James, William. William James (1842–1910) was a finite godist (*see* FINITE GODISM) in his worldview and a pragmatist (*see* PRAGMATISM) in his theory of truth and ethics (*see* MORALITY, ABSOLUTE NATURE OF ; TRUTH, NATURE OF). He approached the world and God from an experiential point of view. His test for the truth of a worldview was simply "What concrete difference will its being true make in one's actual life?" Truth, then, is not inherent in an idea. "Truth happens in an idea. It becomes true, is made true, by events." The worldview that works best is true (*Essays in Pragmatism* , 160–61; all citations in this article are from the writings of James).

View of God. For James, the worldview that worked best was a form of finite godism. Such a God avoided "the hallow unreal God of scholastic theology [theism], or the unintelligible pantheistic monster" (*Pluralistic Universe* , 316). The pantheistic God swallows all individuals in the absolute unity of its consciousness (*see* MONISM ; PANTHEISM). The theistic God is so transcendently distinct from his creatures that they have nothing in common (ibid., 26; *see* THEISM).

In view of these extremes, James believed that the line of least resistance was to accept a "superhuman consciousness" who was not all-embracing, who was finite in power and/or knowledge (ibid., 311). "All the evidence we have seems to me to sweep us very strongly towards the belief in some form of superhuman life with which we may, unknown to ourselves, be co-conscious" (ibid., 309). Such a God need not be infinite; for that matter there could be more than one. James readily saw polytheism as a possible worldview for a pragmatist. The important thing was to posit a larger power that is friendly to humankind and human ideals. Such a power "should be both other and larger than our conscious selves" (*Varieties of Religious Experience* , 396).

Even to claim this much about God seemed to James an overbelief. All James knew for certain was that there is a "more" out there with which human beings feel connected as "a subconscious continuation of our conscious life." Disregarding the overbeliefs and confining ourselves to what is common and generic, there is a saving experience that comes as a positive content of religious experience. This at least, James confessed, is literally and objectively true (ibid., 386, 388).

James speculated very little about his own overbeliefs. He concluded his classic *Varieties of Religious Experience* , “Who knows whether the faithfulness of individuals here below to their own poor overbeliefs may not actually help God in turn to be more effectively faithful to his own greater tasks?” (391).

Despite the particular differences various worldviews express about God, James felt assured that the one thing all religious experience had in common was that “they all agree that the ‘more’ really exists; though some of them hold it to exist in the shape of a personal god or gods, while others are satisfied to conceive it as a stream of ideal tendency embedded in the eternal structure of the world.” James also found generic agreement among religions that the god(s) acts, and that it is beneficial to give your life to him/them. The differences develop, he added, when religions explain what they mean by the union with the divine that comes with religious experience (ibid., 385). Anything beyond this was, to James, speculative overbelief. Christian theism, for example, would define *more* as *Yahweh* God and *union* as imputation to us of the righteousness of Christ. Such beliefs were mere speculation. This is only one way to conceptualize God (*see* PLURALISM, RELIGIOUS), and James did not regard it as the most practical way.

The Nature of the Universe. James declared himself opposed to both pantheistic and materialist/atheist conceptions of the world (*see* ATHEISM), but the distinctions between his thinking and that of the pantheist were often slight. The world is not reducible to matter, nor is it pure mind or spirit. In contrast to monism, James took a pluralistic view of the universe—that there are many diverse things. Still, such a universe is not truly distinct from God. “The theistic conception, picturing God and his creation as entities distinct from each other, still leaves the human subject outside of the deepest reality in the universe” (*Pluralistic Universe* , 25). James’s distinctive views identify him as close in thought to what would later be called “ panentheism .”

The theists’ God is too distinct (transcendent) from what he has created.

Theists are also wrong in supposing God to be complete and sufficient unto himself.

Creation was God’s free act, and he made it as a substance extraneous to himself and humankind is made of a third substance, which is other than both God and creation.

In a panentheistic view, similar to some forms of pantheism, God animates the world the way a soul does a body. This stands in contrast to naturalism, “the curdling cold and gloom and absence of all permanent meaning.” Naturalism places humankind “in a position similar to that of a set of people living on a frozen lake, surrounded by cliffs over which there is no escape” (ibid., 122).

Miracles. How such a God relates to the world is a little difficult to see until James labels the Christian miracle-working God as “grotesque” in conforming nature to human wants (*see* MIRACLE). “The God whom science recognizes must be a God of universal laws exclusively, a God who does a wholesale, not a retail business” (*Varieties* , 372–74). James’s God is more organically connected with the world: “The divine can mean no single quality, it must mean a group of qualities, by being champions of which in alternation, different men may all find worthy missions. Each attitude being a syllable in human nature’s total message, it takes the whole of us to spell the meaning out completely” (ibid., 368).

Despite the naturalistic tone (*see* NATURALISM), James believed in the supernormal. He believed, rather, that Christianity surrendered too easily to naturalism, taking the precepts of the physical sciences at face value. As Immanuel Kant , James believed theistic supernaturalism unnecessarily confines itself to sentiments about life as a whole, which theism views too optimistically. In this over-optimistic, universalistic way of looking at the ideal world, practicality evaporates (ibid.). Such a "crasser" supernaturalism James rejects. His more "refined" supernaturalism admits "providential leadings, and finds no intellectual difficulty in mixing the ideal and the real world together by interpolating influences from the ideal religion among the forces that causally determine the real world's details" (ibid., 392).

However he labeled it, James professed a wider view of reality than that accepted by science. He was willing to use the term *supernatural* , though not in a theistic sense. He would not, for example, accept the idea of "miraculous healings," which were prevalent in the late nineteenth century. He objected to any supernatural interruption of a natural process. Such must be dismissed by the scientist as figments of the imagination. With almost prophetic awareness of the next century, James added, "No one can foresee just how far this legitimation of occultist phenomena under newly found scientist titles may proceed—even 'prophecy,' even 'levitation,' might creep into the pale" (ibid., 378).

But another sort of everyday miraculous was more gladly received—God's subtle, even subliminal influences on us through the natural world. If "there be a wider world of being than that of our everyday consciousness, if in it there be forces whose effects on us are intermittent, if one facilitating condition of the effects be the openness of the 'subliminal' door, we have the elements of a theory to which the phenomena of religious life lend plausibility." James was so impressed by the importance of these "transmundane energies" that he believed they influenced the natural world (ibid., 394).

This denial of the miraculous, except within stringent naturalistic guidelines, amounted to a denial of a life-changing conversion experience. James skeptically claimed that "converted men as a class are indistinguishable from natural men; some natural men even excel some converted men in their fruits." Hence, "The believers in the non-natural character of sudden conversion have had practically to admit that there is no unmistakable class-mark distinctive of all true converts" (ibid., 192).

Good and Evil. James did believe that "saintliness" flowed from religious experience. He rejected Friedrich Nietzsche's view that the saint is a weak individual. James pointed to such strong figures as Joan of Arc and Oliver Cromwell as counter-examples. James lauded the holy life, saying that it gave religion its "towering place in history" even when other aspects of faith did not stand up to practical common sense and empirical testing. "Let us be saints, then, if we can, whether or not we succeed visibly and temporarily" (*Varieties* , 290).

There is, however, no absolute standard for the saintly life of good, for James was a relativist (*see* MORALITY, ABSOLUTE NATURE OF), who believed that "there is no such thing as an ethical philosophy dogmatically made up in advance" (*Essays* , 65). Each must find what works best for them. James offers only the general guideline that we should avoid "pure naturalism" on the one hand, because of its ineptness, and "pure salvationism" on the other, because of its other-

worldliness (*Varieties* , 140). Between these we must find the expedient path of what works best. The human race as a whole helps in this process to determine the content of ethical philosophy so far as we contribute to the race's moral life.

Despite his relative morality and tendency toward pantheism, James sharply parted with most pantheists in that he believed that evil is real, rather than an illusion. Both pantheism and theism, he charged, made too radical a break between concepts of absolute and relative morality. In effect, he sought to give quasi-absolute force to a set of universally accepted moral guidelines, even though they could not be called "absolutes." While the system may seem to hold together by weak threads, the connecting linkage is pragmatism: " 'The true,' to put it briefly, is only the expedient in the way of our thinking, just as 'the right' is only the expedient in the way of our behaving" (*Essays* , 170).

Human Beings. Human beings have a spiritual, as well as a material, dimension. Through evolution from lower forms of life, humankind has reached a point of immortality (*see* EVOLUTION, BIOLOGICAL). At this point James takes on the naturalist's assumption that the mind cannot survive death because it is merely a function of the brain. Even if thought is a function of the brain, this does not compel us to deny immortality because the spiritual aspect is undeniable. "Dependence on the brain for this natural life would in no wise make mortal life impossible—it might be quite compatible with supernatural life behind the veil hereafter" (*Human Immortality* , 24, 38–39). Science can prove only the *concomitance* in the functioning of mind and brain; the *dependence* of the mind on the brain has not been proven (ibid., 42–43).

History and Its Goal. James was opposed to both optimistic and pessimistic views of human destiny. He could not agree with those who believed the world could not be salvaged. Optimism thinks the world's salvation inevitable. Midway between the two was the doctrine of *meliorism* , which treats salvation as neither necessary nor impossible. As a pragmatist, James felt compelled to accept improvement in the world as probable but not inevitable. "Pragmatism has to postpone a dogmatic answer, for we do not yet know certainly which type of religion is going to work best in the long run" (*Pragmatism and Other Essays* , 125, 132).

James's realism led him to reject universalism 's belief that all must be saved. "When the cup is poured off, the dregs are left behind forever, but the possibility of what is poured off is sweet enough to accept" (ibid., 130). In justification of his conclusion, James offered this scenario:

> Suppose that the world's author put the case to you before creation, saying: "I am going to make a world not certain to be saved, a world the perfection of which shall be conditional merely, the condition being that each does its own 'level best.' I offer you the chance of taking part in such a world. Its safety, you see, is unwarranted. It is a real adventure, with real danger, yet it may win through. It is a social scheme of co-operative work genuinely to be done. Will you join the procession? Will you trust yourself and trust the other agents enough to face the risk?" [ibid., 127]

To such a proposal, James believed most people would prefer the risk of such an adventure to nonexistence. Such, he believes, is the world we have.

Evaluation. William James was a fascinating philosopher who fit into no mold. His views present an array of positive and negative characteristics for theists.

Positives. From a Christian perspective, James frequently appears to try to head in the direction of orthodox faith, though from a great distance.

Materialism is rejected. Theists concur with James's rejection of materialism. Humanity is more than matter. Of this immortality, James was certainly correct.

Evil is real. James had no illusions about evil (*see* ILLUSIONISM). He accepted its reality. He rejected a pantheism that affirmed God and denied evil. At the same time, he avoided the temptation of atheism to affirm evil and deny God.

The principle of the Divine is affirmed. While James was not a theist, he did believe in some sort of god and accepted that god's hand in creation. He saw the practical value of these beliefs on one's life.

Holy living is commended. James was willing to admit the significant role that religious beliefs played in his own life. He commended saintliness and its contribution to the value of religion.

Universalism is rejected. Unlike other liberal thinkers, James denied the illusory optimism of the universalist. He was willing to admit that all may not be saved and that some sort of hell exists. This is refreshing honesty from someone who rejected the divine authority of the Bible.

Negatives. Finite Godism Is Inadequate. James's finite god was limited indeed. For a discussion of the problems with this worldview, see PANENTHEISM , and WHITEHEAD, ALFRED NORTH .

Antisupernaturalism is unfounded. James's rejection of the supernatural was illogical (*see* MIRACLES, ARGUMENTS AGAINST). His claim that supernatural religion saps human impetus to advance the good in life is contrary to his own analysis. He gave religion its "towering place" in human history by virtue of the selfless love of Christian supernaturalists. He concluded that saintly group of qualities is indispensable to the world's welfare" (*Varieties* , 290). He admired theists whose beliefs had made considerable impact, among them Christ, Cromwell, and Stonewall Jackson. He further admitted that great educa tional and social institutions, including universities, hospitals, the Red Cross, the slavery abolition movement, and rescue missions, were started by people who believed in the supernatural.

His view of evil is insufficient. While James recognized the reality of evil, his finite godism left him without assurance of a final victory over evil. A finite god does not have the infinite resources necessary to assure the final triumph over evil. In this, James unwittingly offers a solution to his own problem. He admitted that "the world is all the richer for having a devil in it, so long as we can keep our foot upon his neck" (ibid., 55). That is precisely what a finite god cannot do. A limited God could lose, or at best, reach an endless draw. Only an infinitely good

and powerful God of theism can guarantee the outcome of the struggle with evil (*see* EVIL, PROBLEM OF).

Pragmatism is unjustified. The most serious internal criticism against pragmatism is that, pragmatically, it doesn't work. We would have to have infinite knowledge of all possible consequences to each alternative action or philosophy. We can never be sure how things will turn out. Only a theistic God could be an effective pragmatist, and he is not one.

One of James's Harvard colleagues, Josiah Royce, penetrated to the root problem of this pragmatic view of truth when he asked James if he would take the witness stand in court and swear "to tell the expedient, the whole expedient, and nothing but the expedient, so help him future experience."

Relativism is self-defeating. James denied all moral absolutes (*see* ABSOLUTES, MORAL). For him the right was the expedient in the way of living, as the truth was the expedient in the way of knowing. But it is impossible to deny all moral absolutes without implying a moral absolute.

Jefferson, Thomas. Thomas Jefferson (1743–1826), the author of the Declaration of Independence (1776) and the third President of the United States, was a deist (*see* DEISM). Some of his earliest writings earned a place for him in the hearts of historians as "the major penman of the American Revolution" (Ketcham, 4:259). His philosophical and religious views undergird his writings but are not generally made explicit, except in his letters. Chiefly from these letters can his deism be clearly discovered.

Jefferson's religious views are reflected in his abridgment of the Gospels, *The Life and Morals of Jesus of Nazareth* (1803). In an 1816 reference to it he called it "a paradigm of his doctrines, made by cutting the texts out of the book, and arranging them on the pages of a blank

book, in a certain order of time or subject. . . . A more beautiful morsel of ethics I have never seen." The fifty-seventh Congress evidently agreed, ordering an edition published in 1904.

The Jeffersonian Worldview. *God and the World.* Jefferson believed that there is one God, the Creator, Sustainer, and Manager of the universe. He held that this God is infinitely wise, good, righteous, and powerful. Influenced by Isaac Newton, Jefferson understood the world to be harmonious, under the rule of natural law, and open to human investigation. God created it that way. That all this is true is clear from the design of the universe:

> I hold (without revelation) that when we take a view of the universe, in its parts, general or particular, it is impossible for the human mind not to perceive and feel a conviction of design, consummate skill, and indefinite power in every atom of its composition. The movements of the heavenly bodies, so exactly held in their course by the balance of centrifugal and centripetal forces; the structure of the earth itself, with its distribution of lands, waters and atmosphere; animal and vegetable bodies, examined in all their minutest particular; insects, mere atoms of life, yet as perfectly organized as man or mammoth; the mineral substances, their generation and uses; it is impossible, I say, for the human mind not to believe that there is in all this design, cause and effect up to an ultimate cause, a Fabricator of all things from matter and motion, their Preserver and Regulator. [Foote, 10]

Miracles. Jefferson also maintained that God had never broken into history through supernatural miracles or revelation (*see* MIRACLE ; REVELATION, SPECIAL). Such accounts to the contrary were fabrications, superstition, or fanaticism (Fesperman, 81).

Jefferson emphatically rejected the virgin birth of Christ. "The day will come," he said, "when the account of the birth of Christ as accepted in the trinitarian churches will be classified with the fable of Minerva springing from the brain of Jupiter" (Foote, 49). He also cut the resurrection from his supernatural-sanitized "Bible," ending it: "Then took they the body of Jesus, and wound it in linen clothes with the spices, as the manner of the Jews is to bury. Now, in the place where he was crucified, there was a garden; and in the garden a new sepulcher, wherein was never man yet laid. There laid they Jesus, and rolled a great stone to the door of the sepulcher, and departed" (*Life and Morals* , 132).

Bible. Obviously Jefferson regarded the Gospels as distortions wherever they intimated supernatural action by God. He charged the writers with "forgetting often, or not understanding, what had fallen from Him, by giving their own misconceptions as His dicta, and expressing unintelligibly for others what they had not understood themselves" (ibid., vii). Jesus' teachings had been rendered "mutilated, misstated, and often unintelligible" (ibid., 49) by a band of "dupes and impostors" who corrupted the true moral teachings. Worst in this bad lot was the apostle Paul, "the great Coryphaeus, and first corrupter of the Doctrines of Jesus" (*see* BIBLE CRITICISM).

Jefferson literally cut the miracles from the Gospels and retained only the moral teachings of Jesus. His views were not as radically deistic as were Thomas Paine 's. They most closely resembled the deism of Matthew Tindal in his *Christianity as Old as the Creation; or, The*

Gospel: A Republication of the Religion of Nature and those of the unitarian Joseph Priestley. Jefferson rejected all major theological teachings of Christianity, such as the deity of Christ, original sin, salvation by grace through faith alone, and the substitutionary death of Christ. He believed Jesus to be the greatest reformer and moralist in history.

It was up to those who understood the truth, such as Jefferson, to purify the truth of the errors that had been imposed upon it. He endeavored to assemble the redacted truth from various portions of the four Gospels, arranged in the order that seemed to him most natural (Fesperman, 81, 83–84).

Human Beings. As stated in the *Declaration of Independence* , Jefferson considered it "to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness." These "unalienable rights" are grounded in nature, which is itself unchangeable. Since these rights are natural, they are universal (*see* LAW, NATURAL ; MORALITY, ABSOLUTE NATURE OF). Other natural rights, in Jefferson's view, were the right of association, the right to self-government, and the right to be free in regard to religion (Padover, 89–91, 143, 148, 155, 156).

God's creation of all people as equal had logical consequences. One was that slavery as an accepted practice in the United States had to be abolished. Jefferson attempted to accomplish this end by seeking to pass a plan he drafted, the "Report of Government for the Western Territory" (1784). This provided for the abolition of slavery in all the states after 1800 (ibid., 92–93). His legislation was defeated by one vote. Two years later he wrote of this decision: "The voice of a single individual . . . would have prevented this abominable crime from spreading itself over the country. Thus we see the fate of millions unborn hanging on the tongue of one man, and Heaven was silent in that awful moment! But it is to be hoped it will not always be silent, and that the friends of the rights of human nature will in the end prevail" (Foote, 18).

The human is a "rational animal" (*see* ARISTOTLE) who has been endowed "with an innate sense of justice." Both reason and the human sense of morality could go wrong, for neither "wisdom" nor "virtue" are hereditary. However, truth will eventually prevail, and human beings can "be restrained from wrong and protected in right, by moderate powers, confided to persons of his own choice" (Padover, 143, 131–135, 178, 91).

God and Government. It is clear from the *Declaration* that Jefferson did not envision the separation of God from government. Indeed, he believed governments owed allegiance to God. Inscribed in the marble of his memorial in Washington, D. C., is the quotation: "God who gave us life, gave us liberty. Can the liberties of a nation remain secure when we have removed a conviction that these liberties are a gift of God?"

Although Jefferson was in France as ambassador when Congress ratified the First Amendment (1789), he certainly agreed that "Congress shall make no law respecting the establishment of religion; nor prohibiting the free exercise thereof." This is not the "wall of separation" he is said to have espoused. The intent of the First Amendment is clearly that the federal government was not to establish a national religion in the English manner. It is interesting that five colonies had state religions when they ratified this amendment. It was actually in a fit of

pique over what the Baptist association in Danbury, Connecticut, had said about his beliefs that Jefferson wrote of the "wall of separation between Church and State." He never used the phrase outside the context of this private letter, and other statements indicate that Jeffersonian "wall" should protect the state government from federal interference with regard to religion.

Jefferson left ample evidence of his views about church and state cooperation. He established a department of religion in the University of Virginia. He even proposed that students be required to attend church and refrain from swearing. In a treaty with the Kaskaskia Indians, Jefferson and Congress paid for the services of a missionary and a church building with tax funds. Congress did this more than once, being careful not to favor one religious group over another.

The central philosophy in this was that no religious view or group should be given legal sanction at the expense of another view or group. He said, "I am for freedom of religion, and against all maneuvers to bring about a legal ascendancy of one sect over another" (Padover, 119). Besides maintaining that such action would violate the natural law right of free religion, Jefferson believed it would be disadvantageous for religion, since each sect is a check on the others.

Christ and Religion. Religion had been the cause of great evil in Jefferson's view, and it was important that one opinion be balanced by opposing opinions. Millions had been burned, tortured, fined, and imprisoned, "yet we have not advanced one inch towards uniformity." Past coercion had made half the world fools, and the other half hypocrites.

While Jefferson identified himself as a Christian, many agreed with the Danbury Baptists that he was not orthodox. He considered his redacted "Bible" proof "that I am a *real Christian* , that is to say, a disciple of the doctrines of Jesus" (*Life and Morals* , viii). Jefferson admitted he was not a Christian who accepted the historic teachings of the Bible and church. "I am a Christian in the only sense in which I believe Jesus wished anyone to be, sincerely attached to his doctrines in preference to all others; ascribing to himself every human excellence, and believing that he never claimed any other" (Foote, 4).

Evil. People have both good and evil qualities. Indeed "experience proves, that the moral and physical qualities of man, whether good or evil, are transmissible in a certain degree." A primary function of government is to protect people from injuring each other and to be attentive to the needs and desires of the masses. When a government fails to perform this function, its officers "become wolves." This is not an unusual occurrence. The tendency of people to wield abusive power over others "seems to be the law of our general nature, in spite of individual exceptions; and experience declares that man is the only animal which devours his own kind." The kind of government that tends to promote this evil is that run by kings, nobles, or priests. "There is scarcely an evil known in [Europe] which may not be traced to their king as its source" (Padover, 164, 97, 103). When governments become tyrannical, it is the *obligation* of the governed to overthrow it.

Ethics. Following John Locke's natural law tradition, Jefferson held that the natural moral law applies to nations and to individuals: "It is strangely absurd to suppose that a million human

beings, collected together, are not under the same moral laws which bind each of them separately" (Foote, 42). The source of human morality is "love for others," which has been "implanted" by nature. It is this "moral instinct . . . which prompts us irresistibly to feel and to succor" the distress of others. Moral actions are relative. Actions deemed virtuous in one country are considered vicious in another. This occurs because "nature has constituted *utility* to man [as] the standard . . . of virtue" (Padover, 150–51).

Jefferson considered the greatest moral teachers to have been Epicurus and Jesus. He considered himself a follower of both, though he identified most closely with Epicurus. Concerning this he wrote, "I . . . am an Epicurean. I consider the genuine (not the imputed) doctrines of Epicurus as containing everything rational in moral philosophy which Greece and Rome have left us" (Padover, 175).

Human Destiny. The human soul does survive death. While on his deathbed Jefferson penned these words as a farewell to his surviving daughter:

Life's visions are vanished, its dreams are no more;
Dear friends of my bosom, why bathed in tears?
I go to my fathers, I welcome the shore
Which crowns all my hopes and which buries my cares.
Then farewell, my dear, my lov'd daughter, adieu!
The last pang of life is in parting from you.
Two seraphs await me long shrouded in death;
I will bear them your love on my last parting breath. [Foote, 68]

Jefferson spoke of the Judge of all humanity in the *Declaration* , but he did not define what he meant by the term. He did not omit Jesus' references to rewards in heaven for the righteous and punishment in hell for the wicked from his abbreviated Bible. Just how literally he took this is another question.

Evaluation. Since Jefferson was a deist his views fall under the same critique. This includes his denial of miracles (*see* MIRACLES, ARGUMENTS AGAINST) as well as his rejection of God's immanence (*see* THEISM). His views on the Bible were also unfounded (*see* BIBLE, ALLEGED ERRORS IN ; BIBLE CRITICISM ; BIBLE, EVIDENCE FOR).

Jesus, Non-Christian Sources. Negative Bible critics charge or imply that the New Testament documents are unreliable since they were written by disciples of Jesus or later Christians. They note that there is no confirmation of Jesus in any non-Christian sources. Several factors undermine the validity of this criticism (*see* BIBLE CRITICISM).

The Evidence. There is overwhelming evidence that the New Testament is a reliable record composed by contemporaries and eyewitnesses of the events (*see* BIBLE, HISTORICITY OF ; NEW TESTAMENT, DATING OF ; NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT MANUSCRIPTS). There are more manuscripts, earlier manuscripts, better copied manuscripts, and manuscripts written by more people who were closer to the events than for any other piece of ancient history. Archaeology is continually confirming details of their writing (*see* ARCHAEOLOGY, NEW TESTAMENT). If the New Testament record is unreliable, we have no hope for any reliable knowledge of ancient happenings.

The objection that the writings are partisan involves a significant but false implication that witnesses cannot be reliable if they were close to the one about whom they gave testimony. This is clearly false. Survivors of the Jewish holocaust were close to the events they have described to the world. That very fact puts them in the best position to know what happened. They were there, and it happened to them. The same applies to the court testimony of someone who survived a vicious attack. It applies to the survivors of the Normandy invasion during World War II or the Tet Offensive during the Vietnam War. The New Testament witnesses should not be disqualified because they were close to the events they relate.

Related to the charge that Jesus lacks testimony by unbelievers is that there is strong evidence, but a lack of weak evidence.

Suppose there were four eyewitnesses to a murder. There was also one witness who arrived on the scene after the actual killing and saw only the victim's body. Another person heard a second-hand report of the killing. In the trial the defense attorney argues: "Other than the four eyewitnesses, this is a weak case, and the charges should be dismissed for lack of evidence."

Others might think that attorney was throwing out a red herring. The judge and jury were being distracted from the strongest evidence to the weakest evidence, and the reasoning was clearly faulty. Since the New Testament witnesses were the only eyewitness and contemporary testimonies to Jesus, it is a fallacy to misdirect attention to the non-Christian secular sources. Nonetheless, it is instructive to show what confirming evidence for Jesus can be gleaned outside the New Testament.

The Sources. Some excellent resources have been made available to give fuller descriptions of this testimony. Josh McDowell, *Evidence that Demands a Verdict* , devotes a chapter to the non-Christian evidence. F. F. Bruce wrote the popular-level analysis of the evidence in *The New Testament Documents: Are They Reliable* , and Bruce's *Jesus and Christian Origins Outside the New Testament* is a more in-depth and thoroughly documented study. A recent work on the subject is by Gary Habermas in one chapter of *The Historical Jesus* .

Ancient Historians. A surprising amount of information about Jesus can be drawn from historians who were contemporary to him or lived soon after. These include:

Tacitus. The first-century Roman Tacitus is considered one of the more accurate historians of the ancient world. He gives the account of the great fire of Rome, for which some blamed the Emperor Nero:

> Consequently, to get rid of the report, Nero fastened the guilt and inflicted the most exquisite tortures of a class hated for their abominations, called Christians by the populace. Christus, from whom the name had its origin, suffered the extreme penalty during the reign of Tiberius at the hands of one of our procurators, Pontius Pilatus, and a most mischievous superstition, thus checked for the moment, again broke out not only in Judea, the first source of the evil, but even in Rome, where all things hideous and shameful from every part of the world find their center and become popular. [*Annals* 15.44]

This passage contains references to Christians, named after Christus (Latin for *Christ*), who suffered the "extreme penalty" under Pontius Pilate during the reign of Tiberius. The "superstition" which started in Judea and had made its way to Rome was most likely the resurrection of Jesus.

Suetonius. Suetonius was chief secretary to Emperor Hadrian (reign, 117–138). Two references are important:

> Because the Jews at Rome caused continuous disturbances at the instigation of Chrestus, he expelled them from the city. [*Claudius* , 25]

> After the great fire at Rome. . . . Punishments were also inflicted on the Christians, a sect professing a new and mischievous religious belief. [*Nero* , 16]

These brief references establish a few things. There was a man named *Chrestus* (or Christ) who lived during the first century. Certain Jews caused disturbances relating to this man. Suetonius,

writing many years later, was not in a position to know whether the disturbances were instigated by Chrestus or by Jews against his followers. At any rate Claudius became annoyed enough to throw every Jew out of the city (including Paul's associates Aquila and Priscilla) in 49. Also, Christians were persecuted after the Rome fire, and they had professed a new religious belief.

Josephus . Flavius Josephus (37/38–97) was a Jewish revolutionary who changed allegiance to the Romans in the Jewish revolt in time to save his life. He became a historian, working under the auspices of Emperor Vespasian. His *Antiquities* dates to the early 90s and contains two passages of interest. The first refers to James, "the brother of Jesus, who was called Christ" (20:9). This confirms the New Testament facts that there was a man named Jesus, who was known as "Christ" and had a brother named James. The second reference is much more explicit and controversial:

> Now there was about this time Jesus, a wise man, if it be lawful to call him a man. For he was one who wrought surprising feats. . . . He was [the] Christ . . . he appeared to them alive again the third day, as the divine prophets had foretold these and ten thousand other wonderful things concerning him. [*Antiquities* 18:3]

The genuineness of this passage has been questioned by scholars from all areas of belief because it seems doubtful that a Jew who lived and worked outside the Christian context would have said such things about Jesus. Even the apologist-theologian Origen (ca. 185–ca. 254) said that Josephus did not believe Jesus was the Messiah (*Contra Celsum* 1:47). Despite these concerns, there are reasons in favor of accepting most of the text as genuine. First, there is good textual evidence for the mention of Jesus, and no textual evidence against it. Second, the text is written in the style of Josephus. Third, some of the words most likely did not come from a Christian. Fourth, the passage fits its context both grammatically and historically. Fifth, the reference to Jesus in *Antiquities* 20 seems to presuppose an earlier mention. Finally, an Arabic version of the text contains the basic elements without the questionable parts:

> At this time there was a wise man named Jesus. His conduct was good and [he] was known to be virtuous. And many people from among the Jews and the other nations became his disciples. Pilate condemned him to be crucified and to die. But those who became his disciples did not abandon his discipleship. They reported that he had appeared to them three days after his crucifixion, and that he was alive; accordingly he was perhaps the Messiah, concerning whom the prophets have recounted wonders. [cited in Habermas, 186]

Even without portions that are likely Christian interpolations, this text is an extraordinary witness to the life, death, and influence of Jesus. It notes that Jesus was known as a wise and virtuous man who had Jewish and Gentile disciples. Pilate condemned him to be crucified. The disciples reported that he had risen from the dead on the third day. The idea had been attached to his proclamation that he was the Messiah.

Thallus. Thallus wrote around A.D . 52. None of his works are extant, though a few fragmented citations are preserved by other writers. One such writer is Julius Africanus in about 221, who quotes Thallus in a discussion of the darkness which followed the crucifixion of Christ:

> On the whole world there pressed a most fearful darkness; and the rocks were rent by an earthquake, and many places in Judea and other districts were thrown down. This darkness Thallus, in the third book of his *History* calls, as appears to me without reason, an eclipse of the sun. [*Extant Writings* , 18 in the *Ante-Nicene Fathers*]

Africanus identifies the darkness which Thallus explained as a solar eclipse with the darkness at the crucifixion described in Luke 23:44–45 .

Government Officials. Other non-Christian sources were ancient government officials, whose occupations put them in a unique position to have official information unavailable to the public.

Pliny the Younger. Pliny the Younger was a Roman author and administrator. In a letter to the Emperor Trajan in about 112, Pliny describes the early Christian worship practices:

> They were in the habit of meeting on a certain fixed day before it was light, when they sang in alternate verses a hymn to Christ, as to a god, and bound themselves by a solemn oath, not to do any wicked deeds, but never to commit any fraud, theft or adultery, never to falsify their word, nor deny a trust when they should be called upon to deliver it up; after which it was their custom to separate, and then reassemble to partake of food—but food of an ordinary and innocent kind. [*Letters* 10:96]

This passage confirms several New Testament references. The most notable is that early Christians worshiped Jesus as God. Their practices also betray a strong ethic, probably that of Jesus. There is also a reference to the love feast and Lord's Supper. Later in the same letter, Pliny calls the teaching of Jesus and his followers "excessive superstition" and "contagious superstition," which may refer to Christian belief and proclamation of the resurrection of Jesus.

Emperor Trajan. In reply to Pliny's letter, Emperor Trajan gives the following guidelines for punishing Christians:

> No search should be made for these people; when they are denounced and found guilty they must be punished; with the restriction, however, that when the party denies himself to be a Christian, and shall give proof that he is not (that is, by adoring our gods) he shall be pardoned on the ground of repentance, even though he may have formerly incurred suspicion. [ibid., 10:97]

This sheds some light on how the early Roman government viewed Christianity. They were to be punished for not worshiping the Roman gods, but the persecution was not without restrictions.

Hadrian. The Christian historian Eusebius (ca. 265–339) records a letter from Emperor Hadrian to Mincius Fundanus, the Asian proconsul. Not unlike Trajan's letter to Pliny, Hadrian gives some instruction on handling Christians:

> I do not wish, therefore, that the matter should be passed by without examination, so that these men may neither be harassed, nor opportunity of malicious proceedings be offered to informers. If, therefore, the provincials can clearly evince their charges against

> the Christians, so as to answer before the tribunal, let them pursue this course only, but not by mere petitions, and mere outcries against the Christians. For it is far more proper, if anyone would bring an accusation, that you should examine it. [*Ecclesiastical History* , 4:9]

The passage confirms that Christians were often accused of breaking laws and were punished, but that temperance was encouraged.

Other Jewish Sources. In addition to the Jewish writers of the New Testament and Josephus, other Jewish witnesses refer to the life of Jesus.

Talmud. Talmudic writings of most value concerning the historical Jesus are those compiled between 70 and 200 during the so-called *Tannaitic Period* . The most significant text is Sanhedrin 43a:

> On the eve of Passover Yeshu was hanged. For forty days before the execution took place, a herald went forth and cried, "He is going forth to be stoned because he has practiced sorcery and enticed Israel to apostasy. Any one who can say anything in his favour, let him come forward and plead on his behalf." But since nothing was brought forward in his favour he was hanged on the eve of the Passover! [*Babylonian Talmud*]

This passage confirms the crucifixion, the timing of the event on the eve of Passover, and the accusation of sorcery and apostasy. This text also informs us of the herald who went out preceding the death of Jesus (cf. John 8:58–59 ; 10:31–33 , 39). Another reference in this section mentions five disciples of Jesus. Most of the other references to Jesus and Christianity in *the Talmud* are much later and of questionable historical value.

Toledoth Jesu. One rather later witness is *Toledoth Jesu* , an anti-Christian document compiled in the fifth century. This document explains that the body of Jesus was secretly moved to a second grave because the disciples were planning to steal the body. When the disciples came to the tomb, Jesus' body was gone, so they concluded that he was resurrected. Meanwhile the Jewish authorities were being informed of the true location of Jesus' body. Though quite late, this document probably reflects common early opinion (cf. Matt. 18:11–15).

Other Gentile Sources. There were Gentile sources for the life of Christ other than the Romans. These include:

Lucian. Lucian of Samosata was a second-century Greek writer whose works contain sarcastic critiques of Christianity:

> The Christians, you know, worship a man to this day—the distinguished personage who introduced their novel rites, and was crucified on that account. . . . You see, these misguided creatures start with the general conviction that they are immortal for all time, which explains the contempt of death and voluntary self-devotion which are so common among them; and then it was impressed on them by their original lawgiver that they are all brothers, from the moment that they are converted, and deny the gods of Greece, and

> worship the crucified sage, and live after his laws. All this they take quite on faith, with the result that they despise all worldly goods alike, regarding them merely as common property. [*Death of Pelegrine* , 11–13]

Following Habermas, several things can be ascertained from this text. Jesus was worshiped by Christians. He had introduced new teachings and had been crucified for his teachings. His teachings included the brotherhood of believers, the importance of conversion, and the importance of denying other gods. Christians lived according to Jesus' laws. Further, the followers of Jesus believed themselves immortal and were characterized by contempt for death, voluntary self-devotion, and renunciation of material goods. Despite being one of the church's most vocal critics, Lucian gives one of the most informative accounts of Jesus and early Christianity outside the New Testament.

Mara Bar-Serapion. A Syrian, Mara Bar-Serapion wrote to his son Serapion sometime between the late first and early third centuries. The letter contains an apparent reference to Jesus:

> What advantage did the Athenians gain from putting Socrates to death? Famine and plague came upon them as a judgment for their crime. What advantage did the men of Samon gain from burning Pythagoras? In a moment their land was covered with sand. What advantage did the Jews gain from executing their wise King? It was just after that their kingdom was abolished. God justly avenged these three wise men: the Athenians died of hunger; the Samians were overwhelmed by the sea; the Jews, ruined and driven from their land, live in com plete dispersion. But Socrates did not die for good; he lived on in the statue of Hera. Nor did the wise king die for good; he lived on in the teaching which he had given. [British Museum, Syriac ms, add. 14, 658; cited in Habermas, 200]

This passage confirms four specific teachings of the New Testament: (1) Jesus was thought to be a wise and virtuous man. (2) Jesus was considered by many to be the king of Israel. (3) The Jews put Jesus to death. (4) Jesus lived on in the teachings of his followers.

Gnostic Sources. Immediately after the time of Christ, several non-Christian groups flourished in loose connection with the church. One of the more successful was the gnostics (*see* GNOSTICISM).

The Gospel of Truth. This second-century book was perhaps written by Valentinus (135–160). It confirms that Jesus was a historical person in several passages:

> For when they had seen him and heard him, he granted them to taste him and to smell him and to touch the beloved Son. When he had appeared instructing them about the Father. . . . For he came by means of fleshly appearance. [30:27–33; 31:4–6]

In another passage we read that

> Jesus was patient in accepting sufferings . . . since he knows that his death is life for many . . . he was nailed to a tree; he published the edict of the Father on the cross. . . . He draws himself down to death through life. . . . Having stripped himself of the perishable

> rags, he put on imperishability, which no one can possibly take away from him. [20:11–14, 25–34]

These quotations affirm that Jesus was the Son of God and the Word, who became a man and took on a fleshly body. He taught his followers about his Father. Jesus suffered and was crucified. His death brings life for many. Jesus was raised from the dead in an imperishable body.

The Apocryphon of John was a second-century gnostic work that opens with a supposedly historical account of an encounter between Arimanius the Pharisee and John, son of Zebedee, the disciple. John is reputed to have said that Jesus "has gone to the place from which he came" (1:5–17). This was an apparent reference to the ascension. Arimanius replied that John had been deceived by Jesus. There is no evidence outside *The Apocryphon* that this event occurred.

The Gospel of Thomas (140–200) is a collection of some spurious and some actual events and sayings of Jesus. It tells us several things about the identity of Jesus. Jesus identifies himself as the resurrected One, the Son of Man, the Son of his Father, and the All of the Universe. As in the Bible, the disciples fail to recognize the true identity of Jesus. *The Gospel of Thomas* refers to the death and exaltation of Jesus. It is a thoroughly gnostic document, and for this reason, as well as the late date, it has limited historical value.

The Treatise on Resurrection is a gnostic work from the late second century. Despite its heavy gnostic philosophy, *Treatise* does affirm several teachings: Jesus was truly deity. Despite this, Jesus, the Son of God, took on flesh. Jesus died, rose again, and conquered death for those who have faith in him. Its value as a source is also limited.

Other Lost Sources. Beside these non-Christian sources for the life of Christ, some documents are hinted at but have not been found.

The Acts of Pontius Pilate. Although a purportedly official document, *The Acts of Pontius Pilate* does not survive, it is referred to by Justin Martyr in about 150 and by Tertullian in about 200. Justin writes:

> And the expression, "They pierced my hands and my feet," was used in reference to the nails of the cross which were fixed in his hands and feet. And after he was crucified, they cast lots upon his vesture, and they that crucified him parted it among them. And that these things did happen you can ascertain from the "Acts" of Pontius Pilate. [*First Apology* , 35]

Justin also claims that the miracles of Jesus can be confirmed in this document (ibid., 48).

Phlegon. Phlegon (b. ca. 80) was a freed slave of Emperor Hadrian. None of Phlegon's writings are extant, but he is mentioned several times by later writers. He spoke of Christ's death and resurrection in his nonextant *Chronicles* , saying, "Jesus, while alive, was of no assistance to himself, but that he arose after death and exhibited the marks of his punishment, and showed how his hands had been pierced by nails" (cited in Origen, 4:455; cf. Habermas, 210; Anderson,

19). Phlegon also mentioned "the eclipse in the time of Tiberius Caesar, in whose reign Jesus appears to have been crucified, and the great earthquake which then took place" (Origen, 14). Julius Africanus confirms the same quotations (Julius Africanus, 18).

Habermas summarizes from the Phlegon references that Jesus predicted the future, that there was an eclipse at the time of the crucifixion, and that it occurred during the reign of Tiberius. After his resurrection, Jesus appeared and showed his wounds, especially the nail marks from the crucifixion (Habermas, 211).

Summary. The primary sources for the life of Christ are the four Gospels (*see* NEW TESTAMENT, HISTORICITY OF). However, there are considerable reports from non-Christian sources that supplement and confirm the Gospel accounts. These come largely from Greek, Roman, Jewish, and Samaritan sources of the first century. In brief they inform us that: (1) Jesus was from Nazareth; (2) he lived a wise and virtuous life; (3) he was crucified in Palestine under Pontius Pilate during the reign of Tiberius Caesar at Passover time, being considered the Jewish king; (4) he was believed by his disciples to have been raised from the dead three days later; (5) his enemies acknowledged that he performed unusual feats they called "sorcery"; (6) his small band of disciples multiplied rapidly, spreading even as far as Rome; (7) his disciples denied polytheism, lived moral lives, and worshiped Christ as Divine. This picture confirms the view of Christ presented in the New Testament Gospels.

Jesus, Uniqueness of. ***See*** **CHRIST, DEITY OF ; CHRIST, UNIQUENESS OF ; WORLD RELIGIONS AND CHRISTIANITY .**

Jesus of History. ***See*** **CHRIST OF FAITH VS. JESUS OF HISTORY ; JESUS, QUEST FOR THE HISTORICAL ; JESUS SEMINAR .**

Jesus, Quest for the Historical. For over 100 years there has been a quest to identify the historical Jesus and differentiate this person from the Christ of Faith (*see* CHRIST OF FAITH VS. JESUS OF HISTORY). Actually, there have been several quests. All but the last have rejected the historicity of the New Testament as a whole and undermined orthodox Christianity and the Christian apologetic.

The quests for the real Jesus can be divided into four time periods: (1) the first or "old" quest, 1778–1906; (2) the "no quest" period, 1906–1953; (3) the "new" quest, 1953–1970; and (4) the third quest, from 1970 (see Holden, chap. 2).

The First-Quest Period. The quest for the historical Jesus grew out of the posthumous publication by Gotthold Lessing of Hermann Reimarus's *Fragments* . In the fragment "On the Intention of Jesus and His Disciples," Reimarus separated what the apostles said about Jesus from what Jesus actually said about himself. This partition between the Christ of Faith and the Jesus of history remains a core tenet of much of modern New Testament research (*see* JESUS SEMINAR). It is rooted in the antisupernaturalism of Benedict Spinoza , English Deism , and the fact/ value dichotomy of Immanuel Kant .

In 1835, David Strauss published his desupernaturalized work, *The Life of Jesus Critically Examined* . Under the influence of David Hume , Strauss dismissed the reliability of historical and supernatural elements in the Gospels as "outrageous" and "myths." This led to later attempts to demythologize the Gospel records (*see* MYTHOLOGY AND THE NEW TESTAMENT).

Albert Schweitzer brought this period to a close in 1906 with his *The Quest of the Historical Jesus* . He argued that Jesus' message was eschatological in nature and that the supposedly objective research into the man had produced a figure molded into the biases of the researchers. "There is nothing more negative than the result of the critical study of the life of Jesus," wrote Schweitzer. "He is a figure designed by rationalism, endowed with life by liberalism, and clothed by modern theology in historical garb" (Schweitzer, 396).

The No-Quest Period. Schweitzer severely damaged the confidence of the quest for the historical and inaugurated a time during which such research was in disrepute. Rudolph Bultmann regarded such work as methodologically impossible and theologically illegitimate. In *Jesus and the Word* (1958), he wrote, "I do indeed think that we can know almost nothing concerning the life and personality of Jesus, since the early Christian sources show no interest in either, are moreover fragmentary and often legendary; and other sources about Jesus do not

exist" (Bultmann, 8). Bultmann signaled the shift from historical quest to existential encounter. Building on Strauss, he began to demythologize the Gospels and reinterpret them in an existential way.

The New Quest. A student of Bultmann, Ernst Kasemann began the "new quest" in a 1953 lecture. He rejected Bultmann's method as docetic (*see* DOCETISM), because Bultmann disregarded the humanity of Jesus. While he kept most of the presuppositions of the former quest, Kasemann's goals differed. The old quest sought discontinuity between the Christ of Faith and the Jesus of history amid assumed continuity, the new quest was concerned with the person of Christ as the preached word of God and his relation to history. The major work of the new quest is Gunther Bornkamm's *Jesus of Nazareth* (1960).

The Third Quest. The most recent research into the historical Jesus is largely a reaction to the "new quest." It is multifaceted, including some from the radical tradition, a new perspective tradition, and conservatives. In the "conservative" category are I. Howard Marshall, D. F. D. Moule, and G. R. Beasley-Murray. They reject the idea that the picture of the New Testament Jesus was somehow painted by Hellenic Savior cults (*see* MITHRAISM ; APOTHEOSIS).

The new perspective group places Jesus in his first-century Jewish setting. This group includes E. P. Sanders, Ben F. Meyer, Geza Vermes, Bruce Chilton, and James H. Charlesworth. The radical tradition is exemplified by the Jesus Seminar and their interest in the *Gospel of Thomas* and the *Q* document. More about this group can be found in the article, Jesus Seminar. The Jesus Seminar uses many of the methods of Strauss and Bultmann, but unlike the latter, the group is optimistic about recovering the historical individual. Their results to date, however, have yielded very different views, based on a small fragment of New Testament sayings they believe to be authentic.

Evaluation. *False Assumptions about Method and Premises.* With the exception of the conservative resurgence, all the quests have been built on false premises and proceed with fallacious or questionable methods. Most of these are examined in detail in other articles cited. False premises include:

Antisupernaturalism. Miracle accounts and any other references to the supernatural are immediately rejected. This is unjustified (*see* MIRACLE ; MIRACLES, ARGUMENTS AGAINST ; NATURALISM).

Fact/value dichotomy. Kant 's assumption that one can separate fact from value is clearly false, as is evident in the impossibility of separating the fact of Christ's death from its value. There is no spiritual significance in the virgin birth unless it is a biological fact. Nor can one separate the fact of a human life from its value; a murderer inescapably attacks the individual's value as a human by taking the person's life.

A false separation. The quests cannot substantiate the disjunction between the Christ of faith and the Jesus of fact. They assume, without proof, that the Gospels are not historical and that they do not set out the historical person of Jesus.

Denial of Historicity. At the core of the quests is a denial of the historical nature of the Gospels. But their historicity has been substantiated beyond that of other ancient books (*see* NEW TESTAMENT DOCUMENTS, RELIABILITY OF ; NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT, NON-CHRISTIAN SOURCES).

Misunderstanding of "myth." Most quests have not understood the nature of "myth." Simply because an event is more than empirical does not mean it is less than historical. The miracle of the resurrection, for example, is more than a resuscitation of Jesus' body—but it is not less than that. As C. S. Lewis noted, those who equate the New Testament with mythology have not studied too much New Testament; they have not studied enough myths (*see* MYTHOLOGY AND THE NEW TESTAMENT).

False Assumptions about Extra-Biblical Documents. In the most recent radical quest there is a misdirected effort to date the New Testament late and to place extra-biblical documents of *Q* and *The Gospel of Thomas* . But it is well-established that there are New Testament records before 70, while contemporaries and eyewitnesses were still alive. Further, there is no proof that *Q* ever existed as a written document. There are no manuscripts or citations. *The Gospel of Thomas* is a mid-second-century work too late to have figured in the writing of the Gospels.

Jesus Seminar. The Jesus Seminar is a consortium of New Testament scholars, directed by Robert W. Funk, who were organized in 1985 under the auspices of the Estar Institute of Santa Rosa, California. Seventy-plus scholars meet twice a year to make pronouncements about the authenticity of the words and deeds of Christ. The Seminar is comprised of liberal Catholics and

Protestants, Jews, and atheists . Most are male professors, though their number includes a pastor, a filmmaker, and three women. About half are graduates of Harvard, Claremont, or Vanderbilt divinity schools.

Writings. One of the intents of the organization is to publish critical books for a wider range of people than normally read such studies. So the group has a growing literary output. Among the works so far published: Marcus Borg, *Jesus in Contemporary Scholarship* and *Meeting Jesus Again for the First Time* ; John Dominic Crossan, *In Fragments: The Aphorisms of Jesus* , *Jesus: A Revolutionary Biography, The Historical Jesus: The Life of a Mediterranean Peasant* , and *The Other Four Gospels: Shadows on the Contours of Canon* ; Funk, *The Five Gospels* and *The Parables of Jesus* ; and Burton Mack, *Jesus: A New Vision* , *The Myth of Innocence: Mark and Christian Origins* , *The Lost Gospel: The Book of Q and Christian Origins* , and *Who Wrote the New Testament: The Making of the Christian Myth* . The group's crowning effort has been a translation of the Gospels edited by Robert J. Miller, *The Complete Gospels: Annotated Scholars' Version* .

Aims of the Seminar's Work. While Seminar members produce critical works, from its incep tion the Jesus Seminar has sought to make its views available to the general public, rather than just the scholarly community: "We are going to try to carry out our work in full public view; we will not only honor the freedom of information, we will insist on the public disclosure of our work" (Funk, *Forum* , 1.1). To this end the Seminar has sought publicity from every possible source. A TV summit, many articles, interviews with the press, tapes, and even a possible movie are part of this public information campaign for anti-supernatural theology. Funk frankly confessed the radical nature of the work when he said, "We are probing what is most sacred to millions, and hence we will constantly border on blasphemy" (ibid., 8). This is an honest and accurate disclosure of what has happened.

Procedures of the Seminar. The group has used colored beads to vote on the accuracy of Jesus' sayings. A red bead means words that Jesus probably spoke. Pink indicates words that could probably be attributed to Jesus. Gray represents words probably, though not certainly, came from later sources. Black indicates words that Jesus almost certainly did not speak.

The vote was based on a variety of Christian writings other than the four canonical Gospels, including the fragmentary *Gospel of Peter* , the supposed but not extant *Q* or *Quelle* ("source") document, the second-century Gospel of Thomas , and the non-extant *Secret Mark* . *Thomas* is usually treated as a fifth Gospel, on a par with the four canonical books.

Results of the Voting. The results of their work is the conclusion that only fifteen sayings (2 percent) can absolutely be regarded as Jesus' actual words. About 82 percent of what the canonical Gospels ascribe to Jesus are not authentic. Another 16 percent of the words are of doubtful authenticity. The following chart breaks down the proportions of each Gospel in each category and the percentage of "authentic" sayings of Christ. Notice that *Thomas* had a higher percentage of authentic "red" votes than did either Mark or John.

Gospel Sayings	**Red**	**Pink**	**Gray**	**Black**	**Authentic**

Matthew (420 sayings)	11	61	114	235	2.6 %
Mark (177 sayings)	1	18	66	92	0.6 %
Luke (392 sayings)	14	65	128	185	3.6 %
John (140 sayings)	0	1	5	134	0.0 %
Thomas (202 sayings)	3	40	67	92	1.5 %

Conclusions of the Seminar. Several radical conclusions emerge from the work of the Jesus Seminar which seriously affect historic orthodox Christianity, to the extent that they are taken seriously by the public:

1. The "old" Jesus and "old Christianity" are no longer relevant.

2. There is no agreement about who Jesus was: a cynic, a sage, a Jewish reformer, a feminist, a prophet-teacher, a radical social prophet, or an eschatological prophet.

3. Jesus did not rise from the dead. One member, Crossan, theorizes that Jesus' corpse was buried in a shallow grave, dug up, and eaten by dogs.

4. The canonical Gospels are late and cannot be trusted.

5. The authentic words of Jesus can be reconstructed from the so-called " *Q* document," *The Gospel of Thomas* , *Secret Mark* , and *The Gospel of Peter* .

As Funk stated clearly, the Seminar concluded that "the narrative contexts in which the sayings of Jesus are preserved in the Gospels are the creation of the evangelists. They are fictive [fictional] and secondary" ("The Emerging Jesus," 11).

Evaluation. For a more extensive evaluation of the *Gospel of Thomas* and *Q* Document, see those articles. Most issues raised by the Seminar are covered in BIBLE, EVIDENCE FOR ; BIBLE CRITICISM ; CHRIST, DEATH OF ; MIRACLES, ARGUMENTS AGAINST ; NEW TESTAMENT, HISTORICITY OF and RESURRECTION, EVIDENCE FOR . A few other points can be made:

A Radical Fringe of Scholarship. The Jesus Seminar represents a radical fringe of New Testament scholarship, though one that unfortunately includes a large number of mainline

scholars and pastors. The fact that some of their views are adopted by many contemporary scholars is not the point, for truth is not determined by majority vote. Most of the proofs they offer, in addition to the voting procedure, are uncompelling and often nonexistent except for quotations from one another and other liberal scholars as unimpeachable sources. While radical scholars are making considerable noise at the end of the twentieth century, in the broad range of Christian history they are a small minority.

Unjustified Antisupernaturalism. The radical conclusions of the group are based on radical presuppositions, one of which is an unjustified rejection of any miraculous intervention in history by God (*see* MIRACLES, ARGUMENTS AGAINST). One of the chief grounds for rejecting the authenticity of the canonical Gospels is the assumption that any reference to a miracle is not credible. This presupposition crept into biblical scholarship by way of David Hume and David Strauss. David Hume's antisupernaturalism is without foundation.

Unfounded Acceptance of Late Dates. Flowing from the presumption of antisupernaturalism is the tendency to posit dates as late as possible for the writing of the Gospels (at earliest, 70 to 100, and in some arguments later). By doing this they can create enough time between the events and the recording for eyewitnesses to die off and a mythology to develop around the founder of Christianity. Thus they can say that 84 percent of the sayings of Jesus were invented later. However, there are problems with these late dates, and as archaeology broadens understanding of the first-century sources, the position is becoming untenable. Among problems:

Manuscript evidence from the very early second century strongly argues for an Asian origin in the first century.

Gospels are cited in other first-century works (*see* BIBLE, EVIDENCE FOR).

The Gospel of Luke was written before Acts, which has strong evidence for a date of no later than A.D . 60–62 (*see* ACTS, HISTORICITY OF). This is well within the lifetime of Jesus' contemporaries.

The writings of Paul speak of the historicity of the most crucial events in the Gospels, the death and resurrection of Christ. Even critical scholars date 1 Corinthians to ca. A.D . 55–56. This would place it within a quarter century of Jesus' death in 33.

Some critical scholars admit early dates for the basic Gospels. The late Bishop J. A. T. Robinson argued that they were written between 40 and 60. This would place the first records as close as seven years after the events they report.

Even the later dates of the 60s through the 80s do not allow time for mythological distortions to develop. It has been demonstrated that even two generations is too short a period to allow legendary tendencies to wipe out the hard core of historical fact (*see* MYTHOLOGY AND THE NEW TESTAMENT).

Uncritical Acceptance of Q. The method by which the Jesus Seminar was able to come to their radical conclusions with a flourish of scholarly activity was simple. They demoted the first-century and eyewitness contemporary accounts of Jesus' life (the four Gospels) to late works of

mythology and replaced them with nonextant works, such as *Q* , and clearly apocryphal writings, such as *The Gospel of Thomas* . But *Q* is a purely hypothetical document. There are no manuscripts. No one ever quoted such a book or referred to its existence. It is a purely hypothetical literary reconstruction based on unjustified presuppositions. It stands in contradiction to the known evidence.

Use of *Thomas* is questionable on a number of accounts. It is clearly a second-century work, well out of range of contemporaries to the events. It has a heretical agenda, for its teaching is gnostic (*see* NAG HAMMADI GOSPELS). Its claim to be written by an apostle places it in the category of legend. Interestingly, its use to disprove the resurrection overlooks the fact that the work purports to be the words of the resurrected Christ.

Scholars of the Jesus Seminar also use *Secret Mark* and *The Gospel of Peter* . *Peter* is a second- or even third-century apocryphal work that is infamous for its outlandish legends. No one living in recent history has ever seen *Peter* or the copy of Clement's letter that supposedly contained it. How then can its content be used for scholarly judgment on the authenticity of the Gospels?

Circular Reasoning. The reasoning process of the Jesus Seminar is a sophisticated form of the logical fallacy known as *Petitio Princippi* , or begging the question. Its circular reasoning begins with a desupernaturalized view of a first-century religious figure and concludes at the same point.

Conclusion. Despite their desire and achievements for drawing wide publicity, nothing is new in the Jesus Seminar's radical conclusions. They offer only another example of unsubstantiated negative Bible criticism . Their conclusions are contrary to the overwhelming evidence for the historicity of the New Testament and the reliability of the New Testament witnesses. They are based on an unsubstantiated antisupernatural bias.

John, Gospel of. The Gospel of John is an important link in the argument for the deity of Christ and the truth of Christianity. Granting truth is knowable (*see* TRUTH, NATURE OF) the overall argument can be stated (*see* APOLOGETICS, OVERALL ARGUMENT):

1. The theistic God exists.

2. In a theistic universe, miracles are possible (*see* MIRACLE).

3. Miracles in connection with truth claims are acts of God that confirm the truth of God claimed by a messenger of God (*see* MIRACLES, APOLOGETIC VALUE OF).

4. The New Testament documents are historically reliable.

5. In the New Testament Jesus claimed to be God.

6. Jesus proved to be God by an unprecedented convergence of miracles.

7. Therefore, Jesus was God in human flesh.

John's Gospel speaks to the fifth premise, recording Jesus' explicit claims to deity:

> The Father judges no one, but has entrusted all judgment to the Son, that all may honor the Son just as they honor the Father. He who does not honor the Son does not honor the Father, who sent him. [5:22–23]
>
> I tell you the truth . . . before Abraham was born, I am! [8:58]
>
> I and the Father are one. [10:30]
>
> Father, glorify me in your presence with the glory I had with you before the world began. [17:5]

Other claims to Christ's deity claims are unrecorded in the Synoptics as they are in John (for instance, 9:35–38 ; 13 ; 13–15 , and 18:6). Clear statements of an eyewitness apostle about Christ's deity come from John:

> In the beginning was the Word and the Word was with God, and the Word was God. [1:1]

> No one has ever seen God, but God the One and Only, who is at the Father's side, has made him known. [1:18]

> Isaiah said this because he saw Jesus' glory and spoke about him. [12:39–41]

> "My Lord and my God." [The confession of Thomas to the risen Christ, 20:28]

Because these statements have no parallels in the other Gospels, negative critics have dismissed their authenticity. Apologists frequently avoid the issue by sticking to Jesus' claims to deity in the Synoptics (for example, Matt. 16:16–17 ; Mark 2:5–10 ; 14:61–65) and instances where he accepted worship (for example, Matt. 28:9 ; Mark 5:6 ; 15:19).

We cannot afford to bypass John entirely, however. If, as some critics claim, John created these sayings or does not accurately report them, the Gospel accounts are undermined, as well as the rich theological teachings found in John (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF).

Arguments against Historicity. Several arguments are used against the authenticity of John's record:

John was written in the second century, so an eyewitness could not have composed it. Allegedly, the writer put statements that attribute deity into the mouth of Jesus and his disciples.

If John had been written during the second century, that in itself would not make it unreliable. It is not uncommon for other records from antiquity—which critics accept—to be written centuries after the events about which they speak. The earliest life of Alexander the Great was written 200 years later, yet it is used by historians as a reliable source of information. But there is no evidence that John was written so late. No testimonial or documentary evidence contradicts the explicit claims to be an eyewitness of what Jesus said and did. John records: "This is the disciple who testifies to these things and who wrote them down. We know that his testimony is true" (John 21:24). In context the statement clearly identifies the author as the apostle John. There is no evidence to the contrary, so the *prima facie* case for an authentic Gospel is strong.

That case is strengthened by the freshness and vividness of the book, which is lacking in ancient accounts from many years after the events they relate. Background explanation, personal detail, and carefully related private conversation (e.g., John 3 , 4 , 8–10 , 13–17) betray the work of an eyewitness (cf. John 2:6 ; 4:6 ; 6:10 ; 12:3 , 5). For example, John (5:2) mentions five colonnades at the pool of Bethesda. Excavations between 1914 and 1938 uncovered this pool and found it to be just as John described it. Since that pool did not exist in the second century, it is unlikely any second-century fraud would have had access to such detail about persons, places, geography, and topography.

Another charge by critics is that John is too different, both in events and language, to be covering the same man and events as the Synoptic Gospels. Language issues will be discussed below. That the events differ proves too much. If John were written as long as a century after the Synoptics to promote a theological agenda, the tendency would be to refer to some of the same occurrences, simply filling them with new meaning. This does not happen. Yet there is overlap at the obvious points (the crucifixion and resurrection) and in other touchstone occurrences—Jesus walking on water, feeding the 5000, his triumphal entry into Jerusalem, and particularly the last supper. There is no substantial difference among these accounts.

The second-century hypothesis received a fatal blow with the discovery in Egypt of the "John Rylands fragment" of the Gospel, which can be dated as early as 114. John was written in Asia Minor. If copies were circulating in a small town the other side of the Mediterranean by 114, the original was certainly a first-century work.

Tradition has placed John as the last of the Gospels to be written, sometime during the 90s. However, recent research into the Dead Sea Scrolls has caused a few scholars to date John before 70, because of its affinity with Qumran (Guthrie, 261–62). Evidence particularly noted is the simplicity of language and the light-darkness motif so common in Qumran thinking (John 1:4–9 ; cf. 8:12). Even liberal scholars, such as John A. T. Robinson, dated John as early as 40–65 (Robinson, 352). This would place it within a decade of the actual events. This may be a bit too early, but it reflects what has been learned about the author's first-hand acquaintance with the events recounted.

The first-century origin of John, while eyewitnesses were still alive, seems beyond serious dispute. This strongly suggests John's historicity.

John Does Not Use Parables. John's Gospel is distinctive in that it contains none of the parables so characteristic of the Synoptic Gospels. This is taken by some critics as evidence that John is a less trustworthy account. But given other similarities on essential events and teaching, it is difficult to see how the absence of parables proves that John's report is untrustworthy. Nonetheless, four points can be made:

This is an argument from silence. Silence at this point proves nothing logically except that John chose to confine his writing to other matters. He may have done so deliberately, particularly if his was the last Gospel to be written. There is no reason why John should repeat material already available. With three other Gospels in circulation for twenty or thirty years, John's purpose may have been largely supplementary. He was selective, noting that much more happened than could possibly be told (20:30–31 ; 21:24–25).

Jesus uses parabolic speech in John. Craig Blomberg observes that, although John contains no narrative parables, the book presents Jesus as fond of metaphors and figurative or proverbial language (Blomberg, 158). Jesus identifies himself as the good shepherd who seeks to rescue the errant sheep (10:1–16 ; cf., Matt. 18:12–14 ; Luke 15:3–7). Discipleship means servanthood (13:4–5 , 12–17 ; cf., Luke 22:24–27). John introduces sowing versus reaping (4:37); the apprentice son (5:19–20a); slavery versus sonship (8:35); working and walking in the daylight (9:4 ; 11:9–10); the thief, the gatekeeper, and the sheepfold (10:1–3a); the growth of a grain of

wheat (12:24); the vine and vinedresser (15:1–6); and the pain of a woman in childbirth (16:21 ; Blomberg, 158). Rather than showing that John's report is not authentic, such parabolic expression connects the Jesus in John with the Jesus of the Synoptics.

The book covers different times and places. John relates more private conversations, whereas Jesus spoke in parables to the unbelieving crowd (Matt. 13:13–15). Events recorded are not found in the Synoptics. John deals with the early and late ministries of Christ, whereas the Synoptics deal largely with the middle and Galilean ministries. It is understandable that Jesus said things a little differently at different times and places, as does any good itinerant preacher.

John was reaching a new audience. The absence of narrative parables suggests that this preacher's audience is not linguistically Semitic. John uses terms with almost universal religious appeal to minimize communication barriers (Carson, 46). This fits with a date of later than 70, when the Romans conquered Jerusalem and the Gospel was reaching a more diverse, non-Jewish audience.

Jesus' Sayings Are a Different Style. The assumption is made that any dissimilarity in style proves John creates rather than reports the words of Jesus. Logically this does not follow. There are at least three other possible explanations for dissimilarities: (1) The Synoptics may be more accurate than John. (2) John may be more accurate than the Synoptics. (3) They both may be accurately reporting largely different events, and some of the same events in different ways. Evidence supports the latter alternative.

The sayings are largely the same. If John is late and inaccurate, then why does he sometimes report Jesus' statements in the same words as the Synoptics? John and Mark report that Jesus told the paralytic: "Take up your bed and walk" (Mark 2:11 ; John 5:8). Jesus' words to the disciples who saw him walking on the water are, "It is I. Do not be afraid" (Mark 6:50 ; John 6:20). When Jesus appeared to the disciples, he said: "Peace be with you!" (Luke 24:36 ; John 20:19).

However, it is not necessary for reliable reporting to use the exact words, so long as the same meaning is conveyed. At numerous points the substance of what Jesus said is the same in John and in the Synoptic parallel. When feeding the five thousand, Jesus said, "Make the people sit down (cf. John 6:10) and Mark says Jesus commanded them to "make them all sit down" (6:39). In John Jesus defended the woman who anointed him with "Let her alone; she has kept this for the day of my burial" (12:7). Mark records: "She has come beforehand to anoint my body for burial" (14:8). Of Judas' betrayal Jesus said in John, "I tell you the truth, one of you is going to betray me" (13:21). Mark records, "I tell you the truth, one of you will betray me—one who is eating with me" (14:18). In John 13:38 Jesus said to Peter, "Will you really lay down your life for me? I tell you the truth, before the cock crows, you will disown me three times!" Luke reads, "I tell you, Peter, before the cock crows today, you will deny three times that you know me" (Luke 22:34). Here John agrees with one Synoptic and Mark deviates, mentioning two, rather than three, crowings (Mark 14:30). In John 18:11 Jesus said to Peter, "Put your sword away!" Matthew 26:52 reads, "Put your sword back in its place."

John records specific teachings that closely resemble the Synoptic Gospels:

Jesus is the “Son of man” (1:51 ; 5:27 ; 8:28 ; cf. Matt. 9:6 ; 16:13 ; 20:18 ; Mark 2:10 ; 8:31 ; 10:45 ; Luke 12:40 ; 19:10 ; 24:7 , in all 80 occurrences).

Jesus taught with authority (2:18 ; 5:27 ; 10:18 ; cf. Matt. 7:29 ; 9:6 ; 28:18 ; Mark 1:22 , 27 ; Luke 4:32 , 5:24).

One must be born again to enter the kingdom of God (3:3 ; cf. Mark 10:15).

An abundant harvest awaits the laborers (4:35 ; cf. Matt. 9:37–38).

A prophet is without honor in his homeland (4:44 ; cf. Mark 6:4).

Jesus corrected Jewish tradition, especially about the Sabbath (5:9b–16 ; 7:22–23 ; cf. Matt. 12:1–13 ; Mark 2:23–3:5 ; Luke 13:10–17).

Unbelievers will be judged according to their works (5:29 ; cf. Matt. 25:46).

Jesus has unique Sonship with God, including the right to call God *Abba,* Father (5:37 ; 17:11 ; cf. Matt. 3:17 ; 18:10 ; Mark 14:36 ; Luke 3:22 ; 9:35 ; 23:46).

Jesus is the light of the world (8:12 ; cf. Matt. 5:14).

Jesus taught, in part, to harden hearts of those opposed to him (9:39 ; cf. 12:39–40 ; Mark 4:12 ; 8:17).

The good shepherd rescues his flock (10:1–16 ; cf. Matt. 18:12–14 ; Luke 15:3–7).

The Father reveals the Son; no one knows the Father but the Son (10:14–15 ; 13:3 ; 17:2 , 25 ; cf. Matt. 11:25–27).

Jesus was tempted to abandon the way of the cross (12:27 ; cf. Mark 14:35–36).

Receiving Jesus means receiving the Father (12:44–45 ; cf. Matt. 10:40 ; Mark 9:37 ; Luke 10:16).

True discipleship means servanthood (13:4–5 , 12–17 ; cf. Luke 22:24–27).

The disciple is not greater than his master (13:16 ; cf. Matt. 10:24 ; Luke 6:40).

The Holy Spirit will give the disciples their message to authorities (14:26 ; 15:26 ; cf. Matt. 10:19–20 ; Mark 13:11).

The disciples will be expelled from synagogues (16:1–4 ; cf. Matt. 10:17–18 ; Mark 13:9).

The disciples will be scattered over the world (16:32 ; cf. Mark 14:27).

Christians have authority to retain or forgive sins (20:23 ; cf. Matt. 18:18 ; Blomberg, 157–58).

"Johannine" type passages are in the Synoptics. Matthew 11:25–27 records a typical "Johannine" type passage that presents Jesus using the same straightforward, nonparabolic discourse that John attributes to him. In fact, it sounds so Johannine that, unless one knew it came from Matthew, the assumption would be that it came from John. Luke 10:21–22 also is in the Johannine style. Thus, the so-called "Johannine" style of Jesus' sayings is not unique to the Gospel of John. Rather, it could represent an actual mode of speaking Jesus often used.

The "I Am" Sayings of Jesus Are Unlike What Jesus Said in the Synoptics. Since the seven "I am" statements (4:26 ; 6:35 ; 8:12 , 58 ; 10:9 , 11 ; 11:25 ; 14:6) are exclusive to John, some claim it unlikely that Jesus said them, at least in that form.

Actually, the sword of this argument cuts both ways. One could argue equally that the Synoptic sayings cannot be trusted because they differ from the Johannine statements. But it is not accurate to say that the Synoptics have no statements of Jesus using this implied identification with *JHWH* of the Old Testament. "I am he" (Gk: *ego eimi*) is based in the Old Testament proclamation of God to be God (cf. Deut. 5:6 ; 32:39 ; Ps. 46:11 ; Isa. 40–45 , passim). In Matthew 11:25–27 and Luke 10:21–22 the Synoptics use a similar style of expression. Most explicit is Jesus' statement to the high priest in Mark 14:62 , " *I am* [the Christ]." In a demonstration of power approaching an epiphany, Jesus told the disciples, "Take courage! *I am* he. Don't be afraid" (Mark 6:50 , emphasis added).

Also, where would John or the other authors get this remarkable form? Ancient apocryphal writers tried to make their style conform to a format that was accepted as genuine. No other known first-century religious leader used statements like these. The closest nonbiblical parallel comes from the Jewish Qumran *Damascus Document* . It states "Seekest thou the God of Gods? I am He," followed in the next chapter by "I am He, fear not, for I am before the days were" (cited in Stauffer, 179; note how God makes similar statements in Ps. 46:2 and Isa. 43:1).

The content of John's "I am" statements is implied in the Synoptics. Craig Blomberg has noted that all four Gospels depict a man whose words would last forever, who forgave sins, who related humanity's destiny to himself, who demanded absolute loyalty, who offered rest for the weary and salvation for the lost, who promised to be with his followers always, and who guaranteed that God would answer prayers in his name (166). The form's use by Jesus in both the Synoptics and John reveals his self-claim to deity. As Stauffer argued, " 'I am He'—meant: where I am, there God is, there God lives and speaks" (Stauffer, 194–95).

Arguments for the general authenticity of John apply to the "I am" sections. There is no good reason to suspect that John and the Synoptics are not independently authentic. These sections agree in all major areas of overlap, often down to details. John also uses third-person statements like those more common in the Synoptics. In John 10:1–7 he obviously turns to first-person because his hearers don't understand the meaning of his third-person illustration.

“I tell you the truth, the man who does not enter the sheep pen by the gate, but climbs in by some other way, is a thief and a robber. . . .” *Jesus used this figure of speech, but they did not understand what he was telling them. Therefore Jesus said again, “I tell you the truth, I am the gate for the sheep.”* [John 10:1 , 6–7 , emphasis author’s]

Jesus may have used the shorter, simpler style quoted by John on many occasions for emphasis or when the audience did not understand.

Since John stresses the antagonism of Jewish leaders to Jesus (see John 5:16 , 18 ; 7:1 ; 10:31 , etc.), it is understandable that “I am” statements would occur in John.

There is no proof John created the seven “I ams” or the seven “signs” (miracles) by which John supported Jesus’ theme (cf. 20:30–31). Both were chosen for inclusion in the Gospel to make his point. It happens that there is no overlap of “sayings” in John with those in the Synoptics. Why should there be if he is consciously supplementing the already available Synoptics from the wealth of material that “even the world itself could not contain” (John 21:25)?

There is overlap between John and the Synoptics at some points, in particular the signs or miracles Jesus performed. Jesus’ walking on the water and feeding the five thousand in John 6 , and his resurrection in John 20 appear in the Synoptics with no significant variation from John’s accounts. If the book shows no inauthentic additions or exaggerations in reporting the signs of Jesus, there is no reason to doubt John’s reporting of what Jesus said.

Finally, it was John who wrote that Jesus promised divine activation of the memories of the apostles about “everything . . . [Jesus] said” (John 14:26 ; 16:13). If memories were supernaturally activated by the Holy Spirit, there is no real problem understanding how the writers of the Gospels could closely reproduce what Jesus said decades later.

The Brevity of Jesus’ Sayings Shows That They Are the Words of John. Another charge regarding the style of Jesus’ discourse is that the brevity shows the work of a writer as well as a redactor. This overlooks that not all John’s accounts of Jesus’ words are brief (cf. John 3:3–21 ; 5:19–47 ; 6:26–58 ; 10:1–18). The “Upper Room” discourse covers three chapters (John 14–16), rivaling the Sermon on the Mount of Matthew 5–7 in length. John 17 relates the longest prayer of Jesus.

On the other side, the Synoptics record brief statements of Christ. Matthew provides the pithy “Give to Caesar what is Caesar’s, and to God, what is God’s” (22:21). Mark records, “Everything is possible for him who believes” (9:23), and Luke, “Man shall not live by bread alone” (4:4). Note such statements as Luke 18:27 ; 23:34 , 43 , 46 .

Why should brevity be a sign of inauthenticity? One could just as easily use this argument to conclude that Lincoln never gave the Gettysburg Address. Obviously there were times when Jesus spoke expansively and times when his words were crisp and succinct.

John shows careful attention to accuracy in Jesus' words. He distinguishes what Jesus said (which the disciples usually did not then understand) from what the disciples later came to understand what he had meant. Jesus said, "Destroy this temple, and I will raise it again in three days." John adds, "After he was raised from the dead, his disciples recalled what he had said. Then they believed the Scripture and the words that Jesus had spoken" (John 2:19 , 22 ; cf. 20:9). What Jesus actually said to John is distinguished from what the other disciples mistook him to say (21:22–23). Other Gospels make the same distinction (cf. Mark 3:30). So, the brevity of statements recorded in John is no sign that Jesus did not actually say these things.

The "Verily, Verily" ("Amen, Amen") Statements Are Unique to John. Again, it is supposed by critics that John's unique use of "Verily, verily" (KJV) in the mouth of Jesus indicates that Jesus never really used this form of emphasis (John 1:51 ; 3:3 , 5 , 11 ; 5:19 , 24 , 25 ; 6:26 , 32 , 47 , 53 ; 8:34 , 51 , 58 ; 10:1 , 7 ; 12:24 ; 13:16 , 20 , 21 , 38 ; 14:12 ; 16:20 , 23 ; 21:18). This phrase is not used in the Synoptics, but "Verily, verily I say unto you" (John 13:38) has parallels in "Verily I say unto you" (Matt. 26:34 and Mark 14:30). The doubling may indicate emphasis (see Blomberg, 159). The NIV "I tell you the truth" and the NKJV "Most assuredly" capture the idea of emphasis in a single phrase.

There is no reason to suppose that Jesus did not speak that way on occasion. Jesus' discourses in John are generally at different times (early and late ministry) and in different places (Judea, rather than Galilee), and even to different people (e.g., the Samaritan woman would not have the same false political expectations of the Messiah as did the Jews— 4:25–26 (see Carson, 58). John gives more private conversations than do the Synoptics. John records Jesus' private discourse to Nicodemus (chap. 3), to the woman at the well (chap. 4), to the adulteress (chap. 8), and to the disciples (chaps. 13–16). During his ministry Jesus avoided making explicit public claims to be the Messiah. Yet he did not hesitate to do so in private (4:25–26) and before the high priest (Mark 14:61–65). Jesus used speech appropriate to the occasion.

Some evangelical scholars suggest that John's doubling of *verily* (" *amen* ") was for homiletic reasons. Behind this view is the contention that the Gospel of John was composed as a sermon (cf. 20:30–31). Thus, D. A. Carson argues (46). Accordingly, Jesus may have actually said " *amen* ," but John doubled as a rhetorical device. While this is possible, it seems better to conclude that any doubling resulted from the writer's desire to express for a reader an emphasis that only a listener could have detected in the tone of Jesus' voice when he said it. Better yet, there is no reason why Jesus could not have actually said " *amen, amen* " on these occasions, just as John records. There are no parallel passages in the Synoptics that contradict this.

There Are Vocabulary Differences in John. Some 150 words of Jesus' mouth in John are not found in the other Gospels (Carson, 45). Many of these are so general that Jesus should have said them as part of his normal discourse, if he used them at all. This is offered as evidence that John created, not reported, what Jesus said.

nkjv New King James Version

Such an argument neglects to take into account that any good communicator uses words to fit the occasion. And since it is generally acknowledged that Jesus spoke in Aramaic, there is room for a different word choice in Greek by the recorder as translator. All of this brings up a point that applies to various arguments about the Gospels' quotations of Jesus. A discourse or dialogue may be reported verbatim or in a condensed version (Westcott, cxv–cxix). The style and purpose of reporting may vary. Carson notes, "At some point capturing the flavour of a discourse by including an array of verbatim phrases and quips may be important; at another, it may be far more strategic to zero in on the essential argument and outline it fairly, even if the language used is quite different from that of the original address" (46). Thus, many conservative scholars are willing to accept that not all Jesus' statements may be preserved *ipsissima verba* (in the exact words) but only *ipsissima vox* (with the same meaning).

Tense and other grammatical markers also influence word selection, as Carson points out. If the "historic present" is used relatively frequently in narrative, but infrequently in the discourses, the pattern has been shown to give no support to current source theories that attempt to assign these sections to different redactors (Carson, 45).

The argument against the authenticity of these statements is a form of the *petitio principii* fallacy, that is, begging the question. The only reason there is a problem is because these different modes of expression found in John are not taken into consideration in determining what constituted Jesus' style. But this begs the question by assuming that John's expressions are not part of the authentic way Jesus spoke.

The Record and Order of Events Differ. Another argument against the reliability of John's account is that the order of events is sometimes different. The vast majority of John 1–17 and 21 appears in none of the other Gospels, so relative sequence is not an issue.

John places the cleansing of the temple early in Jesus' ministry (2:13–22) but it is placed late in the Synoptics (cf. Mark 11:15–19). Jesus was fulfilling prophecy when he attacked the buying and selling in the Court of the Gentiles. He was making a vital point about extending the kingdom to the Gentile world. So it is entirely possible that Jesus did this object lesson twice, once near the beginning of his work, and after he arrived in the city for his final struggle. This is supported by differences in the accounts. John does not speak of the open hostility of the temple leadership, as does Mark, who intimates that this final cleansing reinforced their intention to kill him, "for they feared him, because the whole crowd was amazed at his teaching" (Mark 11:18). This antagonism from the authorities characterized Jesus' later ministry. That he used the same Old Testament text to rebuke them should be expected, since he was confronting them over the same sins (cf. Matt. 4:4 , 7 , 10).

None of the Gospels claim to be written in chronological sequence. Topical message, rather than sequence, orders the text. Within an overall chronology, if a pericope of the same event is placed in a different place, it may be serving a slightly different literary purpose. Matthew and Luke place the order of the three temptation events in a different order (cf. Matthew 4 and Luke 4). The argument that John's sequence shows that it is a late and unreliable record does not follow. It could be supplementary material or written with different themes in mind. Regardless

of sequence, the events that John shares with the Synoptics show considerable agreement in detail as noted by Blomberg (156–57):

In both, Jesus gives sight to the blind, raises the dead, and cures an official's son at a distance (John 4:46b–54 ; Luke 7:1–10 par.).

In both, Jesus defies traditional Sabbath law interpretations (John 9:6–7 ; Mark 8:23–25).

Both tell of Jesus refusing to work miracles simply to satisfy his opponents (John 6:30–34 ; Mark 8:11–13 pars.).

Both report attempts to arrest Jesus that fail (John 8:59 ; 10:39 ; Luke 4:29–30).

Both describe his friendship with Mary and Martha (John 11:20 ; 12:2–3 ; Luke 10:38–42).

In both, he is accused of demon possession (John 10:19–21 ; Mark 3:22).

In both, John the Baptist is the voice crying in the wilderness of Isaiah 40:3 and the forerunner of the Messiah (John 1:23 / Mark 1:2–3 pars.).

John's baptism with water is contrasted with the Messiah's coming baptism with the Spirit (John 1:26–27 , 33 / Mark 1:7–7 pars.).

The Spirit anoints Jesus, as testified by the Baptist (John 1:32 / Mark 1:10 pars.).

The five thousand are fed (John 6:1–15 / Mark 6:32–33 pars.).

Jesus walks on the water (John 6:16–21 / Mark 6:45–52).

Gerhard Maier lists additional similarities between John and Matthew (cited in Blomberg, 159). This is particularly interesting since Matthew is usually viewed as the least similar to John by the critics.

Both use Old Testament quotations and announce their fulfillment.

Both record frequency, extent, location, and instructional nature of extended sermons of Jesus.

Both share elaborate farewell speeches (the Upper Room and Olivet Discourses).

Both emphasize the private instruction of the disciples.

Both cite an evangelistic purpose, with the Gospel being offered "first to the Jew and then to all the Gentiles."

John Has a Late Christology. An often-stated reason for rejecting John's accuracy in reporting Jesus' words is its supposed "late" and "highly developed" Christology, which stressed

his full deity (for example, in John 1:1 ; 8:58 ; 10:30 ; 20:29). This objection is based on an unjustified dialectical view of doctrinal development. Critics, following F. C. Baur, read a Hegelian (*see* HEGEL, G. W. F .) developmental view into the Gospel record (Corduan, 90–92). They begin with the view that John must have been late, since his views were a synthesis of the earlier conflict between the thesis of Peter and the antithesis of Paul. But this thesis-antithesis view is itself indefensible.

Mark (held by most of these same critics to be the earliest Gospel) has deity claims by and about Christ. For example, when Jesus claimed to forgive sins the Pharisees saw this as a claim of deity and responded, "Why does this fellow talk like that? He's blaspheming! Who can forgive sins but God alone?" (Mark 2:7). And when Jesus was asked under oath whether he was the Messiah (whom the Old Testament said would be God— Ps. 45:8 ; Isa. 9:6 ; Zech. 12:10), Jesus responded clearly: "I am. And you will see the Son of Man sitting at the right hand of the Mighty One and coming on the clouds of heaven" (Mark 14:62). The reply clearly acknowledges his claim to be God, and the Sanhedrin used it to condemn Jesus of "blasphemy" (vs. 64). Outside the Gospels, Paul's Roman epistle (ca. 56), which is believed by many to be earlier than the Gospels, has a strong description of Christ's deity, proclaiming him "God over all" (Rom. 9:5).

Many of Jesus' strongest deity claims come in the context in which he is challenged or confronted by the crowd. While this applies to both John and the Synoptic Gospels (cf. Mark 2:7–10 ; 14:61–62 ; John 10:24 , 30–33), John emphasizes the antagonism of "the Jews" (see John 5:16 , 18 ; 7:1 ; 10:31). It is understandable that he would pay special attention to the clear claims to deity.

It was not the primary purpose of the Synoptics to stress the deity of Christ. Matthew's Jewish emphasis was on the long-awaited Messiah. Mark stressed Jesus as a Servant (Mark 10:45). Luke stressed Jesus' humanity. John's express purpose was to show that Jesus was God incarnate (1:1 , 14 ; 20:31). It is no surprise that there are more claims to deity in his Gospel. At the very climax of his Gospel John reports that Thomas declared Christ's deity, proclaiming him as "My Lord and My God" (20:28). If this is not accurate, then John is misrepresenting the central point of his book, that Jesus' miracles led his disciples to recognize his true identity as God (see 20:28–31).

Conclusion. Arguments against the authenticity of the sayings of Jesus in John's Gospel seem to be based more on *a priori* philosophical grounds than on actual historical and textual evidence. There are reasonable explanations for differences based on where, when, to whom, and under what circumstances Jesus spoke. Most of these are accounted for on the reasonable premise that John wrote a later and consciously supplementary Gospel. He deliberately avoids repeating what the other Gospels have said unless it is really important to the theme. As seen in the areas of overlap, the parallels of John to the Synoptic Gospels are substantial.

There is no real evidence in any of these cases that John is creating, rather than reporting, what Jesus said. To the contrary, John's account is so fresh, vivid, private, detailed, and personal that it manifests an intimate, first-hand witness by the one writing it. There is reason to believe that John preserved the original words of Jesus or the same meaning *,* if not the exact words.

The reasons for accepting the authenticity of John's Gospel are as good or better than those supporting the Synoptics. All can be accepted in good conscience as historical. Matthew and Mark parallel Luke, and Luke discusses its own historiographical method and accuracy (*see* ACTS, HISTORICITY OF):

> Many have undertaken to draw up an account of the things that have been fulfilled among us, just as they were handed down to us by those who from the first were eyewitnesses and servants of the word. Therefore, since I myself have carefully investigated everything from the beginning, it seemed good also to me to write an orderly account for you, most excellent Theophilus, so that you may know the certainty of the things you have been taught. [Luke 1:1–4]

If Matthew and Mark tell substantially the same story as Luke, then they are just as historically re liable as Luke. And if John's parallel material does not deviate in substance from the Synoptics, the burden of proof is on the critics to show solid reasons why his testimony should not be taken as historically reliable (*see* NEW TESTAMENT, HISTORICITY OF).

John's differences in language use from the Synoptics can be explained largely by location (Judean), date (early and late ministry), and nature (many private conversations). The "I am" claims can be understood as shorter, simpler statements Jesus made to those who did not at first understand him. Indeed, the fact that John's account is so intimate, fresh, and detailed argues strongly for its authenticity.

John's link in the apologetic argument is one of the strongest in the chain. Indeed, it is the only Gospel that claims to be written by an eyewitness apostle (John 21:24–25). Carson concludes: "It is altogether plausible that Jesus sometimes spoke in nothing less than what we think of as 'Johannine' style, and that John's style was to some degree influenced by Jesus himself. When all the evidence is taken together, it is not hard to believe that when we listen to the voice of the Evangelist in his description of what Jesus said, we are listening to the voice of Jesus himself" (Carson, 48).

Justin Martyr. Justin Martyr (100[?]–164) was one of the early-second-century Christian apologists (*see* CLASSICAL APOLOGETICS). He was born of pagan parents in Samaria. He embraced Christianity in 130. Later, he taught at Ephesus, where he engaged in, and wrote, *Dialogue with Trypho the Jew* (ca. 130). Eventually, he opened a Christian school in Rome. There he wrote his *First Apology* (ca. 155). *Second Apology* (ca. 161) was addressed to the Roman Senate. His emphasis on Greek philosophy and reason has led some to wrongly conclude that he was a rationalist. Like other early church fathers, Justin believed in the inspiration and divine authority of Scripture.

Alleged Rationalism. Cited as evidence of his alleged rationalism is Justin's statement that even Greeks who "lived a reasonable and earnest life" knew Christ the Logos (2.8). He went so far as to say that Christ "is the Word of whom every race of men were partakers; and those who lived reasonably *(meta logou)* are Christians, even though they have been thought atheists" (1.46).

The Role of Reason. These citations notwithstanding, it is unwarranted to conclude that Justin believed that pagans could be philosophized into the kingdom. His critics misunderstand a subtle view of faith and reason.

Justin stated emphatically that his faith was in Christ, not Socrates; it was in Christianity, not philosophy. He wrote: "And the right Reason [Christ], when He came, proved that not all opinions nor all doctrines are good, but that some are evil, while others are good" (ibid., 2.9). Justin believed Christianity superior to Greek philosophy, declaring, "Our doctrines, then appear to be greater than all human teaching. . . . For whatever either lawgivers or philosophers uttered well, they elaborated by finding and contemplating some part of the Word. But since they did not know the whole Word, which is Christ, they often contradicted themselves" (ibid., 2.10). Christian teachings "are more lofty than all human philosophy" (ibid., 2.15). Justin stated that no one trusted in Socrates enough to die for him, as they did for the teachings and presence of Christ (ibid., 2.10).

Like many other early Fathers, Justin believed that what truth there was in Greek philosophy was borrowed from divine revelation of Hebrew Scripture (ibid., 1.60). At best, Greek philosophy had only partial and dim truth, but Christianity had truth completely and clearly. Hence, "whatever things were rightly said among all men, are the property of us Christians" (ibid., 2.13).

View of Resurrection. Since Justin was so close in time to the apostles and since the resurrection is so crucial to Christianity, his view of the resurrection is of more than passing interest (*see* RESURRECTION, EVIDENCE OF).

Resurrection Is Possible. Against those who denied the resurrection, Justin confronted those who said they were believers yet thought it impossible that God could raise the dead. God, he said, had demonstrated his power in creating the first man, "for he was made from the earth by God. . . . But now we are demonstrating that the resurrection of the flesh is possible" (in *Ante-Nicene Fathers* , 1.294–99). Justin declares, "Let the unbelieving be silent, even though they themselves do not believe. But, in truth, He has even called the flesh to the resurrection, and promises to it everlasting life. For where he promises to save man, there He gives the promise to the flesh" (Justin., chap. 8).

A Physical Resurrection (see RESURRECTION, PHYSICAL NATURE OF) . Justin admitted that there were those who maintained that Jesus had appeared only in a spiritual, with only the appearance of flesh. Such people robbed Christians of a great promise (ibid., chap. 2). "If the resurrection were only spiritual, it was requisite that He, in raising the dead, should show the body lying apart by itself, and the soul living apart by itself. But now He did not do so, but raised the body, confirming in it the promise of life." Otherwise, why did Christ rise in the body in which he had been crucified and let the disciples handle his body when they doubted? "And they were by every kind of proof persuaded that it was Himself, and in the body, they asked Him to eat with them, that they might thus still more accurately ascertain that He had in verity risen bodily" (Justin, chap. 9). Justin Martyr observed that Jesus also proved the possibility of flesh ascending to heaven, showing that the dwelling place of the physical resurrection body of Christians is in heaven.

"The resurrection is a resurrection of the flesh which died. For the spirit dies not; the soul is in the body, and without a soul it cannot live" (ibid., chap. 10).

Conclusion. The first apologists, like Justin, were not as systematic as such later apologists as Thomas Aquinas. Nevertheless, Justin was far from a rationalist in his use of reason. He believed firmly in the superiority and necessity of divine revelation. However, there is no doubt that Justin, like classical apologists after him, used reason to explain and defend the Christian faith (*see* CLASSICAL APOLOGETICS).

Kk

Kabir (Kabirpanthis). Kabir was an Indian teacher and religious reformer who flourished in fifteenth-century North India. He revolted against the caste system of Hinduism (*see* HINDUISM, VEDANTA) and spawned a number of sects, the last of which was Sikhism . His disciples were called Kabirpanthis and were drawn from Hinduism and Islam.

Not surprisingly, he was disliked by both Hindus and Muslims. Brahmans decried him as an associate of a woman of ill-fame. Kabir was denounced by the king of Delhi for allegedly laying claim to deity. He died at Maghar near Gorakhpur. His followers believe that he was an incarnation of deity whom his mother found floating on a lotus (*see* APOTHEOSIS ; DIVINE BIRTH STORIES). There are also legends about his mother being a virgin, or that he was born from his mother's hand while she was widowed.

Kabir left no writings, but he did inspire rhyming couplets, hymns, poems, and odes (found in Khas Grantha). Some fifty years after his death many of Kabir's sayings were compiled by Bhago Das. A number of these are included in the Adi Granth of the Sikhs. He was probably a disciple of Ramanand of the Viasnava school of thought. His teaching was one of the main sources drawn on by Nanak Shah, the founder of Sikhism. He was one of the first thinkers to try to influence both Hinduism and Islam. He had some knowledge of Sufism, a mystical cult of Islam (*see* ISLAM ; MYSTICISM).

It is not clear whether he believed in a distinct heaven or hell . He did, however, believe in reincarnation. His followers believe that souls enter into heaven or hell between their incarnations (Burn, 633). Kabir was antiritualistic. He rejected the outward symbols and practices of Hinduism. He was also theistic, believing in a supreme being called Ram. His God had several names: Ram, Ali, and Karim. Polytheism is an illusion *(maya).* Contrary to Hinduism and Islam, he believed that salvation was by faith, not by works. In the search for God a guide is necessary. However, such a teacher should not be accepted blindly without being tested. Since we all owe our existence to the same God, we should show tenderness to all that live.

An important teaching of Kabir is the doctrine of the Sabda, or the Word. Any one who wished to know the truth must turn from the many words to the Word. The Word is the gateway to truth. He said, "I am a lover of the Word, which has shown me the unseen (God)" (Burn, 633).

The Alleged Resurrection of Kabir. After his death in 1518, his Muslim and Hindu followers were divided over whether to cremate his body, a practice Hindus favor and Muslims oppose. Kabir himself is said to have appeared to stop the controversy. When he directed them to draw back the cloth placed over his body, they found only flowers. His Hindu followers burned half of the flowers and the Muslims buried the other half. There are significant problems with any attempt to verify such claims. And the differences between them and the resurrection of Christ are decisive (*see* RESURRECTION, EVIDENCE FOR ; RESURRECTION CLAIMS IN NON-CHRISTIAN RELIGIONS).

Kahler, Martin. Martin Kahler (1835–1912) studied theology at Heidelberg, Tubingen, and Halle and was professor at the University of Halle. He once referred to his studies under F. C. Baur at Tubingen as a "critical cold water bath" (see Strimple, 90). His principal works in theology were *Die Wissenschaft der christlichen Lehre* (1883) and *Geschichte der protestantischen Dogmatik im 19. Jahrhundert* (pub. 1962). His most influential work, *The So-Called Historical Jesus and the Historic, Biblical Christ* (1892) was translated into English in 1964.

Kahler is credited as the impetus for the "second quest" for the historical Jesus (*see* CHRIST OF FAITH VS. JESUS OF HISTORY ; QUEST FOR HISTORICAL JESUS). Kahler attacked the nineteenth-century attempt to reconstruct the Jesus of History as an exercise in speculation. He claimed the "real Christ" is the Christ of faith, not the Jesus who is the result of so-called historical research (*see* BIBLE CRITICISM). The real Christ is the Christ of the Christian *kerygma* (proclamation), who is available to all.

Kahler's views gave impetus to both conservatives and liberals. Liberal and neo-orthodox accepted his conclusion that faith cannot be dependent on historical research (*see* FIDEISM). Conservatives rejoiced when he repudiated attempts to separate the Jesus of history from the Christ of faith.

Misunderstanding Kahler. Kahler is the father of the German distinction between the "historical" (*historisch*) Jesus and the "historic" (*geschichtlich*) Christ. However, it is doubtful that he meant this distinction to be used as it has been in New Testament critical scholarship. When Kahler referred to the "so-called" historical Jesus, he had in mind the reconstructed Jesus who resulted from liberal critical scholarship, not the Jesus of the first century. As Robert

---

ERE *Encyclopedia of Religion and Ethics*

Strimple put it, “Kahler’s treatise and its title are misused when they are appealed to in support of the twentieth-century distinction between ‘the Jesus of History’ and ‘the Christ of faith.’ ” As Carl E. Braaten said in his “Introduction” to the English translation of *The So-Called Historical Jesus* , “The ‘historical Jesus’ is not the earthly Jesus as such, but rather Jesus insofar as he can be made the object of historical-critical research. The term has primary reference to the problem of historical knowledge, and does not intend to deny or devalue the historicity of revelation” (Strimple, 92).

Kahler never denied the historical reliability of the New Testament. He did not reject the general picture of Christ presented in Scripture. He simply insisted that neither the Gospel sources nor the historian’s naturalistic methods were adequate to produce a true biography of the real Jesus (ibid., 93). He did not deny that the Gospels present “a trustworthy picture of the Savior for believers” (ibid., 94).

Kahler emphasized that using Ernst Troelsch’s principles of analogy cannot yield the real Jesus. This requires analogies in the present through which we can understand the past (*See* ANALOGY, PRINCIPLE OF ; HISTORY, OBJECTIVITY OF). “The distinction between Jesus Christ and ourselves is not one of degree, but of kind” (ibid.).

Thus the canons of naturalistic history can never discover the incarnate Son of God.

“Kahler sought to deliver the Christian believer from the tyranny of the expert, the papacy of the professor” writes Strimple (ibid., 95). He asked, “Should we expect [believers] to rely on the authority of the learned men when the matter concerns the source from which they are to draw the truth for their lives? I cannot find sure footing in probabilities or in a shifting mass of details, the reliability of which is constantly changing” (Kahler, 109, 111). This is reminiscent of Gotthold Lessing and his “ugly ditch” and the later question by Soren Kierkegaard , “How can something of an historical nature be decisive for an eternal happiness?” (Kierkegaard, 86). However, Kahler never understood his view in the sense in which Bultmann and later critics have taken it to pit the Christ of faith against the Jesus of history.

Reliable but Not Inerrant. Kahler did reject verbal inspiration and inerrancy of Scripture (*see* BIBLE, EVIDENCE OF), which he called an “authoritarian faith” (Kahler, 72). He derided the idea that only the inerrancy of Scripture regarding every incidental matter could guarantee its trustworthiness about the central point. He believed we should “approach the Bible without detailed theories about its nature and origin.” The Gospel tradition was “inherently fallible” and the Bible as a book “contains” God’s revelation (Kahler, 91, 106, 112–14).

Nevertheless he maintained that the Bible is the only fully sufficient means of coming to the “safe harbor” of faith in the living Christ. For “the more converse a person has with the Bible itself, the more he finds that the drawing power of the Savior merges with the authority of the Bible” (ibid., 76). He added, “We have been hasty in following Lessing’s counsel to read the Bible as we read other books” (ibid., 123).

According to Kahler, the Bible presents a generally reliable picture of the historical Christ. “The biblical picture of Christ, so lifelike and unique beyond imagination, is not a poetic

idealization originating in the human mind. The reality of Christ himself has left its ineffaceable impress upon this picture” (ibid., 79–90, 95). This impression of Christ is once again found in the “big picture” of the Bible, not the minute one:

> Nowhere in the Gospels do we detect a rigorous striving for accuracy of observation or for preservation of detail. . . . Nevertheless, from these fragmentary traditions, these half-understood recollections, these portrayals colored by the writers’ individual personalities, these heartfelt confessions, these sermons proclaiming him as Savior, there gazes upon us a vivid and coherent image of a Man, an image we never fail to recognize. In his incomparable deeds and life (including his resurrection appearances) this Man has engraved his image on the mind and memory of his followers with such sharp and deeply etched features that it could be neither obliterated nor distorted. [ibid., 141–42]

This is “a tangible human life, portrayed in a rich and concrete though brief and concise manner.” Once we get past the demand for an infallible biblical record, we can appreciate even the trustworthiness of the legends, so far as this is conceivable” (ibid.). This is not a fundamentalist’s view of Scripture, but it is far from the radical liberal who denies the basic historicity of the Gospels.

While Kahler upheld the general reliability of Scripture, he did not place his faith in the historical. Faith is generated in the heart by God. He wrote, “We want to make absolutely clear that ultimately we believe in Christ, not on account of any authority, but because he himself evokes such faith from us” (ibid., 87). The independent faith of the New Testament, was in Kahler’s mind expressed by the Samaritans in John 4:42 : “We no longer believe just because of what you said; now we have heard for ourselves, and we know that this man really is the Savior of the world” (ibid., 76–77).

Evaluation. The question of the historicity and inspiration of Scripture is dealt with in detail in such articles as ACTS, HISTORICITY OF ; BIBLE CRITICISM ; BIBLE, EVIDENCE FOR ; LUKE, ALLEGED ERRORS IN ; MIRACLE, MYTH AND , and NEW TESTAMENT, HISTORICITY OF . The attempt to separate fact and faith is treated in such articles as FIDEISM ; FAITH AND REASON , and KANT, IMMANUEL . The attempt to build a wall between faith and history is discussed in the articles CHRIST OF FAITH VS. JESUS OF HISTORY and JESUS SEMINAR .

While it is true that faith is ultimately not based on the historical, but on God who evokes it, this does not mean that the Christian faith is not focused in and supported by the historical (*see* HOLY SPIRIT, ROLE IN APOLOGETICS). Neither does it mean that the revelation from God that evokes true faith is not mediated through the historical. God is the primary and remote cause, but the historical data about Christ is the secondary and mediate cause of the revelation that evokes faith.

***Kalam* Cosmological Argument.** The cosmological argument is the argument from creation to a Creator. It argues *a posteriori* , from effect to cause and is based on the principle of causality (*see* CAUSALITY, PRINCIPLE OF ; FIRST PRINCIPLES). This states that every event has a cause, or that every thing that begins has a cause.

The *kalam* (Arabic: “eternal”) argument is a horizontal (linear) form of the cosmological argument. The universe is not eternal, so it must have had a Cause. That Cause must be considered God. This argument has a long and venerable history among such Islamic philosophers as Alfarabi , Al Ghazli, and Avicenna . Some scholastic philosophers also used it, especially Bonaventure. The argument, however, was opposed by Thomas Aquinas, who believed it philosophically possible (though biblically untrue) that God could have caused the universe from eternity.

Essence of the Argument. The basic outline of the *kalam* argument is:

1. Everything that had a beginning had a cause.

2. The universe had a beginning.

3. Therefore, the universe had a cause.

Scientific and philosophical lines of evidence are generally given in support of the crucial second premise. The scientific evidence is based heavily on the Second Law of Thermodynamics (*see* THERMODYNAMICS, LAWS OF), which affirms that the universe is running out of usable energy and, hence, cannot be eternal. Other supportive evidence is taken from big bang cosmology, including the expanding universe and the purported radiation echo of the original explosion—all of which are taken to support the idea of a beginning of the universe.

The philosophical argument for a beginning can be summarized:

1. If an infinite number of moments occurred before today, then today would never have come, since it is impossible to traverse an infinite number of moments.

2. But today has come.

3. Hence, there was a finite number of moments before today; the universe had a beginning.

Criticisms. Criticisms have been offered against the *kalam* argument. The most significant are included here, with responses by proponents of the argument (*see also* BIG BANG THEORY).

Eternal Eventless Universe. Some suggest that big bang only signals the first eruption in a previously eternal universe. That is, the universe had eternal quiescence before this first event. The big bang singularity only marks the transition from primal physical stuff. Hence, there is no need for a Creator to make something out of nothing.

No known natural laws could account for this violent eruption out of eternal quietude. Some theists assert that an eternally quiet universe is physically impossible, since it would have to exist at absolute zero, which is impossible. Matter at the beginning was anything but cold, being collapsed into a fireball with temperatures in excess of billions of degrees Kelvin. In a lump of matter frozen to absolute zero, no first event could occur. Finally, positing eternal primordial stuff does nothing to account for the incredible order that follows the moment of the big bang (*see* ANTHROPIC PRINCIPLE). Only an intelligent Creator can account for this.

Rebounding Universe. Some scientists have suggested that the big bang may only be the most recent in an eternal process of expansion and collapse. There are several problems with this hypothesis. There is no real scientific evidence for this speculation. It contradicts the Second Law, which would demand that, even if the universe were expanding and contracting, it would still be running down, so that it would ultimately collapse anyway. Logically and mathematically, the evidence for the big bang suggests that originally there was no space, no time, and no matter. Hence, even if the universe were somehow going through expansion and contraction from this point on, at the beginning it came into existence from nothing. This would still call for an initial Creator.

Steady State Theory. Fred Hoyle devised the steady-state theory to avoid the need to posit a first cause. According to this hypothesis, hydrogen atoms are spontaneously coming into existence to keep the universe from running down. If so, then it would not need a beginning, since it is not running out of usable energy. There are, however, two serious problems with this speculation. First, there is no scientific evidence that hydrogen atoms are coming into existence. This has never been observed anywhere. Second, the belief that hydrogen atoms are coming into existence out of nothing is itself *ex nihilo* creation (*see* CREATION, VIEWS OF). It does not explain what (or Who) is creating them. Indeed, it is contrary to the fundamental principle of science (and rational thought) that everything that comes to be had a cause.

No Need for a Cause. Some atheists argue that there is nothing incoherent about something coming into existence from nothing. They insist that the universe could come into existence "by nothing and from nothing" (Kenny, 66). Proponents of the *kalam* argument offer several points in response. First, this is contrary to the established principle of causality. It is contrary to the scientific enterprise, which seeks a causal explanation. It is counterintuitive to believe that things

just pop into existence. Many argue that the idea that nothing can cause something is logically incoherent, since "nothing" has no power to do anything—it does not even exist.

An Infinite Series. Some thinkers believe an infinite number of moments is possible, since in mathematics infinite series are possible. For example, an infinite number of points exists between the ends of my ruler (*see* GOD, OBJECTIONS TO PROOFS FOR). In response to this objection, proponents of the *kalam* argument insist that there is a difference between a *mathematical* infinite series and an *actual* infinite series. Mathematical series are *abstract,* but actual series are *concrete* . In a concrete series it is impossible to have an infinite number, since no matter how long it is one more can always be added. But this would make it more than infinitely long, which is impossible. Further, that one can get an infinite number of abstract (dimensionless) points between the book ends on my desk does not mean one can get an infinite number of books (or even sheets of paper) between them, no matter how thin they are.

Others object that if God knows the future, which is endless, then he knows an infinite series of events. And if he knows it, then it must be possible no matter how contrary to our intuitions it may be. But defenders point out that the future is not an *actual* infinite series but only a *potential* one, there always being the possibility of one more event. Further, if an actual infinite series is impossible, then God cannot know it, since God cannot know the impossible, only the actual and the possible.

No Personal God. Some have objected that the *kalam* argument does not prove God is personal or intelligent. Hence, it is not helpful to Christian theism which believes in an intelligent Creator. In response, some theists argue that only a being with free choice could bring something from nothing. Also, few theists believe that the cosmological argument *alone* proves a theistic God. It must be combined with the teleological argument and/or moral argument to show that God is also intelligent and moral. Second, some proponents of the *kalam* argument offer arguments for the personality of the First Cause, apart from the teleological or moral arguments. Three have been suggested.

The argument from a First Cause can be stated:

1. The universe had a First Cause.

2. This First Cause's act to create was either determined, undetermined, or self-determined.

3. But it cannot be determined, since there is nothing before the First Cause.

4. Neither can it be undetermined, since this is contrary to the principle of causality.

5. Hence, the act to create must have been self-determined.

6. But self-determined acts are free acts, for this is what is meant by a free act (*see* FREE WILL).

7. Therefore, the act by which the First Cause created the world must have been a free act of an intelligent, personal being.

The argument from the nature of intellectual causes can be stated:

1. An intelligent cause is characterized by effects which have ordered, regular effects.

2. According to the anthropic principle the universe was “fine tuned” or “pre-fitted” from the very moment of its big bang origin for the eventual emergence of human life. The most infinitesimal change of conditions in any way would have made life as we know it impossible.

3. Therefore, the First Cause must have been an intelligent cause.

The argument from the nature of natural causes states that natural causes have certain characteristics not present prior to the moment of the creation of the universe. The argument can be stated:

1. Natural causes have predetermined conditions.

2. But there were not predetermined conditions before the moment of the big bang origin of the space-time universe.

3. Therefore, the Cause was not a natural cause; it must have been a non-natural cause without predetermined conditions.

4. The only known cause which has these characteristics is a free cause.

5. Hence, the First Cause was a free cause.

Limits to the Argument. *The Argument and God’s Continued Existence.* Three objections have more validity than others. They do not invalidate what the *kalam* argument demonstrates, but they show its severe limitations. This argument cannot prove that any God now exists. Therefore, it cannot disprove deism . Further, its assumptions are unacceptable to a pantheist , so it is useless against pantheism.

The *kalam* argument as such does not prove that any God now exists or necessarily exists. It is an argument about how the universe *originated,* not how it is *sustained* . It shows that a First Cause was needed to explain how the universe *came into being* . This does not mean there is no way to rectify this inadequacy. One can argue that this First Cause must now exist, since the only kind of being that can cause a contingent being (i.e., one that can come to be) is a Necessary Being. A Necessary Being cannot come to be or cease to be. However, this borrows from the vertical cosmological argument to make up the lack in the horizontal cosmological argument. It might be easier just to begin with the vertical form.

The Argument and Deism. Since the *kalam* argument as such does not prove that God is necessary to sustain the here-and-now existence of the universe, it has deistic (*see* DEISM) tones. This does not mean that this argument denies the possibility of miracles, but it denies the ontological basis for God's immanence. A God who is not, as the horizontal cosmological argument shows he is, the here-and-now cause of the very existence of the universe, is deistically remote. The argument shows that God was needed to get the universe going, which is precisely what deists believe occurred. Again, this problem is not rectifiable unless one imports help from the vertical form of the cosmological argument, showing how a Necessary Being is necessary at all times to sustain all contingent beings at every moment of their existence.

The Argument and Pantheism. Neither does the *kalam* argument disprove pantheism. In fact, it begs the question with pantheism by assuming the reality of the finite world. No pantheist would grant the premises that a finite, space-time world really exists and is actually running down, or that time is real, involving actual discrete units that pass in succession. Hence, the *kalam* argument is not effective in combating pantheism. What value to theism is an argument that eliminates neither deism or pantheism? There appears to be no solution that does not involve appeal to the vertical form of the cosmological argument. The vertical form of the cosmological argument would appear to be necessary to sustain the *kalam* argument.

Kant, Immanuel. Immanuel Kant (1724–1804) was born in Konigsberg, East Prussia. He studied and later taught at Konigsberg University. He never married, and lived a highly regulated life. Kant's major works were *General History of Nature and Theory of the Heavens* (1755) which propounds the nebular hypothesis; *Critique of Pure Reason* (1781); *Prolegomena to Any Future Metaphysics* (1783); *Critique of Practical Reason* (1790); *Critique of Judgment* (1790); *Religion within the Limits of Reason Alone* (1793); *Metaphysics of Morals* (1797).

Kant's Philosophical Agnosticism . Before Kant the two dominant European streams of thought were rationalism and *empiricism. The rationalists included Rene Descartes (1596–1650), Bene dict de Spinoza (1632–1677), and Gottfried Leibniz (1646–1716). The empiricists were led by John Locke (1632–1704), George Berkeley (1685–1753), and David Hume (1711–1776). The rationalists stressed the *a priori* and the empiricists the *a posteriori* . Rationalists

believed in innate ideas, but empiricists insisted we are born a *tabula rasa* . Kant was trained in the rationalist tradition, but in his own words he was "awakened from his dogmatic slumbers" by the Scottish skeptic Hume.

The genius of Kant was in synthesizing these two divergent epistemologies (*see* EPISTEMOLOGY). The empiricists, he concluded, are right that we are born blank slates, with no innate ideas. The content of all knowledge comes *a posteriori* from experience. On the other hand, the rationalists correctly stress that there is an *a priori* dimension to knowledge. While the *content* of all knowledge comes through the senses, the *form* or *structure* is provided by the *a priori* forms of sensation and categories of the mind (*Critique of Pure Reason,* 173–75, 257–75).

The price of the Kantian synthesis was high: Lost in his model of the knowing process was the ability to know reality. If Kant was right, we know how we know, but we no longer really know. For if all knowledge is formed or structured by *a priori* categories, we can only know things as they appear *to us* , not as they are *in themselves* . We can know *phenomena* but not *noumena* . Thus, the net epistemological gain was the ultimate ontological loss. Reality or the thing-in-itself, including God, is forever beyond us. What is left for us is the thing-to-me, which is appearance but not reality. Thus, Kant's view ends in philosophical agnosticism.

Kant offered a second reason for his agnosticism, the antinomies of reason (*see* ANTINOMY). When categories of understanding are applied to reality, antinomies result. Two will illustrate the point. The antinomy about time states:

Thesis: The world must have had a beginning, otherwise an infinite number of moments passed by now. But this is impossible, since an infinite cannot be traversed.

Antithesis : But the world could not begin in time, otherwise there was time before time began which is impossible.

In the antinomy of causality:

Thesis: Not every cause has a cause, otherwise the series would never begin, which it has. So, there must be a first cause.

Antithesis: But the series cannot have a beginning, since everything has a cause. So, there cannot be a first cause.

Since reason, when applied to reality, ends in contradictions, one must be content to apply reason only to the *phenomenal* world, the world to me and not to the *noumenal* world, the world in itself.

Kant's View of God. Kant believed in God, but he insisted that God's existence cannot be proven (*see* GOD, OBJECTIONS TO PROOFS FOR). All proofs for God are invalid. The cosmological argument and teleological argument are based on the ontological argument, which is invalid. Each depends on the concept of a Necessary Being. But statements about existence are not necessary. Necessity characterizes thought, not existence. A Necessary Being is not a self-clarifying concept. What is logically necessary is not actually necessary. Beside this, an infinite

regress is possible. And a *noumenal* (real) cause can't be derived from a phenomenal (appearance) effect.

The ontological argument leaves experience (when speaking of the highest possible cause) and soars into the realm of pure ideas. Further, existence is not a *predicate* (attribute) but only an *instance* of something. For example, the dollar in my mind has the same attributes as the one in my wallet. The only difference is that one exists and the other does not.

Kant did not believe the existence of God could be proven by theoretical reason, but did believe it was a necessary postulate of practical reason (*see* MORAL ARGUMENT FOR GOD). A summary of his reasoning in *Critique of Practical Reason* goes like this:

1. The greatest good for all persons is that they have happiness in harmony with duty.

2. All persons should strive for the greatest good.

3. What persons ought to do, they can do.

4. But persons are not able to realize the greatest good in this life unless there is a God.

5. Therefore, we must postulate a God and a future life in which the greatest good can be achieved.

Kant's Antisupernaturalism. Kant not only synthesized rationalism and empiricism but gave impetus to modern agnosticism and deism. His impact on the history of philosophy has been felt especially in epistemology and metaphysics. In one sense, Kant's view of miracles is far more helpful to naturalism than is Hume's. Hume's attack on supernaturalism is frontal, while Kant's is subterranean (*see* MIRACLES, ARGUMENTS AGAINST). For Kant, miracles are not essential to true religion.

Morality and True Religion. Like Spinoza, Kant believed that morality is the heart of true religion, though their justifications for this conclusion differed from one another. According to Kant, theoretical reason can never reach God (see *Critique of Pure Reason*). God can only be known by practical reason (see *Critique of Practical Reason Alone*). In view of the fact that we cannot know that there is a God but must fulfill the moral imperative, we must live assuming there is a God.

Foreshadowing Friedrich Schleiermacher (1768–1834), Kant claimed that practical or moral reason must determine what is essential to religion. This moral reason should be a guide to interpreting the Bible (*see* BIBLE CRITICISM). He even admitted that "frequently this interpretation may, in the light of the text (of the revelation), appear forced—it may often really be forced; and yet if the text can possibly support it, it must be preferred to a literal interpretation" (*Religion within the Limits,* 100–1). The Bible's moral teaching "cannot but convince him of its divine nature" (ibid., 104).

With morality as the rule for truth, miracles become an appropriate introduction to Christianity, but not strictly necessary for it. Moral religion must "in the end render superfluous the belief in miracles in general." To believe that miracles can be helpful to morality is "senseless conceit" (ibid.).

Kant affirmed that the life of Christ may be "nothing but miracles," but warned that in the use of these accounts "we do not make it a tenet of religion that the knowing, believing, and professing of them are themselves means whereby we can render ourselves well-pleasing to God" (ibid., 79–80). By this he implies that belief in miracles is not essential to Christian faith.

Naturalistic Biblical Criticism. The very nature of a miracle is unknown. "We cannot know anything at all about supernatural aid," Kant wrote (ibid., 179). One thing of which we can be sure is that, if a miracle flatly contradicts morality, it cannot be of God. What father would kill a son who is, so far as he knows, perfectly innocent (ibid., 82)? Thus the moral law disqualifies the story of Abraham's willingness to sacrifice Isaac in Genesis 22 . Kant carried this moral argument to the conclusion that miracles never happen. In a revealing passage, Kant argued:

> Those whose judgment in these matters is so inclined that they suppose themselves to be helpless without miracles, believe that they soften the blow which reason suffers from them by holding that they happen but seldom. How seldom? Once in a hundred years? . . . Here we can determine nothing on the basis of knowledge of the object . . . but only on the basis of the maxims which are necessary for the use of our reason. Thus, miracles must be admitted as [occurring] daily (though indeed hidden under the guise of natural events) or else never. . . . Since the former alternative [that miracles occur daily] is not at all compatible with reason, nothing remains but to adopt the later maxim—for this principle remains ever a mere maxim for making judgments, not a theoretical assertion. [For example, with regard to the] admirable conservation of the species in the plant and animal kingdoms . . . no one, indeed, can claim to comprehend whether or not the direct influence of the Creator is required on each occasion. They are for us . . . nothing but natural effects and ought never to be adjudged otherwise. [ibid., 83–84]

One who lives by moral reason, then, "does not incorporate belief in miracles into his maxims (either of theoretical or practical reason), though, indeed, he does not impugn their possibility or reality" (ibid., 83). So, miracles may be possible, but it is never rational to believe in them, since reason is always based on universal laws.

In view of this moral naturalism, it is not surprising that Kant rejects the resurrection of Christ (*see* RESURRECTION, EVIDENCE FOR). He wrote, "The more secret records, added as a sequel, of his resurrection and ascension . . . cannot be used in the interest of religion within the limits of reason alone without doing violence to their historical valuation" (ibid., 119).

Rather than looking at the historical evidence for Scripture, he summarily dismissed it as inauthentic because it was morally unessential. Again, a forced moral hermeneutic is preferable to the "literal" understanding. Why? Not because the historical facts support it. Rather, Kant's understanding of the moral law demands it. According to Kant, historical truth is determined *a*

priori by moral law, not *a posteriori* from the facts. In a moral hermeneutic, what was is understood through what ought to have been.

If the argument is sound, we should live as if miracles do not occur—even if some have. We should order our life by (practical) reason, even if it is contrary to fact. We should "reason" in practice that what is true is false.

Evaluation. This is an unreasonable use of reason, and its effects have devastated Western epistemology.

Philosophical Consequences. Philosophically, the post-Kantian world cannot know God or reality. Kant's philosophy particularly contradicts Paul that God's power and divine nature are clearly seen through nature (Rom. 1:20). Nor can Scripture tell what God is really like. Scriptures do not inform us of how God really is *in-himself* , but only the way he is *to us* . The Bible tells how God wants us to *think about him* . It merely presents God-talk which never really talks about God.

Theological Consequence. Kantian theology has followed this radical disjunction between what appears and what is. Accepting the gulf between appearance and reality, Soren Kierkegaard (1813–1855) existentially proclaimed God to be "wholly other" and insisted that human reason played no part in the defense of the Gospel. Kierkegaard wrote, "If God does not exist it would of course be impossible to prove it; and if he does exist it would be folly to attempt it. For at the very outset, in beginning my proof, I will have presupposed it . . . otherwise I would not begin, readily understanding that the whole would be impossible if he did not exist" (*Philosophical Fragments,* 31–35).

Three of Kant's views, if true, would destroy Christian faith. First, Kant is a philosophical agnostic (*see* AGNOSTICISM). Second, he held that no arguments for God's existence are valid (*see* COSMOLOGICAL ARGUMENT). Third, he denied the right to believe in miracles.

Both of Kant's arguments for agnosticism are invalid. His antinomies fail in that one premise is false. There need not be time before time; there could be eternity. Theism does not hold to creation *in* time but to the creation *of* time with the world. Not everything needs a cause, only contingent (finite, temporal) beings. Hence a first, eternal, Necessary Being does not need a cause (*see* CAUSALITY, PRINCIPLE OF).

The argument that we cannot know the real world is self-defeating. The very statement "We cannot know reality" is a statement that presupposes knowledge about reality. The attempt to undermine theistic proofs likewise fails, as is discussed in the article God, Objections to Proofs for.

Kant implies, but does not elaborate, a crucial premise (premise three below) in his argument against miracles, that reason operates according to universal laws. From his writings, the argument can be reconstructed:

1. We cannot know the real world (the world in itself) by theoretical reason.

2. Everything in our experience (the world to us) must be determined by practical reason.

3. Practical reason operates according to universal laws.

4. Miracles must occur either daily, seldom, or never.

5. But what occurs daily is not a miracle; it occurs according to natural laws.

6. And what occurs seldom is not determined by any law.

7. But everything must be determined by practical reason that operates on universal laws.

8. Therefore, miracles never occur.

In support of the crucial third premise, Kant wrote, "In the affairs of life, therefore, it is impossible for us to count on miracles or to take them into consideration at all in our use of reason (and reason must be used in every incident of life)" (*Religion within the Limits,* 82). Miracles are theoretically possible but practically impossible. If we live as if they occur, we overthrow practical reason and moral law, which are the essences of true religion. Therefore, admitting that miracles occur and living in their light is actually harmful to religion. Even if there are supernatural acts, we must live (and think) as if there are none.

Kant made a radical disjunction between the unknowable world of things as they are (the *noumena*) and the world of our experience (the *phenomena*). However, philosophers have noted two things about this agnosticism. First, Kant was inconsistent, since he sometimes wandered over into the *noumenal* (real) world to make statements about it. And in so doing he implied that the noumenal world *is* knowable. Second, one cannot consistently separate the two realms without some knowledge of both. A line cannot be drawn, unless one can see beyond it. To say, "I know that reality is unknowable" is to make a claim to know something about reality. Complete agnosticism is self-defeating.

Like other naturalists, Kant begs the question by laying down a uniformitarian rule, some interpretive framework by which the naturalist demands a uniformitarian understanding of the world. For Spinoza, the rule is rational, for Hume, it is empirical, for Anthony Flew , it is methodological, and for Kant, it is moral. Kant regulates all of life by a universal moral law (practical reason). Since he allows no exceptions to a law, there are no exceptions to the rule: "Live as if there are no miracles."

But this begs the question. Why should one assume there are no exceptions to any laws? And why should we assume that everything comes under some law? Maybe there are singularities, such as the origin of the world or the history of the earth, that defy classification (*see* ORIGINS, SCIENCE OF). Kant himself originated the nebular hypothesis about a scientific singularity at the beginning of our solar system.

Science now knows more, and the model changed. Natural law is now thought of as general and statistical, but not necessarily universal and without exceptions. Immanuel Kant believed, as

did others of his day, that Newton's law of gravitation was universally true, with no exceptions. If Kant is wrong in his view of scientific law—insisting that every event be subsumed under some natural law, then his moral objection to miracles fails.

Hermeneutical Consequences. According to post-Kantian fideism, the Bible is not an adaptation to human *finitude* ; it is an accommodation to human *error* . It does not contain anthropomorphisms, but myths. The task of hermeneutics is not to "lead forth the truth" *(exegesis)* of the text, but to extract the truth of the text from the error surrounding it. Objective truth is out of reach anyway, so the Bible student seeks subjective "truth." Thus, post-Kantian hermeneutics is locked out of real knowledge about God from Scripture or anywhere else.

Apologetic Consequences. With this scenario, apologetics can only be fideistic or presuppositional. It is no accident that there were no presuppositionalists (*see* PRESUPPOSITIONAL APOLOGETICS) before Kant and fewer nonpresuppositionalists after him (*see* CLASSICAL APOLOGETICS). Those who accept Kant's conclusions are forced to forsake reason for mere faith (*see* FAITH AND REASON). They can no longer fulfill the biblical imperative to "give a reason of the hope that is within them." Karl Barth 's neo-orthodoxy denied even Emil *Brunner's limited contention that there is a capacity to receive the revelation of God. Barth forbid natural theology and would not allow even for analogy of God in creation. In Kierkegaard and Barth, modern Christian fideism was born, proclamation but no verification of truth claims.

Evangelistic Consequences. When Christianity is reduced to declaration without defense, its mission is seriously hampered. Among the diverse views of the intellectual marketplace, it is necessary to both declare Christ and to defend the declaration. God who created human reason in his image and who invites us to reason with him (Isa. 1:18) demands the sacrifice of sin, not reason, as a condition for entering the kingdom. Unlike Kantian agnosticism, Kierkegaardian existentialism, or pantheistic mysticism , Christianity is not a "leap before you look." Rather, it bids all to look before they leap. Augustine noted rightly that "no one indeed believes anything unless he has first thought that it is to be believed." Hence, "it is necessary that everything which is believed should be believed after thought has led the way"(*On Predestination* 5).

Conclusion. Kant's attack on miracles is fundamental. He sees miracles as fundamentally unnecessary to true religion. To him, true religion is to live in accord with a universal law of practical reason. However, Kant's agnosticism is self-defeating, he begs the question by assuming a moral uniformitarianism, and he assumes the nature of a scientific "law" to be a universal *sine qua non* , rather than a statistical generalization. For Kant to avoid the miraculous, he had to eliminate the miracle accounts from the basic documents of Christianity, without any historical reason for doing so.

Historic Christianity claims miracles to be a true and essential part of the religion's belief system (Rom. 10:9 ; 1 Cor. 15:12–32). Christianity without miracles is Christianity without Christ, whose life was (and is still) characterized by miracles (*see* MIRACLES, ARGUMENTS AGAINST).

Kierkegaard, Soren. Soren Kierkegaard (1813–1855) was born in Copenhagen, the son of Michael Pederson, a poor Jutlander who amassed a fortune selling drapes, then sold his business in 1786 to study theology. Kierkegaard said he was reared with severity and piety by a melancholy old man. His mother and five of his six brothers died when he was young, the result, it was said, of a curse on the family. He referred to the deaths in the title of his first book, *From Papers of One Still Living* . He was of high intellect, but lazy, and he loved the theater, especially Mozart. A spine deformity may have colored his view of life. Hans Christian Andersen portrayed the frequently drunken young Kierkegaard as a principal character in his novel, *Shoes of Fortune* . Converted to Christianity and reconciled with his father in 1838, he studied from 1831 to 1841 before receiving a master's degree in philosophy. He became engaged to Regina Olsen after graduation, but decided not to marry.

Writings. Kierkegaard's amazing literary output began when he was twenty-one years old in 1834 and continued to 1855. His works can be categorized:

Starting with *From the Papers of One Still Living* , the writer produced many aesthetic and philosophical essays and books. These works include the discourses "The Expectation of Faith," "Every Good and Perfect Gift is from Above," "Love Shall Cover a Multitude of Sins," "Strengthened in the Inner Man," "The Lord Gave and the Lord Hath Taken Away," "To

Acquire One's Soul in Patience," "To Preserve One's Soul in Patience," "Patience in Expectation," "The Thorn in the Flesh," "Against Cowardice," "The Righteous Man Strives in Prayer with God and Conquers—in that God Conquers," "A Confessional Service," "On the Occasion of a Wedding," and "At the Side of a Grave."

His books in aaesthetics include *Concluding Unscientific Postscript* , *Fear and Trembling* , *Johannes Climacus or De Omnibus Dubitandum Est* , *Philosophical Fragments* , *Prefaces* , *Repetition* , *Stages on Life's Way* , *The Concept of Dread* , and *The Concept of Irony* .

The explicitly religious writings of Kierkegaard include *Armed Neutrality* , *Attack upon "Christendom," Judge for Yourselves* , *On Authority and Revelation: The Book of Adler, On the Difference Between a Genius and an Apostle* , *Purity of Heart Is to Will One Thing* , *Reply to Theophilus Nicolaus (Faith and Paradox)* , *The Crisis and a Crisis in the Life of an Actress* , *The Dialectic of Ethical and Ethico-Religious Communication* , *The Gospel of Suffering* , *The High Priest—The Publican—The Woman that Was a Sinner* , *The Individual* , *The Lilies of the Field* ; *The Point of View* , *The Present Age* , *The Sickness unto Death* , *The Unchangeable God* , *Training in Christianity* , *What Christ's Judgment Is about Official Christianity* , and *Works of Love* .

Other works that fit no single category include: *Meditations from Kierkegaard* , *Newspaper Articles* , *The Journals of Kierkegaard* , and *The Prayers of Kierkegaard* .

Basic Beliefs. Theologically Kierkegaard was orthodox. He wrote that he was not out to change the doctrines taught in the church but to insist that something be done with them (*Journals and Papers* , 6:362). He believed in the inspiration of Scripture (*see* BIBLE, EVIDENCE FOR), the *virgin birth* , miracles, the substitutionary atonement, the bodily resurrection, and the final judgment (*see* HELL). In "Thoughts Which Wound from Behind," he is aghast that Christendom has replaced the resurrection with platonic immortality.

Three Life Stages, One Eternal. Kierkegaard's overall beliefs are expressed in his three stages of life: the aesthetic, the ethical, and the religious. His entire purpose is to get one from the aaesthetic life of pleasure to the religious life of commitment by way of the moral life of duty. In *My Point of View for My Work as an Author* , he wrote, "I am and was a religious author, that the whole of my work as an author is related to Christianity, to the problem of becoming a Christian, with a direct or indirect polemic against the illusion that in such a land as ours all are Christians of a sort" (ibid., 5–6).

Some contrasts are helpful to summarize these three levels:

The Aesthetic Stage	**The Ethical Stage**	**The Religious Stage**
Feeling	Deciding	Existing
Self-centered	Law-centered	God-centered
Routines of Life	Rules for Life	Revelation to Life

Centered in Present	Centered in Life/Time	Centered in Eternity
Individual Is Spectator	Individual Is Participant	
Live by Personal Whims	Live by Universal Norms	
Life of Deliberation	Life of Decision	
Life of Intellect Immediate Interests	Life of Will Ultimate Concerns	
	Respect of Moral Law	Response to Moral Law Giver
	The Universal	The Individual
	Propositions about God	Person of God
	Objective Truth	Subjective Truth
	Essential Realm	Existential Realm

Kierkegaard describes the conflict between the aesthetic and ethical spheres in his work *Either/Or* (1843), an attack on the dialectical thinking of G. W. F. Hegel (1770–1831). Kierkegaard believed that passion is the culmination of existence. There is no real value in either the objective storing of knowledge, nor the blissful, mystical intuition of it. Life is not found in neutral facts nor blissful insights but in responsible choices.

Volume 1 is a dramatic presentation of the aesthetic life by a sophisticate who sees the inevitable pathos of pleasure. In this hedonism, one's own reflective experience is the object of pleasure. The refined esthete is morally indifferent, rather than defiant. The aesthetic experience is one of endless possibility, never present reality. The author despairs of ever becoming a true self and merely tinkers with his environs. He chooses, not between good or evil, but between choosing and not choosing. The ultimate for the aesthetic life is commitment to despair. The esthete has immediate interests but no ultimate concern.

Volume 2 presents the other pole—moral responsibility. A meaningful life is impossible apart from moral effort. To be ethical means to be ruled by the eternal; to be aesthetic is to be ruled by the temporal. Ethical and aesthetic are qualitatively distinct but naturally related in that the former is a prior condition to the latter. The ethical means accepting responsibilities under the sovereignty of God. Hence, self-realization is not mere self-creation but integration of the eternal and the temporal.

In this Kierkegaardian Ecclesiastes, the basic choice of the aesthetic lifestyle is ultimately to merge good and evil, while the ethical lifestyle will inevitably choose good. This is reminiscent of the Augustine maxim: "Love God and do what you will." Kierkegaard is chiefly concerned with how one lives (passion), rather than what one does (content). But the ethical person also

ends in despair of finding meaning. This moves the reader toward the third stage, the religious. The ethical life leads to a failure to reach one's ideals. That leads to repentance, a precondition of faith.

Kierkegaard introduces God as the Moral Law-Giver. Ethical repentance ends in sorrow in response to one's failure. That in itself does not lead to redemption. Ethics leads to the law, with its failure, not to the Law-Giver.

This key work prepares for the religious stage without entering it. The law ends self-reliance, but it does not itself bring God-reliance. The individual in the end arrives at an "either/or"—either the religious or despair.

Kierkegaard hoped his aesthetic writings would provoke people to want to choose the religious as a way of finding eternal meaning. He wrote several "edifying discourses" to provide the answer to the despair of the aesthetic and ethical stages. Unfortunately, he found that people preferred entertainment to edification. In "Expectation of Faith," a response to the aesthetic stage, he affirmed that solace is found only in the eternal. It is a guiding star to a sailor faced with the monotonous repetition of the waves. The tedium of the temporal is overcome only by the tranquillity of the transcendent. Faith is a passion for, and response to, the eternal. Even doubt can be an instrument that helps awaken the eternal God.

In "Every Good and Perfect Gift," a response to the life of ethical duty, Kierkegaard shows how God uses the moral gloom for our good. Even denied prayer is not unjust. The one praying is changed for better, even if the answer is for worse. Even tragedies can be triumphs if received with thanksgiving. Every personal tragedy is somehow redeemed by God's sovereignty. Suffering is beneficial in destroying self-will.

The Religious vs. the Ethical. In *Fear and Trembling* , Kierkegaard reveals how the ethical is transcended by the religious. Abraham is devoted to God's law, which forbids killing. Nevertheless, God tells him to offer Isaac as a sacrifice. Unable to explain or justify his action, Abraham suspended the ethical and made a "leap of faith" to the religious. In so doing, he dethroned the ethical without destroying it.

Kierkegaard believed religious faith to be personal, something we are. We must live it, not just know it. Spiritual truth cannot be merely acknowledged; it should be appropriated by commitment.

In *Concluding Unscientific Postscripts* , a further distinction is made within the religious stage. Religion A is natural religion, while religion B is supernatural. The first is religiosity; the second is Christianity. Religion A is rational, but Religion B is paradoxical. The first focuses only in a general need; the latter is prompted by a special need for Christ.

In *Philosophical Fragments* , Kierkegaard relates faith and reason. The book is philosophical and objective. Christianity is surveyed as to its content (what), as opposed to *Concluding Unscientific Postscripts* , which stresses Christianity as an existential way of life (how). This attack on human-centered philosophy profoundly influenced Karl Barth. Human beings see God

as a perplexing Unknown. God must initiate communication. Two questions are raised: First, is it possible to base eternal happiness on historical knowledge? This harkens back to Gotthold Lessing (1729–1781) and his "ditch." Second, how can the transcendent God communicate with us?

Kierkegaard uses the parable of a king who becomes a beggar to win the love of a lowly maiden to argue that one cannot get the eternal out of the purely historical, nor the spiritual out of the rational. Original sin is the elemental human fact (see *Concept of Dread*). Humanity can neither know nor find the truth unless God puts them in it through revelation. This revelation, a miraculous self-authenticating disclosure, is not part of a rational system.

Reason and Revelation. Kierkegaard compared Socrates and Christ to get at the difference between revelation and reason:

Socrates's Wisdom	**Christ's Revelation**
Backward recollection	Forward expectation
Truth aroused within	Truth given from without
Truth immanent	Truth transcendent
Truth rational	Truth paradoxical
Truth comes from wise man	Truth comes from God-Man

Christian truths are neither analytic (self-evident) nor synthetic, because even if factually correct, human knowledge lacks the certainty held in Christian claims. Christian claims are paradoxical and can be accepted only by a leap of faith. There is a real transcendent God, who can only be chosen in his self-revelation. This God is meaningful and real, but paradoxical. He is the unknown limit to knowing, and he magnetically draws reason and causes passionate collision with humanity within the paradox. Reason cannot penetrate God, nor can it avoid him. The very zeal of the positivists to eliminate God shows their preoccupation with him. The supreme paradox of all thought is its attempt to discover something that thought cannot think.

Proofs and Pointers. God is unknown to us, even in Christ. God indicates his presence only by "signs" (pointers). The paradoxical revelation of the unknown is not knowable by reason. Human response must be a leap of faith, which is given by God but not forced on us; we can accept faith or choose to live rationally (*see* FIDEISM). Faith in God cannot be either rationally or empirically grounded. Rationally we cannot even imagine how God is like or unlike himself. The most we can do is to project familiar qualities in the direction of the transcendent that never reach him. We cannot argue from the works of nature to God, for these either assume God or lead to doubt.

Those who ask for proofs for God ignore God (*see* GOD, EVIDENCE FOR). For one already possesses what he wonders about (see "On the Occasion of a Confessional Service in *Thoughts on Crucial Situations in Human Life*). Even if we could prove God's being (*in himself*) it would be irrelevant to us. It is God's existence or relatedness to us that is of religious significance. The Gospel is presented only as an existential choice, not for rational reflection (

Postscripts , 485; *Works of Love* , 74). God is not irrational. God is suprarational, which transcends finite rationality. The real absurdity in the human situation is that people must act as though certain, even though they have no reason for certainty.

Faith and the Irrational. Concluding Unscientific Postscripts adds that objective reason can never find existential truth. Proofs can neither establish nor overthrow Christianity. To try to prove God is as shameless an insult as to ignore him. To reduce Christianity to objective probability would be to make it a treasure one could carelessly possess, like money in the bank.

Faith in religious facts, such as the incarnation or the authority of Scripture, is not true faith. True faith is the gift of God and unattainable by effort. The incarnation (*see* CHRIST, DEITY OF) and Bible are objective points of reference, but they are not reasons. True faith is a leap to God's revelation that does not rest on objectively rational or empirical evidence. Reason, however, plays the negative role of helping us distinguish nonsense from paradox. The Christian is prevented by reason from believing sheer nonsense (*Postscripts* , 504). He tells the parable of an insane man who wants to prove that he is sane. He bounces a ball, saying, "Bang, the earth is round." He points out that what the man said was true, but he nevertheless fails to prove he is sane. How he says it shows that he is not rightly related to the truth (ibid., 174).

Volitional and Rational Knowledge of God. Sin, not our mental inability, makes God seem an absolute paradox. This absolute paradox becomes absurd in the cross, the offense offered by the Gospel. The human task, therefore, is not to intellectually comprehend God but to existentially submit to him in sacrificial love. The paradox is not theoretical, but volitional. It is not metaphysical but axiological. God is folly to our mind and an offense to our heart. The objective paradox of God in Christ is to be answered by a paradoxical response of faith and love.

Scripture. Kierkegaard believed the Bible to be the inspired Word of God (*see* REVELATION, SPECIAL). He wrote, "To be alone with the Holy Scriptures! I dare not! When I turn up a passage in it, whatever comes to hand—it catches me instantly, it questions me (indeed it is as if it were God Himself that questioned me, 'Hast thou done what thou readest there?' "). He even calls it "God's Word," adding, "My hearer, how highly dost thou esteem *God's Word* " (*Self-Examination* , 51). Kierkegaard even believed the canon to be closed and that God is giving no new revelation. He severely criticized someone who claimed they had received new revelation (*see* BIBLE, CANONICITY OF).

On the other hand, Kierkegaard did not believe it necessary or important to defend the inerrancy of Scripture. This is evident in his views on the eternal and temporal, as well as his comments on biblical criticism .

The eternal and the temporal. How can eternal salvation depend on historical (and thereby uncertain) documents? How can the historical give nonhistorical knowledge? (*see* CHRIST OF FAITH VS. JESUS OF HISTORY). Kierkegaard's answer is that, insofar as the Bible gives empirical data, it is an insufficient ground for religious belief. Only Spirit-inspired faith finds the eternal God in the temporal Christ (*see* HOLY SPIRIT, ROLE IN APOLOGETICS). The biblical writers do not primarily certify the historicity of Christ's deity (*see* CHRIST, DEITY OF); rather they testify to the deity of Christ in history. Hence biblical criticism is irrelevant. The important thing is not

the historicity of Christ but his contemporaneity as a person who confronts people today by faith in the offense of the Gospel. The Jesus of history is a necessary presupposition, but history does not prove his messiahship. The only proof of his messiahship is our discipleship.

Historicity and contemporaneity. If the eternal comes as an event in history, how is it equally available to all generations? The answer is that faith does not depend on happenstance, or being in the street when Jesus walked by. This would be mere physical contemporaneity. Faith is centered in a historical event, but it is not based on it. No superficial contemporaneity can occasion faith; only spiritual contemporaneity can. For "If the contemporary generation had left nothing behind them but these words: 'We have believed that in such and such a year the God appeared among us in the humble form of a servant, that he lived and taught in our community, and finally died,' it would be more than enough" (ibid., 130). So time is immaterial to faith. There is no second-hand discipleship.

Biblical criticism. To the Bible's apologist, Kierkegaard exhorts, "Whoever defends the Bible in the interest of faith must have made it clear to himself whether, if he succeeds beyond expectations, there could from all his labor ensure anything at all with respect to faith."To the critic he warns, "Whoever attacks the bible must also have sought a clear understanding of whether, if the attack succeeds beyond all measure, anything else would follow than the philological result." If Bible defenders achieve their wildest dreams in proving what books belong to the canon, their authenticity, trustworthiness, and inspiration, so what? Has anyone who previously did not have faith been brought a step closer? Faith does not result simply from a scientific inquiry; it does not come directly at all. On the contrary, "in this ob jectivity one tends to lose that infinite personal interestedness in passion which is the condition of faith" (*Concluding Unscientific Postscripts* , 29–30). But what if the Bible's opponents have proven all they allege about the Bible, does that abolish Christianity? By no means. If the believer "had assumed it by virtue of any proof, he would have been on the verge of giving us his faith." Faith does not need the proof, he said. Faith, in fact, regards proof as its enemy (ibid., 31).

Elsewhere Kierkegaard affirms that, in order to make room for faith, men and women must be freed from the shackles of historical necessity. History is not an unfolding necessity, as Hegel said, but a free response to challenge and confrontation. Freedom escapes the net of scientific explanation.

Natural Theology Rejected. Natural religion is good, but it is not Christian, because it lacks transcendent disclosure. It supplements Christianity but is pathetic without Christianity to fulfill it. It arises by a collision of reason with the unknown (a concept developed in Rudolph Otto's *Numinous*), but it never goes beyond the collision. A human being is a god-maker who deifies whatever is overwhelming. But deep in the heart of natural piety lurks a caprice that knows it has produced the deity and that the deity is a fantasy. Hence, natural religion veers either to polytheism, which collects all its fantasies, or to pantheism, which is an incongruous merger of them. So Kierkegaard concludes that the nearest reason that brings God is still the farthest from us he ever is.

Kierkegaard adds an interesting observation on comparative religion. Buddhism, he says, seeks eternal outside of time—by meditation. Socrates sought eternal before time—by recollection. But Christianity seeks eternal in time—by revelation.

Evaluation. Although Kierkegaard can be taken to be a mild evidentialist with respect to objective, historical truths, when it comes to religious truth he is almost a classic example of a fideist. He, and Karl Barth following him, are fountain heads of the Christian attack on a rational and evidential approach to Christianity in the modern world. Nonetheless, there are many values in Kierkegaardian thought, even for Christian apologetics.

Positive Contributions. Kierkegaard can be commended for his belief in the fundamentals of Christian faith. He stressed a personal encounter with authentic Christianity, the importance of individual free will vs. behavioral determinism, and a return to New Testament faith. He emphasized God's unchangeability, transcendence, and grace and human depravity. He offered creative insights into many Bible passages.

A corrective to rationalism. Some rationalists, such as Rene Descartes , Gottfried Leibniz , and Christian Wolfe, stressed an extreme rational approach to God. They underemphasized the role of faith and personal encounter in a genuine relationship with God. They overstated their arguments for God's existence (*see* GOD, EVIDENCE FOR), claiming they were mathematically certain. Kierkegaard's attack on rationalism and stress on a personal encounter with the living God is a helpful corrective to sterile rationalism.

The classic distinction between reason and the truths of faith (*see* FAITH AND REASON) is sometimes forgotten in modern rational apologetics. There are truths that, while not going against reason, go beyond reason (*see* MYSTERY). Kierkegaard saw this clearly.

The real basis for belief. Some classical apologists (*see* CLASSICAL APOLOGETICS) and evidential apologists (*see* APOLOGETICS, TYPES OF) tend to forget that faith is not based in evidence or reason about God but in God himself. Our belief is supported by evidence. Kierkegaard emphasized this point to a fault.

Helpful preevangelism. Few have described the despair of the aesthetic life so clearly as did Kierkegaard. *Either/Or* gives an unparalleled view of the futility of life apart from God. This can be cast into an implied argument from religious need (*see* GOD, NEED FOR).

The historical and the eternal. Kierkegaard is correct in observing that there is more to a miracle than the mere historical dimensions, and the historical is insufficient to bring one into contact with the living God (*see* MIRACLES, MYTH AND). Overemphasis by historical apologists can be misconstrued to imply that one can reach God via the historical evidence alone. Pointed reminders of the gulf between the historical and the eternal are well made. He is correct in noting that, even if one had perfect historical records, that information would not in itself bring one into contact with God.

Difficulties. Fideism . As other fideists, Kierkegaard offers self-defeating reasons for fideism, which claims that one cannot offer reasons for matters of faith. More on this point is discussed in the article FIDEISM .

Separating fact and value. Following Immanuel Kant, Kierkegaard radically separates fact and value, is and ought. This gave impetus to the separation of the Jesus of History from the Christ of Faith (*see* CHRIST OF FAITH VS. JESUS OF HISTORY ; JESUS SEMINAR ; MIRACLES, MYTH AND). While the historical as such does not bring one into contact with the eternal, neither can the eternal be divorced from real history. While Kierkegaard does not deny the historical reality of miracles, he downplays the importance of that dimension. Miracles may be more than historical, but they are not less. By denying the importance of the historical, he undermines the authenticity of the New Testament and, with it, New Testament Christianity. The shift in emphasis from fact to value leads to the denial of fact and its support for faith.

Evidential support for faith. While Kierkegaard is correct that faith is based not in fact but in God, he is wrong in assuming that there is no rational and evidential support for faith. Of course, God is the basis of faith in God, but this does not mean we have no accompanying rational or evidential support for belief. Kierkegaard goes too far when he claims, "The miracle can prove nothing; for if you do not believe that he is what he says he is, you deny the miracle. A miracle can make one attentive" (*Training in Christianity* , 99).

Belief in and belief that. There is no evidence for belief *in* God. This is strictly a matter of faith. Nonetheless, there is evidence for believing *that* there is a God. Kierkegaard fails to stress the importance of having evidence that God exists. No rational person would place faith in an elevator to go to the ninth floor without evidence that the elevator could do this. Likewise, no rational person should trust in God unless it is reasonable to believe that there is a God who is trustworthy.

The role of theistic arguments. Kierkegaard offers no disproofs of arguments for God as did Kant (*see* GOD, OBJECTIONS TO PROOFS FOR). He offers only a kind of existential complaint against theistic arguments, that they are an offense to God. But why should the God of reason be offended when we use reason. Reason is part of the very thing that makes us like him (Gen. 1:27).

A wholly other God. The concept of God as "wholly Other" is a form of agnosticism . Like Kant's *noumenal* realm (the thing-in-itself), God can never be known. We can know only *that* he is, but not *what* he is. But it is impossible to know pure "thatness." We must know something about *what* something is or we cannot know *that* it is. Even a strange gadget we have never seen before is not "wholly other." We may not know its purpose, but we can know its size, shape, and color. The very affirmation that we know nothing about God is a claim to know something about him; hence it is self-defeating. Purely negative knowledge about something is impossible. The claim that God is not "this" implies that we know the "this." So, the view of religious language as mere pointers to God that do not really describe him leaves us in total self-defeating ignorance.

Suspension of the ethical. In his suspension of the ethical for the religious, Kierkegaard paved the way for situation ethics. Even though he believed strongly in God's moral laws, on the highest level of duty—his relation to God—there is no way to distinguish right from wrong. The existential encounter with God places one beyond rational and ethical realms. Regardless of the rational and ethical context in which one begins, the suspension of the ethical for the religious leaves one without any real guide on the highest level for right and wrong.

Subjectivity of truth. Kierkegaard did not claim that truth is subjective. He said, "Truth is subjectivity." And while he did not deny objective truth (*see* TRUTH, NATURE OF) in science or history, he did deny that religious truth is objective or testable. Not only does this leave us with a mere subjective test for religious truth, but it confuses the objective nature of religious truth with the subjective condition of receiving it. Certainly one should apply truths of Christianity to life subjectively, but this does not mean truths should be defined as subjectivity. All truth objectively corresponds to the state of affairs being described.

Minimizing the historically necessarily. When Kierkegaard spoke of the mere belief in a man named Jesus, in whom people believed God dwelt as the minimal historical facts necessary for the Christian faith, he invited the radical demythologizing of Bultmann . It flies in the face of the New Testament claim that the fact of the bodily resurrection is absolutely necessary to Christianity. As the apostle Paul declared, "If Christ has not been raised, your faith is futile; you are still in your sins" (1 Cor. 15:17 ; cf. Rom. 10:9).

Personal and propositional revelation. Though he believed in the inspiration of Scripture, Kierkegaard's stress on the personal nature of religious truth and the need for an existential encounter with God tilted the axiological scales against propositional revelation. It was not only downplayed, but it was separated from what is really important, personal revelation. This led to the neo-orthodoxy of Karl Barth and Emil *Brunner, which denied the historic, orthodox view that revelation is propositional.

There is no need for such a disjunction. Propositional revelation can be very personal, as anyone who has ever written a love letter knows. God's love letter, the Bible, is written in propositions, but it conveys a very personal message. Those who read it and respond enter into a very personal relation to God.

The terms leap, absurd, and paradox. Kierkegaard was not an irrationalist, as some have claimed, but his use of terms make him sound like one. *Absurd* and *paradox* have generally been reserved, from Zeno through Kant, to mean a logical contradiction (*see* FIRST PRINCIPLES ; LOGIC). They are, at best, an unfortunate choice of terms and are generally misleading. Kierkegaard has been widely misunderstood, partly because he used them. Likewise, to speak of a "leap" of faith sounds irrational, as even Kierkegaard seemed later to recognize (see *Journals* , 581). Such extreme words to describe the mystery of what does not go against reason, but merely beyond it, only invite misunderstanding.

Kushner, Harold . Harold Kushner is a late-twentieth-century American Jewish rabbi whose popular version of finite godism is expressed in his best-selling books, *When Bad Things Happen to Good People* and *When All You've Wanted Isn't Enough* . Kushner challenges Christianity at several major points, particularly in his rejection of miracles and arguments for a finite God (*see* MIRACLES, ARGUMENTS AGAINST).

A Limited God. According to Kushner there is one God who is limited in power and perfection. But "when we speak of one God, are we doing something more than taking a census of how many divine beings there are? Are we perhaps saying that God 'has it all together' . . . ?" (*When All You've Wanted,* 133). Further, "because He is One, He is all alone unless and until there are other people to love Him" (ibid., 56). This God "cannot monopolize all the Power and leave none for us" (ibid.). Not only is God limited because of us, but he is limited because of his nature. As Kushner put it, "I recognize His limitations. He is limited in what He can do by the laws of nature and by the evolution of human nature and human moral freedom" (*When Bad Things Happen,* 134). We must realize "that even God has a hard time keeping chaos in check and limiting the damage that evil can do" (ibid., 43).

Kushner views God's finitude as an asset to our lives, rather than a liability. For "if we can bring ourselves to acknowledge that there are some things God does not control, many good things become possible" (ibid., 45). In fact, "God, who neither causes nor prevents tragedies, helps by inspiring people to help" (ibid., 141). God cannot control the world and human beings, but he "is the divine power urging them to grow, to reach, to dare" (ibid., 132).

God, for Kushner, is a God of love, rather than power (*When All You've Wanted,* 55). He is more kind than able (ibid., 58). "God is the force that moves us to rise above selfishness and help our neighbors, even as he inspires them to transcend selfishness and help us" (ibid., 183). As to our tragic circumstances, "God may not prevent the calamity, but He gives us the strength and the perseverance to overcome it" (*When Bad Things Happen,* 141). God cannot ward off our

misfortunes, but neither does he send them. “Our misfortunes are none of His doing, and so we can turn to Him for help” (ibid., 44). Even during the Jewish holocaust God “was with the victims, and not with the murderers, but . . . He does not control man’s choosing between good and evil” (ibid., 84).

Good Human Beings. Humanity is an evolved result of “God’s creation” (*When All You’ve Wanted,* 77). Each individual is made in “God’s image.” This is especially manifest in his ability to choose good and evil. Human beings are also rational beings. “When the opening pages of the Bible describe Adam as naming the animals, tribute is being paid to his unique ability to reason, to sort things into categories. Man alone can use his mind to make tools, . . . as well as to write books and symphonies” (ibid., 103, 104).

Humans not only have a mind and will but they have physical bodies that experience pain (ibid., 78). Nevertheless, the human body is good. For Kushner, “to view the human body and the whole natural world with disgust or mistrust is as much a heresy as to view it with unqualified reverence” (ibid., 83). God is good, and he also made mankind good. When the Bible describes Adam and Eve taking the fruit of the tree of knowledge, they did not fall downward; they “fell upward.” It was a moment of progress for the human race, not of catastrophe. It was a leap forward in the evolutionary process.

Kushner refers to the human mind as “the most indisputable proof of God’s hand in the evolutionary process” (ibid., 110). Elsewhere he writes of “what God had in mind when he arranged for human beings to evolve” (ibid., 135). So evolution is the means through which God expresses his creativity (*see* EVOLUTION, BIOLOGICAL). The human being is the highest product of that process—the creature most like God.

A Chaotic World. Even though the world is in the process of change, there are things about the world that even God cannot change. God cannot make fatal conditions less fatal or heal an illness (*When Bad Things Happen,* 110). “The laws of nature do not make exceptions for nice people. A bullet has no conscience; neither does a malignant tumor or an automobile gone out of control” (ibid., 58).

God’s hands are tied by the unfeeling laws of nature. Thus, we cannot ask God for a miracle . When highly unusual things do occur, “we would be well advised to bow our heads in thanks at the presence of a miracle, and not to think that our prayers, contributions or abstentions are what did it” (ibid.). Prayer does not put us in touch with a supernatural God. Rather, prayer puts “us in touch with other people, people who share the same concerns, values, dreams, and pains that we do” (ibid., 119).

This world is also irrational (*When All You’ve Wanted,* 111). There is no ultimate meaning in anything that happens (*When Bad Things Happen,* 136). There is no reason why some people suffer and not others. “These events do not reflect God’s choice. They happen at random, and randomness is another name for chaos, in those corners of the universe where God’s creative light has not yet penetrated”(ibid., 53).

Forgiving God for Evil. Evil is real (*When All You've Wanted,* 89). "To be alive is to feel pain, and to hide from pain is to make yourself less alive" (ibid.). The world is unjust, and we must adjust to it. Rather than blame God, we need to forgive God. In a poignant passage, the rabbi asks:

> Are you capable of forgiving and loving God even when you have found out that He is not perfect, even when He has let you down and disappointed you by permitting bad luck and sickness and cruelty in His world, and permitting some of those things to happen to you? Can you learn to love and forgive Him despite His limitations . . . as you once learned to forgive and love your parents even though they were not as wise, as strong, or as perfect as you needed them to be? [*When Bad Things Happen,* 148]

The solution to the problem of evil (*see* EVIL, PROBLEM OF) is "to forgive God for not making a better world, to reach out to the people around us, and to go on living despite it all" (ibid., 147).

Maturity in Ethics. Kushner's view of right and wrong is rooted in Jewish tradition, but blossoms in the sunlight of contemporary psychology. At times he speaks of God as Law Giver. "He commands us. He imposes on us a sense of moral obligation" (*When All You've Wanted,* 180). God "commands us. That's what we're here on earth for, to be in God's service, to do God's bidding" (*When Bad Things Happen,* 86). Obedience to God's laws, however, is a lower-level ethical activity. Following psychologist Jean Piaget, Kushner believes obedience is not necessarily the highest virtue. In fact, "a religion that defines morality as obedience to its commands is appropriate to children and immature people, and may have been appropriate to humankind as a whole when civilization was immature." Such a religion was appropriate for immature civilization, but unquestioning obedience makes perpetual children (*When All You've Wanted,* 127–28).

A higher level of ethical maturity is achieved by those who "understand that rules don't come from 'on high.' Rules are made by people like themselves, tested and perfected over the course of time, and can be changed by people like themselves." At this stage "being 'good' no longer means simply obeying rules. It now comes to mean sharing in the responsibility of evaluating and making rules which will be fair to all, so that we can all enjoy living in a fair and just society" (ibid., 123).

Hope for the Future. As to life after death, Rabbi Kushner is uncertain. Personal immortality is only a hope. "Neither I nor any living person can know anything about the reality of that hope" (*When Bad Things Happen,* 28). He does "believe that the part of us which is not physical, the part we call soul or personality, does not and cannot die." But he adds quickly, "I am not capable of imagining what a soul without a body looks like. Will we be able to recognize disembodied souls as being the people we had known and loved?" (ibid.).

Kushner admits that belief in a world to come can help people endure the unfairness of this world. But it can excuse accepting injustice, instead of doing something about it (ibid., 29). We should live for the short run, a moment at a time. "We never solve the problem of living once and for all" (*When All You've Wanted,* 143). The important thing is to live in the now. Those who live in the present with integrity have no fear of dying (ibid., 155). "I have no fear of death

because I feel that I have lived. I have loved and have been loved” (ibid., 161). Most people are not afraid of dying but of living. They fear coming to death without ever having lived (ibid., 156).

We should not seek future rewards. “When you have learned how to live, life itself is the reward” (ibid., 152). Rabbi Kushner quotes approvingly the *Talmud* which says, “One hour in this world is better than all eternity in the World to Come” (ibid., 151). When we speak of God in heaven as our hope “we trivialize religion and make it harder for thoughtful people to take it seriously and find help there” (ibid., 179). Our real immortality is to have children and to plant things that others can enjoy after we are gone (ibid., 173).

Heaven and hell are on earth. Heaven “is having learned to do and enjoy the things that make us human, the things that only human beings can do.” By contrast, “the worst kind of hell I can imagine is not fire and brimstone . . . The worst hell is the realization that you could have been a real human being . . . and now it’s too late” (ibid., 157). God will not intervene someday to reward the righteous and punish the wicked. The real reward is that “he has made the human soul in such a way that only a life of goodness and honesty leaves us feeling spiritually healthy and human” (ibid., 183).

Evaluation. *Positive Contributions.* Even though his finite godism is false, his articulation of the view contains truths:

Acknowledgment of the problem of evil. Kushner has centered his thought in a crucial area—the problem of evil. In this regard he acknowledges the reality of evil, instead of opting for a pantheism that denies it. He is right that tornadoes have no conscience; they strike both good and bad people. They hit churches and houses of prostitution. Any adequate solution to the problem of natural evil must deal with this reality (*see* EVIL, PROBLEM OF). Kushner attempts to find this solution. He doesn’t relegate it to the realm of the ultimately inexplicable. Although theists do not agree with the solution (see below), nonetheless, we commend his attempt to find a solution.

Insights into the problem of suffering. Having experienced physical suffering, Kushner is not a detached observer; he is sensitive to the existential impact of suffering. His perspective is the difference between C. S. Lewis in his book, *The Problem of Pain* , when he was not experiencing it personally, and his later reflections in *A Grief Observed* , after his wife died from cancer.

Recognition of the problem in divine intervention. He also points to a problem some theists tend to overlook. Given the reality of the human condition, God cannot do everything. There are operational limits on divine intervention. God cannot violate the human freedom he gave to beings in his image. So, performing a miracle contrary to moral freedom is operationally impossible for God. Continually intervening would upset the very laws of nature that make both physical and moral life possible.

Weaknesses and Objections. Most of the objectionable aspects of Kushner’s thought are critiqued in other articles. They will be noted here with references.

First, finite godism is without foundation (*see* FINITE GODISM).

Second, Kushner's concept of evil is inadequate (*see* EVIL, PROBLEM OF).

Third, Kushner's denial of the supernatural is unfounded (*see* MIRACLE).

Fourth, his denial of immortality is contrary to the evidence (*see* IMMORTALITY). Without this denial his case crumbles, since it depends on the premise that wrongs of this life will not be rectified in the next life (see Geisler, *The Roots of Evil,* append. 3).

In spite of its popularity, Kushner's form of finite godism, especially as it relates to evil, does not stand up to scrutiny. It has more emotional appeal than rational justification.

Lapide, Pinchas. Pinchas Lapide is a late-twentieth-century Jewish rabbi and biblical scholar who, without converting to Christianity, supports the Christian belief that Jesus of Nazareth rose bodily from the grave. His conclusion supports a crucial link in the Christian apologetic—that of Christ's resurrection.

In his book, *The Resurrection of Jesus,* Rabbi Lapide concluded: "In regard to the future resurrection of the dead, I am and remain a Pharisee. Concerning the resurrection of Jesus on Easter Sunday, I was for decades a Sadducee. I am no longer a Sadducee since the following deliberation has caused me to think this through anew" (125). He adds, "If God's power which was active in Elisha is great enough to resuscitate even a dead person who was thrown into the tomb of the prophet (2 Kings 13:20–21), then the bodily resurrection of a crucified Jew also would not be inconceivable" (131).

Since a miracle is an act of God that confirms the truth of a prophet of God (*see* MIRACLES, APOLOGETIC VALUE OF), it is difficult to escape the conclusion that Jesus is the Messiah (*see* CHRIST, DEITY OF). As one writer put it, "Pinchas Lapide's logic escapes me. He believes it is a possibility that Jesus was resurrected by God. At the same time he does not accept Jesus as the Messiah. But Jesus said that he was the Messiah. Why would God resurrect a liar?" (*Time* , 4 June 1979). Indeed, another rabbi said to Jesus, "Rabbi, we know you are a teacher who has come from God. For no one could perform the miraculous signs you are doing if God were not with him" (John 3:2).

Law, Nature and Kinds of. Moral law is a measure for conduct. It is a first principle (*see* FIRST PRINCIPLES) of human action. After it is proclaimed, a law is binding. Theonomists contend that the only legitimate law is divine law, insisting that human governments should be based on

biblical law (Bahnsen). Situation ethicists insist that there are no moral absolutes, and all law reduces to human law. Moralists ponder the relation of divine law and human law. One of the most comprehensive and influential treatments of the topic is that of Thomas Aquinas. Secular, Protestant, and Catholic scholars, including John Calvin , John Locke , and Thomas Jefferson through the legal theorist William Blackstone, built on his analysis.

The Nature of Law. Law is a measure or rule by which we are led to act or are withheld from acting. Law is a first principle of action. It is the basic rule or principle by which actions of persons are directed. The rule and measure of human activity is reason, whose function is to direct means to ends (Aquinas, *Summa Theologica,* 1a2ae. 90, 1). Civil law is an ordinance of reason for the common good, made by public person(s) who have charge of the community. It is promulgated to them (ibid., 1a2ae. 90, 4).

Law as First Principle. Each area of human activity has first principles. There are first principles of human thinking, such as the law of noncontradiction. Likewise, there are first principles of being, such as the principle that "Being exists." And there are first principles of human acting, such as, "Do good and shun evil." The latter is known as the natural law. The precepts of the natural law are to practical reason what first principles of thought are to philosophical thinking. The first principle of practical reason is our ultimate end or happiness. Law is primarily concerned with planning for this end. In brief, law is the rule directed toward the common good (happiness) (ibid., 1a2ae. 90, 2).

Proclamation of Law. For law to be in effect, it must be proclaimed. No one is obliged to obey a precept without first being reasonably informed of it (Aquinas, *Disputations*). This follows logi cally upon the nature of law as a duty of action for the common good. Thus, to lay down an obligation a law must be applied to the persons to be regulated, and it must be brought to their knowledge by promulgation (*Summa Theologica,* 1a2ae. 90, 4). Ignorance of the law is a legitimate excuse not to obey it, unless it is culpable ignorance.

Different Kinds of Law. Four kinds of law have been differentiated: eternal, natural, human, and divine. Each is the measure or rule in a different sphere.

Eternal Law. Eternal law is the idea in the mind of God, the principle of the universe that lies behind the governance of all things (ibid., 1a2ae. 91, 1). It is the source and exemplar of all other law. For all laws derive from the eternal law to the extent that they share in right reason. It is eternal because, being in the mind of God, it is the plan of things that was set up from eternity (ibid.). So eternal law is the divine reason by which the universe is ruled. All things subject to divine providence are ruled and measured by eternal law; thus they share in eternal law (ibid., 1a2ae. 91, 2). It is the eternal mind of God as it conceived and determined all that would be and how it would be run. From it flow other kinds of law.

Natural Law . The communication of eternal law to rational creatures is called *natural law* . Natural law is the human participation in eternal law by way of reason. It is contained in the eternal law primarily and in the natural judicial faculty of human reason secondarily (ibid., 1a2ae. 71, 6). Natural law is the light of reason by which we discern what is right and wrong (ibid., 1a2ae. 91, 2). It is the law written on human hearts (Rom. 2:15).

Natural law teaches us to do good and shun evil. Good and evil should be set in the context of what is proper to human beings as human, their rational and moral life (*Disputations,* 2). So a good act is one in accord with human rational and moral nature. An evil act is one contrary to human nature. Sadly, most people err at this point because they act according to sense rather than reason (*Summa Theologica,* 1a. 49, 3).

However, to live according to human nature does not mean that human nature is the ultimate measure. In voluntary activity the proximate measure is human reason, but the supreme measure is eternal law (ibid., 1a2ae. 71, 6). When a human act goes to its end in harmony with the order of reason and eternal law, the act is right; when it turns away from that rightness it is wrong (ibid., 1a2ae. 21, 1). Human reason is the basis for natural law only insofar as it participates in God's eternal reason. In this sense, violating the dictate of reason amounts to violating the law of God (ibid., 1a2ae. 19, 5).

Human Law. Human law , also called positive or civil law, is the attempt of human reason to make practical laws based on natural law. Human law results when the practical reason proceeds to enact concrete laws for society from the general precepts of the natural law (ibid., 1a2ae. 91, 3). It is a particularization of the general principles of natural law.

Human laws may be inferred from natural law. Some precepts are inferred from natural law as a conclusion. For example, "You should not kill" comes from "You should not harm." Other precepts are determinate embodiments of the natural law. Natural law dictates that criminals should be punished, but it does not (always) settle the character of that punishment (ibid., 1a2ae. 95, 2). Human laws may be derived from natural law, either as a conclusion or a particular application (ibid.). The first is like a demonstrative science and the second like an art. Hence, laws declared as conclusions have their force from both the natural law and the government that enacts them. Applied laws have their force from government alone.

Not everything forbidden by human law is essentially evil. Some things are commanded as good, or forbidden as evil. Others are good because they are commanded or evil because they are forbidden (ibid., 2a2ae. 57, 2). An act of vice, forbidden by a negative precept, is never to be committed. However, many factors have to conspire to make a commanded act of virtue right. A virtuous act need not be complied with in every case, "but only when the due conditions of person, time, place, and situation demand its observance" (see Gilby, 361).

Human law is imposed on imperfect people. "Therefore it does not forbid all vices, from which the virtuous keep themselves, but only the graver ones, which the majority can avoid, and chiefly those that are damaging to others and on prevention of which depends social stability" (*Summa Theologica,* 1a2ae. 96, 2). That is, "human law cannot forbid all and everything that is against virtue; it is enough that it forbid deeds against community life; the remainder it tolerates almost as if they were licit, not indeed because they are approved, but because they are not punished" (ibid., 2a2ae. 77, 1). "Every act of virtue is not commanded by human law, but only those that can be enjoined for the public good" (ibid., 2a2ae. 96, 3). For "the immediate end of human law is men's own utility" (ibid., 1a2ae. 95, 3).

Of course, not every human law is legitimate. A law has the force of law only when it benefits the community (ibid., 2ae. 90, 2). Laws contrary to common good (which is demanded by the natural law) do not have the force of law. Likewise, laws not promulgated, even if directed to the common good, are not binding (*Disputations,* 177).

Divine Law. Divine law has a different purpose from natural law. Its intent is to lead people to God. That is, "the entire purpose of the lawgiver is that man may love God" (Aquinas, *Summa contra Gentiles,* 111–16). Divine law, therefore, is not given to unbelievers but to believers. Natural law is for unbelievers. Divine law is binding on the church, but natural law is binding on all society. Natural law is directed toward temporal good, but divine law is directed toward eternal good. Inasmuch as natural law reflects the very character of God, it cannot change. Divine law, however, is based on God's will and therefore does change. Hence, "in divine as in human law, some things are commanded because they are good. . . . Others again are good because they are commanded . . ." (*Summa Theologica,* 2a2ae. 57, 2). This is reflected in God's change in divine law from the Old Testament to the New Testament. The natural law remains the same from age to age and from person to person.

Purpose of Law. In general, God's purpose for law is to regulate human activity. Each kind of law, of course, has its own kind of regulation in mind. By eternal law God regulates the entire universe; by divine law he regulates the church, and by natural law he regulates all rational creatures. In addition to these spheres, Aquinas spells out several specific dimensions of God's purpose for giving law.

Friendship. One purpose of law is to promote friendship. "As the leading purpose of human law is to bring about friendship of men among themselves, so divine law is chiefly intended to establish men in friendship with God" (ibid., 2a2ae. 99, 2). To be civil, behavior must be regulated. Apart from laws, friendship cannot function, since it is the measure of right relationships.

Love of God. Jesus summarized all laws into two: Love God and love others. Aquinas calls love for God the "entire purpose of the lawgiver." Hence, it is not *either* law *or* love; it is the law of love. It leads humanity to God. For "love is our strongest union with God, and this above all is intended by the divine law." God is love, and the highest duty is to love him (*Summa contra Gentiles,* 111–16).

Curbing Evil. Not everyone will obey God's law, so sanctions are required, either to reform the sinner or to protect society through his punishment (*Summa Theologica,* 2a2ae. 68, 1). This is also true of divine and natural law. The primary purpose is for our good, but the secondary purpose is to penalize those who disobey.

Common Good. Human laws also have the purpose of achieving the common good. Aquinas recognized that "to make a rule fit every case is impossible." Hence, "legislators have to attend to what happens in the majority of cases and should frame their laws accordingly." For example, the law commands that things borrowed should be returned. What if a weapon has been borrowed and, if given back, it will be used for violence (ibid., 2a2ae. 120, 1)? So what is productive of the common good is not always right in a specific case. Since the law-maker

cannot take every specific exception into consideration, law must be based on what usually happens (Aquinas, *Commentary, 5 Ethics,* lect. 16).

Conflicting Laws. Sometimes there is conflict among kinds of law. In such cases there is a hierarchy of priority.

Priority of Natural Law. There are exceptions even to just human laws. Human laws are only general, not universal. At times natural law overrides them. Though the law of property rights demands that we return what we have borrowed when requested, nonetheless, we should not return a weapon to someone who is in a murderous rage. In such a case, "to follow the law as it stands would be wrong; to leave it aside and follow what is demanded by fairness and the common benefit will then be right" (Aquinas, *Summa Theologica,* 2a2ae. 120, 1). The virtue of justice or equity demands this. Moral law takes precedence over human law in special cases, even if the human law is just.

Law's Based in God's Nature. Divine and human law, being based on God's will, can be changed (*see* ESSENTIALISM). The natural law, however, is based on God's nature and cannot be changed (*Summa Theologica,* 2a2ae. 57, 2; *see* GOD, NATURE OF). Hence, it would follow that, whenever there is a conflict between unchangeable law and changeable law, the former takes priority. When the disciples picked ears of corn on the Sabbath they were excused by necessity of hunger. Neither did David transgress by taking the loaves it was illegal for him to eat (ibid., 3a. 90, 4).

Letter vs. Spirit. Christian thinkers have noted that "the judgment that the letter of the law is not to be followed in certain given circumstances is not a criticism of the law, but an appreciation of a particular situation that has cropped up" (ibid., 2a2ae. 120, 1). If one does not do this, then severity takes priority over equity. For "legal-mindedness should be directed by equity, which provides a higher rule for human activity" (ibid., 2a2ae. 120, 2). There is a higher law and lower laws. When they conflict, one is obligated to obey the higher.

Leibniz, Gottfried. Gottfried Leibniz (1646–1716) was a child genius in Germany who learned both Greek and scholastic philosophy at an age so young he was denied a master's degree in law at the University of Leipzig because of his youth. He co-invented calculus with Isaac Newton in 1676. He wrote a doctoral dissertation on symbolic solutions to philosophical problems. Leibniz was greatly influenced by contemporary rationalist Benedict Spinoza , although Spinoza was a pantheist (*see* PANTHEISM), and Leibniz remained a theist (*see* THEISM).

The most influential works of Leibniz were *Discourse on Metaphysics* , *Monadology* , and *Theodicy* . His influence on modern thought has been considerable. Immanuel Kant was a Leibnizian rationalist before he was awakened from his "dogmatic slumbers" by reading David Hume .

Theory of Knowledge: Rationalism. Leibniz stated three goals for his life work, which he believed stood together, the love of God, promotion of human welfare, and the perfection of reason. The Leibniz method was mathematical, yet empirically grounded. He began by analyzing scientific findings (not merely ideas, as Rene Descartes). He saw everything as beginning in the senses except the mind itself. A purely logical ground for science is not possible. However, reason is necessary to complete knowledge. There is no universal collection of sense data, and sense cannot organize and relate all the data.

Metaphysical (universal) knowledge is possible only because God made all things in harmony. All ideas are innate, generated by the mind from sensory information.

First Principles. Some ideas are necessarily true. These first principles are the condition of all knowledge. As first principles, the predicate in each statement can be deduced from the subject. These include:

The Principle of Sufficient Reason . "There is a sufficient reason for everything, either in another or in itself." This principle is the ground of all true propositions and intelligibility.

The Principle of Noncontradiction. "Something cannot be both true and false at the same time and in the same sense."

The Principle of Identity. "A thing is identical to itself." I am I; A is A.

The principle of sufficient reason regulates all truth. The principles of noncontradiction and identity establish all necessary truths.

The Principle of Identity of Indiscernibles. “Where there is no discernible difference, things are identical.” No separate substances (or monads) are alike. The world is filled with qualitatively different things, hierarchically graded. If two things were the same, there is no sufficient reason God would choose both of them to exist in a maximally good world (*see* EVIL, PROBLEM OF).

The Principle of Continuity. “The world is full; there are no gaps in the hierarchy of beings in the best world.” Nature never acts by leaps.

The Principle of Contingency. “Every contingent thing has a cause.” Possibility does not explain actuality. The basic question: Why is there something, rather than nothing?

The Principle of Perfection. “ Good tends to maximize.” Like the scholastic principle of finality (agents act for a good end). Good produces good in the maximal degree possible.

A corollary is that it is better to exist than not to exist. Essences have a drive *(conatus)* toward existence.

Leibniz’s Proofs for God. Leibniz offered several arguments for the existence of God:

Argument from Perfection or Harmony. His argument from perfection or harmony can be stated:

1. Pure essences are eternal possibilities.
2. It is better to exist than not to exist.
3. All things have a drive toward existence (conatus). (a) Some are incompatible with others. (b) Not all can exist at a given moment. (c) But all strive to exist.
4. Yet there is harmony in the universe.
5. Hence, there must be a God who orders all things, keeping them in harmony with one another

Cosmological Argument. The cosmological argument as formulated by Leibniz took the form:

1. The entire observed world is changing.
2. Whatever changes lacks the reason for its own existence.
3. But there is a sufficient reason for everything.
4. Hence, there must be a cause beyond the world for its existence.

5. This cause is either its own sufficient reason, or there is one beyond it.

6. But there cannot be an infinite regress of sufficient reasons, for the failure to reach an explanation is not an explanation. There must be an explanation.

7. Therefore, there must be a First Cause of the world that has no reason beyond itself but is its own sufficient reason.

This argument differs from that of Aquinas by its use of the principle of sufficient reason. Thomas Aquinas appealed only to the principle of causality and, thus, avoided the charges of rationalism that were rightly leveled at Leibniz. The principle of sufficient reason led atheists (*see* SARTRE, JEAN-PAUL ; Nietzsche, Friedrich) to con clude that the cosmological argument eventuated in the self-contradictory concept of God as a self-caused being.

Ontological Argument . Leibniz also contributed to the ontological argument debate:

1. If it is possible for an absolutely perfect being to exist, then it is necessary for it to exist. (a) By nature an absolutely perfect being cannot lack anything. (b) But if it did not exist, it would lack something. (c) Hence, an absolutely perfect being cannot lack existence.

2. It is possible (noncontradictory) for an absolutely perfect being to exist. (a) A perfection is a simple quality (= monad), since each one differs in kind. (b) But whatever is simple cannot conflict with another simple thing. (c) Hence, it is possible for one being (God) to have all perfections.

3. Therefore, it is necessary that an absolutely perfect being exists.

Metaphysics (Monadology). Leibniz developed his own theory of substance in order to bridge the physical world to metaphysical realities. His doctrine revolved around *monads* . He believed monads exist as an immaterial "particle" more elemental even than the atom, for while physical atoms can be divided, metaphysical monads cannot. Monads differ from one another in shape, size, space, and quality. They are created, they can be destroyed, but they cannot change. Each monad perceives and acts differently, at its own hierarchical level, as established by God. Together they act in total harmony with each other according to the plan of God and have an innate drive toward perfection that is built into their essence. Since body and soul are separate substances, their separate monads function together in precise harmony as ordered by God.

In the hierarchy of monads, the higher are those belonging to the spiritual realm. Soul monads are of a higher order than those of the body. The highest, uncreated Super Monad is God. God created all other monads and maximizes good among and through them.

Problem of Evil. According to Leibniz, God foreordains all things by foreknowledge, without coercing free will. Freedom is the spontaneity of an intellectual being. God has an antecedent will, which is only for good. He also has a consequent will to bring about the best world possible given the existence of evil. As best of all possible beings, God wills the best of all

possible worlds. Since this world is willed by God, it must be the best possible or least defective world.

Three kinds of evil exist: metaphysical (finitude), moral (sin), and physical (suffering). Finitude underlies sin and suffering. Sin is the result of ignorance, a confused or unclarified state. Evil is part of a total picture of good, giving darkness so that the light stands out in contrast (*see* EVIL, PROBLEM OF).

God is working to perfect the universe, which can only be done by perfecting people. God aims at perfecting an immortal soul through the universal church. This view of the church borrows from Augustine 's *The City of God* .

Evaluation. Some of the ideas of Leibniz are flawed, but his positive contributions should be recognized:

Positive Contributions. Through his work in developing calculus, Leibniz did an immense service to modern math and science, and he contributed to epistemology, metaphysics, theology, and theodicy as well.

Epistemology. Leibniz was a foundationalist (*see* FOUNDATIONALISM), who correctly stressed that knowledge is impossible without first principles. Even though many disagree with his belief in innate ideas, even Kant in his agnosticism acknowledged the necessity of an innate dimension to knowledge.

Metaphysics. As a theist (*see* THEIST), Leibniz believed in creation *ex nihilo* . He struggled with and gave modern form to theistic concepts in the tradition of Augustine , Anselm , and Thomas Aquinas. His cosmological argument has influenced theists.

Theodicy. Leibniz's solution to the problem of evil was classic (*see* EVIL, PROBLEM OF). It grappled with the origin, nature, and persistence of evil in a way that attempted to preserve both God's absolute perfection and human freedom. Further, in spite of justified criticisms, his concept of a "best possible world" is an essential element in theodicy.

Weaknesses. The central values notwithstanding, Leibniz is open to some criticism:

Rationalist epistemology. As Hume showed, the concept of innate ideas is contrary to experience. There is no evidence that we are born with a whole storehouse of ideas, waiting only to be activated. The *a priori* dimension to knowledge appears to be in the area of *capacity,* not *content* . That is, we are born with the capability to know truth, but not with a mind full of truths.

Dualism . Leibniz's dualism of mind and body leads to the unlikely views of parallelism, occasionalism, and established harmony of mind and body. There is no real interaction or unity between the two.

The principle of sufficient reason. In spite of the validity of many of Leibniz's first principles, the principle of sufficient reason leads logically to a contradictory, self-caused Being.

For if the cause of God's being is within himself, then God is self-caused. Unlike the first principle of causality of Aquinas, the principle of sufficient reason is not rooted in reality (*see* REALISM) but only in the realm of ideas. Finally, the principle is not undeniable, since one can say that something does not have a reason (cause) without engaging in a self-defeating statement. Indeed, the uncreated God is the ultimate uncaused Cause.

The ontological argument. Leibniz's form of the ontological argument is based on the widely rejected premise that existence is a perfection (*see* KANT, IMMANUEL). Further, his attempt to prove that the concept is logically possible fails to reach its goal. It is subject to the same criticism leveled against other pluralisms that hold to a univocal view of being (*see* ANALOGY, PRINCIPLE OF). It is impossible to avoid monism.

Even Leibniz's form of the otherwise valid cosmological argument gives no certain starting point being based only in the observation [appearance] of change.

View of evil. This view of free will tends to reduce to a form of determinism. For if it is God who gives the drive or desire for free choices, how can it be really free (*see* FREE WILL).

Likewise, his theodicy implies that the best God can do still involves evil. This was powerfully satirized by Voltaire's *Candide* . While God must do his best, this present world is not it. This is not the best possible world, though it may very well be the best possible *way* to the best possible *world* (*see* EVIL, PROBLEM OF).

Lessing, Gotthold Ephraim. Gotthold Ephraim Lessing (1729–1781) was the son of a scholarly German pastor who became a dramatist and critic. He studied theology at Leipzig University, where he imbibed the rationalism of the Enlightenment, whose leading spokesman was Christian Wolfe, a follower of Gottfried Leibniz. Lessing was influenced by the English deists (*see* DEISM). As a theater critic he came under the influence of the deist Hermann Reimarus, from whose book, *An Apology for Rational Worshippers of God* he published extracts in 1774 and 1777 to

1778 (*see* DEISM). Lessing finally came to be dominated by the pantheism of Benedict Spinoza .

Lessing's influence on others was immense. It can be seen in the liberalism of Friedrich Schleiermacher and Samuel Coleridge, as well as the existentialism of Soren Kierkegaard and the historicism of G. W. F. Hegel and the positivism of Auguste Comte.

Views of God. Lessing came from a trinitarian (*see* TRINITY) background, but gradually adopted deist ideas and eventually became a Spinozan pantheist. As such, his life foreshadowed much of the history of the next two centuries. By 1753 Lessing indicated in *The Christianity of Reason* that he was moving toward pantheism , as he mixed Spinoza and Leibniz and denied that God is a superobject beyond or behind the world (see Chadwick, 445). His 1763 work, *On the Reality of Things Outside God* , which was published posthumously in 1795, denied traditional theism. He denied that a created world exists distinct from God.

Friedrich Jacobi, in *Letters to Moses Mendelssohn on Spinoza's Doctrine* (1785), related how, seven months before Lessing's death, the critic had told him of his rejection of transcendent metaphysics in deism. He had adopted the immanentistic view of Spinoza. This was confirmed by fragments found among Lessing's papers (ibid., 446).

Lessing not only believed that nothing exists outside the divine mind, but since ideas of contingent things are necessary, believed that a contingency exists inside God. This foreshadowed the later process theologians (*see* PANENTHEISM), such as Alfred North Whitehead .

History and the Gospels. In 1754 Lessing published a series of "Vindications," in which he defended a number of historical figures he believed had been badly treated by the church. While expressing sympathy with the Christian ethic in these leaders, he showed antipathy toward Christian doctrines.

Christ versus Jesus. The turning point for Lessing occurred in 1769. As librarian for the duke of Brunswick he began to publish fragments of a manuscript by the deist Reimarus (1766–69). The last fragment precipitated a controversy with Hamburg pastor Johann Goeze and touched off the quest for the historical Jesus (*see* CHRIST OF FAITH VS. JESUS OF HISTORY ; JESUS, QUEST FOR THE HISTORICAL ; JESUS SEMINAR). Not only did Lessing distinguish between the Jesus of history and the Christ of Faith; he did a critical study of the sources of the Synoptic Gospels in *New Hypotheses Concerning the Evangelists Regarded as Merely Human Historians* (1784). Lessing's views were expressed in a play, "Nathan the Wise," which pleaded for love and tolerance rather than assent to a creed. Lessing's view was the essence of Enlightenment Christianity, the view that, beneath creedal accretions, Christianity is a moral code of universal brotherhood.

Lessing's "Ditch." The legacy of Lessing was a "ditch" dug between the contingent truths of history and the necessary truths of faith. He split the revelation of timeless truths from the time-bound, contingent truths of history. It was this huge gulf with which Kierkegaard struggled and from which he took his "leap of faith" (see *Fear and Trembling*).

Lessing affirmed that the "accidental truths of history can never become the proof of necessary truths of reason" (Chadwick, 445). There is no logical connection between historical realities and faith. Faith truths are mathematical and *a priori* , independent of experience. The former are *a posteriori* , contingent truths of experience. Therefore, historical narrative can never convey knowledge of God.

Relativism. Lessing was more a relativist than a skeptic. He immortalized his view in the aphorism, "If God held all truth in his right hand and in his left the everlasting striving after truth, so that I should always and everlastingly be mistaken and said to me, Choose, with humility I would pick on the left hand and say, Father grant me that; absolute truth is for thee alone" (Chadwick, 445).

Evaluation. Lessing's self-claimed humility aside, it is clear that the net result of his views a self-defeating form of agnosticism , relativism (*see* TRUTH, NATURE OF), and a dichotomy of fact and value and of history and faith (*see* APOLOGETICS, ARGUMENT OF ; NEW TESTAMENT, MANUSCRIPTS ; NEW TESTAMENT DOCUMENTS, RELIABILITY OF). One insightful assessment is that "Lessing spent his life hoping that Christianity was true and arguing that it was not" (Chadwick, 445).

Lewis, C. S. Because much of his work was in popular media, including radio broadcasts and children's stories, Clive Staples Lewis (1898–1963) is arguably the most influential twentieth-century Christian theist and apologist (*see* APOLOGETICS, NEED FOR). An Oxford University professor, this former atheist so expressed profound truths in simple language that he reached into the hearts of millions. Lewis disclaimed being a philosopher or theologian, but his insight into the essentials of theism made him a significant apologist and communicator.

The Nature and Existence of God. Lewis accepted the Augustine-Anselm-Aquinas view of God as eternal, necessary, transcendent, morally perfect, and personal (*see* GOD, NATURE OF). God transcends space and time: "Almost certainly God is not in Time. His life does not consist of moments following one another. . . . Ten-thirty—and every other moment from the beginning of the world—is always the Present for Him." To put it another way, "He has all eternity in

which to listen to the split second of prayer put up by a pilot as his plane crashes in flames" (*Mere Christianity,* 146).

God is, nevertheless, immanent (present and operating) in creation. Lewis wrote: "Looking for God—or Heaven—by exploring space is like reading or seeing all Shakespeare's plays in the hope that you will find Shakespeare as one of the characters or Stratford as one of the places. Shakespeare is in one sense present at every moment in every play. But he is never present in the same way as Falstaff or Lady Macbeth. Nor is he diffused through the play like a gas" (*Christian Reflections,* 167–68).

The Cosmological Argument . Although he accepted a theistic form of evolution (see below), Lewis believed in creation out of nothing (*see* CREATION, VIEWS OF). For "What God creates is not God; just as what man makes is not man" (*God in the Dock,* 138). He explained that matter is not coeternal with God:

> Entropy by its very character assures us that though it may be the universal rule in the Nature we know, it cannot be universal absolutely. If a man says, "Humpty Dumpty is falling," you see at once that this is not a complete story. The bit you have been told implies both a later chapter in which Humpty Dumpty will have reached the ground, and an earlier chapter in which he was still seated on the wall. A Nature which is "running down" cannot be the whole story. A clock can't run down unless it has been wound up." [Lewis, *Miracles,* 157]

Matter is the product of a cosmic Mind (*see* DUALISM). "But to admit *that* sort of cosmic mind is to admit a God outside Nature, a transcendent and supernatural God" (ibid., 30). The universe is matter. Matter cannot produce mind; only mind can produce matter (*see* MATERIALISM). The creation of the world was not from some pre-existing matter or stuff. It was created from nothing. God created this world freely: "The freedom of God consists in the fact that no cause other than Himself produces His acts and no external obstacle impedes them—that His own goodness is the root from which they all grow and His own omnipotence the air in which they all flower." (*Problem of Pain,* 23).

God did not create the world because he had to; he created it because he wanted to. The existence of the universe is entirely contingent on the good will of the Creator.

The Moral Argument . Lewis begins *Mere Christianity* with the premise that an objective moral law, such as even common disagreements presuppose, entails a Moral Law Giver. There is "something which is directing the universe, and which appears in me as a law urging me to do right and making me feel responsible and uncomfortable when I do wrong. I think we have to assume it is more like a mind than it is like anything else we know—because after all the only other thing we know is matter and you can hardly imagine a bit of matter giving instructions" (*Mere Christianity,* 34).

Lewis's argument can be summarized:

1. There must be an objective, universal moral law, or else no ethical judgments make sense (*see* MORALITY, ABSOLUTE NATURE OF). Nothing could be called evil or wrong, and there would be no reason to keep promises or treaties (*God in the Dock,* chap. 1).

2. This moral law does not originate with us. In fact, we are bound by it.

3. The source of this law is more like mind than matter, and it cannot be part of the universe any more than an architect is part of the building he designs.

4. Therefore, there exists a Moral Law Giver who is the ultimate source and standard of all right and wrong (ibid., chap. 7).

For a fuller discussion of Lewis's moral law argument and its defense, see his section in the article MORAL ARGUMENT FOR GOD .

The Nature of Human Beings. However science may show that the human body emerged, the process was divinely initiated and consummated by God in the creation of a rational human soul.

Human Beings Are Rational. Lewis would not blush at the appellation "rationalist." Repeatedly he exalts human rationality. He writes, "I couldn't get at the universe unless I could trust my reason. If we couldn't trust inference we could know nothing but our own existence" (*God in the Dock,* 277). "The heart never takes the place of the head; but can and should obey it" (*The Abolition of Man,* 30).

There also must be an ultimate reason or explanation. "You cannot go on 'explaining away' forever: you will find that you have explained explanation itself away." Moreover, "you cannot go on 'seeing through' things forever." Consequently, "it is no use trying to 'see through' first principles. If you see through everything, then everything is transparent." But "to 'see through' all things is the same as not to see" (ibid., 91).

Lewis believed rational thought is undeniable. He insists that "all arguments [against] the validity of thought make a tacit, and illegitimate, exception in favor of the bit of thought you are doing at that moment." Hence, "the validity of thought is central: all other things have to be fitted in round it as best they can" (Lewis, *Miracles,* 23).

Human Beings Are Moral. Emphasis on the rational nature does not negate human emotions. Those who put thinking above feeling are for Lewis "men without chests" (Lewis, *Abolition of Man,* 34). "The head rules the belly through the chest—the seat . . . of emotions organized by trained habit into stable sentiments." Without this middle element "man is vain: for by his intellect he is mere spirit and by his appetite mere animal" (ibid., 34). Beyond the moral nature stands an attainable moral ideal. Lewis would agree with the statement that the primary value of education is an education in primary values. Education fulfills its proper purpose as it cultivates value judgments to help perfect the moral nature. Without trained emotions, the intellect is powerless against the animal (ibid., 33, 34). Thus, Lewis observes, it is better to play cards with a skeptic who is a gentleman than a moral philosopher who was brought up among card sharks

(ibid., 34). Only because we stand within God's law can we speak of having the power of self-control (ibid., 86).

Secular humanism, in a sort of ghastly simplicity, removes the moral organ and yet demands the moral function. "We make men without chests and expect of them virtue and enterprise. We laugh at honour and are shocked to find traitors in our midst" (ibid., 35).

Human Beings Are Creative. Characteristically, Lewis also affirmed the aesthetic nature within an ideal of human creatorhood. Dorothy Sayers's *Toward a Christian Aesthetic* calls the idea of art as *creation* Christianity's most important contribution to aesthetics (6). The artist or writer is not the Creator, but a sub-creator. Creative expression expresses the image of an artist's inner feelings even as the Invisible God was visibly expressed in the incarnation of his Son. He and other Christians of his Oxford University circle, called the Inklings, produced an immense literary body. Lewis himself wrote

- seven fantasy genre books of the Narnia Chronicles: *The Lion, the Witch, and the Wardrobe* ; *Prince Caspian* ; *The Voyage of the Dawn Treader* ; *The Magician's Nephew* ; *The Horse and His Boy* ; *The Silver Chair* ; and *The Last Battle* .

- a "space trilogy," that explored the nature of God's battle with personal and societal evil in the guise of three interlocking science fiction stories: *Out of the Silent Planet* , *Perelandra* , and *That Hideous Strength* .

- *Screwtape Letters* and *The Great Divorce* , deceptively light stories reflecting the dynamics of temptation and rebellion against God.

- a series of BBC radio lectures expanded into an apologetic classic, *Mere Christianity* , as well as deeper works in apologetics and philosophy, including *God in the Dock* , *Studies in Medieval and Renaissance Literature* , *The Abolition of Man* , and *The Problem of Pain* .

- his intellectual and spiritual autobiography, *Surprised by Joy* .

- the moving story of his crisis of faith at his wife's death, *A Grief Observed* .

- a variety of literary criticism articles and studies.

- voluminous personal correspondence, a sampling of which was published in *Letters to an American Lady* .

Human Beings Are Immortal. Lewis also affirmed humanity's eternal value (*see* IMMORTALITY). This affirmation springs from the belief that each person is made in God's image. To affirm humanity while denying the ultimate moral value does not affirm real human value at all. Secularist humanists, Lewis believed, abolish, rather than affirm, humanity (see *The Abolition of Man* and an allegorical version of its message, *That Hideous Strength*). In denying the human immortal, moral and God-like nature they deny personhood and sweep away the basis for treating the individual with ultimate respect (*The Abolition of Man,* 76, 77).

The irony, then, is that, as secular humanists elevate humanity to godhood, they sweep away all humanity, with its accompanying right to respect. By contrast, Christianity, in affirming that the basis for ultimate value comes from a transcendent God, preserves the basis for ultimate human dignity.

So secularist humanism dehumanizes what it seeks to deify. Only the Christian view retains true humanness. For Lewis holds that "either we are rational spirit obliged forever to obey the absolute values of the *Tao* [moral law], or else we are mere nature to be kneaded and cut into new shapes" (ibid., 84). The only guarantee against tyranny and slavery is to affirm immortal human worth in the context of an absolute moral law. For "the process which, if not checked, will abolish Man, goes on apace among Communists and Democrats no less than among Fascists" (ibid., 85). Only within the absolute moral law is there a concrete reality in which to be truly human (ibid., 86).

Human Beings Have Dignity. Following from rationality and moral responsibility is human dignity. There is a firm basis for this virtue in the immortal human-God-like nature: A person has rational, moral and volitional abilities. This is why punishment for wrongdoing is appropriate. The person knows better and deserves to be penalized for unlawful action (*God in the Dock,* 292). Punishment is a complement to human dignity.

Citing Martin Buber , Lewis exhorts science not to treat the person as an "It" but to recognize the human "Thou" (Lewis, *The Abolition of Man,* 90). We must never surrender any human to science as a mere object to control. This, says Lewis, is "a 'magician's bargain' . . . whereby man surrenders object after object, and finally himself, to Nature in return for power" (ibid., 87). When science is allowed to take control, it has the same goal as magic, though its means differ (ibid., 89). He reminds us that even the father of modern science, Francis Bacon, condemned those who make scientific knowledge an end, rather than a means (ibid., 88). Lewis called science to repentance: "The regenerate science which I have in mind would not do even to minerals and vegetables what modern science threatens to do to man himself" (ibid., 89, 90).

Lewis chides the secularists for boasting in science. "As regards the powers manifested in the aeroplane or the wireless, man is as much the patient or subject as the possessor, since he is the target both for bombs and for propaganda" (ibid., 68). What we call power over nature turns out to be power by some people over others (ibid., 69). "Each new power won *by* man is a power *over* man as well. Each advance leaves him weaker as well as stronger" (ibid., 71).

Unless those in control of power are bound by an objective moral law, the power gained will be used only to bind, and not to benefit, the human race. Says Lewis, "I am very doubtful whether history shows us one example of a man who, having stepped outside traditional morality and attained power, has used that power benevolently" (ibid., 75). The final irony is that when humankind steps outside the moral law, which Lewis calls the *Tao,* the Chinese word for "way," they become no longer human, but artifacts. "Man's final conquest has proved to be the abolition of Man" (ibid., 77).

So biased against Lewis' penal view of justice were the secular humanists of his day that no academic publication would publish him on the topic. His definitive statement was first

published in an Australian journal and later incorporated into *God in the Dock* . In this article Lewis attacks secular humanism's reformatory view of justice. He argues that it is tyranny to subject a human being to an undesired, compulsory cure. The reformatory view is "illusory humanitarianism," which disguises cruelty on the false premise that crime is pathological, not moral. In fact, the reformatory view dehumanizes the individual, treating him as a patient or case, rather than as a person. Lewis insists that to be 'cured' against one's will puts the man or woman in a class with those who cannot think for themselves and never will. Even severe punishment of a person as a rational human being treats the person as an image-bearer of God (*God in the Dock,* 292).

Lewis was keenly aware of the danger of replacing the objective moral law of God with subjective political laws (*see* LAW, NATURE AND KINDS OF). History shows that dictators who step outside the moral law are invariably not benevolent. The potential for evil when great power resides in a person's political grasp is horrendous. This message also figures into the social commentary of the allegorical *That Hideous Strength* .

Miracles. Naturalism claims that nature is "the whole show." So if naturalism is true, then every event in nature must be explicable in terms of the total system of nature. But human (inferential) reason, such as even naturalists assume and exercise, cannot be explained strictly in terms of nonrational natural causes. Moreover, "the Naturalist cannot condemn other people's thoughts because they have irrational causes and continue to believe his own, which have (if Naturalism is true) equally irrational causes" (*Miracles,* 22). Furthermore, argues Lewis, if naturalism is right then there is no reason that the thoughts of a lunatic or drug addict should not be valued by a naturalist as much as his or her own thoughts. This is the self-contradiction of naturalism.

There is more than nature; there is mind which cannot be reduced to matter. And there is value (ought), which cannot be reduced to nature (what is). In fact, there is an absolute moral Mind behind nature who gives the moral law.

Evil. According to Lewis, evil is not eternal, as dualism claims.

> The two Powers, the good and the evil, do not explain each other. Neither . . . can claim to be the Ultimate. More ultimate than either of them is the inexplicable fact of their being there together. Neither of them chose this *tete-a-tete* . Each of them, therefore, is *conditioned* —finds himself willy-nilly in a situation; and either that situation itself, or some unknown force which produced that situation, is the real Ultimate. Dualism has not yet reached the ground of being. You cannot accept two conditioned and mutually independent beings as the self-grounded, self-comprehending Absolute. [*God in the Dock,* 22]

Evil arose from free choice (*see* FREE WILL). This does not mean that it is evil to be free. In freedom we most resemble God and take part in eternal reality (ibid., 129). Christianity agrees with dualists that the universe is at war. But the Christian does not think this is a war between independent powers. It is, rather, a civil rebellion, and we are living in territory occupied by the rebel (*Mere Christianity,* 51). This rebellion was not at first a turning to wickedness.

"Wickedness, when you examine it, turns out to be the pursuit of some good in the wrong way" (ibid., 49).

Like Augustine and Thomas Aquinas, C. S. Lewis believed that evil does not exist in itself but as a corruption of good (*see* EVIL, PROBLEM OF). "Goodness is, so to speak, itself: badness is only spoiled goodness. And there must be something good first before it can be spoiled" (ibid., 49). Even the devil is a fallen angel. So "evil is a parasite, not an original thing" (ibid., 50).

God does not permit evil without a good purpose. Even physical evil has a moral impact. For "God whispers to us in our pleasures, speaks in our conscience, but shouts in our pain: it is His megaphone to rouse a deaf world" (*Problem of Pain,* 81).

Human Beings. So human beings are free rational and moral beings with an immortal soul. But each is in a body in a material world with other bodies. Lewis wrote: "A creature with no environment would have no choices to make: so that freedom, like self-consciousness (if they are not, indeed, the same thing) again demands the presence to the self of something other than the self" (ibid., 17).

The human environment is called nature. But humanity is more than natural processes. Humans think rationally, and "no thought is valid if it can be fully explained as the result of irrational causes." Every worldview that makes the human mind a result of irrational causes is inadmissible. Such a view "would be a proof that there are no such things as proofs, which is nonsense" (*Miracles,* 21).

The human is both a rational and a moral being. Without a moral nature there would be no true humanity, so those who would abolish the moral law would abolish humanity in the bargain (*Abolition of Man,* 77):

> Either we are rational spirit obliged for ever to obey the absolute values of the *Tao,* or else we are mere nature to be kneaded and cut into new shapes for the pleasure of masters who must, by hypothesis, have no motive but their own "natural" impulses. Only the *Tao* provides a common human law of action which can over-arch rulers and ruled alike. A dogmatic belief in objective value is necessary to the very idea of a rule which is not tyranny or an obedience which is not slavery. [ibid., 84–85]

Ethics. The moral human creature is obligated to live by an absolute moral law (*see* MORALITY, ABSOLUTE NATURE OF) that transcends human law. Such was what the framers of the Declaration of Independence had in mind when they wrote of the "Laws of Nature and of Nature's God" and of "certain unalienable rights" with which all are "endowed by their Creator." As moral creatures, created in God's image, we have certain absolute obligations toward others.

This objective moral law is prescriptive, not descriptive. It lays down the principles by which we ought to live; it does not merely express the way we do live. It is not social convention, for it sometimes condemns society. Neither is it herd instinct, for we sometimes act out of a sense of duty against our instinct for self-preservation (*Mere Christianity,* 22). We can progress in our understanding, but the moral law itself does not change (*Abolition of Man,* 58, 59).

History and the Goal. Life is the proving ground for eternity. During life, each rational creature makes a lifetime decision. All play the game, and "if a game is played, it must be possible to lose it." Of course, adds Lewis, "I would pay any price to be able to say truthfully 'All will be saved.' But my reason retorts, 'Without their will, or with it?' If I say 'Without their will,' I at once perceive a contradiction; how can the supreme voluntary act of self-surrender be involuntary? If I say 'With their will,' my reason replies 'How if they *will not* give in?' " (*Problem of Pain,* 106–7).

At the end of life and history, Lewis finds two kinds of people: "those who say to God, 'Thy will be done,' and those to whom God says, in the end, ' *Thy* will be done.' All that are in hell, choose it." Lewis believed "without that self-choice there could be no hell. No soul that seriously and constantly desires joy will ever miss it. Those who seek, find. To those who knock it is opened" (*The Great Divorce,* 69). Thus, the doors of hell are locked on the *inside* . Even those who *wish* to come out of hell would not do so at the expense of self-abandonment through which alone the soul can reach any good (*The Great Divorce,* 127).

Evaluation. In spite of Lewis's overwhelming value to Christian apologetics, not everything in his views is compatible with evangelical Christianity. Lewis wrote one of the finest critiques of naturalism in print *(Miracles),* in which he defended literal New Testament miracles, including the resurrection of Christ. Nevertheless, Lewis inconsistently denied the literal nature of many Old Testament miracles (*see* MIRACLES IN THE BIBLE):

> The Hebrews, like other peoples, had mythology: but as they were the chosen people so their mythology was the chosen mythology—the mythology chosen by God to be the vehicle of the earliest sacred truths, the first step in that process which ends in the New Testament where truth has become completely historical. Whether we can ever say with certainty where, in this process of crystalisation, any particular Old Testament story falls, is another matter. I take it that the memoirs of David's court come at one end of the scale and are scarcely less historical than *St. Mark* or *Acts* ; and that the *Book of Jonah* is at the opposite end. [*Miracles,* 139]

Lewis accepted the deity of Christ. But he did not believe in a Christ who verified the historicity and authenticity of some of the very Old Testament events Lewis rejects. Jesus verified the literal truth of Jonah (Matt. 12:40), of the nonevolutionary creation of Adam and Eve (Matt. 19:4), of the flood (Matt. 24:38–39), and of other miraculous events (see Geisler, *Inerrancy,* 3–35). Lewis seems to read into the Old Testament a non-Christian development of myth (*see* MIRACLES, MYTH AND). This is especially surprising in view of his criticism of New Testament scholars who do the same. Lewis chides them:

> A theology which denies the historicity of nearly everything in the Gospels to which Christian life and affections and thought have been fastened for nearly two millennia—which either denies the miraculous altogether or, more strangely, after swallowing the camel of the Resurrection strains at such gnats as the feeding of the multitudes—if offered to the uneducated man can produce only one or other of two effects. It will make him a Roman Catholic or an atheist. [*Christian Reflections, 153*]

Lewis does recognize that he might be wrong about Old Testament miracles. He admits that his view is tentative and liable to error, and that the subject matter is beyond his knowledge:

> A consideration of the Old Testament miracles is beyond the scope of this book and would require many kinds of knowledge which I do not possess. My present view—which is tentative and liable to any amount of correction—would be that just as, on the factual side, a long preparation culminates in God's becoming incarnate as Man, so, on the documentary side, the truth first appears in *mythical* form and then by a long process of condensing or focussing finally becomes incarnate as History. [*Miracles,* 139]

Lewis also accepted other higher critical ideas about the Old Testament (*see* BIBLE CRITICISM). He questioned the historicity of Job, "because it begins about a man quite unconnected with all history or even legend, with no genealogy, living in a country of which the Bible elsewhere has hardly anything to say" (*Mere Christianity,* 110). Lewis held this in spite of references to Job as historical in both Old (Ezek. 14:14 , 20) and New Testaments (James 5:11). Uz is mentioned in Jeremiah 25:20 and Lamentations 4:21 . Customs and forms of proper names connected with Job also have been verified (Archer, 438–48).

Lewis held a very negative view of many Psalms, even calling some "devilish" (*Reflections on the Psalms,* 25). He rejected the Davidic authorship of all but Psalm 18 (ibid., 114). This is especially surprising given Lewis's high view of Christ and the Gospels. Jesus verified that David wrote Psalm 110 (Matt. 22:41–46). Jesus also affirmed the divine authority of the whole Old Testament (Matt. 5:17–18 ; John 10:35) and especially the Psalms (cf. Luke 24:44), which was one of the books he quoted most frequently.

Although he had some later doubts (Ferngreen), his own educational background apparently led Lewis to assume an evolutionary (*see* EVOLUTION, BIOLOGICAL) view of the universe's origin (see *Mere Christianity,* 52, 65). That even so pious and courageous an intellectual apologist as Lewis could be sucked into humanist and higher critical assumptions shows that each believer must continually evaluate the truth of what he or she is learning in a secular pagan environment.

Limitation of Christ, Theory of. Bible critics have offered two theories that undermine the apologetic argument for the deity of Christ (*see* CHRIST, DEITY OF) and the authority of Scripture (*see* BIBLE, EVIDENCE FOR). A crucial link in the overall argument for both is that Jesus taught that he was the Son of God and that the Bible is the Word of God (*see* APOLOGETICS, ARGUMENT OF). These propositions are based on the premise that the Gospels accurately tell us what Jesus taught. If Jesus intentionally accommodated his words to what his audience believed but did not disclose what he really believed, then the conclusion does not hold (*see* ACCOMMODATION THEORY).

Likewise, if Jesus was so limited in his human knowledge that it did not extend to such matters as the authority and authenticity of the Old Testament, he was not really affirming these matters. Rather, his ministry was limited to spiritual and moral matters, and he affirmed nothing about historical and critical matters.

The Case for a Limited Christ. Two supporting pillars in the argument for limitation are the *humanity of Christ* and the *kenosis theory* .

Humanly Limited Knowledge. The Bible makes clear that Jesus was human (*see* CHRIST, DEITY OF). But if Jesus was truly human in every respect, why could he not experience human error? Why could Jesus not have been wrong about many of the things he believed, so long as they did not hinder his overall redemptive mission?

Emptying at the Incarnation. The Bible further teaches that Jesus "emptied himself" of his omniscience at his incarnation. That this severely limited his knowledge when he taught is called the *kenosis* theory, from the Greek word *kenoo m* , to "empty." He was ignorant of the time of his second coming, for he said, "No one knows about that day and hour, not even the angels in heaven, nor the Son, but only the Father" (Mark 13:32). He did not know whether figs were on the tree in Mark 11:13 . As a child he "increased in wisdom," as do other children (Luke 2:52).

He had to ask questions (Mark 5:9 , 30 ; 6:38 ; John 14:9). Perhaps Jesus was also ignorant of the origin of the Old Testament and of the historical truth of its record.

Response to the Limitation View. The "limitation theory" is more plausible and potentially more damaging then the accommodation theory. But both arguments in favor of the limitation of Christ's understanding ignore crucial points about who Jesus was.

Can God err or sin? In Jesus, one and the same person was both God and human at the same time. If the human person had sinned or erred, then God would have sinned or erred. This is why the Bible is careful to say, "We have one who was tempted in every way, just as we are—yet was without sin" (Heb. 4:15). He was human enough to be tired and tempted, but not to be sinful (see 2 Cor. 5:21 ; 1 Peter 3:18 ; 1 John 3:3). If a sin attributed to Christ must also be attributed to God, who cannot sin (Hab. 1:13 ; Heb. 6:18), then an error attributed to Christ would have been an error God made (*see* TRINITY).

The *kenosis* theory that Jesus emptied himself of deity when he became human is unfounded. It is certainly not the meaning of Philippians 2 . Verses 5 and 6 say that he emptied himself of his divine nature by humbling himself to become a human being. When he emptied himself he was still in the form or essence of God. If the same word, *form* , as applied to a servant means he was a servant, then applied to God it means he is God. This is what John 1:1 declares. The human Jesus claimed to be God. How he showed that to be so is covered at length in the article Christ, Deity of. The incarnation did not subtract deity; it added humanity. An error or sin would have been attributable to the second person of the godhead.

Since the orthodox doctrine of Christ acknowledges that he was fully human, there is no problem with the statement that Jesus was ignorant of many things. He had two natures, one infinite or unlimited in knowledge, the other finite or limited in knowledge. Could it be that Jesus did not really "err" in what he taught about the Old Testament but that he was simply so limited that his human knowledge and authority did not extend into those areas? The evidence in the New Testament records demands an emphatic negative answer to that question.

Jesus had supranormal knowledge. Even in his human state, Christ possessed super-human knowledge. He saw Nathaniel under the fig tree (John 1:48). Jesus knew the private life of the Samaritan woman (John 4:18–19). He knew who would betray him (John 6:64) and all that would happen in Jerusalem (Mark 8:31 ; 9:31 ; John 18:4). He knew about Lazarus' death before he was told (John 11:14). Whatever his limitations, Jesus' knowledge was completely adequate for his mission and doctrinal teaching.

Jesus possessed final authority. Christ claimed, with absolute and final authority, that whatever he taught came from God. "Heaven and earth will pass away but my word will not pass away" (Matt. 24:35). Jesus proclaimed that "all things have been delivered to me by my Father" (Matt. 11:27). He told his disciples to teach others "to observe all that I have commanded you" (Matt. 28:18–19). Jesus claimed that the very destiny of people hung on his words (Matt. 7:24–26) and that his words would be the basis for judgment (John 12:48). The emphatic *amen, amen* or "Truly, truly" is used to preface his teachings twenty-five times in John alone. In Matthew he declared that not a single stroke would pass from the law that he had come to fulfill.

Then, throughout the rest of Matthew 5 , Jesus placed his own words on a par with that law. He claimed that his words bring eternal life (John 5:24), and vowed that his teaching came from the Father (John 8:26–28). Despite the fact that he was a human being on earth, Christ accepted acknowledgment as deity (for example, Matt. 28:18 ; John 9:38).

Conclusion. The most reasonable conclusion is that Jesus' teachings possessed divine authority. Despite the necessary limitations involved in a human incarnation, there is no error or misunderstanding in what Christ taught. Whatever limits there were in the extent of Jesus' knowledge, there were no limits to the truthfulness of his teachings. Just as Jesus was fully human, yet his *moral* character was without flaw (Heb. 4:15), likewise he was finite in human knowledge and yet without factual error in what he taught (John 8:40 , 46). Whatever Jesus taught came from God and carried divine authority.

Locke, John.

The Life and Works of Locke. Locke was born in Somersetshire, England, in 1632 and died in 1704. He disliked his scholastic training, but read and enjoyed Rene Descartes and Francis Bacon. His work on tolerance strongly influenced the American Revolution—Thomas Jefferson in particular.

Locke's main writings included *An Essay Concerning Toleration* (1667), *An Essay Concerning Human Understanding* (1690), and *The Reasonableness of Christianity* (1695).

The Empirical Epistemology of Locke. Locke was an empiricist, following the work of Aristotle (*see*). In his *Essay Concerning Human Understanding* he called his epistemology "the plain historical method," that is, treating ideas just as they appear in our minds. His goal was to discover the origin, extent, and degree of certainty in our knowledge.

The Two Sources of Ideas. Locke believed there were two sources of ideas (or, objects of thought): (1) sensation—experience of an external object (which presses on the body and produces an idea in the mind), and (2) reflection—experience of internal operations of the mind. As proof he offered four arguments. First, children are born as *tabula rasas* (blank slates) without a store of ideas. Second, where there are different experiences, there are different ideas.

Third, where there is no experience, there is no corresponding idea. For example, persons born blind have no idea of sight, nor do deaf mutes have an idea of sound. Fourth, we have only ideas that fit one or more of the five senses (or combinations thereof).

The Nature of Knowledge. For Locke all knowledge is either agreement or disagreement.

Intuition is agreement between two ideas immediately perceived (e.g., “I” and “exist” = I exist). This is the most certain kind of knowledge.

Demonstration is agreement between two ideas seen by way of a third idea (e.g., “God exists”). This is less certain to us only because the chain of argument makes it so.

Sensation is agreement between an idea and an external object (e.g., “The world exists”). This is less certain. Locke’s proof of an external world went like this: (1) There must be a source of our ideas. Not all of them could have been created by us. (2) Some ideas are more lively than others, showing that they are original and not created by us. (3) We have combined testimony of several senses that these lively ideas come from the external world. (4) Pleasure and/or pain repeatedly occurs upon contact with it, even when we do not will it. Hence, there must be an external world that is the source of these lively ideas over which we have no control.

Locke’s Proof for the Existence of God. Locke’s proof for the existence of God follows the line of the traditional cosmological argument (*see*). (1) Something exists. For example, I exist (which is known by intuition). Further, the world exists (which is known by sensation). (2) This something that exists comes either (a) from itself, (b) from nothing, or (c) from another. But (3) only something can cause something. Something cannot be caused by nothing. (4) There cannot be an infinite series of causes of the existence of the world. If there were, the whole world would rest on nothing. But this is impossible, for in this case (since nothing cannot cause something) the world would never have come into existence. Therefore, (5) there must be a first cause of my existence and the world. (6) This eternal being must be most powerful and most knowing. It must be most powerful because it is the source of all power, and it must be most knowing because the cognitive cannot arise from the noncognitive. Locke believed it was ridiculous to say everything else has a mind behind it except the universe.

The Defense of Christianity. Building on his rational theism , Locke argued in the tradition of classical apologetics (*see* APOLOGETICS, CLASSICAL). In his *Reasonableness of Christianity* he defended the existence of miracles. In his two *Vindications* (1695, 1697) he defended what he said in the *Reasonableness of Christianity* .

The Defense of the Supernatural. Locke was neither a Deist (*see* DEISM) nor a Socinian who denied the resurrection (*see* RESURRECTION, EVIDENCE FOR). He defended miracles, as well as the Bible as the Word of God (*see* BIBLE, EVIDENCE FOR). He believed the Bible could be defended by reason, but that it contained mysteries of the Christian faith that go beyond reason.

The Deity of Christ. He also defended Christ’s deity (*see* CHRIST, DEITY OF), claiming “we see the people justified their believing in him, i.e., their believing him to be the Messiah, because of the miracles he did” (*Reasonableness of Christianity* [58] 1). He added of Jesus, “He was sent by God: His miracles shew it” (ibid., 242). There is a conspicuous absence of discussion on the Trinity. However, absence does not necessarily mean denial. Though Locke admits in a letter to Limborch that he said some things to please the Deists (*see* DEISM), he explicitly denied Arianism.

Locke's View of Ethics and Government. Locke held that the "law of Nature" (*see* NATURAL LAW) teaches us that "being all equal and independent, no one ought to harm another in his life, health, liberty or possessions; for men being all the workmanship of one omnipotent and infinitely wise Maker" (*An Essay concerning Toleration* , 2.6).

This same view was expressed by Thomas Jefferson in the Declaration of Independence (1776) when he wrote: "we hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness."

Logic. Logic deals with the methods of valid thinking. It reveals how to draw proper conclusions from premises and is a prerequisite of all thought. In fact, it builds from fundamental laws of reality and truth, the principles that make rational thought possible (*see* FIRST PRINCIPLES). Logic is such an indispensable and inescapable tool for all thought that even those who eschew it still use logical forms to argue for their rejection of it (*see* FIDEISM).

The three fundamental laws of all rational thought are:

1. the law of noncontradiction (A is not non-A),

2. the law of identity (A is A), and

3. the law of excluded middle (either A or non-A).

Each serves an important function. Without the law of noncontradiction we could say that God is God, and God is the Devil. Unless the law of identity is binding, there can be no unity or identity. Without it there is no difference in stating, "I am I" or am a chair." If the law of excluded middle does not hold, then opposites could both be true.

Beyond these basic principles, there are the principles of valid inference. These inferences traditionally were classed under *deductive* or *inductive* logic (*see* INDUCTIVE METHOD), or under transcendental arguments. All of these, however, use some form of the three basic laws.

Logic and God. If logic is the basis of all thought, it is the basis of all thought about God (theology). Some object that this makes God subject to logic. But God is sovereign and not subject to anything beyond himself. So, how can thought about God be subject to logic?

In one sense God is not subject to logic; rather, our *statements* about God are subservient to logic. All rational statements must be logical. Since theology purports to make rational statements, theological statements are subject to rules of rational thought, as are any other statements.

In another sense, God indeed is subject to logic, but not because there is something more ultimate than he. Since logic represents the principles of rational thought and since God is a rational Being, God is subject to his own rational nature. Insofar as logic manifests reason it flows from the very nature of God, and God is subject to his own nature. Indeed, he cannot act contrary to it, ethically or logically. For example, "It is impossible for God to lie" (Heb. 6:18). Likewise, it is impossible for God to contradict himself. Both violate his basic nature (*see* GOD, NATURE OF).

God is not only subject to his own rational self-consistency; he also is subject to logic which is derived from it. For we could not even begin to think about or talk about God without the law of noncontradiction. In this sense, logic is prior to God in that we need to use logic before we can even think about him rationally. Logic is prior to God in the *order of knowing,* but God is prior to logic in the *order of being* . Logic is prior to God *epistemologically,* but God is prior to logic *ontologically* .

To object that this makes God subject to our logic sets up a faulty dichotomy. Logic is logic; it is not "our" logic as opposed to "his." Ours is based on his. God's rational nature is the basis of our rational nature. He made it that way so we could understand something about him. The law of noncontradiction applies to God's thoughts as well as to ours. People did not *invent* it; they *discovered* it.

Rationality versus Rationalism . Others protest that making truths about God subject to human reason is a form of rationalism (*see* EPISTEMOLOGY ; SPINOZA, BENEDICT). However, this objection overlooks several important things. First, God is not being subjected to our reason. God is the author of reason, and he created us to be like himself. So the basic principles of reason are not arbitrarily imposed on God; rather, they come from God (*see* FAITH AND REASON).

Second, the basic laws of reason are not opposed to God's revelation; they are an essential part of God's general revelation. Human rationality, with its basic laws, is a manifestation of God's rationality. God is rational, and humans are made in his image. So using logic is not opposed to revelation; it is part of it.

Third, even special revelation (*see* REVELATION, SPECIAL) cannot be known or communicated apart from logic. We would not even be able to distinguish the revelation from God from that of the Devil unless the law of noncontradiction is valid. Furthermore, when the Bible reveals that "God so loved the world," we could not know that love is not hate unless the

law of noncontradiction is valid. So logic is essential to special revelation (*see* REVELATION, SPECIAL) as well as to general revelation (*see* REVELATION, GENERAL).

Finally, there is a difference between using reason and being a rationalist. A rationalist tries to *determine* all truth by human reason. A reasonable Christian merely uses reason to *discover* truth that God has revealed, either by general revelation or by special revelation in the Bible (*see* BIBLE, EVIDENCE FOR).

Logic and Aristotle. Some critics of traditional logic object that Aristotle invented logic, and there is no reason we must accept his Western form of logic over an "Eastern" type that does not use the law of noncontradiction. However, Aristotle did not *invent logic;* he *discovered* it. The laws of rational thought were in operation eternally in God and from the very beginning in rational creatures. Aristotle only *articulated* them.

This criticism also implies that "Eastern" thought can avoid using logic. But as we have seen, the basic laws of thought are inescapable for all rational beings, whatever their culture and worldview. No "Eastern" philosopher (*see* ZEN BUDDHISM) can even think or speak without using the law of noncontradiction. The very denial of this law employs the law in its denial. It is literally undeniable (*see* UNDENIABILITY, PRINCIPLE OF).

Many Kinds of Logic. Others object that there are many kinds of logic. Why choose just one kind and make it the norm for all kinds? In response, it need only be noted that while there are many kinds of logic (deductive, inductive, symbolic, etc.), nonetheless, all forms of logic depend on the basic rational principles of thought stated above. For example, no valid form of logic can operate apart from the principle of noncontradiction. If contradictories can be true, then thought itself is impossible. But we cannot deny thought without thinking. Hence, denying the laws of thought is literally unthinkable.

Logic and Omnipotence. The Bible says that "nothing is impossible for God" (Matt. 19:26). He is all-powerful (omnipotent), and an omnipotent Being can do anything. Therefore, it would seem that God could violate the law of noncontradiction if he wished. However, this is based on a misconception. When the Bible declares that God can do what is impossible it does not refer to what is *actually* impossible but to what is *humanly* impossible.

Further, omnipotence does not imply that God can do what is contradictory. If it did, then God could cease being God. But it is impossible for the Uncreated to decided that he wants to be created. It is impossible for a Necessary Being (which cannot cease to be) to decide it does not want to be. God cannot contradict his own nature. So omnipotence does not mean that God can do literally anything. The Bible says that "It is impossible for God to lie" (Heb. 6:18 ; cf. 2 Tim. 2:13). And just as God cannot contradict his moral nature, so he cannot contradict his rational nature. Indeed, omnipotence only means that God can do anything that is not actually contradictory or impossible. For example, God cannot make a square circle. Neither can he make a stone so heavy he cannot lift it. For if he can make it, then he can move it. He doesn't even have to "move" it. All he would have to do is to destroy it and recreate it wherever he wanted it to be.

Logic and Miracles. God created natural laws, yet he can transcend them by miracles (*see* MIRACLE). God engineered the law of gravity and the viscosity of liquids, but Jesus walked on water. Why can't the laws of logic be broken like the laws of physics?

First, this is an invalid analogy. Laws of nature are *descriptive,* whereas logical laws, like ethical laws, are *prescriptive* . That is, laws of logic tell us how we ought to reason in order to conform our thought to how things really are. Like moral laws, they are universal prescriptions (*see* MORALITY, ABSOLUTE NATURE OF). Everyone should reason that if all triangles have three sides and this figure is a triangle, then it has three sides. There are no exceptions; everyone should come to this conclusion. Laws of physics are descriptive generalizations. They merely inform us about the way things are; they do not exhort us about how something ought to be. As descriptions of the way things usually occur, they admit of exceptions. A miracle is an exception. As such it does not contradict the general law. The comparison between physical laws and laws of thought is invalid.

Further, God did not create laws of logic. They manifest his uncreated nature. God is rational, and there are certain basic principles of rationality that cannot change any more than God can change his own essential nature. The laws of physics are not so. Presumably, God could have created other kinds of worlds, with other kinds of laws. The law of gravity, for example, applies in a material universe. It does not apply to angels with no physical bodies.

Logic and the Mysteries of Faith. Some object that the great Christian mysteries, such as the Trinity, the incarnation (*see* CHRIST, DEITY OF), and predestination (*see* DETERMINISM ; FREE WILL), violate laws of human reason. There is a difference between propositions that go *beyond* reason, such as mysteries of the faith, and those that go *against* reason. Those that go beyond human ability to reason do not go against reason. Human understanding unaided by special revelation cannot reach them. They can only be known by special revelation. Once these truths are known, their premises do not contradict other revealed truth.

Logic and the Trinity. The doctrine of the Trinity affirms three persons in one Essence. It does not claim that there are three persons in one Person or three essences in one Essence. These would be logical contradictions.

Logic and the Incarnation. The Incarnation does not claim that God became human. The Infinite cannot become finite, or the Necessary contingent. Rather, it affirms that the second person of the Godhead became man. Jesus assumed a human nature without laying his deity aside. Thus the Incarnation was not the subtraction of deity but the addition of his humanity. Two natures in one person is not a contradiction. Two natures in one nature or two persons in one Person would be, but not two natures sharing one Person. It is a mystery; it is not a contradiction.

Logic and predestination. Neither is predestination and free choice a logical contradiction. It is not contradictory to assert that God has predetermined who will be saved, as long as he predetermined that it would be accomplished through their free choice. What would be contradictory is to claim that God *forced* people to *freely* accept him, since forced freedom is logically incompatible. But to claim that God knowingly determined how he would effect

salvation by his grace and through our free choice is not a logical contradiction. It is a mystery, but not a logical contradiction (*see* DETERMINISM ; FREE WILL).

Logical Positivism. Logical positivism is a school of thought that operated during the 1920s within a circle of Vienna philosophers that included Alfred J. Ayer , Rudolf Carnap, Herbert Feigl, and Moritz Schlick. They took an antimetaphysical stand and developed a principle of empirical verification by which all but tautologies and empirical statements were considered meaningless.

This view held devastating implications for Christianity, since neither the existence nor attributes of God could be meaningfully stated. All God-talk was pronounced to be literally nonsense (*see* ANALOGY, PRINCIPLE OF ; WITTGENSTEIN, LUDWIG). This view is sometimes called acognosticism or semantical atheism .

Roots of the principle of empirical verifiability are found in David Hume ’s empirical skepticism. In the last line of his *Inquiry Concerning Human Understanding* Hume wrote:

> When we run over libraries, persuaded of these principles, what havoc must we make? If we take in our hand any volume—of divinity or school of metaphysics, for instance—let us ask, *Does it contain any abstract reasoning concerning quality or number?* No. *Does it contain any experimental reasoning concerning matter of fact and existence?* No. Commit it then to the flames, for it can contain nothing but sophistry and illusion. [Hume, 173]

If Hume is correct, then there are two kinds of meaningful statements: (1) those true by definition (analytic), and (2) those known to be true through the senses (synthetic). Only definitional and sensible sensory statements are meaningful. All the rest are literally nonsense.

In the English-speaking world, Ayer was a zealous proponent of this view. He formulated Hume’s conclusion into the principle of empirical verifiability, which stated in its original form that there are only two kinds of meaningful propositions.

Logical positivism died by its own sword (see Feigl). The principle of empirical verifiability is not empirically verifiable. Every attempt to broaden it destroys its effectiveness. Positivism cannot be used to exclude metaphysical statements (*see* METAPHYSICS).

***Logos* Theory.** The Greek word *logos* comes from *lego m* ("I say"). *Logos* means "word, speech, explanation, principle, or reason." In Greek philosophy the concept of *logos* had varying meanings. Heraclitus considered it the rational law governing the universe. Anaxagoras saw it as the principle of intelligence in the universe, though he called it *nous* ("mind"), as did Plato . For the stoics the *logos* was the principle of all rationality in the universe. But shortly before the New Testament was written, the Jewish Philosopher Philo (30 B.C.–A.D . 45) described the *logos* as the image of God which was distinct from God and an intermediate between God and the world (Edwards, " *Logos* "). Later, in the third century, Plotinus made the *logos* or *nous* a lower-level emanation from the One (God).

The use of the Logos on a lower level from God led some early Fathers, such as Origen , to assign less than full deity to Christ. This became the basis of Arianism, which was opposed by Athanasius (*see* CHRIST, DEITY OF). Some scholars have assumed that John's Gospel (1:1) borrowed from this Greek usage of *logos* and, hence, did not teach the full deity of Christ.

There is no reason, however, to suppose John is depicting something inferior to God in the *logos* . John declares clearly and emphatically that "the *Logos* was God" (John 1:1 ; see also 8:58 ; 10:30 ; 20:28). John's concept of the *Logos* is of a personal being (Christ), whereas the Greeks thought of it as an impersonal rational principle. The *Logos* is referred to by personal pronouns, such as *he* (1:1) and *his* (1:14). This was not true of the Greek *logos* .

According to John, the *Logos* "became flesh" (1:14). To combine *logos* (reason) or *nous* (mind) and flesh was contrary to Greek thought. Flesh was either evil, as in Gnosticism , or nearly evil, as in Platonic, or Plotinian (*see* PLOTINUS) thought. Only in the Judeo-Christian

tradition was matter or flesh thought respectable in any sense. Christians saw it as so good as to be worthy of clothing God in the incarnation.

The Old Testament, not Greek ideas, is the root of New Testament ideas. John, as all New Testament writers (except maybe Luke) were Jews. The root of their thought was in Judaism. They cite the Old Testament hundreds of times. Hence, it is contrary to the Jewish background and thought of the New Testament writers to use Greek sources for their theological ideas.

The New Testament is a theistic (*see* THEISM) book, whereas Greek thought was polytheistic and pantheistic (*see* PANTHEISM). We would not expect John to borrow from such a worldview to express his ideas. The Old Testament spoke of the coming Messiah who was God (Ps. 110:1 ; Isa. 9:6 ; 45:6 ; Zech. 12:10), who would come in human flesh, suffer, and rise physically from the dead (cf. Isaiah 53). Never did Greek religion or philosophy teach this doctrine. Claims that Christianity borrowed from pagan idea or gods are unsubstantiated (*see* MITHRAISM ; RESURRECTION CLAIMS IN NON-CHRISTIAN RELIGIONS)

Luke, Alleged Errors in. Luke has been charged by the critics with containing significant historical inaccuracies in the nativity narrative of chapter 2 .

The Worldwide Census. Luke 2:1–3 refers to a worldwide census under Caesar Augustus when Quirinius was governor of Syria. However, according to the annals of ancient history, no such census took place. In fact, Quirinius did not become governor in Syria until A.D . 6. It was commonly held by critics that Luke erred in his assertion about a registration under Caesar Augustus, and that the census actually took place in A.D . 6 or 7 (which is mentioned by Luke in Gamaliel's speech recorded in Acts 5:37).

A Possible Retranslation. F. F. Bruce offers another possibility. The Greek of Luke 2:2 can be translated: "This enrollment (census) was before that made when Quirinius was governor of Syria." In this case, the Greek word translated "first" (*prot m os*) is translated as a comparative,

---

ERE *Encyclopedia of Religion and Ethics*

"before." Because of the construction of the sentence, this is not an unlikely reading. In this case there is no problem, since that census of A.D . 6 is well known to historians.

Recent Archaeological Support. The lack of any extrabiblical support led some to claim this an error. However, with recent scholarship, it is now widely admitted that there was in fact an earlier registration, as Luke records.

William Ramsay discovered several inscriptions that indicated that Quirinius was governor of Syria on two occasions, the first time several years prior to A.D . 6. According to the very papers that recorded the censuses, (see Ramsay, *Was Christ?*) there was in fact a census between 10 and 5 B.C . Periodic registrations took place every fourteen years. Because of this regular pattern of census taking, any such action was regarded as the general policy of Augustus, even though a local census may have been instigated by a local governor. Therefore, Luke recognizes the census as stemming from the decree of Augustus.

Since the people of a subjugated land were compelled to take an oath of allegiance to the Emperor, it was not unusual for the Emperor to require an imperial census as an expression of this allegiance and a means of enlisting men for military service, or, as was probably true in this case, in preparation to levy taxes. Because of the strained relations between Herod and Augustus in the later years of Herod's reign, as the Jewish historian Josephus reports, it is understandable that Augustus would begin to treat Herod's domain as a subject land, and consequently would impose such a census in order to maintain control of Herod and the people.

Third, a census was a massive project which probably took several years to complete. Such a census for the purpose of taxation begun in Gaul between 10–9 B.C . took 40 years to complete. Likely the decree to begin the census, in 8 or 7 B.C ., may not have begun in Palestine until sometime later. Problems of organization and preparation may have delayed the actual census until 5 B.C . or even later.

Fourth, it was not an unusual requirement that people return to the place of their origin, or to the place where they owned property. A decree of C. Vibius Mazimus in A.D . 104 required all those absent from their home towns to return for a census. Jews were quite used to travel, making annual pilgrimage to Jerusalem.

There is simply no reason to suspect Luke's statement regarding the census. Luke's account fits the regular pattern of census taking, and its date would not be unreasonable. This may have been simply a local census taken as a result of the general policy of Augustus. Luke simply provides a reliable historical record of an event not otherwise recorded. Luke has proven himself an amazingly reliable historian (*see* ACTS, HISTORICITY OF ; see Ramsay, *St. Paul the Traveler and Roman Citizen*). There is no reason to doubt him here.

Quirinius' Terms as Governor. Given Luke's statement that the census decreed by Augustus was the first one taken while Quirinius was governor of Syria, the fact that Quirinius became governor of Syria long after the death of Herod, in about 6 A.D ., sounds like an error in the Gospel.

As noted, there is an alternate way to translate this verse which resolves the problem. Further, there is now evidence that Quirinius was governor of Syria on an earlier occasion that would fit with the time of Christ's birth.

Quintilius Varus was governor of Syria from about 7 to about 4 B.C . Varus was not a trustworthy leader, a fact demonstrated in A.D . 9 when he lost three legions of soldiers in the Teutoburger forest in Germany. Quirinius, on the other hand, was a noted military leader who squelched the rebellion of the Homonadensians in Asia Minor. When it came time to begin the census, in about 8 or 7 B.C ., Augustus entrusted Quirinius with the delicate problem in the volatile area of Palestine, effectively superseding Varus by appointing Quirinius to a place of special authority in this matter.

Quirinius was probably governor of Syria on two separate occasions, once while prosecuting the military action against the Homonadensians between 12 and 2 B.C ., and later, beginning about A.D . 6. A Latin inscription discovered in 1764 has been interpreted to the effect that Quirinius was governor of Syria on two occasions.

Gary Habermas summarizes the situation well:

> (1) A taxation-census was a fairly common procedure in the Roman Empire and it did occur in Judea, in particular. (2) Persons were required to return to their home city in order to fulfill the requirements of the process. (3) These procedures were apparently employed during the reign of Augustus (37 B.C .–14 A.D .), placing it well within the general time frame of Jesus' birth. (4) The date of the specific taxation recounted by Luke could very possibly have been 6–5 B.C ., which would also be of service in attempting to find a more exact date for Jesus' birth. [*Verdict of History,* 153]

Conclusion. There are three reasons to believe Luke is accurate in his account of Jesus' birth. First, there is the general rule of "innocent until proven guilty." A document from antiquity in proper custody that purports to be giving an accurate account (cf. Luke 1:1–4) should be accepted as authentic until it is proven not to be. This is known as the *ancient document rule* . This rule is used in law courts to establish authenticity of old documents.

Second, there are, as noted, plausible explanations that harmonize the record with historical evidence (*see also* ACTS, HISTORICITY OF).

Third, Luke has proven himself to be a reliable historian even in the details. William Ramsay spent twenty years of research in the area Luke wrote about. His conclusion was that in references to thirty-two countries, fifty-four cities, and nine islands Luke made no mistakes! That is a record to be envied by historians of any era.

Luther, Martin. Martin Luther (1483–1546), the great German Reformer who was not known as an apologist—he was too preoccupied with reconstructing the church. However, he said nothing, properly understood, that would negate the consistent use of reason by the classical apologists in defending the faith.

Reason Condemned. Luther declared that human reason is that God-given faculty by which humans are distinguished from brute beasts (*disputatio de homine*). Luther was concerned that human reason not be substituted for the Gospel, as were the other great teachers of the Church. *The Augsburg Confession* (Art. 2) condemns the belief that anyone can be justified "by his own strength and reason." Martin Chemnitz added, "reason of itself and from events cannot establish anything concerning the love of God toward us" (Chemnitz, 609). These deprecating statements about human reason must be seen in proper context (*see* FAITH AND REASON).

First, they were made in the context of someone trying to attain salvation by personal strength, rather than by the merit of Christ and grace through faith. Human reason cannot attain salvation. Only the Gospel brings salvation. However, this is not to say that reason cannot be used to defend the Gospel. Second, Luther believed the redemptive love of God cannot be established by reason. This is not to say that the existence of God cannot be established by reason (*see* COSMOLOGICAL ARGUMENT). Indeed, among the great classical apologists was Augustine , Luther's philosophical and theological mentor.

Reason in Lutheran Theology. While Luther himself, preoccupied as he was with salvation, developed neither an apologetic nor a systematic theology, his colleague, Philipp Melancthon, did both. Melancthon and other Lutheran Reformers used classical apologetics to develop proofs for the existence of God. Chemnitz speaks of the validity of teachings derived from Scripture "by way of good, certain, firm and clear reasoning" (ibid., 249). Luther's own polemics are tightly constructed of cogently reasoned arguments.

Reason, of course, can be the "tool of the devil" when used in opposition to God. But the stand on Scripture by the Lutheran Reformers and modern Lutheran scholars reveals a tradition of reasoned theology and apologetics. One modern exemplar of the Lutheran tradition is John Warwick Montgomery in his works defending the faith. See those noted among the sources for this article.

Lying in Scripture. The Scriptures teach that God is truth (Deut. 32:4) and that it is impossible for him to lie (Heb. 6:18). God commands us not to lie (Exod. 20:16) and warns that he will severely punish liars (Rev. 21:8). However, there are many instances where God appears to bless lying. Bible critics frequently point out this seeming contradiction.

It is notable that this problem does not exist for divine voluntarists who believe that an act is good or evil only because God wills it to be such. However, according to essentialism (*see* ESSENTIALISM, DIVINE), God is essentially good and cannot do or will evil (*see* GOD, NATURE OF). In this context, the problem of divinely approved lying is acute.

Categories of Alleged Lying. The "lying passages" in the Bible do not all fall into the same category. Some are actual lies, and some are not. Some are approved by God, and some are not. But in no case does the Bible ever place divine approval on a lie as such.

Lies Reported without Approval. Actual lies are recorded in the Bible, but they are not thereby approved. The Bible relates many sins on which it places no approbation. For example, some of Satan's lies are recorded in Scripture. Satan told Eve, "You will not surely die" (Gen. 3:4) when God had said emphatically that they would (Gen. 2:17). This is a clear case of a lie that God does not approve. Many scholars place Rahab's lie (see below) in this category. If so, she was blessed *in spite of* her lie and not *because of* it.

Partial Truths That Are Not Lies. Not all partial truths are lies. In at least one case God himself told Samuel to tell only part of the truth to Saul (1 Sam. 16:1–5). Since Samuel feared for his life at the hands of King Saul when God told the prophet to anoint a new king, God instructed him to tell Saul that he had come to offer a sacrifice, which was true but a subterfuge.

Lies Approved in View of a Higher Law. Some conservative Bible scholars and Christian ethicists believe that, while lying *as such* is always wrong, lying to save a life is not. This, they argue, is based on a hierarchy or gradation of values wherein mercy (in saving a life) takes precedence over the truth that ends in murder. The Hebrew midwives in Exodus 1 appear to fall into this category, and perhaps Rahab, who lied to save the lives of the Hebrew spies.

Passages Involving Apparent Lying. Several key passages involving alleged lying with divine approval bear scrutiny. Among these is the case of Abraham's "half-truth" about his wife Sarah, who was also his half-sister.

Genesis 12:10–20 . Fearing that the king of Egypt might kill him and take his wife (but under no direct threat), Abraham instructed Sarah: "Say you are my sister, so that I will be treated well

for your sake and my life will be spared because of you" (Gen. 12:13). Sarah was Abraham's half-sister. Nevertheless, what Abraham instructed Sarah to do was to lie.

No divine approval of Abraham's act is shown; the opposite is implied. Abraham's increase in wealth should not be viewed as a divine reward for his lie. Pharaoh's gifts were understandable. Pharaoh may have felt obligated to pay amends for the wicked constraint that his corrupt society put on strangers who visited his land, as well as for unwittingly taking Abraham's wife into his palace. Adultery was strictly forbidden by Egyptian religion.

The years of trouble that followed may have been a direct result of Abraham's lack of faith in God's protecting power. Although some people are portrayed as men of God, they are still fallible and responsible for their sin, as was David in his adultery with Bathsheba and murder of her husband (2 Samuel 12). God blessed such leaders *in spite of,* not *because of,* their sins.

Genesis 31 . Genesis 31:35 records Rachel's apparent lie about the idols she had stolen. Yet God appeared to bless Rachel, for she was not discovered and God prospered her and her husband Jacob. However, a closer look at this text reveals that God did not bless Rachel for stealing the idols or for lying about her deed. Simply because Laban did not discover that Rachel was the thief does not mean that God blessed her. It is reasonable to assume that God did not expose Rachel's theft in order to protect Jacob's life (cf. 31:31). The biblical record reveals that God allowed Rachel to fall into the background of importance until her painful death (Gen. 35:16–20).

Joshua 2:4–5 . When the Hebrew spies came to Jericho, they sought refuge in the house of Rahab. When the king of Jericho commanded Rahab to bring out the men, she said that the men had already gone and that she did not know where they were. When Israel destroyed Jericho, Rahab and all her family were saved alive as a reward for her protection. How could God bless Rahab for lying?

Defenders of the biblical text fall into two groups on this issue. Some argue that it is not clear that God blessed Rahab for lying. What he blessed her for was her "faith" (Heb. 11:31), not her falsehood. God blessed Rahab *in spite of* her lie, not *because of* it. Proponents of this view insist that God saved and blessed Rahab for protecting the spies and assisting in the overthrow of Jericho. They insist that nowhere does the Bible explicitly say that God blessed Rahab for lying.

Other scholars insist that Rahab was faced with a real moral dilemma. It may have been impossible for her both to save the spies and to tell the truth to the soldiers of the king. If so, God would not hold Rahab responsible (see Geisler, chap. 7). Certainly a person cannot be held responsible for disobeying a lesser law in order to keep a higher obligation. The Bible commands obedience to the government (Rom. 13:1 ; Titus 3:1 ; 1 Peter 2:13), but civil disobedience is just when the government attempts to compel unrighteousness (Exodus 5 ; Dan. 3 , 6 ; Revelation 13). The case of the Hebrew midwives (Exodus 1), who lied to save the lives of the male children, is perhaps the clearest example.

1 Samuel 16:1–5 . We have seen that Abraham was judged for telling the half truth that Sarah was his sister, but in 1 Samuel 16 God actually encourages Samuel to tell that he had come to

Bethlehem to offer a sacrifice, when he had also come to anoint David king as well. Did not God encourage deception here? Why did God condemn Abraham for the same thing he commanded Samuel to do?

It is important to note that the two situations are not the same. Abraham's "half-truth" was a whole lie, for the implied question was "Is Sarah your wife?" And his answer in effect was "No, she is my sister." By this answer Abraham intentionally misrepresented the facts, which is a lie.

Samuel was asked, "Why have you come to Bethlehem?" His answer was, "I have come to sacrifice to the Lord" (1 Sam. 16:2). This corresponded with the facts, namely, it was why he came and what he did. The fact that he had another purpose for coming is not directly related to the question he was asked and the answer he gave, as it was in Abraham's case. Of course, had Samuel been asked "Do you have any other purpose for coming?" then he would have had to come clean. "No" would have been a deception.

Concealment and deception are not necessarily the same. Samuel certainly concealed one of the purposes of his mission in order to save his life (1 Sam. 16:2). It is not always necessary (even possible) to tell all in order to tell the truth. The fact that God told Samuel to conceal one of the purposes of his visit in order to avoid Saul's murderous anger does not mean he was guilty of lying. Not telling part of the truth and telling a falsehood are not necessarily the same. Nor are secrecy and concealment the same as duplicity and falsehood.

2 Kings 6:19 . When Elisha went out to meet his enemies, he told them "this is not the way, nor is this the city. Follow me, and I will bring you to the man whom you seek" (2 Kings 6:19). How could a man of God lie to these Syrian troops?

Very simply, what Elisha told them was not actually a lie. The Syrian troops were sent to Dothan in order to capture Elisha. The Lord blinded them, and Elisha came out of the city to meet them. What Elisha told them was "this is not the way, nor is this the city." Once Elisha came out of the city, he was no longer in Dothan. Consequently, entering Dothan was no longer the way to capture Elisha, neither was it the city. Elisha also instructed them, "follow me and I will bring you to the man whom you seek." This was also true. Elisha went before them into Samaria, and when they arrived, the Lord opened their eyes and they saw Elisha, and that they were in Samaria.

2 Chronicles 18:18–22 . God is portrayed in this passage by Micaiah the prophet as enlisting lying spirits to entice wicked King Ahab to seal his own doom. The text says, "The Lord has put a lying spirit in the mouths of these prophets of yours" (vs. 22). But how can the God of all truth perpetrate such a lie?

Defenders urge that God is not promoting evil here but simply controlling evil for good. Several factors help in understanding this situation. First, this is a vision, a dramatic picture of God's sovereign authority spelled out in regal imagery.

Second, this dramatic vision represents God’s sweeping authority, even over evil spirits. The God of the Bible, in contrast to some pagan religions, is in sovereign control of everything, including evil, which he uses to accomplish his good purposes (cf. Job 1–3).

Third, the Bible sometimes speaks of God “hardening” people’s hearts (see Rom. 9:17–18) or even sending them strong delusions (2 Thess. 2:11). However, on closer examination, we discover that God did this to those who had hardened their own hearts (Exod. 8:15) and who “did not believe the truth” (2 Thess. 2:12). God uses even their depravity to accomplish his purposes. God *permits* lying as a judgment on evil.

God, for his own purposes of justice, allowed Ahab to be deceived by evil spirits to accomplish his sovereign and good will.

John 7:3–10 . Bible critics have sometimes appealed to this text to show that Jesus lied. This is a serious charge, since it would not only be a divinely approved lie, but one told by God himself in the person of his Son. Jesus’ unbelieving brothers challenged him to go up to Jerusalem and show himself openly to be the Messiah (7:3–4). Jesus refused, saying, “I am not yet going up to this feast, because for me the right time has not yet come” (vs. 8). But later Jesus did go (vs. 10). Jesus did not go openly, as the brothers had suggested, nor at the immediate time they suggested. Further, John 7:8 relates that Jesus said he was not *yet* going. “He remained in Galilee” before he went up.

Luke 24:28 . When Jesus has finished his discourse to the two disciples on the road to Emmaus, “Jesus acted as if he were going farther” (Luke 24:28b). Although this is not a verbal lie, it is true that one can lie by actions. Some critics believe that this is what Jesus did here.

Calling this a lie stretches the imagination. The text goes on to say, “But they urged him strongly, ‘Stay with us, for it is nearly evening.’ So he went in to stay with them” (vs. 29). In other words, Jesus was going on until they persuaded him to stay with them. Rather than impose himself on his disciples, he waited for them to take the initiative, which evidently came immediately and vigorously. By showing that he could go on, he invited these hurting friends to come closer.

Exodus 1:15 . Most alleged cases of divinely approved lying turn out to be either not a lie or not divinely approved. There is at least one case, however, that seems to be both.

The pharaoh (king) of Egypt directly ordered the Hebrew midwives to murder the newborn Hebrew boys. “The midwives, however, feared God and did not do what the king of Egypt had told them to do; they let the boys live” (Exod. 1:17). Not only did the midwives disobey pharaoh, but, when he questioned them about their actions, they lied saying, “Hebrew women are not like Egyptian women; they are vigorous and give birth before the midwives arrive” (Exod. 1:19). “So God was kind to the midwives,” according to 1:20–21 . “And because the midwives feared God, he gave them families of their own.”

There is little question that the midwives both disobeyed a command of government by not murdering the newborn male children and lied to cover it up. The moral dilemma in which the

midwives found themselves was unavoidable. Either they obeyed God's law not to murder, or they obeyed the lesser obligation to pharaoh. Rather than commit deliberate infanticide against the children of their own people, the midwives disobeyed the king. God commands us to obey the governmental powers, but he also commands us not to murder (Exod. 20:13).

The saving of innocent lives is a higher obligation than obedience to government. When the government commands an act against God, we should not obey. God would have held the midwives responsible had they fulfilled their duty to government. In the case of the midwives, the higher law was the preservation of the lives of the newborn male children (cf. Acts 4 ; Revelation 13). Further, the lie, and the larger act of disobedience, came in the context of the midwives' faith commitment to God. The midwives had to make a choice of allegiance and obedience, a choice that required courage and spiritual wisdom. A similar situation might involve obedience to parental authority. Submission is part of the moral authority. But if a parent commands a child to kill or worship an idol, the child must submit instead to the higher authority and refuse. Jesus emphasized the need to follow the higher moral law when he said, "Anyone who loves his father or mother more than me is not worthy of me" (Matt. 10:37a).

The midwives' fear of God led them to do what was necessary to save lives. Their false statement to Pharaoh was an essential part of their effort to save lives.

Conclusion. Narrative texts in which a person lies fall into one of a few categories: First, some cases were not lies but only legitimate utterance of part of the truth. Second, in most cases of clear lying, there is no indication that God approved of the falsehood. To the contrary there was usually some kind of judgment. In cases that can legitimately be called divinely approved falsification, such as the midwives in Exodus 1 , there is unavoidable conflict with a higher moral law. It is when there is a rare, *unavoidable* conflict with one of God's higher moral laws that he suspends our duty to truth.

Machen, J. Gresham. J. Gresham Machen (1881–1937) was born in Baltimore and was graduated with a degree in classics from Johns Hopkins University. He studied at Princeton Theological Seminary under B. B. Warfield and R. D. Wilson. He also studied at Princeton University and as a fellow in Germany at Marburg and Gottingen. At Marburg he studied under Adolf Julicher and Wilhelm Herrmann, who was a disciple of Albrecht Ritschl. At Gottingen he studied under E. Schurer and W. Bouset. In 1906 Machen became an instructor in New Testament at Princeton Seminary.

In 1912 Machen gave an address, "Christianity and Culture," which was to set a theme for his career. He identified the problem in the Christian church as the relation between knowledge and piety. There were three approaches to this relationship, he said. Liberal Protestants subordinated the gospel to science and disregarded the supernatural. Fundamentalists preserved the supernatural but rejected science. Machen's solution was to blend the pursuit of knowledge with religion.

By 1914 Machen was a full professor of New Testament at Princeton. After World War I, the Northern Presbyterian Church and Princeton Seminary both underwent a fundamental shift in theology, from historical Christianity and traditional Calvinism to a liberal or modernist following of German theological trends. In the ensuing battle, the denomination and seminary split. By 1929, Machen, Oswald T. Allis, Cornelius Van Til, and Robert Dick Wilson, along with twenty students, left the seminary. Under Machen, these men established Westminster Seminary in Philadelphia.

In 1933, to counter the increasing liberalism in the Presbyterian Church, USA, Machen founded the Independent Board for Presbyterian Foreign Missions. This board tested and commissioned orthodox missionaries and gave conservative churches an alternative to supporting liberals sent out by their own denomination. The General Assembly demanded that Machen leave the board. He refused and was tried for violating his ordination vows. Without being given the opportunity to defend his actions he was suspended from the ministry by New Brunswick Presbytery in Trenton, New Jersey. He, along with others, was expelled from the PCUSA in 1936. Immediately a new organization was formed, the Presbyterian Church of America. Only a few months later Machen died suddenly while on a preaching tour to build support for the new denomination. Without his focused leadership, the infant church was divided

by the individual agendas of its leaders. Two denominations eventually emerged, the Orthodox Presbyterian Church and the Bible Presbyterian Church.

While he rejected the label of "fundamentalist" and some of the theological emphases traditionally adopted by the fundamentalist movement, Machen was the intellectual leader of that movement during the 1920s. His scholarship and professional work were respected even by his opponents. One of his most helpful contributions for generations of students was his *New Testament Greek for Beginners* (1924). Of theological importance was his classic defense, *The Virgin Birth of Christ* (1930). This collection of lectures given at Columbia Theological Seminary argued that the virgin birth was not a late addition to Christianity. Other significant defenses of intellectually-strong faith were *The Origin of Paul's Religion* (1921), *Christianity and Liberalism* (1923), *What Is Faith?* (1927), *The Christian Faith in the Modern World* (1938), and *The Christian View of Man* (1937).

Fervent, Thoughtful Apologetic. Machen's apologetic is closely aligned with the work of Charles Hodge, B. B. Warfield, A. A. Hodge, Caspar Wistar Hodge, and Geerhardus Vos. As the work of these men, Machen's philosophy was rooted in Thomas Reid and Scottish Realism . He believed that reason, which relied upon and dealt with facts, was essential for faith. He followed the classic pattern of *notitia* (cognitive knowl edge), *assensus* (feeling), that leads to *fiducia* (faith). Machen pointed out that reason does not *prove* faith. This, he believed, was the fundamental error of liberalism (Lewis and Demarest, 374). Machen was ever cautious to put Christian experience in its proper context: "Christian experience is rightly used when it confirms the documentary evidence. But it can never produce a substitute for the documentary evidence. . . . Christian experience is rightly used when it helps to convince us that the events narrated in the New Testament actually did occur, but it can never enable us to be Christians, whether the events occurred or not" (*Christianity and Liberalism* , 72).

Machen's starting point for apologetics was human consciousness, which relied upon logical analysis, deduction, and common sense. He did not elaborate on theistic proofs; nonetheless, he relied upon traditional arguments. Machen went so far as to delay his ordination until he could satisfactorily answer Kant 's objections. He affirmed:

> The very basis of the religion of Jesus was a triumphant belief in the real existence of a personal God. And without that belief no type of religion can rightly appeal to Jesus today. Jesus was a theist, and a rational theism is at the basis of Christianity. Jesus did not, indeed, support His theism by argument; He did not provide in advance answers to the Kantian attack upon the theistic proofs. But that means not that He was indifferent to the belief which is the logical result of those proofs, but that the belief stood so firm, both to Him and to His hearers, that in His teaching it is always presupposed. So today it is not necessary for all Christians to analyze the logical basis of their belief in God; the human mind has a wonderful faculty for the condensation of perfectly valid arguments, and what seems like an instinctive belief may turn out to be the result of many logical steps. Or, rather, it may be that the belief in a personal God is the result of a primitive revelation, and that the theistic proofs are only the logical confirmation of what was originally arrived at by a different means. At any rate, the logical confirmation of the belief in God is a vital concern to the Christian. [ibid., 59–60]

Infallible and Inerrant. Following the old Princetonian tradition, Machen believed the Bible in its original writings (autographs) to be plenarily inspired, in that God's Word was mediated through the lives and personalities of the writers and the genre of literature through which they wrote. Thus historical narrative is not judged with the same standards as poetry. Scripture is infallibly God's truth and is without error, but it is not mechanically dictated (*see* BIBLE, EVIDENCE FOR). "In all its parts," said Machen, Scripture is "the very word of God, completely true in what it says regarding matters of fact and completely authoritative in its commands" (*Christian Faith in the Modern World* , 2, 37). He affirmed: "Only the autographs of the Biblical books, in other words—the books as they came from the pen of the sacred writers, and not any of the copies of those autographs which we now possess—were produced with that supernatural impulsion and guidance of the Holy Spirit which we call inspiration" (ibid., 39).

Defense of Christianity. Machen's apologetic for orthodoxy was mostly evidential. It began with an appeal to mostly biblical and historical facts that require an adequate explanation. Machen's defense of orthodoxy centered on two important miracles, the virgin birth and the bodily resurrection of Jesus Christ. Machen often appealed, similar to Paul, to the fact that, if Christ was not born of a virgin in history and resurrected bodily three days after his death, our faith is in vain.

Machen defended miraculous acts in Scripture (*see* MIRACLES, ARGUMENTS AGAINST), especially those of Christ, by defining a supernatural event as what "takes place by the immediate, as distinguished from the mediate, power of God" (*Christianity and Liberalism* , 99). This, he points out, presupposes the existence of a personal God and the existence of a real order of nature. Thus, miracles are supernaturally dependently joined to theism.

In defense of New Testament miracles (*see* MIRACLES IN THE BIBLE). Machen pointed out the mistake of isolating miracles from the rest of the New Testament. It is a mistake to discuss the resurrection of Jesus as though that which had to be proved was simply the resurrection of a first-century man in Palestine (ibid., 104). Rather, the resurrection is supported by the historical uniqueness of Christ in his person and claims, and the "adequate occasion" or purpose for the miracle that can be detected (ibid., 1, 104). The faith demonstrated by the early church was the most convincing argument for the resurrection (*What Is Christianity?* 6, 99). Machen further supports biblical miracles by pointing out the illegitimate naturalistic tendencies of the liberal church in rejecting them.

Evaluation. Machen defended orthodox Protestant faith at a crucial point in the first half of the twentieth century. He set a high standard of scholarship at a time when few others, liberal or conservative, were producing valuable academic studies. Many of these works are still widely used.

Machen's overall apologetic is succinctly summarized by C. Allyn Russell: "It was Machen's thesis that Christianity and liberalism were essentially two distinct and mutually exclusive religions, not two varieties of the same faith." He argued that they used similar language but proceeded from altogether different roots. "In assaulting liberalism as a non-Christian religion, Machen declared that liberal attempts to reconcile Christianity with modern science had relinquished everything distinctive of Christianity" (Russell, 50).

Maimonides. Moses, son of Maimon (1135–1204). latinized his name into Maimonides. He left his native Cordova, Spain, in the wake of the Muslim invasion and went to North Africa and eventually Egypt, where he died in Cairo. Though known for his legal doctrine, "Rabbi Moses," as the scholastics called him, became the most celebrated Jewish philosopher of the middle ages.

In his *Guide for the Perplexed* , he addressed the semi-intellectual Jewish thinkers who were in a state of mental confusion because they believed the principles of Greek philosophy contradicted their religious faith. It was for those who hesitated between conflicting claims of philosophy and religion. Maimonides believed one could have full knowledge of Greek philosophy without giving up the observance of the commandments. Unfortunately, the

---

WTJ *Westminster Theological Journal*

reconciliation was usually in favor of an allegorical interpretation at the expense of a literal understanding of Scripture.

In addition to his Jewish faith, especially stressing the oneness and ineffability of God, Maimonides was heavily influenced by Alfarabi , Aristotle , Averroes , Philo , Plato , and Plotinus . The result was his own unique synthesis of these philosophers, with preference to Plato over Aristotle and heavy influence from Plotinus. Maimonides influenced Thomas Aquinas and other scholastic philosophers, and also the modern rationalist Benedict Spinoza .

Philosophy. Following his Jewish training, Maimonides believed God was one. He also held that God's existence was demonstrable but that his essence was unknowable. He offered proofs for God's existence used by the later scholastics, such as God as First Cause, First Mover, and Necessary Being (three of Aquinas's five proofs for God). Unlike the Greeks, he believed God was the efficient, as well as the formal and final, cause of the world.

Greek philosophers argued for the eternality of the world, but Maimonides found these arguments inconclusive because they overlooked the omnipotence of God, who can freely create a universe of whatever duration he wishes. Aquinas followed this line of reasoning.

Following Plotinus, Maimonides held that all knowledge of God is negative. Anything positive refers only to God's actions, not to his nature, which is essentially unknowable.

The Bible reveals one positive divine name, *YHWH* . The "tetragrammaton" name means "absolute existence." God is a pure and necessary existence. All creatures are contingent. Their existence is only an "accident" added to their essence.

Evaluation. There are many positive contributions in Maimonides' views. From the perspective of classical theism and apologetics (*see* CLASSICAL APOLOGETICS), his stress on the nature of God, creation, and the proofs for God's existence are commendable.

Of concern to Christians is Maimonides' negative theology, which allows no positive analogies (*see* ANALOGY). Also, his tendency to allegorize away parts of Scripture not reconcilable with prevailing Platonic philosophy was unnecessary and unacceptable.

Martin, Michael. Michael Martin, a late-twentieth-century Bible critic, wrote *The Case against Christianity* to argue that Jesus is not a historical figure. He contends that the earliest layer of the four Gospels is not historical, that Paul was not interested in the historical Jesus, and that Jesus, whether he existed, did not rise from the dead.

Evaluation. A critique of Martin's views begins with what Martin himself accepts regarding the earliest Epistles of Paul (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT MANUSCRIPTS). Martin accepts the authenticity of some early Epistles, including 1 and 2 Corinthians and Galatians. In these letters, Paul affirmed that Jesus died and was raised (1 Corinthians 15). He recorded that the apostles were in Jerusalem after Jesus died (Gal. 1:17) where he had visited them twice, once after his conversion (Gal. 1:18–19) and once fourteen years later (2:1–10). Paul also met Peter later in Antioch (Gal. 2:11 –). Paul was not only a contemporary of the apostles but on par with them (1 Cor. 9:1). Contrary to Martin, Paul knew James the "brother of our Lord" (1 Cor. 9:5 ; Gal. 1:18–19). This is the natural sense of these passages.

Further, Josephus called James the "brother of Jesus," not of a Jerusalem faction (Josephus 20.9.1). In fact, all four Gospels speak of Jesus' brothers in the context of his physical family (Matt. 12:46–47 ; Mark 3:31–32 ; Luke 8:19–20 ; John 7:5). There is no ancient evidence to the contrary.

Paul mentions other details of Jesus' life (2 Cor. 5:16 , 21). So, it is simply not true that there is no support for the historicity of Jesus. Even the earliest layer of material accepted by Martin reveals details, including some basic ones about the death and resurrection of Christ.

Late Dating of the Gospels. There also are good reasons to reject Martin's late dates, from 70 to 135, for the Gospels. Once this premise is proven false, his whole case against the historicity of Jesus crumbles. Even such radical theologians as John A. T. Robinson date the Gospels between A.D . 40 to 65 (see Robinson, 352).

Several arguments for a pre–70 A.D . date can be marshaled. Most scholars date Mark in the decade 60–70, or more precisely, 65–70. Martin wrongly asserts that Mark was not mentioned until the mid-second century. Papias refers to Mark during the first quarter of the second century. Martin also errs in claiming that Luke was unknown by Clement, Ignatius, or Polycarp. All three Synoptic Gospels are cited by them, including a resurrection text from Luke 24 . Martin asserts that Clement is not clear about whether disciples received instructions from Jesus while on earth. Yet Clement wrote, "The apostles received the Gospel for us from the Lord Jesus Christ: Jesus Christ was sent forth from God" (1 Clement 42). Martin's case against the earlier dates for the Gospels collapses. And once the Gospels are placed within the generation of eyewitnesses and contemporaries of the events (as pre–70 dates do), then there is good evidence for the historicity of Jesus (*see* NEW TESTAMENT, HISTORICITY OF).

Even the radical theologian John A. T. Robinson has come to believe a late date is untenable. He places the Gospels between 40 and 60. Roman historian Colin Hemer has shown that Luke

wrote Acts between 60 and 62. And Luke says there that his Gospel was already finished (see Acts 1:1 ; cf. Luke 1:1). Most critics believe Mark and/or Matthew were written before Luke. This would place all three within the time of contemporaries and eyewitnesses (*see* NEW TESTAMENT, DATING OF).

Use of Extrabiblical Sources. Martin's use of extrabiblical sources is seriously wanting. He wrongly rejects Josephus' reference to Jesus. He even incorrectly cites two authorities as being in favor of his view, F. F. Bruce and John Drane. Like most scholars, Bruce is skeptical of the rendering of one text from Josephus as though he believed in the resurrection of Christ. However, Bruce clearly accepts the general authenticity of Josephus ' reference to Christ as a historical figure. Drane declared: "Most scholars have no doubts about the authenticity" of most of it. So, the very people Martin uses to debunk the Josephus citations hold that these citations do show that Jesus was a historical person in the early first century.

Criticism of the Resurrection. Martin believes that Gospel discrepancies discredit the resurrection. The problem of which women were at the tomb when is a case in point. Matthew says Mary Magdalene and the other Mary. Mark adds Salome to the two Marys. Luke adds Joanna to the two Marys. John refers only to Mary Magdalene.

The answer to this problem is not difficult to find. One would expect differences between independent accounts. Were there no differences in perspective, the accounts would be highly suspect. For a fuller discussion of the women at the resurrection, see RESURRECTION OF CHRIST, EVIDENCE FOR . The discrepancies are reconcilable (*see* BIBLE, ALLEGED ERRORS ; RESURRECTION, ORDER OF EVENTS). In the case of the women at the tomb, Mark and Luke indicate that other women were involved (Mark 15:40–41 ; Luke 23:55 ; 24:10). John quotes Mary as using the term "we" (20:2), showing that she was not alone, and that this was not an exhaustive report of visitors to the grave.

Martin also misapplies his analogy of evidence for Christ to that presented in a courtroom. Critics are more anxious to list inconsistencies than to give the text a fair reading. We have different standards of evidence than did the first-century witnesses. Compared with other ancient histories, the Gospels are exceptionally well attested. The purpose of the Gospels, however, was not to present depositions or present testimony from the witness stand, but to be independent narrations with a faith perspective. The resurrection can be established independent of the historicity of Gospels from facts accepted by nearly all critics (see, for example, Habermas, chap. 5).

Paul's Testimony for Resurrection. Martin and many other critics accept the authenticity of 1 Corinthians 15 , along with its early date of about A.D . 55–56. This chapter alone is deadly to Martin's argument. Paul recorded eyewitness reports from as early as five years after the events and no later than twenty-five years after them, and his own eyewitness account of a post-resurrection appearance of Christ. We have other data to confirm Paul's testimony. For example, Paul's creedal material is supportive data. Martin's denial to the contrary, the Gospels were written early enough to confirm the events. And sermons in Acts confirm it (Acts 2 , 10 , 13 ; *see* ACTS, HISTORICITY OF). In these sermons, historical details are given (Jesus eating with the disciples). Indeed, the common theme of the sermons is the resurrection.

Martin's List of "Delusions." Martin claimed that the disciples were victims of a psychosis *folie a deus* . They had divine delusions. But his evidence is purely circumstantial. Furthermore, the disciples do not show accepted characteristics of deluded individuals. They were, in fact, so convinced and convincing that they were willing to die for their witness and so were their spiritual descendants. Psychosis *folie a deus* has no evidence for it and much against it.

Conclusion. Martin cannot support his contention that Jesus is not even a historical person. Even granting his own premises, one can demonstrate the historicity of Jesus. Further, there is strong reason to reject Martin's late dates for the Gospels. Once the earlier dates are acknowledged, the historicity of Jesus is a given; only the details are left for debate.

Marx, Karl. Karl Marx (1818–1883) was one of the most influential of all modern atheists (*see* ATHEISM). His German-Jewish family was converted to Lutheranism when he was six. He was

influenced heavily by the idealism of G. W. F. Hegel (1770–1831), under whom he studied, and he adopted the atheism of fellow student, Ludwig Feuerbach (1804–1872). After some radical political activity, which led to his expulsion from France (1845), he joined Friedrich Engels to produce *The Communist Manifesto* (1848). With the economic support of Engels' prosperous textile business, Marx spent years of research in the British Museum producing *Das Kapital* (1867).

God and Religion. Even as a college student, Marx was a militant atheist who believed that the "criticism of religion is the foundation of all criticism." For this criticism Marx drew heavily on the radical young Hegelian named Feuerbach .

Engels spoke of "the influence which Feuerbach, more than any other post-Hegelian philosopher, had upon us" (*Marx and Engels on Religion,* 214). He triumphantly spoke of Feuerbach's *Essence of Christianity* which "with one blow . . . pulverized [religion] . . . in that without circumlocution it placed materialism on the throne again" (ibid., 224). Marx drew three principles from Feuerbach:

First, "man is the highest essence for man" (ibid., 50). This means there is a categorical imperative to overthrow anything—especially religion—which debases humanity. Secondly, "Man makes religion; religion does not make man" (ibid., 41). Religion is the self-consciousness of the human being who feels lost without some identification with a "God." Third, religion is "the fantastic reflection in men's minds of those external forces which control their daily life, a reflection in which the terrestrial forces assume the form of supernatural forces" (ibid., 147). God is a projection of human imagination. God did not make the human being in his image; the human being has made a god in his image (*see* SIGMUND FREUD).

Marx's atheism , however, went well beyond that of Feuerbach. Marx agreed with the materialists that "matter is not a product of mind, but mind itself is merely the highest product of matter" (ibid., 231). Marx objected that Feuerbach did not follow the implications of his ideas into the social domain, for "he by no means wishes to abolish religion; he wants to perfect it" (ibid., 237). "Feuerbach," reasoned Marx, "does not see that the 'religious sentiment' is itself a social product" (ibid., 71). Hence, does not grasp the significance of 'revolutionary,' of 'practical-critical,' activity" (ibid., 69). In the words of Marxism's slogan, "Religion is the opiate of the people" (ibid., 35). People take the drug of religion "because this world is not adequate to assure man of his complete accomplishment and integrated development, [so] he compensates himself with the image of another, more perfect world" (ibid., 36).

In the Marxist evolutionary conception of the universe, there is absolutely no room for a Creator or a Ruler (*see* EVOLUTION, BIOLOGICAL). Deism 's supreme being, who is shut out from the whole existing world, is a contradiction in terms. Concluded Marx, the only service to be rendered to God is to make atheism a compulsory article of faith and prohibit religion generally (ibid., 143). Marx rejects even agnosticism: "What, indeed, is agnosticism but, to use an expressive Lancashire term, 'shamefaced' materialism? The agnostic conception of nature is materialistic throughout" (ibid., 295).

Marx was under no delusion that religion would immediately die when socialism was adopted. Since religion is but a reflex of the real world, religion will not vanish until "the practical relations of every-day life offer to man none but perfectly intelligible and reasonable relations with regard to his fellowmen and to nature" (ibid., 136). The communist utopia must be realized before religion is no more.

Human Beings. Marxism holds a materialistic view of human origins and nature (*see* MATERIALISM). This, of course, entailed naturalistic evolution. *Das Kapital* came only eight years after Charles Darwin 's *On the Origin of Species* was published in 1859. Evolution was a helpful addition to Marx's materialistic framework. "Mind is the product of matter." That is, mind evolved from material stuff. The nonliving (matter) has always been (*see* EVOLUTION, COSMIC). The nonliving has produced the living (*see* EVOLUTION, CHEMICAL), and finally, the nonintelligent has produced the intelligent (*see* EVOLUTION, BIOLOGICAL).

Marx wrote his doctoral thesis at the University of Jena (1841) on the materialistic philosophies of the Greek philosophers Epicurus and Democritus. Adding in the support of Darwinian evolution he could explain, without God, the origin of human life as the product of evolutionary processes in a material world.

Marx dismissed pure philosophy as speculation, compared to the vital task of changing the world (Marx, *Selected Writings in Sociology and Social Philosophy,* 82). Hence, he was not particularly interested in philosophical materialism. As a materialist he did not deny mind altogether. He believed that everything about man, including the mind, was determined by material conditions. "For us, mind is a mode of energy, a function of brain; all we know is that the material world is governed by immutable laws, and so forth" (Marx, *Marx and Engels on Religion,* 298). This view would fit what philosophers call epiphenomenalism, that consciousness is nonmaterial but that it is dependent on material things for its existence. Certainly life after death was an illusion (*see* IMMORTALITY).

Karl Marx was more interested in the concrete social being. He believed "the real nature of man is the total of *social* nature" (ibid., 83). Apart from such obvious biological facts as the need for food, Marx tended to downplay individual existence. He believed that what was true of one person at one time in one society was true of all at all times in all places (ibid., 91, 92). The consciousness determines human being, but social being determines consciousness (ibid., 67). Sociology is not reducible to psychology. One central generalization was that the human is a socially active being distinguished from other animals in that people *produce* their means of subsistence (ibid., 69). They work for their living. Thus, Marx concludes, it is right to work, to have a life of productive activity.

Those who do not find fulfillment in industrial labor experience alienation. This alienation will be eliminated when private property is done away with (ibid., 250). Private property, however, is not the cause but a consequence of alienation (ibid., 176). Alienation itself consists in the fact that the worker is forced to bring fulfillment to someone else, instead of finding personal fulfillment. Even the objects produced are owned by another. The cure for this ill is the future communist society in which the individual can be fulfilled by working for the good of the whole (ibid., 177, 253).

World and History. Marx's overall view of the world is both materialistic and dialectic. Marx used the term *historical materialism* for the "view of the course of history which seeks the ultimate cause and the great moving power of all important events in the economic development of society" (*Marx and Engels on Religion,* 298). When this is applied specifically to history Marx is a *dialectical* materialist who looks for thesis, antithesis, and synthesis. History is unfolding according to a universal dialectic law that can be predicted the way an astronomer predicts an eclipse. In the preface to *Das Kapital* , Marx compared his method to that of a physicist and said, "the ultimate aim of this work is to lay bare the economic law of motion of modern society," and he also spoke of the natural laws of capitalistic production as "working with iron necessity toward inevitable results" (*Das Kapital,* "Preface").

The nature of the dialectic of modern history is that the thesis of capitalism is opposed by the antithesis of socialism, which will give way to the ultimate synthesis of communism. History is predetermined like the course of the stars, except the laws governing history are not mechanical but economic (*see* DETERMINISM). Humanity is economically determined. That is, "the mode of production of material life determines the general character of social, political, and spiritual processes of life" (ibid., 67, 70, 90, 111f.). There are other factors as well, but the economic is a primary factor of social determination. Engels emphatically proclaimed, "more than this neither Marx nor I have ever asserted. Hence if somebody twists this into saying that the economic element is the *only* determining one, he transforms that proposition into a meaningless, abstract, senseless phrase" (*Marx and Engels on Religion,* 274).

The Future. Based on his knowledge of the dialectic of history and economic determinism, Marx confidently predicted that capitalism would become increasingly unstable and that the class struggle between the bourgeois (ruling class) and the proletariat (working class) would intensify. Thus the poor would become larger and poorer until, by a major social revolution, they would seize power and institute the new communist phase of history (ibid., 79–80, 147f., 236).

The fact that these predictions did not come to pass was an embarrassment to Marxist theory. That almost the opposite has happened has been the near-demise of Marxism.

Communistic Utopia. According to Marx, capitalism has its own internal contradictions. For as the masses become more numerous and the capitalists fewer, the latter would control great concentrations of productive equipment which they would throttle for their own gain. The masses would sweep aside the capitalists as a hindrance to production and seize the industrial economy. In the emerging progressive society there would be no wages, no money, no social classes, and eventually no state. This communist utopia would simply be a free association of producers under their own conscious control. Society would move ultimately "from each according to his ability to each according to his need" (ibid., 263). There would, however, be an intermediate period of "the dictatorship of the proletariat" (ibid., 261). But in the higher stage the state would vanish and true freedom begin.

Ethics. There are several characteristic dimensions of the ethics of Marxism. Three of these are relativism (*see* MORALITY, ABSOLUTE NATURE OF), utilitarianism, and collectivism.

Relativism. Since Marxism is an atheism, and since as Nietzsche noted that when God dies all absolute value dies with him, then it is understandable that Marxism's ethic is relativistic. There are no moral absolutes. There are two reasons for this. First, there is no external, eternal realm. The only absolute is the unfolding dialectic world process. Engels wrote, "we therefore reject every attempt to impose on us any moral dogma whatever as an eternal, ultimate and forever immutable law on the pretext that the moral world has its permanent principles which transcend history" (see Hunt, 87–88).

Second, there is no foundational nature or essence for general principles of human conduct. Ideas of good and evil are determined by the socio-economic structure. Class struggle generates its own ethic.

Utilitarianism. The standard for morality is its contribution to creation of a communist society. Whatever promotes the ultimate cause of communism is good, and what hinders it is evil. Actions can be justified by their end. Lenin once defined morality as that which serves to destroy the exploiting capitalistic society and to unite workers in creating a new communist society (ibid., 89). Thus the end justifies the means. Some neo-Marxists have rejected this, insisting that means are subject to the same moral principles as the end. But they have departed from orthodox Marxism. This is the communist's equivalent of utilitarianism's "greatest good for the greatest number in the long run."

Collectivism. In the Marxist ethic, the universal transcends the individual. This is a heritage from Hegel who believed that the perfect life is possible only when the individual is organically integrated into the ethical totality. For Marx, however, the highest ethical totality is not the state, as it was for Hegel, but "universal freedom of will." However, this "freedom" (*see* FREE WILL) is not individual but corporate and universal. The difference from Hegel is that the apex is shifted from the state to society, from the body politic to the body public.

In the perfect society private morals are eliminated and the ethical ideals of the community are achieved. This will be determined by material production. Material production determines religion, metaphysics, and morality.

Evaluation. *Positive Contributions.* Marx's concern for the condition of workers is to be commended. Working conditions are vastly improved today from those over a century ago when Marx wrote. Likewise, Marx is just in attacking the view that workers are a means to the end of capital gain. People should not be used as an end to things, even things desired by other people. Thus, Marxism has made a significant contribution to the social ethos that places the person over money.

Marxism has been a corrective on unlimited, uncontrolled capitalism. Any system which permits the rich to get richer and the poor poorer without moral limits is abusive. In ancient Jewish economy this possibility was checked by the year of Jubilee (one year every half century) when acquisitions were returned to their original owners.

The utopian aspirations of Marxism are noble. Marxism has been both a philosophy of history and a goal for overcoming perceived evils in the world. This vision has captured the imagination and dedication of many idealistic thinkers.

Negative Elements. Unfortunately, the harmful aspects of Marxism are significant. At the center of these is a militant, dogmatic atheism. It is self-defeating to insist that God is *nothing but* a projection of human imagination. "Nothing but" statements presume "more than" knowledge. One cannot know that "God" is confined only to imagination unless knowledge about God goes beyond mere imagination.

Marx's deterministic view of history is contrary to fact. Things have not worked out as Marx predicted. Marxist historical theory also is a category mistake, assuming that economic influences work like physical laws.

Materialism, as a view of humanity, ignores the rich spiritual and religious aspects of human nature, to say nothing of the evidence for human immateriality and immortality. Related to this is a view of human origins based on a flawed view of naturalistic evolution. This view has been shown to be an inadequate explanation of human origins. Marx's metaphysics is generally antisupernatural, ruling out the possibility of miracles. But this view has crucial philosophical flaws, as noted in the article MIRACLES, ARGUMENTS AGAINST .

Ethical relativism is self-destructive in its strongest form. The absolute denial of absolutes cuts its own throat, replacing one absolute with another. Socialist society has hardly avoided absolutism. Also, the fallacies of the "end justifies the means" ethic are infamous.

Marxism holds out an admirable idealism of goals (a human utopia) but demonstrates a miserable record of achievement. Reality in Marxist countries has brought millions closer to hell than paradise. While the goal of a perfect community is desirable, the revolutionary means of achieving it have resulted in mass destruction unparalleled in human history. From a Christian perspective the means of transforming humankind is not revolution but regeneration. Freedom is not by the birth of a new government but by the birth of a new inner person—that is, the new birth. Marx's view of religion was superficial. He should have heeded his father's exhortation to him at age 17: "Faith [in God] is a real [requirement] of man sooner or later, and there are moments in life when even the atheist is involuntarily drawn to worship the Almighty" ("Letter from Trier," 18 November 1835).

Marx also might have applied his own thoughts when he said, "Union with Christ bestows inner exaltation, consolation in suffering, calm assurance, and a heart which is open to love of mankind, to all that is noble, to all that is great, not out of ambition, not through the desire for fame, but only because of Christ" (written by Marx as a teenager between August 10 and 16, 1835).

Marx's own father feared it was the desire for fame which transformed Karl's Christian conscience into a demonic desire. In March 1837, he admonished his ambitious son, saying,

> At times I cannot rid myself of ideas which arouse in me sad forebodings and fear when I am struck as if by lightning by the thought: is your heart in accord with your head, your talents? Has it room for the earthly but gentler sentiments which in this vale of sorrow are so essentially consoling for a man of feeling? *And since that heart is obviously animated and governed by a demon not granted to all men, is that demon heavenly or Faustian?* [*Selected Writings* , emphasis added]

Mary, Apparitions of. Many persons claim to see appearances of the Virgin Mary or other Roman Catholic saints. These appearances are sometimes used as verification for some doctrine or truth claim connected with the Roman Catholic Church. Are these true miracles? Do they have any apologetic value in establishing truth claims?

The Apologetic Value of Apparitions. The apparitions of Mary are not really connected with a specific truth claim (*see* MIRACLES, APOLOGETIC VALUE OF). Mary did not announce that she was God in feminine flesh and then proceed to prove it by miracles. The connections to truth claims are generally made by those who saw the apparition. It is usually not clear what the specific claim would be.

Even when specific claims are associated with the event, the alleged miraculous nature of the event is challengeable. Leading Roman Catholic authorities reject the authority of most claims that Mary has appeared. Since most of these appearances are of a basic experiential nature, it raises questions about the validity of the rest of the claims. At best the apparitions add a note of confusion to doctrinal debate, and God is never a God of confusion.

Many of the appearances have natural explanations or are a spiritualization of natural phenomena (for example, a cloud formation or reflection of light through a window). Some fit all the criteria for being hallucinations. Of the small number of hard-core events that escape purely natural explanations, some may be explained as demonic deceptions. The few apparitions with an objective basis in reality have signs of Satanic deception characteristic of false miracles (*see* MIRACLES, FALSE). The apparitions lack unique features of a true miracle, as are described in the articles Miracle and Miracles, Apologetic Value of. They tend to be associated with adoration

of a statue, crucifix, or icon, which is an idolatrous form of worship (see Exod. 20:4). Some involve communication with the dead (see Deut. 18:11) and false teaching (see 1 Timothy 4), such as veneration of Mary or relics (see Geisler and MacKenzie, chap. 15).

There are also similar occurrences in other religions, so any conflicting truth claims associated with them are self-canceling, since neither of two opposing truth claims can be supported if their evidence is of the same kind. Buddhists have visions of Buddha, Hindus of Krishna, and many cultists of unbiblical forms of Christ. The Church of Jesus Christ of Latter-Day Saints (Mormon) is largely founded on angelic appearances to Joseph Smith and sustained by visions seen by the "apostles" of the church, yet the Mormon Christ is the brother of Lucifer and the result of sexual union between God (who has a physical body) and Mary. There are many conflicting, self-canceling visions and appearances, but no pious visionary has been able to miraculously substantiate his or her claims as did Jesus (*see* CHRIST, UNIQUENESS OF). He performed unparalleled, objectively demonstrable miracles (*see* MIRACLES IN THE BIBLE ; RESURRECTION, EVIDENCE FOR).

Conclusion. Whatever status apparitions of Mary may have as unusual events, they do not show evidence of being true miracles (*see* MIRACLE ; MIRACLES, MAGIC AND). On the contrary, their association with occult practices and false teaching shows that they are not supernatural acts of God. Since they are unconnected with clear truth claims and are not unique events unparalleled in other religions, they have no apologetic value in establishing truth claims (*see* MIRACLES, APOLOGETIC VALUE OF).

Materialism. *Materialism* believes that all is matter or reducible to it. *Pantheism* , by contrast, holds that all is mind. Theists (*see* THEISM) hold that Mind produced matter, and materialists that matter produced mind (*see* ATHEISM). In rigid materialism "mind" does not really exist, only matter. According to soft materialism or Epiphenomenalism, mind exists but is dependent on matter the way a shadow of a tree depends on the tree.

Thomas Hobbes defined matter:

> The world (I mean not the earth only, that denominates the lovers of it "worldly men," but the *universe* , that is, the whole mass of all things that are) is corporeal, that is to say, body; and hath the dimensions of magnitude, namely, length, breadth, and depth: also every part of body is likewise body, and hath the like dimensions; and consequently every part of the universe is body, and that which is not body is no part of the universe: and because the universe is all, that which is no part of it is nothing, and consequently nowhere. [269]

Basic Tenets. All materialists hold several basic beliefs in common (such as, everything is made of matter [energy]). Most materialists share other beliefs, such as humans are not immortal (*see* IMMORTALITY).

Matter Is All There Is. As Carl Sagan put it, the Cosmos is all that was, is, or ever will be. Everything is matter or reducible to it and dependent on it. If matter were to cease to exist, nothing would remain.

Matter Is Eternal. Most materialists believe matter has always been. Or, as one atheist put it, if matter came to be, it came into existence from nothing and by nothing (Kenny, 66; *see* CREATION, VIEWS OF). The material universe is self-sustaining and self-generating. It is probably eternal, but if it came to be, then it came to be on its own without outside help. Isaac Asimov speculated that the probability is equally good that nothing came from nothing or that something came out of nothing. As luck would have it, something emerged (Asimov, 148). So matter is eternal, or else it came from nothing spontaneously.

Traditional materialists believed there were innumerable indestructible little hard pellets of reality called *atoms* (*see* ATOMISM). With the splitting of the atom and the emergence of Einstein 's $E=MC^2$ (energy = mass times speed of light squared), materialists now speak of the indestructibility of energy. They appeal to the first law of thermodynamics, claiming that "energy can neither be created nor destroyed." Energy does not pass out of existence; it simply takes on new forms. Even at death, all the elements of our being are reabsorbed by the environment and reused. The process goes on forever (*see* THERMODYNAMICS, LAWS OF).

There Is No Creator. Another premise of strict materialism is atheism or nontheism. That is, either there is no God or, at least, no need for a God. As the *Humanist Manifesto II* put it, "As nontheists, we begin with humans not God, nature not deity" (Kurtz, 16). According to the nontheistic view of creation out of matter, no cause is needed to bring matter into existence or to form matter already in existence. There is neither a Creator nor a Maker (Former) of the world. The world explains itself.

Humans Are Mortal. Another implication of this view is that there is no immortal, never-dying "soul" or spiritual aspect to human beings (*see* IMMORTALITY). As *Humanist Manifesto I* noted, "the traditional dualism of mind and body must be rejected." A materialist believes modern science discredits any spiritual or soul dimension (Kurtz, 8, 16–17). There is no mind, only a chemical reaction in the brain. Less stringent materialists admit the existence of a soul but

deny that it can exist independently of matter. For them the soul is to the body what the image in the mirror is to the one looking at it. When the body dies, so does the soul. When matter disintegrates, the mind is also destroyed.

Humans Are Not Unique. Materialists differ regarding the nature of human beings. Most accord a special status to humans as the highest point in the evolutionary process (*see* EVOLUTION, BIOLOGICAL). That doesn't allow a qualitative difference from animals. Humans differ only in degree, not in kind, from lower forms of life. Human beings are the highest and latest animal form on the evolutionary ladder, with more highly developed abilities than fellow primates (*see* HUMANISM, SECULAR).

Argument for Materialism. *The Nature of Self-Consciousness.* In order for there to be more than matter, the mind must consciously survive death. But the mind cannot function without the brain. Therefore, when the brain dies consciousness ceases at the same time. This argument assumes that consciousness is a physical function, that "mind" is a function of matter. Mind is only a process within the brain. There is no proof for such an assumption.

Also unwarranted is the assumption that, because the mind and brain function *together* , they must be identical. A corollary assumption is that I am nothing but my brain. This is reductionist fallacy. Things that go together are not necessarily the same, any more than ideas expressed by these words are the same as the words themselves. Mind and brain could interact without being the same.

Dependence of Consciousness. In a modified form of materialism, *epiphenominalism* , the mind is not identical to the brain, but it is dependent on the physical brain, the way a shadow is dependent on a tree. This again assumes, though it does not prove, that the mind is dependent on the brain. Certain mental functions can be explained in physical ways, but that does not mean they are dependent on physical processes. If there is a spiritual, as well as a physical, dimension to reality, the mind shows every sign of being able to function in either. Neurobiology is an empirical science, but these scientists freely admit that they have not come close to isolating the "I." They can quantify mind-brain interactions, but there has been no success in learning the qualities of emotional or self response.

Access to the World. Materialists insist that the mind or self gains access to the world through the brain. Death destroys the brain, so death closes that door. The brain is certainly one way of access, but we cannot know if it is the only way of access to this world. It may or may not be. More to the point is that there may be another world, or even multiple dimensions, with wholly different kinds of access. And there may be ways to be conscious other than through interaction with the physical world. If there are spiritual beings, God and angels, and the evidence is that there are (*see* GOD, EVIDENCE FOR), they are certainly conscious without a physical body gateway to the world. The possibility of this spiritual dimension, of course, is what the materialist wants to avoid admitting, but there is no reason to do so.

The Necessity of Embodiment. Materialists reason that no person can survive without a body, and death destroys the body. So it destroys personhood. This begs the question by defining "person" in an arbitrary way that is unwarranted by our knowledge. We do not have the

information that death destroys personhood for the reasons already stated. At best we can say that death severs one dimension of consciousness—this-world consciousness. We can still be self-conscious, God-conscious, and conscious of another world.

Evaluation. Since materialists hold many beliefs in common with other atheists and agnostics, these beliefs are discussed in their respective articles. Their antisupernaturalism (*see* MIRACLE) is without philosophical grounds. Likewise, their acceptance of evolution (*see* EVOLUTION ; EVOLUTION, BIOLOGICAL ; EVOLUTION, COSMIC) is without scientific justification.

Materialist arguments are self-defeating. "Nothing but" statements assume "more than" knowledge. How could I know I am nothing more than my brain unless I was more than it? I cannot analyze my brain in a test tube unless I am outside the test tube.

At the heart of materialism is the rejection of the existence of mind or spirit as a separate entity that survives the dissolution of matter. Mind, rather, is really matter, or at least dependent on matter.

Strict Materialism Is Self-Defeating. The pure materialist view is clearly self-defeating (see Lewis, chap. 3). For surely the materialist *theory* is not made up of matter. That is, the *theory* about matter has no matter in it. The *idea* that all is made of molecules does not itself consist of molecules. For the *thought* about all matter must itself stand over and above matter. If the thought about matter is part of matter then it cannot be a thought about *all* matter, since being a part of matter it cannot transcend itself to make a pronouncement about *all* matter.

Mind (or its thought) only can transcend matter if it is more than matter. If it is more than matter, then matter is not all that exists. Whatever is material is limited to a region of space and time. If it moves, it moves in space and time. But the mind is not so limited. It roams the universe without leaving the room. Even the materialist speaks of personal thoughts. But if strict materialism were correct there could be no discrete thoughts. They would be a mere stream of electrons or some other material particle. Only a self-conscious being can truly make thoughts. Materialists want people to agree with their doctrine and accept their views. However, this is not possible if the views are correct. If consciousness is merely the result of a flow of electrons, persons are material processes, not free human beings.

Modified Materialism Is Self-Defeating. Some materialists admit that mind is more than matter but deny that mind can exist independent of matter. They insist that mind is more than matter the way the whole is more than the sum of its parts. And yet the whole ceases to exist when the parts do. For instance, a whole automobile engine has something more than all its individual parts spread over the floor of the garage. Nonetheless, when the parts are destroyed, the "whole" engine is destroyed too. Likewise, a mind is more than matter but it is dependent on matter and ceases to exist when man's material parts dissolve.

Although this materialistic argument is less apparently self-defeating than the first one, it is nonetheless equally wrong. It affirms that mind is ultimately dependent on matter. But the statement "mind is dependent on matter" does not claim to depend for its truth upon matter. In fact, it claims to be a truth about all mind and matter. But no truth about *all* matter can be

dependent for its truth upon matter. One cannot stand outside all matter to make an affirmation about all matter and yet simultaneously claim he is really standing inside matter, being dependent upon it. If my mind is completely dependent on matter, then it can't make statements from a vantage point beyond matter. And if its statements are not from a standpoint independent of matter, then they are not really statements about *all* matter. For one must step beyond something to see it all. The whole cannot be seen from within. It claims to have transcendent knowledge with only an immanent basis of operation.

Mind Transcends Matter. While materialists attempt to reduce everything to matter rather than mind, it would appear that in an epistemological sense at least, just the opposite is true. For whatever analysis I make of matter, there is always an "I" that stands outside the object of my analysis. Indeed, even when I analyze myself, there is an "I" that transcends the "me." I can never capture my transcendental I (ego). I can only catch it, as it were, out of "the corner of my eye." Even if I attempt to put my "I" in the test-tube of analysis it becomes a me at which the elusive I is looking. There is always more than me; there is the I that is not merely me. Contrary to materialism, then, everything is reducible to (i.e., ultimately dependent on) the I.

Mind is prior to and independent of matter.

Matter Is Not Eternal. There is strong evidence for what scientists have come to call the Big Bang origin of the universe, showing that matter had a beginning. The *kalam* cosmological argument demonstrates that the material universe has a cause. But the cause of all matter cannot itself be matter; hence something more than matter exists. As Karl Marx put it, either matter produced mind, or mind produced matter. Since matter was produced, Mind must have produced it.

Law Giver Was Immaterial. Another way to demonstrate that all is not matter is known as the Moral Argument for God . It can be phrased:

1. There is an objective moral law (*see* MORALITY, ABSOLUTE NATURE OF).

2. The moral law is prescriptive, not descriptive.

3. What is prescriptive is not part of the descriptive material world.

4. So there is an immaterial objective reality. More than matter exists (Lewis, *Mere Christianity* , 17–19).

Conclusions. All of the arguments in favor of materialism are essentially self-defeating. Any attempt to deny that there is a reality beyond the material implies that a nonmaterial reality, such as the mind, exists. Materialism is an untenable position.

Metaphysics. *Metaphysics* (lit. "beyond the physical) is the study of being or reality. It is used interchangeably with *ontology* (Gk. *ontos* , "being," and *logos* , "word about").

Metaphysics is the discipline in philosophy which answers such questions as: What is real? (*see* REALISM); Is reality one or many? (*see* ONE AND MANY, PROBLEM OF); Is reality material or immaterial? (*see* MATERIALISM); Is it natural (*see* NATURALISM) or supernatural? (*see* MIRACLES, ARGUMENTS AGAINST). Another important metaphysical problem has to whether being is univocal or analogical (*see* ANALOGY, PRINCIPLE OF).

In the Aristotelian-Thomistic tradition, metaphysics is defined as the study of being insofar as it is being. Physics is the study of being insofar as it is physical. Mathematics is the study of being insofar as it is quantifiable.

Mill, John Stuart. John Stuart Mill (1806–1873) embraced a finite god (*see* FINITE GODISM) worldview, with a logical positivism that took a strong anti-metaphysical stand (*see* AYER, A. J .). He is usually known as a pioneer in modern scientific thinking. He devised rules for inductive scientific reasoning (*see* INDUCTIVE METHOD) and was a fountain head of ethical utilitarianism. Mill elaborated the canons of inductive scientific thought first stated by Francis Bacon (1561–1626) in *Novum Organum* (1620).

A Small God. Mill rejected the traditional teleological argument as expounded by William Paley . He reasoned that Paley's argument is built on analogy, that similarity in effect implies similarity in cause. This kind of analogy weakens as dissimilarities become greater. Watches imply watchmakers only because, by previous experience, we know that watchmakers make watches. There is nothing intrinsic in the watch to demand a craftsman's hand. In like manner, footprints imply human beings and dung implies animals because previous experience informs us that this connection is appropriate. It is not that there is intrinsic design in the remains. Therefore, Mill concluded, Paley's argument is weak.

Mill went on to offer what he considered a stronger expression of the teleological argument, built on an inductive "method of agreement." This argument was the weakest of Mill's inductive methods, but he considered the teleological argument to be a strong form of this kind of induction. Mill began with the organic rather than the mechanical aspect of nature:

1. There is an amazing concurrence of diverse elements in the human eye.

2. It is not probable that random selection brought these elements together.

3. The method of agreement argues for a common cause of the eye.

4. The cause was a final (purposing) cause, not an efficient (producing) cause.

Mill said that biological evolution, if true, diminishes the strength of even this stronger form of the teleological argument. For much of what appears to be design is accounted for in evolution by the survival of the fittest (see Geisler, *Philosophy of Religion* , 177–84).

Mill's reasoning led him to posit a finite God:

> A Being of great but limited power, how or by what limited we cannot even conjecture; of great, and perhaps unlimited intelligence, but perhaps, also, more narrowly limited than his power: who desires, and pays some regard to, the happiness of his creatures, but who seems to have other motives of action which he cares more for, and who can hardly be supposed to have created the universe for that purpose alone. ["Nature," in *Three Essays on Religion* , 194; except where noted, subsequent quotations will be from this essay]

Such a description limits God in power and goodness. We can infer from nature that God has benevolent feelings toward his creatures, "but to jump from this to the inference that his sole or chief purposes are those of benevolence, and that the single end and aim of creation was the happiness of his creatures, is not only not justified by any evidence but is a conclusion in opposition to such evidence as we have" (192). Mill's deity cannot foresee the future or what will come of his acts. He is not omnipotent. The evidence shows an intelligence superior to any human being's, but the fact that God uses means to reach ends shows that he is limited. "Who would have recourse to means if to attain his end his mere word was sufficient?" (177).

While he believed there could be many creators, he favored the idea that there was only one (ibid., 133). Other than the general principles of nature's design, there is little reason to believe the Creator benevolent. Nature is not directed toward a particularly moral end, if there is a goal at all (189).

The limitations of God are in himself, not simply caused by the world or other beings. He cannot control the qualities and forces of the fabric of the universe. The materials of the universe do not allow God to more completely fulfill his purposes, or else he did not know how to accomplish it (186).

Creation. The universe was not created out of nothing, according to Mill. “The indication given by such evidence as there is, points to the creation, not indeed of the universe, but of the present order of it by an Intelligent Mind, whose power over the materials was not absolute” (243). In fact, there is from nature no reason to suppose that either matter or force were made by the Being who put them together in the ways they now appear. It is unclear that he has power to alter any of the properties of matter. Matter and energy are, therefore, eternal. Out of them God constructed a world by working with the materials and properties at hand (178).

In positing a finite God and eternal matter, Mill followed Plato into a theistic dualism . Creation is not *ex nihilo* (out of nothing) or *ex deo* (out of God). Rather, it is *ex materia* (out of preexisting matter; *see* CREATION, VIEWS OF).

Mill believed in a material universe he called “Nature.” *Nature* is the entire system of material, with all its properties (64). It is “all facts, actual and possible” or “the mode . . . in which all things take place” (5–6). Since all things take place in a uniform way, we can speak of *laws* of nature. “All phenomena which have been sufficiently examined are found to take place with regularity, even having certain fixed conditions, positive and negative, on the occurrence of which it invariably happens” (ibid.). It is the task of science to learn those conditions.

Miracles. Mill held that the finite god is the author of Nature’s laws and could intervene in the affairs of humanity, though there is no evidence that he does. Mill agrees with David Hume that “the testimony of experience against miracles is undeviating and indubitable” (221). Mill takes another route to reach Hume’s antisupernatural conclusion (*see* MIRACLE ; NATURALISM). Mill believed that an unusual occurrence, even if it de feats a well established law, is merely discovery of another law, previously unknown (221).

So whatever new phenomena are discovered still depend on law and are always exactly reproduced when the same circumstances are repeated (222). A miracle claims to supersede natural laws, not just cancel out one natural law with another. Such a breaking of law cannot be accepted. How is Mill so certain that there is a natural explanation for every event? He draws proof from the absence of all experience of a supernatural cause and the frequent experience of natural causes:

> The commonest principles of sound judgment forbid us to suppose for any effect as cause of which we have absolutely no experience, unless all those of which we have experience are ascertained to be absent. Now there are few things of which we have more frequent experience than of physical facts which our knowledge does not enable us to account for. [229–30]

There is, therefore, nothing to exclude the supposition that every “miracle” has a natural cause, and as long as that supposition is possible, “no man of ordinary practical judgment, would assume of conjecture a cause which no reason existed for supposing to be real, save the necessity of accounting for something which is sufficiently accounted for without it” (231).

Miracles cannot be ruled impossible so long as there is a God. Mill believed that “If we had the direct testimony of our senses to a supernatural fact, it might be as completely authenticated

and made certain as any natural one." Pending that personal contact, miracles have no historical claim, and they are invalid as evidence of revelation (239).

Evil and Ethics. One of the most convincing evidences of God's finitude was the presence of evil in the world (*see* EVIL, PROBLEM OF ; FINITE GODISM ; KUSHNER, HAROLD). Mill concluded that "if the maker of the world can [do] all that he will, he wills misery, and there is no escape from the conclusion" (37). Men are hanged for doing what Nature does in killing every being that lives. Much of the time that death comes with torture. Nature has total disregard for mercy and justice, treating the noblest and the worst people alike. Such evils were absolutely inconsistent with an all-powerful, all-good being. The best he could hope for was a partially good deity with limited power (29–30). In view of Nature's gross evil, it would be irrational and immoral to use natural law as the model for action. Human duty is not to imitate nature but to amend it. Some aspects of nature may be good, but "it has never been settled by any accredited doctrine, what particular departments of the order of nature shall be reputed to be designed for our moral instruction and guidance" (42). At any rate, it is impossible to decide what in nature expresses the character of God.

Since ethics cannot be based in revelation or the supernatural, there are obviously no absolute maxims of morality (99). Having rejected moral absolutes (*see* MORALITY, ABSOLUTE NATURE OF), Mill devised the utilitarian calculus by which one is obligated to do what he or she can to bring the greatest good to the greatest number in the long run.

Mill had great respect for the moral example of Jesus (253–54). But when it came to spelling what the Christian "golden rule" meant, Mill believed utilitarianism was the answer. We should so act to bring the greatest good to the greatest number. There are no ethical absolutes. There may be times when a lie brings about more good than does the truth. Our best guide is experience, through which we can develop general guidelines (*Utilitarianism* , chap. 2).

Human Destiny. A human being is mind and soul as well as material body. There is no evidence, then, that the soul could not be immortal. There simply isn't any evidence in favor of an immortal soul, either (*see* IMMORTALITY). Mill believed it certain that souls did not become "ghosts" who bothered with human affairs. Beyond that there was only a hope (201, 208–10). Of one thing he was confident: *If* there is life after death, "nothing can be more opposed to every estimate we can form of probability, than the common idea of the future life as a state of rewards and punishments (*see* HELL) in any other sense than that the consequences of our actions upon our own character and susceptibilities will follow us in the future as they have done in the past and present" (210–11). Any future life will simply continue life now. To assume a radical break at death in the change of the mode of our existence is contrary to all analogies drawn from this life. We must assume the same laws of nature will apply.

Despite the lack of evidence for immortality, life here and now is worth living, as is the effort to cultivate the improvement of character (250). There is also ground for optimism about the human race:

> The conditions of human existence are highly favorable to the growth of such a feeling inasmuch as a battle is constantly going on, in which the humblest human creature

> is not incapable of taking some part, between the powers of good and those of evil, and in which even the smallest help to the right side has its value in promoting the very slow and often insensible progress by which good is gradually gaining ground from evil, yet gaining it so visibly at considerable intervals as to promise the very distant but not uncertain final victory of good. [256]

Not only did Mill express optimism about the final victory over evil, but he believed that humanistic efforts in this direction were sure to become the new religion. For "to do something during life, on even the humblest scale if nothing more is within reach, towards bringing this consummation ever so little nearer, is the most animating and invigorating thought which can inspire a human creature" (257).

Evaluation. *Inadequate View of God.* Philosophically, a finite god is not self-explaining. Such a god is contrary to the principle of causality that affirms a cause for every finite being. A finite god is only a large creature, who needs a Creator. A finite being is a contingent, not a necessary, being. A contingent being is one that can not exist. Whatever could not exist depends for its existence on a Necessary Being, which cannot not exist (*see* COSMOLOGICAL ARGUMENT).

Further, a god who is not absolutely perfect is not God in the ultimate sense. One could measure his imperfection only by an ultimate standard of perfection. But the ultimate perfection is, by definition, God. So if there were an imperfect finite god, he would be something less than ultimate God. Since Mill's God engages in evil, one could say that his argument best proves the existence of a Devil. At any rate, anything incompletely good is not worthy of worship. Worship attributes ultimate worth to something. Why should one attribute absolute worth to what is not absolutely worthy? Every finite being is a creature, and worship of the creature is idolatry. Or to borrow terms from Paul *Tillich, *ultimate commitment* should not be given to something less than an *Ultimate* . A partially good creature is not an Ultimate.

Some finite godists attempt to avoid this criticism by positing a God limited in power but not perfection. This seems arbitrary and wishful thinking. How can God be an infinitely good Being when he is only a finite being? How can one be more of anything than he has the capacity to be? How can the attributes of God be extended further than his nature allows?

Finally, a finite god offers no assurance that evil will be defeated. Since a religious commitment is an ultimate commitment, we are ultimately committed to the cause of good, which may not ultimately succeed. Can a finite god who cannot guarantee victory really inspire ultimate commitment? How many people will really make an ultimate commitment to work for what they have no assurance will ultimately win? One can be inspired to confess courageously, "I would rather lose in a battle that is ultimately going to win, than to win in a battle that will ultimately lose." A finite god lacks the assurance to engender such motivation.

Inadequate View of Evil. The problem of evil does not eliminate God or his goodness. It calls for an infinitely powerful and perfect God to eliminate it. One cannot even know there are ultimate injustices without knowing some ultimately just Being beyond the world. Only an

infinitely powerful and perfect God can defeat evil. Only an all-powerful God can defeat evil; only an all-good God desires that defeat. A finite god will not suffice (*see* EVIL, PROBLEM OF).

Mill makes a category mistake in arguing that God is not perfect because he kills in a way that would be murder among humans. God is Creator of life, and he has the right to take away what he gives (Deut. 32:39 ; Job 1:21). We did not create life; we do not have the right to take it. The gardener who is sovereign over the flowers and bushes in his or her own yard lacks the right to cut down those belonging to the neighbors. Those who own them are in control of them. God owns all life. He can take it if he wants without failing any moral law.

Inadequate View of Miracles. Mill's rejection of miracles, like that of Hume, begs the question. Mill bases belief in methods that preassume naturalism (*see* MIRACLE ; MIRACLES, ARGUMENTS AGAINST). He assumes that every exception to a natural law will automatically have a natural explanation. If one knows in advance that every event, however unusual, has a natural explanation, miracles are ruled out in advance. Mill's approach to human immortality overlooks strong evidence favoring its existence.

Inadequate View of Ethics. Utilitarianism also is inadequate. As a form of relativism, it is subject to the criticisms against relativists (*see* MORALITY, ABSOLUTE NATURE OF). How can one know that everything is not absolute without an absolute standard by which to measure it? Further, to work properly, utilitarianism demands that finite creatures know what will bring the greatest good to the greatest number in the long run. We are seldom certain what will bring the greatest good even in the short run. Only an infinitely wise, good God could be a utilitarian. And Mill does not have such a God.

Miracle. Before a materialist, naturalistic culture, Christians believe and are called upon to defend their belief that God created and governs the universe. One theme of Christian philosophy and apologetics is to understand and explain why biblical accounts of miracles should be believed, what miracles are and are not, how they relate to natural processes, and what they reveal to us about God. Because of the importance of this subject, miracles are covered under several headings relating to the nature of miracles in general, accounts in Scripture, and attacks on the possibility of miraculous interventions by God. What Christians regard as false or occultic

unexplained occurrences will be distinguished from genuine acts of God (*see* MIRACLES, FALSE).

Definition. A *miracle* is a special act of God that interrupts the natural course of events. The Christian conception of the miraculous immediately depends on the existence of a theistic God (*see* COSMOLOGICAL ARGUMENT ; MORAL ARGUMENT FOR GOD ; TELEOLOGICAL ARGUMENT). If the theistic God exists, miracles are possible. If there is a God who can act, then there can be acts of God. The only way to show that miracles are impossible is to disprove the existence of God.

The above statement immediately calls for clarification: What are "special acts" of God? How are they known when they occur? There must be specific distinguishing characteristics of miracles before one can analyze events that possess these characteristics. Simply to say a miracle is a singularity is insufficient. Singularities occur in nature without obvious divine intervention.

Theists (*see* THEISM) define miracles in either a weak sense or a strong sense. Following Augustine, the weaker definition describes a miracle as "a portent [which] is not contrary to nature, but contrary to our knowledge of nature" (Augustine, 21.8).

Others, following Thomas Aquinas, define a miracle in the strong sense of an event that is outside nature's power, something only done through supernatural power. This latter, stronger sense is important to apologists. A miracle is a divine intervention, a supernatural exception to the regular course of the natural world. Atheist (*see* ATHEISM) Antony Flew put it well: "A miracle is something which would never have happened had nature, as it were, been left to its own devices" (Flew, 346). Natural laws describe naturally caused regularities; a miracle is a supernaturally caused singularity.

To expand on this definition, we need some understanding of what is meant by *natural law* . Broadly, a natural law is a general description of the usual orderly way in which the world operates. It follows, then, that a miracle is an unusual, irregular, specific way in which God acts within the world.

Probability of Miracles. Whether we can know if miracles actually happened depends on answers to three questions: (1) "are miracles possible?" (2) "are New Testament documents reliable?" (3) "were the New Testament witnesses reliable?"

An often overlooked argument is that for the probability of miracles. It is true that philosophy (i.e., arguments for God's existence) shows miracles are *possible* but only history reveals whether they are *actual.* But it is also true that, granting existence of a theistic God, miracles are *probable* .

A theistic God has the *ability* to perform miracles since he is all-powerful or *omnipotent* . Second, he has the *desire* to perform miracles because he is all-knowing or *omniscient* and all-good or *omnibenevolent* . One who examines history to see whether God *has* performed any miracles already can know that God is the kind of God who *would* if he could, and he *can* .

Why would God perform miracles if he could? By nature and will he is the kind of God who desires to communicate with his creatures and do good for them. And a miracle by definition is an event that does this very thing. Miracles heal, restore, bring back life, communicate God’s will, vindicate his attributes, and many more things that are in accord with his nature. Such things befit the nature of the One performing them (the Creator and Redeemer) and the need of the one for whom they are performed (the creature). By analogy, what good earthly father who had the ability to rescue his drowning child would not do everything in his power to do so? And if he had all power, then we know in advance that his goodness would lead him to do so. How much more our heavenly Father? So we know in advance of looking at the evidence for the actuality of miracles that if God exists they are not only possible but probable.

Further, if a miracle is an act of God to confirm the word of God through a messenger of God (*see* MIRACLES, APOLOGETIC VALUE OF), then it is reasonable that God would want to do miracles. Through miracles, God confirms his prophets (Heb. 2:3–4). This is the way God confirmed Moses (Exod. 4) and Elijah (1 Kings 18). And this is the way he confirmed Jesus (John 3:2 ; Acts 2:22). How better could God confirm to us who were his spokespersons. And it is a priori probably that an intelligent, personal, moral Creator would want to communicate in the most effective way with his creatures.

Reality of Miracles. While philosophy makes supernatural events possible and the nature of a theistic God shows they are probable, only history reveals whether they are actual. But “history” here includes both the history of the cosmos and the history of the human race.

Actuality of the Miraculous in Cosmic History. A fact seldom fully appreciated is that even before we look at human history, we can know that miraculous events are not only possible but *actual* . The very cosmological argument, by which we know God exists, also proves that a supernatural event has occurred. For if the universe had a beginning and, therefore, a Beginner (*see* BIG BANG ; KALAM COSMOLOGICAL ARGUMENT), then God brought the universe into existence out of nothing (*see* CREATION, VIEWS OF). But ex nihilo cre ation out of nothing is the greatest supernatural event of all. If Jesus’ making much bread out of a little bread is a miracle, then how much more is making everything out of nothing? Turning water into wine pales in comparison with creating the first water molecules. So, the surprising conclusion is that, if the Creator exists, then the miraculous is not only possible but actual. The history of the cosmos, then, reveals that the miraculous has occurred in making something out of nothing; making life out of nonlife; making the rational (mind) out of the nonrational (*see* EVOLUTION and related articles). What greater miracles could occur in human history than are already known to have occurred in cosmic history?

The Miraculous in Human History. Contrary to the widely perceived misconception, if God exists then we should come to human history with the expectation of the miraculous, not with a naturalistic bias against it. For, as we have seen, if the Creator exists, then miracles are not only possible and probable, but the miraculous has already occurred in cosmic history. God has already broken through supernaturally in the history of the cosmos and life leading up to human history. In view of this, the most reasonable expectation then, is to ask not *whether* but *where* he has broken through in human history.

The reality of miracles in human history is based on the reliability of the New Testament documents (*see* NEW TESTAMENT MANUSCRIPTS) and the reliability of the New Testament witnesses (*see* NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT, NON-CHRISTIAN SOURCES). For given the trustworthiness of their combined testimony, it is beyond reasonable dispute that the New Testament records numerous miraculous events.

Dimensions of Miracles. In the Bible's pattern, a miracle has several dimensions:

First, miracles have an *unusual character* . It is an out-of-the-ordinary event in contrast to the regular pattern of events in the natural world. As a "wonder" it attracts attention by its uniqueness. A burning bush that is not consumed, fire from heaven, and a person strolling on water are not normal occurrences. Hence, they draw the interest of observers.

Second, miracles have a *theological dimension* . A miracle is an act of God that presupposes a God who acts. The view that a God beyond the universe created it, controls it, and can interfere in it is *theism* .

Third, miracles have a *moral dimension* . They bring glory to God by manifesting his moral character. Miracles are visible acts that reflect the invisible nature of God. No true miracle, then, is evil, because God is good. Miracles by nature aim to produce and/or promote good.

Fourth, miracles have a *doctrinal dimension* . Miracles in the Bible are connected directly or indirectly with "truth claims" (*see* MIRACLES IN THE BIBLE). They are ways to tell a true prophet from a false prophet (Deut. 18:22). They confirm the truth of God through the servant of God (Heb. 2:3–4). Message and miracle go hand-in-hand.

Fifth, miracles have a *teleological dimension* . Unlike magic (*see* MIRACLES, MAGIC AND), they are never performed to entertain (see Luke 23:8). Miracles have the distinctive purpose to glorify the Creator and to provide evidence for people to believe by accrediting the message of God through the prophet of God.

Theistic Context for a Miracle. An essential feature of biblical miracles is their theistic context (*see* THEISM). Only within a theistic worldview can a miracle be identified. When Moses came upon the burning bush (Exod. 3:1–6), he began to investigate it because of its unusual nature. The accompanying word from God told Moses that this event was not merely unusual, but a miracle. If Moses reported to convinced atheists (*see* ATHEISM) what had happened at the burning bush, they would have been within their rights to doubt the story. In an atheistic universe it makes no sense to speak about acts of God. A burning bush and a voice would seem to the nontheist no more miraculous than the voice from heaven did to those who took it to be thunder (John 12:29). But granting that God exists and something about his rational and moral nature, these defining characteristics give miracles their apologetic power.

Conclusion. We must know what we are looking for before we can recognize a miracle. First, miracles stand in contrast to nature, which is God's regular and naturally predictable way of working in the world. Miracles are an unusual and humanly unpredictable way in which God sometimes intervenes in the events of the world. A miracle may look like any unusual

occurrence, but it has a supernatural cause. It is performed with divine power, according to the divine mind, for a divine purpose, in order to authenticate a divine message or purpose.

Miracles, Alleged Impossibility of. ***See*** **NATURALISM ; MIRACLES, ARGUMENTS AGAINST ; SPINOZA, BENEDICT .**

Miracles, Apologetic Value of. The central claims of Christianity are dependent on the apologetic value of miracles (*see* APOLOGETICS, ARGUMENT OF ; MIRACLE). If miracles have no evidential value, then there is no objective, historical evidence to support the claims of historic, orthodox Christianity.

Some contemporary naturalists argue that, no matter how unusual an event is, it cannot be identified as a miracle. If true, this has serious implications for those who believe in miracles. No unusual event that lays claim to divine origin could be considered a miracle. Further, theistic religions such as Judaism and Christianity, in which miraculous claims are used apologetically, could not actually identify any of their unusual events as miraculous confirmation of their truth claims, no matter how much evidence they could produce for the authenticity of these events.

Identifiability of Miracles. There are two aspects to the case for the identifiability of miracles. First, miracles in general must be identifiable before a particular miracle can be identified. Second, one must be able to point to distinguishing marks in order to identify a specific event as a miracle. The focus here will be on the identifiability of miracles.

According to some, miracles cannot be identified because the concept of a miracle is not coherent. Alistair McKinnon, for example, claims that "the idea of a suspension of natural law is self-contradictory. This follows from the meaning of the term" (Swinburne, 49). For if natural laws are descriptive, they merely inform us about the actual course of events. But nothing, says McKinnon, can violate the actual course of events. He wrote: "This contradiction may stand out

more clearly if for *natural law* we substitute the expression the *actual course of events* . Miracle would then be defined as 'an event involving the suspension of the actual course of events.' " Therefore, "someone who insisted upon describing an event as a miracle would be in a rather odd position of claiming that its occurrence was contrary to the actual course of events" (ibid., 50). McKinnon's argument can be summarized as follows:

1. Natural laws describe the actual course of events.

2. A miracle is a violation of a natural law.

3. But it is impossible to violate the actual course of events (what is, is; what happens, happens).

4. Therefore, miracles are impossible.

McKinnon's Argument. There are several problems with this argument. Three are particularly worth noting:

Begging the Question. If McKinnon is correct, miracles cannot be identified in the natural world, since whatever happens will not be a miracle. If whatever happens is *ipso facto* a natural event, then of course miracles never happen. This, however, simply begs the question; this definition of natural law is loaded against miracles. No matter what happens within the natural world, it will automatically be called a "natural event." This would eliminate in advance the possibility of any event in the world being a miracle. But this fails to recognize even the possibility that not every event *in* the world is *of* the world. For a miracle can be an effect *in* nature by a cause that is *beyond* nature. For the mind that makes a computer is *beyond* the computer, and yet the computer is *in* the world.

Misdefinition. The problem is that McKinnon has misdefined *natural laws* . Natural laws should not be defined as what *actually* happens but what *regularly* happens. As Richard Swinburne points out, "laws of nature do not just describe what happens. . . . They describe what happens in a regular and predictable way." Therefore, "when what happens is entirely irregular and unpredictable, its occurrence is not something describable by natural laws" (ibid., 78). In this way miracles can be identified as events within nature that fall into the class of the irregular and unpredictable. There may be more to a miracle than an irregular and unpredictable event in the natural world, but they are not less than this. At any rate they cannot be ruled out simply by defining a natural law as what actually occurs. Even though they occur in the natural world, miracles are distinguishable from natural occurrences.

Confusing Kinds of Events. Since natural laws deal with *regularities* and miracles with *singularities* , miracles cannot possibly be violations of natural laws. They are not even in the same class of events. A miracle is not a mini-natural law; it is a unique event with its own characteristics. Therefore, to claim that miracles don't happen (or should not be believed to have happened), because they do not fall into the class of natural events is a category mistake. By the same logic, we might as well say that no book has an intelligent cause because its origin cannot be explained by the operational laws of physics and chemistry.

Flew's Argument. A stronger attack on the apologetic value of miracles is laid out by Antony Flew . The basic objection to miracles by contemporary naturalists is not ontological but epistemological. That is, miracles are not rejected because we know they did not occur. Rather, we do not and cannot know that they *did* occur. Flew's objection fits into this category. If successful, Flew's argument shows that miracles have no apologetic value.

Miracles Are Parasitic to Nature. Flew broadly defines a miracle as something that "would never have happened had nature, as it were, been left to its own devices" (Flew, 346). He notes that Thomas Aquinas demonstrated that miracles are not properly a violation of natural law. Aquinas wrote that "it is not against the principle of craftsmanship . . . if a craftsman effects a change in his product, even after he has given it its first form" (Aquinas, 3.100). Not only is this *power* inherent in the idea of craftsmanship; so is the *mind* of the craftsman. A miracle bears the unmistakable mark of power and divine mind. A miracle, then, is "a striking interposition of divine power by which the operations of the ordinary course of nature are overruled, suspended, or modified" (see Flew, 346).

Accepting this theistic definition, Flew insists that "exceptions are logic dependent upon rules. Only insofar as it can be shown that there is an order does it begin to be possible to show that the order is occasionally overridden" (ibid., 347). In brief, miracles to Flew are logically parasitic to natural law. Hence, a strong view of miracles is possible without a strong view of the regularity of nature.

The Improbability of Miracles. Flew argues that miracles are *prima facie* improbable, quoting historian R. M. Grant that "credulity in antiquity varied inversely with the health of science and directly with the vigor of religion" (ibid.). David Strauss, a nineteenth-century Bible critic, was even more skeptical. He wrote, "We may summarily reject all miracles, prophecies, narratives of angels and demons, and the like, as simply impossible and irreconcilable with the known and universal laws which govern the course of events" (see ibid., 347). According to Flew, such skepticism is justified on a methodological basis.

Identifiability. Flew claims to be willing to allow in principle for the possibility of miracles. In practice, he argues that the problem of *identifying* a miracle is serious, if not insurmountable.

The argument against miracles from unidentifiability may be summarized:

1. A miracle must be identified (distinguished) before it can be known to have occurred.

2. A miracle can be distinguished in one of two ways: in terms of nature or in terms of the supernatural.

3. To identify it by reference to the supernatural as an act of God begs the question.

4. To identify it in reference to the natural event robs it of its supernatural quality.

5. Therefore, miracles cannot be known to have occurred, since there is no way to identify them.

Flew insists, against Augustine (see Augustine, 21.8), that if a miracle is merely “a portent [which] is not contrary to nature, but contrary to our knowledge of nature” (Flew, 348), then it has no real apologetic value. For, argues Flew, if an event is merely a miracle in relation *to us at present,* then it provides no proof that a revelation it alleges to support is *really* beyond the power of nature. Whereas Augustine’s notion of a miracle would assure the dependence of creation on God, it does so at the cost of subverting the apologetic value of miracle (ibid.). For if a miracle is only contrary to our *knowledge* of nature, then a miracle is nothing but a natural event. In any event, we could not know that a miracle has *really* occurred, only that it *seems* to us that one did.

Flew’s point can be stated another way. In order to identify a miracle within nature, the identification of that miracle must be in terms of what is independent of nature. But there is no way to identify a miracle as independent of the natural except by appealing to a supernatural realm, which begs the question. It argues in effect: “I know this is a miraculous event in the natural world, because I know (on some independent basis) that there is a supernatural cause beyond the natural world.”

On the other hand, there is no natural way to identify a miracle. For unless it is already known (on independent grounds) that the event is miraculous, then it must be considered to be another natural event. From the scientific point of view, it is just “odd” or inconsistent with previously known events. Such an event should occasion *research* for a broader scientific law, not worship.

From this, it would follow that no alleged miraculous event can be used to prove that a religious system is true. That is to say, miracles can have no apologetic value. We cannot argue that God exists because an event is an act of God. For unless we know that there is a God who can act, we cannot know that an occurrence is an act of God. The latter cannot prove the former (ibid., 348–49).

If miracles are not identifiable, because there is no way to define them without begging the question, the reasoning proceeds:

1. A miracle must be identifiable before it can be identified.

2. A miracle is identified in only one of two ways—either as an unusual event in nature, or as an exception to nature.

3. But an unusual event in nature is simply a natural event, not a miracle.

4. An exception to nature cannot be known (i.e., identified) from within nature alone.

5. Therefore, a miracle is not identifiable.

And, of course, what is not identifiable has no evidential value. It cannot be used to prove the truth of Christianity.

Response to Flew's Argument. Flew's first premise is solid. We must know what we are looking for before we can know we have found it. If we cannot define it, then we cannot be sure we have discovered it. But if we can define an event in terms of nature, miracles can be reduced to natural events. However, to define them in terms of a supernatural cause (God) is to presuppose that God exists. Therefore, miracles cannot be used as an evidence of God's existence. The supernaturalist argues in a circle.

Presupposing God's Existence. One way to reply to Flew is to claim that arguing in a circle is not unique to supernaturalists. Naturalists do the same thing. Antisupernaturalist arguments presuppose naturalism. Thus, it is necessary to argue in a circle, because all reason is circular (Van Til, 118). In the final analysis, all thought is grounded in faith (*see* FAITH AND REASON ; FIDEISM).

If a supernaturalist chooses to go this route, the grounds (or lack of grounds) are just as good as those of the antisupernaturalist. Certainly naturalists who rule out miracles on the basis of a faith commitment to naturalism are in no position to forbid theists from simply believing that God exists and, hence, that miracles are possible and identifiable. Once the naturalists accept the privilege of a mere belief basis for naturalism, for which they have no rational or scientific proof, they must allow alternative worldviews the same opportunity.

Evidence for God's Existence. There is, however, another avenue: Theists may first offer rational justification for belief in God through the cosmological or teleological arguments. If successful, then they can have earned the right to define (show the identifiability of) miracles in terms of the supernatural realm they have *reason* to think exists. To the degree that one can give a rational argument for God's existence, it is not difficult to circumvent Flew's criticism that miracles have no identifiable apologetic value.

Miracles as Confirmation of Truth. Christian apologetics is based in miracles. Unless miracles are possible (*see* THEISM) and actual (*see* NEW TESTAMENT, HISTORICITY OF ; MIRACLES IN THE BIBLE), there is no way to verify the truth claims of Christianity. This raises the question of the relationship between a miracle and a truth claim. Are miracles an appropriate and valuable confirmation of Christianity's truth claims?

The claim of David Hume (1711–1776) that all religious truth claims are self-canceling fails because the credibility of all alleged "miracles" is not equal. However, the question remains as to whether a miracle can confirm truth.

In both New and Old Testament contexts, people did not show naive acceptance of every alleged word or act from God. Like moderns, they wanted proof. Miracles were assumed to confirm the message of a spokesman for God.

Miracles Confirmed the Prophetic Claim. When asked by God to lead Israel out of Egypt, Moses replied:

> "What if they do not believe me or listen to me and say, 'The LORD did not appear to you'?" Then the LORD said to him, What is that in your hand? A staff, he replied. The

> LORD said, "Throw it on the ground. Moses threw it on the ground and it became a snake, and he ran from it. Then the LORD said to him, Reach out your hand and take it by the tail. So Moses reached out and took hold of the snake and it turned back into a staff in his hand. This, said the LORD , is so *that they may believe that the LORD , the God of their fathers—the God of Abraham, the God of Isaac and the God of Jacob—has appeared to you.* ' " [Exod. 4:1–5 , emphasis added]

It is clear that the miracles were intended to confirm the message God had given him. God, in fact, offered multiple miracles. For, "If they do not believe you or pay attention to the first miraculous sign, they may believe the second. But if they do not believe these two signs or listen to you, take some water from the Nile and pour it on the dry ground. The water you take from the river will become blood on the ground" (Exod. 4:8–9).

Later, when Moses was challenged by Korah, a miracle again was Moses' vindication.

> Then [Moses] said to Korah and all his followers: "In the morning the LORD will show who belongs to him and who is holy, and he will have that person come near him. The man he chooses he will cause to come near him." . . . Then Moses said, "This is how you will know that the LORD has sent me to do all these things and that it was not my idea: If these men die a natural death and experience only what usually happens to men, then the LORD has not sent me. But if the LORD brings about something totally new, and the earth opens its mouth and swallows them, with everything that belongs to them, and they go down alive into the grave, then you will know that these men have treated the LORD with contempt." . . . They went down alive into the grave, with everything they owned; the earth closed over them, and they perished and were gone from the community. [Num. 16:5 , 28–30 , 33]

Few questioned Moses' divine authority from this point.

When confronted by belief in pagan deities, Elijah the prophet of Israel, challenged the people of Israel: " 'How long will you waver between two opinions? If the LORD is God, follow him; but if Baal is God, follow him.' But the people said nothing" (1 Kings 18:21). To prove he was a prophet of the true God, *Yahweh* , Elijah proposed a contest in which they would invoke a supernatural confirmation. When the prophets of Baal could not bring down fire on their sacrifice from heaven, Elijah had the altar to *Yahweh* drenched with water and prayed: "O LORD , God of Abra ham, Isaac and Israel, let it be known today that you are God in Israel and that I am your servant and have done all these things at your command" (1 Kings 18:36). The text adds, "Then the fire of the LORD fell and burned up the sacrifice, the wood, the stones and the soil, and also licked up the water in the trench." And "When all the people saw this, they fell prostrate and cried, 'The LORD —he is God! The LORD —he is God!' " (1 Kings 18:38–39).

Miracles Confirmed the Messianic Claim. Jesus' ministry was characterized by supernatural, confirming signs of his identity as a prophet and more. But the Gospel of Matthew records that some Pharisees and teachers of the law still demanded a confirming sign: "Teacher, we want to see a miraculous sign from you." Jesus refused on this day, not because miracles did not constitute a sign of his identity, but because the question was asked in contempt and unbelief.

Instead, Jesus announced that soon they would have the greatest confirming sign of all: “A wicked and adulterous generation asks for a miraculous sign! But none will be given it except the sign of the prophet Jonah” (Matt. 12:38–39). Just as Jonah was in the fish’s belly three days, so Jesus was in the grave and then returned to life. He offered the miraculous sign of his resurrection as proof that he was the Jewish Messiah.

John sent messengers to ask Jesus whether he was the Messiah. “At that very time Jesus cured many who had diseases, sicknesses and evil spirits, and gave sight to many who were blind. So he replied to the messengers, ‘Go back and report to John what you have seen and heard: The blind receive sight, the lame walk, those who have leprosy are cured, the deaf hear, the dead are raised, and the good news is preached to the poor’ ” (Luke 7:20–22). These were just the sorts of miracles the prophets had predicted would confirm the presence of Israel’s Messiah. The answer was clear: Jesus’ miracles confirmed his messages.

Nicodemus, a member of the Jewish ruling council, the Sanhedrin, told Jesus, “ ‘Rabbi, we know you are a teacher who has come from God. For no one could perform the miraculous signs you are doing if God were not with him’ ” (John 3:1–2).

In his great sermon on Pentecost, Peter told the crowd that Jesus had been “accredited by God to you by miracles, wonders and signs, which God did among you through him” (Acts 2:22).

Miracles Confirmed the Apostolic Claim. Hebrews 2:3–4 proclaims that God has testified to his “great salvation” in the gospel “by signs, wonders and various miracles, and gifts of the Holy Spirit distributed according to his will.” (Heb. 2:3–4). Miracles were used to confirm the apostolic message. They were the supernatural sign for their sermon; the divine confirmation for their revelation.

In defense of his apostleship at Corinth, Paul wrote: “The things that mark an apostle—signs, wonders and miracles—were done among you with great perseverance” (2 Cor. 12:12). This special apostolic, miracle-working power was offered as proof of the truth he spoke to them.

Qur’an and Confirming Miracles. Judaism and Christianity are not the only religions that recognize the validity of miracles as a means of confirming a message from God. Islam does as well (*see* MUHAMMAD, ALLEGED MIRACLES OF). Muhammad recognized that prophets before him (including Jesus) were confirmed by miraculous powers. “If they reject thee, So were rejected apostles Before thee, who came With Clear Signs” (sura 3:184).

The *Qur’an* records Moses saying of his miracles, “Thou knowest Well that these things Have been sent down by none But the Lord of the heavens And the earth as eye-opening Evidence” (17:102). Allah says, “Then We sent Moses and his brother Aaron, with Our signs and Authority manifest” (23:45). So, in principle, all three great monotheistic religions agree that a truth claim can be substantiated by miracles.

Unbelievers and Confirming Miracles. Even many who reject miracles agree that unique miracles could be used to support the truth claims of the religion possessing them. Even Hume

implied that truly unique miracles would confirm the truth claims of a religion. He argued only that similar signs by conflicting religions would be self-canceling. He claimed only that "every miracle, therefore, pretended to have been wrought in any of these religions (and all of them abound in miracles) . . . so has it the same force, though more indirectly, to overthrow every other system" and "in destroying a rival system, it likewise destroys the credit of those miracles on which that system was established." Since a miracle's "direct scope is to establish the particular system to which it is attributed, so has it the same force . . . to overthrow every other system." This leaves open the possibility that a religion presenting unique miraculous confirmation would be true and all opposing claims false.

Agnostic (*see* AGNOSTICISM) Bertrand Russell (1872–1970) admitted miracles would confirm a truth claim. In response to the question "What kind of evidence could convince you God exists?" Russell said,

> I think that if I heard a voice from the sky predicting all that was going to happen to me during the next twenty-four hours, including events that would have seemed highly improbable, and if all these events then proceed to happen, then I might perhaps be convinced at least of the existence of some superhuman in telligence. I can imagine other evidence of the same sort which might convince me, but as far as I know, no such evidence exists. ["What Is an Agnostic?"] To the contrary, such evidence does not exist (*see* CHRIST, DEITY OF ; PROPHECY AS PROOF OF THE BIBLE).

Logical Confirmation of Miracles. The logic behind a miracle being used to confirm a religious truth claim goes like this:

1. If a theistic God exists, then miracles are possible.

2. A miracle is a special act of God.

3. God is the source and standard of all truth; he cannot err.

4. Nor would a theistic God act to confirm something as true that was false.

5. Therefore, true miracles in connection with a message confirm that message to be from God: (a) The miracle confirms the message. (b) The sign confirms the sermon. (c) An act of God confirms the Word of God. (d) New revelation needs new confirmation.

If there is an all-powerful, all-good, and all-wise God, then it follows that he would not perform a miraculous act to confirm a lie. Since miracles are by nature special acts of God, God would not act contrary to his own nature. The God of all truth would not miraculously confirm error. Hence, when a truth claim is repeatedly confirmed by miracles, such as the Old Testament prophets, Jesus, and the New Testament apostles did, then it is true and all opposing views are false.

Criteria for Confirmation. Several criteria can be established, on the basis of principles discussed above, for allowing miracles as a confirmation of a truth claim. These are criteria for

apologetically valuable miracles. They all assume miracles to be possible. Confirming miracles should be:

Connected with a Truth Claim

Truly Supernatural

Unique

Multiple

Predictive

Connected with a Truth Claim. Not all supernatural events are connected with truth claims. There was no truth claim announced of which the acts of creation are evidence. Neither was there a lesson taught by the translation of Enoch to heaven (Genesis 5), the plagues on the king who took Abraham's wife (Genesis 12), the manna from heaven (Exodus 16), Samson's supernatural feats (Judges 14–16), or the resurrection of the man who touched Elisha's bones (2 Kings 13). Most miracles are connected with a person who is thereby shown to be a prophet of God. But these acts lack direct apologetic value without the specific claim of prophethood and a message from God.

Truly Supernatural. A miracle is truly supernatural, as opposed to an anomaly, magic (*see* MIRACLES, MAGIC AND), a psychosomatic cure (*see* HEALING, PSYCHOSOMATIC), or even a special act of providence. None of these involve true supernatural intervention. All can be explained by natural means, even if they are at times very unusual and though they are used by God. One characteristic of a supernatural event is that it is immediate, rather than gradual. It is an irregular and naturally unrepeatable event. It is successful every time it is attempted by God or a person he empowers.

Unique. Hume argued that an alleged supernatural event cannot support one religious claim as long as a contradictory claim is made by another who can perform the same kind of alleged miracles. Similar competing miracles are self-canceling. Logically, from a theistic standpoint, it is impossible for true miracles to confirm contradictory claims, since a true miracle is an act of God, who cannot confirm what amounts to a lie (Heb. 6:18 ; cf. Titus 1:2).

Multiple. As Deuteronomy 17:6 put it, "In the mouth of two or three witnesses, every word shall be established." Multiple witnesses are better than one. In fact, in crucial life-and-death legal matters multiple testimony is often mandatory. One miracle leaves room for doubt. Hence, apologetically relevant miracles should be multiple.

Predictive. Another characteristic often connected with a confirming miracle is that it is often predicted. While this is not essential, it is helpful. It eliminates charges that the miraculous event is not connected with the truth claim. Otherwise, it might be viewed as a fluke. For example, if a false teacher was teaching along the shores of the Sea of Galilee as Jesus walked by on the water, Jesus' walking should not have been taken as a confirmation of the false teacher's views.

On many occasions in the Bible, Jesus and other prophets predicted and performed miracles that confirmed their claims. Jesus predicted his resurrection from early in his ministry on (Matt. 12:40 ; 17:22–23 ; 20:18–19 ; John 2:19–22). He explicitly predicted the resurrection as a "sign" (miracle) of his claims (Matt. 12:39–40). Once Jesus emphatically said ahead of time that a miracle would be evidence of his claim to be the Messiah: " 'But that you may know that the Son of Man has authority on earth to forgive sins,' he said to the paralytic, 'I tell you, get up, take your mat and go home' " (Mark 2:10–11).

In the Old Testament miracles were often announced in advance. Elijah predicted the fire from heaven to consume the sacrifice (1 Kings 18:22f .). Moses promised supernatural judgments of God on Egypt (Exod. 4:21–23). Moses announced that the rod would bud (Num. 17:5) and that the rebellious Korah would be judged (Num. 16:28–30).

Conclusion. Even Flew would not claim that his argument eliminates the possibility of miracles. He does believe it seriously cripples Christian apologetics (*see* CLASSICAL APOLOGETICS ; HISTORICAL APOLOGETICS). If miracles cannot be identified as supernatural events, they have no real apologetic value. A merely unusual event within nature can prove nothing beyond nature. However, Christian apologists can evade this problem by either presupposing the existence of God or by offering evidence independent of miracles for his existence. For as long as there is a God who can act, then special acts of God (miracles) are possible and identifiable. The only way to disprove this possibility is to disprove the possibility of God's existence. But such attempts are notoriously unsuccessful and self-refuting (*see* GOD, ALLEGED DISPROOFS OF).

Not only can miracles confirm a truth claim, but biblical miracles (*see* MIRACLES IN THE BIBLE) fit all the criteria for such apologetically valuable miracles. As shown elsewhere, no other religion or claimants to truth contradictory to Christianity have offered verified examples of truly supernatural events (*see* CHRIST, DEITY OF). We can conclude that biblical miracles, and they alone, support the truth claims of Christ and the biblical prophets. Christianity alone is a supernaturally confirmed religion (*see* WORLD RELIGIONS AND CHRISTIANITY).

Miracles, Arguments Against. Most modern thinkers who reject miracles trace their reasoning to the Scottish skeptic (*see* AGNOSTICISM), David Hume (1711–1776). Hume provided what many believe to be the most formidable of all challenges to a supernaturalist perspective: Miracles are incredible.

Hume laid out three arguments against miracles: philosophical, historical, and religious. The first argument is an argument *in principle,* based on the incredibility of claiming natural laws are ever contravened. The second is an argument *in practice,* which challenges whether miracles have ever had credible witnesses (*see* NEW TESTAMENT, HISTORICITY OF). The last is from the self-canceling nature of similar miracle claims that abound in all religions.

The Incredibility of Miracles. Building on his empirical epistemology, Hume launched his attack on miracles with the comment, "I flatter myself that I have discovered an argument . . . which, if just, will, with the wise and learned, be an everlasting check to all kinds of superstitious delusion, and consequently will be useful as long as the world endures" (Hume, *An Enquiry Concerning Human Understanding,* 10.1.18). Hume's reasoning goes like this (Inquiry, 10.1.18, 120–23):

1. A wise person proportions belief to the evidence.

2. An event that can be established on infallible experience can be, with full assurance, expected to reoccur in the future.

3. The reliability of evidence derived from witnesses and human testimony establishes proof or probability, as it is corroborated by other reports and evidence.

4. All circumstances should be considered in judging probability, and the ultimate standard is how the reports comport with personal experience and observation.

5. Where personal experience is not the same, the person should keep a contrary judgment and subject the question to thorough argument.

6. Any contradictions among witnesses should be regarded with suspicion. Suspicion should also arise if the witnesses are few in number, of "doubtful character," have a vested interest in what they affirm, hesitate in their testimony, or assert it too vigorously.

7. “But when the fact attested is such a one as has seldom fallen under our observation, here is a contest of two opposite experiences; of which the one destroys the other as far as its force goes, and the superior can only operate on the mind by the force which remains.”

8. A miracle violates the laws of nature, which have, by “firm and unalterable experience” been established.

9. Therefore, “the proof against a miracle, from the very nature of the fact, is as entire as any argument from experience can possibly be imagined.”

10. Experience is direct and full proof against the existence of any miracle.

Hume’s argument can be abbreviated:

1. A miracle is a violation of the laws of nature.

2. Firm and unalterable experience has established these laws of nature.

3. A wise person proportions belief to evidence.

4. Therefore, the proof against miracles is overwhelming.

Hume wrote, “There must, therefore, be a uniform experience against every miraculous event. Otherwise the event would not merit that appellation.” So “nothing is esteemed a miracle if it ever happened in the common course of nature” (10.1.122–23).

Alternatives in Hume’s Argument. There are two basic ways to understand Hume’s argument against miracles. We will call these the “hard” and “soft” interpretations. According to the “hard” interpretation, Hume would be saying:

1. Miracles, by definition, violate natural laws.

2. Natural laws are unalterably uniform.

3. Therefore, miracles cannot occur.

Now, despite the fact that Hume’s argument sometimes sounds like this, it is not necessarily what he has in mind. If this is his argument, then it clearly begs the question by simply defining miracles as impossible. For if miracles are a “violation” of what cannot be “altered,” then miracles are *ipso facto* impossible. Supernaturalists could easily avoid this dilemma. They could refuse to define miracles as “violations” of fixed law and simply call them “exceptions” to a general rule. Both premises are deniable. Natural law is the regular (normal) pattern of events. It is not a universal or unalterable pattern.

This would be an easy way out of the problem. Actually, Hume's position contains an argument that is much more difficult to answer, one that addresses a "softer" view of natural law. It is not an argument for the *impossibility* of miracles, but for their *incredibility* :

1. A miracle is by definition a rare occurrence.

2. Natural law is by definition a description of regular occurrence.

3. The evidence for the regular is always greater than that for the rare.

4. Wise individuals always base belief on the greater evidence.

5. Therefore, wise individuals should never believe in miracles.

Notice that this "soft" form of the argument does not rule miracles out of the question; they are held to be incredible by the nature of the evidence. Wise people do not claim that miracles cannot occur; they simply *never believe* they happen. Sufficient evidence never exists for belief.

In this "soft" interpretation of the argument, miracles are still eliminated, since by the *very nature of the case* no thoughtful person should ever hold that a miracle has indeed occurred. If this is so, Hume has seemingly avoided begging the question and yet has successfully eliminated the possibility of reasonable belief in miracles. Variations of these arguments are still held to be valid by some widely respected contemporary philosophers.

Evaluation of Hume's Argument. Since the "hard" form of Hume's argument clearly begs the question and is easily answered by redefining the terms, we will concentrate on the "soft" form. The key to unlocking this attack rests in Hume's claim for uniform experience.

Hume's "uniform" experience either begs the question or is special pleading. It begs the question if Hume presumes to know the experience is uniform *in advance* of the evidence. How can one know that all *possible* experience will confirm naturalism, without access to all possible experiences, past, present, and future? If, on the other hand, Hume simply means by "uniform" experience the select experiences of *some* persons (who have not encountered a miracle), this is special pleading. Others claim to have experienced miracles. As Stanley Jaki observes, "Insofar as he was a sensationist or empiricist philosopher he had to grant equal credibility to the recognition of any fact, usual or unusual" (Jaki, 23). As C. S. Lewis observed,

> Now of course we must agree with Hume that if there is absolutely "uniform experience" against miracles, if in other words they have never happened, why then they never have. Unfortunately we know the experience against them to be uniform only if we know that all the reports of them are false. And we can know all the reports to be false only if we know already that miracles have never occurred. In fact, we are arguing in a circle. [Lewis, 105]

The only alternative to this circular argument is to be open to the possibility that miracles have occurred.

Further, Hume does not really *weigh* evidence objectively; he really *adds* up the evidence against miracles. Death occurs over and over; resurrection occurs rarely. Therefore we must reject the latter. In Hume's own words, "It is no miracle that a man, seemingly in good health, should die on a sudden, because such a kind of death has yet been frequently observed to happen. But it is a miracle that a dead man should come to life; because that has never been observed in any age or country." Hence, "it is more probable that all men must die" (*Enquiry* , 10.1.122).

There are other problems with Hume's concept of adding up events to determine truth. Even if a few resurrections *actually occurred,* according to Hume's principles, one should not believe them. However, truth is not determined by majority vote. Hume commits a kind of *consensus gentium* which is an informal logical fallacy of arguing that something is true because it is believed by most people.

This argument really equates "evidence" and "probability." It says in effect that one should always believe what is most probable, what has the highest "odds." One should not, therefore, believe that the rolled dice came up with three 6's on the first roll. The odds against that happening, after all, are 216 to 1. Or, one should not believe that he was dealt a perfect bridge hand (which has happened) since the odds against this happening are 1,635,013,559,600 to 1! Hume overlooks that wise people base beliefs on *facts,* not odds. Sometimes the "odds" against an event are high (based on past observation of similar events), but the evidence for the event is very good (based on current observation or testimony for this event).

Hume's concept of "adding" evidence eliminates belief in any sort of unusual or unique event. Richard Whately satirized Hume's thesis in his pamphlet, *Historical Doubts Concerning the Existence of Napoleon Bonaparte* . Since Napoleon's exploits were so fantastic, so extraordinary, so unprecedented, no intelligent person should believe that these events ever happened. After recounting Napoleon's amazing and unparalleled military feats, Whately wrote, "Does anyone believe all this and yet refuse to believe a miracle? Or rather, what is this but a miracle? Is not this a violation of the laws of nature?" If the skeptic does not deny the existence of Napoleon, he "must at least acknowledge that they do not apply to that question the same plan of reasoning which they have made use of in others" (Whately, 274, 290).

Finally, Hume's argument proves too much. It proves that a person should not believe in a miracle *even if it happens!* For it argues, not that miracles have not occurred, but that we should not *believe* they occurred because the evidence for the regular is always greater than that for the rare. On this logic, if a miracle did occur—rare as it may be—one should still not believe in it. There is something patently absurd about claiming that an event should be disbelieved, even if one knows it happened.

Uniformitarian Denial of Miracles. Can one eliminate belief in present events based on evidence for past events? It would seem that Hume wants each wise person always to believe in advance that miracles never have, do not now, nor ever will occur. Before examining the evidence, one should be prearmed with the uniform and "unalterable" testimony of uniformitarianism. Only if one approaches the world with a kind of invincible bias against anything that has not been personally perceived in the past can all claims for the miraculous be discounted.

Hume recognized the fallacy of this reasoning when he argued that, based on past conformity, nothing can be known as true concerning the future. We cannot even know for sure that the sun will rise tomorrow morning (*An Abstract of Treatise on Human Nature,* 14–16). Hence, for Hume to deny future miracles based on past experience is inconsistent with his own principles and is a violation of his own system.

If it were true that no present exception can overthrow "laws" based on our uniform experience in the past, there could be no progress in our scientific understanding of the world. For established or repeatable exceptions to past patterns are precisely what force a change in scientific belief. When an observed exception to a past "law" is established, that "law" is revised, if possible, to account for the exception. A new "law" replaces it. This is precisely what happened when certain outer-spatial but repeatable "exceptions" to Newton's law of gravitation were found, and Einstein's theory of relativity was considered broader and more adequate. Exceptions to "laws" have a heuristic (discovery) value; they are goads to progress in our understanding of the universe. Now what is true of repeatable exceptions that call for a natural explanation is also true for unrepeatable exceptions that point to a supernatural explanation.

Lack of Credible Witnesses. Hume also argued against the testimony for miracles in practice. We have shown that the *a priori* attempts to eliminate miracles fail, so we are left with *a posteriori* arguments. Hume objects that there is not enough evidence to establish New Testament miracles. He enumerates several arguments which, if true, would exclude the credibility of the New Testament witnesses.

Hume says, "there is not to be found, in all history, any miracle attested by a sufficient number of men of such unquestioned good-sense, education, and learning as to secure us against all delusion in themselves." Nor are there enough witnesses of "such undoubted integrity, as to place them beyond all suspicion of any design to deceive others." Neither are they "of such credit and reputation in the eyes of mankind, as to have a great deal to lose in case of their being detected in any falsehood." Finally, neither have the alleged miracles been "performed in such a public manner and in so celebrated a part of the world as to render the detection unavoidable" (*Abstract of a Treatise* , 124).

"The strong propensity of mankind to the extraordinary and marvelous . . . ought reasonably to beget suspicion against all relations of this kind." And "if the spirit of religion join itself to the love of wonder, there is an end of common sense," wrote Hume (ibid., 125–26).

Miracles and the Ignorant. Hume believes the case for miracles is damaged because "they are observed chiefly to abound among ignorant and barbarous nations." Those that have found believers in civilized countries, he added, usually got them originally from "ignorant and barbarous ancestors." Further, "the advantages are so great of startling an imposture among ignorant people that . . . it has a much better chance for succeeding in remote countries than if the first scene had been laid in a city renowned for arts and knowledge" (ibid., 126–28).

"Upon the whole, then, it appears that no testimony for any kind of miracle has ever amounted to a probability, much less to a proof." Further, "even supposing it amounted to a

proof, it would be opposed by another proof derived from the very nature of the fact which it would endeavor to establish" (ibid., 137).

Evaluation. Even though Hume implies that he is open to actual evidence for a miracle should it meet his standards for purity, one quickly suspects that the rules of evidence have been tampered with, so as to rule out the credibility claims for any miracle.

Hume at one point candidly admits that no number of witnesses would convince him of a miracle. Speaking of what he acknowledged to be highly attested Jansenist miracles of his day, Hume wrote: "And what have we to oppose to such a cloud of witnesses but the *absolute impossibility* or miraculous nature of the events which they relate?" Such impossibility, he adds, should be sufficient "in the eyes of all reasonable people" (ibid., 133, emphasis added). No matter how many witnesses one provides for these "absolutely impossible" events, no "reasonable person" will believe them. If this is the case, then Hume is still approaching every miraculous event, no matter how well it is attested, from an incurably *a priori* naturalistic bias. All the talk of testing the credibility of the witnesses is poorly concealed antisupernaturalism.

This bias shows that his argument cuts in two directions. Knowledge of human nature also reveals biases against accepting miracles.

Hume's position also is inconsistent. He would not allow testimony for miracles, yet he would allow testimony from those who had seen frozen water, in preference to the testimony of those who never had. But why allow testimony for one event and not the other? He cannot reply that it is because others have seen water frozen, for this begs the question. The problem is that a tropical tribe has never seen it, so why should they accept the testimony of an outsider who says he has, regardless of how often he has seen it? Miracles have happened more than once. Further, according to Hume's own principles, even if one saw water freeze only once and he walked or slid on it, that would be sufficient to know that it happened. But, the same applies to a miracle. Only an antisupernatural bias would hinder a person from honestly considering reliable testimony about its occurrence.

Hume is apparently unaware of the strong historical evidence for the reliability of the biblical documents and witnesses (*see* BIBLE, EVIDENCE FOR ; NEW TESTAMENT, HISTORICITY OF). At least, he overlooks it. But biblical miracles cannot be dismissed without a closer look. For no one should rule out the possibility of these miracles in advance of looking at the evidence for them.

New Testament Witnesses and Hume's Criteria. Hume outlined the basic criteria that he believed necessary for testing the credibility of witnesses (ibid., 120). These are discussed in the article WITNESSES, HUME'S CRITERIA FOR . They can be summarized as four questions:

1. Do the witnesses contradict each other?

2. Are there a sufficient number of witnesses?

3. Were the witnesses truthful?

4. Were they prejudiced?

Witnesses do not contradict each other. Hundreds of alleged contradictions in the Gospels have been weighed and found wanting by scholars, including Gleason Archer, John Haley, William Arndt, and others (see some of these defenses in the list of sources for this article). The error is not in the Gospel but in the procedure used by the critic. For a study of sample charges, see BIBLE, ALLEGED ERRORS IN . The testimonies of the New Testament witnesses are never mutually contradictory (*see* BIBLE, ALLEGED ERRORS). Each one tells a crucial and overlapping part of the whole story.

To be sure, there are minor discrepancies. One account (Matt. 28:2–5) says there was one angel at the tomb on the morning of Jesus' resurrection; John says there were two angels (John 20:12). It should be noted about these kinds of discrepancies that they are conflicts but not irreconcilable contradictions. Matthew does not say there was *only* one angel there; that would be a contradiction. Likely at one point there was one angel, and at another a second angel was about. Conflict in details is what one would expect from authentic, independent witnesses. Any perceptive judge who heard several witnesses give identical testimony would suspect collusion (*see* GOSPELS, HISTORICITY OF).

The number of witnesses is sufficient. Twenty-seven books in the New Testament were written by some nine persons, all eyewitnesses or contemporaries of the events they recorded. Six of these books are crucial to the truth of New Testament miracles, Matthew, Mark, Luke, John, Acts, and 1 Corinthians. All of these books bear witness to the miracle of the resurrection. Even critical scholars now acknowledge that these books are first-century documents, most written before A.D . 70, while contemporaries of Christ were still alive. Virtually all scholars acknowledge that 1 Corinthians was written by the apostle Paul around A.D . 55 or 56, a little over two decades after the death of Christ. This is a powerful witness to the reality of the miracle of the resurrection: First, it is a very early document. Second, it is written by an eyewitness of the resurrected Christ (15:8, cf. Acts 9:3–8). Third, it refers to more than 500 eyewitnesses of the resurrection (15:6), stressing that most of these witnesses were still alive (vs. 6). Any immediate reader of 1 Corinthians could check out the reliability of the evidence for the resurrection.

The witnesses were truthful. Few challenge the fact that the New Testament provides a great standard of morality based on love (Matt. 22:36–37) and inner piety (Matthew 5–7). Jesus' apostles repeated this teaching in their writings (for example, Romans 13 ; 1 Corinthians 13 ; Galatians 5). Their lives exemplified their moral teaching. Most died for what they believed (2 Tim. 4:6–8 ; 2 Peter 1:14), an unmistakable sign of their sincerity.

In addition to teaching that truth is a divine imperative (Eph. 4:15 , 25), it is evident that the New Testament writers were scrupulous about expressing it. Peter declared, "We did not follow cunningly devised fables" (2 Peter 1:16). The Apostle Paul insisted, "Do not lie one to another" (Col. 3:9).

Where the New Testament writers' statements overlap with the discoveries of historians and archaeologists, they have proven to be exactingly accurate (*see* ARCHAEOLOGY, NEW

TESTAMENT). Archaeologist Nelson Glueck concludes, “It may be stated categorically that no archaeological discovery has ever controverted a Biblical reference. Scores of archaeological findings have been made which confirm in clear outline or exact detail historical statements in the Bible” (31). Millar Burrows notes that “more than one archaeologist has found his respect for the Bible increased by the experience of excavation in Palestine” (Burrows, 1). There is no hint that the New Testament writers ever falsified facts of the case. Their testimony would be accepted as valid by any unbiased jury. As the great Harvard legal expert Simon Greenleaf concluded, their testimony shows absolutely no sign of perjury.

The witnesses were not prejudiced. There is every reason to believe that New Testament witnesses of the miracles of Christ, particularly of his resurrection, were not predisposed to believe the events to which they gave testimony. The apostles themselves did not believe the when the women reported it (Luke 24:11). Even some disciples who saw Christ were “slow of heart to believe” (Luke 24:25). Indeed, when Jesus appeared to ten apostles and showed them his crucifixion scars, “they still did not believe it because of joy and amazement” (Luke 24:41). And even after they were convinced by Jesus’ eating food, their absent colleague Thomas protested that he would not believe unless he could put his finger in the scars in Jesus’ hands and side (John 20:25).

Jesus also appeared to unbelievers, in particular his skeptical half-brother, James (John 7:5 ; 1 Cor. 15:7), and to a Jewish Pharisee named Saul of Tarsus (Acts 9). If Jesus had only appeared to those who were believers or had a propensity to believe, there might be legitimacy to the charge that the witnesses were prejudiced. But the opposite is the case.

Witnesses to the resurrection had nothing to gain personally by their witness to the resurrection. They were persecuted and threatened (cf. Acts 4 , 5 , 8). Most of the apostles were martyred. Yet they proclaimed and defended it in the face of death. Nor should witnesses be dismissed simply because they have an interest in what occurred. Otherwise, we should not accept testimony from the survivors of the holocaust, which we do. The question is whether there is evidence they were telling the truth.

Self-Canceling Claims. Hume claims that “every miracle, therefore, pretended to have been wrought in any of these religions (and all of them abound in miracles) . . . so has it the same force, though more indirectly, to overthrow every other system.” However, Hume believes, these miracles do not accomplish their task. Rather, “in destroying a rival system, it likewise destroys the credit of those miracles on which that system was established” (Hume, 129–30). Since all religions have the same sorts of miracles, none of them establish the truth of their doctrines. They cancel one another out as witnesses to truth.

There are, however, several significant problems with Hume’s argument from the self-canceling nature of miracle claims.

All Miracles Claims Are the Same? Hume wrongly assumes that all alleged miracles are created equal. This is contrary to fact. Some obviously refer to natural anomalies or psychosomatic cures. Particularly in the Eastern and New Age religions, supernatural occurrences generally can be shown to be tricks (*see* MIRACLES, MAGIC AND). In the case of

prophecies, their accuracy is too low to be taken seriously. There is a big difference between walking on hot coals, a feat that anyone can be taught to do, and walking on water, as Jesus did (John 6). There is a difference between healing someone of migraine headaches and healing a person born blind, as Jesus did (John 9). Faith-healers in all religions raise up the sick, but Jesus raised the dead (John 11).

All Witnesses Are Equally Reliable? Hume's reasoning assumes that the credibility of the witnesses for the miracle claims in all religions is the same. The New Testament miracles are attested by contemporary eyewitnesses. Islamic miracle stories appear generations later (*see* MUHAMMAD, ALLEGED MIRACLES OF). Some have credible witnesses; others do not. The reliability of each witness to a miracle must be evaluated on its own merits. They are decidedly not equal.

Evaluation. Rather than disproving New Testament miracles, Hume's third argument that all religion's miracle stories are equally (un)reliable, supports the authenticity of biblical miracles. For the superiority of the Christian witnesses is a sound argument against all non-Christian miracle claims. We may restate the argument this way:

1. All non-Christian religions (which claim miracles) are supported by similar "miracle" claims (in both their nature and witnesses).

2. But no such "miracles" have strong enough testimony to maintain evidential value, so they are self-canceling.

3. Therefore, no non-Christian religion is supported by miracles.

If this is so, then we can argue that only Christianity is divinely confirmed as true.

1. Only Christianity has unique miracle claims confirmed by sufficient testimony.

2. What has unique miraculous confirmation of its claims is true (as opposed to contrary views).

3. Therefore, Christianity is true (as opposed to contrary views).

Jesus' miracles were instantaneous, always successful, and unique. So-called miracle workers who claim partial success effect only psychosomatic cures, engage in trickery, perform satanic signs, or other naturally explainable events. No contemporary healer even claims to heal all diseases (including "incurable" ones) instantaneously, with 100 percent success. Jesus and his apostles did. This is unique, and it sets these miracles against all competing claims by other religions. If biblical miracles are unique, then they alone confirm the truth-claims connected with them (Exod. 4:1f .; 1 Kings 18:1f .; John 3:2 ; Acts 2:22 ; 14:3 ; Heb. 2:3–4). All other so-called miracles are, as Hume's argument shows, self-canceling.

Arguments from Analogy. Ernst Troeltsch (1865–1923) laid down the rule of analogy: The only way one can know the past is by analogy in the present. That is, the unknown of the past is

arrived at only through the known in the present. On the basis of this, some argue that, since no miracles occur in the present such as are alleged to exist in the past, it follows that proper historical method eliminates the miraculous.

Troeltsch used “the principle of analogy” and Antony Flew a similar principle of “critical history” against miracles. These theories are extensively examined in the article TROELTSCH, ERNST , so they will be covered only in general terms here.

Troeltsch’s “Principle of Analogy.” This principle of analogy, according to Troeltsch, asserts that “Without uniformity in the present, we cannot know anything from the past” (*Historicism and Its Problems*). On the basis of this principle, Troeltsch and others have insisted that no evidence or witnesses are adequate to establish miracles (Becker, 12–13).

This argument does not insist that no such miracles as are reported in the Bible occurred. The claim, rather, is that they are historically unknowable, whether they occurred or not. Most would agree that no such miracles as a virgin birth, walking on water, or raising the dead are occurring today, so by Troeltsch’s analogy, such events cannot be known to have happened ever.

Flew’s “Critical History.” Similar is Antony Flew ’s “critical history.” Flew asserts that the remains of the past cannot be interpreted as historical evidence unless we presume that the same basic regularities obtained then as do today. The historian must judge the past evidence by personal knowledge of what is probable or possible (350).

Flew concluded that the critical historian dismisses stories of a miracle out of hand, ranking them with the impossible and absurd (ibid., 352). The impossibility, Flew adds, is not logical but physical. Miracles are possible in principle, but in practice they break natural laws that are simply never broken.

Evaluation of the Historical Argument. Troeltsch and Flew attempt to rule out *knowability* by what Flew calls “critical history.” Further, the argument (as Flew admits) follows the basic form of Hume’s antisupernaturalism, critiqued above. All of these arguments assume that to be critical and historical one must be antisupernatural. By this view, a closed mind is prerequisite to doing “critical” historical study.

The principle that the present is the key to the past, or the past is known by analogy to the present is valid. This is so since those living in the present have no direct access to the past. The kind of causes known to produce certain kinds of effects in the present can be assumed to produce similar kinds of effects in the past.

But this principle does not rule out a credible belief in miracles in the past, even if no such miracles exist in the present. Fallacies are involved in the historical argument.

Uniform or uniformitarian?. Troeltsch and Flew confused principles of *uniformity* (analogy) and *uniformitarianism.* They assumed that all past events are uniformly the same as today’s. This is not only an assumption, but it doesn’t fit what even naturalistic scientists believe about origins. All scientists believe that the origin of the universe and the origin of life are singular and

unrepeatable events (*see* ORIGINS, SCIENCE OF). But if the past can be known only in terms of processes now at work, then there is no scientific basis for knowledge about them. Another problem with uniformitarianism is that processes change. Geological uniformitarians fail to account for catastrophes, climatic changes, landmass shifts, and other factors that might have altered geological forces.

Uniformitarianism illogically assumes that there have been no past singularities. While knowledge of the past is *based on* analogies in the present (uniformity), the *object of* this knowledge can be a singularity. Archaeologists may know on the basis of analogy that only intelligent beings can make projectile points. However, the making of one unique spear point by a particular craftsman in a particular tribe can also be studied in itself. What can be learned about this singular past event can become present knowledge—a basis for analogy when other spear points are discovered. By analogy scientists have learned that certain levels of specified complexity originate only in intelligent beings.

Analogy, properly understood, supports as credible the possibility that some past events had a supernatural intelligent cause. Even without analogy to the present, there is good evidence that the universe began (*see* BIG BANG), and that it had an intelligent supernatural cause.

Special pleading. The Historical argument against miracles makes a special pleading that evidence for individual events cannot be allowed unless the events are repeated. This weighs the evidence for all regularly occurring events, rather than for the particular event(s) at issue. This is not a standard rule of evidence. Further, it pleads that no miracle either has occurred, can, or ever will in today's world. Flew and Troeltsch are simply not omniscient enough to know this is true.

Begging the question. Flew also commits the fallacy of *petitio principii* . In practice, he begs the question when he asserts that miracles are "absolutely impossible" and that the critical thinker will dismiss them "out of hand." But why should a critical thinker be so biased against the historical actuality of a miracle? Why should one begin with a methodology loaded against certain past events, before looking at the evidence?

Hindering scientific progress. Uniformitarian views have hampered the progress of science. The big bang theory is an example. Astrophysicist Arthur Eddington spoke of this special, explosive beginning of the universe as "repugnant," "preposterous," and "incredible" (Jastrow, 112). Albert Einstein made a mathematical error, so sure was he that the big bang was "senseless" (ibid., 28).

The evidence is so compelling that many scientists now believe that the basic hydrogen atoms of the universe were created in milliseconds. Most astronomers today accept the reality of a great initial explosion. Here is a singularity, which by its nature cannot be repeated. Yet it is a viable theory of origins and the proper object of science, though scientists had to be dragged to it because it does hold definite theistic implications.

Appealing to the general to rule out the particular. A strange sort of logic works in the historical argument. One must judge all particular (special) events in the past on the basis of general (regular) events in the present. Why not use special events in the present as an analogy

for special events in the past? There are unique and particular “anomalies.” From a strictly scientific point of view a miracle is like an anomaly. Here the historical argument uses special pleading. Neither Troeltsch nor Flew allows evidence to count for *particular* events, in lieu of the evidence for general categories of events. There are far more regular and repeatable events than the unrepeatable kind. there is no evidence for the unrepeatable. It is like refusing to believe that someone won the lottery, because thousands more lost it. Along these same lines, the contemporary philosopher Douglas K. Erlandson argues that scientific law, as such, is concerned with general classes of events, whereas the supernaturalist is concerned with events that do not fit general classes. A belief in the latter does not upset belief in the former (Erlandson, 417–).

Proving too much. The historicist arguments prove that much of what naturalists believe about the past cannot be true. As Richard Whately showed in his famous satire on Hume’s naturalistic skepticism (Whately, 224, 290), if one must reject unique events in the past because there is no analogy in the present, then the incredible history of Napoleon must be rejected.

Not critical enough. Actually, “critical history” is not critical enough. It does not criticize the unreasonable acceptance of presuppositions that eliminate valid historical knowledge. Far from being open to evidence, its naturalism eliminates in advance any miraculous interpretation of events in the past. It *legislates* meaning rather than *looks* for it.

Arguments from Science. Since the origin of modern science it has been common to claim that miracles are not scientific. Some critics object to miracles because they are said to be contrary to the very nature of the scientific procedure for handling irregular or exceptional events. They insist that when scientists come upon an irregular or anomalous event they do not posit a miracle. They broaden their understanding of natural processes to take in that event. To do otherwise would be to forsake the scientific method. Some individual arguments include:

Ninian Smart. Ninian Smart reasons that nothing in nature can be out of bounds for exploration. Otherwise it would stultify scientific research. But a belief that certain events are miraculous erects a bar against science. Hence, acceptance of miracles violates the proper domain of science (Smart, chap. 2). The argument can be summarized.

1. A miracle is an exception to a natural law.

2. In science, exceptions are goads to find a better explanation, not an indication to stop research.

3. Hence, accepting miracles stops scientific progress.

Therefore, a miracle cannot be identified ever as an irregular event or anomaly. Rather, it calls for further research. When one natural law does not explain an exception, scientists do not throw in the towel; they look again, more deeply. What is an exception to one scientific description (L1) can be included within a broader description (L2).

Patrick Nowell-Smith. The supernaturalist’s claim that an event is a miracle because it cannot be explained in terms of scientific laws bothers Patrick Nowell-Smith. “We may believe him [the

supernaturalist] when he says that no scientific method known to him will explain it. . . . But to say that it is inexplicable as a result of natural agents is already beyond his competence as a scientist, and to say that it must be ascribed to supernatural agents is to say something that no one could possibly have the right to affirm on the evidence alone (Nowell-Smith, 245–46).

However strange an event, he argues, it must not be ascribed to the supernatural, because future scientists may very well explain it. At one time the bumblebee's flight was unexplained by natural law. However, principles of this very natural occurrence have come to light in the discovery of power packs in the bee's cells called *mitochondria* , which make flight by rapid wing motion possible. The argument can be described:

1. What is scientifically unexplained is not necessarily scientifically unexplainable.

2. Miracles are scientifically unexplained.

3. Miracles are not scientifically unexplainable.

An explanation qualifies as scientific, according to Nowell-Smith, if a hypothesis from which predictions can be made can afterwards be verified (ibid., 249). Further, the explanation must describe how the event comes about.

In this definition, "lawful" miracles should be explainable by laws that can be stated. If not, the event can be explained. "If we can detect any order in God's interventions, it should be possible to extrapolate in the usual way and to predict when and how a miracle will occur" (ibid. 251). Nowell-Smith challenges supernaturalists to consider whether the notion of explanation does not necessarily include hypothesis and prediction and thought about whether the "supernatural" could play any part in it (ibid., 253).

Should it be objected that he is simply redefining the "natural" to include miracles, Nowell-Smith replies: "I will concede your supernatural, if this is all that it means. For the supernatural will be nothing but a new field for scientific inquiry, a field as different from physics as physics is from psychology, but not differing in principle or requiring any non-scientific method" (ibid.). This may be summarized:

1. Only what has predictive capabilities can qualify as an explanation of an event.

2. A miracle explanation cannot make verifiable predictions.

3. Therefore, a miracle explanation does not qualify as an explanation of the event.

The implications of this reasoning are that miracle explanations must become scientific or they cease to be explanations at all. So a miracle is methodologically unscientific. It is contrary to the scientific means of explaining events, a way that always involves the ability to predict similar events. Further, Nowell-Smith denies that rational agency is necessary to account for any anomaly in nature. Ultimately, all that happens will be shown to result from natural law.

Alistair McKinnon. Another opponent of miracles, Alistair McKinnon (see another McKinnon argument in the article MIRACLE .) put the scientific law argument this way:

1. A scientific law is a generalization based on past observation.

2. Any exception to a scientific law invalidates that law as such and calls for a revision of it.

3. A miracle is an exception to a scientific law.

4. Therefore, any so-called "miracle" would call for a revision of the present scientific law.

In McKinnon's view, a miracle would be assumed to be a natural event under a new law that incorporates it into its natural explanation. Laws are like maps, and maps are never violated; they are revised when found to be in error.

Malcolm Diamond. Others have attempted to argue against miracles as opposition to scientific methodology. For example, Malcolm Diamond, professor of philosophy at Princeton University, insists that it is disastrous to accept miraculous exceptions to scientific laws. If one accepts some exceptions as supernatural, "scientific development would either be stopped or else made completely capricious, because it would necessarily be a matter of whim or whether one invoked the concept of miracle" (Diamond, 317).

Diamond sees two problems with supernaturalism. First, exceptions should not stop scientific research. They are, in fact, goads to further study. Second, exceptions should not necessarily be called miracles. Does the odd prove God? If not, how does one distinguish the unusual from the supernatural?

According to Diamond, "Allowing for the possibility of supernatural explanations of naturally observable occurrences is something that would, in effect, drive working scientists to opt right out of the scientific enterprise. . . . These scientists would not be able to investigate [the miracle]. . . . As scientists they would not be able to determine whether the exception was supernatural" (ibid., 320). Scientists must operate with autonomy. They must set their own rules and referee their own games. Therefore, although nothing logically would prevent a scientist from accepting a supernatural interpretation for an utterly extraordinary, the scientists would be selling out science.

Diamond concludes: "The answer that I shall offer on behalf of the naturalistic interpretation is pragmatic. It recommends reliance on the scientific explanations without pretending to be a conclusive refutation of supernaturalism" (ibid.).

The outline of this argument is pragmatic, based on the autonomy of the scientific method:

1. Scientists, as scientists, cannot give up looking for naturalistic explanations for every event.

2. To admit even one miracle is to give up looking for a natural explanation.

3. Therefore, to admit miracles is to give up being a scientist.

Evaluation. Unlike other arguments against miracles, the scientific objection does not try to prove that miracles are impossible or even incredible. If successful it would show that miracles are not identifiable by the scientific method. It leaves open the possibility that there are other ways to identify a miracle. If by definition the scientific method deals only with a certain class of events (the repeatable), then singular events such as miracles cannot be identified by the scientific method. But what such an argument does not prove is that miracles do not occur or that there is not some other way to identify them. Nor does it show that there is no other way to identify the scientific method by which a miracle could be identified, at least in part.

Anomalies and the scientific method. Even the scientific procedure that deals with regular repeatable events allows for exceptional events that do not call for the explanation of another natural law. A scientist who encounters an anomaly does not automatically revise previously held laws. If the exception is not repeatable, there is no right to use it as the basis for a new law. It is inappropriate to demand that *all* exceptional events be naturally caused, but only that repeatable events be explainable. So in the nonrepeatable miracle, there is no violation of a scientist's right to do science.

Science in the commonly understood sense deals with regularities, not singularities. One cannot expect a method geared to deal with regularities to eliminate the scientific viability of a miracle.

A scientific approach to the world is not limited to regular events. There are legitimate scientific approaches that deal with singular events, as even supernaturalists claim.

Even the scientific method admits exceptions or anomalies, and no scientist revises existing natural laws based on a single exception. Unless the scientist can show that it is a regular, repeatable part of nature, he has no basis on which to make a new natural law. There is no reason a miracle cannot fall into the broad category of the anomalous, even within the general sense of the scientific method.

Of course, there is more to a miracle than a mere anomaly. There are "divine" earmarks. However, even from a strictly scientific approach that deals with regularities, one cannot legitimately eliminate the possibility of identifying a miracle. To argue that every exception to a known natural law demands another natural explanation, simply begs the question. Such an argument goes beyond science and reveals a naturalistic bias (*see* MATERIALISM ; NATURALISM).

As theists have long insisted, if there is a God, then he cannot be locked out of his creation. If he had the ability to create the universe, he has the power to produce occasional but naturally unrepeatable exceptional acts within his world. The only effective way to disprove miracles is to disprove God (*see* GOD, ALLEGED DISPROOFS OF).

Confusion of categories. Even some naturalists have admitted that this argument is an *a priori* argument that can be refuted by noting that a supernaturally caused exception to a scientific law would not invalidate it. Scientific laws express regularities. A miracle is a special and nonrepeatable exception (Diamond, 316–17). One nonrepeatable exception does not call for revising a natural law. More likely it would be credited to faulty observation anyway. From a strictly scientific view, a nonrepeatable exception remains just that—an exception to known scientific laws. If, under specified conditions, the anomaly recurs, then a scientist has the right to call it a natural event. In this case, anomalies would be pointers to the development of a more general natural law.

Miracles, however, are not the result of natural laws. They were caused by the willed actions of rational agents, God and his representatives. That action of will is what cannot be repeated and therefore places miracles outside the realm of scientific observation. A miracle takes place because God wants it to. One cannot arrange for God to "want it" again so that scientists can watch. Miracles do not change our view of scientific laws, they simply step outside of them.

Since miracles are unrepeatable exceptions to known laws, they leave natural laws intact and therefore are not unscientific. Smart wrote, "Miracles are not experimental, repeatable. They are particular, peculiar events. . . . They are not small-scale laws. Consequently, they do not destroy large-scale laws."

Begging the question. If scientific objections are understood to eliminate the acceptance of miracles by a rational person, they are unsuccessful. They clearly beg the question by insisting that every event in nature must be considered a natural event. For if whatever happens—no matter how unrepeatable—must not be considered a miracle, miracles are eliminated in advance by definition. Even if a resurrection from the dead occurred, it could not be a miracle.

Despite the fact that he claims the problem must be attacked with an open mind (ibid., 243), Nowell-Smith shows an invincible bias in favor of naturalism. His standards mandate that any event will be declared to be a natural event. He is, in fact, open only to naturalistic interpretations, not to the supernatural. That he begs the question is evident. He defines "explanation" in such a narrow way as to eliminate the possibility of a supernatural explanation. He arbitrarily insists that all explanations must be naturalistic in order to be counted.

The supernaturalist does not insist that "an event no matter how strange must have been due to a supernatural agent." It does seem likely that most strange events *are* natural. But the supernaturalist does object when Nowell-Smith says that supernatural agency *cannot* be part of the report of a strange event. The supernaturalist says that one should look at the evidence on its merits.

Nowell-Smith simply assumes that all phenomena ultimately admit a natural explanation (ibid., 247). He cannot know this as a scientist. There is no empirical proof. This assumption is simply a matter of naturalistic faith. Even if he were presented with empirical evidence of a miracle, he makes it clear that he would never admit it to be supernatural. Pending discovery of a naturalistic explanation, he will persist in believing that an explanation can be found.

Neither is it necessary that all true explanations have predictive value. There are events he would call natural that no one can predict. If the naturalist replies that he cannot always predict an occurrence in practice but can in principle, the supernaturalist can make that level of prediction. In principle we know that a miracle will occur whenever God deems one necessary. If we knew all the facts, including the mind of God, we could predict precisely when the miracle would happen. Further, biblical miracles are past singularities. Like the origin of the universe, they are not currently being repeated. But no prediction can be made from any singularity; they can only be made from patterns. The past is not known by empirical science, but by forensic science. It is misdirected to ask for *predictions forward* . Rather one attempts to make *retrodictions backward* .

The supernaturalist can agree with Nowell-Smith that "the breakdown of *all* explanations in terms of present-day science does not . . . immediately force us outside the realm of the "natural' " (ibid., 248). The two part company when Nowell-Smith requires natural causes for miracles. Such a position goes beyond what is warranted by the evidence. The naturalist demonstrates a faith commitment that rivals the religious dedication of the most ardent believers in miracles.

One problem behind this kind of scientific naturalism is the confusion of naturalistic *origin* and natural *function* . Motors function in accord with physical laws, but physical laws do not produce motors; minds do. In like manner, the origin of a miracle is not the physical and chemical laws of the universe, even though the resulting event will operate in accord with natural law. While natural laws regulate the operation of things, they do not account for the origin of all things.

Methodological naturalism. Scientific arguments against miracles are a form of rigid methodological naturalism. The very method chosen does not admit the possibility that any event will ever be identified as a miracle. Explanations that cover regular events do not necessarily apply to singularities. Rounded stones in a river are produced according to describable natural forces. But no natural law can account for the faces on Mount Rushmore. Here a non-natural, intelligent cause is appropriated (*see* EVOLUTION, CHEMICAL ; TELEOLOGICAL ARGUMENT).

When a singularity is not known to be attributable to natural causes and demonstrates signs of divine intervention, then there are positive reasons to accept it as a miracle. The following are discussed with more detail in the article Miracle:

1. They have an *unusual character* as an irregular event.

2. They have a *theological dimension* as an act of God.

3. They have a *moral dimension* , since God is an absolutely perfect moral Being. One moral mark of a miracle is that it brings glory to God.

4. They have a *teleological dimension* . They are purposeful events.

5. They have a *doctrinal dimension* . Miracles are connected, directly or indirectly, with "truth claims" (Heb. 2:3–4 ; *see* MIRACLES, APOLOGETIC VALUE OF).

When an irregular, unrepeatable event, not known to be produced by natural causes, is accompanied by other marks of intervention, there is reason to identify it as an act of a theistic God (*see* GOD, EVIDENCE FOR).

Too restrictive a definition of science. The science arguments against miracles are based on an overly restrictive definition of science, one that deals only with repeatable events. Science also deals with singularities. True, the scientific method only tests regular, repeatable events. But scientists also recognize origin science, which is largely a study of singularities. The big bang origin of the universe is a radical singularity. The history of our planet is a singularity, yet it is the object of research. We would regard it as both strange and foolish for a geology teacher to rule out anything but a natural cause for the sculpted faces on Mount Rushmore. It would seem odd if an archaeologist were limited to natural causes for projectile points and pottery. Insisting that one who does not insist on natural causes cannot be scientific is to improperly restrict science.

Miracles and the integrity of science. We are now in a position to evaluate the charge that belief in miracles is unscientific. Diamond's comments make evident his belief in the absolute autonomy of the scientific method. He assumes as a matter of faith, with only pragmatic justification, that the scientific method is *the* method for determining all truth. Indeed, it is not just the scientific method, but one aspect of the scientific approach—the search for natural causes—that is assumed to be the only approach to truth. Diamond's arguments are vulnerable to several criticisms:

First, it is wrong to presuppose that the scientific method necessarily entails naturalism. Scientists, as scientists, need not be so narrow as to believe that nothing can ever count as a miracle. All a scientist needs to hold is the premise that every event has a cause and that the observable universe operates in an orderly way.

Second, it is wrong to assume that natural laws have dominion over every event, rather than every *regular* event. To assume that every irregular, unrepeatable event has a natural explanation is not science but metaphysics. Natural laws do not account for the origin of all events any more than the laws of physics alone explain the origin of an automobile. Natural laws account for the *operation* of these things.

Third, it is unscientific to be closed to reasonable explanations. If a God caused the universe to exist and cares for it, it is not unreasonable to expect that he can perform some regular activities and also some special events. The only way to effectively disprove this possibility is to disprove the existence of such a God, which most atheists agree is impossible to do (Geisler, *Miracles and the Modern Mind* , chap. 12). The truly scientific and open-minded person will not dismiss in advance, logically or methodologically, the possibility of identifying some miraculous events in the defense of scientific autonomy.

Fourth, when the argument against miracles reduces to its basic premises, it becomes:

1. Whatever actually occurs in the natural world is a natural event.

2. Some so-called “miracles” have occurred.

3. Therefore, these miracles are really natural events.

This formation lays bare the circular reasoning of the naturalist’s argument. Whatever happens in the natural world is, *ipso facto* , a natural event. Whatever occurs *in* nature was caused *by* nature. Even Michael Polanyi seemed to fall into this trap when he wrote, “If the conversion of water into wine or the resurrection of the dead could be experimentally verified, this would strictly disprove their miraculous nature. Indeed, to the extent to which any event can be established in terms of natural science, it belongs to the natural order of things” (Jaki, 78). This, of course, assumes what is to be proven, that there is no supernatural Being who can act in nature. Just because an event occurs in the world, does not mean it was caused by the world. It may have been specially caused by a God who transcends the world.

The preservation of the scientific method. If miracles are allowed, how can one retain the integrity of the scientific method? If some events are ruled out of bounds to the scientists, then has not the supernaturalist closed the door on rational examination of some events? Positing a supernatural cause for the origin of some rare events in no way affects the domain of science, assuming science is based on a regular pattern of events. Operation science is naturalistic and has every right to demand explanatory control over all regular events. But science, as such, has no right to claim that it alone can explain singularities.

Science has unlimited authority in the classification of regular events. The scientist has a right, even an obligation, to examine all events, including anomalies. However, the singular, unrepeated event that is not part of a regular pattern must be classified among the “not yet explainable as natural events.” Within this class are events that may have a supernatural cause. To assume that all not-yet-explained events are naturally explainable moves beyond science into philosophical belief in naturalism. Indeed, it rules out the possibility that there is a supernatural God who can intervene in the world he created. But this is contrary to the evidence (*see* GOD, EVIDENCE FOR).

Summary. Hume offered a forceful argument against miracles. But, strong as it may seem, the evaluation indicates that he was overly optimistic to believe that this argument could be “an everlasting check” and “useful as long as the world endures” to refute any credible claim for the miraculous. In fact, Hume’s argument is not successful. In the “hard” form he begs the question by assuming that miracles are, *by definition* , impossible. In the “soft” form of the argument, Hume ignores contrary evidence, begs the question, proves too much (for example, that Napoleon did not exist), is inconsistent with his own epistemology, and makes scientific progress impossible. In brief, to eliminate miracles before looking at them seems prejudicial. A wise person does not *legislate* in advance that miracles cannot be believed to have happened; rather he *looks* at the evidence to see if they did occur. So, for the rational mind, Hume’s efforts to eliminate miracles must be considered unsuccessful.

Hume was right to demand that witnesses meet criteria of trustworthiness. Indeed, courts of law depend on such criteria to determine life and death issues. However, unbeknown to Hume, his tests for the truthfulness of witnesses, which he believed would eliminate the credibility of

miracles, actually verify the trustworthiness of New Testament witnesses, particularly the miracle of the resurrection.

Hume's self-canceling-witness argument fails because it is based on false presuppositions which, when corrected, boomerang into a proof for the uniqueness of Christianity. His argument is based on the premise that all alleged miracles are created equal. But this is not true, either of the nature of the alleged miracle or of the number and reliability of the witnesses.

In evaluating the historical argument against miracles it must be noted that there is a crucial difference between the principle of *uniformity* (or analogy), on which all valid inquiry is based, and the principle of *uniformitarianism* . The latter is a naturalistic dogma which rules out in advance by its very methodological principle the credibility of the miraculous. Troeltsch's principle of analogy, used to reject miracles, is an example of historical uniformitarianism. A form of historical naturalism, it assumes that all events in history are naturally explainable. This bias, however, is contrary to both rational thought in general and scientific thought in particular.

Various attempts have been made to prove that belief in miracles is contrary to scientific explanations or to scientific methods. Some argue that miracles, contrary to natural laws, are unpredictable; others contend that miracles are unrepeatable or would sacrifice the autonomy of science. Such arguments beg the question in favor of naturalism. They assume the scientific method must be defined in such a way that excludes acceptance of miracles. The central, though hidden, premise is that every event in the world must have a natural cause. If one does not now have that explanation, it must be believed to ultimately exist. The supernaturalist points out that one does not have to be incorrigibly naturalistic to be scientific. Properly speaking, the domain of scientific law is the realm of *regular* , not *all* , events.

Miracles do not destroy the integrity of the scientific method. Science is possible so long as theists believe that the world is orderly and regular and operates in accordance with the law of causality. If the origin of the world can have a supernatural cause without violating the laws by which it operates, such a God can also cause other events without violating the regular natural operation. Since empirical science deals with the way things *operate* , not how they *originate* , the origination of an event by a supernatural cause in no way violates natural law. As physicist George Stokes observed, a new effect can be introduced into the natural world without suspending the ordinary operation of the world (Stokes, 1063).

Miracles, Cessation of Sign Gifts. Those who accept biblical miracles debate among one another as to whether the special gift of miracles used to confirm a revelation from God (*see* MIRACLES, APOLOGETIC VALUE OF) has ceased since the times of the apostles. The issue has significance for apologetics. First, existence of apostolic, sign gift-type miracles today raises the issue of whether the New Testament miracles uniquely confirmed the truth claims of Christ and the apostles, as recorded in Scripture. Second, if miracles that confirm divine truth claims exist today, are truth claims they accompany to be accepted on a par with those of Scripture? Has divine revelation ceased?

The select individuals known as apostles were given certain, unmistakable signs of their office (2 Cor. 12:12). These sign gifts included the abil ity to raise the dead on command (Matt. 10:8 ; Acts 20:9–10); heal diseases immediately that were naturally incurable (Matt. 10:8 ; John 9:1–7), instantly exorcise evil spirits (Matt. 10:8 ; Acts 16:16–18), speak messages in known languages they had never personally studied (Acts 2:1–8 , cf. 10:44–46), and pass on supernatural gifts to others to assist them in the apostolic mission (Acts 6:6 , cf. 8:5–6 ; 2 Tim. 1:6). On one occasion (Acts 5:1–11), apostles passed a supernatural sentence of death on two people who had “lied to the Holy Spirit.”

Defense of Ongoing Miracles. Proponents of the proposition that miraculous gifts do exist in the church today defend their claims on several arguments:

God performed miracles in redemptive history. They are recorded from Genesis through Revelation (*see* MIRACLES IN THE BIBLE). There seems to be no reason to believe they would cease arbitrarily with the apostles.

God has not changed (Mal. 3:6). Jesus is “the same yesterday, today, and forever” (Heb. 13:8). If the miracle-working God has not changed, then why would miracles cease?

Jesus spoke of continuing miracles. He said, “Anyone who has faith in me will do what I have been doing. He will do even greater things than these, because I am going to the Father” (John 14:12). In his commission as recorded in Mark, Jesus said that miracles would accompany the gospel as it went out (16:17–18).

ERE *Encyclopedia of Religion and Ethics*

Miracles manifest God's greatness (Exod. 7:17) and glory (John 11:40), to deliver God's children in need (Exod. 14:21 ; Deut. 4:34 ; Acts 12:1–19), and to communicate God's messages to his people (Exod. 4:8 ; Heb. 2:3–4). These needs continue today.

There are examples of miraculous manifestations as performed through the apostles, including the gifts of tongues, special healing, and even being raised from the dead (see Wimber, *Power Evangelism* , 44).

The Position that Miracles Ceased. Both positive and negative arguments are offered for the position that the special gift of miracles ended with the time of the apostles.

Proving Present Miracles from the Past. Logically there is no connection between past and present miraculous occurrences. Even during thousands of years of Bible history miracles were clustered in three very limited periods: (1) The Mosaic period: from the exodus through the taking of the promised land (with a few occurrences in the period of the judges); (2) The prophetic period: from the late kingdom of Israel and Judah during the ministries of Elijah, Elisha, and to a lesser extent Isaiah; (3) The apostolic period: from the first-century ministries of Christ and the apostles. Occurrences of miracles were neither continuous nor without purpose. Theologically the three great periods of miracles have certain things in common: Moses needed miracles to deliver Israel and sustain the great number of people in the wilderness (Exod. 4:8). Elijah and Elisha performed miracles to deliver Israel from idolatry (see 1 Kings 18). Jesus and the apostles showed miracles to confirm establishment of the new covenant and its deliverance from sin (Heb. 2:3–4). That miracles occurred at special times for special purposes is no argument that they will exist when these conditions no longer prevail.

Changeless Attributes; Changing Acts. God never changes, but his program on earth does. There are different stages of his redemptive plan, and what is true in one stage is untrue in another. We no longer are required not to eat some forbidden fruit (Gen. 2:16–17). We need not offer a lamb as sacrifice for sins (Exodus 12). We no longer are led by the twelve apostles and Paul; rather we have God's final revelation in Scripture. Note that 2 Corinthians 12:12 calls miracles "the signs of an apostle."

Promises to Apostles. Jesus did promise that miracles would continue after he left, but he did not say they would endure until his return. It was specifically to the apostles that he made the statement of John 14:12 . The antecedent of *you* in that promise is the eleven who were with him. His promise to give the Holy Spirit's baptism, with which came the gift of tongues, was only given to the apostles (Acts 1:1–2). Only the apostles received the fulfillment of this promise at Pentecost (Acts 1:26 ; cf. 2:1 , 7 , 14). Nonapostolic instances of tongues witness the salvation of the first Samaritans and Gentiles and those on whom the apostles laid hands (cf. Acts 8:17–18 ; 2 Tim. 1:6) or in the presence of an apostle's proclamation (Acts 10:44 ; cf. 11:15). The reference to special "signs of an apostle" (2 Cor. 12:12) make no sense if these gifts were possessed by anyone other than the apostles or those on whom Christ and the apostles conferred the gift.

Desire Does Not Prove Fulfillment. There is a desire for ongoing miracles, but not all felt needs are real needs. Job received no miracle cure. Nor did Epaphras. Nor did the apostle Paul,

who earnestly desired to be healed (2 Corinthians 12). The moving testimony of Joni Earickson Tada includes her search for a miraculous recovery before she came to terms with the ways God had decided to use her as a quadriplegic.

When compared with the periods that prompted miracles in Bible times, there is no actual need for sign miracles today. Miracles confirmed new revelation (Exod. 4:6 ; John 3:2 ; Acts 2:22). But the Bible is so much more than the New Testament saints possessed, and it is complete and sufficient for faith and practice. Pente cost does not need to be repeated, any more than Calvary and the empty tomb.

Though miracles can manifest God's greatness, glory, and deliverance, he accomplishes these things in other ways. The heavens declare his glory and greatness (Psalm 19 ; Isaiah 40). Spiritual deliverance is accomplished in the power of the gospel (Rom. 1:16). God works through general and special providence without suspending natural laws (*see* MIRACLES, MAGIC AND).

Even when there is an apparent need for divine intervention, there are things for which God never performs a miracle today. He does not delay the appointed time of death (Rom. 5:12 ; Heb. 9:27). This does not mean God never will supernaturally intervene to solve the problem of death. A time has been appointed for it at the resurrection (1 Corinthians 15). Meanwhile we await bodily redemption (Rom. 8:23)—the miracle of the resurrection.

The Problem of Sign Gifts. The claim that apostolic sign gifts still exist fails to distinguish between the *fact* of miracles and the *gift* of miracles:

Gift of Miracles	Fact of Miracles
Limited to Bible times	Occurs any time
Temporary	Permanent
Done through humans	Done without humans
Confirms new revelation	Does not confirm revelation
Apologetic value	No apologetic value

The view that sign miracles ceased with the apostles does not demand that God has performed no miracles since the first century. It argues that the special *gift* of doing miraculous feats possessed by the apostles ceased once the divine origin of their message was confirmed. In Hebrews 2:3–4 , the writer of Hebrews referred to these special sign gifts of an apostle as already past in about 69 when he spoke of the message "first announced by the Lord." "God also testified [in the past] to it by signs, wonders and various miracles, and gifts of the Holy Spirit distributed according to his will." Jude, writing later (after 70), speaks of the faith that was "once for all entrusted to the saints" (vs. 3). Jude exhorts his hearers to "remember what the apostles of our Lord Jesus Christ foretold" (vs. 17). Here also the miraculously confirmed apostolic message was spoken of as past by A.D . 70. In spite of the profusion of apostolic miracles (cf. Acts 28:1–10) up to the end of Acts, about 60–61, there is no record of apostolic miracles in Paul's Epistles after this time.

This argument from the sudden absence of miracles after their earlier abundance is not to be confused with a fallacious "argument from silence." The Bible is not silent on the nature, purpose, and function of these special apostolic miracles (see, for example, 2 Cor. 12:12 ; Heb. 2:3–4). This function of confirming apostolic revelation fits with their cessation, since they were not needed after the revelation was confirmed.

It is to be noted that Paul apparently could not heal some of his own trusted helpers (Phil. 2:26 ; 2 Tim. 4:20), asking for prayer or recommending that they take medicine (1 Tim. 5:23). Even while Paul was doing miracles he was unable to heal his own physical infirmity, Gal. 4:13 . In fact, there is never a sign in Scripture of anyone performing a miracle for their own benefit. That illness may have resulted from his being blinded by God or an infliction sent to humble him. Either way, Paul regarded it as increasing his value as a servant through his weakness. Miracles were to be exercised according to God's will.

Special signs given to the apostles established their authority as representatives of Christ in founding the church. Jesus promised special "power" to them as his witnesses (Acts 1:8). In 2 Corinthians 12:12 , Paul offered his miracles as confirmations of his authority. Hebrews 2:3–4 speaks of the special apostolic miracles as confirming their witnesses to Christ. It was the pattern of God from Moses on to give such special confirmation for his key servants (Exodus 4 ; 1 Kings 18 ; John 3:2 ; Acts 2:22).

The cessation view concludes, based on both Scripture and history, that extraordinary sign gifts, such as the apostles exercised, have not been possessed by any since their time. While special *gift* miracles have ceased, the *fact* of miracles has not necessarily vanished. There is no evidence, however, of groups or persons who possess special gifts. Given the media penchant for sensationalism, if anyone had such powers it would be a widely publicized fact. Apostolic miracles had at least three characteristics missing in the acts performed by any modern miracle worker.

The Characteristics of New Testament Miracles. First, New Testament miracles were *instantaneous.* When Jesus or the apostles performed a miracle the results were always immediate. The man with a lifelong infirmity was told to " 'Get up! Pick up your mat and walk.' At once the man was cured; he picked up his mat and walked" (John 5:8–9). Peter took the hand of the beggar, and "instantly the man's feet and ankles became strong" (Acts 3:7). Even the two-stage miracle of Mark 8:22–25 took moments, and each stage had immediately intended results. There are no gradual healing over days or weeks. They were all immediate.

Second, a New Testament miracle *never failed.* A miracle is a special act of God, and God cannot fail. Further, there is no record that anyone who received one relapsed into the condition again. If there had been relapses, enemies of the gospel message would have quickly used them to discredit Christ or the apostles.

Of course those who were raised from the dead died again. Jesus alone received a permanent, immortal resurrection body (1 Cor. 15:20). Lazarus died, again, when his moment had come. The final and lasting resurrection miracle will be at Christ's second coming (1 Cor. 15:52–53).

Third, New Testament sign gifts as exercised by Jesus and the apostles were *successful on all kinds of conditions*— even incurable diseases and dead people. They healed people who were born blind (John 9) and even dead and rotting (John 11). Further, they healed all kinds of disease, not just the easier kinds (Matt. 10:8). Sometimes, they healed everyone brought to them in the entire area (Acts 28:9). It is a verifiable fact that no one today possesses the special powers of Jesus and the apostles to instantaneously cure all sicknesses and even raise the dead on command (Acts 9 , 20). These special "signs of an apostle" (2 Cor. 12:12), along with the ability to give people the Holy Spirit (Acts 8:18), special gifts (2 Tim. 1:6), and smite lying Christians with death (Acts 5), have ceased.

Fourth, unlike the miracles of apostolic times, modern miracles do not confirm new revelation, nor do they establish the credentials of God's messengers. The person's fidelity in obeying and proclaiming Scripture now establishes the message. Attempts to stress the miraculous or to claim supernatural gifts has now become a *disqualifying* , rather than a *qualifying* , mark. This is especially true among those who claim to foretell the future. For those who make such claims, the biblical standard for accuracy is absolutely no false predictions (Deut. 18:22). Since new revelation ceased with the apostles, prophetic and other miraculous claims should be seriously distrusted.

Jesus the Final Revelation. Jesus was the full and final revelation of God. "In the past God spoke to our forefathers through the prophets at many times and in various ways, but in these last days he has spoken to us by his Son, whom he appointed heir of all things, and through whom he made the universe" (Heb. 1:1–2). Jesus informed the apostles that his revelation would be continued by the Holy Spirit, who "will teach you all things and will remind you of everything I have said to you" (John 14:26). Using the Scriptures, the Holy Spirit fulfills the role once taken by the prophets: "He will guide you into all truth. He will not speak on his own; he will speak only what he hears, and he will tell you what is yet to come" (John 16:13). It is clear that the apostles were the divinely authorized agents through which the Holy Spirit proclaimed the final revelation of Jesus Christ.

Indeed, the apostles claimed this revelatory power (John 20:31 ; 1 Cor. 2:13 ; 1 Thess. 4:2 ; 2 Thess. 2:2 ; 1 John 2:19 ; 4:6), claiming the church was "built on the foundation of the apostles and prophets" (Eph. 2:20). The early church recognized this authority and "they devoted themselves to the apostles' teaching" (Acts 2:42). The apostles were the eyewitnesses of Christ (Acts 1:22), even Paul (1 Cor. 9:1 ; 15:5–9). Since these divinely authorized channels of "all truth" died in the first century, it follows that divine revelation ceased with them. If revelation ceased, there was no longer a need for miracle signs of a new revelation.

Conclusion. Arguments for the continuance of gift miracles miss the mark. While God does not change, his actions differ with different times. The purpose of signs and wonders was to confirm new revelation, but revelation ceased with the apostles. This is substantiated by the fact that no one since their time has actually possessed their unique power to instantaneously heal and even raise the dead. This does not mean God cannot do miracles now. But such miracles are not connected with any truth claims, nor are they a gift possessed by an individual. Whatever truly miraculous event that may occur has no apologetic value.

Miracles, False. Distinguishing a true from a false miracle is important to the defense of the Christian faith. For miracles are the unique way God confirms a truth claim to be from him (see MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE). But the counterfeit cannot be detected unless one knows the characteristics of a genuine.

A true miracle has preconditions. A miracle is a special act of God, and there cannot be acts of God unless there is a God who can perform these special acts. Miracles can occur only within the context of a theistic worldview (*see* THEISM). A miracle is a divine intervention in the world. God cannot "intervene" unless he is in some real sense transcendent over it. Transcendence must also mean that God has *super-natural* power. A God who created the world out of nothing, *ex nihilo* (*see* CREATION, VIEWS OF), has the power to intervene.

Atheists look at the same event as a theist, for example the resurrection of Christ, and from the viewpoint of their worldview see no miracle (*see* ATHEISM ; RESURRECTION, EVIDENCE FOR). Whatever happened must be an anomaly, unusual, perhaps, but someday explainable through natural proces ses (*see* NATURALISM). If confronted with a resurrection, pantheists do not admit a divine intervention has occurred, for they do not believe in a God who created all things (*see* PANTHEISM). Pantheists hold that God is all things. Hence, a resurrection could only be an unusual event within the world, not a supernatural event from outside it.

Description of a True Miracle. The three words Scripture uses to describe a miracle help delineate that meaning more precisely. Each of the three words for supernatural events (*sign* , *wonder* , *power*) delineates an aspect of a miracle. For a full discussion of these elements see the article MIRACLES IN THE BIBLE . From the human vantage point, a miracle is an unusual event ("wonder") that conveys and confirms an unusual message ("sign") by means of unusual power ("Power"). From the divine vantage point a miracle is an act of God ("power") that attracts the attention of the people of God ("wonder") to the Word of God (by a "sign").

According to the Bible, a miracle has five dimensions that together differentiate a true miracle from a false miracle. First, a true miracle has an *unnatural dimension* . A burning bush that is not consumed, fire from heaven, and walking on water are not normal occurrences. Their unusual character commands attention. Second, a true miracle has a *theological dimension* . It presupposes the theistic God who can perform these special acts. Third, a true miracle has a *moral dimension* . It manifests the moral character of God (*see* GOD, NATURE OF). There are no evil miracles, because God is good. A miracle that punishes or judges establishes God's nature as just.

Fourth, a miracle has a *teleological dimension* . Unlike magic (*see* MIRACLES, MAGIC AND), miracles never entertain (see Luke 23:8). Their overall purpose is to glorify the Creator. Though unnatural, they fit into creation and befit the nature of the Creator. The virgin birth, for example, was supernatural in its operation, unnatural in its properties, but purposeful in its product. It was unnatural, yet not anti-natural. Mary's virgin conception resulted in a normal nine-month pregnancy and birth (*see* DIVINE BIRTH STORIES). Fifth, miracles in the Bible, particularly the gifts of miracles, had a *doctrinal dimension.* They directly or indirectly verified truth claims. They show that a prophet is truly sent from God (Deut. 18:22). They confirm the truth of God through the servant of God (Acts 2:22 ; 2 Cor. 12:12 ; Heb. 2:3–4). Message and miracle go hand-in-hand.

Distinguishing Marks of a Miracle. In addition to its dimensions, a true miracle has distinguishing marks. The most basic is that *a true miracle is an exception to natural law* . Natural laws are regular, predictable events, but miracles are special, unpredictable events. Of course, there are some unusual natural events or anomalies that are sometimes confused with miracles. Comets, eclipses, and other natural phenomena were once thought to be miracles, but are not. Meteors pass our way infrequently, but they are purely natural and predictable. Eclipses are natural and predictable. Earthquakes are relatively unpredictable, but as scientists understand them better they know where they will occur, if not precisely when. That they are not miracles does not mean they do not belong to God's special providence. He uses them and is in control of them. We can be sure that sometimes he intervenes in their operation in dramatic ways. A fog at Normandy aided the Allied Forces' invasion of Europe on D-Day and the eventual defeat of Nazi Germany. Fog has natural causes, but the timing of this one was an evidence of God's providence. But it was no miracle. Bullets bouncing off the chests of Allied soldiers would have been a miracle.

A true miracle also produces immediate results (*see* HEALINGS, PSYCHOSOMATIC). In Matthew 8:3 , Jesus touched a man and immediately he was cured of his leprosy. All of the miraculous healings by Jesus and the apostles had such immediacy. No miracle took months, or hours. Only one required a few minutes, because it was a two-stage miracle—actually two interconnected instantaneous acts of God (Mark 8:23–25). By contrast, natural events take time and process. It takes a whole season to grow, harvest, grind, and mix wheat flour for bread, but Jesus made it instantly (John 6). It takes eighteen years or longer to grow an adult human being, but God created Adam immediately (Gen. 1:27 ; 2:7).

A characteristic of a true miracle, is that *it always brings glory to God* . Occult "magic" brings glory to the magician, and psychosomatic "cures" to the one who performs them. Satanic

delusions (see 2 Thess. 2:9 ; Rev. 16:14) are lies (2 Thess. 2:9) that do not glorify the God who cannot lie (Titus 1:2 ; Heb. 6:18).

While miracles are not natural events, *they bring good to the natural world.* The resurrection is the ultimate example. It reverses death and brings back the good of life (*see* Romans 8). Healing restores the body to the way God made it, which was "good" (Gen. 1:27–31). Even "negative" miracles are good in that it is good for God's justice to defeat sin.

True miracles never fail. They are acts of the God for whom "all things are possible" (Matt. 19:26). Since God cannot fail, neither can miracles. This does not mean that any servant of God can perform a miracle at any time. Miracles occur only according to God's will (Heb. 2:3–4 ; 1 Cor. 12:11). Further, true miracles have no relapses. If a person is miraculously healed, that healing is permanent. Pseudo-miracles, particularly the psychosomatic kind, often fail. They do not work on people who do not believe, and sometimes they do not work on those who do be lieve. When they do work, their effect is often only partial and/or temporary.

Kinds of False Miracles. As noted above, many unusual events are attributable to God that are not true miracles. God acts through natural processes. Other unusual events are acts of human beings (and/or deceiving spirits, called demons). These are not real miracles either. Satan can fool, but he cannot truly work transcendently over nature—and never intentionally for God's glory.

Magical Tricks. A true miracle is distinguishable from magic (*see* MIRACLES, MAGIC AND). Most modern magicians do not seriously pretend that the illusions they perform are anything more than entertainment that "fools" the public. Those who watch are intended to walk away mystified about how the magician did it, but assured that the magician and his assistants did "do it." This is not like occult acts unless an illusion is performed for occultic reasons. Magical tricks involve innocent deception, but miracles involve no deception. Magic has a purely natural explanation; miracles do not. A miracle is under God's control, whereas magic is under human control. Like all human actions, magic can be used for good or evil. It is not evil in itself.

Psychosomatic Curses. Mind-body interactions, psychosomatic illnesses and healing do not usually involve pretend or neurotic illnesses and charlatan faith-healers. This complex and poorly understood subject is covered with some depth in the article HEALINGS, PSYCHOSOMATIC . In this article it is sufficient to say that psycho-soma, mind-over-body cures are not miraculous. Mental cures require faith. Miracles do not. Whether using the placebo effect, touching the television as a "point of contact" with a "healer," or more directly therapeutic tools like acupuncture and biofeedback mind-training, psychosomatic healings can do good or ill. They use God's marvelous body design to work healing. But they should never be misrepresented as direct interventions or true miracles. They are human phenomena and are common to many religions.

Anomalies of Nature. As noted miracles must not be confused with a natural anomaly, like a lunar eclipse. The latter is unusual but not unnatural. Miracles are not naturally repeatable. Anomalies are predictable. The flight of a bumble bee was an anomaly for many years, but since it occurred regularly it was predictable even before it was explainable. Anomalies lack the theological, moral, and teleological dimensions.

Special Providence. Some events are caused by God indirectly, not directly. That is, God uses natural laws to accomplish them. These may be quite remarkable and may stimulate faith, but they are not supernatural. Robert Muller gathered his English orphans around the dining table and gave thanks for food they did not at that moment have to eat. At that time a wagon loaded with bread broke down in front of the orphanage, and all of it was given to Muller. That was an act of wonderful providence, but it was not a miracle.

Satanic Signs. One of the most controversial dimensions of the topic of false miracles is that of Satanic "signs." The Bible uses the same word for miracle (sign") of some unusual manifestations of Satan. Many theologians call these events "miracles." The question of whether Satan can perform miracles is made difficult because of this common usage of the same word "miracle." However, if the apologetic value of miracles is to be preserved, there must be some way to distinguish a divine miracle from a Satanic one. Most evangelical biblical scholars agree on some fundamental facts: Satan is a created being (Col. 1:15–16). He is not all-powerful (Rev. 20:10). He cannot create life (Gen. 1:21 ; Deut. 32:39). He cannot raise the dead (Gen. 1:21). He is a master deceiver (John 8:44).

Given these facts, there is no reason to grant that Satan can perform truly supernatural events. As a master magician and super-scientist he can deceive almost anyone he wishes (see Matt. 24:24). Indeed, "the whole world is under the control of the evil one" (1 John 5:19) who is "the prince and the power of the air" (Eph. 2:2). And "the god of this world hath blinded the minds of them which believe not" (2 Cor. 4:3–4). For "Satan himself masquerades as an angel of light" (2 Cor. 11:14).

Satan's powers, though great, are finite and God's are infinite. It thus seems best to distinguish a true miracle from a Satanic sign in both name and ability. God performs true miracles; Satan does false signs. God does genuine miracles; Satan does counterfeit miracles. This is precisely what the Bible calls them in 2 Thess. 2:9 when it speaks of "The coming of the lawless one will be in accordance with the work of Satan displayed in all kinds of *counterfeit* miracles, signs and wonders."

Just as there are marks of miracles, there are marks of a work of Satan, which are shown in the accompanying chart.

Divine Miracle	**Satanic Sign**
actual supernatural act	only a supernormal acts
under Creator's control	under creature's control
never associated with the occult	associated with the occult
connected with the true God	frequently connected with pantheistic or polytheistic gods
associated with truth	associated with error
associated with good	associated with evil
involves truth prophecies	involves falsehoods prophecies
glorifies the Creator	glorifies the creature

Satanic signs are not supernatural. False signs are unusual. They may be supernormal and extraordinary. But they are not miraculous. They can be recognized as false signs if they are not successful, they are not immediate or instantaneous, they are not permanent. As with Moses and the magicians of Egypt or Elijah and the prophets of Baal (Exod. 8–12 ; 1 Kings 18), Satan's signs lose in a contest with God.

Satanic signs are associated with error. False signs and false teaching go together. "The Spirit clearly says that in later times some will abandon the faith and follow deceiving spirits and things taught by demons" (1 Tim. 4:1). There is "a spirit of truth and a spirit of falsehood" (1 John 4:6). So false teaching will not be confirmed by a true miracle. False signs will be connected with false teachings. A true prophet does not give false prophecies. If the predicted signs do not come to pass, then it was a false sign. False teachings connected with false signs might include that: There are gods other than the one true theistic God (Deut. 6:4 ; 13:1–3). Worship can use images or idols (Exod. 20:3–4). Jesus is not God (Col. 2:9). Jesus did not come in human flesh (1 John 4:1–2). We should contact departed spirits (Deut. 18:11).We can predict the future (Deut. 18:21–22). Fallible or partly true revelations can come from God (Heb. 6:18). Christ does not have to be at the center of life (Rev. 19:10).

Satanic signs are associated with moral evil. Counterfeit miracles tend to accompany moral rebellion and anger with God (1 Sam. 15:23), sexual immorality (Jude 7), asceticism (1 Cor. 7:5 ; 1 Tim. 4:3), legalism (Col. 2:16–17), pride in alleged visions (Col. 2:18), lying and deception (1 Tim. 4:2 ; John 8:44), and other works of the flesh (cf. Gal. 5:19).

Satanic signs are associated with the occult. Occult practices that can accompany Satanic signs include contacts with spirits (Deut. 18:11); the use of channelers, mediums, or trances (Deut. 18:11); losing control of one's faculties (1 Cor. 14:32); disorderly conduct (1 Cor. 14:40); use of crystals, stones, rods or other means of divination (Deut. 18:11 ; Exod. 21:21); mind-emptying Eastern meditation, chanting or the use of repetitive phrases (Matt. 6:7); self-deification (Gen. 3:5 ; 2 Thess. 2:9); astrology (Deut. 4:19 ; Isa. 47:13–15); idolatry or the use of images in worship (Ex. 20:3–4); experiencing apparitions of dead persons (Deut. 18:11 ; 1 Cor. 10:18–21 ; 2 Cor. 11:14).

Satanic signs are limited in power. Satan can imitate God's miracles but not duplicate them. Again, the miracles of Moses and Elijah over the Egyptian magicians and Baal priests demonstrate this superiority. Some have wrongly supposed that Satan can create life and raise the dead. This is clearly contrary to Scripture. Only God is the creator of living creatures (Gen. 1:21 cf. Deut. 32:39 ; 1 Sam. 2:2 , 6 ; Job 1:1). Satan himself is a created being (Col. 1:15–16), and creatures by nature do not create life. Satan's workers admitted that they could not create even lice in Exodus 8:18–19 .

Raising the dead was a special sign of an apostle (Matt. 10:8 ; 2 Cor. 12:12). If Satan could do it, it would hardly be a distinguishing sign of God's apostle. And if Satan could raise the dead, he could duplicate the resurrection—the crowning proof of Christ's claim to be God (Matt. 12:40 ; John 2:19–21 ; 10:18)—and thus subvert the uniqueness of the Christian apologetic. The evidence for the resurrection of Christ would not have been "infallible proofs" (

Acts 1:3 NKJV). In fact, if Satan could do the same miracles God can do, then there would be no supernatural way to discern truth. For Satan could confirm lying prophets to be telling the truth. Likewise, if Satan could give infallible prophecies (*see* PROPHECY, AS PROOF OF THE BIBLE), the test that a false prophecy is a sign of a false prophet would be ineffective (Deut. 18:22).

Two texts are sometimes misapplied to support the thesis that Satan can create life or raise the dead. Upon scrutiny, neither is a legitimate example of life-giving power. One is the creating of serpents from rods by the magicians of Egypt. However, the magicians themselves admitted that they could not create life in Exod. 8:18–19 . They were trained in illusion and deception. Some modern Eastern snake handlers have been seen to make certain snakes appear to go rigid.

The second instance is a prophecy about what Satan will do in the final confrontation with God (Revelation 13). The second "beast . . . was granted power to give breath to the image of the beast that it should both speak and cause as many as would not worship the [first] beast to be killed" (Rev. 13:15 NKJV). This, it claimed is proof that Satan can create life. If the power in fact was given by God, it is conceivable that the power to enliven will be granted to the beast. More likely this is speaking metaphorically, as when Jesus told Pilate, "You would have no power over me if it were not given to you from above" (John 19:11). Note also that it is not a human being who has died and is given life here. Rather, it is an "image" (we are not told what sort) of the beast that is given breath. Further, it is not given life but simply "breath." This could refer to the image being animated or made life-like. There are plenty of scenarios in which this prophetic vision would be fulfilled without Satan giving life to anything.

False Claims to Resurrection. Non-Christian religions and some fringe Christian groups have claimed great miracles, including the ability to raise the dead. No instance of an actual resurrection has been substantiated with anything like the evidence for the resurrection of Christ. Most are patently false.

Some are simply fraudulent tricks. Such is the case of the African witch doctor who claimed to have killed a man to appease the gods and then restored him to life. Illusionist Andre Kole, who has exposed many occult charades, discovered that the witch doctor had dug a tunnel by which the man he faked killing had escaped, and later returned (see Geisler, 118).

Some alleged resurrections are mystically induced "comas." Some Indian gurus are able to slow down their body processes by altering their state of consciousness. This enables them to spend hours in a grave with little oxygen. At least one modern escape artist was able to escape from a coffin buried under nine feet of dirt in an hour and a half. He made no claim to resurrection. He simply learned to conserve the oxygen from his large coffin while digging through loose soil to the surface.

Some cases are simply medical resuscitations. Medical science performs resuscitation regularly on people who are clinically but not actually dead. An actual resurrection occurs when someone was physically dead. By contrast, Jesus raised Lazarus after he had been buried for four days and his body was decomposing (John 11:39).

---

nkjv New King James Version

Some alleged resurrections are merely cases where individuals fainted or went into a coma. Evangelist and faith-healer Oral Roberts claimed to have resurrected people from the dead. When pressed for names and addresses, he declined. He finally mentioned one girl who had passed out in his service. When asked how he knew she was dead, he said her body felt cold and that both he and the girl's mother believed she was dead.

Resurrections were reported in Indonesian revivals (see Geisler, 71–72). When George Peters researched the matter first-hand, he found no evidence of real physical resurrections. He discovered, rather, that the word for "death" in the language can also refer to states of unconsciousness, such as fainting and comas (Peters, 88).

Claims of resurrections are still made, but no case has been made for a real physical resurrection from the dead (*see* RESURRECTION, PHYSICAL NATURE OF). Anyone who truly possessed this power would be thronged by crowds. Jesus had to pledge people to silence about his miracles (Matt. 8:4 ; 17:9). He was so besieged by miracle-seeking crowds that he often did not have time to eat (Mark 6:31 ; John 6:24). But no one since the time of the apostles is known to have possessed these kinds of powers.

God could raise the dead. He will raise all the dead one day (John 5:28–30 ; Rev. 20:4–5). Until then it is not something he is likely to do.

Conclusion. True miracles are truly supernatural; false miracles are, at best, only supernormal. Satanic signs are earmarked by association with evil and falsehood. Supernatural acts are distinguished by good and truth. Nor does Satan have the power to perform a truly supernatural act. His are always deceptions and usually obvious counterfeits to anyone who knows the signs. He is the master magician and a super scientist. But only God can create life and raise the dead. Only God can infallibly predict the future. Only God can instantaneously cure the "incurable." Satan's power is finite and evil. God's power is infinite and good, and his supernatural acts give evidence.

Miracles, Magic and. Crucial to the apologetic use of miracles is the ability to distinguish true miracles from false ones. Many religions claim to be "proven" by miraculous deeds. While Judaism claims that Moses' rod became a serpent and Christianity holds that Jesus walked on water, Islam's Muhammad is supposed to have moved a mountain, and Hindu gurus claim the power to levitate themselves.

New Age prophet Benjamin Creme offers a spirit of power and divination that "overshadowed" Jesus and is now available to followers of "the Christ": "It is this which has enabled them to perform what at that time were called miracles, which today are called spiritual or esoteric healing. Daily, all over the world, there are miracles of healing being performed. . . ."

If a miracle is properly an act of God that suspends natural laws with a purpose of confirming the source of truth in God, what are we to make of such sales pitches? Can we tell what is truly miraculous from what is not of God and could be demonic? Is it possible to define a miracle in such a way as to exclude false claims and other kinds of unusual events?

The Problem of Definition. According to theism, a miracle is a supernatural intervention by a transcendent God into the natural world. But pantheism , like atheism , says that there is no God beyond the universe. Hence, all events have natural causes. They disagree only on whether " is limited to the physical or can include the spiritual. As the pantheistic "Jesus" of the *Aquarian Gospel of Jesus Christ* says, "All things result from natural law." Even Christian Science says that a miracle is, "that which is divinely natural, but must be learned humanly; a phenomenon of Science." Instead of saying that there are no miracles, pantheists redefine miracles as a manipulation of natural law. In a classic view of pantheism, the *Star Wars* films, Luke Skywalker learned to use "the force" (natural law) in an almost spiritual power that enabled him to do his incredible deeds. Pantheists have even tried to incorporate advanced physics into explanations of the supernormal. Fritjof Capra's book *The Tao of Physics* is an updated version of the pantheistic doctrine that all matter is at heart mystical: "The basic oneness of the universe is not only the central characteristic of the mystical experience, but is also one of the most important revelations of modern physics. It becomes apparent at the atomic level and manifests itself more and more as one penetrates deeper into matter, down into the realm of subatomic particles."

So the source of pantheistic "miracles" is not an all powerful personal God who is beyond the universe. It is an impersonal Force within the universe. Hence, these unusual events are not really supernatural; they are only *supernormal* .

Supernatural versus Supernormal. Christianity does not deny that supernormal events take place, but we deny that they are truly unique or have any apologetic value in confirming religious truth claims. The definition of a true miracle has three basic elements that are reflected in the three words associated with miracles in the Bible: *power* , *sign* , and *wonder* (for more on these elements, *see* MIRACLES IN THE BIBLE).

The *power* of miracles comes from a God who is beyond the universe. The nature of miracles are that they are *wonders,* which inspire awe because they transcend natural laws. The word *sign* tells us the purpose of miracles: They confirm God's message and messenger. The theological dimension of this definition is that miracles imply a God outside the universe who intervenes in it. Morally, because God is good, miracles produce and/or promote good. In their doctrinal dimension, miracles tell us which prophets are true and which are false. Teleologically (purposefully), miracles are never performed for entertainment. They have the purpose of glorifying God and directing people to him.

Pantheistic "miracles" don't meet this definition because their power is not from God. New Age writer David Spangler identified the source of miracles for pantheists when he wrote, "Christ is the same force as Lucifer but moving in seemingly the opposite direction. Lucifer moves in to create the light within. . . . Christ moves out to release that light." So the power for supernormal events in pantheism comes from Lucifer, or Satan, even though it is called Christ when it goes out from the individual.

From a biblical perspective, Lucifer, also called the Devil and Satan, is not the same as God or even equal to God. In the beginning, God created everything good: the earth (Gen. 1:1 , 31), humanity (Gen. 1:27–28), and angels (Col. 1:15 , 16). One angel was named Lucifer (Isa. 14:12). He was beautiful, but "lifted up with pride" (1 Tim. 3:6) and rebelled against God saying, "I will make myself like the Most High" (Isa. 14:14). One-third of all the angels left their home with God to follow him (Rev. 12:4). These beings are now known as Satan and his demons (Rev. 12:7 and Matt. 25:41). They do have unusual powers, in the sense that all angels have supernatural powers as part of the spiritual world. They are said to be "working in [energizing] the sons of disobedience" (Eph. 2:2). Satan is able to "disguise himself as an angel of light" (2 Cor. 11:14) even to appear to be on God's side, but it is only a disguise.

Miracles versus Magic. From a biblical perspective there are tests to distinguish miracles from New Age or occultic influences that might be called "magic." Miracles are God-ordained supernatural interventions. Magic is supernormal manipulation of natural forces. The following chart summarizes these differences:

Miracles	**Magic**
Under God's control.	Under human control.
Not available on command.	Available on command.
Supernatural power.	A supernormal power.
Associated with good.	Associated with evil.
Associated only with truth.	Associated also with error.
Can overpower evil.	Cannot overpower good.
Affirm Jesus is God in the flesh.	Denies Jesus is God in the flesh.
Prophecies always true.	Prophecies sometimes false.
Never associated with occult	Often associated with occult practices.

practices.

Magic uses occult means to perform its acts. These are practices which claim to conjure powers from the spirit realm. In many cases they do just that; but it is demonic power. Some practices directly linked to demonic power in the Bible are:

Witchcraft (Deut. 18:10)

Fortune-telling (Deut. 18:10)

Communicating with spirits (Deut. 18:11)

Mediums (Deut. 18:11)

Divination (Deut. 18:10)

Astrology (Deut. 4:19 ; Isa. 47:13–15)

Heresy (false teaching) (1 Tim. 4:1 ; 1 John 4:1–3)

Immorality (Eph. 2:2–3)

Self-deification (Gen. 3:5 ; Isa. 14:12)

Lying (John 8:44)

Idolatry (1 Cor. 10:19–20)

Legalism and self-denial (Col. 2:16–23 ; 1 Tim. 4:1–4)

Many who practice and teach pantheistic "miracles" admit that they use occult practices and recommend them for others. These tests clearly show that such claims to supernatural powers are not miracles.

Test Case: Jean Dixon. Jean Dixon is one of the twentieth century's most celebrated psychics. She is alleged to have made many supernormal predictions, but her work in no sense meets the standards for the miraculous.

False Prophecies. Even her biographer, Ruth Montgomery, admits that Dixon has made false prophecies. "She predicted that Red China would plunge the world into war over Quemoy and Matsu in October of 1958; she thought that labor leader Walter Reuther would actively seek the presidency in 1964." On October 19, 1968, she assured us that Jacqueline Kennedy was not considering marriage; the next day, Mrs. Kennedy wed Aristotle Onassis! She also said that World War III would begin in 1954, the Viet Nam war would end in 1966, and Castro would be banished from Cuba in 1970.

The People's Almanac (1976) did a study of the predictions of twenty-five top psychics including Dixon. The results: "Out of the total 72 predictions, 66 (or 92 percent) were dead wrong" (Kole, 69). Of those correct to some degree, two were vague and two hardly surprising—the United States and Russia would remain leading powers and there would be no world wars. It is clear that it does not take supernatural powers to get these subnormal results.

An accuracy rate around 8 percent could be explained by chance and general knowledge of circumstances. But there may be more to it. Montgomery tells us that Dixon uses a crystal ball, astrology, and telepathy, and that her gift of prophecy was given to her by a gypsy fortune-teller when she was a little girl.

The So-called Kennedy Prediction. Even Jean Dixon's highly reputed prophecy of John F. Kennedy's death is vague, and wrong in some aspects (she says that the 1960 election would be dominated by labor, which it was not), and said at one point that Richard Nixon would win, which he did not, a prediction she contradicted elsewhere. Her assassination prophecy did not specifically name Kennedy. In contrast, Isaiah named King "Cyrus" and told what he would do a century and a half before he was born (see Isa. 45:1). Second, Dixon gave no details as to how, where, or when Kennedy would be killed. Compare this with the specificity of Old Testament prophecies concerning the birth and death of the Christ (see Isaiah 53). Third, her prediction was general. All she divined was that a Democrat President would die in office. In 1960 there was about a 50–50 chance that a Democrat would be elected and, given two four-year terms, a fair chance that he would at least be shot at. Furthermore, the early 1960s fit a century-old cycle in which every twenty years a president died in office. The 1980 President, Ronald Reagan was almost assassinated.

The Bible allows no room for such things. All forms of divination are prohibited. No error is allowed for a prophet of God. Deuteronomy 18:22 says a prophet must be 100 percent accurate: "If what a prophet proclaims in the name of the LORD does not take place or come true, that is a message the LORD has not spoken. That prophet has spoken presumptuously. Do not be afraid of him" (Deut. 18:22). That last phrase means that it is appropriate to stone such a prophet. If God has spoken, it will come about. There is no need for a second chance.

Some claims to supernormal powers have been shown to be nothing more than illusions and sleight-of-hand tricks. Danny Korem, a professional magician who has written a book to expose such frauds, says, "given the proper circumstances, anyone can be made to believe he has witnessed something which never took place."

One example of this is the "psychic" Uri Geller, who claims to have the power to bend metal objects without touching them, as well as telepathy and clairvoyance. He even received support in a Stanford Research Institute report published in a popular-level science journal. But the editors of the magazine noted that the men who had refereed the tests felt that "insufficient account had been taken of the established methodology of experimental psychology. . . . Two referees also felt that the authors had not taken into account the lessons learned in the past by parapsychologists researching this tricky and complicated area." Their skepticism proved to be well founded. *New Science* magazine recorded that "at least five people claim to have seen Geller actually cheat." One woman observing him in a television studio said that "she actually

saw Geller bend—by hand, not by psychic powers—the large spoon.” Another of Geller’s tricks is to take his picture with a camera while the lens cap is on. But this has been duplicated by a photographer using a wide angle lens and with the cover not quite closed. Geller’s success also seems to drop dramatically when the controls are tightened. On television shows, he liked to pick an object from one of ten film cans.

> On the Merv Griffin show on US TV, Geller did the trick successfully, but some people thought they saw Geller jarring the table so that the cans would shake and he could tell which was heaviest. On the Johnny Carson Tonight show on 1 August 1973, therefore, special precautions were taken and Geller was not permitted to get near enough to the table to jar it or touch the cans. He failed.

It is hard to avoid the conclusion of one critic who said flatly that “the SRI paper simply does not stand up against the mass of circumstantial evidence that Uri Geller is simply a good magician.” Magician Andre Kole enlightens us,

> What most people do not realize about Uri Geller—what he has tried to suppress in his publicity—is that he studied and practiced magic as a youth in Israel. But he quickly realized that he attracted a far greater following by claiming paranormal powers than he did as a conjurer. In fact, most of what he does would be rather insignificant coming from a magician.

Unique Biblical Miracles. Biblical miracles are superior and unique. The magicians of Egypt tried to reproduce Moses’ works by means of illusions with some success (Exod. 7:19ff .; 8:6ff .), but when God brought forth gnats from the dust, the sorcerers failed and exclaimed, “This is the finger of God” (Exod. 8:19). Elijah silenced all claims of the prophets of Baal when he called down fire from heaven when they could not (1 Kings 18). Moses’ authority was vindicated when Korah and his followers were swallowed up by the earth (Numbers 16). Aaron was shown to be God’s choice as priest when his rod budded (Numbers 17).

In the New Testament, Jesus healed the sick (Matt. 8:14–17), made the blind to see (Mark 8:22–26), cleansed lepers (Mark 1:40–45), and raised people from the dead (Luke 8:49–56). His pattern continued in the apostles, as Peter healed the beggar at the Temple gate (Acts 3:1–11) and raised Dorcas from the dead (Acts 9:36–41). Hebrews 2:4 tell us the purpose of these miracles: “God also testified to it by signs, wonders and various miracles, and gifts of the Holy Spirit distributed according to his will.” As far as the purposefulness, goodness, and confirmation of God’s message, there is no comparison between these miracles and bending spoons.

Unique Biblical Prophecy. Biblical prophecy is also unique in that, while most predictions are vague and often wrong, the Scriptures are remarkably precise and accurate (*see* PROPHECY, AS PROOF OF THE BIBLE). God foretold not only the coming of the destruction of Jerusalem (Isa. 22:1–25), but also the name of Cyrus, the Persian ruler who would return them (Isa. 44:28 ; 45:1). This was 150 years before it all happened. The very place of Jesus’ birth is cited in about 700 B.C . (Micah 5:2). The time of his triumphal entry into Jerusalem was predicted accurately by Daniel in 538 B.C . (Dan. 9:24–26). No fortune-teller can boast of anything like this accuracy or consistency.

Christ predicted his own death (Mark 8:31), the means of his death (Matt. 16:24), his betrayal (Matt. 26:21), and his resurrection from the dead on the third day (Matt. 12:39–40). There is nothing like this anywhere in the occult prophecies or miracles. The prediction and resurrection of Jesus stands alone as *the* unique and unrepeatable event of history.

Miracles, Myth and. Under the relentless attack from modern naturalism, many religious thinkers have retreated to the view that miracles are not events in the space-time world (*see* MIRACLE). Rather, miracles are myths or events in a spiritual world, above space and time. As a result, the religious records must be "demythologized" or divested of the mythological "husk" to get at the existential "kernel" of truth. Rudolf Bultmann (1884–1976) was at the forefront of this view of "miracles." He adapted phenomenologist Martin Heidegger's (1889–1976) concept of existential analysis to New Testament exegesis. Using Heidegger's methods, he attempted to separate the essential gospel message from the first-century worldview.

Demythological Naturalism. Bultmann believed Scripture to be founded on a three-story universe, with the earth in the center, heaven above with God and angels, and the underworld beneath. The world "is the scene of the supernatural activity of God and his angels on the one hand, and of Satan and his demons on the other. These supernatural forces intervene in the course of nature and in all that we think and will and do" (Bultmann, 1). The New Testament documents needed to be stripped of this mythological structure. The language of mythology is incredible to moderns, for whom the mythical view of the world is obsolete. "All our thinking to-day is shaped for good or ill by modern science," so "a blind acceptance of the New Testament . . . would mean accepting a view of the world in our faith and religion which we should deny in our everyday life" (ibid., 3–4).

With confidence, Bultmann did not even open for consideration the assumption that the biblical picture of miracles is impossible. Such a view could no longer be held seriously. The only honest way of reciting the creeds was to strip the mythological framework from the truth they enshrine.

Purpose of Myth. If the biblical picture is mythological, how then are we to understand it? For Bultmann "the real purpose of myth is not to present an objective picture of the world as it is, but to express man's understanding of himself in the world in which he lives." Therefore "myth should be interpreted not cosmologically, but anthropologically, or better still, existentially."

"Myth speaks of the power or the powers which man supposes he experiences as the ground and limit of his world and of his own activity and suffering." In other words, myth speaks of a transcendent power which controls the world. It is that hope that religion shares once its dated peripheral material is cut away (ibid., 10–11).

Bultmann concludes confidently, "Obviously [the resurrection] is not an event of past history . . . An historical fact which involves a resurrection from the dead is utterly inconceivable" (ibid., 38–39). He offers several reasons for this antisupernatural conclusion. First, there is "the incredibility of a mythical event like the resuscitation of a corpse." Second, "there is the difficulty of establishing the objective historicity of the resurrection no matter how many witnesses are cited." Third, "the resurrection is an article of faith which, as such, cannot be a miraculous proof." Finally, "such a miracle is not otherwise unknown to mythology" (ibid., 39–40).

What then is the resurrection (*see* RESURRECTION, EVIDENCE FOR)? For Bultmann, it is an event of subjective history, an event of faith in the hearts of the early disciples. As such, it is not subject to historical verification or falsification, for it is not an event in the space-time world. Christ did not rise from Joseph's tomb; he arose by faith in the disciples' hearts.

It is difficult to formulate precisely the reasoning Bultmann used to support this thesis. It seems to go like this:

1. Myths are by nature more than objective truths; they are transcendent truths of faith.

2. But what is not objective cannot be part of a verifiable space-time world.

3. Therefore, miracles (myths) are not part of the objective space-time world.

Weaknesses of Demythological Naturalism. *Miracles Are Not Less Than Historical.* It does not follow that, because an event is *more* than historical, it must be *less* than historical. Gospel miracles, to be sure, have a transcendent dimension. They are more than historical events. For example, the virgin birth involves the divine nature of Christ (*see* CHRIST, DEITY OF) and the spiritual purpose of his mission as much as biology. It is presented as a "sign" (Isa. 7:14). The resurrection is more than the resuscitation of a corpse. Its divine dimension entails spiritual truths (Rom. 4:25 ; 2 Tim. 1:10).

That in no way means that these miracles are not purely objective and factual events. Even Bultmann admits that the New Testament writers believed the events they described were historical. "It cannot be denied that the resurrection of Jesus is often used in the New Testament as a miraculous proof. . . . Both the legend of the empty tomb and the appearances insist on the physical reality of the risen body of the Lord." However, "these are most certainly later

embellishments of the primitive tradition" (ibid., 39). No solid reasons are given for concluding that these events could not be events in space-time history (*see* MIRACLES IN THE BIBLE).

Miracles in but not of the World. Bultmann wrongly assumes that any event *in* this world must be *of* this world. A miracle can originate in the supernatural world (its source) and yet occur in the natural world (its sphere). In this way the event can be objective and verifiable without being reducible to purely factual dimensions. One could verify directly by historical means whether the corpse of Jesus of Nazareth was raised and empirically observed (the objective dimensions of the miracle), without reducing the spiritual aspects of the event to mere scientific data. But in claiming that such miracles cannot occur in space-time history, Bultmann is merely revealing an unjustified and anti-intellectual naturalistic bias.

The basis of Bultmann's antisupernaturalism is not evidential, nor even open to discussion. It is something he holds "no matter how many witnesses are cited" (ibid.). The dogmatism of his language is revealing. Miracles are "incredible," "irrational," "no longer possible," "meaningless," "utterly inconceivable," "simply impossible," and "intolerable." Hence, the "only honest way" for modern people is to hold that miracles are spiritual and that the physical world is immune to supernatural interference.

If miracles are not objective historical events, then they are unverifiable and unfalsifiable. There is no factual way to determine if they are truth. They have been placed beyond the realm of objective truth and must be treated as purely subjective. Antony Flew's criticism (*see* VERIFICATION, KINDS OF) was to the point when he challenged, "Now it often seems to people who are not religious as if there was no conceivable event or series of events the occurrence of which would be admitted by sophisticated religious people to be a sufficient reason for conceding 'There wasn't a God after all.' " Antony Flew asked: "What would have to occur or to have occurred to constitute for you a disproof of the love of, or of the existence of, God" (Flew, 98)?

To rephrase Flew's questions for Bultmann, "If the corpse of Jesus of Nazareth had been discov ered after the first Easter, would this falsify your belief in the resurrection?" Clearly for Bultmann it would not. The apostle Paul's answer to that question, given in 1 Corinthians 15 , is emphatically "Yes." For "if Christ has not been raised, your faith is futile; you are still in your sins" (1 Cor 15:17).

If miracles are not historical events, they have no evidential value (*see* FIDEISM). They prove nothing, since they have value only for those who wish to believe them. However, the New Testament writers claim evidential value for miracles. They consider them "convincing proofs" (Acts 1:3) and not "cleverly devised myths" (2 Peter 1:16 RSV). Paul declared that "God has given proof of this to all men, by raising him [Jesus] from the dead" (Acts 17:31).

Conclusion. Bultmann's demythological approach to miracles and the New Testament documents in general is unjustified. First and foremost, it is contrary to the overwhelming evidence for the authenticity of the New Testament documents and the reliability of the

rsv Revised Standard Version

witnesses (*see* NEW TESTAMENT, HISTORICITY OF). Secondly, it is contrary to the New Testament claim (2 Peter 1:16 , cf. John 1:1–3 ; 21:24). Finally, the New Testament is not the literary genre of mythology (*see* MYTHOLOGY AND THE NEW TESTAMENT). C. S. Lewis himself a writer of myth (fairy tales) keenly noted that "Dr. Bultmann never wrote a gospel." He asks, therefore, "Has the experience of his learned . . . life really given him any power of seeing into the minds of those long dead [who have]?" As a writer of myth, Lewis found the critics usually wrong when they attempted to read his mind rather than his words. However, he adds, "the 'assured results of modern scholarship,' as to the way in which an old book was written, are 'assured,' we may conclude, only because the men who knew the facts are dead and can't blow the gaff." Bultmannian biblical critiques are unfalsifiable because, as Lewis wryly remarks, . Mark is dead. When they meet St. Peter there will be more pressing matters to discuss" (*Christian Reflections,* 161–63).

Miracles in the Bible. In the broad sense of the term *miracle* , every supernaturally caused event described in Scripture is miraculous. Scripture, however, also uses the concept in a narrower, more technical sense. In supernatural events of the past (and events predicted for the future), an unusual outward sign confirms a message from God.

Perhaps the definitive New Testament text on miracles is Hebrews 2:3–4 (KJV): "How shall we escape, if we neglect so great salvation; which at the first began to be spoken by the Lord, and was confirmed unto us by them that heard [him]; God also bearing [them] witness, both with signs and wonders, and with divers miracles, and gifts of the Holy Ghost, according to his own will?" Miracles are God's way of accrediting his spokespersons. A miracle is an act of God that confirms the message as true, substantiates the sermon, and verifies the Word of God (*see* MIRACLES, APOLOGETIC VALUE OF).

When Korah challenged Moses' divine authority, God confirmed Moses by opening up the earth to swallow Korah (Numbers 16). When Israel hesitated between the god Baal and *Yahweh* , God confirmed Elijah over the prophets of Baal by sending fire from heaven to consume the sacrifices. Elijah had prayed, "Let it be known today that you are God in Israel and that I am your servant" (1 Kings 18:36).

---

kjv King James Version

In miracles Jesus was both confirmed and revealed. The religious ruler Nicodemus said to Jesus, “we know you are a teacher who has come from God. For no one could perform the miraculous signs you are doing if God were not with him” (John 3:2). Many people followed him because they saw the signs he performed on those who were sick (John 6:2). John said of Jesus’ first recorded miracle, “He thus revealed his glory, and his disciples put their faith in him” (John 2:11). John said he wrote about Jesus’ miracles “that you may believe that Jesus is the Christ, the Son of God” (John 20:31). The apostles were confident in proclaiming, “Jesus of Nazareth was a man accredited by God to you by miracles, wonders and signs, which God did among you through him, as you yourselves know” (Acts 2:22).

Miracles were apostolic credentials in the early church. Paul claimed that the signs of a true apostle were performed among the Corinthians (2 Cor. 12:12). He and Barnabas recounted to the apostles “the miraculous signs and wonders God had done among the Gentiles through them” (Acts 15:12).

Signs, Wonders, and Power. The Bible uses three basic words to describe a miracle: *sign* , *wonder* , and *power* . Each of the words carries a connotation that clarifies the complete picture of biblical miracles (*see* MIRACLE).

“Sign.” Although the Hebrew word for “sign” is sometimes used to refer to natural things such as stars (Gen. 1:14) or the Sabbath (Exod. 31:13), it usually carries supernatural significance, something appointed by God with a special message assigned to it (*see* MIRACLES, APOLOGETIC VALUE OF).

The first appearance of the concept comes in the divine prediction given to Moses that Israel would be delivered from Egypt to serve God at Horeb. God said, “I will be with you. And this will be the sign to you that it is I who have sent you” (Exod. 3:12). When Moses asked God, “What if they do not believe me or listen to me?” the Lord gave two “signs”: Moses’ rod turned into a serpent (Exod. 4:3) and his hand became leprous (Exod. 4:1–7). These were given “that they may believe that the Lord, the God of their fathers . . . has appeared to you” (4:5). Moses performed the signs and the people believed (4:30–31). God gave further signs, the plagues, as a witness to the Egyptians “that I am the Lord, when I stretch out My hand against Egypt and bring the Israelites out of it” (Exod. 7:3 , 5 ; cf. 11:9).

Repeatedly the purpose of the supernatural occurrence is given as a twofold “sign”: “By this you will know that I am the Lord” (Exod. 7:17 ; cf. 9:29–30 ; 10:1–2) and that these are “my people” (Exod. 3:10 ; cf. 5:1 ; 6:7 ; 11:7).

Several statements about signs appear in the context of God’s deliverance of his people from Egypt. God complained to Moses in the wilderness, saying, “How long will they refuse to believe in me, in spite of all the miraculous signs I have performed among them?” (Num. 14:11 ; cf. vs. 22). Moses challenged Israel: “Has any god ever tried to take for himself one nation out of another nation, by testings, by miraculous signs and wonders?” (Deut. 4:34). Moses reminded the people, “Before our eyes the LORD sent miraculous signs and wonders—great and terrible—upon Egypt and Pharaoh and his whole household” (Deut. 6:22). “So the LORD brought us out of Egypt with a mighty hand and an outstretched arm, with great terror and with

miraculous signs and wonders” (Deut. 26:8 ; cf. 29:2–3 ; Josh. 24:17 ; Neh. 9:10 ; Ps. 105:27 ; Jer. 32:20–21).

Throughout the Old Testament God performs miraculous “signs.” Signs confirm a prophet as God’s spokesman. As noted, Moses received miraculous credentials (Exodus 3 and 4). Gideon asked God, “give me a sign that it is really you talking to me” (Judg. 6:17). God responded with miraculous fire that consumed the offering (vs. 21). God confirmed himself to Eli by miraculous predictions about his sons’ deaths (1 Sam. 2:34). Predictive signs confirmed God’s appointment of King Saul (1 Sam. 10:7 , 9). Isaiah made predictions as signs of his divine message (Isa. 7:14 ; 38:22). Victories over enemies were called signs (1 Sam. 14:10). Signs affirmed healing (Isa. 38:7 , 22) and accompanied judgment (Jer. 44:29).

In the New Testament, *sign (semeion)* is used seventy-seven times (forty-eight times in the Gospels). It is occasionally used of ordinary events, such as circumcision (Rom. 4:11), and of a baby wrapped in swaddling clothes (Luke 2:12). These signs have special divine significance. Most often the word is reserved for what we would call a miracle. It is used when Jesus healed (John 6:2 ; 9:16), turned water to wine (John 2:11), and raised the dead (John 11:47). Likewise, the apostles did miracles of healing (Acts 4:16 , 30), “great signs and miracles” (Acts 8:13), and “miraculous signs and wonders” (Acts 14:3 ; 15:12); for “many wonders and miraculous signs were done by the apostles” (Acts 2:43). Even the Jewish authorities said, “What are we going to do with these men? . . . Everybody living in Jerusalem knows they have done an outstanding miracle, and we cannot deny it” (Acts 4:16).

The word “sign” is also used of the most significant miracle in the New Testament, the resurrection of Jesus Christ from the grave. Jesus said that his unbelieving generation would see “the sign of the prophet Jonah.” As Jonah had been in a fish’s belly for three days, “the Son of Man will be three days and three nights in the heart of the earth” (Matt. 12:39–40). Jesus repeated this prediction of his resurrection when asked for a sign in Matthew 16:1 , 4 . Not only was the resurrection a miracle, but it carried with it a message from God (John 2:19).

“Wonder.” Often the words *signs* and *wonders* are used together in the Old Testament of the same event(s) (Exod. 7:3 ; cf. Deut. 4:34 ; 7:19 ; 13:1 , 2 ; 26:8 ; 28:46 ; 29:3 ; 34:11 ; Neh. 9:10 ; Ps. 135:9 ; Jer. 32:20–21). At other times the Bible describes as “wonders” events that are elsewhere called “signs”(Exod. 4:21 ; 11:9–10 ; Pss. 78:43 ; 105:27 ; Joel 2:30). Sometimes the word is used of a natural “wonder” (Ezek. 24:24) or a unique thing a prophet did to get his message across (Isa. 20:3). The word *wonder* usually has supernatural (divine) significance.

The Greek word *teras* means a “miraculous sign, prodigy, portent, omen, wonder” (Brown, 2:633). It carries with it the idea of that which is amazing or astonishing (ibid., 623–25). In all sixteen of its New Testament occurrences, “wonder” is used in combination with the word .” It describes Jesus’ miracles (John 4:48 ; Acts 2:22), the apostles’ miracles (Acts 2:43 ; 14:3 ; 15:12 ; Rom. 15:19 ; Heb. 2:3–4), Stephen’s miracles (Acts 6:8), and Moses’ miracles in Egypt (Acts 7:36). It connotes supernatural events before the second coming of Christ (Matt. 24:24 ; Mark 13:22 ; Acts 2:19).

"Power." "Power" is sometimes used of human power in the Old Testament (Gen. 31:6 ; Deut. 8:17 ; Nahum 2:1). But often it is used of divine power, including God's power to create: "God made the earth by his power" (Jer. 10:12 ; 27:5 ; 32:17 ; 51:15). The "power" of God overthrows his enemies (Exod. 15:6–7), delivers his people from Egypt (Num. 14:17 ; cf. vs. 13), rules the universe (1 Chron. 29:12), gives Israel their land (Ps. 111:6), and inspires the prophets (Micah 3:8). Power is often in direct connection with events called "signs" or "wonders" or both (Exod. 9:16 ; 32:11 ; Deut. 4:37 ; 2 Kings 17:36 ; Neh. 1:10). Sometimes Hebrew words denoting power are used in the same verse with "signs and wonders." Moses speaks of the deliverance of Israel "by miraculous signs and wonders, . . . by a mighty hand" (Deut. 4:34 ; cf. 7:19 ; 26:8 ; 34:12).

"Power" *(dunamis)* is sometimes used in the New Testament to refer to human power (2 Cor. 1:8) or abilities (Matt. 25:15) or demonic powers (Luke 10:19 ; Rom. 8:38). Like its Old Testament parallel, the New Testament term is often translated "miracles." *Dunamis* is used in combination with "sign and wonder" (Heb. 2:4), of Christ's miracles (Matt. 13:58), of the virgin birth of Christ (Luke 1:35), of the outpouring of the Holy Spirit at Pentecost (Acts 1:8), of the "power" of the gospel to save sinful people (Rom. 1:16), of the special gift of miracles (1 Cor 12:10), and of the power to raise the dead (Phil. 3:10). The emphasis of the word is on the *divine energizing* aspect of a miraculous event.

Biblical Nature of a Miracle. The three words Scripture uses to describe a miracle help delineate the meaning of miracles more precisely. Each of the three words for supernatural events (*sign* , *wonder* , *power*) delineates an aspect of a miracle. From the human vantage point, a miracle is an unusual event ("wonder") that conveys and confirms an unusual message ("sign") by means of unusual power ("power"). From the divine vantage point, a miracle is an act of God ("power") that attracts the attention of the people of God ("wonder") to the Word of God (by a "sign").

The purposes of a miracle are

1. *to glorify* the nature of God (John 2:11 ; 11:40);

2. *to accredit* certain persons as the spokesmen for God (Acts 2:22 ; Heb. 2:3–4); and

3. *to provide evidence* for belief in God (John 6:2 , 14 ; 20:30–31).

Not all witnesses to a miracle believe. In this event the miracle is a witness against those who reject this evidence. John grieved: "Even after Jesus had done all these miraculous signs in their presence, they still would not believe in him" (John 12:37). Jesus himself said of some, "They will not be convinced even if someone rises from the dead" (Luke 16:31). One result, though not the purpose, of miracles is condemnation of the unbeliever (cf. John 12:31 , 37).

Biblical References to Miraculous. About 250 occurrences in Scripture fit the narrow definition of sign, wonder, or power. Since many references refer to multiple supernatural acts, the number of actual miraculous events is greater than the number of passages listed. Also, the

Bible often refers to single events combining many miracles. Ten lepers were healed (Luke 17:12–14), as were all or most of the sick in one city (Matt. 9:35).

Genesis	
1	Creation of all things.
5:19–24	Translation of Enoch to be with God.
7:9–12 , 17–24	Noahic flood.
11:1 , 5–9	Judgment at tower of Babel.
12:10–20 ; 17:15–19 ; 18:10–14	Plagues on pharaoh for taking Abraham's wife.
19:9–11	Sodomites blinded.
19:15–29	Sodom and Gomorrah destroyed.
19:24–26	Lot's wife turned to salt.
21:1–8	Sarah's conception of Isaac.
Exodus	
3:1–15	The burning bush.
4:1–5	Moses' staff becomes serpent and restored.
4:6–7	Moses' hand becomes leprous and restored.
7:10–12	Aaron's staff becomes serpent, which swal- lows serpents of sorcerers.
7:19–24	Water turned to blood.
8:5–7 ; 12–13	Frogs plague Egypt.
8:16–18	Lice plague Egypt.
8:20–24	Flies plague Egypt.
9:1–7	Egyptian cattle die of disease.
9:8–11	Boils on Egyptians and their animals.
9:22–26	Storm of thunder, hail, and fire.
10:3–19	Locusts plague Egyptians.
10:21–23	Plague of darkness covers Egyptians.
12:29–30	First-born Egyptian children and animals slain.
13:21–22	Pillar of cloud and fire lead Israel.
14:19–20	Angel protects Israel from Egyptians.
14:21–29	Sea parts so Israel can pass.
15:23–25	Bitter waters of Marah sweetened.
16:12–13	Quail cover camp of Israel.

16:14–15	Manna is provided for Israel to eat.
17:5–6	Water is provided from the rock.
17:8–16	Victory over Amalek.
19:16–18	Fire and smoke engulf Mount Sinai.
19:19–25	God answers Moses at Sinai.
20:1–17	God gives law.
Leviticus	
9:23–24	Fire consumes burnt offering.
10:1–7	Judgment upon Nadab and Abihu.
Numbers	
11:1–2	Fire consumes murmuring Israelites.
12:10–15	Miriam is made leprous and healed.
16:28–33	Judgment on Korah and rebels.
16:35	Fire consumes rebellious who offered incense.
16:46–48	Plague stopped by offering incense.
17:8	Aaron's rod buds.
20:7–11	Moses strikes the rock for water.
21:6–9	Healing with brass serpent.
22:21–35	Balaam's donkey speaks.
Joshua	
3:14–17	Waters of the Jordan divided.
5:13–15	Joshua's encounter with angelic being.
6	The fall of Jericho.
10:12–14	The sun stands still upon Gibeon.
Judges	
2:1–5	Angel of Lord appears to Israel.
3:8–11	Spirit of Lord comes upon Othniel.
3:31	Shamgar slays 600 with ox goad.
6:11–24	Angel appears to Gideon.
6:36–40	The sign of Gideon's fleece.
7:15–25	God delivers Midian to Gideon.
13:3–21	Angel appears to Manoah.
14:5–6	Samson slays lion.
15:14–17	Samson slays Philistines with jawbone of a donkey.

16:3	Samson carries away a city gate.
16:27–31	Samson causes collapse of temple of Dagon.
1 Samuel	
3:2–10	Voice of God calls Samuel.
5:1–5	Overturning of the god, Dagon.
5:6–12	Ashdod plagued by tumors.
6:19	God smites men of Beth-shemesh.
28:15–20	Samuel appears from dead to rebuke Saul.
2 Samuel	
6:6–7	Uzzah dies after touching ark.
1 Kings	
3:3–28	God gives Solomon great wisdom.
17:1	Three-year drought judges Israel.
17:2–6	Ravens feed Elijah.
17:8–16	Widow receives meal and oil.
17:17–24	Elijah raises widow's son.
18:17–38	Fire consumes Elijah's sacrifice on Carmel.
18:41–46	Elijah prays and God sends rain.
19:5–8	Elijah is fed by Angel.
2 Kings	
1:9–15	Fire from heaven consumes soldiers.
2:7–8	Elijah parts Jordan.
2:11	Elijah taken to heaven in chariot of fire.
2:13–14	Elisha parts Jordan.
2:19–22	Elisha cleanses waters at Jericho.
2:24	Youths killed by bears.
3:15–20	Ditches filled with water.
4:1–7	Widow's pots are filled with oil.
4:8–17	Shunammite woman bears a son.
4:32–37	Elisha raises dead son.
4:38–41	Elisha makes poison food edible.
4:42–44	One hundred fed with loaves and corn.
5:1–14	Naaman healed of leprosy.
5:27	Gehazi judged with leprosy.

6:5–7	Iron axe head floats on water.
6:16–17	Vision of horses and chariots of fire.
6:18	Syrian army struck with blindness.
6:19–20	God opens eyes of Syrians.
13:20–21	Dead man raised by contact with Elisha’s bones.
20:9–11	Ahaz’s sundial turns backward.
Job	
8–42:6	God speaks from whirlwind.
Isaiah	
1:1	Isaiah’s vision concerning Jerusalem.
	Isaiah’s vision of the Lord.
Ezekiel	
1	Ezekiel has a vision of God’s glory.
Daniel	
2:26–45	Daniel recounts and interprets Nebuchadnezzar’s dream.
3:14–30	Deliverance from fiery furnace.
5:5	Handwriting on wall.
6:16–23	Daniel saved from lions.
7:1–8:14	Daniel’s visions.
9:20–27	Daniel’s vision of seventy weeks.
10:1–12:13	Daniel’s further visions.
Jonah	
1:4–16	Storm from God stops fleeing Jonah.
1:17	God’s great fish swallows Jonah.
4:6	Gourd grows to shade Jonah.
4:7	Worm destroys gourd.
4:8	God sends east wind.

Matthew	**Mark**	**Luke**	**John**	**Description**
			2:1–11	Water becomes wine.
			4:46	Noble’s son healed.
		4:30		Jesus escapes mob.
		5:6		Catch of fish.
	1:23	4:33		Unclean spirit cast out.
8:14	1:30	4:38		Peter’s mother-in-law healed.

8:16	1:32	4:40		Sick healed.
8:2	1:40	5:12		Leper cleansed.
9:2	2:3	5:18		Paralytic healed.
			5:9	Infirm man healed.
12:9	3:1	6:6		Withered hand restored.
12:15	3:10			Sick healed.
8:5		7:1		Centurion's servant healed.
		7:11		Widow's son returned to life.
12:22				Demon cast from blind mute.
8:23	4:35	8:22		Storm stilled.
8:28	5:1	8:26		Demons cast out and enter herd of swine.
9:18–23	5:22–35	8:40–49		Ruler's daughter raised.
9:20	5:25	8:43		Woman with issue of blood healed.
9:27				Blind men healed.
9:32				Demon cast from deaf mute.
14:13	6:30	9:10	6:1	Five thousand fed.
14:25	6:48		6:19	Jesus walks on sea.
14:36	6:56			Sick healed at Gennesaret.
15:21	7:24			Gentile man's daughter healed.
	7:31			Deaf mute healed.
15:32	8:1			Four thousand fed.
	8:22			Blind paralytic healed.
17:1–8	9:2–8	9:28–36		Jesus' transfiguration.
17:14	9:17	9:38		Epileptic boy healed.
17:24				Coin in fish's mouth.
			9:1	Man born blind healed.
		11:14		Demon-possessed, blind mute healed.
		13:11		Infirm woman healed.
		14:1–4		Man with dropsy healed.
			11:43	Lazarus raised from dead.
		17:11		Ten lepers cleansed.

20:30	10:46	18:35		Two blind men healed.
21:18	11:12			Fig tree withers.
		22:51		Servant’s ear restored.
28	16:1–8	24	20	Jesus rises from dead.
28:1–7				Angel rolls stone away, announces resurrection.
28:5–8	16:5–7	24:4–8		Angel appears at grave.
			20:11–13	Angels appear to Mary.
	16:9		20:14–17	Jesus appears to Mary Magdalene.
28:9–10				Jesus appears to women.
	16:12	24:13–35		Jesus appears on road to Emmaus.
			20:19–23	Jesus appears to ten.
	16:14–18	24:36–48	20:26–31	Jesus appears to eleven.
			21:1–25	Jesus appears to seven.
			21:6	Miraculous catch of fish.
8:16–20	6:15–18			Jesus appears to the apostles.

Acts	
1:3–5	Jesus appears and addresses apostles (Luke 24:49–51).
1:6–9	Jesus ascends into heaven.
1:10–11	Angels appear to apostles.
2:1–4	Holy Spirit comes on apostles.
2:4–13	Apostles speak in foreign tongues.
3:1–11	Peter heals lame man in temple.
5:5–10	Ananias and Sapphira die.
5:12	Signs and wonders by apostles.
5:18–20	Apostles released from prison.
7:55–56	Stephen sees Jesus with God.
8:7	Unclean spirits cast out.
8:13	Philip performs miracles and signs.
8:14–17	Samaritans receive Holy Spirit.
8:39–40	Philip caught away by Holy Spirit.
9:3–7	Jesus appears to Saul (cf. 1 Cor. 15:8).

9:10–16	Jesus appears to Ananias.
9:17–19	Saul's sight is restored.
9:32–34	Peter heals Aeneas.
9:36–42	Dorcas raised from dead.
10:1–8	Cornelius receives vision.
10:9–16	Peter receives vision three times.
10:44–48	Household receives Holy Spirit.
12:7–10	Angel releases Peter from prison.
12:23	Angel kills Herod.
13:8–11	Elymas the sorcerer blinded.
14:8–10	Paul heals lame man at Lystra.
16:16–18	Paul casts demon from young woman.
16:25–26	Earthquake opens prison doors.
18:9–10	Paul receives vision.
19:6	Ephesian believers receive Holy Spirit.
19:11–12	Paul performs unusual signs.
20:9–12	Eutychus restored to life.
23:11	Paul receives vision.
28:3–6	Paul protected from viper bite.
8:7–8	Paul heals the father of Publius.
1 Corinthians	
15:6	Jesus appeared to five hundred.
5:7	Jesus appeared to James.
2 Corinthians	
2:1–6	Paul's vision of heaven.
Revelation	
1:1–3:22	John's vision of Jesus.
4:1–22:21	John's vision of future.
6:12	Great earthquake.
6:12	Sun becomes black.
6:12	Moon becomes as blood.
6:13	Stars fall from heaven.
6:14	Mountains shaken from places.
8:7	Hail, fire, and blood fall.

8:8	Mountain is cast into the sea. Third of sea becomes blood.
8:9	Third of creatures in the sea die.
8:9	Third of ships destroyed.
8:10–11	Star falls and third of rivers and fountains become bitter.
8:12	Third of sun darkened.
8:12	Third of moon darkened.
8:12	Third of stars darkened.
9:1	Star falls from heaven.
9:2	Sun darkened by smoke from pit.
9:3–11	Plague of locusts.
9:18	Third of humanity killed.
11:5	Two witnesses destroy enemies by fire from their mouths.
11:6	Two witnesses stop rain.
11:6	Two witnesses turn water into blood.
11:6	Two witnesses call down plagues.
11:11	Two witnesses raised from dead.
11:12	Two witnesses ascend to heaven.
11:13	Earthquake destroys tenth of city.
11:19	Lightning, voices, thunder, earthquake and hail.
16:2	Sores on those who worship the beast.
16:3	Sea becomes as blood, and every soul in it dies.
16:4	Rivers, water sources become blood.
16:8	Sun scorches people.
16:10	Darkness covers kingdom of beast.
16:12	Euphrates River dries up.
16:18	Voices, thunders and earthquake.
16:20	Islands and mountains destroyed.
16:21	Stones fall on people.
18:1–24	Babylon falls.
19:11–16	Jesus Christ returns.
21:1	New heaven and earth appear.
21:10	New Jerusalem descends.

Old Testament Miracles. Negative Bible critics deny the authenticity of all miracles in the Bible. This conclusion is not based on a historical approach but on a philosophical one grounded in antisupernatural presuppositions. There are good grounds for accepting the authenticity of New Testament miracles. However, even some defenders of New Testament miracles have questioned the authenticity of some Old Testament accounts.

In a very popular book defending the possibility of miracles in general and New Testament miracles in particular, even apologist C. S. Lewis relegates many Old Testament miracles to the realm of myth. In *Miracles* he wrote:

> My present view . . . would be that just as, on the factual side, a long preparation culminates in God's becoming incarnate as Man, so on the documentary side, the truth first appears in mythical form and then by a long process of focusing finally becomes incarnate as History. The Hebrews, like other peoples had mythology; but as they were the chosen people so their mythology was the chosen mythology. I take it that the memoirs of David's court come at one end of the scale and are scarcely less historical than St. Mark or Acts: and that the Book of Jonah is at the opposite end. [139]

There is no more reason to reject the authenticity of miracles in the Old Testament than to reject miracles in the New Testament. The evidence is of the same kind, reliable documents from contemporaries of the events. Indeed, the New Testament itself speaks of Old Testament miraculous events as historical.

General Evidence. We show, in related articles, why miracles are philosophically *possible* (*see* COSMOLOGICAL ARGUMENT ; MIRACLE ; MORAL ARGUMENT FOR GOD ; TELEOLOGICAL ARGUMENT). An all-powerful, all-good personal God who created a world of personal creatures in his image can perform miracles. He will if he wishes to communicate with his finite creatures, for miracles are a crucial part of such a communication. Beginning with creation, which is the greatest miracle of all, Scripture reveals just such a God (*see* EVOLUTION, COSMIC ; KALAM COSMOLOGICAL ARGUMENT). Historical evidence argues persuasively that miracles occurred in the New Testament (*see* MIRACLES, ARGUMENTS AGAINST). Since both the God and redemptive plan of the Old Testament and New Testament are the same, there is every reason to expect that the miracles recorded in the Old Testament are authentic.

Evidence in Particular. Lewis' rejection of some Old Testament miracles is inconsistent, founded on faulty presuppositions, contrary to historical evidence, and not in accord with the New Testament use of the Old Testament.

It is based on a mistaken view of myth. Lewis' rejection of Old Testament miracles is based in an unsubstantiated view of myth (*see* MIRACLES, MYTH AND). According to Lewis, truth first appears as myth and then as history. Actually, the reverse has been the case, especially regarding pagan stories that gods appear on earth, die and then reappear in bodily form. It has been shown that these pagan myths probably copied Christ's death and resurrection rather than the reverse (*see* DIVINE BIRTH STORIES ; FRAZER, JAMES ; RESURRECTION CLAIMS IN NON-CHRISTIAN RELIGIONS). Further, there is no indication in the Bible that God operates in such a manner. On the contrary, the Bible condemns myths (see 1 Tim. 1:3–4 ; 4:7 ; 2 Tim. 4:4). The whole concept

of myth becoming history is borrowed from an antisupernatural critical view, which Lewis himself condemns (see, for example, *God in the Dock,* chap. 16).

It is contrary to Old Testament monotheism. Old Testament miracles fit the monotheistic concept of God that permeates the entire record. A theistic God (*see* THEISM) is a God beyond the world who created the world. Furthermore, since this theistic God loves what he has made, it is understandable that he would intervene on behalf of creatures in need. The fact that the Old Testament records miracles fits perfectly with its central message (*see* MIRACLES IN THE BIBLE).

It is inconsistent with the historical record. The Old Testament miracle stories are part of the same historical record as events known to be space-time history. There is absolutely no evidence that any manuscripts of these texts ever existed without the miracle accounts. They are present unmodified in the very oldest texts we possess. Rather, the miracles are an integral part of the history and message the Old Testament conveys. Remove miraculous events from Genesis 1–2 and the message about the Creator evaporates. The story of Noah and his faithfulness in a day of unbelief makes no sense apart from God's intervention to save him and destroy the world by flood. Israel's call of God and deliverance from Egypt are meaningless apart from the supernatural intervention to accomplish these things. The miracles of Elijah, Elisha, and Jonah are inseparable to the fabric of the history they record.

It is contrary to New Testament use of the Old Testament. New Testament references to Old Testament miracles assume their historical nature. The creation of the world is not only repeatedly cited in the New Testament but the events and persons involved are taken to be historical. Adam and Eve are referred to as historical figures many times in the New Testament (Matt. 19:4 ; 1 Cor. 11:8 , 9 ; 1 Tim. 2:13–14). In Romans 5:12 the inference is unmistakable: Through one man sin and death entered the world. In Luke 3:38 , Adam is listed in Jesus' genealogy. Likewise, Adam is called "the first man Adam" in direct comparison to Christ who is the "last Adam" (1 Cor. 15:45).

Supernatural events in the Old Testament are the bases for New Testament teaching. Jesus connected the truth of his resurrection with Jonah's miraculous preservation in the belly of a great fish, saying, "For *as* Jonah was three days and three nights in the belly of a huge fish, *so* the Son of Man will be three days and three nights in the heart of the earth" (Matt. 12:40). Given the context, it is inconceivable that Jesus meant: "Just as you believe that myth about Jonah, I would like to tell you about what will really hap pen at my death." Jesus makes a similar connection between his return and the historical flood, saying, " *That is how* it will be at the coming of the Son of Man" (Matt. 24:39).

Jesus referred to numerous miraculous Old Testament events as historical, including creation (Matt. 19:4 ; 24:21), the miracles of Elijah (Luke 4:26), and the prophecies of Daniel (Matt. 24:15). In view of Jesus' use of the Old Testament miracles, there is no way to challenge their authenticity without impugning his integrity. Accepting the New Testament as authentic, while rejecting Old Testament miracles, is inconsistent.

Summary. The biblical description of miracles uses three main words: *power* , *wonder* , and *sign* . These words designate the source (God's power), the nature (wonderful, unusual), and the

purpose (to signify something beyond itself). A miracle is a sign to confirm a sermon; a wonder to verify the prophet's words; a miracle to help establish the message (*see* MIRACLES, APOLOGETIC VALUE OF).

There are hundreds of miracle accounts in Scripture. Those in the New Testament particularly capture our attention, because they are well-attested and reveal Jesus Christ in his power over Satan, sickness, and the grave. The New Testament shows that the ongoing power of Christ was present in the young church. However, there is nothing more incredible or unbelievable about Old Testament miracles than about those in the New Testament. In fact, once the existence of a theistic God is granted, then all miracles become possible. As Lewis himself noted, "If we admit God must we admit miracle? Indeed, indeed, you have no security against it" (*Miracles,* 109). The greatest miracle of all—the resurrection of Christ—occurs in the New Testament. If this is historical, then there is no reason to reject the lesser miracles of Moses, Elijah, or Elisha.

Missing Links, Evolutionary. Evolutionists believe in the common ancestry of all plants and animals, including humans. This theory of macro-evolution (*see* EVOLUTION ; EVOLUTION, BIOLOGICAL) entails the belief that all higher forms of life evolved from lower forms by small changes over multimillions of years. However, they acknowledge that the fossil record studied by paleontology does not reveal such a finely graded series of animal forms in the proper time sequences. These transitional fossils that should be in the ground but are not are called "missing links" in the evolutionary chain.

The father of modern evolution himself, Charles Darwin, recognized this as a serious problem when he wrote in *On the Origin of Species:* "Why then is not every geological formation and every stratum full of such intermediate links? Geology assuredly does not reveal any such finely graduated organic chain, and this, perhaps, is the most obvious and gravest objection which can be urged against my theory" (152). Of course, Darwin hoped that enough of these "missing links" would eventually be found to substantiate what he called the "theory of evolution" as opposed to the "theory of creation" (235, 435, 437).

In the century and a half since Darwin wrote (1859) millions of fossils have been unearthed. But the "missing links" needed to confirm his theory have not been found. In fact, some species thought to be transitional have been found not to be real transitional fossils after all, so that the record is actually more bleak today than in Darwin's time! Harvard paleontologist Stephen Jay Gould has confessed that "The extreme rarity of transitional forms in the fossil record persists as the trade secret of paleontology. The evolutionary trees that adorn our textbooks have data only at the tips and nodes of their branches; the rest is inference, however reasonable, not the evidence of fossils" (Gould, 14).

Niles Eldredge agrees, reasoning that, "expectation colored perception to such an extent that the *most obvious single fact about biological evolution — non-change* —has seldom, if ever, been incorporated into anyone's scientific notions of how life actually evolves. If ever there was a myth, it is that evolution is a process of constant change" (Eldredge, 8).

Gould frankly acknowledged that the history of most fossil species includes two features particularly inconsistent with gradualism:

Stasis. Most species exhibit no directional change during their tenure on earth. They appear in the fossil record looking much the same as when they disappear; morphological change is usually limited and directionless.

Sudden appearance. In any local area, a species does not arise gradually by the steady transformation of its ancestors. It appears all at once, "fully formed" (Gould, 13–14). So, it is fair to say that the evolution theory, as Darwin conceived of it, has not been verified by the only source of real evidence of what actually happened, the fossil record.

Explanation of "Missing Links." Although the failure to find "missing links" has disappointed evolutionists, few have given up the theory for lack of them. Rather, they respond in various ways:

Some transitional fossils exist to support evolution, so perhaps others will be found. Horse fossils are cited as an example of an existing fossil series.

A tiny fraction of all the animals that ever lived have been preserved in fossils. And only a very small fraction of all fossils have been unearthed. So, we should not expect that many "missing links" will be found.

By their nature transitional fossils were few. This adds to their rarity.

Many species had soft parts that perished easily and would not have been preserved.

Many evolutionists favor a view called "punctuated equilibrium," which contends that evolution occurred more rapidly than previously thought. There are leaps in the fossil record. Evolution, they claim, is more like a ball bouncing up a staircase than one rolling up a hill.

Crucial links have been found between primates and human beings. These include Neanderthals, Peking Man, Austriapithicus, Lucie, and others.

Response to Missing-Link View. Responses of creationists to these defenses of evolutionary theory follow several lines of reasoning.

Even if a finely graded series of fossils were found, so that there were fewer missing pieces in the progression, this would not prove evolution. Similarity and progress do not necessarily prove common ancestry; they may be evidence of a common Creator. Evolutionists sometimes speak of the evolution of the airplane or of the car, from simple to later more complex models. However, neither the car nor the airplane evolved by natural forces producing small changes over a long period of time. In both cases there was intelligent interference from the outside that created a new model similar to previous ones. These illustrations actually support the creationist model of a common Designer, rather than an evolutionary common ancestor.

This leads to another problem: Different life forms can be similar outwardly or even in the basic components of their genetic code, yet be part of entirely different systems. Just as it requires intelligence to create *King Lear* from selected words of the language, so it also requires intelligence to select and sort genetic information to produce a variety of species that fit together in a biosystem.

Also, the genetic code of one form of life differs from another the way Henry Ford's Model T differs from a Mercedes. There are basic similarities, but they are quite different systems. And systemic changes must appear simultaneously for the system to work; they cannot be gradual. That is, the whole new system must come into existence as a functioning whole. But simultaneous, systematic change in an already functioning organism is consistent with creation, not evolution. One can make small changes in a car gradually over time without changing its basic type. Changes can be made in the shape of the fenders, its color, and its trim gradually. But if a change is made in the size of the pistons, this involves simultaneous changes in the cam shaft, block, cooling system, engine compartment, and other systems. Otherwise the new engine will not function (Denton, 11). Likewise, changing a fish to a reptile or a reptile to a bird involves major, simultaneous changes in every biological system of the animal. Gradual evolution cannot account for this. The same applies to the far more complex system of the genetic code.

The very concept of "missing link" begs the question in favor of evolution. The analogy envisions a chain with some breaks. The true picture can only be described as a few links with a *missing chain* . There are gigantic "gaps" between the major types of life at every "level" of the alleged evolutionary hierarchy. However, the whole analogy of a chain assumes a "chain" of evolution was there, and that there are missing "links" to be found. This superimposes an analogy in favor of evolution on the fossil record, rather than examining what is actually in the fossil record. An unbiased study of this record reveals, not sections of a chain, but different basic forms, which appear suddenly, simultaneously, fully formed and functioning, reproducing their kind, and remaining basically unchanged throughout their geological history. This evidence points to an intelligent creator.

There are fewer transitional fossils today than in Darwin's day. For many things thought to be transitional turned out not to be. The evolution of the horse is a case in point. Even evolutionists acknowledge that the alleged progression is not a continuous transformational series. There is a devolution in some cases (e.g., the number of ribs in the earlier Eohippus is 18 and the later Orohippus is 15). Likewise the number of ribs in the earlier Pliohippus is 19 while the later Equus Scotti is 18. Even most evolutionists have given this up as a proof of evolution. The smallest (dog-sized) animal in the series (Eohippus) is not a horse but a rock badger.

Among the few alleged "missing links" found, Coelacanth (a sturdy fin fish from the Devonian Period) is not half-fish and half-reptile. It is 100 percent fish. None were ever found with feet evolving on them. In fact, they have been found alive today and look identical to those in the fossil record of some 60 million years ago. Likewise, Archaeopteryx is not half bird and half reptile. Other ancient birds had teeth as it does. Some current birds, such as the ostrich, have claws in their wings. Archaeopteryx has perfectly formed feathers and wings—something necessary for flight. Neither are simple tool-making primates proof of evolution. Even some birds and seals use things as tools. Primates, however, did not make space rockets or computers.

Discovery of so-called "missing links" between primates and humans does not support macro-evolution (*see* LUBENOW).

Logically, the physical similarities among the species does not prove common ancestry. An alternative explanation is that they have a common Creator, who designed them to live in similar environments. Genetics is the only way to prove linkage. Unfortunately, there is no way to reconstruct the genetic structure of bones uncovered. It is what is "under the hood" that counts. And the gap between a primate and human brain is immense. And this gap does not refer merely to the size of the brain but to its complexity and ability to create art, human language, and highly complex mechanisms.

Further, some of the bones once widely touted as transitional species are now known not to have been, even by evolutionists. Piltdown Man, a basic form in science texts and museums for years, turned out to be a fraud. Nebraska Man was a reconstruction from one tooth, which turned out to be that of an extinct pig. Yet Nebraska Man was used as evidence in the Scopes Trial (1925) to support teaching evolution in public schools. The fossil evidence for Peking Man vanished. Some question its validity, based on studies before the pieces of bone disappeared. One serious problem is that this creature was killed by a sharp object, a highly unlikely cause of death for a prehuman. Even some evolutionists believe Australopithecine was an orangutan. Not one primate fossil find to date that has been subjected to objective scientific scrutiny is a strong candidate for the human family tree. Despite alleged genetic differences, Neanderthals had a larger brain capacity than modern man and evidence of religious ritual, characteristics normally associated with rational and moral beings. With this history, there is reason to question other fragmentary finds. The bent posture of Piltdown has been traced to a bone deformity resulting from a vitamin deficiency cave-dwellers experience from lack of sunlight.

Even if other primates *morphologically* similar to human beings are uncovered, this will not mean that they were *spiritually* the same. Behind the human form and shape is a human mind and soul (*see* IMMORTALITY). The human person has reflective self-consciousness unique to

itself, and it has language, with its grammatical rule-oriented structure. What is more, humans have religious consciousness and practices; primates do not. All attempts to show physical similarities between primates and human beings as a basis for evolution overlook the gigantic gulf between the animal kingdom and a human being created in the image and likeness of God (Gen. 1:27).

Mithraism. Some contemporary critics of Christianity argue that this religion is not based in divine revelation but was borrowed from mystery religions, such as Mithraism. Muslim author Yousuf Saleem Chishti attributes such doctrines as the deity of Christ and the atonement to the pagan teachings of the Apostle Paul and the doctrine of the Trinity to pagan formulations of the church Fathers.

Pagan Source Theory. Chishti attempts to demonstrate a vast influence of mystery religions on Christianity, stating, "The Christian doctrine of atonement was greatly coloured by the influence of the mystery religions, especially Mithraism, which had its own son of God and virgin Mother, and crucifixion and resurrection after expiating for the sins of mankind and finally his ascension to the 7th heaven." He adds, "If you study the teachings of Mithraism side by side with that of Christianity, you are sure to be amazed at the close affinity which is visible between them, so much so that many critics are constrained to conclude that Christianity is the facsimile or the second edition of Mithraism" (Chishti, 87).

Chishti lists some similarities between Christ and Mithra: Mithra was considered the son of God, he was a savior, he was born of a virgin, he had twelve disciples, he was crucified, he rose from the grave the third day, he atoned for the sins of humankind, and he returned to his father in heaven (ibid., 87–88).

Evaluation. An honest reading of the New Testament data shows that Paul did not teach a new religion or draw on existing mythology. The foundation stones for Christianity are patently taken from the Old Testament, Judaism generally, and the life of a historical figure named Jesus.

Jesus and the Origin of Paul's Religion. A careful study of Epistles and Gospels reveals that the source of Paul's teachings on salvation was the Old Testament and the teachings of Jesus. A simple comparison of both Jesus' and Paul's teachings will demonstrate the point.

Both taught that Christianity fulfilled Judaism. Paul, similar to Jesus, taught that Christianity was a fulfillment of Judaism. Jesus declared: "Do not think that I have come to abolish the Law or the Prophets; I have not come to abolish them but to fulfill them" (Matt. 5:17). Jesus added, "The Law and the Prophets were proclaimed until John. Since that time, the good news of the kingdom of God is being preached, and everyone is forcing his way into it. It is easier for heaven and earth to disappear than for the least stroke of a pen to drop out of the Law" (Luke 16:16–17).

The Christ of Paul and Jesus is utterly at home in Judaism and foreign to the mystery cults. Paul wrote to the Romans: "Christ is the end of the law so that there may be righteousness for everyone who believes" (Rom. 10:4). He added in Colossians, "Therefore do not let anyone judge you by what you eat or drink, or with regard to a religious festival, a New Moon celebration or a Sabbath day. These are a shadow of the things that were to come; the reality, however, is found in Christ" (Col. 2:16–17).

Christianity taught that humans are sinful. Both Paul and Jesus taught that human beings are sinners. Jesus declared: "I tell you the truth, all the sins and blasphemies of men will be forgiven them" (Mark 3:28). He added in John, "I told you that you would die in your sins; if you do not believe that I am [the one I claim to be], you will indeed die in your sins" (John 8:24).

Paul declared that all human beings are sinful, insisting that "all have sinned and fall short of the glory of God" (Rom. 3:23). He added in Ephesians, "As for you, you were dead in your transgressions and sins" (Eph. 2:1). Indeed, part of the very definition of the Gospel was that "Christ died for our sins according to the Scriptures" (1 Cor. 15:3).

Christianity taught that blood atonement is necessary. Both Jesus and Paul insisted that the shed blood of Christ was necessary as an atonement for our sins (*see* CHRIST, DEATH OF). Jesus proclaimed: "For even the Son of Man did not come to be served, but to serve, and to give his life as a ransom for many" (Mark 10:45). He added at the Last Supper, "This is my blood of the covenant, which is poured out for many for the forgiveness of sins" (Matt. 26:28).

Paul is just as emphatic. He affirmed that "In him [Christ] we have redemption through his blood, the forgiveness of sins, in accordance with the riches of God's grace" (Eph. 1:7). In

Romans he added, “But God demonstrates his own love for us in this: While we were still sinners, Christ died for us” (5:8). Referring back to the Old Testament Passover, he said, “Christ, our Passover lamb, has been sacrificed” (1 Cor. 5:7).

Christianity emphasized Christ’s resurrection. Jesus and Paul also taught that the death and burial of Jesus was completed by his bodily resurrection (*see* RESURRECTION, EVIDENCE FOR ; RESURRECTION, PHYSICAL NATURE OF). Jesus said, “He told them, ‘This is what is written: The Christ will suffer and rise from the dead on the third day’ ” (Luke 24:46). Jesus challenged, “Destroy this temple, and I will raise it again in three days. . . . But the temple he had spoken of was his body” (John 2:19 , 21).

After he was raised from the dead, his disciples recalled what he had said. Then they believed the Scripture and the words that Jesus had spoken (John 2:22 ; cf. 20:25–29).

The apostle Paul also stressed the need of the resurrection for salvation. To the Romans he wrote: “He [Jesus] was delivered over to death for our sins and was raised to life for our justification” (Rom. 4:25). Indeed, Paul insisted that belief in the resurrection was essential to salvation, writing, “That if you confess with your mouth, ‘Jesus is Lord,’ and believe in your heart that God raised him from the dead, you will be saved” (Rom. 10:9).

Christianity taught salvation is by grace through faith. Jesus affirmed that every person needs God’s grace. Jesus’ disciples said to him, “Who then can be saved?” Jesus looked at them and said, “With man this is impossible, but with God all things are possible” (Matt. 19:25–26). All through the Gospel of John Jesus presented only one way to obtain God’s gracious salvation: “Whoever believes in the Son has eternal life” (3:36 ; cf. 3:16 ; 5:24 ; Mark 1:15).

Paul taught salvation by grace through faith, affirming, “It is by grace you have been saved, through faith—and this not from yourselves, it is the gift of God—not by works, so that no one can boast” (Eph. 2:8–9 ; cf. Titus 3:5–7). He added to the Romans, the man who does not work but trusts God who justifies the wicked, his faith is credited as righteousness” (4:5).

A comparison of the teachings of Jesus and Paul on salvation reveals clearly that there is no basis for speculating on any source of Paul’s teachings other than that of Jesus. Christianity was rooted in Judaism, not in Mithraism. Indeed, Paul’s message of the gospel was both checked and approved by the original apostles (Gal. 1–2), demonstrating official recognition that his message was not opposed to that of Jesus (see Habermas, 67–72). The charge that Paul corrupted Jesus’ original message was long ago answered by J. Gresham Machen in his classic work, *The Origin of Paul’s Religion* and F. F. Bruce , *Paul and Jesus* .

Origin of the Trinity. The Christian doctrine of the Trinity does not have a pagan origin. Pagan religions were polytheistic and pantheistic , but trinitarians are monotheists (*see* THEISM). Trinitarians are not tritheists who believe in three separate gods; they are monotheists who believe in one God manifested in three distinct persons.

Though the term *Trinity* or its specific formulation does not appear in the Bible, it faithfully expresses all the biblical data. An accurate understanding of the historical and theological

development of this doctrine amply illustrates that it was exactly because of the dangers of paganism that the Council of Nicea formulated the orthodox doctrine of the Trinity. For a brief treatment of the history of this doctrine see E. Calvin Beisner, *God in Three Persons* . Two classics in this field are G. L. Prestige, *God in Patristic Thought* , and J. N. D. Kelly, *Early Christian Doctrines* .

Mithraism and Christianity. From the foregoing it is evident that Judaism and the teachings of Jesus were the origin of Christianity. It is equally clear that Mithraism was not. Chishti's descriptions of this religion are baseless. In fact he gives no reference for the similarities he alleges.

Unlike Christianity (*see* NEW TESTAMENT, HISTORICITY OF), Mithraism is based in myth. Ronald Nash, the author of *Christianity and the Hellenistic World,* writes:

> We do know that Mithraism, like its mystery competitors, had a basic myth. Mithra was supposedly born when he emerged from a rock; he was carrying a knife and torch and wearing a Phrygian cap. He battled first with the sun and then with a primeval bull, thought to be the first act of creation. Mithra slew the bull, which then became the ground of life for the human race. [Nash, 144]

Christianity affirms the physical death and bodily resurrection of Christ. Mithaism, like other pagan religions, has no bodily resurrection. The Greek writer Aeschylus sums up the Greek view, "When the earth has drunk up a man's blood, once he is dead, there is no resurrection." He uses the same Greek word for "resurrection," *anastasis* , that Paul uses in 1 Corinthians 15 (Aeschylus, *Eumenides* , 647). Nash notes:

> Allegations of an early Christian dependence on Mithraism have been rejected on many grounds. Mithraism had no concept of the death and resurrection of its god and no place for any concept of rebirth—at least during its early stages. . . . During the early stages of the cult, the notion of rebirth would have been foreign to its basic outlook. . . . Moreover, Mithraism was basically a military cult. Therefore, one must be skeptical about suggestions that it appealed to nonmilitary people like the early Christians. [ibid.]

Mithraism flowered after Christianity, not before, so Christianity could not have copied from Mithraism. The timing is all wrong to have influenced the development of first-century Christianity (ibid., 147; *see* MYTHOLOGY AND THE NEW TESTAMENT).

Conclusion. All the allegations of Christian dependence on Gnostic or mystery religions (*see* NAG HAMMADI GOSPELS) have been rejected by the scholars in biblical and classical studies (ibid., 119). The historic character of Christianity and the early date of the New Testament documents did not allow enough time for mythological developments. And there is a complete lack of *early* historical evidence to support such ideas. The British scholar Norman Anderson explains:

> The basic difference between Christianity and the mysteries is the historic basis of the one and the mythological character of the others. The deities of the mysteries were no

more than "nebulous figures of an imaginary past," while the Christ whom the apostolic *kerygma* proclaimed had lived and died only a few years before the first New Testament documents were written. Even when the apostle Paul wrote his first letter to the Corinthians the majority of some five hundred witnesses to the resurrection were still alive. [Anderson, 52–53]

Modalism. Modalism is an unorthodox or heretical view of God that denies the orthodox trinitarian view that there are three distinct, co-eternal persons in the godhead (*see* TRINITY). Modalists claim that God simply manifests himself in different modes or forms at different times. Unfortunately, some illustrations used by trinitarians tend toward a modalistic concept of God. For example, modalists claim that God is like water, which can be manifested in one of three different modes at different times: liquid, gas, or solid.

Better illustrations are more appropriate to trinitarianism. They show that God is simultaneously a plurality within a unity, since he is three distinct persons in one eternal nature. God is like one triangle (his nature), which has three corners (his persons). In this illustration the three and one are simultaneous, not successive. Without three sides there is no triangle. Further, each corner differs from the others, yet all share in the nature of a triangle. Or God is like 13 (1 x 1 x 1 = 1). Here too there are three and one at the same time. It is not one manifest at three different times in three differing ways.

In modalism there is one person in the godhead. In this sense, modalism is more like the traditional monotheism of Islam, rather than trinitarian theism. In the Trinity, three distinct persons unite in one eternal nature.

Both trinitarianism and modalism are in contrast to tritheism, which affirms that there are three gods (1 + 1 + 1 = 3). This is a form of polytheism . Like trinitarianism it has three different persons, but unlike trinitarianism, it believes three separate beings are each a god, with an individual nature. Orthodox trinitarians hold that God has only one nature, but that three distinct persons, co-eternal and co-equal, share this same nature (see bibliography under TRINITY).

Molinism. *Molinism* is a view of the relation between God's grace and human free will, emanating from the Spanish Jesuit theologian Luis de Molina (1535–1600). Molina asserted that God has a special kind of foreknowledge of human free acts, which are the basis of God's gracious gift of salvation. Molinism was widely adopted by Jesuits and opposed by Dominicans. After examination by a special congregation in Rome (1598–1607), both views were allowed in Catholic schools.

An Exposition of Molinism. According to Molinism, God has three kinds of knowledge: natural, middle, and free (Craig, *The Only Wise God,* 131).

Natural knowledge is God's knowledge of all possible worlds. This knowledge is essential to God. It is concerned with the necessary and the possible.

Free knowledge is God's knowledge of this actual world. After a free act of his will, God knows these things absolutely, but such knowledge is not essential to God.

Middle knowledge or *scientia media* is the distinctive of Molinism. God cannot know future free acts in the way he knows other things. God knows some things absolutely, but future free acts are known only contingently. "God, from a most profound and inscrutable comprehension of every free will in His essence, has intuited what each, according to its innate liberty, would do if placed in this or that condition" (Garrigou-Lagrange, *The One God* , 460; *see* FREE WILL). Unlike natural knowledge, this middle or intermediate knowledge is in some sense dependent on what free creatures choose to do. God's omniscience "waits" to see what a free creature does "before" he selects those who will be saved. Since God is eternal, the sequence is only logical, not chronological.

Arguments for Middle Knowledge. Argument from three states of affairs. One argument for *scientia media* is that there are three kinds of knowledge in God because there are three possible states of affairs. Between the merely possible and the necessary there is the contingent (free). Since God knows all future states, it follows that he must know them in the way in which they are (as three). Future free acts are contingent. God must know future free acts by way of an intermediate knowledge that is neither necessary nor merely possible, but is contingent on the way free creatures will choose.

Argument from the order of knowing. Logically, an event must occur before it can be true. It must be true before God can know it is true. God cannot know as true what is not yet true. Hence, God must wait (from a logical standpoint) the occurrence of free acts before he can know they are true.

Argument from the nature of truth. Truth corresponds to reality. God cannot know anything as true unless it actually has occurred. Since future free acts have not actually occurred, God's knowledge of them is dependent on their occurrence. Since their occurrence is contingent, God's knowledge of them is contingent.

Avoiding fatalism. A fourth argument is that middle knowledge is the only way to avoid fatalism. Theological fatalism holds that all things are predetermined necessarily, including what we call "free acts." But if we are truly free, then some things do not happen necessarily but contingently, upon free choices. But if some events are contingent, God's knowledge of them cannot be necessary. God must know what will be freely chosen to occur.

In addition, Molinists see great benefits to their view in explaining predestination, God's providence, the problems of evil (*see* EVIL, PROBLEM OF), and even hell . "In the logical moment prior to creation, God had no idea how many would be saved and how many lost," according to one supporter (Craig, Ibid., 145–46). With regard to predestination, "the very act of selecting a world to be created is a sort of predestination. The person in that world who God knew would respond most certainly will respond and be saved. . . . Of course, if they were to reject his grace, God's middle knowledge would have been different. . . . As for the unsaved, the only reason they are not predestined is that they freely reject God's grace" (ibid., 136). The cost of having a certain number of elect is to have a certain number who will be lost. God so ordered things providentially that those who are lost would not have chosen Christ in any case (ibid., 148, 150).

Biblical Arguments for Molinism. Biblical arguments for Molinism are based on passages such as 1 Samuel 23:6–13 and Matthew 11:20–24 . God knew that if David were to remain in the city, Saul would come to kill him. So if God's answers through the ephod are taken to be simple foreknowledge, his knowledge was false. What was predicted did not happen. Only if the answers are taken as what would happen under certain freely chosen circumstances were they true. This would indicate that God had contingent knowledge of them. In Matthew 11 Jesus asserts that the ancient cities he mentions would have repented if they had seen Jesus' miracles. But this makes sense only if God's knowledge is contingent on what they would have done.

Evaluation. Molinism assumes that God must "wait" to know things are true. But God is eternal, and an eternal perspective knows things "before" they occur in time. God knows things in eternity, not in time. All things preexist in their ultimate cause (God). So God knows things in himself from all eternity. He does not have to "wait" to know them.

Truth is correspondence to reality. But the reality to which God's knowledge corresponds is his own nature, by which he eternally and necessarily knows all things as they preexist in him. God's knowledge is not dependent on waiting for the effect to occur in time. The effect preexists most eminently in its Cause, so God knows all things that will happen most perfectly in himself "before" they happen in time.

God's Knowledge Is Not Contingent. God's knowledge is not dependent on the conditions of the object known. If what God knows is contingent, then he must know it contingently. But since God is a Necessary Being, he must know everything in accordance with his own nature,

necessarily. Since God is eternal, all of his knowledge is intuitive, eternal, and necessary. Since his being is independent, and he must know in accord with his independent nature, it follows that God's knowledge is not dependent in any way.

Fatalism Is Not Necessary. Molinism is not the only alternative to fatalism. God can have *necessary* knowledge of *contingent* acts. He can know for sure what will happen freely. Just because he has certainty about an event does not mean that it does not occur freely. The same event can be necessary from the vantage point of God's knowledge and free from the standpoint of human choice (*see* DETERMINISM , FREE WILL). If God is omniscient, then he knows everything, including the fact that Judas would betray the Christ. If Judas had not betrayed Christ, God would have been wrong about what he knew. But that does not mean Judas was coerced. For God knew certainly that Judas would betray Christ freely. Just as prerecorded television news segments are of events that cannot be changed but were freely chosen, so God in his omniscience sees the future with the same certainty with which he sees the past.

One can hold the same solution to theological mysteries without being a Molinist. God's knowledge of the future can be necessary without any event being forced. The mysteries of predestination and providence are explained better by denying any contingency in God's knowledge of them, since fatalism does not follow from denying Molinism (*see* DETERMINISM ; FREE WILL).

That God knows what people would have done under different conditions is not inconsistent with his knowledge being necessary. He simply knew with necessity what would have happened if people had chosen differently.

Evaluation. Thomists and Calvinists have strongly opposed Molinism as a denial of both the independence and grace of God.

According to Thomism, God is Pure Actuality; he has no passive potency at all (*see* ANALOGY, PRINCIPLE OF ; ARISTOTLE ; GOD, NATURE OF ; THOMAS AQUINAS). If God had potency he would need a cause. But since he is the ultimate cause of all things, God is without potency (*see* GOD, NATURE OF). If Molinism is correct, then God is the passive recipient of the knowledge of free acts. God's "middle knowledge" is dependent on the events actually occurring. The great "I Am" becomes the "I Can Be." This implies a passivity that God as Pure Actuality cannot have. Hence, Molinism is contrary to the nature of God.

God Becomes an Effect. Another statement of the difficulty is that either God's knowledge is completely causal, determining all events, or it is determined by these events. There is no third alternative. Molinists say that God's knowledge is determined by future free acts. This sacrifices God as ultimate Cause. He is determined by events, not Determiner. This is contrary to the nature of God, for he becomes an epistemological spectator (ibid., 107).

Efficacious Grace Is Denied. Another objection is that Molinism denies God's efficacious grace in salvation. All that God wills comes to pass without our freedom being infringed upon. "He wills efficaciously that we freely consent and we do freely consent" (ibid., 401). Only in this way can God's grace be efficacious. God is the active Author of salvation (ibid., 398). As

Aquinas says, “If God’s intention is that this man, whose heart he is moving, shall receive sanctifying grace, then that man receives grace infallibly.” God’s intention cannot fail, and the saved are saved infallibly (*certissime* , says Augustine; ibid., 111).

While agreeing on the efficacious nature of grace, Thomists part company with strong Calvinists at this point. For Thomists, free creatures retain the power to choose not to follow God when God graciously and efficaciously moves them to choose according to his predetermined will. Strong Calvinists teach that this movement by the Holy Spirit in the Heart of the person choosing is irresistible. If it is God’s will, that person *will* respond because the Spirit quickens the heart. Thomists insist that, “far from forcing the act, far from destroying . . . freedom, the divine motion instead actualized . . . freedom. When efficacious grace touches the free will, that touch is virginal, it does no violence, it only enriches” (ibid., 110). However, this is not essential to the anti-Molinist view. God’s knowledge could be determinative of a free act without his causing the free act himself. This view was held by the early Augustine and moderate Calvinists (see Geisler).

Monism. The study of reality is metaphysics. How reality is viewed is worldview. Fundamental to a person’s worldview is whether they see the “one or many.” This difference separates monists from pluralists and is so imbedded in the person’s thought patterns that he or she seldom is aware that such a difference in viewpoint actually exists. Monism sees all as “one.” God and the universe are one thing. Christianity is committed to the “many” of pluralism, holding that God differs from creation (*see* THEISM).

The Case for Monism. Monism, in contrast to all forms of pluralism, insists that all reality is one. Parmenides of Elea (b. ca. 515 B.C .) initially posed, or identified, the problem, and many

philosophers since have grappled with his dilemma. Four answers have been proposed, but only one successfully solves the problem.

Parmenides argued that there cannot be more than one thing (*absolute monism*). If there were two things, they would have to differ. But for things to differ, they must differ by being or by nonbeing. Being is what which makes them identical, so they cannot differ by that. Nor can they differ by nonbeing, for nonbeing is nothing, and to differ by nothing is not to differ at all. Hence there cannot be a plurality of beings. There is only one single, indivisible being.

Alternatives to Monism. Basically, there are four alternatives to monism. Aristotelianism, Thomism, *Atomism* and *Platonism* , the latter two affirm that the many beings differ by nonbeing. Aristotelianism and Thomism hold that the many beings differ by being.

Things Differ by Absolute Nonbeing. With the generation of philosophers following Parmenides came the atomists, such as Leucippus and Democritus, who contended that the principle which separates one being (atom) from another is absolutely nothing (i.e., nonbeing). They called it the void. Being is full and nonbeing is an empty void. Atoms do not differ at all in their essence, but they are separated by different space. This difference, however, is merely extrinsic. There is no intrinsic difference in the atoms (beings). This answer was scarcely adequate. To differ by absolutely nothing is to have absolutely no difference. Whether the no difference is in one location or another makes no difference. To have absolutely no difference is to be absolutely the same. Monism wins the day over atomism.

Things Differ by Relative Nonbeing. Plato believed that things differ because differing forms or archetypes lie behind them. These ideas or forms, are the reality. All things in this world of our experience are only shadows of the real world. They have meaning because they participate in the true forms. For example, each individual human being participates in the universal form of humanness in the world of ideas.

Plato saw the weakness of his view and tried to escape by modifying it to the explanation that the forms or ideas are not indivisibly and unrelatably separated by absolute nonbeing; rather, they are related by *relative* nonbeing.

This relative nonbeing was also called the “other” (Plato, *Sophist,* 255d). Plato believed he could have many different forms (beings) and thus avoid monism. Each form differed from other forms in that it was not that other form.

All determination is by negation. A sculptor determines what the statue is in relation to the stone by chipping away what is unwanted. The finished form is other than what the sculpture would have been if different chips lay at the sculptor’s feet. Likewise, each form is differentiated from every other form by what is not there. The chair is distinguished from everything else in the room in that it is *not* the table. It is *not* the floor or the wall, etc. The chair is not absolutely nothing. It has *chairness* in itself. But it is nothing in relation to other things, because it is not those other things.

Parmenides would not have been impressed by Plato's attempt. He would have asked whether there was any difference in the beings themselves. If not, then he would have asserted that all these beings (forms) must then be identical. There are not many beings but only one.

Things Differ as Simple Beings. Both the atomist and Platonist took one horn of the Parmenidian dilemma. They tried to differentiate things by nonbeing. Aristotle and Thomas Aquinas sought to find a difference in the beings themselves. Both contended that beings are essentially different. Aristotle held that these beings are metaphysically simple (Aristotle, IX, 5, 1017a 35b-a). Thomas Aquinas viewed them as metaphysically composite.

See the article ARISTOTLE for the full argument that there is a plurality of forty-seven or fifty-five unmoved movers that are separate from one another in their very being. This plurality of beings causes all motion in the world, each from its own cosmic domain. Each is a pure form with no matter. Matter differentiates things in this world. This plurality of totally separated substantial forms has no commonness or community of being. The movers are completely diverse, one from another. They cannot be related (see Eslick, 152–53).

Parmenides would ask Aristotle how simple beings can differ in their very being. Things composed of form and matter can differ in that one particular matter differs from all other matter, even though they have the same form. But how do pure forms (beings) differ? Here is no principle of differentiation. If there is no difference in their beings, their being is identical. Aristotle's solution does not avoid monism.

Thomism: Things Differ as Complex Beings. The fourth pluralistic alternative to Parmenidean monism is represented by Thomas Aquinas, who with Aristotle, sought difference within beings themselves. But unlike Aristotle, who began with simple beings, Aquinas believed that all finite beings are compositions. Only God is an absolutely simple Being, and there can be only one such Being (God). However, there can be other kinds of being, namely, composed beings. Beings differ in their very being because there can be different kinds of beings (Aquinas, 1a. 4, 1, ad 3). God, for example, is an infinite kind of being. All creatures are finite kinds of beings. God is pure actuality; all creatures are composed of both actuality and potentiality. Hence, finite things differ from God in that they have a limiting potentiality; he does not. Finite things can differ from each other in whether their potentiality is completely actualized (as in angels) or whether it is being progressively actualized (as in human beings). But in all creatures their essence (whatness) is really distinct from their existence (isness). God's essence and existence are identical. Aquinas was not the first to make this distinction, but he was the first to make such extensive use of it.

Aquinas argues in his book *On Being and Essence* that existence is something other than essence except in God, whose essence is his existence. Such a being must be one and unique, since multiplication of anything is only possible where there is a difference. But in God there is no difference. It follows necessarily that in everything else, except this one unique existence, existence must be one thing and essence another.

This answered the dilemma posed by monism. Things do differ in their being because they are different kinds of beings. Parmenides was wrong because he assumed that "being" is always

understood univocally (the same way). Aquinas saw that being is analogous (*see* ANALOGY, PRINCIPLE OF). This means each being can be understood in similar but different ways. All beings that exist are the same in that they are all *actual* . Finite beings differ from the one infinite Being in that they have differing potentialities to become other things, or to cease being. And they have differing actualizations of those individual potentials.

Superiority of the Thomistic Position. Aquinas' view has value both in its own rationality and in the implausibility of its alternatives. Parmenides' position does violence to our experience of a differentiated, yet interrelated, multiplicity of beings.

The *Thomistic* position on plurality is that multiplicity is possible because each thing has its own mode of *be* -ing. Essence, the principle of differentiation, is real. This is not to say that essence is independent of existence. Essence is real *because* it exists. The real distinction within being between essence *(essentia)* and existence *(esse)* seems to be the only satisfactory answer to the Parmenidian problem of unity and plurality. Without an analogy of being, there is no way to account for multiplicity.

Parmenides saw no multiplicity because he saw all being univocally. Things are either totally unrelated or totally identical. There was no middle ground. If all being is univocal, then all being is identical. There is no room for distinction; it is all one Being. This is why the monistic worldview lacks any possibility of a Creator-creature distinction. It is why monistic religions view the ultimate hope as becoming submerged into "god." Everything else is nonbeing. The only way to avoid the monistic conclusion which follows from either an equivocal or a univocal view of beings is to take an analogical view. And the only way being can be analogical is if there is within being both the principle of unification *and* the principle of differentiation. Since finite beings have different potentialities (essences), these finite beings can be differentiated in reality when these potentialities are actualized or brought into existence in different kinds of being.

Conclusion. Being is that which is. How many beings are there? Being can be either simple (pure actuality) or complex (actuality and potentiality). There cannot be two absolutely simple beings, since there is nothing in a completely simple being by which it could differ from another. A simple being must, however, differ from complex beings, since it has no potentiality and they do. This is the Creator-creature distinction. It is why there can be only one pure and simple God, but many created beings that mix actuality and potency or potentiality. Only one *is* Being; everything else *has* being. This appears to be the only adequate answer to monism.

Monotheism. ***See*** **THEISM ; ISLAM ; MONOTHEISM, PRIMITIVE .**

Monotheism, Primitive. The Bible teaches that monotheism was the earliest conception of God. The very first verse of Genesis is monotheistic: “In the beginning God created the heavens and the earth” (Gen. 1:1). The patriarchs Abraham, Isaac, and Jacob reflect an early monotheism. Job, the only other biblical book that is set in an ancient pre-Mosaic period, clearly has a monotheistic view of God (see, for example, Job 1:1 , 6 , 21). Romans 1:19–25 teaches that monotheism preceded animism and polytheism and that these forms of religion resulted as people sinfully exchanged the glory of God for “images made to look like mortal man and birds and animals and reptiles.”

Monotheism, Early or Late? *Frazer’s Late Monotheism.* Since James Frazer published *The Golden Bough* (1912) it has been widely believed that religions evolved from animism through polytheism to henotheism and finally monotheism. Even before this Charles Darwin set the stage for such an evolutionary scheme. Frazer alleged that Christianity copied pagan myths. In spite of its selective use of anecdotal data, that have been outdated by subsequent research, the book still holds wide influence, and its ideas are assumed true. Frazer’s evolutionary thesis of religion actually is without foundation, as is noted in the article on his work.

Arguments for Early Monotheism. There is substantial evidence to support the work of Schmidt (see Schmidt) that monotheism is the primitive belief about God. Arguments for a primitive monotheism come from the earliest records and traditions that have survived. These include not only the Bible, but also the Ebla Tablets and studies of preliterate tribes. Genesis represents the oldest records of the human race, going back to the first man and woman. Archaeologist William F. Albright has demonstrated that the Genesis patriarchal record is historical. “Thanks to modern research,” he wrote, “we now recognize its [Scripture’s] substantial historicity. The narratives of the patriarchs, of Moses and the exodus, of the conquest of Canaan, of the judges, the monarchy, exile and restoration, have all been confirmed and illustrated to an extent that I should have thought impossible forty years ago” (*From the Stone Age to Christianity* , 1).

Genesis is both a literary and genealogical work, tied together by a listing of family descendants (Genesis 5 , 10) and the literary formula: “this is the history [or account] of.” The phrase is used throughout Genesis (2:4 ; 5:1 ; 6:9 ; 10:1 ; 11:10 , 27 ; 25:12 , 19 ; 36:1 , 9 ; 32:2). What is more, events from every one of the disputed first 11 chapters of Genesis are referred to by Jesus and New Testament writers as historical. This includes the existence of Adam and Eve (see Matt. 19:4–5), the temptation (1 Tim. 2:14) and fall (Rom. 5:12), the sacrifices of Cain and Abel (Heb. 11:4), the murder of Abel by Cain (1 John 3:12), the birth of Seth (Luke 3:38), the translation of Enoch to heaven (Heb. 11:5), marriage before the flood, the flood and

destruction of humanity (Matt. 24:39), preservation of Noah and his family (2 Peter 2:5), the genealogy of Shem (Luke 3:35–36), and the birth of Abraham (Luke 3:34).

There is strong evidence for the historicity of Adam and Eve in particular. Yet this record reveals that these first persons were monotheists (Gen. 1:1 , 27 ; 2:16–17 ; 4:26 ; 38:6–7).

Behind Genesis, Job is the oldest biblical book, yet this too reveals a monotheistic view of God. God is the personal (Job 1:6 , 21), moral (1:1 ; 8:3–4), yet sovereign (42:1–2) and almighty (5:17 ; 6:14 ; 8:3 ; 13:3) Creator (4:17 ; 9:8–9 ; 26:7 ; 38:6–7).

Aside from the Bible, the oldest relevant records come from *Ebla* in Syria. They reveal a clear monotheism, declaring, "Lord of heaven and earth, the earth was not, you created it, the light of day was not, you created it, the morning light you had not made exist" (Pettinato, *The Archives of Ebla,* 259).

Primitive religions of Africa unanimously reveal an explicit monotheism. John Mbiti studied three hundred traditional religions. "In all these societies, without a single exception, people have a notion of God as the Supreme Being" (see *African Religions and Philosophy*). This is true of primitive religions around the world. Even in polytheistic societies, a high god or sky god reflects a latent monotheism.

The idea of a late, evolved monotheism is itself late, only gaining popularity in the wake of Charles Darwin and his theory of biological evolution (see *On the Origin of Species* , 1859). The idea was stated by Darwin himself in *The Descent of Man* (1871). Frazer's evolutionary idea in religion is based on several unproven assumptions. Among them, it assumes that biological evolution is true, though it lacks support (*see* EVOLUTION, BIOLOGICAL). Even if biological evolution were true, there is no reason to believe evolution would be true of religion.

Frazer's evolution of monotheism thesis also is based on fragmentary and anecdotal evidence, not a serious historical and chronological search for origins of monotheism. It fits evidence around an evolutionary model. The evidence can be explained as well, if not better, if polytheism were a degeneration from original monotheism. Paganism is a falling away from the primitive monotheism. Albright acknowledges that "high gods may be all-powerful and they may be credited with creation of the world; they are generally cosmic deities who often, perhaps usually, reside in heaven" (*From the Stone Age* , 170). This clearly runs counter to the animistic and polytheistic conceptions.

Conclusion. There is no real reason to deny the biblical account of an early monotheism. On the contrary, there is every evidence that monotheism was the first religion, from which others devolved, just as Romans 1:19–25 declares. This better fits the evidence of the existence of a monotheistic God (*see* GOD, EVIDENCE FOR) and the proven tendency of human beings to distort the truth God reveals to them (*see* NOETIC EFFECTS OF SIN).

Moral Argument for God. Most arguments for the existence of God, such as the cosmological argument and teleological argument, are from the ancient world. The ontological argument comes from medieval times. But the moral argument has modern ancestry, emanating from the works of Immanuel Kant.

Kant's Moral Postulate. Kant strongly rejected traditional arguments for God's existence (*see* GOD, OBJECTIONS TO PROOFS FOR). He did not, however, reject belief in God. Rather, he believed that God's existence is a practically (morally) necessary *postulate* , even though we cannot *prove* it.

Kant's argument from practical reason for God's existence, from his *Critique of Practical Reason* , can be stated:

1. Happiness is what all human beings desire.
2. Morality (viz., categorical imperative) is the duty of all human beings (what they ought to do).
3. The unity of happiness and duty is the greatest good (the *summum bonum*).
4. The *summum bonum* ought to be sought (since it is the greatest good).

NTCERK *New Twentieth Century Encylcopedia of Religious Knowledge*

5. But the unity of desire and duty (which is the greatest good) is not possible by finite human beings in limited time.

6. And the moral necessity of doing something implies the possibility of doing it (ought implies can).

7. Therefore, it is morally (i.e., practically) necessary to postulate: (a) a Deity to make this unity possible (i.e., a power to bring them together), and (b) immortality to make this unity achievable.

A simpler form goes:

1. The greatest good of all persons is that they have happiness in harmony with duty.

2. All persons should strive for the greatest good.

3. What persons ought to do, they can do.

4. But persons are not able to realize the greatest good in this life or without God.

5. Therefore, we must postulate a God and a future life in which the greatest good can be achieved.

Kant never offered his postulate as a *theoretical proof* for God. He did not believe such proof to be possible. Rather, he viewed God's existence as a morally necessary presupposition, not the result of a rationally necessary argument.

Kant's premises are challenged. Existentialists , including Jean-Paul Sartre and Albert Camus and atheists such as Friedrich Nietzsche challenged the assumption that the greatest good is achievable. Although they lived before Kant, Martin Luther and John Calvin , with other Protestant Reformers, denied that ought implies can. Still others, from Aristotle forward, believed the greatest good is achievable in this life.

Rashdall's Moral Argument. Hastings Rashdall did what Kant never attempted when he offered a rational argument for the existence of God from the moral law. Beginning with the objectivity of the moral law, he reasoned to an absolutely perfect moral Mind (see Hick, 144–52).

1. An absolutely perfect moral ideal exists (at least psychologically in our minds).

2. An absolutely perfect moral law can exist only if there is an absolutely perfect moral Mind: (a) Ideas can exist only if there are minds (thoughts depend on thinkers). (b) And absolute ideas depend on an absolute Mind (not on individual [finite] minds like ours).

3. Hence, it is rationally necessary to postulate an absolute Mind as the basis for the absolutely perfect moral idea.

In support of the objectivity of the absolute moral idea Rashdall offers this reasoning:

1. Morality is generally understood as objectively binding.

2. Mature minds understand morality as being objectively binding (i.e., binding on all, not just some).

3. Moral objectivity is a rationally necessary postulate (because something cannot be judged as better or worse unless there is an objective standard of comparison).

4. Objective moral ideals are practically necessary to postulate.

If an objective moral law exists independent of individual minds, then it must ultimately come from a Mind that exists independently of finite minds. It is rationally necessary to postulate such a Mind in order to account for the objective existence of this moral law.

The most common ways to challenge this argument are to question the existence of an objective moral law, and to deny that an absolute moral ideal would need an absolute moral Mind. Why cannot a finite mind conjure up the idea of moral perfection without there being any in the real world. After all, cannot we think of perfect triangles without there being one?

Sorley's Moral Argument. The moral argument is dependent on the objectivity of the moral law. Hence, it is necessary to offer a defense of this premise. This is precisely what W. R. Sorley does in his version of the moral argument for God's existence. Since there exists a moral ideal prior to, superior to, and independent of all finite minds, there must be a supreme moral Mind from which this moral ideal is derived:

1. There is an objective moral law that is independent of human consciousness of it and that exists in spite of human lack of conformity to it: (a) Persons are conscious of such a law beyond themselves; (b) Persons admit its validity is prior to their recognition of it; (c) Persons acknowledge its claim on them, even while not yielding to it; (d) no finite mind completely grasps its significance; (e) all finite minds together have not reached complete agreement on its meaning, nor conformity with its ideal.

2. But ideas exist only in minds.

3. Therefore, there must be a supreme Mind (beyond all finite minds) in which this objective moral law exists.

Sorley draws attention to an important difference between a natural law and this moral law. The former is descriptive of the universe, while the latter is prescriptive of human behavior. Hence, the moral law cannot be part of the natural world. It is the way humans ought to act. It is beyond the natural world and is the way we should behave in the world.

Critics of Sorley's form of the moral argument claim that simply because persons *believe* there is a moral law beyond them and independent of them, does not mean it *really* is. Following

Feuerbach , they believe that such a law is only a projection of human imagination. It is a collective ideal of human consciousness (or unconsciousness), which conjures up the best from human nature as an ideal by which we should live. Critics also point to differences in understanding of morals as an indication that there is no one universal moral law but merely a collection of different human ideals that overlap and are thereby confused as one moral law. Finally, critics challenge the premise that only a supreme, extrahuman Mind can be the basis for this universal moral ideal. Perfect ideas can be created by imperfect minds, they say.

Trueblood's Moral Argument. Evangelical philosopher Elton Trueblood adds significantly to the moral arguments proposed by Rashdall and Sorley in his form of the argument:

1. There must be an objective moral law; otherwise: (a) There would not be such great agreement on its meaning. (b) No real moral disagreements would ever have occurred, each person being right from his own moral perspective. (c) No moral judgment would ever have been wrong, each being subjectively right. (d) No ethical question could ever be discussed, there being no objective meaning to any ethical terms. (e) Contradictory views would both be right, since opposites could be equally correct.

2. This moral law is beyond individual persons and beyond humanity as a whole: (a) It is beyond individual persons, since they often sense a conflict with it. (b) It is beyond humanity as a whole, for they collectively fall short of it and even measure the progress of the whole race by it.

3. This moral law must come from a moral Legislator because: (a) A law has no meaning unless it comes from a mind; only minds emit meaning. (b) Disloyalty makes no sense unless it is to a person, yet people die in loyalty to what is morally right. (c) Truth is meaningless unless it is a meeting of mind with mind, yet people die for the truth. (d) Hence, discovery of and duty to the moral law make sense only if there is a Mind or Person behind it.

4. Therefore, there must be a moral, personal Mind behind this moral law.

It is noteworthy that Trueblood's form of the moral argument argues its validity in terms of its rationality. It reasons, in essence, that to reject the moral law is irrational or meaningless. That is, unless we assume the universe is irrational, there must be an objective moral law and, thereby, an objective Moral Law Giver.

In addition to the things said against the other forms of the moral argument, some critics, especially existentialists and nihilists, simply point to the absurdity of the universe. They simply refuse to assume, with Trueblood, that the universe is rational. They admit that it may be meaningless to assume there is no moral law, but add quickly that this is the way things are—meaningless. Of course, the defender of the moral argument could point to the self-defeating nature of the claim that "Everything is meaningless," since that very statement is assumed to be meaningful.

Lewis' Moral Argument. The most popular modern form of the moral argument was given by C. S. Lewis in *Mere Christianity* . He not only gives the most complete form of the argument in the most persuasive way, but he also answers major objections. The moral argument of Lewis can be summarized:

1. There must be a universal moral law, or else: (a) Moral disagreements would make no sense, as we all assume they do. (b) All moral criticisms would be meaningless (e.g., "The Nazis were wrong."). (c) It is unnecessary to keep promises or treaties, as we all assume that it is. (d) We would not make excuses for breaking the moral law, as we all do.

2. But a universal moral law requires a universal Moral Law Giver, since the Source of it: (a) Gives moral commands (as lawgivers do). (b) Is interested in our behavior (as moral persons are).

3. Further, this universal Moral Law Giver must be absolutely good: (a) Otherwise all moral effort would be futile in the long run, since we could be sacrificing our lives for what is not ultimately right. (b) The source of all good must be absolutely good, since the standard of all good must be completely good.

4. Therefore, there must be an absolutely good Moral Law Giver.

The Moral Law Is Not Herd Instinct. Lewis anticipates and persuasively answers major objections to the moral argument. Essentially, his replies are:

What we call the moral law cannot be the result of herd instinct or else the stronger impulse would always win, but it does not. We would always act *from* instinct rather than selflessly to help someone, as we sometimes do. If the moral law were just herd instinct, then instincts would always be right, but they are not. Even love and patriotism are sometimes wrong.

The Moral Law Is Not Social Convention. Neither can the moral law be mere social convention, because not everything learned *through* society is *based* on social convention. For example, math and logic are not. The same basic moral laws can be found in virtually every society, past and present. Further, judgments about social progress would not be possible if society were the basis of the judgments.

The Moral Law Differs from Laws of Nature. The moral law is not to be identified with the laws of nature. Nature's laws are descriptive (is), not prescriptive (ought) as are moral laws. Factually convenient situations (the way it *is*) can be morally wrong. Someone who tries to trip me and fails is wrong, but someone who accidentally trips me is not.

The Moral Law Is Not Human Fancy. Neither can the moral law be mere human fancy, because we cannot get rid of it even when we would like to do so. We did not create it; it is impressed on us from without. If it were fancy, then all value judgments would be meaningless, including such statements as "Hate is wrong." and "Racism is wrong." But if the moral law is not a description or a merely human prescription, then it must be a moral prescription from a Moral

Prescriber beyond us. As Lewis notes, this Moral Law Giver is more like Mind than Nature. He can no more be part of Nature than an architect is identical to the building he designs.

Injustice Does Not Disprove a Moral Law Giver. The main objection to an absolutely perfect Moral Law Giver is the argument from evil or injustice in the world. No serious person can fail to recognize that all the murders, rapes, hatred, and cruelty in the world leave it far short of perfect. But if the world is imperfect, how can there be an absolutely perfect God? Lewis' answer is simple: The only way the world could possibly be imperfect is if there is an absolutely perfect standard by which it can be judged to be imperfect (*see* MORALITY, ABSOLUTE NATURE OF). For injustice makes sense only if there is a standard of justice by which something is known to be unjust. And absolute injustice is possible only if there is an absolute standard of justice. Lewis recalls the thoughts he had as an atheist:

> Just how had I got this idea of *just* and *unjust?* A man does not call a line crooked unless he has some idea of a straight line. What was I comparing this universe with when I called it unjust. . . . Of course I could have given up my idea of justice by saying it was nothing but a private idea of my own. But if I did that, then my argument against God collapsed too—for the argument depended on saying that the world was really unjust, not simply that it did not happen to please my private fancies. Thus in the very act of trying to prove that God did not exist—in other words, that the whole of reality was senseless—I found I was forced to assume that one part of reality—namely my idea of justice—was full of sense. [*Mere Christianity* , 45, 46]

Rather than disproving a morally perfect Being, the evil in the world presupposes a perfect standard. One could raise the question as to whether this Ultimate Law Giver is all powerful but not whether he is all perfect. For if anyone insists there is real imperfection in the world, then there must be a perfect standard by which this is known.

Morality, Absolute Nature of. Orthodox Christianity has always defended moral absolutes. However, most modern ethicists hold some form of relativism. Thus, it is necessary to defend the belief in moral absolutes.

Moral Absolutes. Before the absolute nature of morality can be understood, morality must be defined. Several things are meant by a moral obligation. First, a moral duty is good in itself (an *end*), not merely good as a means. Further, it is something we *ought* to pursue, a duty. Morality is *prescriptive* (an "ought"), not merely descriptive (an "is"). Morality deals with what is right, as opposed to wrong. It is an obligation, that for which a person is accountable.

An absolute moral obligation is:

an *objective* (not subjective) moral duty—a duty for all persons.

an *eternal* (not temporal) obligation—a duty at all times.

a *universal* (not local) obligation—a duty for all places.

An absolute duty is one that is binding on all persons at all times in all places.

Defense of Absolutes. Moral absolutes can be defended by showing the deficiency of moral relativism. For either there is a moral absolute or else everything is morally relative. Hence, if relativism is wrong, then there must be an absolute basis for morality.

Everything is relative to an absolute. Simply by asking, "Relative to what?" it is easy to see that total relativism is inadequate. It can't be relative to the relative. In that case it could not be relative at all, ad infinitum, since there would be nothing to which it was relative, etc. Albert Einstein did not believe everything was relative in the physical universe. He believed the speed of light is absolute.

Measurement is impossible without absolutes. Even moral relativists make such statements as, "The world is getting better (or worse)." But it is not possible to know it is getting "better" unless we know what is "Best." Less than perfect is only measurable against a Perfect. Hence, all objective moral judgments imply an absolute moral standard by which they can be measured.

Moral disagreements demand objective standards. Real moral disagreements are not possible without an absolute moral standard by which both sides can be measured. Otherwise both sides of every moral dispute are right. But opposites cannot both be right. For example, "Hitler was an evil man" vs. "Hitler was not an evil man" cannot both be true in the same sense (*see* FIRST PRINCIPLES). Unless there is an objective moral standard by which Hitler's actions can be weighed, we cannot know that he was evil.

Moral absolutes are unavoidable. Total moral relativism reduces to statements such as "You should never say never," "You should always avoid using always," or "You absolutely ought not believe in moral absolutes." "Ought" statements are moral statements, and "ought never" statements are absolute moral statements. So, there is no way to avoid moral absolutes without affirming a moral absolute. Total moral relativism is self-defeating.

Distinctions in Moral Absolutes. If there is an absolute basis for morality, then why do so many believe that all morality is relative? The reasons for this are mostly based on the failure to make proper distinctions.

Difference between Fact (Is) and Value (Ought). Relativists confuse fact and value, what is and what ought to be. What people *do* is subject to change, but what they *ought* to do is not. There is a difference between sociology and morality. Sociology is *descriptive;* morality is *prescriptive* . Relativists confuse the changing factual situation with unchanging moral duty.

Difference between Value and Instance of Value. There is confusion as well between an absolute moral value and changing attitudes regarding whether a given action violates that value. Once witches were sentenced as murderers, but now they are not. What changed was not the moral principle that murder is wrong. Rather, our understanding changed about whether witches really murder people by their curses. One's factual understanding of a moral situation is relative, but the moral values involved in the situation are not.

Difference between Values and Understandings. A similar misunderstanding is over the difference between an unchanging *value* and a changing *understanding* of that value. A couple deeply in love better understand their love after twenty years. The love itself has not changed. Their understanding of it has changed.

Difference between End (Value) and Means. Often moral relativists confuse the *end* (the value itself) with the *means* to attaining that value. Most political disputes are of this sort. Both liberal and conservative politicians agree that justice should be done (the end); they merely disagree as to whose program is the best means to attain justice. Both militarists and pacifists desire peace (the end); they simply disagree as to whether a strong military best attains this peace.

Difference between Command and Culture. Another important difference, often overlooked by moral relativists, is that between the absolute moral command and the relative way a culture can manifest it. All cultures have some concept of modesty and propriety in greeting. In some a kiss is appropriate, while in others such intimacy would horrify. *What* should be done is common, but *how* it should be done differs. Failure to make this distinction misleads many to believe that because a value differs among cultures, the value itself *(what)* differs.

Difference between Applications. A legitimate discussion to decide *which* value applies to a given situation is not the same as a discussion over *whether* there is an absolute value. For example, we err if we think that anyone who believes a pregnant woman has the right to an abortion places no value on human life. They simply do not believe that the unborn are truly human beings. This debate is vastly important, but it should not miscommunicate the notion that the absolute good of protecting life is the issue on the floor. The issue is whether the unborn are human persons (see Geisler, chapter 8).

Conclusion. Moral absolutes are unavoidable. Even those who deny them use them. The reasons for rejecting them are often based on a misunderstanding or misapplication of the moral absolute, not on a real rejection of it. That is, moral values are absolute, even if our understanding of them or the circumstances in which they should be applied are not.

Muhammad, Alleged Bible Predictions of. Muhammad (570–632) claimed to be the last of the prophets of God, the culmination of God's prophetic words to humankind, the seal of the prophets (Sura 33:40). In a well-known *hadith* , Muhammad states his uniqueness this way: "I have been given permission to intercede; I have been sent to all mankind; and the prophets have been sealed with me" (Schimmel, 62). What he spoke was later written in the *Qur'an* which is considered by Muslims to be the verbally inspired and inerrant Word of God. As the last prophet, Muhammad superseded Abraham, Moses, Jesus, and others as the prophet of God.

Islamic apologetics has followed several lines of reasoning for proving the finality of Muhammad over the previous prophets. The chief of these proofs are:

1. that the Old and New Testaments contain clear prophecies about him;

2. that Muhammad's call to be a prophet was miraculous (*see* MUHAMMAD, ALLEGED DIVINE CALL OF);

3. that the language and the teaching of the *Qur'an* are without a parallel (*see* QUR'AN, ALLEGED DIVINE ORIGIN OF);

4. that Muhammad's miracles are a seal on his claims (*see* MUHAMMAD, ALLEGED MIRACLES OF), and

5. that his life and character prove him to have been the last and the greatest of prophets (*see* MUHAMMAD, CHARACTER OF).

Biblical Predictions. In a popular Muslim book, *Muhammad in the Bible,* Abdu L-Ahad Dawud argues that the Bible predicts the coming of the prophet Muhammad. He claims that "Muhammad is the real object of the Covenant, and in him alone are actually and literally fulfilled all the prophecies in the Old Testament" (11). He examines the New Testament, finding Muhammad, not Christ, to be the foretold prophet. The texts Dawud and other Muslims use to support these claims include:

Deuteronomy 18:15–18 . God promised Moses, "I will raise up for them [Israel] a prophet like you from among their brothers; I will put my words in his mouth, and he will tell them

everything I command him” (vs. 18). Muslims believe this prophecy is fulfilled in Muhammad, as the *Qur’an* claims when it refers to “The unlettered Prophet [Muhammad], Whom they find mentioned in their own (Scriptures), in the Law and the Gospels” (sura 7:157).

However, this prophecy could not be a reference to Muhammad. First, it is clear that the term “brothers” means fellow Israelites. The Jewish Levites were told in the same passage that “They shall have no inheritance among their brothers” (vs. 2). Since the term “brothers” refers to Israel, not to their Arab antagonists, why would God raise up for Israel a prophet from their enemies? Elsewhere in Deuteronomy the term *brothers* also means fellow Israelites, not foreigners. God told the Jews to choose a king “from among your own brothers,” not a “foreigner” (Deut. 17:15). Israel never chose for herself a non-Jewish king, though the foreign Herodian kings were forced upon Israel by Rome.

So Muhammad came from Ishmael, as Muslims admit, and heirs to the Jewish throne came from Isaac. According to the Torah, when Abraham prayed “If only Ishmael might live under your blessing!” God answered emphatically, “But my covenant I will establish with Isaac” (Gen. 17:18 , 21). Later God repeated, “It is through Isaac that your offspring will be reckoned” (Gen. 21:12). The *Qur’an* itself states that the prophetic line came through Isaac, not Ishmael: “And We bestowed on him Isaac and Jacob, and We established the Prophethood and the Scripture among his seed” (sura 29:27). The Muslim scholar Yusuf Ali adds the word *Abraham* and changes the meaning as follows, “We gave (Abraham) Isaac and Jacob, and ordained Among his progeny Prophethood And Revelation.” By adding Abraham, the father of Ishmael, he can include Muhammad, a descendent of Ishmael, in the prophetic line! But Abraham’s name is not found in the Arabic text of the *Qur’an* , which Muslims consider to be perfectly preserved.

Jesus, not Muhammad, completely fulfilled this verse. He was from among his Jewish brethren (cf. Gal. 4:4). He fulfilled Deuteronomy 18:18 in that “he will tell them everything I command him.” Jesus said, “I do nothing on my own but speak just what the Father has taught me” (John 8:28). And, “I did not speak of my own accord, but the Father who sent me commanded me what to say and how to say it” (John 12:49). He called himself a “prophet” (Luke 13:33), and the people considered him a prophet (Matt. 21:11 ; Luke 7:16 ; 24:19 ; John 4:19 ; 6:14 ; 7:40 ; 9:17). As the Son of God, Jesus was prophet (speaking to men for God), priest (Hebrews 7–10 , speaking to God for men), and king (reigning over men for God, Revelation 19–20).

Other characteristics of the “Prophet” to come fit only Jesus. These include speaking with God “face to face” and performing “signs and wonders,” which Muhammad admitted he did not do (see below).

Deuteronomy 33:2 . Many Islamic scholars believe this verse predicts three separate visitations of God—one on “Sinai” to Moses, another in “Seir” through Jesus, and a third in “Paran” (Arabia) through Muhammad who came to Mecca with an army of “ten thousand.”

This contention can be easily answered by looking at a map of the area. Paran and Seir are near Egypt in the Sinai peninsula (cf. Gen. 14:6 ; Num. 10:12 ; 12:16–13:3 ; Deut. 1:1), not in

Palestine where Jesus ministered. Paran is hundreds of miles from Mecca in the northeastern Sinai.

More significant, this verse is speaking of the " LORD " coming, not Muhammad. And he is coming with "ten thousand *saints,* " not 10,000 *soldiers,* as Muhammad did.

This prophecy is said to be a "blessing that Moses the man of God pronounced on the Israelites before his *death* " (vs. 1). If it were a prediction about Islam, which has been a constant enemy of Israel, it could scarcely have been a blessing to Israel. In fact, the chapter goes on to pronounce a blessing on each of the tribes of Israel by God, who "will drive out the enemy" (vs. 27).

Deuteronomy 34:10 . This verse claims that "Since then, no prophet has risen in Israel like Moses." Muslims argue that this proves that the predicted prophet could not be an Israelite but was Muhammad instead.

However, the "since" means since Moses' death to the time this last chapter was written, probably by Joshua. Even if Deuteronomy was written much later, as some critics believe, it was composed many centuries before the time of Christ and would not eliminate him.

As noted above, Jesus was the perfect fulfillment of this prediction of the prophet to come. One reason this could not refer to Muhammad is that the prophet to come was like Moses, who did "all those miraculous signs and wonders the Lord sent" (Deut. 34:11). Muhammad by his own confession did not perform signs and wonders, as did Moses and Jesus (see sura 2:118; 3:183). Finally, the prophet to come was like Moses who spoke to God "face to face" (Deut. 34:10). Muhammad claimed to receive his revelations through an angel (see sura 25:32; 17:105). Jesus, like Moses, was a direct mediator (1 Tim. 2:5 ; Heb. 9:15), who communicated directly with God (cf. John 1:18 ; 12:49 ; 17). Thus, the prediction could not have referred to Muhammad, as many Muslims claim.

Habakkuk 3:3 . The text declares that "God came from Teman, the Holy One from Mount Paran. His glory covered the heavens and his praise filled the earth." Some Muslim scholars believe this refers to the prophet Muhammad coming from Paran (Arabia), and use it in connection with a similar text in Deuteronomy 33:2 .

As already noted (in comments on Deut. 33:2 above), Paran is hundreds of miles from Mecca, to which Muhammad came. Further, the verse is speaking of God coming, not Muhammad, who denied being God. Finally, the "praise" could not refer to Muhammad (whose name means "the praised one"), since the subject of both "praise" and "glory" is God, and Muslims would be the first to acknowledge that Muhammad is not God and should not be praised as God.

Psalm 45:3–5 . Since this verse speaks of one coming with the "sword" to subdue his enemies, Muslims sometimes cite it as a prediction of their prophet Muhammad, who was known as "the prophet of the sword." They insist it could not refer to Jesus, since he never came with a sword, as he himself admitted (in Matt. 26:52).

However, the very next verse (vs. 6) identifies the person spoken of as "God" whom, according to the New Testament, Jesus claimed to be (John 8:58 ; 10:30), but Muhammad repeatedly denied being anything other than a human prophet (*see* CHRIST, DEITY OF).

Further, although Jesus did not come the first time with a sword, the Bible declares that he will at his second coming, when the "armies of heaven" will follow him (Rev. 19:11–16). The first time he came to die (Mark 10:45 ; John 10:10–11). The second time he will come in "blazing fire with his powerful angels. He will punish those who do not know God" (2 Thess. 1:7–8). So there is no warrant in taking this as a prediction of Muhammad. Indeed Hebrews 1:8–9 explicitly identifies Christ as the subject of this passage.

Isaiah 21:7 . Isaiah in vision sees chariots with teams of horses, riders on donkeys or riders on camels. Muslim commentators take the rider on the "donkeys" to be Jesus and the rider on "camels" to be Muhammad, whom they believed superseded Jesus as a prophet. But this is speculation with no basis in the text or context. Even a casual look at the passage reveals that it is speaking about the fall of Babylon several centuries before the time of Christ. Verse 9 declares: "Babylon has fallen, has fallen!" There is nothing in the text about either Christ or Muhammad. Further, the reference to horses, donkeys, and camels is speaking about the various means by which the news of Babylon's fall would spread. Again, absolutely nothing here refers to Muhammad.

Matthew 3:11 . According to Dawud, this prediction of John the Baptist could not refer to Christ and must refer to Muhammad (157). John said, "after me will come one who is more powerful than I, whose sandals I am not fit to carry. He will baptize you with the Holy Spirit and with fire." Dawud argues that "the very preposition 'after' clearly excludes Jesus from being the foretold Prophet," since "they were both contemporaries and born in one and the same year." Further, "it was not Jesus Christ who could be intended by John, because if such were the case he would have followed Jesus and submitted to him like a disciple and subordinate." What is more, "if Jesus were in reality the person whom the Baptist foretold, . . . there would be no necessity nor any sense in his being baptized by his inferior in the river like an ordinary penitent Jew!" Indeed, John " *did not know* the gift of prophecy in Jesus until he heard— *while in prison* —of his miracles." Finally, since the one John proclaimed was to make Jerusalem and its temple more glorious (cf. Hag. 2:8–9 ; Mal. 3:1), it could not have referred to Christ; otherwise this "is to confess the absolute failure of the whole enterprise" (Dawud, 158–60).

Jesus' public ministry did not begin until "after" that of John's, precisely as John said. Jesus did not begin until after his baptism by John (Matt. 3:16–17) and temptation (Matt. 4:1–11). Second, John did defer to Jesus, saying he was unworthy even to carry his shoes (Matt. 3:11). In fact, the text says "John tried to deter him [Jesus], saying, 'I need to be baptized by you, and do you come to me?' " (Matt. 3:14). Third, Jesus stated his reason for baptism, namely, it was necessary "to fulfill all righteousness" (Matt. 3:15). Since he came not to "abolish them [Law or the Prophets] but to fulfill them" (Matt. 5:17). He had to identify with its demands. Otherwise, he would not have been, as he was, perfectly righteous (cf. Rom. 8:1–4). Fourth, John clearly knew who Christ was when he baptized him, since he proclaimed him to be "the Lamb of God who takes away the sin of the world" (John 1:29). And he, with the crowd, saw the "Spirit of God" descend on Jesus and the "voice from Heaven" proclaim, "This is my Son, whom I love;

with him I am well pleased" (Matt. 3:16–17). While John did express some later questions, these were quickly answered by Christ who assured him by his miracles (Matt. 11:3–5) that he was the Messiah predicted by Isaiah (35:5–6 ; 40:3).

Finally, all of the Old Testament prophecies about Messiah (Christ) were not fulfilled at his first coming; some await his coming again (*see* PROPHECY, AS PROOF OF BIBLE). Jesus stated that he would not set up his kingdom until the end of the age (Matt 24:3), when they would "see the Son of Man coming on the clouds of the sky, with power and great glory" (Matt. 24:30). Only then "the Son of Man sits on his glorious throne, . . . [and his apostles] on twelve thrones, judging the twelve tribes of Israel" (Matt. 19:28).

Jesus' eyewitness contemporaries and disciples considered him to be the one predicted in the Old Testament, since that is precisely how they apply the predictions of Malachi (3:1) and Isaiah (40:3) in their writings (cf. Matt. 3:1–3 ; Mark 1:1–3 ; Luke 3:4–6).

John 14:16 . Muslim scholars see in Jesus' reference to the coming of the promised "Helper" (Gk. *paraclete*) a prediction of Muhammad. They base this on the *Qur'anic* (sura 61:6) reference to Muhammad as "Ahmad" *(periclytos),* which they take to be the correct rendering of the Greek word *paraclete* here.

Of the more than 5000 Greek manuscripts of the New Testament (Geisler and Nix *,* chap. 22), there is absolutely no manuscript authority for placing the word *periclytos* ("praised one") in the original, as the Muslims claim it should read. Universally they read *paraclete* ("helper"). In this passage Jesus clearly identifies the "Helper" as "the Counselor, the Holy Spirit, whom the Father will send" (John 14:26).

The Helper was given to Jesus' apostles (vs. 16), namely, those who would "testify" of him because they "have been with . . . [him] from the beginning" (John 15:27 ; cf. Luke 1:1–2 ; Acts 1:22). But Muhammad was not one of Jesus' apostles, so he could not have been the one Jesus referred to as the "Helper" *(paraclete).*

The Helper Jesus promised was to abide with them "forever" (vs. 16), but Muhammad has been dead for over thirteen centuries.

Jesus said to the disciples, "You know him [the Helper]" (vs. 17), but the apostles did not know Muhammad. He would not be born for another six centuries. Also, Jesus told his apostles that the Helper will be "in you" (vs. 17). Muhammad could not have been "in" Jesus' apostles. Their teaching was not in accord with Muhammad's, so he could not have been "in" Jesus' apostles in any sort of spiritual or doctrinally compatible way.

Jesus affirmed that the Helper would be sent "in my [Jesus'] name" (John 14:26). But no Muslim believes Muhammad was sent by Jesus in Jesus' name.

The Helper Jesus was about to send would not "speak on his own" (John 16:13). But Muhammad constantly testifies to himself (for example, in sura 33:40). The Helper would

“glorify” Jesus (John 16:14), but Islam declares that Muhammad supersedes Jesus. He would not be glorifying Jesus who he considered an earlier and, in that sense, inferior prophet.

Finally, Jesus asserted that the Helper would come in “not many days” (Acts 1:5), rather than after hundreds of years. The Holy Spirit came fifty days later on the Day of Pentecost (Acts 1–2).

Muslim Use of Scripture. Careful observation of all these texts in their literary setting shows that they are wrenched out of their context by Muslim apologists eager to find in Judeo-Christian Scripture something to show the superiority of Islam (*see* CHRIST, UNIQUENESS OF). Islamic scholars complain when Christians try to interpret the *Qur’an* to Christian advantage. But they are guilty of the very thing they charge.

Muslim usage of Scripture is often arbitrary and without textual warrant. Although Islamic scholars are quick to point out that the Scriptures have been corrupted (*see* NEW TESTAMENT MANUSCRIPTS), nevertheless, when they come upon a text they feel can be made to lend credence to their view, they have no problem accepting its authenticity. Their determination of which biblical texts are authentic is arbitrary and self-serving.

Conclusion. Nowhere did the Bible predict the coming of Muhammad. Attempts by Muslim apologists to claim such involved forced interpretations contrary to the context of the passage. Rather, the Old Testament prophets predicted in detail the coming of Christ. Christ, not Muhammad, is confirmed to be God’s Messenger (*see* MIRACLES, APOLOGETIC VALUE OF ; CHRIST, DEITY OF). Indeed, Christ is proven to be the very Son of God.

Muhammad, Alleged Divine Call of. Muhammad claims to be called of God to be a prophet. Indeed, he claimed to be the last of God’s prophets on earth, “the Seal of the Prophets” (sura 33:40). The alleged miraculous nature of his call is used by Muslims to prove that Islam is the true religion.

An examination of the facts, even from Muslim sources, reveals that the Muslim view of Muhammad suffers an acute case of overclaim. One does not find, for example, support for the claim that he was called to bring the full and final revelation from God in the circumstances that surround Muhammad’s call.

Elements of the Call. *Choked by an Angel.* During his call Muhammad said he was choked by the angel—three times. Muhammad said of the angel, "he choked me with the cloth until I believed that I should die. Then he released me and said: 'Recite!' *(Iqra).* When he hesitated, he received "twice again the repeated harsh treatment" (Andrae, 43–44). This seems an unusual form of coerced learning, uncharacteristic of the gracious and merciful God Muslims claim Allah to be, as well as contrary to the free choice they believe he has granted his creatures.

Deceived by a Demon? Muhammad himself questioned the divine origin of the experience. At first he thought he was being deceived by a *jinn* or evil spirit. In fact, Muhammad was at first deathly afraid of the source of his newly found revelation, but he was encouraged by his wife Khadijah and her cousin, Waraqah, to believe that the revelation was the same as that of Moses and that he too would be a prophet of his nation. One of the most widely respected modern Muslim biographer, Muhammad Husayn Haykal, speaks vividly of Muhammad's plaguing fear that he was demon possessed:

> Stricken with panic, Muhammad arose and asked himself, 'What did I see? *Did possession of the devil which I feared all along come to pass?* ' Muhammad looked to his right and his left but saw nothing. For a while he stood there trembling with fear and stricken with awe. He feared the cave might be haunted and that he might run away still unable to explain what he saw. [74, emphasis added]

Haykal notes that Muhammad had feared demon possession before, but his wife Khadijah talked him out of it. For "as she did on earlier occasions when *Muhammad feared possession by the devil,* so now stood firm by her husband and devoid of the slightest doubt." Thus "respectfully, indeed reverently, she said to him, 'Joy to my cousin! Be firm. By him who dominates Khadijah's soul I pray and hope that you will be the Prophet of this nation. By God, he will not let you down' " (ibid., 75). Indeed, Haykal's description of Muhammad's experience of receiving a "revelation" fits that of other mediums. Haykal wrote of the revelation to remove the suspicion of guilt for one of Muhammad's wives:

> Muhammad had not moved from his spot when revelation came to him accompanied by the usual convulsions. He was stretched out in his clothes and a pillow was placed under his head. A'ishah [his wife] later reported, "Thinking that something ominous was about to happen, everyone in the room was frightened except me, for I did not fear a thing, knowing I was innocent . . ." Muhammad recovered, he sat up and began to wipe his forehead where beads of perspiration had gathered. [ibid., 337]

Another characteristic often associated with occult "revelations" is contact with the dead (cf. Deut. 18:9–14). The Muslim biographer, Haykal, relates an occasion when "The Muslims who overheard him [Muhammad] asked, 'Are you calling the dead?' and the Prophet answered, 'They hear me no less than you do, except that they are unable to answer me' " (ibid., 231). On another occasion Muhammad was found "praying for the dead buried in that cemetery" (ibid., 495). Haykal even frankly admits that "There is hence no reason to deny the event of the Prophet's visit to the cemetery of Baqi as out of place considering *Muhammad's spiritual and psychic power of communication with the realms of reality and his awareness of spiritual reality that surpasses that of ordinary men* " (ibid., 496, emphasis added).

Silence and Depression. Also clouding the alleged divine origin of his message is the fact that after this there was a long period of silence which, according to some accounts lasted about three years, during which time Muhammad fell into the depths of despair, feeling forsaken by God, and considering suicide. These circumstances seem uncharacteristic of a divine call.

The Satanic "Revelation." On another occasion Muhammad set forth a revelation he thought was from God, but later changed it, claiming Satan had slipped the verses into the text. God said to the prophet, "They are but names which ye have named, ye and your fathers, for which Allah hath revealed no warrant" (sura 53:23, Pickethall trans. cf. 22:51). But unfortunately human deception is always a possibility. Muslims themselves believe that all claimants to revelations opposing the *Qur'an* involve deception. In view of this, it is reasonable to ask whether Muslims have taken seriously the possibility that Muhammad's first impression was the right one, that he was being deceived by a demon. They acknowledge that Satan is real and that he is a great deceiver. Why then dismiss the possibility that Muhammad himself was being deceived, as he first thought?

Human Sources for Qur'an. Finally, some critics see nothing at all supernatural in the source of Muhammad's ideas, noting that the vast majority of ideas in the *Qur'an* have known Jewish, Christian, or pagan sources (*see* QUR'AN, ALLEGED DIVINE ORIGIN OF). Even the noted biographer, Haykal, unwittingly places his finger on a possible source of Muhammad's "revelations." He wrote,

> The Arab's imagination is by nature strong. Living as he does under the vault of heaven and moving constantly in search of pasture or trade, and being constantly forced into the excesses, exaggerations, and even lies which the life of trade usually entails, the Arab is given to the exercise of his imagination and cultivates it at all times whether for good or for ill, for peace or for war. [ibid., 319]

Conclusion. The claim that Muhammad was called of God is not supportable by the evidence. Indeed, the indication, even in Muslim sources, is just the opposite. What is more, there is no supernatural confirmation of this call (*see* MUHAMMAD, ALLEGED MIRACLES OF) such as there is in the case of Jesus (*see* CHRIST, DEITY OF ; PROPHECY AS PROOF OF BIBLE ; RESURRECTION, EVIDENCE FOR).

Finally, the character of Muhammad falls far short of his claim (*see* MUHAMMAD, CHARACTER OF). Compared to the impeccable character of Christ, Muhammad pales into insignificance (*see* CHRIST, UNIQUENESS OF).

M. H. Haykal, *The Life of Muhammad*

Muhammad, Character of. Most students of Islam acknowledge that Muhammad was generally a moral person. Many Muslims insist that he was both beyond (major) sin and was the perfect moral example. They claim that Muhammad “stands in history as the best model for man in piety and perfection. He is a living proof of what man can be and of what he can accomplish in the realm of excellence and virtue” (Abdalati, 8). This, they say, is a chief proof that Muhammad is the unique prophet from God (Pfander, 225–26).

A popular Muslim classic by Kamal ud Din ad Damiri gives us the following description of the prophet Muhammad:

> Mohammad is the most favored of mankind, the most honored of all apostles, the prophet of mercy. . . . He is the best of prophets, and his nation is the best of nations; . . . He was perfect in intellect, and was of noble origin. He had an absolutely graceful form, complete generosity, perfect bravery, excessive humility, useful knowledge . . . perfect fear of God and sublime piety. He was the most eloquent and the most perfect of mankind in every variety of perfection. . . . (Gudel, 72).

Evaluating Muhammad’s Character. *Polygamy.* There are areas, however, where questions arise about the moral perfection of Muhammad. The first is the matter of his polygamy. According to the *Qur’an* , a man may have four wives (sura 4:3). This raises two questions: Is polygamy moral? Was Muhammad consistent with his own law?

In the Judeo-Christian tradition, polygamy is considered morally wrong. Although God permitted it, along with other human frailties and sins, he never approved it (*see* POLYGAMY). The *Qur’an* , however, clearly sanctions polygamy, allowing that a man may have up to four wives, if he is able to provide for them. Sura 4:3 declares, “Marry women of your choice, Two, or three, or four.”

Without presupposing the truth of Christian revelation, there are arguments against polygamy from a moral point of view common to both Muslims and Christians. Monogamy should be recognized by *precedent,* since God gave the first man only one wife (Eve). It is implied by *proportion,* since the number of males and females God brings into the world are about equal. And monogamy is implied by *parity.* If men can marry several wives, it seems only fair that a wife can have several husbands.

Even biographer Muhammad Husayn Haykal tacitly acknowledged the superiority of monogamy when he affirmed that “the happiness of the family and that of the community can best be served by the limitations which monogamy imposes” (294). Muhammad’s relationships with his wives are themselves an argument against polygamy. The wives went so far as to plot against him. This is understandable in that Muhammad often ignored some of his wives, and avoided others on many occasions (ibid., 436). He adds, “Indeed, favoritism for some of his wives had created such controversy and antagonism among the ‘Mothers of the Believers’ that Muhammad once thought of divorcing some of them” (ibid., 437). All of this falls short of an exemplary moral situation in principle and practice.

Even if polygamy, as taught in the *Qur'an* , is deemed morally right, there remains another serious problem. Muhammad received a revelation from God that a man should have no more than four wives at once, yet he had many more. A Muslim defender of Muhammad, writing in *The Prophet of Islam as the Ideal Husband,* admitted that he had fifteen wives. Yet he tells others they may have only four. How can someone be a perfect moral example and not live by one of the basic laws he laid down for others as from God?

The Muslim answer is unconvincing. Muhammad received a "revelation" that God had made an exception for him but not for anyone else. He quotes God as saying: "Prophet! We have Made lawful to thee Thy wives . . . ; And any believing women Who dedicates her soul To the Prophet if the Prophet Wishes to wed her;" but adds quickly, "—this Only for thee, and not For the Believers" (sura 33:50). What is more, Muslims believe (based on sura 4:3b and other teachings) that they may have an unlimited number of concubines, especially among those they conquer in war. This was, no doubt, a powerful motivation for success on the battlefield.

In addition, Muhammad claimed a divine exemption to another law giving each wife her conjugal rights "justly." Husbands were to observe a fixed rotation among their wives. Muhammad insists that God told him that he could have whomever he wanted when he wanted them: "Thou mayest defer (the turn Of) any of them that thou Pleasest, and thou mayest receive Any thou pleasest" (Sura 33:51). Apparently even God had to put the brakes on Muhammad's love for women. For eventually he received a revelation that said, is not lawful for thee [to have many more] women After this, nor to change Them for (other) wives, Even though their beauty Attract thee" (Sura 33:52). A look at the facts of Muhammad's lust and inconsistency makes one wonder how he can be considered a perfect moral example and ideal husband.

The Treatment of Women. The *Qur'an* and Hadith accord a lower status to women. The superior status of men is based directly on commands in the *Qur'an* . As noted, men can marry four wives (polygamy) but women cannot marry multiple husbands. Sura 2:228 explicitly affords men the right to divorce their wives but does not accord the equal right to women, claiming "Men have a degree of advantage over them" (sura 2:228).

Muhammad sanctioned the beating of a female servant in order to elicit the truth from her. "The servant was called in and Ali immediately seized her and struck her painfully and repeatedly as he commanded her to tell the truth to the Prophet of God" (Haykal, 336). According to the *Qur'an* , men can beat their wives. Sura 4:34 declares: "Men are in charge of women because Allah hath made the one to excel the other. . . . As for those from whom ye fear rebellion, admonish them and banish them to beds apart, and scourge them" (Pickethall trans.). Yusuf Ali attempts to soften this verse by adding "lightly," a word not found in the Arabic.

Muslim women must wear a veil, stand behind their husbands, and kneel behind them in prayer. Two women must bear witness in civil contracts as opposed to one man (Abdalati, 189–91).

In a Hadith found in the Sahih Al-Bukhari we find the following narrative describing the inferior status of women:

> Narrated [by] Ibn ‘Abbas: The Prophet said: “I was shown the Hell-fire and that the majority of its dwellers were women who were ungrateful.” It was asked, “Do they disbelieve in Allah?” (or are they ungrateful to Allah?) He replied, “They are ungrateful to their husbands and are ungrateful for the favors and the good (charitable deeds) done to them.” [Bukhari, 1.29]

In view of these statements, it seems incredible to hear Muslim apologists say, “Evidently, Muhammad not only honored woman more than did any other man, but he raised her to the status which truly belongs to her—an accomplishment of which Muhammad alone has so far been capable” (Haykal, 298). Another Muslim writer states, “Islam has given woman rights and privileges which she has never enjoyed under other religious or constitutional systems” (Abdalati, 184).

Muhammad’s Moral Imperfection. Muhammad was far from sinless. Even the *Qur’an* speaks of his need to ask God for forgiveness. In sura 40:55 God told him, “Patiently, then, persevere: For the Promise of God Is true: and *ask God* forgiveness For thy fault.” On another occasion God told Muhammad, “Know, therefore, that There is no god But God, and ask Forgiveness for thy fault, and for the men And women who believe” (sura 41:19). Clearly forgiveness was to be sought for his own sins, not just for others (cf. also 48:2).

Of one occasion, Haykal said flatly, “Muhammad did in fact err when he frowned in the face of [the blind beggar] ibn Umm Maktum and sent him away. . . . in this regard he [Muhammad] was as fallible as anyone” (134). If so, then one finds it difficult to believe that Muhammad can be so eulogized. However much an improvement Muhammad’s morals may have been over many others of his day, he falls short of the perfect example for all people of all times that many Muslims claim for him. Unlike the Jesus of the Gospels, he certainly would not want to challenge his foes with the question: “Which of you convicts me of sin?” (John 8:46).

Holy Wars. Muhammad believed in holy war (the *Jihad*). By divine revelation he commanded his followers: “fight in the cause Of God” (sura 2:244). He added, “fight and slay The Pagans wherever ye find them” (sura 9:5). And, “when ye meet The Unbelievers (in fight) Smite at their necks” (sura 47:4). In general, Muslims were to “fight those who believe not In God nor the Last Day” (sura 9:29). Indeed, Paradise is promised for those who fight for God. Sura 3:195 declares: “Those who have left their homes . . . Or fought or been slain,—Verily, I will blot out From them their iniquities, And admit them into Gardens With rivers flowing beneath;—A reward from the Presence Of God, and from His Presence Is the best of rewards” (cf. sura 2:244; 4:95). These “holy wars” were carried out “in the cause Of God” (cf. sura 2:244) against “unbelievers.”

Sura 5:36 declares that “The punishment of those Who wage war against God [i.e., unbelievers] And His Apostle, and strive With might and main For mischief through the land Is: execution, or crucifixion, Or the cutting off of hands And feet from opposite sides, Or exile from the land.” Acknowledging that these are appropriate punishments, depending on “the circumstances,” Ali offers little consolation when he notes that the more cruel forms of Arabian treatment of enemies, such as, “piercing of eyes and leaving the unfortunate victim exposed to a tropical sun,” were abolished! (Ali, 252, 738). Such war on, and persecution of, enemies on

religious grounds—by whatever means—is seen by most critics as religious intolerance. In view of these clear commands to use the sword aggressively to spread Islam and Muslim practice down through the centuries, Muslim claims that "this fight is waged solely for the freedom to call men unto God and unto His religion" have a hollow ring (cf. Haykal, 212).

Moral Expediency. Muhammad sanctioned the raiding of commercial Meccan caravans by his followers (Haykal, 357f.). The prophet himself led three raids. Doubtless the purpose of these attacks was not only obtaining financial reward, but also to impress the Meccans with the growing power of the Muslim force. Critics of Islam question this piracy. These actions cast a dark shadow over Muhammad's alleged moral perfection.

Another time Muhammad approved of a follower lying to an enemy named Khalid in order to kill him. Then in the presence of the man's wives "he fell on him with his sword and killed him. Khalid's women were the only witnesses and they began to cry and mourn for him" (Haykal, 273).

On other occasions Muhammad had no aversion to politically expedient assassinations. When a prominent Jew, Ka'b Ibn Al-Ashraf, had stirred up discord against Muhammad and composed a satirical poem about him, the prophet asked: "Who will deliver me from Ka?" Immediately four persons volunteered and shortly returned to Muhammad with Ka'b's head in their hands (Gudel, 74). Haykal acknowledges many such assassinations in his book, *The Life of Muhammad.* Of one he wrote, "the Prophet ordered the execution of Uqbah ibn Abu Muayt. When Uqbah pleaded, 'Who will take care of my children, O Muhammad?' Muhammad answered, 'The fire' "(234; cf. 236, 237, 243).

The *Qur'an* itself informs us that Muhammad was not indisposed to breaking promises when he found it advantageous. He even got a "revelation" to break a long-standing pledge to avoid killing during the sacred month of pilgrimage: "They ask thee Concerning fighting In the Prohibited Month. Say: 'Fighting therein Is a grave (offense); But graver is it In the sight of God To prevent access To the path of God ' " (sura 2:217). Again, "God has already ordained For you, (O men), The dissolution of your oaths (In some cases)" (sura 66:2). Rather than consistency, Muhammad's moral life was sometimes characterized by expediency.

Retaliation. On at least two occasions Muhammad ordered people assassinated for composing poems that mocked him. This extremely oversensitive overreaction to ridicule is defended by Haykal: "For a man like Muhammad, whose success depended to a large extent upon the esteem which he could win, a malicious satirical composition could be more dangerous than a lost battle" (Gudel, 74). But this is a pragmatic, end-justifies-means ethic.

Even though "the Muslims were always opposed to killing any women or children," nonetheless, Haykal says, "a Jewish woman was executed because she had killed a Muslim by dropping a millstone on his head" (314). On another occasion, two slave women who had allegedly spoken against Muhammad in song were executed with their master (410). When it was believed that one woman, Abu 'Afk, had insulted Muhammad (by a poem), one of Muhammad's followers "attacked her during the night while she was surrounded by her children,

one of whom she was nursing. . . . After removing the child from his victim, he killed her" (Haykal, 243).

The zeal with which Muhammad's followers would kill for him was infamous. Haykal records the words of one devotee who would have killed his daughter at Muhammad's command. Umar ibn al Khattab declared fanatically, "By God, if he [Muhammad] were to ask me to strike off her head, I would do so without hesitation" (Haykal, 439).

Mercilessness. Muhammad attacked the last Jewish tribe of Medina on the suspicion that they had plotted with the Meccan enemies against Muslims. Unlike the previous two Jewish tribes that had been simply expelled from the city, this time all the men of the tribe were put to death and the women and children were sold into slavery. Said one who tried to justify this, "one must see Muhammad's cruelty toward the Jews against the background of the fact that their scorn and rejection was the greatest disappointment of his life, and for a time they threatened completely to destroy his prophetic authority" (Andrae, 155–56). In any case, would this justify killing the men and making slaves of the women and children? And is this kind of activity exemplary of a person who is supposed to be of flawless moral character?

In spite of this evidence against Muhammad, one defender of Islam responds that even if "their claims were true, we would still refute them with the simple argument that the great stand above the law" (Haykal, 298)!

Conclusion. Muslims make outstanding claims about the character of Muhammad, even attributing moral perfection to him. However, the record of Muhammad, even from the *Qur'an* and Muslim tradition *(Hadith)* falls far short of these claims. While being a generally moral person in his everyday dealings, Muhammad taught, approved of, and participated in morally imperfect activities. There is no evidence that he was morally superior to a typical human being. In fact, there is evidence to the contrary. By contrast, the life of Christ was impeccable (*see* CHRIST, UNIQUENESS OF).

Muhammad, Alleged Miracles of. Islam claims to be the one true religion. In support of this claim they offer the *Qur'an* as their chief miracle. However, many Muslim apologists also claim that Muhammad performed other miracles to support his claims to be a prophet of God, in spite of the fact that when asked to perform miracles to support his claims, Muhammad refused to do so (sura 3:181–84).

Muslim Definition of a Miracle. For Muslims a miracle is always an act of God (*see* MIRACLE ; MIRACLES IN THE BIBLE). Nature is the way God works customarily and repeatedly and miracles are seen as *khawarik,* "the breaker of usage." There are many words for miracle in Arabic, but the only one used in the *Qur'an* is *ayah,* "sign" (cf. suras 2:118, 151, 253; 3:108; 28:86–87). The technical term used by Muslim scholars to designate a miracle that confirms one to be a prophet is *mudjiza* . To qualify it needs to be:

1. an act of God that cannot be done by any creature;
2. contrary to the customary course of things;
3. aimed at proving the authenticity of the prophet;
4. preceded by the announcement of a forthcoming miracle;
5. done in the exact manner in which it was announced;
6. done only through the hands of the prophet;
7. in no way a disavowal of his prophetic claim;
8. accompanied by a challenge to duplicate it; and
9. unduplicated by anyone present.

Muslims believe that Moses, Elijah, and Jesus performed miracles that fulfilled these criteria (see "Mudjiza"). The question is: Does the eloquence of the *Qur'an* meet these characteristics to be a miracle? A subjective answer is that it does not, in either form or content.

Miracles in the Qur'an. Miracle claims about Muhammad fall into three categories: claims recorded in the *Qur'an* ; supernatural predictions of Muhammad made in the *Qur'an* ; and miracle claims in the *Hadith* or Islamic tradition (Bukhari, iii–vi).

Sura 6:35 is used by many Muslims to show that Muhammad could do miracles. It reads: "If their spurning is hard On thy mind, yet if Thou wert able to seek A tunnel in the ground Or a ladder to the skies And bring them a Sign,—(What good?)."

Careful examination of the text reveals that it does not claim that Muhammad was able to perform miracles. First of all, it is hypothetical—" *If* Thou were able. . . ." It does not say he was able. Second, the passage even implies that he could not perform miracles. Otherwise, why was he being spurned for not doing so? If he could have done miracles, then he could have easily stopped the spurning that was so "hard On thy [his] mind."

The Alleged Splitting of the Moon. Many Muslims understand sura 54:1–2 to mean that upon Muhammad's command before unbelievers the moon was split in half. For it reads: "The Hour (of judgment) Is nigh, and the moon Is cleft asunder. But if they see A Sign, they turn away, And say, 'This is (But) transient magic.' "

Again there are difficulties with this understanding of the text. Muhammad is not mentioned in the passage. The *Qur'an* does not call this a miracle, though the word sign *(ayah)* is used. If it is a miracle, it contradicts other passages that claim Muhammad did not perform feats of nature like this (cf. 3:181–84).

Further, this passage is earlier than those in which unbelievers are calling for a sign. If Muhammad had pulled it off, the sign would have been universally observed and noted with wonder throughout the world. But there is no evidence that it was (Pfander, 311–12). Even Muslim scholars say this is speaking about the resurrection of the last days, not a miracle during Muhammad's day. They maintain that the phrase "the Hour (of judgment)" refers to the end times. The tense they take as the usual Arabic way of expressing a future prophetic event.

The Night Journey. One miraculous occurrence recorded in the *Qur'an* is Muhammad's *Isra* or "night journey." Many Muslims believe Muhammad, after being transported to Jerusalem, ascended into heaven on the back of a mule. Sura 17:1 declares: "Glory to (God) Who did take His Servant For a Journey by night From the Sacred Mosque To the Farthest Mosque, Whose precincts We did Bless,—in order that We Might show him some Of Our Signs." Later Muslim traditions expanded on this verse, speaking of Muhammad's escort by Gabriel through several levels of heaven. He is greeted by important people (Adam, John, Jesus, Joseph, Enoch, Aaron, Moses, and Abraham). While there he bargains God down in his command to pray fifty times to five times a day.

There is no reason to take this passage as referring to a literal trip to heaven. Many Muslim scholars do not so interpret it. The noted translator of the *Qur'an* , Abdullah Yusuf Ali, commenting on this passage, notes that "it opens with the mystic Vision of the Ascension of the Holy Prophet; he is transported from the Sacred Mosque (of Mecca) to the Farthest Mosque (of Jerusalem) in a night and shown some of the Signs of God" ("Introduction to Sura XVII," 691). Even according to one of the earliest Islamic traditions, Muhammad's wife, A'isha, reported that "The apostle's body remained where it was but God removed his spirit by night" (Ishaq, 183). Even were this to be understood as a miracle, there is no evidence presented to test its

authenticity. By Islam's own definition of a confirming sign, this miracle would have no apologetic value ("Mudjiza"; *see* MIRACLES, APOLOGETIC VALUE OF).

The Victory at Badr. Another miracle claim often attributed to Muhammad is the victory at Badr (see suras 3:123; 8:17). Sura 5:12 reads: "O ye who believe! Call in remembrance The favour of God Unto you when Certain men formed the design To stretch out Their hands against you, But (God) held back Their hands from you: So fear God."

According to Islamic tradition, several miracles are said to have occurred here, the most prominent of which was that God sent 3000 angels to help in the battle (supposedly identifiable by the turbans they wore) and the miraculous rescue of Muhammad just before a Meccan was going to kill him with a sword. One tradition tells of Muhammad throwing a handful of dirt into the Meccan army to blind them and drive them into retreat.

It is questionable whether all of these passages refer to the same event. Even many Muslim scholars believe sura 8 is speaking of another event and is to be taken figuratively of God casting fear into the heart of Muhammad's enemy, Ubai ibn Khalaf (Pfander, 314). Sura 5 is taken by some to refer to another event, possibly to the attempted assassination of Muhammad at Usfan.

Only sura 3 mentions Badr, and it says nothing about a miracle. At best it would reveal only God's providential care for Muhammad, not a supernatural event. Certainly it does not speak of a miracle that confirms Muhammad's prophetic credentials, since there is no evidence that it fits the nine criteria.

If Badr's victory is a sign of divine confirmation, then why was not the subsequent defeat at Uhud a sign of divine disapproval? So humiliating was the defeat that they "pulled out two links of chain from Muhammad's wound, and two of his front teeth fell off in the process." In addition, the Muslim dead were mutilated on the battlefield by the enemy. One enemy of Muhammad "cut off a number of noses and ears [of his troops] in order to make a string and necklace of them." Even Muhammad Husayn Haykal acknowledged that "the Muslims suffered defeat" here, noting that the enemy was "intoxicated with her victory" (Haykal, 266–67). Yet he did not consider this a supernatural sign of divine disfavor. Indeed, after the battle of Badr, the *Qur'an* boasts that Muhammad's followers could overcome an army with God's help when outnumbered ten to one (sura 8:65). But here they were outnumbered only three to one, just as they were in their victory at Badr, and yet they suffered a great defeat.

Muhammad is not the first outnumbered military leader in history to win a big victory. The Israeli six-day war in 1967 was one of the quickest and most decisive battles in the annals of modern warfare. Yet no Muslim would consider it a miraculous sign of divine approval of Israel over an Arab nation.

The Splitting of Muhammad's Breast. According to Islamic tradition, at Muhammad's birth (or just before his ascension), Gabriel is said to have cut open Muhammad's chest, removed and cleansed his heart, then filled it with wisdom and replaced it. This is based in part on sura 94:1, 2, 8 which reads: "Have We not Expanded thee thy breast?—And removed from thee Thy burden . . . and to thy Lord Turn (all) thy attention?"

Most conservative Islamic scholars take this passage as a figure of speech describing the great anxiety Muhammad experienced in his early years at Mecca. The great *Qur'anic* commentator Ali said, "The breast is symbolically the seat of knowledge and of the highest feeling of love and affection" (Ali, *The Meaning of the Glorious Qur'an,* 2.1755).

Prophecies in the Qur'an. Muslims offer predictive prophesies in the *Qur'an* as a proof that Muhammad could perform miracles. But the evidence is not convincing. The suras most often cited are those in which Muhammad promised victory to his troops.

What religious military leader is there who might not say to his troops: "God is on our side; we are going to win. Fight on!"? Further, remembering that Muhammad is known as "the prophet of the Sword," with his greatest number of conversions coming after he had forsaken the peaceful but relatively unsuccessful means of spreading his message, it should be no surprise that he would predict victory.

Considering the zeal of Muslim forces, who were promised Paradise for their efforts (cf. sura 22:58–59; 3:157–58; 3:170–71), it is no surprise that they were so often victorious. Finally, it is little wonder so many "submitted," considering Muhammad commanded that "the punishment of those Who wage war against God And his Apostle, and strive With might . . . Is: execution, or crucifixion, Or the cutting off of hands And feet from opposite sides, or exile from the land" (sura 5:36).

The only substantive prediction was about the Roman victory over the Persian army at Issus. Sura 30:2–4 reads: "The Roman Empire Has been defeated—In a land close by: But they, (even) after (This) defeat of theirs, Will soon be victorious—within a few years."

This prediction is less than spectacular (see Gudel, 54). According to Ali "a few years" means three to nine years, but the real victory did not come until thirteen or fourteen years after the prophecy. The defeat of the Romans by the Persians in the capture of Jerusalem took place about 614 or 615. The counteroffensive did not begin until 622 and the victory was not complete until 625. This would be at least ten or eleven years, not "a few" spoken by Muhammad.

Uthman's edition of the *Qur'an* had no vowel points, these not being added until much later (Spencer, 21). Hence, the word *sayaghlibuna,* "they shall defeat," could have been rendered, with the change of two vowels, *sayughlabuna,* "they shall be defeated" (Tisdall, 137). Even if this ambiguity were removed, the prophecy is neither long-range nor unusual. One would have expected the defeated Romans to bounce back. It took little more than a perceptive reading of the trends of time to forecast such an event. At best, it could have been a good guess. In any event, there appears to be no sufficient proof that it is supernatural.

The only other alleged prophecy worth mentioning is found in sura 89:2 where the phrase "By the Nights twice five" is taken by some to be a prediction of the ten years of persecution early Muslims experienced (Ahmad, 374f.). But that this is a far-fetched interpretation is evident from the fact that even the translator of the *Qur'an* Ali, admitted that *By the Ten Nights* is usually understood to refer to the first ten nights of *Zul-Hajj,* the sacred season of Pilgrimage (Ali, 1731, n. 6109). There is certainly no clear prediction.

The evidence that Muhammad possessed a truly supernatural gift of prophecy is lacking. His prophecies are vague and disputable. It is far easier to read meaning back in to them after the event than it would have been to see the meaning before hand.

If Muhammad had possessed the ability to miraculously forecast the future, surely he would have used it to squelch his opponents. But he never did. Instead, he admitted that he did not do miracles as the prophets before him had and simply offered as his sign the *Qur'an* .

Finally, Muhammad never offered a prophesy as proof of his prophethood (*see* MUHAMMAD, ALLEGED DIVINE CALL OF). None is mentioned in this connection at all. Jesus repeatedly offered miracles as a proof that he was the Messiah, the Son of God. When about to heal the paralytic, he said to the unbelieving Jews, "that you may know that the Son of Man has power on earth to forgive sins," something the Jews asserted that only God could do (cf. vs. 7), "I say to you, arise, take up your bed and go your way to your house" (Mark 2:10–11). In view of the strong contrast in the ability to provide miraculous confirmations of their respective claims, the thinking person would have to entertain serious doubts as to whether there is sufficient evidence to support Muhammad's claims.

Miracles in the Hadith. Most miracle claims for Muhammad do not occur in the *Qur'an* , the only book in Islam for which divine inspiration is claimed (*see* MUHAMMAD, ALLEGED MIRACLES OF ; QUR'AN, ALLEGED DIVINE ORIGIN OF). The vast majority of alleged miracles are reported in the *Hadith* (Islamic tradition), considered by Muslims to contain many authentic traditions. There are hundreds of miracle stories in the *Hadith* (*see* HADITH, ALLEGED MIRACLES IN).

Al Bukhari tells how Muhammad healed the broken leg of a companion, Addullaha ibn Atig, who was injured while attempting to assassinate one of Muhammad's enemies.

Several sources relate the story that Muhammad miraculously provided water for 10,000 of his troops at the battle of Hudaibiyah. He allegedly dipped his hand into an empty water bottle and let the water flow through his fingers. There are numerous stories of miraculous provision of water. In one, water is turned into milk.

Several stories exist of trees speaking to Muhammad, saluting him, or moving from him as he passed. Once when Muhammad could not find a private place to relieve himself, two trees are said to have come together to hide him and then returned when he was finished. Bukhari claims that a tree against which Muhammad leaned missed his company when he left. There are many stories of wolves and even mountains saluting Muhammad.

Some stories speak of Muhammad miraculously feeding large groups with little food. Anas tells that Muhammad fed eighty or ninety men with a few loaves of barley. Ibn Sa'd relates the story of a woman who invited Muhammad to a meal. He took a thousand men with him and multiplied her small meal to feed them all.

The *Hadith* often relates stories of Muhammad's miraculous dealings with his enemies. Once Muhammad cursed one of his enemies whose horse then sank up to its stomach in hard ground. Sa'd said Muhammad turned a tree branch into a steel sword.

The authenticity of these stories is questionable for many reasons:

They Are Contrary to the Qur'an. For Muslims only the *Qur'an* is divinely inspired. Yet no miracles by Muhammad are recorded in the *Qur'an* . In fact, they are in general contrary to the whole spirit of the Muhammad of the *Qur'an* , who repeatedly refused to do these very kinds of things for unbelievers who challenged him (see sura 3:181–84; 4:153; 6:8–9).

They Are Apocryphal. These alleged miracles of Islamic tradition follow the same story pattern as the apocryphal tales of Christ written a century or two after his death. They are a legendary embellishment by people who lived many years removed from the original events and not a record of contemporary eyewitnesses (*see* MIRACLES, MYTH AND).

Most of those who collected miracle stories lived 100 to 200 years later. They relied on stories passed on orally for generations with ample embellishment. Even the stories accepted by Muslims as authentic, as determined by the *isnad* (or chain of storytellers), lack credibility. These stories are not based on eyewitnesses but rely on generations of storytellers. Joseph Horowitz questioned the reliability of the *isnad:*

> The question as to who first circulated these miracle tales would be very easy to answer if we could still look upon the *isnad* , or chain of witnesses, as unquestionably as we are apparently expected to do. It is especially seductive when one and the same report appears in various essentially similar versions. . . . In general the technique of the *isnad* does not make it possible for us to decide where it is a case of taking over oral account and where of copying from the lecture books of teachers. [Horowitz, 49–58]

They Are Not Agreed Upon. Among Muslims there is no generally accepted list of authentic miracles from the *Hadith* . Indeed, the vast majority of stories from the *Hadith* are rejected by most Muslim scholars. Different groups accept different collections. This casts doubt on their authenticity.

Bukhari, considered to be the most reliable collector, admitted that of the 300,000 *Hadith* he collected, he considered only 100,000 might be true. Even these he boiled down to 7275. That means that even he admitted that more than 290,000 of them were unreliable.

No Canon Is Accepted by All. No single *Hadith* canon is accepted by all Muslims. Most Muslims rank their credibility in descending order as follows: the *Sahih* of Al Bukhari (d. 256 A.H . ["After *Hageira* ," Muhammad's flight in 622 A.D .]); the *Sahih* of Muslim (d. 261 A.H .), the *Sunan* of Abu Du'ad (d. 275 A.H .), the *Jami* of Al-Tirmidhi (d. 279 A.H .), the *Suand* of Al Nasa (d. 303 A.H .), and the *Sunan* of Ibn Madja (d. 283 A.H .). Along with these *Hadith,* biographers related miracle stories. The most important are Ibn Sa'd (d. 123 A.H .), Ibn Ishaq (d. 151 A.H .), and Ibn Hisham (d. 218 A.H .). The above categories are rejected by Shia Islam, yet they, along with other Muslims, accept the *Qur'an* .

Their Origin Is Suspect. The origin of the miracle claims of Islam is suspect. It is common knowledge that Islam borrowed many of its beliefs and practices from other religions (Dashti, 55). This has been documented frequently. It is not surprising that Muslim miracle claims have arisen, then, as Christian apologists demonstrated the superiority of Jesus to Muhammad by Jesus' miracles (*see* MIRACLES IN THE BIBLE ; NEW TESTAMENT, HISTORICITY OF). Islamic miracle stories began to appear after two Christian bishops, Abu Qurra from Edessa and Arethas from Caesarea, made a point of Muhammad's lack of authenticating miracles. As Sahas noted: "The implication [of the bishop's challenge] is quite clear: Muhammad's teaching is one that might have merit; but this is not enough to qualify him as a prophet, without supernatural signs. If such signs could be shown one could possibly accept him as a prophet" (312). Thus, if Muslims could invent miracles, they could respond to the Christian challenge.

Sahas notes that several miracle stories bear an amazing resemblance to miracles of Jesus found in the Gospels (ibid., 314). For example, Muhammad ascended into heaven, he changed water into milk and miraculously fed large numbers of people.

A Lack of Apologetic Value. They Do Not Fit Islamic Criteria . No miracle stories fit the nine categories accepted by Muslims for a miracle that can confirm a prophet's claim (*mudjiza*). Hence, by their own standards, none of these stories demonstrate the truth of Islam.

They do not come from the *Qur'an* (which is claimed to be inspired), so they lack divine authority by Islamic criteria. The absence of these events in the *Qur'an* , where Muhammad is constantly challenged to support his claims miraculously, is a strong argument that they are not authentic (*see* QUR'AN, ALLEGED DIVINE ORIGIN OF). Surely, if Muhammad could have silenced his critics by proving his supernatural confirmation, he would have done so.

Muhammad accepts the fact that God confirmed the prophets before him by miracles. He refers to God's confirmation of Moses' prophetic credentials (cf. sura 7:106–8, 116–19; 23:45). The *Qur'an* also refers to manifestations of God's miraculous power through other prophets (cf. sura 4:63–65; 6:84–86).

Muhammad also accepts the fact that Jesus performed miracles to prove the divine origin of his message, such as his healings and raising people from the dead (cf. sura 5:113). But if Jesus could perform miraculous feats of nature to confirm his divine commission, and Muhammad refused to do the same, Muhammad's superiority to Christ as a prophet is doubtful.

Muhammad's response to the challenge to perform miracles (cf. sura 6:8–9; 17:90–92) is illuminating: "Am I aught but a man—an apostle?" One cannot imagine Moses, Elijah, or Jesus giving such a response. Muhammad admitted that when Moses was challenged by Pharaoh he responded with miracles (cf. sura 7:106–8, 118). Knowing this was God's way to confirm his spokesperson, Muhammad refused to produce similar miracles.

Muslims offer no good explanation for Muhammad's failure to do miracles. The most familiar Islamic argument is that "it is one of the established ways of God that he gives his Prophets that kind of miracles which accord with the genius of the time so that the world may see that it is beyond human power and that the power of God manifests itself in these miracles."

Thus, "During the time of Moses the art of sorcery had made the greatest development. Therefore, Moses was given miracles which dumbfounded the sorcerers and at the sight of these miracles the sorcerers accepted the leadership and prophethood of Moses." Similarly, "during the time of the Prophet of Islam, the art of eloquent speech had made great advances. Therefore, the Prophet of Islam was given the miracle of the *Qur'an* whose eloquence stilled the voices of the greatest poets of his time" (Gudel, 38–39).

But there is no evidence that this is "one of the established ways of God." To the contrary, even by the *Qur'an* 's own admission that God repeatedly gave miracles of nature through Moses and other prophets, including Jesus, it is God's established way to confirm his prophets through miracles. Further, there is nothing supernatural about eloquence.

Summary. Muhammad's unwillingness (and apparent inability) to perform miraculous feats of nature, when he knew that the prophets before him could and did perform them, sounds like a cop-out to thinking non-Muslims. They will ask, "If God confirmed other prophets by such things, then why did he not do the same for Muhammad and remove all doubt?" In Muhammad's own words (from the *Qur'an*), "They [will] say: 'Why is not A Sign sent down To him from his Lord?' " since even Muhammad admitted that "God hath certainly Power to send down a Sign" (sura 6:37).

Muhammad simply offered his own sign (the *Qur'an*) and said their reason for rejecting him was unbelief, not his inability to do miracles. In the few instances where alleged supernatural events are connected to Muhammad's life, they can be explained by natural means. For example, Muslims take Muhammad's outstanding victory at the battle of Badr in 624 as a supernatural indication of divine approval on his behalf. But exactly one year later, Muhammad's forces suffered a humiliating defeat. Yet this is not taken as a sign of divine disapproval.

Unlike the *Qur'an* , Islamic tradition *(* the *Hadith)* is filled with miracle claims, but they lack authenticity: They contradict the claim of Muhammad in the *Qur'an* . They were recorded a century or more after Muhammad. Most are rejected by Muslim scholars. They show evidence of embellishment. They lack criteria laid down by Muslim scholars for a supernatural confirmation of Muhammad's claims to be a prophet of God.

By contrast, Jesus performed numerous miracles. Most, if not all, of these were performed in connection with his claim to be God in human flesh (*see* CHRIST, DEITY OF ; MIRACLE). The reports of these miracles are from eyewitnesses and contemporaries of Jesus. In this crucial way there is a significant difference between the supernatural confirmation of Christ to be the Son of God and the lack of credible miraculous confirmation of Muhammad to be even a prophet of God.

GOTR *Greek Orthodox Theological Review*

Mullins, Edgar Young. E. Y. Mullins was born on January 5, 1860, in Franklin County, Mississippi. He attended Mississippi College and Texas A & M, where he graduated in 1879. After hearing a former lawyer, Major William Evander Penn, speak at First Baptist Church, Dallas, Mullins was converted. Penn had been described as a man who used "reason and persuasion without denunciation" (Nettles, 54). Sensing a call to the ministry, he entered Southern Baptist Theological Seminary in 1881, where he graduated in 1885, having concentrated in theology and philosophy. In 1886 he married Isla May Hawley. After pastoring in Kentucky and Maryland, he was appointed president of Southern Seminary in 1899, where he remained until his death in 1928.

Mullins was both a theologian and apologist. His primary apologetic work is entitled *Why Is Christianity True?* (1905). His last work, *Christianity at the Crossroads* (1924), is strongly polemical. His other works also have apologetic overtones: *The Axioms of Religion* (1908), *The Christian Religion in Its Doctrinal Expression* (1917), and *Freedom and Authority in Religion* (1913).

Relation of Science and Scripture. Mullins was strongly influenced by the inductive method of modern science. He also paid tribute to the pragmatist William James . Without discarding traditional apologetics, he believed the task of the day was to "establish the Christian position by means of the principles of investigation employed by the opposition, so far as those principles are valid" (Mullins [1], 4).

Although Mullins fell short of a denunciation of evolution , he strongly defended the direct creation of human beings. He was willing to admit that "God made the world gradually through long eras of time, that there is progress and growth in the universe" (Mullins, [4], 67). Yet his statement on science and religion attacked scientists who make "alleged discoveries in physical nature a convenient weapon of attack upon the facts of religion." Likewise, he opposed "teaching as facts what are merely hypotheses." Although he acknowledged that "evolution has long been a working hypothesis of science," he was quick to point out that "its best exponents freely admit that the causes of the origin of species have not been traced. Nor has any proof been forthcoming that man is not the direct creation of God as recorded in Genesis" (Mullins [5], 64).

Defense of Supernaturalism. Mullins declared that "The supreme issue today is between naturalism and super-naturalism (*see* MIRACLES, ARGUMENTS AGAINST). We stand unalterably for the supernatural in Christianity" (Mullins [5], 64). He spoke out strongly against its foundation in naturalism, calling the latter "an outrage against human nature, . . . a million miles away from the great struggling heart of the world" (Mullins [4], 148).

Defense of Theism. Although Mullins stressed Christian experience, he did not totally neglect the value of theist arguments for God's existence (*see* GOD, EVIDENCE FOR). In *Why Is Christianity True?* he spoke out strongly against the major alternative worldviews of pantheism , idealism, materialism , agnosticism , and naturalistic evolutionism. He did favor, however, the pragmatic verification of Christianity. Nonetheless, he attempted to extricate himself from the charges of subjectivism by stressing the factual and historical basis of Christianity as well as its rational nature. What he opposed was reducing Christianity to a philosophy. He wrote: "Christianity is primarily not a philosophy of the universe. It is a religion. . . . Christianity is a

historical religion, and a religion of experience. It is grounded in facts. the Christian world-view rests upon these facts" (Mullins [4], 163)

Defense of the Historicity of the Gospels. Mullins' apologetic astuteness is captured in a tribute made by Thorton Whaling, professor of apologetics and theology at the Presbyterian Theological Seminary in Louisville who noted that "Mullins is well acquainted with the historic attacks on the Christian faith and is equally a master of the historic answers" (Nettles, 56). Even his doctrinal work, *The Christian Religion in Its Doctrinal Expression* , contains a strong defense of the facts of the historical Jesus. Based on the integrity of the New Testament witnesses (*see* NEW TESTAMENT, HISTORICITY OF), Mullins reconstructed from the historical records a supernatural Jesus who has a virgin birth , sinless life (*see* CHRIST, UNIQUENESS OF), died a substitutionary death, and rose bodily from the dead (*see* RESURRECTION, EVIDENCE FOR).

Defense of the Inspiration of Scripture. Mullins' approach to Scripture was inductive, following that of James Orr , Marcus Dodds, and William Sanday. He rejected what he thought of as the "scholastic" approach, which made the biblical writers "mere unintelligent instruments or pens used by the Holy Spirit" (Mullins [3], 379). However, he readily confessed his belief that the Bible is revelation from God (*see* BIBLE, EVIDENCE FOR). In it, he said, we have "an authoritative Scripture which Christian experience does not and cannot transcend" (ibid., 382). He even speaks of the biblical writers as rendering "truth unmixed with error" (Mullins [2], 144). Following James Orr, he affirms that the Bible "impartially interpreted and judged, is free from demonstrable error in its statements, and harmonious in its teachings" (Mullins [3], 381).

Stress on Christian Experience. Without neglecting the objective and rational dimensions of faith, Mullins placed a strong emphasis on the experiential elements of the Christian faith. Christianity, he said, "has to do with two great groups of facts: the facts of experience and the facts of the historical revelation of God through Christ" (Mullins [2], 18). He recorded testimonies of noted Christians from church history as well as contemporaries. He believed that he had achieved "irrefutable evidence of the objective existence of the Person [God] so moving me" (Mullins, 284). Combining all the experiential testimony of an unbroken line of Christians back to the New Testament, he concluded: "My certainty becomes absolute" (ibid.)

Mystery. St. Paul wrote: "Beyond all question, the mystery of godliness is great: He [God] appeared in a body, was vindicated by the Spirit, was seen by angels, was preached among the nations, was believed on in the world, was taken up in glory" (1 Tim. 3:16). The incarnation is a mystery (*see* CHRIST, DEITY OF). So is the Trinity .

A mystery is not to be confused with an antinomy or paradox, which involves a logical contradiction (*see* LOGIC). A mystery goes *beyond reason* but not *against reason.* There is no contradiction, yet we lack total comprehension.

Further, a mystery is not something that can be attained by unaided human reason (*see* FAITH AND REASON). A mystery is known only by special divine revelation (*see* REVELATION, SPECIAL). Hence, mysteries are not the subject of natural theology but only of revealed theology.

Another characteristic of a mystery is that while we know *that* both elements making up the mystery are true and ultimately fit together, nevertheless, we do not know *how* they are compatible. For example, we know *that* Christ is both God and human, but it is a mystery just *how* these two natures unite in one person.

Finally, a mystery is distinguished from a problem. A problem has a *solution;* a mystery is the object of *meditation.* A problem calls for *extensive* knowledge; a mystery for *intensive* concentration. Like a missing word in a crossword puzzle, a problem can be solved by more knowledge; a mystery cannot. If it could, it would not be a mystery. Mysteries do not call for *answers* , but for *insights.*

Mysticism.

Background. The word "mysticism" is derived from the Greek word *mustikos,* meaning one initiated into the mysteries. Eventually, it was used in Christian circles as the branch of Christian

theology that believes in the direct communion of the soul with God. In pantheistic context it usually refers to one who seeks by contemplation and self-surrender to obtain absorption into the Ultimate. In philosophy it often refers to someone who believes that intuitive and immediate knowledge of ultimate reality is possible.

Kinds of Mysticism. Mysticism can be classed in many ways. In terms of worldviews (*see*) it can be divided into Christian and non-Christian or theistic and nontheistic. There are also forms of mysticism in most major world religions. Some, such as Zen Buddhism, are mystical as such. Interest here is in whether mysticism has any apologetic value. That is, does a mystical experience help establish the truth of the belief system of the one having it?

The Nature of a Mystical Experience. Religious experiences are notoriously difficult to define. Friedrich Schleiermacher said religion is a feeling of absolute dependence on the All. Paul *Tillich defined religion as an ultimate commitment. Our own analysis found it to be an awareness of some form of transcendent Other (*see* GEISLER , *Philosophy of Religion*).

A Private Religious Experience. Religious experiences are of two basic kinds: general and specific. The first are available to all persons, and the latter are unique to only some. The former is public and the latter is private. Mystical experiences are private by nature. This does not mean that others cannot have similar experiences. It simply means that the experience is unique to the one having it. Also, the general public does not have such experiences at any time.

A Focused Religious Experience. Some forms of awareness are general and others are particular. For example, the awareness of being married is a general one that one has at all times. But the awareness of getting married is a special experience that one has only while going through the ceremony. A mystical experience is more like the latter. It is a focused and intensified awareness of an Ultimate, whereas, a general religious experience is like Schleiermacher's continual and nonspecific awareness of being dependent on the Ultimate.

An Intuitive Experience. Mystical experiences of God are noncognitive. They are not mediated through concepts or ideas. Rather, they are unmediated and intuitive. They are direct contacts with God. As such, they are not discursive. They involve no reasoning processes.

An Ineffable Experience. Although many mystics have attempted descriptions of their experience, most hasten to say that words are inadequate to express it. Many admit that they can only say what it is not. All attempts to be positive are purely metaphorical, allegorical, or symbolical. It can be experienced but not uttered (*see* PLOTINUS).

The Apologetic Value of Mystical Experiences. Mysticism is not without value. As William James (*see*) noted, it points to a state beyond that of the purely empirical and rational. Indeed, Christian forms of mysticism, such as that of Meister Eckhart, have been embraced by many orthodox Christians.

However, our concern here is with the mystics' claim of the self-evident truthfulness of their mystical experiences. They insist that they are as basic as sense perceptions, being a kind of

spiritual perception. Others challenge this and offer many reasons for rejecting any truth value to such experiences.

Mystical Experiences Are Not Self-Authenticating. While it is not necessary to deny that there are transcognitive mental states, it is often claimed by mystics that such experiences are self-authenticating. This appears to be a confusion of two things. They may be authenticating to the self (person) having them, but they are not self-authenticating. Self-authenticating, as in self-evident first principles (*see*), is something that can be known by examining the terms of the proposition. For example, "All triangles are three-sided figures" is self-evident because the predicate says exactly what the subject says. But there is no such parallel in a mystical experience of God.

Mystical Experience Is Not Objective. By their own admission, the experiences mystics have are not public but private. As such, then, they are subjective and not objective. But subjective experiences have validity only for the subject experiencing them. As William James noted in his landmark *Varieties of Religious Experience,* mystical experiences hold no authority over those not having them.

Mystical Experiences Are Not Testable. Since mystical experiences are without an objective basis, they are also untestable. Being subjective by nature, there is no objective test for them. Thus, they are totally relative to the individual having them. As such, there is no way that what the subject experiences can be validly applied to others.

Mystical Experiences Are Self-Cancelling. When a mystical experience is used to support the truth claim of the belief system of the one having it, it is without value for the simple reason that people with conflicting belief systems have mystical experiences. But if the same kind of evidence is used to support opposing beliefs it is self-cancelling. The evidence must be unique to one over the other for it to count for one over the other.

Mystical Experiences Can Be Misinterpreted. No attempt here is made to deny that some people have a mystical experience. Nor is it denied that they may feel that it is self-authenticating. Neither do we challenge the fact that it may appear to them to come with its own self-interpreting label.

It is simply argued that there is no evidence that this is so. Similar experiences by people from different worldviews appear to them to vindicate their particular worldview or religious system. However, that fact in itself shows that it does not vindicate it, since opposites cannot be true. In brief, such experiences are not self-labeled and, hence, they can be mislabeled by the one having them.

Mysticism Leads to Agnosticism . As most mystics admit, they have only a negative knowledge. That is, they know only what God is not. But they have no positive knowledge of what God is, certainly not in a cognitive sense. In short, they are religious agnostics, or acognostics . They may believe in God and feel God, but they have no positive knowledge of what it is they are believing or feeling. They acknowledge a mystical realm, but like Ludwig

Wittgenstein they must remain silent about it. There are at least two serious problems with this position.

First, purely negative knowledge is impossible. One cannot know not-That unless he knows what That is. Likewise, one cannot know what God is not like unless he knows what he is like. Second, since religion, at least in the theistic sense, involves a personal relation with God, it is difficult to understand how one can have this if he knows none of the qualities of the Beloved. In this regard, the atheist Ludwig Feuerbach 's comment is appropriate: "Only where man loses his taste for religion, and thus religion itself becomes insipid existence—does the existence of God become an insipid existence—an existence without qualities" (Feuerbach, 15).

Mythology and the New Testament. Central to higher critical argumentation is the theory that much of the New Testament's picture of Jesus and his teachings evolved over time in the social context and theological meanderings of the early church. Jesus the man became lost in legend and myth, buried under supernatural claims of such events as the virgin birth, miracles, and the resurrection (*see* RESURRECTION, EVIDENCE FOR). Behind these events were the patterns of Greek and Roman gods. Besides atheists and skeptics, some New Testament scholars have made such charges. Rudolf Bultmann was in the forefront of this view of the New Testament. He insisted that the religious records must be "demythologized," or divested of their mythological "husk" to get at the existential "kernel" of truth.

Bultmann's Demythological Naturalism. At the basis of Bultmann's thought is his theory that Christianity grew from the prescientific worldview of a three-storied universe: The earth is at the center of this worldview, with God and angels in heaven above, and the underworld beneath. The material world was acted upon by supernatural forces from above and below, who intervened in human thoughts and actions (Bultmann, 1). The New Testament documents had to be stripped of this mythological structure, for science had made the supernaturalistic worldview obsolete. Blind acceptance of the New Testament would sacrifice the intellect to accept a view of the world in religion that we deny in everyday life (ibid., 3–4). The only honest way to recite the creeds is to strip the mythological framework from the truth it enshrines.

Bultmann proclaimed confidently that the resurrection is not an event of past history. "For an historical fact which involves a resurrection from the dead is utterly inconceivable" (Bultmann, 38–39). Resuscitation of a corpse is not possible. The objective historicity of the resurrection cannot be verified, no matter how many witnesses are cited. The resurrection is an article of faith. That in itself disqualifies it as a miraculous proof. Finally, similar events are known to mythology (ibid., 39–40).

Since the resurrection is not an event of objective space-time history, it is an event of subjective history. It is an event of faith in the hearts of the early disciples. As such, it is not subject to objective historical verification or falsification. Christ arose from Joseph's tomb only in the faith of the disciples' hearts.

Bultmann's argument can be summarized:

1. Myths are, by nature, more than objective truths; they are transcendent truths of faith.

2. But what is not objective cannot be part of a verifiable space-time world.

3. Therefore, miracles (myths) are not part of the objective space-time world.

Evaluation. Several objections have been offered to Bultmann's mythological naturalism.

Basically, demythologization is built on at least two unproven assumptions: First, miracles are less than historical. Second, miracles can occur in the world without being of the world. Bultmann's view is dogmatic and unverifiable. He has no evidential basis for his assertions. Yet he stands contrary to the overwhelming evidence for the authenticity of the New Testament

documents and the reliability of the witnesses (*see* NEW TESTAMENT, HISTORICITY OF). Indeed, it is directly contrary to the New Testament writer Peter's claim that he was not preaching "cunningly devised myths" (2 Peter 1:16). Rather, he and the other apostles were eyewitnesses. John said much the same at the beginning and end of his Gospel (1:1–3 ; 21:24).

The New Testament is not the literary genre of mythology. C. S. Lewis , himself a writer of fairy tales, noted that "Dr. Bultmann never wrote a gospel." Lewis asks, "Has the experience of his learned . . . life really given him any power of seeing into the minds of those long dead [who have written Gospels]?" As a living writer, Lewis found his critics usually wrong when they attempted to read his mind. He adds, "the 'assured results of modern scholarship,' as to the way in which an old book was written, are 'assured,' we may conclude, only because the men who knew the facts are dead and can't blow the gaff" (Lewis, *Christian Reflections,* 161–63).

Evidence for the New Testament. Other articles show that the New Testament was written by contemporaries and eyewitnesses of the events (cf. Luke 1:1–4) and was not the result of later legend development (*see* BIBLE CRITICISM ; MYTHOLOGY AND THE NEW TESTAMENT ; NEW TESTAMENT DATING ; NEW TESTAMENT MANUSCRIPTS). The article MIRACLES, MYTH AND , presents the following in greater detail.

New Testament books appeared within the lifetime of eyewitnesses and contemporaries. Luke was written by about 60, only twenty-seven years after Jesus' death, before Acts in 60–62 (see Hemer, all). First Corinthians was written by 55–56, only twenty-two or twenty-three years after Jesus' death (cf. 1 Cor. 15:6–8). Even radical New Testament scholar John A. T. Robinson dates basic Gospel records between 40 and 60 (see Robinson).

Given that significant parts of the Gospels and other crucial New Testament books were written before 70, there is no time or way for a legend to develop while the eyewitnesses were still alive to refute the story. A legend takes time and/or remoteness to develop, neither of which were available. Roman historian A. N. Sherwin-White calls the mythological view of the New Testament "unbelievable" (Sherwin-White, 189). Others have noted that the writings of Herodotus enable us to determine the rate at which legends develop. Two generations is too short a period for legendary tendencies to wipe out historical fact (Craig, 101). Julius Muller (1805–1898) challenged scholars of his day to produce even one example where in one generation a myth developed where the most prominent elements are myths (Muller, 29). None have been found.

New Testament stories do not show signs of being mythological. Lewis comments that the accounts are straightforward, unembellished records, written in artless, historical fashion by narrow, unattractive Jews who were blind to the mythical wealth of the pagan world around them (Lewis, *Miracles,* 236). "All I am in private life is a literary critic and historian, that's my job," said Lewis. "And I'm prepared to say on that basis if anyone thinks the Gospels are either legends or novels, then that person is simply showing his incompetence as a literary critic. I've read a great many novels and I know a fair amount about the legends that grew up among early people, and I know perfectly well the Gospels are not that kind of stuff" (*Christian Reflections,* 209).

Persons, places, and events surrounding the Gospel stories are historical. Luke goes to great pains to note that it was in the days of "Caesar Augustus" (Luke 2:1) that Jesus was born and at later baptized in "the fifteenth year of the reign of Tiberius Caesar, Pontius Pilate being governor of Judea, Herod being tetrarch of Galilee, . . . Annas and Caiaphas being high priests" (Luke 3:1–2).

Sixth, no Greek or Roman myth spoke of the literal incarnation of a monotheistic God into human form (cf. John 1:1–3 , 14) by way of a literal virgin birth (Matt. 1:18–25), followed by his death and physical resurrection. The Greeks believed in reincarnation into a different mortal body; New Testament Christians believed in resurrection into the same physical body made immortal (cf. Luke 24:37). The Greeks were polytheists , not monotheists as New Testament Christians were.

Stories of Greek gods becoming human via miraculous events like a virgin birth were not prior to but after the time of Christ (Yamauchi). Hence, if there is any influence of one on the other it is the influence of the historical event of the New Testament on the mythology, not the reverse.

Conclusion. The New Testament records show no signs of mythological development. Indeed, the miracle events are surrounded by historical references to real people, places, and times. The New Testament documents and witnesses are too early, too numerous, and too accurate to be charged with writing myths. Only an unjustified antisupernatural bias could ground any conclusion to the contrary (*see* MIRACLES, ARGUMENTS AGAINST).

Nag Hammadi Gospels. Some radical critics of the New Testament (*see* BIBLE CRITICISM) claim that the Gnostic gospels are equal to those in the New Testament, and that they do not support the resurrection of Christ (*see* MIRACLE ; RESURRECTION, EVIDENCE FOR). The Jesus Seminar places *The Gospel of Thomas* in their otherwise severely truncated Bible. Both of these conclusions are a serious challenge to the historic Christian Faith.

The Gnostic gospels were discovered in Nag Hammadi, Egypt, near Cairo in 1945 and translated into English in 1977. *The Gospel of Thomas* (140–170) has 114 secret sayings of Jesus.

Credibility of the Gnostic Gospels. The best way to evaluate the credibility of these gospels is by comparison to the New Testament Gospels, which the same critics have grave doubts about accepting (*see* NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT MANUSCRIPTS). Against the canonical gospels, the Gnostic gospels come up seriously short.

Late Writings. The attested dates for the canonical Gospels are no later than 60–100 (*see* NEW TESTAMENT, DATING OF). Gnostic gospels appeared nearly a century later. O. C. Edwards asserts "As historical reconstructions there is no way that the two can claim equal credentials" (Edwards, 27).

Historical Worth. The earliest Christians meticulously preserved Jesus' words and deeds. The Gospel writers were close to the eyewitnesses and pursued the facts (cf. Luke 1:1–4). There is evidence that the Gospel writers were honest reporters. They also present the same overall picture of Jesus (*see* BIBLE, ALLEGED ERRORS IN ; RESURRECTION, EVIDENCE FOR).

New Testament Canon. Contrary to the critics, the New Testament canon with Gospels and most of Paul's Epistles was formed by the end of the first century. The only books in dispute, the *Antelegomena* , have no apologetic effect on the argument for the reliability of the historical material used to establish the deity of Christ.

The New Testament itself reveals a collection of books in the first century. Peter speaks of having Paul's Epistles (2 Peter 3:15–16), equating them with Old Testament Scripture. Paul had access to Luke's Gospel, quoting it (10:7) in 1 Timothy 5:18 .

Beyond the New Testament, canonical lists support the existence of a New Testament canon (see Geisler and Nix, 294). Indeed, all the Gospels and Paul's basic Epistles are represented on these lists.

Even the heretical canon of Marcion (ca. 140) accepted the Gospel of Luke and ten of Paul's Epistles (*see* BIBLE, CANONICITY OF).

Support of Church Fathers. A common body of books was cited by Fathers in the second century. This includes the six books crucial to the historicity of Christ and his resurrection, the Gospels, Acts, and 1 Corinthians. Clement of Rome cited the Gospels in 95 (*Corinthians,* 13, 42, 46). Ignatius (ca. 110–115) quoted Luke 24:39 (*Smyrnaeans* 3). Polycarp (ca. 115) cites all Synoptic Gospels (*Philippians* 2, 7). The *Didache* (early second century) cites the Synoptic Gospels (1, 3, 8, 9, 15–16). The *Epistle of Barnabas* (ca. 135) cites Matthew 22:14 . Papias (*Oracles,* ca. 125–140) speaks of Matthew, Mark (chronicling Peter), and John (last) who wrote Gospels. He says three times that Mark made no errors. The Fathers considered the Gospels and Paul's Epistles to be on par with the inspired Old Testament (cf. Clement's *Corinthians* [47]; Ignatius's *Ephesians* [10]; *To Polycarp* [1, 5]; and Polycarp's *Philippians* [1, 3–4, 6, 12]).

The Fathers vouched for the accuracy of canonical Gospels in early second century. This is long before gnostic gospels were written in the late second century.

Gnostic Resurrection Accounts. There is no real evidence that the so-called "Q" (*Quelle,* source) document posited by the critics ever existed (see Linneman; *see* Q DOCUMENT). It is an imaginary reconstruction, so the allegation that it has nothing about the resurrection is pointless.

The Gospel of Thomas does exist, even though it is from the late second century. Nonetheless, contrary to the critics who support this composition, it acknowledges Jesus' resurrection. In fact, it is the living, post-death (34:25–27; 45:1–16) Christ who allegedly speaks in it. True, it does not stress the resurrection, but this is to be expected because it is primarily a "sayings" source, rather than a historical narration. Further, the Gnostic theological bias against matter would downplay bodily resurrection.

Earliest Christian Creeds. Since the critics acknowledge the authenticity of 1 Corinthians 15 , which is dated ca. 55–56 A.D ., it is impossible to deny the historicity of the resurrection. This is only twenty-two or twenty-three years after Jesus died (1 Cor. 15:6). What is more, 1 Corinthians 15:1 alludes to a possible creed confessing the death and resurrection of Christ that would be even earlier. Even on the minimal assumption that the creed was ten or twelve years old, that would place it within ten or twelve years of the events themselves. Few ancient events have this immediate, contemporary verification.

Conclusion. The evidence for the authenticity of the Gnostic gospels does not compare with that for the New Testament. The New Testament is a first-century book. *The Gospel of Thomas* is a mid-second-century book. The New Testament is verified by numerous lines of evidence, including other references in the New Testament, early canonical lists, thousands of citations by the early Fathers, and the established earlier dates for the Gospels.

Natural Law. *See* LAW, NATURE AND KINDS OF ; REVELATION, GENERAL ; MORALITY, ABSOLUTE NATURE OF .

Natural Theology. *Theology* is the study *(logos)* of God *(theos). Natural theology* (*see* LAW, NATURE AND KINDS OF) is the study of God based on what one can know from nature (*see* REVELATION, GENERAL). Natural theology is set in contrast with supernatural theology which is dependent on a supernatural revelation (*see* REVELATION, SPECIAL) from God, such as the Bible.

Natural theology depends on the rational arguments for God's existence (*see* COSMOLOGICAL ARGUMENT ; MORAL ARGUMENT FOR GOD ; TELEOLOGICAL ARGUMENT) and nature (*see* GOD, NATURE OF). Most natural theologians, following Thomas Aquinas, believe that one can know the existence, unity, and general nature of God from natural revelation. However, the triunity of God (*see* TRINITY), incarnation of Christ (*see* CHRIST, DEITY OF), and redemption (*see* "HEATHEN," SALVATION OF) can only be known by supernatural revelation. These are known as mysteries of the Faith (*see* MYSTERY).

Naturalism. Philosophical or metaphysical *naturalism* refers to the view that nature is the "whole show." There is no supernatural realm and/or intervention in the world (*see* MATERIALISM ; MIRACLES, ARGUMENTS AGAINST). In the strict sense, all forms of nontheisms are naturalistic, including atheism , pantheism , deism , and agnosticism .

However, some theists (*see* THEISM), especially scientists, hold a form of *methodological naturalism.* That is, while acknowledging the existence of God and the possibility of miracles, they employ a method of approaching the natural world that does not admit of miracles (*see* SCIENCE OF ORIGINS). This is true of many theistic evolutionists (*see* EVOLUTION ; EVOLUTION, BIOLOGICAL), such as Douglas Young (see Young) and Donald MacKay (see MacKay). They insist that to admit miracles in nature to explain the unique or anomalous is to invoke "the God of the gaps." In this sense they are bedfellows with the antisupernaturalists, who deny miracles on the grounds that they are contrary to the scientific method.

Forms of Metaphysical Naturalism. Metaphysical naturalists are of two basic kinds: materialists and pantheists. The materialist reduces all to matter (*see* MATERIALISM) and the pantheist reduces all to mind or spirit. Both deny that any supernatural realm intervenes in the natural world. They differ chiefly about whether the natural world is composed ultimately of matter or of mind (spirit). Those who hold the latter often admit the possibility of *supernormal* events by tapping into this invisible spiritual Force (*see* MIRACLE ; MIRACLES, MAGIC AND). However, these are not supernatural events in the theistic sense of a *supernatural* being intervening in the natural world he created.

Bases for Naturalism. Metaphysical naturalists reject miracles outright. They vary only in the basis for their criticism of the supernatural. Benedict Spinoza believed miracles are impossible because they are irrational. David Hume claimed that miracles are incredible. Rudolph Bultmann held that miracles are unhistorical and mythical (*see* MIRACLES, MYTH AND ; MYTHOLOGY AND THE NEW TESTAMENT). Based on the unrepeatability of the miraculous, Antony Flew argued that miracles are unidentifiable. Immanuel Kant contended that miracles are not essential to religion. All of these allegations have been care fully analyzed and found to be without foundation in the articles MIRACLE and MIRACLES, ARGUMENTS AGAINST .

Evaluation. *Theistic Inadequacy of Naturalism.* Naturalistic views either admit that a deistic sort of God exists or deny or doubt existence of any divine Being. But the alleged disproofs for God are notoriously unsuccessful (*see* GOD, ALLEGED DISPROOFS OF). The evidence that God exists is strong (*see* COSMOLOGICAL ARGUMENT ; MORAL ARGUMENT FOR GOD ; TELEOLOGICAL ARGUMENT). As for views that admit the existence of a supernatural God but deny miracles (such as deism), many critics have pointed out their basic incoherence. For if God can and has performed the greatest supernatural act of all—creating the world out of nothing (*see* CREATION, VIEWS OF), then there is no reason to deny the possibility of lesser supernatural events (i.e., miracles). For making water out of nothing (as God did in Genesis 1) is a greater supernatural event than making water into wine (as Jesus did in John 2).

Scientific Insufficiency. Modern science has pointed to its own miracle—the origin of the material universe out of nothing. The evidence for the big bang origin of the universe is strong. This evidence includes the second law of thermodynamics (*see* THERMODYNAMICS, LAWS OF), the expanding universe, the radiation echo and the discovery of the large mass of energy predicted by the big bang theory (*see* KALAM COSMOLOGICAL ARGUMENT). If so, then matter is neither eternal nor all there is. And if there is a Creator of the whole universe from nothing, the greatest miracle of all has occurred.

Philosophical Insufficiency. Two premises common to all forms of secular humanism (*see* HUMANISM, SECULAR) are nontheism and naturalism. These can be treated together, since if there is no supernatural being (Creator) beyond the natural universe, then nature is all there is. Often naturalism means that everything can be explained in terms of chemical and physical processes. At a minimum it means that every event in the universe can be explained in terms of the whole universe (the whole system). Naturalists believe there is no need to appeal to anything (or Anyone) outside the universe to explain any event in the universe nor to explain the whole universe itself.

But the very scientific naturalists who insist on explaining *everything* in terms of physical and chemical laws cannot explain their own scientific theories or laws in terms of mere physical and chemical processes. For a "theory" or "law" about physical processes is obviously not itself a physical process. It is a nonphysical *theory* about physical things. A physics professor was once asked: "If everything is matter, then what is a scientific theory about matter?" His response was, *"It is magic!"* When asked his basis for believing that, he replied "Faith." It is interesting to note the inconsistency that a purely materialistic worldview resorts to faith in "magic" as the basis of their materialistic beliefs.

Another argument revealing the inconsistency of pure naturalism was offered by C. S. Lewis . Quoting Haldane, Lewis wrote: "If my mental processes are determined wholly by the motion of atoms in my brain, I have no reason to suppose that my beliefs are true . . . and hence I have no reason for supposing my brain to be composed of atoms" (Lewis, 22). If naturalism is claiming to be true then there must be more than mere natural processes; there must be "reason," which is not purely a natural physical process.

Another way to state the inconsistency of naturalism is to show that a basic premise of science, which even naturalists hold, is contrary to their conclusion that every event in the universe can be explained in terms of the whole universe. This premise that "every event has a cause" is at the philosophical heart of scientific research (*see* CAUSALITY, PRINCIPLE OF). For scientists—certainly naturalistic ones—are trying to find the natural explanation or cause for all events. But if *every* event has a cause, then it follows that the *whole* universe has a cause. For the universe as conceived by modern science is the sum total of all events at a given time. But if *each* event is caused, then *every* event is caused. And if the universe is the sum total of every event, then the whole universe is caused. For instance, if each tile on the floor is brown, then the whole floor is brown. And if each part of the table is wooden, then the whole table is wooden. Likewise, if every event in the universe is an effect, then adding up all the events (effects) does not equal a cause. Rather, the sum total of all caused events needs a cause to explain it (*see* COSMOLOGICAL ARGUMENT).

It is not sufficient for the naturalist to say there is something "more" to the universe than the sum of all the events or "parts," for then he is not really explaining *everything* in terms of the physical "parts" or events but in terms of something beyond them. It is, however, perfectly consistent for the nonnaturalist to insist that all the events of the universe cannot be explained *solely* in terms of the physical universe of events. But naturalism is not able to explain either itself or the universe on a purely naturalistic premise.

Near-Death Experiences. ***See*** **IMMORTALITY .**

Neopaganism. *Neopaganism* (lit. "New-paganism") is a revival of ancient paganism (*see* MITHRAISM). It is a form of polytheism that arose in the wake of the "death of God" movement (*see* ALTIZER, THOMAS ; NIETZSCHE, FRIEDRICH). Neopaganism is also manifest in witchcraft (wicca), occultism, and other religions that fit under the New Age umbrella (see Geisler).

Mark Satin has contrasted new paganism with primitive forms of the religion. Citing Andrea Dworkin, he noted that the "old religion":

- celebrated sexuality, fertility, nature, and women's place in it.
- worshiped a hairy, merry deity who loved music and dancing and good food.
- was nature- and woman-centered, with priestesses, wise women, midwives, goddesses, and sorceresses.
- had no dogma. Each priestess interpreted the religion in her own fashion.

Not all of this could be reestablished in New Age society, writes Satin, but neopagans could adapt nature-and woman-centeredness to fit new priorities. "Nature-centeredness has an obvious parallel in our growing recognition that the quality of our connection to the environment—both natural and people-made—has a lot to do with our spiritual health and spiritual growth" (Satin, 113–14).

Roots of Neopaganism. Neopaganism is not a monolithic movement. It springs from the soil of paganism, Hinduism , wicca, and, indirectly, atheism, and other systems. Modern atheism fertilized the soil out of which contemporary neopaganism grew. David Miller describes it as rising from the ashes of the "death of God" heralded by Thomas Altizer and others in the 1960s and 1970s. "The death of God gives rise to the rebirth of the gods," according to Miller. When God died in modern culture, the ancient gods rose again. Monotheism was holding back paganism.

Ancient Polytheism. Of course, the main root of Neopaganism is ancient Greek and Roman polytheism. Miller noted that ancient polytheism remained underground or in the countercultural tradition of the West throughout the 2000-year reign of monotheistic thought. This tradition may be behind recent interest in the occult, magic, extraterrestrial life, Eastern societies and religions, communes, new forms of multiple family life, and other alternative life-style meaning systems that seem so foreign (ibid., 11). He adds that, for racial-cultural traditions, Western Europeans still draw on gods and goddesses of ancient Greece (ibid., 6, 7, 60, 81).

Hinduism. Not all modern paganism comes from Greece. The revival of Buddhism and especially Hinduism, with its multi-millions of gods, also supports New Age religion and Neopaganism. Hinduism has infiltrated virtually every level of Western culture, tailored to fit Western humanism by teaching that each of us is a little god.

Witchcraft (Wicca) and Radical Feminism. Another stream is the religion of wicca. This movement, popularly known as witchcraft, has a strong overlap with the feminist movement. Wiccans have an abhorrence to monotheism (*see* THEISM). Feminist witch Margot Adler expresses this view. Adler refers to monotheism as one of the totalistic religious and political views that dominate society (Adler).

Occultism and Star Wars. George Lucas' *Star Wars* "religion of the Jedi" has roots in the Mexican sorcerer, Don Juan. Lucas biographer Dale Pollock notes that "Lucas' concept of the Force was heavily influenced by Carlos Castaneda's *Tales of Power* . This is an account of a supposed Mexican Indian sorcerer, Don Juan, who uses the phrase 'life force' " (Pollock, 10). The director of Lucas' movie, *The Empire Strikes Back* , Irvin Kershner, is a Zen Buddhist. He admitted of the film: "I want to introduce some Zen here because I don't want the kids to walk away just feeling that everything is shoot-em-up, but there's also a little something to think about here in terms of yourself and your surroundings" (Kershner, 37). Whatever the source of the Force of *Star Wars* , it clearly is similar to the Force believed in by neopagan witches. Lucas himself referred to the force as a religion in the first movie of his *Star Wars* trilogy (Lucas, 37, 121, 145). The character, Luke Skywalker, was engaging in white magic when he tapped into the "light side of the Force," the Force was "God." Lucas claimed in an interview with *Time* (see source list) that "the world works better if you're on the good side" of this occult Force. Lucas' sorcery is even more evident in the hero of Lucas' subsequent film, *Willow* , whose life goal is to be a sorcerer.

Characteristics of Neopaganism. Obviously a variety of beliefs are practiced under the broad neopagan heading. There are some generally shared characteristics and beliefs that draw on polytheism, the occult, relativism, and pluralism.

Polytheism. Neopagans are free to worship any gods and goddesses, ancient or modern, from the East or West. Some worship Apollo and Diana. Author-philosopher Theodore Roszak (*Where the Wasteland Ends*) is an animist. He believes that "the statue and sacred grove were transparent windows . . . by which the witness was escorted through to sacred ground beyond and participated in the divine" (*see* Adler, 27). Most neopagans revive one of the Western forms of polytheism. The names of the gods may differ, but most often they are Celtic, Greek, or Latin.

Some neopagans debate about the ontological state of their “gods,” assigning an idealistic or aesthetic role to them. But as one put it, “All these things are within the realm of possibility. It has been our nature to call these ‘gods.’ ” God is an eternal being; so are we. Then in a sense, we, too, are god. Adler notes that there are two deities of most wicca groups: The god is the lord of animals and of death and beyond; and the goddess has three aspects: Maiden, Mother, and Crone. Each of her aspects is symbolized by a phase of the moon. The Maiden is the waxing crescent, the Mother is the full moon, and the waning crescent is like the woman who is past childbearing. Adler suggests that neopagans might be considered “duotheists,” though feminist witches are often monotheists, worshiping the goddess as the one god (ibid., 35, 112). Neopagans sometimes describe themselves as monotheistic polytheists. Morgan McFarland, a Dallas witch, declared: “I see myself as monotheistic in believing in the Goddess, Creatrix, the Female Principle, but at the same time acknowledging that other gods and goddesses do exist through her as manifestations of her, facets of the whole” (ibid., 36). By her own definition, the use of *monotheistic* here is misleading. She and other neopagans look to a many-faceted (polytheistic) manifestation of pantheism. Each manifestation, of course, is finite (*see* POLYTHEISM).

The Radical Feminist Connection. Neopaganism closely connects with radical feminism. Not all neopagans are feminists, nor are all feminists neopagan. Nonetheless, neopaganism has drawn many feminists. Adler describes the dynamics this way: “Many feminist Witchcraft covens have . . . attracted women from all walks of life. But even there, most of these women have already been strengthened by the feminist movement, or by consciousness-raising groups, or by an important experience such as divorce, separation, or a homosexual encounter”(ibid., 37). One neopagan feminist said, “We have found that women working together are capable of conjuring their past and reawakening their old ascendancy. . . . This does not seem to happen when men are present . . . it seems that in mixed covens, no matter how ‘feminist’ the women are, a kind of competition begins to happen. Among the women alone, none of this occurs, and a great reciprocity develops, unlike anything I have seen before” (ibid., 124).

Some were witches before they were feminists. A neopagan from Los Angeles said her spiritual journey began when she observed her mother talking to the dead. “I saw her go into a trance and feel presences around her. She is an artist, and her art often reflects Sumerian influences. . . . She tells fortunes and can still the wind.” But the daughter, like the mother, found herself in the traditional role of wife and mother and felt limited and enslaved. While attempting suicide she had a vision that confirmed her occult beliefs. Her awareness as a witch and feminist perspective met in the attempt to liberate her womanhood from perceived oppression (ibid. 76–77).

One draw to witchcraft for women is that their gender has equal, and often superior, status. As far back as the 1890s, a social observer named Leland wrote that in times of intellectual rebellion against conservatism and hierarchy, there is a feminist struggle for superiority. He noted that in witchcraft the female is the primitive principle. “The perception of this [tyranny] drove vast numbers of the discontent into rebellion, and as they could not prevail by open warfare, they took their hatred out in a form of secret anarchy, which was, however, intimately blended with superstition and fragments of old tradition” (ibid., 59).

Occultism. Almost inevitably neopagans are involved in the occult. They believe in an impersonal force, energy, or power, into which they can tap to do supernormal things. Luke Skywalker of *Star Wars* is the classic model for this belief. Attempts to cast spells are another example.

Pluralism and Relativism. Neopagans are strongly pluralistic. Polytheism by its nature leaves room for more gods or goddesses. All forms of worship of whatever god one may choose are legitimate. Such belief rejects absolute truth in favor of an irrationalism in which opposites can both be true. Miller denies that any system operates "according to fixed concepts and categories" and that all are controlled by either-or categories of logic. He rejects the idea that something is true or false, beautiful or ugly, good or evil (ibid., 7).

Consistently, many neopagans flatly reject the idea of *The Witches' Bible* , fuming at the word *the* . Modern pagans remain anti-authoritarian, taking pride in being "the most flexible and adaptable of religions, . . . perfectly willing to throw out dogmas" (Adler, ix, 126, 135). A neopagan "creed," therefore, is an oxymoron. They are noncreedal by definition.

Evaluation. Many criticisms of neopagan, polytheistic, and relativist (*see* TRUTH, ABSOLUTE NATURE OF) religion are treated elsewhere. See the articles DUALISM ; FINITE GODISM ; GNOSTICISM ; GOD, NATURE OF ; HINDUISM, VEDANTA ; MONISM ; NOSTRADAMUS ; PANTHEISM ; PLURALISM, RELIGIOUS ; TRUTH, NATURE OF ; ZEN BUDDHISM . A few central points can be briefly discussed here:

Irrationality. Neopagans claim we should discard reason as normative in life. But if this is done, then opposites could both be true. This violates the fundamental laws of thought (*see* FIRST PRINCIPLES). The person who claims that opposites can both be true does not really believe that the opposite of that statement also is true.

Relativism. Neopagans are relativists. But all truth cannot be relative. That very claim is presented as a nonrelative truth claim. There cannot be one and only one God (monotheism) and more than one god (polytheism) at the same time and in the same sense (*see* PLURALISM).

Pluralism. The pluralistic desire to embrace all forms of religion runs into the same problem. Everything cannot be true, including opposites. This violates the Law of Noncontradiction (*see* LOGIC ; FIRST PRINCIPLES). Either polytheism is true or monotheism is true. Both cannot be true. Neopagans cannot use either-or statements to affirm both-and thinking. Polytheists have to deny pluralism in order to affirm it, for they do not believe the opposite of pluralism is true. But if opposites are not true, pluralism is false.

Inclusivism. The claim that we must be inclusive, holding all religions to be true, is also self-defeating. It is a non-inclusive (exclusivist) claim to assert that only inclusivism is true and all exclusivism is false. While they claim to allow total diversity of expression, the neopagan practice is quite restrictive. The very existence of *secret* covens reveals the exclusivistic nature of the group. Some refer to wicca as *the* religion. Even proponents believe in a universal element in neopaganism, insisting on universality of content but not of form (ibid., 116, 145). The existence of an initiation rite is an earmark of exclusivism. Witches claim their rite is a way to

protect the institution from those who are insincere, evil, or who would give the craft a bad name (ibid., 98). But if they must protect their institution from evil or the insincere, there must be a genuine form to preserve. Adler claims that witchcraft was once the *universal religion* , which has been driven underground (ibid., 66). This is a claim to universality and implicit exclusivism to be *the* religion.

One controversy in which wiccans condemned a couple who were charging money for lessons in witchcraft, further shows exclusivity. Those who voiced disapproval insisted that “this violates Craft Law,” indicating that there is a universal craft law that defines right and wrong. If it does not, witchcraft can be done in any way one wishes. Even the “Principles of Wiccan Belief” adopted by the Council of American Witches on April 11–14, 1974, has a strong statement excluding the belief that Christianity is “the only way.” They frankly acknowledged this as part of “our animosity toward Christianity” (ibid., 103).

All-inclusive groups fail to realize that every truth claim is exclusive. If Christianity is true, then of necessity all non-Christian beliefs are false. If witchcraft is true, all nonwitchcraft beliefs are false. Neopaganism is just as exclusivistic as any other religion that claims to have discovered truth about reality.

Neopagans admit that “polytheism always includes monotheism. The reverse is not true” (ibid., viii). *Includes* is not the proper word here. Polytheism is willing to *absorb* or *swallow* monotheistic beliefs, but polytheism must be extremely exclusive of all orthodox forms of monotheism. These worldviews cannot share the same belief system. Under a cloak of inclusive language, neopaganism believes that the only way is to deny that there is an only way.

Failure to Explain Origins. Some pagan religions speak of origins, but few ask ultimate questions about them (*see* COSMOLOGICAL ARGUMENT). There are gods acting, but how did they get us to this point? What caused it all to be? C. S. Lewis remarked that to bring God and nature into relation, also separates them. What makes and what is made are two, not one. “Thus the doctrine of Creation in one sense empties nature of divinity” (Lewis, 79–80). That destroys paganism.

Failure to Explain Unity. If the pagan realized that nature and God are distinct, that the one made the other; one ruled and the other obeyed, gods would not be worshiped, but rather the Creator God. C. S. Lewis observed, “The difference between believing in God and in many gods is not one of arithmetic. . . . God has no plural” (Lewis, 78, 82). Herein is revealed the depravity of polytheism, for they prefer to worship a god they make, rather than the God who made them. One neopagan concluded, “I realized it wasn’t so outrageous, and that we could choose what deities to follow. . . . [for] the element of Christianity that bothered [me] . . . was its requirement to be submissive to the deity.” He adds that his gods have human characteristics. They are flawed and so more approachable (*Fort Worth Star-Telegram* , 16 December 1985, 2A). In biblical language this is a vivid confession of the fact that pagans “suppress the truth in unrighteousness . . . and change the glory of the incorruptible God into an image made like corruptible man” (Rom. 1:18 , 23).

Anticreedalism. Their protest notwithstanding, neopaganism has its own creeds and dogmas. Adler admits: "I've seen a lot of people in the Craft get hung up on fragments of ritual and myth. Some people accept these fragments as a dogma." While protesting creeds, Adler lays down a set of "basic beliefs" she claims "most people in this book share" (Adler, 88, ix). She seems unaware that she is thereby defining a creed.

The creed she confesses is informative: "The world is holy. Nature is holy. The body is holy. Sexuality is holy. The mind is holy. The imagination is holy. You are holy. . . . Thou art Goddess. Thou art God. Divinity is immanent in all Nature. It is as much within you as without" (ibid.). There are several standard doctrines of neopaganism in this creed, including pantheism, polytheism, animism, self-deification, and, covertly, free sexual expression. In the creed they called "Principles of Wiccan Belief," the Council of American Witches listed thirteen basic principles. These beliefs include moon worship, harmony with nature, the creative power in the universe manifest in male and female polarities, and sex as pleasure. Interestingly, they disavowed Devil worship and the belief that Christianity is "the only way" (ibid., 101–3).

Mission. Neopagans claim to seek no converts. "You don't *become* a Pagan," they insist; "You *are* a Pagan." They claim that no one converts to Wicca. Yet they admit that people are drawn into paganism by "word of mouth, a discussion between friends, a lecture, a book, or an article." Regardless of their purpose, what are these but means of evangelism. To claim that these people were always pagan and that they just "came home" (ibid., x, 14, 121) is like Christian missionaries denying that they evangelize, since those who believe have simply "come back to God." Like anyone else who believes he or she has found truth or reality, the neopagans cannot resist the urge to propagate their faith. Why else does the experience of enlightenment lead new wiccans to proclaim with the zeal of a new convert: "I was turned on to the Goddess. It was the religion" (ibid., 116)?

Neotheism.

Meaning of the Term. Proponents of this view variously describe themselves as holding the "openness of God" view or "free will theism," by which they mean God is open to change and that humans have free will as opposed to any divine determinism of the future in advance. Nonetheless, "neotheism" appears to be a more appropriate, simpler, and more descriptive term. By their own confession, they see themselves as theists but have adopted some of the tenets of panentheism or process theology (*see* WHITEHEAD, A. N .).

Some Proponents of Neotheism. Proponents of neotheism include Clark Pinnock, Richard Rice, John Sanders, William Hasker, and David Basinger (see Pinnock et al., *The Openness of God*). Others who have written in defense of the position include Greg Boyd, Stephen T. Davis, Peter Geach, Peter Lang, J. R. Lucas, Thomas V. Morris, Ronald Nash, A. N. Prior, Richard Purtill, Richard Swinburne, and Linda Zagzebski.

Some Basic Tenets of Neotheism. In their own words neotheists believe that "1. God not only created this world *ex nihilo* but can and at times does intervene unilaterally in earthly affairs. 2. God chose to create us with incompatibilist (libertarian) freedom—freedom over which he cannot exercise total control. 3. God so values freedom—the moral integrity of free creatures and a world in which such integrity is possible—that he does not normally override such freedom, even if he sees that it is producing undesirable results. 4. God always desires our highest good, both individually and corporately, and thus is affected by what happens in our lives. 5. God does not possess exhaustive knowledge of exactly how we will utilize our freedom, although he may very well at times be able to predict with great accuracy the choices we will freely make" (Pinnock, 76–77).

Neotheism can best be described by noting what it holds in common with traditional or classical theism (*see*) and also what it holds in distinction from it.

Tenets Held in Common with Theism. In accord with classical theism , neotheists believe that God is a personal, transcendent, all-powerful Being who created the world *ex nihilo,* out of nothing (*see* CREATION, VIEWS OF), and who can and has performed supernatural acts within it. God is in charge of the universe, but he has given human beings the power to make free choices.

Tenets Held in Distinction from Theism. By way of contrast with traditional theism, neotheism holds that God does not have an infallible knowledge of future free acts. In addition, he can and does change his mind in response to our prayers. Furthermore, God is not absolutely simple nor is he nontemporal or eternal. Thus, he is not able to completely control or predict exactly the way things will turn out.

An Evaluation of Neotheism. *Positive Features.* There are many positive dimensions of neotheism. These include all the things its adherents hold in common with classical theists.

Creation ex nihilo. One of the signature beliefs of classical theism, in contrast to other worldviews , is that God created the universe out of nothing. This clearly distinguishes the view from panentheism and places its adherents in the broad theistic camp.

Affirmation of miracles. Unlike panentheists and like theists, neotheists affirm miracles . This places them alongside traditional theism and in contrast to naturalism and current neoclassical theism known as process theology.

Emphasis on God's relatability with creation. Neotheists are deeply concerned, and rightly so, to preserve God's relatability with the world. A God who cannot hear and answer prayer is less than personal and is not the God described in the Bible.

Stress on Free Will . Along with classical theists, neotheists desire to defend free choice against forms of determinism that would eliminate genuine free will. This is commendable.

Along with this should be mentioned that neotheists are right in stressing that there are some things that are impossible for God to do, once he has decided to make free creatures. He cannot, for example, force them to freely choose something. Forced freedom is a contradiction in terms (*see* FREE WILL ; EVIL, PROBLEM OF).

Negative Critique. On the negative side of the ledger, neotheists are to be criticized in part for creating God in their own image (see Geisler, all). They have in fact bought too deeply into panentheism and are subject to many of the same criticisms.

Neotheism is unbiblical. Since Christian neotheists claim to accept the authority of the Bible, they can be judged by its standards (Geisler, chap. 4). And the Bible, in contrast to neotheism, clearly affirms that God cannot change. The self-existent I AM (Exod. 3:14) of Scripture says "I the Lord change not" (Mal. 3:6 ; Heb. 1:12 ; James 1:17). and who "knows the end from the beginning" (Isa. 46:10). God is "infinite in understanding" (Ps. 147:5) and, hence, "foreknows" the elect (Rom. 8:29 ; 2 Peter 1:2). He "is not a man that he should change his mind" (1 Sam. 15:29).

When the Bible speaks of God "repenting" it is only from our perspective, as when there is a repentance on the part of man (Jonah 3). For example, when one reverses course after peddling his bike against the wind, it was not the wind that changed. Even neotheists admit there are anthropomorphisms in the Bible.

Neotheism is incoherent. For example, neotheists believe God created the temporal world out of nothing. If so, then he must be prior to time and not temporal himself. But neotheists deny that God is a nontemporal Being. This is inconsistent, for if God created time, then he cannot himself be temporal, any more than God can be a creature if he created all creatures (see Geisler, chap. 6).

Likewise, neotheists admit God is a necessary Being yet they deny he has Pure Actuality. But here again they cannot have it both ways. For a necessary Being has no potentiality for

nonexistence. If it did, then it would not be necessary in its being. But if it has no potentiality not to exist, then its existence must be Pure Actuality (with no potentiality).

Finally, if God is a Necessary Being, then he cannot change in his Being. For a Necessary Being must necessarily be what it is; it cannot be other. However, neotheists claim God can change, that is, he is not immutable. But both these things held by neotheists cannot be true.

Neotheism undermines infallibility. Although many neotheists claim to believe the Bible is the infallible Word of God, this is inconsistent with their basic beliefs. If God cannot know the future infallibly, then the predictions in the Bible that involve free acts (as most do) cannot be infallible. That is, some of them may be wrong. Further, we have no way of knowing which ones. Thus, neotheism undermines the infallibility of all biblical predictions (*see* PROPHECY, AS PROOF OF THE BIBLE).

Neotheism destroys a biblical test for false prophets. The Bible declares (in Deut. 18:22) that a false prophecy is a test of a false prophet. But, as just noted, according to neotheism there may be false predictions in the Bible. If this is so, then a false prediction cannot be a test of a false prophet, since even God himself could make false predictions.

Neotheism undermines confidence in unconditional promises. If neotheism is correct, even God's unconditional promises cannot be trusted, including the answer of prayer (see Geisler, chaps. 5, 6). For as well-meaning as God may be in making the promise, if the fulfillment in any way depends on human free choices (which most do), then God may not be able to deliver on his promise.

New Testament Apologetic Concerns. The historicity of the New Testament is based on the evidence that history can be known, the reliability of the New Testament manuscripts, and the reliability of the New Testament witnesses (NEW TESTAMENT, HISTORICITY OF). The witnesses include the New Testament writers who were first-hand eyewitnesses and/or contemporaries of the events and other early secular sources.

These issues are part of a crucial link in the overall Christian apologetic (*see* APOLOGETICS, ARGUMENT OF). Without a reliable New Testament, we have no objective, historical way to know what Jesus said or did. We cannot establish whether he was God, what he taught, or what his followers did and taught. There are two basic steps in the argument for the reliability of the New Testament documents. First, we must show that the manuscripts were written early enough and with enough attention to detail to be faithful records. A side issue, also important, is whether the New Testament books have been passed down accurately, so that we can know for sure what was written in the original copies or *autographs* . Second, we must know if the sources or witnesses used by the authors were reliable.

It may surprise those unfamiliar with the facts that there is more documentary evidence for the reliability of the New Testament than for any other book from the ancient world. Evidence will be surveyed in three articles:

NEW TESTAMENT, DATING OF discusses in general what is and is not known about when the Gospels, Epistles, Acts, Hebrews, and The Revelation of John were first penned. Further information on dating is available in the articles ACTS, HISTORICITY OF ; BIBLE, EVIDENCE FOR ; JESUS SEMINAR , and Q DOCUMENT .

The articles NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT MANUSCRIPTS , and NEW TESTAMENT, NON-CHRISTIAN SOURCES cover more general concerns of the accurate transmission of documents.

New Testament, Dating of. When the New Testament was written is a significant issue as one assembles the overall apologetic argument for Christianity (*see* APOLOGETICS, ARGUMENT OF). Confidence in the historical accuracy of these documents depends partly on whether they were written by eyewitnesses and contemporaries to the events described, as the Bible claims. Negative critical scholars (*see* BIBLE CRITICISM) strengthen their own views as they separate the actual events from the writings by as much time as possible. For this reason radical scholars argue for late first century, and if possible second century, dates for the autographs (*see* JESUS SEMINAR). By these dates they argue that the New Testament documents, especially the Gospels, contain mythology (*see* MYTHOLOGY AND THE NEW TESTAMENT). The writers created the events contained, rather than reported them.

Arguments for Early Dates. *Luke and Acts.* The Gospel of Luke was written by the same author as the Acts of the Apostles, who refers to Luke as the "former account" of "all that Jesus began to do and teach" (Acts 1:1). The destiny ("Theophilus"), style, and vocabulary of the two books betray a common author. Roman historian Colin Hemer has provided powerful evidence that Acts was written between A.D . 60 and 62 (*see* ACTS, HISTORICITY OF). This evidence includes these observations:

1. There is no mention in Acts of the crucial event of the fall of Jerusalem in 70.

2. There is no hint of the outbreak of the Jewish War in 66 or of serious deterioration of relations between Romans and Jews before that time.

3. There is no hint of the deterioration of Christian relations with Rome during the Neronian persecution of the late 60s.

4. There is no hint of the death of James at the hands of the Sanhedrin in ca. 62, which is recorded by Josephus in *Antiquities of the Jews* (20.9.1.200).

5. The significance of Gallio's judgment in Acts 18:14–17 may be seen as setting a precedent to legitimize Christian teaching under the umbrella of the tolerance extended to Judaism.

6. The prominence and authority of the Sadducees in Acts reflects a pre-70 date, before the collapse of their political cooperation with Rome.

7. The relatively sympathetic attitude in Acts to Pharisees (unlike that found even in Luke's Gospel) does not fit well in the period of Pharisaic revival that led up to the council at Jamnia. At that time a new phase of conflict began with Christianity.

8. Acts seems to antedate the arrival of Peter in Rome and implies that Peter and John were alive at the time of the writing.

9. The prominence of "God-fearers" in the synagogues may point to a pre-70 date, after which there were few Gentile inquirers and converts to Judaism.

10. Luke gives insignificant details of the culture of an early, Julio-Claudian period.

11. Areas of controversy described presume that the Temple was still standing.

12. Adolf Harnack contended that Paul's prophecy in 20:25 (cf. 20:38) may have been contradicted by later events. If so, the book must have appeared before those events.

13. Christian terminology used in Acts reflects an earlier period. Harnack points to use of *Iusous* and *Ho Kurios* , while *Ho Christos* always designates "the Messiah," and is not a proper name for Jesus.

14. The confident tone of Acts seems unlikely during the Neronian persecution of Christians and the Jewish War with Rome during the late 60s.

15. The action ends very early in the 60s, yet the description in Acts 27 and 28 is written with a vivid immediacy. It is also an odd place to end the book if years have passed since the pre-62 events transpired.

For additional proofs of the accuracy and early date of Acts, see the article ACTS, HISTORICITY OF . If Acts was written in 62 or before, and Luke was written before Acts (say 60), then Luke was writ ten less than thirty years of the death of Jesus. This is contemporary to the generation who witnessed the events of Jesus' life, death, and resurrection. This is precisely what Luke claims in the prologue to his Gospel:

> Many have undertaken to draw up an account of the things that have been fulfilled among us, just as they were handed down to us by those who from the first were eye-witnesses and servants of the word. Therefore, since I myself have carefully investigated everything from the beginning, it seemed good also to me to write an orderly account for you, most excellent Theophilus, so that you may know the certainty of the things you have been taught. [Luke 1:1–4]

Luke presents the same information about who Jesus is, what he taught, and his death and resurrection as do the other Gospels. Thus, there is not reason to reject their historical accuracy either.

First Corinthians. It is widely accepted by critical and conservative scholars that 1 Corinthians was written by 55 or 56. This is less than a quarter century after the crucifixion in 33. Further, Paul speaks of more than 250 eyewitnesses to the resurrection who were still alive when he wrote (15:6). Specifically mentioned are the twelve apostles and James the brother of Jesus. Internal evidence is strong for this early date:

1. The book repeatedly claims to be written by Paul (1:1 , 12–17 ; 3:4 , 6 , 22 ; 16:21).

2. There are parallels with the book of Acts.

3. There is a ring of authenticity to the book from beginning to end.

4. Paul mentions 500 who had seen Christ, most of whom were still alive.

5. The contents harmonize with what has been learned about Corinth during that era.

There also is external evidence:

1. Clement of Rome refers to it in his own *Epistle to the Corinthians* (chap. 47).

2. *The Epistle of Barnabas* alludes to it (chap. 4).

3. *Shepherd of Hermas* mentions it (chap. 4).

4. There are nearly 600 quotations of 1 Corinthians in Irenaeus, Clement of Alexandria, and Tertullian alone (Theissen, 201). It is one of the best attested books of any kind from the ancient world.

Along with 1 Corinthians, 2 Corinthians and Galatians are well attested and early. All three reveal a historical interest in the events of Jesus' life and give facts that agree with the Gospels. Paul speaks of Jesus' virgin birth (Gal. 4:4), sinless life (2 Cor. 5:21), death on the cross (1 Cor. 15:3 ; Gal. 3:13); resurrection on the third day (1 Cor. 15:4), and post-resurrection appearances (1 Cor. 15:5–8). He mentions the hundreds of eyewitnesses who could verify the resurrection (1 Cor. 15:6). Paul rests the truth of Christianity on the historicity of the resurrection (1 Cor. 15:12–19). Paul also gives historical details about Jesus' contemporaries, the apostles (1 Cor. 15:5–8), including his private encounters with Peter and the apostles (Gal. 1:18–2:14). Surrounding persons, places, and events of Christ's birth were all historical. Luke goes to great pains to note that Jesus was born during the days of Caesar Augustus (Luke 2:1) and was baptized in the fifteenth year of Tiberius. Pontius Pilate was governor of Judea and Herod was tetrarch of Galilee. Annas and Caiaphas were high priests (Luke 3:1–2).

Acceptance of Early Dates. There is a growing acceptance of earlier New Testament dates, even among some critical scholars. Two illustrate this point, former liberal William F. Albright and radical critic John A. T. *Robinson

William F. Albright. Albright wrote, "We can already say emphatically that there is no longer any solid basis for dating any book of the New Testament after about A.D . 80, two full generations before the date between 130 and 150 given by the more radical New Testament critics of today" (*Recent Discoveries in Bible Lands* , 136). Elsewhere Albright said, "In my opinion, every book of the New Testament was written by a baptized Jew between the forties and the eighties of the first century (very probably sometime between about A.D . 50 and 75)" ("Toward a More Conservative View," 3).

This scholar went so far as to affirm that the evidence from the Qumran community shows that the concepts, terminology, and mind set of the Gospel of John is probably early first century ("Recent Discoveries in Palestine"). "Thanks to the Qumran discoveries, the New Testament proves to be in fact what it was formerly believed to be: the teaching of Christ and his immediate followers between cir. 25 and cir. 80 A.D ." (*From Stone Age to Christianity* , 23).

John A. T. Robinson. Known for his role in launching the "Death of God" movement, Robinson wrote a revolutionary book titled *Redating the New Testament* , in which he posited revised dates for the New Testament books that place them earlier than the most conservative scholars ever held. Robinson places Matthew at 40 to after 60, Mark at about 45 to 60, Luke at before 57 to after 60, and John at from before 40 to after 65. This would mean that one or two Gospels could have been written as early as seven years after the crucifixion. At the latest they were all composed within the lifetimes of eyewitnesses and contemporaries of the events. Assuming the basic integrity and reasonable accuracy of the writers, this would place the reliability of the New Testament documents beyond reasonable doubt.

Other Evidence. *Early Citations.* Of the four Gospels alone there are 19,368 citations by the church fathers from the late first century on. This includes 268 by Justin Martyr (100–165), 1038 by Irenaeus (active in the late second century), 1017 by Clement of Alexandria (ca. 155–ca. 220), 9231 by Origen (ca. 185–ca. 254), 3822 by Tertullian (ca. 160s–ca. 220), 734 by Hippolytus (d. ca. 236), and 3258 by Eusebius (ca. 265–ca. 339; Geisler, 431). Earlier, Clement of Rome cited Matthew, John, and 1 Corinthians in 95 to 97. Ignatius referred to six Pauline Epistles in about 110, and between 110 and 150 Polycarp quoted from all four Gospels, Acts, and most of Paul's Epistles. Shepherd of Hermas (115–140) cited Matthew, Mark, Acts, 1 Corinthians, and other books. Didache (120–150) referred to Matthew, Luke, 1 Corinthians, and other books. Papias, companion of Polycarp, who was a disciple of the apostle John, quoted John. This argues powerfully that the Gospels were in existence before the end of the first century, while some eyewitnesses (including John) were still alive.

Early Greek Manuscripts. The earliest undisputed manuscript of a New Testament book is the John Rylands papyri (P52), dated from 117 to 138. This fragment of John's Gospel survives from within a generation of composition. Since the book was composed in Asia Minor and this fragment was found in Egypt, some circulation time is demanded, surely placing composition of John within the first century. Whole books (Bodmer Papyri) are available from 200. Most of the New Testament, including all the Gospels, is available in the Chester Beatty Papyri manuscript from 150 years after the New Testament was finished (ca. 250). No other book from the ancient world has as small a time gap between composition and earliest manuscript copies as the New Testament (*see* NEW TESTAMENT MANUSCRIPTS).

Jose O'Callahan , a Spanish Jesuit paleographer, made headlines around the world on March 18, 1972, when he identified a manuscript fragment from Qumran (*see* DEAD SEA SCROLLS) as a piece of the Gospel of Mark. The piece was from Cave 7. Fragments from this cave had previously been dated between 50 B.C . and A.D . 50, hardly within the time frame established for New Testament writings. Using the accepted methods of papyrology and paleography, O'Callahan compared sequences of letters with existing documents and eventually identified

nine fragments as belonging to one Gospel, Acts, and a few Epistles. Some of these were dated slightly later than 50, but still extremely early:

text	fragment	approx. date
Mark 4:28	7Q6	A.D . 50
Mark 6:48	7Q15	A.D . ?
Mark 6:52 , 53	7Q5	A.D . 50
Mark 12:17	7Q7	A.D . 50
Acts 27:38	7Q6	A.D . 60 +
Rom. 55:11 , 12	7Q9	A.D . 70 +
1 Tim. 3:16 ; 4:1–3	7Q4	A.D . 70 +
2 Peter 1:15	7Q10	A.D . 70 +
James 1:23 , 24	7Q8	A.D . 70 +

Conclusion. Both friends and critics acknowledge that, if valid, O'Callahan's conclusions will revolutionize New Testament theories. If even some of these fragments are from the New Testament, the implications for Christian apologetics are enormous. Mark and/or Acts must have been written within the lifetimes of the apostles and contemporaries of the events. There would be no time for mythological embellishment of the records (*see* MYTHOLOGY AND NEW TESTAMENT). They must be accepted as historical. Mark could be shown to be an early Gospel. There would hardly be time for a predecessor series of Q manuscripts (*see* Q DOCUMENT). And since these manuscripts are not originals but copies, parts of the New Testament would be shown to have been copied and disseminated during the lives of the writers. No first-century date allows time for myths or legends to creep into the stories about Jesus. Legend development takes at least two full generations, according to A. N. Sherwin-White (see Sherwin-White, 189). Physical remoteness from the actual events also is helpful. Neither are available here. The thought is utterly ridiculous with a ca. 50 or earlier Mark. Even putting aside O'Callahan's controversial claims, the cumulative evidence places the New Testament within the first century and the lives of eyewitnesses.

New Testament, Historicity of. Thomas Paine , one of America’s founding fathers and author of *Common Sense* and *The Age of Reason,* said of Jesus Christ, “There is no history written at the time Jesus Christ is said to have lived that speaks of the existence of such a person, even such a man” (Paine, 234). In his essay *Why I Am Not a Christian,* Bertrand Russell wrote, “Historically it is quite doubtful whether Christ ever existed at all, and if he did we know nothing about him” (Russell, 16). A recent book by G. A. Wells concludes that even if there was a historical Jesus, he is not the Christ of the New Testament.

Yet Christianity depends entirely on the historical person of Jesus Christ (see 1 Corinthians 15). Since the New Testament is the primary source of information about the words and works of Christ, if it is not accurate then we do not possess a first-hand presentation of Jesus’ claims,

character, and credentials. The historical integrity of the New Testament is crucial to Christian apologetics.

Evidence for the historicity of the New Testament documents presupposes the knowability of history in general and the believability of miracle history in particular. There are those who believe no history can be objectively known. Their position is answered in the article History, Objectivity of. Such a radical skepticism eliminates the possibility of knowing anything about the past. Immediately, all university history and classical departments are swept away. No sources about past events could be trusted. By analogy such skepticism would eliminate all historical science, such as historical geology (paleontology), archaeology, and forensic science (*see* ORIGINS, SCIENCE OF). They too depend on examining and interpreting remains from the past.

Since everything not occurring now is history, such a view would eliminate all eyewitness testimony. Even living witnesses can only testify to what they saw at a separate point in reality. On the other hand, if their testimony can be accepted while they are living, the valid records they leave behind are just as credible.

Some critics object only to miracle history. This is discussed in detail in the article MIRACLES, ARGUMENTS AGAINST . This view clearly begs the question by assuming that no miracle story is credible in advance of looking at the evidence. No one looking for the objective truth should assume that a report of an unusual event is not to be trusted before even considering the matter. Both in science (*see* BIG BANG ; EVOLUTION, CHEMICAL ; EVOLUTION, COSMIC) and in history the evidence has shown that radical singularities have occurred (*see* RESURRECTION, EVIDENCE FOR ; VIRGIN BIRTH).

The first step in establishing the historicity of the New Testament is to show that the New Testament documents have been accurately transmitted from the time of their original composition. This is demonstrated in the article NEW TESTAMENT MANUSCRIPTS .

The second step is to show that they were written by reliable eyewitnesses or contemporaries of the events. For this, see NEW TESTAMENT, DATING OF . Contrary to critics, there is more evidence for the historicity of the life, death, and resurrection of Christ than for any other event from the ancient world (*see* NEW TESTAMENT, NON-CHRISTIAN SOURCES).

To reject the historicity of the New Testament is to reject all history. But we cannot reject all history without engaging in some history of our own. The statement that "The past is not objectively knowable" is itself an objective statement about the past. Hence, the position against the knowability of history slits its own throat (*see* HISTORY, OBJECTIVITY OF).

New Testament Manuscripts. The fidelity of the New Testament text is an important link in the apologetic for Christianity (*see* APOLOGETICS, ARGUMENT OF ; NEW TESTAMENT, HISTORICITY OF), and there is overwhelming evidence in support of the reliability of the New Testament text.

The Story of the Manuscripts. Testimony to the fidelity of the New Testament text comes primarily from three sources: Greek manuscripts, ancient translations, and quotations of Scripture by Christian writers.

Greek manuscripts are the most important and are found in four classes, *papyri* , *uncials* , *minuscules* , and *lectionaries* . These designations can be rather confusing to follow, for papyri refers to the woven material on which the writing was made. Uncials and minuscules refer to the way letters were formed in the writing style of the manuscript, and lectionaries are collections of Scripture texts bound for use in worship. What is confusing is that papyri manuscripts are written with the rounded, cursive capital letters of uncial script. More than 200 lectionaries were written in uncial letters. Still, scholars try to catalog their finds according to the most distinguishing characteristic of each. A papyrus comes from a particular era and region. The papyri Greek manuscripts tend to be compared with one another and used extensively in comparing the Greek used in the text. Those manuscripts placed in the categories of uncials and minuscules are differentiated by the style of writing and by being written on vellum or parchment. So, for example, an uncial papyri manuscript is in the *papyri* category; an uncial vellum manuscript is called an *uncial* . Minuscule script is small, plain, cursive and did not develop until medieval

times. So there are far more minuscule manuscripts, but they are later, between the ninth and fifteenth centuries.

Another term frequently used in reference to ancient and medieval manuscripts is *codex* . While Jewish worship has traditionally preferred Scriptures bound as scrolls, Christians in Greek culture mostly used the bound book form that was gaining acceptance in the first century. Therefore, most Scripture manuscripts, even early ones, are bound codices.

More Manuscripts. Catalogued Greek texts include eighty-eight papyri manuscripts, 274 uncial manuscripts, and 245 uncial lectionaries. Those early uncial manuscript witnesses are extremely valuable in establishing the original text of the New Testament. The other 2795 manuscripts and 1964 lectionaries are minuscule.

This is an astounding number and variety. It is not uncommon for classics from antiquity to survive in only a handful of manuscript copies. According to F. F. Bruce , nine or ten good copies of Julius Caesar's *Gallic War* survive, twenty copies of Livy's *Roman History,* two copies of Tacitus' *Annals* , and eight manuscripts of Thucydides' *History* (Bruce, 16). The most documented ancient secular work is Homer's *Iliad,* surviving in 643 manuscript copies. Counting Greek copies alone, the New Testament text is preserved in some 5686 partial and complete manuscript portions that were copied by hand from the second (possibly even the first) through the fifteenth centuries (see Geisler, chap. 26).

In addition to the Greek manuscripts there are numerous translations from the Greek, not to mention quotations of the New Testament. Counting major early translations in Syriac, Coptic, Arabic, Latin, and other languages, there are 9000 copies of the New Testament. This makes a total of over 14,000 copies of the New Testament. What is more, if we compile the 36,289 quotations by the early church Fathers of the second to fourth centuries we can reconstruct the entire New Testament minus 11 verses.

Earlier Manuscripts. One mark of a good manuscript is its age. Generally, the older the copy, the closer to the original composition and the fewer copyist errors. Most ancient books survive in manuscripts that were copied about 1000 years after they were composed. It is rare to have, as the *Odyssey* does, a copy made only 500 years after the original. Most of the New Testament is preserved in manuscripts less than two hundred years from the original (P45, P46, P47), some books of the New Testament dating from little over one hundred years after their composition (P66), and one fragment (P52) comes within a generation of the first century. The New Testament, by contrast, survives in complete books from a little over 100 years after the New Testament was completed. Fragments are available from only decades later. One fragment, the John Ryland papyri (P52), is dated 117–138. See the article NEW TESTAMENT, DATING OF .

Many critics reject the identifications, arguing that they are too fragmentary for certain identification. O'Callahan, however, is a respected paleographer and he defends his work as consistent with that by which other ancient fragments are identified. Critics have not come up with viable alternate writings from which the fragments could have come without changing the usual procedures. If they are New Testament fragments, these early dates would revolutionize New Testament critical studies.

More Accurate Manuscripts. Muslims make a point that the *Qur'an* has been accurately preserved (*see* QUR'AN, ALLEGED DIVINE ORIGIN OF). But while the *Qur'an* is a *medieval book* from the seventh century, the New Testament is the most accurately copied book from the *ancient* world. Of course, the important factor is not the precise accuracy in the copies but whether the original is the Word of God (*see* BIBLE, EVIDENCE FOR).

There is widespread misunderstanding among critics about the "errors" in the biblical manuscripts. Some have estimated there are about 200,000 of them. First of all, these are not "errors" but variant readings, the vast majority of which are strictly grammatical. Second, these readings are spread throughout more than 5300 manuscripts, so that a variant spelling of one letter of one word in one verse in 2000 manuscripts is counted as 2000 "errors." Textual scholars Westcott and Hort estimated that only one in sixty of these variants has significance. This would leave a text 98.33 percent pure. Philip Schaff calculated that, of the 150,000 variants known in his day, only 400 changed the meaning of the passage, only fifty were of real significance, and *not even one* affected "an article of faith or a precept of duty which is not abundantly sustained by other and undoubted passages, or by the whole tenor of Scripture teaching" (Schaff, 177).

Most other ancient books are not nearly so well authenticated. New Testament scholar Bruce Metzger estimated that the *Mahabharata* of Hin duism is copied with only about 90 percent accuracy and Homer's *Iliad* with about 95 percent. By comparison, he estimated the New Testament is about 99.5 percent accurate (ibid.).

Islamic scholars recognize the textual scholar Sir Frederic Kenyon as an authority on ancient manuscripts. Yet Kenyon concluded that:

> The number of manuscripts of the New Testament, of early translations from it, and of quotations from it in the oldest writers of the Church, is so large that it is practically certain that the true reading of every doubtful passage is preserved in some one or other of these ancient authorities. This can be said of no other ancient book in the world. [55]

The Manuscript Witnesses. *Manuscripts on Papyrus.* The date of the earliest alleged New Testament manuscripts is disputed. One known as the "Magdalen" fragment contains a reference to Mary Magdalen (in Matt. 26). This bit of papyrus is found in the Oxford University library. The German papyrus expert, Carsten Thiede, argued that it could be an eyewitness account of Jesus. Other experts date it in the second century or later (see Stranton, *Gospel Truth?*).

Other Gospel fragments are dated as early as A.D . 50. These were originally found among the Dead Sea Scrolls (see). Jose O'Callahan, a Spanish Jesuit paleographer, identified a manuscript fragment from Qumran (*see* DEAD SEA SCROLLS) as the earliest known piece of the Gospel of Mark. Fragments from Cave 7 had previously been dated between 50 B.C . and A.D . 50 and listed under "not identified" and classified as "Biblical Texts?" The nine fragments from Qumran are listed as follows:

Mark 4:28	7Q6?	A.D . 50
Mark 6:48	7Q15	A.D . ?
Mark 6:52 , 53	7Q5	A.D . 50

Mark 12:17	7Q7	A.D . 50
Acts 27:38	7Q6?	A.D . 60
Romans 5:11 , 12	7Q9	A.D . 70+
1 Timothy 3:16 ; 4:1–3	7Q4	A.D . 70+
2 Peter 1:15	7Q10	A.D . 70+
James 1:23 , 24	7Q8	A.D . 70+

O'Callahan's critics object to his identification and have offered other possible sources for them. The fragmentary nature of the manuscript makes it difficult to be dogmatic about their true identification (*see* O'CALLAHAN, JOSE).

Eighty-eight undisputed papyri manuscripts have so far been found, of which the following are the most important representatives. The papyri witness to the text is invaluable, because it comes from within the first 200 years after the New Testament was written. Papyri manuscripts or fragments are identified with a "P," followed by a superscript number of 1 through 88.

John Rylands Fragment. The John Rylands Fragment (P52), a two-by-three-inch papyrus fragment from a codex, is the earliest undisputed copy of a portion of the New Testament. It dates from the first half of the second century, probably 117–38. Adolf Deissmann argues that it may be even older (Metzger, *Text of the New Testament,* 39). The papyrus piece, written on both sides, contains portions of five verses from the Gospel of John (18:31–33 , 37–38). Because it was found in Egypt, far from Asia Minor where John by tradition was written, this portion tends to confirm that the Gospel was written before the end of the first century. The fragment belongs to the John Rylands Library at Manchester, England.

Bodmer Papyri. The most important discovery of New Testament papyri since the Chester Beatty manuscripts was the acquisition of the Bodmer Collection by the Library of World Literature at Culagny, near Geneva, Switzerland. This also has three sections, designated P66, P72, P75. Dating from about 200 or earlier, P66, contains 104 leaves of John 1:1–6:11 ; 6:35b–14:26 ; and fragments of forty other pages from John 14–21 (Metzger, *Text of the New Testament,* 40). P72 is the earliest known copy of Jude, 1 Peter, and 2 Peter. Also included is a hymn fragment, Psalm 33 , and Psalm 34 , 1 Peter, and 2 Peter, plus several apocryphal books: *The Nativity of Mary* , *Correspondence of Paul to the Corinthians* , *Eleventh Ode of Solomon* , Melito's *Homily on the Passover* , and *The Apology of Phileas* . This third-century papyrus was apparently a private codex measuring six by five inches, prepared by some four scribes (Metzger, *Text of the New Testament,* 40–41). P75 is a codex of 102 pages (originally 144), measuring ten by five and one-third inches. It contains most of Luke and John in clear, carefully printed uncials, and is dated between 175 and 225. It is the earliest known copy of Luke (Metzger, *Text of the New Testament,* 42).

Chester Beatty Papyri. This papyrus dates from about 250 or later. Thirty of the leaves are owned by the University of Michigan. An important collection of New Testament papyri (P45,

P46, P47), now resides in the Beatty Museum near Dublin. The Chester Beatty Papyri consist of three codices, containing most of the New Testament. P45 is made up of pieces of thirty leaves of a papyrus codex: two from Matthew, six from Mark, seven from Luke, two from John, and thirteen from Acts. The original codex consisted of some 220 leaves, measuring ten by eight inches each. Several other small fragments of Matthew from those papyri have appeared in a collection at Vienna (Metzger, *Text of the New Testament,* 37). P46 consists of eighty-six slightly mutilated leaves (eleven by six inches), from an original that contained 104 pages of Paul's Epistles, including Ro mans, Hebrews, 1 Corinthians, 2 Corinthians, Ephesians, Galatians, Philippians, Colossians, 1 Thessalonians, and 2 Thessalonians. Portions of Romans and 1 Thessalonians, and all of 2 Thessalonians, are missing from the manuscripts, which were arranged in descending order according to size. Like P45, P46 dates from about 250. P47 is ten slightly mutilated leaves of the book of Revelation, measuring nine by five inches. Of the original thirty-two leaves, only the middle portion, 9:10–17:2 , remains.

Uncials on Vellum and Parchment. The most important manuscripts of the New Testament are generally considered to be the uncial codices that date from the fourth and following centuries. These appeared almost immediately following the conversion of Constantine and the authorization at the Council of Nicea (325) to freely copy the Bible.

There are 362 uncial manuscripts of sections of the New Testament, of which some of the more important are noted below, and 245 uncial lectionaries. The most important of the uncial manuscripts are A, B, C, and Aleph, which were not available to the King James translators. The only good Greek uncial manuscript available in 1611 was D, and it was used only slightly in the preparation of the King James Version. That fact alone indicated the need for the Revised Version, based on earlier and better manuscripts.

Codex Vaticanus. The Codex Vaticanus (designated B) is perhaps the oldest uncial on parchment or vellum (ca. 325–350), and one of the most important witnesses to the text of the New Testament. It was probably written by the middle of the fourth century, but it was not known to textual scholars until after 1475, when it was catalogued in the Vatican Library. For the next 400 years scholars were prohibited from studying it. A complete photographic facsimile was made in 1889–90, and another of the New Testament in 1904.

It includes most of the Old Testament Septuagint and the New Testament in Greek. Missing are 1 Timothy through Philemon, Hebrews 9:14 to the end of the New Testament, and the General Epistles. The Apocrypha is included with the exceptions of *1 Maccabees* , *2 Maccabees* , and the *Prayer of Manasses* . Also missing is Genesis 1:1–46:28 , 2 Kings 2:5–7 and 10–13 , and Psalms 106:27–138:6 . Mark 16:9–20 and John 7:53–8:11 were purposely omitted from the text.

This codex was written in small and delicate uncials on fine vellum. It contains 759 leaves measuring ten inches square—617 in the Old Testament and 142 in the New. Codex Vaticanus is owned by the Roman Catholic Church, and is housed in the Vatican Library, Vatican City.

Codex Sinaiticus. Codex Sinaiticus or *Aleph* , a fourth-century Greek manuscript, is generally considered to be the most important witness to the text because of its antiquity, accuracy, and lack of omissions.

The story of the discovery of *Aleph* is one of the most fascinating in textual history. It was found in the monastery of St. Catherine on Mount Sinai by Count Lobegott Friedrich Constantine von Tischendorf (1815–1874). On his first visit (1844), he discovered forty-three leaves of vellum, containing 1 Chronicles, Jeremiah, Nehemiah, and Esther, in a basket of scraps that the monks were using to light their fires. He secured this Septuagint text and took it to the University Library at Leipzig, Germany. It remains there, known as the Codex Frederico-Augustanus. Tischendorf's second visit in 1853 proved unfruitful, but in 1859, just as he was about to return home empty-handed, the monastery steward showed him an almost complete copy of the Scriptures and some other books.

This manuscript contains over half of the Septuagint, and all of the New Testament except Mark 16:9–20 and John 7:53–8:11 . The Apocrypha, with the addition of the *Epistle of Barnabas* and a large portion of the *Shepherd of Hermas,* are also included.

This codex was written in large, clear Greek uncials on 364 pages (plus the forty-three at Leipzig), measuring thirteen by fourteen inches. In 1933 the British government purchased it for the British Museum. In 1938 it was published in a volume titled *Scribes and Correctors of Codex Sinaiticus* (Metzger, *Text of the New Testament,* 42–45).

Codex Alexandrinus. Codex Alexandrinus (A) is a well-preserved manuscript that ranks second only to Sinaiticus as representative of the New Testament text. Though some have dated this manuscript in the late fourth century (Kenyon, 129), it is probably the work of fifth-century scribes of Alexandria. In 1621 it was taken to Constantinople by Patriarch Cyril Lucar. Lucar gave it to Thomas Roe, English ambassador to Turkey in 1624, to present to King James I. James died before it reached England, and the manuscript was given to Charles I in 1627, too late for use in the King James Version of 1611. In 1757, George II presented it to the National Library of the British Museum.

It contains the whole Old Testament, except for several mutilations in Genesis 14–16 ; , 1 Kingdoms [1 Samuel] 12–14 , and Psalms 49:19–79:10 . Only Matthew 1:1–25:6 ; John 6:50–8:52 and 2 Corinthians 4:13–12:6 are missing from the New Testament. The manuscript also contains 1 and 2 Clement and the Psalms of Solomon, with some parts missing.

The manuscript contains 773 ten-by-twelve leaves, 639 of the Old Testament and 134 of the New. The large square uncials are written on very thin vellum. Codex Alexandrinus is in the possession of the National Library of the British Mu seum. The text varies in quality (Metzger, *Text of the New Testament,* 47, 49).

Codex Ephraemi Rescriptus. The Ephraemi Rescriptus Codex (C) probably originated in Alexandria, Egypt, in about 345. It was brought to Italy by John Lascaris at about 1500 and later was purchased by Pietro Strozzi. Catherine de Medici, the Italian political power broker and wife

and mother of French kings, acquired it about 1533. At her death, the manuscript was placed in the Bibliotheque Nationale at Paris, where it remains.

Most of the Old Testament is missing from this codex, except parts of Job, Proverbs, Ecclesiastes, Song of Solomon, and two apocryphal books, *Wisdom of Solomon* , and *Ecclesiasticus* . The New Testament lacks 2 Thessalonians, 2 John, and parts of other books (Scrivener, 1:121). The manuscript is a *palimpsest* . Because paper was so valuable, early manuscripts were often rubbed out and the material reused. With care, scholars can sometimes discern both the original text and the *rescriptus* or rewritten text. So a palimpsest can have added value.

These leaves originally contained the Old and New Testaments, but they were erased by Ephraem, who wrote his sermons on the leaves. By chemical reactivation, Tischendorf was able to decipher the almost invisible writing (Lyon, 266–72). Only 209 leaves survive: sixty-four from the Old and 145 (of an original 238) from the New Testament. The pages are nine by twelve inches, with one wide column of forty to forty-six lines (usually forty-one). C mixes all the major textual types, agreeing frequently with the inferior Byzantine family.

Codex Bezae. Written between 450 and 550, Codex Bezae (also called Codex Catabrigiensis or D) is the oldest known bilingual manuscript of the New Testament. It was written in Greek and Latin and may have originated in southern Gaul (France) or northern Italy. It was found in 1562 by Theodore de Beze (Beza), the French theologian, at St. Irenaeus Monastery, Lyons, France. In 1581 Beza gave it to Cambridge University.

D contains the four Gospels, Acts, and 3 John 11–15 , with variations from other manuscripts indicated. Missing from the Greek text are sections of Matthew 1 , 6–9 , and 27 ; John 1–3 , and Acts 8–10 , 21 , and 22–28 . In Latin, missing sections are from Matthew 1 , 6–8 , 26–27 ; Acts 8–10 , 20–21 ; and 22–28 , and 1 John 1–3 . The 406 leaves are eight by ten inches, with one column of thirty-three lines to each page. The manuscript is located in the Cambridge University Library. It is remarkable for some unusual variations from the normal New Testament text (Metzger, *Text of the New Testament,* 50).

Codex Claromontanus. Codex Claromontanus is a ca. 550 text that is designated D2 or Dp2. The latter stands for Dpaul because it supplements D (Codex Bezae) for the Pauline Epistles. It contains much of the New Testament missing in Codex Bezae. Like D, D2 is a bilingual manuscript, and it contains 533 pages, seven by nine inches. D2 seems to have originated in Italy or Sardinia (Kenyon, *Our Bible and the Ancient Manuscripts,* 207–8; Souter, 28).

Claromontanus was named after a monastery at Clermont, France, where it was found by Beza. After Beza's death, the codex was owned by several private individuals. Finally, Louis XIV purchased it for the Bibliotheque Nationale at Paris in 1656. Tischendorf fully edited it in 1852.

It contains all of Paul's Epistles and Hebrews, although verses from Romans 1 and 1 Corinthians 14 are missing in Greek, and verses from 1 Corinthians 14 and Hebrews 13 are missing in the Latin. It was artistically written in a single column of twenty-one lines on thin,

high quality vellum. The Greek is good, but the Latin is grammatically inferior in some places. The manuscript is now located in the Bibliotheque Nationale, Paris.

Other Codices. Codex Basilensis (E) is an eighth-century manuscript of the Gospels on 318 leaves. It is in the library of the University of Basel, Switzerland.

Codex Laudianus (E2 or Ea) dates from the late sixth or early seventh century. It was edited by Tischendorf in 1870. E2 contains Acts in Greek and Latin, arranged in very short lines of one to three words. It is the earliest known manuscript containing Acts 8:37 .

Codex Sangermanensis (E3 or Ep) is a ninth-century copy of D2 in Greek and Latin, so it has no independent value for the textual critic.

Codex Boreelianus (F) contains the four Gospels, dates from the ninth century, and is located at Utrecht.

Codex Augiensis (F2 or Fp) is a ninth-century manuscript of Paul's Epistles in Greek and Latin (with large omissions), but Hebrews is in Latin only. It is now at Trinity College, Cambridge.

Also called Codex Harleianus, Codex Wolfii A (G) dates to the tenth century. It contains the four Gospels with many omissions.

Dating from the ninth century, Codex Boernerianus (G3 or Gp) contains Paul's Epistles in Greek with a literal Latin translation between the lines. Evidently it once included a copy of the apocryphal Epistle to the Laodiceans. It is possibly of Irish origin.

Codex Wolfii B (H) contains the four Gospels, but with many omissions. It dates from the ninth or tenth century and now resides in the Public Library, Hamburg.

Codex Mutinensis (H2 or Ha) is a ninth-century copy of Acts (seven chapters missing), now in the Grand Ducal Library at Mondena, Italy. The text is Byzantine.

Codex Coislinianus (H3 or Hp) is an important codex of Paul's Epistles, dating from the sixth century. The forty-three leaves known to exist today are divided among the libraries at Paris, Leningrad, Moscow, Kiev, Turin, and Mount Athos.

Codex Washingtonianus II (I) is a manuscript of the Pauline Epistles in the Freer Collection at the Smithsonian Institution, Washington, D.C. There are eighty-four surviving leaves of the original 210. It dates from the fifth or sixth century and has portions of Hebrews and all of Paul's letters, except Romans.

Codex Cyprius (K) is a ninth- or tenth-century complete copy of the four Gospels.

Codex Mosquensis (K2 or Kap) is a ninth- or tenth-century codex of Acts, the General Epistles, and Pauline Epistles with Hebrews.

Codex Regius (L) is an eighth-century codex of the Gospels. Its unique feature is the presence of two endings to the Gospel of Mark. The first is the shorter ending, reading as follows: “But they [the women] reported briefly to Peter and those with him all that they had been told. And after this, Jesus himself sent out by means of them, from east to west, the sacred and imperishable proclamation of eternal salvation” (Mark 16:8 RSV). The second ending is the traditional verses 9–20 .

Codex Angelicus (L2 or Lap) is a ninth-century copy of Acts, the General Epistles, and the Pauline Epistles.

Codex Pampianus (M) contains the four Gospels. It dates from the ninth century.

Codex Purpureus Petropolitanus (N), written in the sixth century in silver letters on purple vellum, is a deluxe parchment of the Gospels. Of the 462 original leaves, some 230 known leaves are scattered around the world.

Codex Sinopensis (O) is another sixth-century deluxe edition of the Gospels, written with gold ink on purple vellum. It is now in Bibliotheque Nationale, Paris. It contains forty-three leaves of Matthew 13–24 .

Codex Porphyrianus (P2 or Papr) is one of the few uncial manuscripts containing the book of Revelation. It also contains Acts and the General and Pauline Epistles, with omissions. It is now in St. Petersburg, Russia.

Now in the British Museum, Codex Nitriensis (R) is a palimpsest of Luke from the sixth century, over which an eighth- or ninth-century treatise of Severus of Antioch was written. It also contains four thousand lines of Homer’s *Iliad.* The text is Western.

Codex Vaticanus 354 (S) is one of the earliest self-dated manuscripts of the Gospels and was prepared in 949. It resides in the Vatican Library.

Codex Borgianus (T) is a valuable fifth-century fragment of Luke 22–23 and John 6–8 . The text closely resembles that of Codex Vaticanus.

Now in Moscow, Codex Mosquensis (V) is a nearly complete copy of the four Gospels from the eighth or ninth century. The manuscript is in uncials to John 8:39 , where it shifts to thirteenth-century minuscules.

Codex Washingtonianus I (W) dates from the fourth or early fifth century. Professor H. A. Sanders, of the University of Michigan, edited it between 1910 and 1918. The manuscript contains Deuteronomy, Joshua, and Psalms, the Gospels, Hebrews, and portions of all the Pauline Epistles except Romans. Some psalms are missing, along with text from Deuteronomy 5–6 , Joshua 3–4 , Mark 15 , John 14–16 , and some Epistles. The Gospels manuscript has 187 leaves, 374 pages of good vellum. Each page is five and five-sixths by eight inches and has one

---

rsv Revised Standard Version

column of thirty lines, consisting of small but clearly written, slanting uncials. The Gospels include Matthew, John, Luke, and Mark, in that order. The long ending of Mark (16:9–20) is attached, with a most noteworthy insertion after 16:14 : “And they excused themselves, saying, ‘This age of lawlessness and unbelief is under Satan, who does not allow the truth and power of God to prevail over the unclean things of the spirits. Therefore reveal thy righteousness now’—thus they spoke of Christ. And Christ replied to them, ‘The term of years for Satan’s power has been fulfilled, but other terrible things draw near. And for those who have sinned I was delivered over to death, that they may return to the incorruptible glory of righteousness which is in heaven’ ” (Metzger, *Text of the New Testament,* 54; *A Textual Commentary on the Greek New Testament,* 122–28). The manuscript of Deuteronomy and Joshua has 102 leaves (ten by twelve inches), with two columns on each thick vellum page. The mutilated manuscript of Psalms has portions of 107 leaves that originally measured eleven by fourteen inches, written in single columns. This codex is located in the Smithsonian Institution. The text is mysteriously mixed, as though it were compiled from manuscripts representing different textual traditions or families.

Codex Dubliensis (Z [*Zeta*]) is a palimpsest of 299 verses from Matthew. It dates from the fifth or sixth century.

Codex Sangallensis (*Delta*) is a ninth-century Greek-Latin interlinear manuscript of the four Gospels (John 19:17–35 missing).

Codex Koridethi (*Theta*) is a ninth-century copy of the Gospels. The text of John differs in tradition from that of Matthew, Mark, and Luke. It is akin to the third- or fourth-century text used by Origen and Eusebius of Caesarea.

Codex Tischendorfianus III (*Lambda*) contains the text of Luke and John. The ninth-century manuscript is located at Oxford University.

Codex Zacynthius (*Xi*) is a twelfth- or thirteenth-century palimpsest preserving most of Luke 1:1–11:33 . It is the earliest known New Testament manuscript with a marginal commentary.

Codex Petropolitanus (*Pi*) is an almost complete ninth-century copy of the Gospels.

Codex Rossanensis (*Sigma*) is a sixth-century copy of Matthew and Mark. It is the earliest known Bible adorned with watercolor pictures.

Codex Beratinus (*Phi*) is a sixth-century deluxe edition of Matthew and Mark, with large gaps.

Codex Athous Laurae (*Psi*) is an eighth- or ninth-century manuscript containing the Gospels from Mark 9 on, Acts, the General Epistles, Pauline Epistles, and Hebrews. It carries the same unusual ending of Mark as Codex Regius.

Codex Athous Dionysiou (*Omega*) dates from the eighth or ninth century and is a virtually complete copy of the four Gospels. It is one of the oldest examples of the textual tradition known as the Byzantine text.

Minuscule Manuscripts. As the dates from the ninth to the fifteenth centuries would indicate, most minuscule manuscripts do not possess the high quality of the earlier uncials. However, that is not always the case. Some minuscules are late copies of good early texts. Their main importance rests in the comparison they provide for the textual families. There are 2795 minuscule New Testament manuscripts and 1964 minuscule lectionaries. They are referred to by manuscript number.

The Alexandrian family is represented by manuscript 33, dating from the ninth or possibly the tenth century. It contains the entire New Testament except for Revelation and is now in the possession of the Bibliotheque Nationale. Although it is predominantly Alexandrian text-type, it shows traces of Byzantine in Acts and the Pauline Epistles.

Some scholars find a Caesarean family text-type in some manuscripts of the Gospels. It harks back to the Caesarean text used in the third and fourth centuries. An Italian subfamily of Caesarean is represented by about a dozen manuscripts known as family 13. These manuscripts were copied between the eleventh and fifteenth centuries. One of their interesting characteristics is that they contain the section about the adulterous woman (John 7:53–8:11) following Luke 21:38 instead of after John 7:52 .

Some individual minuscules include:

Manuscript 61 consists of the entire New Testament, dating from the late fifteenth or early sixteenth century. It was the first manuscript found containing 1 John 5:7 , the single basis by which Erasmus was compelled to insert that doubtful passage into his Greek New Testament in 1516.

Manuscript 69 contains the entire New Testament and dates from the fifteenth century. It is an important member of family 13.

Manuscript 81 was written in 1044 and is one of the most important of all minuscules. Its text in Acts agrees frequently with the Alexandrian text-type.

Manuscript 157 is a twelfth-century codex of the Gospels following the Caesarean type. An editorial inscription or colophon, found in this and a number of other manuscripts, states that they were copied and corrected "from ancient manuscripts at Jerusalem." For more about the "Jerusalem colophon," see *Journal of Theological Studies* 14 [1913]: 78ff., 242ff., 359ff.).

Manuscript 565 is one of the most beautiful of all known manuscripts. It has all the Gospels on purple vellum in gold letters.

Manuscript 614 is a thirteenth-century copy of Acts and the Epistles, with many pre-Byzantine readings.

Manuscript 700 is an eleventh- or twelfth-century codex remarkable for its divergent readings. It has 2724 deviations from the Received Text and 270 not found in any other manuscript.

Manuscript 892 is a ninth- or tenth-century codex of the Gospels with remarkable readings of an early (Alexandrian) type.

Manuscript 1739 is a very important codex from the tenth century that is based directly on a fourth-century Alexandrian type of manuscript. It has marginal notes from the writings of Irenaeus, Clement , Origen , Eusebius , and Basil.

Manuscript 2053 is a thirteenth-century copy of Revelation. It is one of the best sources for the text of the Apocalypse.

Conclusion. Whereas there are many variant readings in New Testament manuscripts, there are a multitude of manuscripts available for comparison and correlation of those readings in order to arrive at the correct one. Through intensive comparative study of the readings in 5686 Greek manuscripts, scholars have carefully weeded out errors and additions from "helpful" copyists and discerned which early manuscripts are most accurate. Textual issues remain, but today's Bible reader, and especially those who read a recently edited Greek New Testament from the United Bible Society, can be confident that the text is extremely close to the autographs.

Newman, John Paul. John Paul Newman (1801–1890) was born in London and ordained to the Church of England priesthood in 1825. He was the most famous English convert to Roman Catholicism and one of the great Catholic apologists of modern times. He came to Christ as a teen and was nurtured in the most Calvinistic segment of Anglicanism. He attended Oxford and remained as a fellow in Oriel College. Repelled by the theological liberalism he saw rising in his church, he launched the Oxford or Tractarian Movement. When he realized the Anglican Church as a whole would not embrace it, he took refuge in Roman Catholicism (1845), which he believed offered the best hope for overcoming the liberal onslaught. He rose to the ecclesiastical rank of cardinal.

Newman produced several works with apologetic themes. While an Anglican he wrote *Essays on Miracles* and *The Arians of the Fourth Century* . In his *University Sermons* , preached between 1826 and 1843, he developed his views on faith and reason. In *Essay on the Development of Christian Doctrine* (1845) he explained his reasons for believing the Roman Church was the true successor of the early church. His *Idea of a University* was penned in 1852. In 1864, in response to the attacks of Charles Kingsley, he composed his *Apologia pro vita sua* . His last major work was *An Essay in Aid of a Grammar of Assent* (1870).

Newman’s Apologetic Views. In *Essay on the Development of Christian Doctrine* , Newman argued, against objections by liberals to all dogmatic religion, that religious assent is real. It is not a passing notion. Speculative theology, as practiced by the liberals, was about logic and abstractions, but the believer adheres with a whole heart to the living God (Dulles, 185).

Newman then addressed the problem of the degree of conviction demanded by faith and the amount of certainty on which it stands (*see* LESSING, GOTTHOLD). Newman did not believe it possible to amass a set of philosophical or historical arguments that would demonstrate Christianity beyond all possible argument. He felt that purely objective arguments would not

bring true religious conviction. Because of the subjective element in all religious inquiry, Newman preferred what has been called an "existential dialect of conscience" (ibid., 186). In this he followed Joseph Butler 's use of analogies and probabilities .

Newman counted only two consistent alternatives regarding belief in God: atheism and Roman Catholicism. He rejected atheism because of the testimony of conscience, which he believed implied the existence of a Supreme Legislator. Nonetheless, Newman recognized that the absence of God pointed to an alienation due to sin and called for a divinely established way of salvation. This way must be accompanied by a teaching authority sufficient to withstand the arbitrary willfulness of fallen human beings. Natural religion (*see* NATURAL THEOLOGY) provides an anticipation of this revealed religion. But he held that there is only one religion in the world which tends to fulfill the aspirations, needs, and foreshadowing of natural faith and devotion (ibid., 187).

In *Grammar of Assent* (Chap. 10, part 2), Newman set forth an impressive historical argument based on the convergence of probabilities. He concluded that Christianity is more probable than other religions because of the convergence of probabilities that give rise to moral certitude (*see* CERTAINTY/CERTITUDE). First, the history of the Jews shows an example of extraordinarily strong monotheism in the face of persistent idolatry. Christianity exhibits the fulfillment of Israel's messianic expectations and agrees with Jesus' prediction that it would fill the earth and take dominion over it.

Newman argues more fully in *Apologia* for the Catholic dimension of his apologetic. He insists that, if divine revelation was delivered to the dominion of human reason, it would inevitably deteriorate and dissolve into chaos and confusion (ibid., 188). It was his opinion that only an infallible living authority could arrest this process of decline. In his *Essay on the Development of Christian Doctrine* , he sought to show how the Catholic Church has followed a line of development that manifests its continuity with the original revelation given in the Bible.

Evaluation. Newman's apologetic is valuable for both Catholics and Protestants. Some positive features include an appeal to objective and historical evidence (*see* APOLOGETICS, HISTORICAL), willingness to address the subjective and moral dimension, and focus on the moral certitude that results from converging probabilities.

On the negative side, Newman fails to make a convincing case for the uniqueness of Catholicism in holding back liberalism. Conservative Protestantism, without an infallible teaching magisterium, has more successfully held its ranks (see Geisler, chap. 11). What is more, Newman's thesis on the historical development of doctrine is without proof from either Scripture or the Fathers and is contrary to the infallible pronouncements of the Council of Trent (see Geisler, chap. 10).

Nietzsche, Friedrich. Friedrich Nietzsche (1844–1900) was one of the most colorful and forceful atheists (*see* ATHEISM) of all time. His rejection of God was instinctive and incisive (*see* GOD, ALLEGED DISPROOFS OF). With the denial of God, Nietzsche denied all objective value based on God. Hence, his view is a form of nihilism. Although he was reared in a Lutheran pastor's home, Nietzsche reacted violently against his religious training. His mother, aunt, and sisters reared him from a young age after the death of his father.

God and the God Myth. Nietzsche based his belief that God never existed on several grounds (*Beyond Good and Evil,* 23). He argued that the theist's God would have to be a self-caused being, which was impossible (*see* GOD, OBJECTIONS TO PROOFS FOR). Evil in the world further ruled out a benevolent Creator (*see* EVIL, PROBLEM OF). Nietzsche thought the basis for belief in God to be purely psychological (*see* FREUD, SIGMUND). Nietzsche exhorted, "I beseech you, my brothers, remain faithful to the earth, and do not believe those who speak to you of other worldly hopes!" He added, "Once the sin against God was the greatest sin; but God died, and these sinners died with Him. To sin against the earth is now the most dreadful thing" (*Thus Spake Zarathustra,* 125).

Nietzsche did believe the God-myth was once very much alive. It had been the model by which medieval and Reformation Europe had based its life. This culture, however, was in decay. Modernity had caught up to modern humanity, who could no longer believe in God. "God is dead!" Nietzsche cried. Modern humankind must bury God and move on.

The World. Since God does not exist, the world is all there is. Matter is in motion, and life moves in cycles (*see* MATERIALISM ; NATURALISM). The world is real, and God is an illusion. There is no God to which we must be faithful. Hence, each person is exhorted to "remain faithful to the earth." For Nietzsche viewed God "as the declaration of war against life, against nature . . . the deification of nothingness, the will of nothingness pronounced holy" (ibid., 92–94).

History and Destiny. Human history, as human destiny, is cyclical. Nietzsche rejected any Christian goal-oriented end or eschaton in favor of a more oriental cyclical recurrence. History is not going anywhere. There are no ultimate goals to achieve, no paradise to regain. There is simply an individual life to live by courage and creativity. Humanity creates a destiny here, and there is no hereafter—except the eternal recurrence of the same state of affairs. The supermen are the geniuses who form destiny. "They say, 'It shall be thus!' They determine the 'whether' and the 'to what end' of mankind. . . . Their knowing is creating" (*Beyond Good and Evil,* 18–19).

Ethics. The shocking realization of God's death brought Nietzsche to the conclusion that all God-based values and absolutes were also dead (*see* MORALITY, ABSOLUTE NATURE OF).

Hence, Nietzsche rejected traditional Judeo-Christian values in an almost violent manner. Nietzsche questioned even general principles, such as "injure no man" (*Beyond Good and Evil,* 186–87). He ridiculed the Christian principle of love: "Why, you idiots. . . . 'How about praising the one who sacrifices himself?' " (ibid., 220). Indeed, Christianity "is the greatest of all conceivable corruptions. . . . I call it the one immortal blemish of mankind." (*Antichrist,* 230).

In place of traditional Christian values, he proposed that modern people go "beyond good and evil." He suggested a transevaluation that would reject the "soft" feminine virtues of love and humility and seize the "hard" male virtues of harshness and suspicion (*Beyond Good and Evil,* all).

Human Beings. There is no afterlife, so the best one can do to overcome the limits of personal mortality is to will the eternal recurrence of the same state of affairs (*see* IMMORTALITY). That is, he must will to come back and live the same life over and over forever. Since there is no God and there are no objective values to discover, the human race must create its own values. Meaningless and emptiness of life must be overcome. The overcomers are "supermen."

Evaluation. All atheists share the basic elements of Nietzsche's view. His contention that no God exists is refuted by strong evidence for the existence of God (*see* COSMOLOGICAL ARGUMENT ; MORAL ARGUMENT FOR GOD ; TELEOLOGICAL ARGUMENT). The objections to these arguments are answered elsewhere (*see* GOD, OBJECTIONS TO PROOFS FOR). Like Freud 's, Nietzsche's view that God is an illusion is without foundation. His moral relativism cannot stand against the logical strength of moral absolutism. Both the materialistic (*see* MATERIALISM) view of the universe (*see* NATURALISM) and its eternality are contrary to good scientific (*see* BIG BANG) and philosophical arguments (*see* KALAM COSMOLOGICAL ARGUMENT).

Nihilism. *Nihilism* means “nothingness,” the negation of all being or value (*see* NIETZSCHE, FRIEDRICH). In rejecting values, nihilism is antinomian or lawless. But even most relativists (*see* MORALITY, ABSOLUTE NATURE OF) or situationists do not deny all value, just all *absolute* value. Less stringent nihilists simply deny that any ultimate or absolute value exists. The only value that exists is what we create. There is no objective value to be discovered.

The negation of all being is self-defeating, since one has to exist in order to deny all existence. Those who do not exist do not deny anything.

Likewise, the denial of all value is self-refuting, since the very denial involves the belief that there is value in making this denial. Nihilists value their freedom to be nihilists. Thus, they cannot escape affirming value implicitly, even when they deny it explicitly.

Noah’s Ark. *See* FLOOD, NOAH’S .

Noetic Effects of Sin. Some scholars object to any form of rational or evidential apologetics (*see* APOLOGETICS, TYPES OF) on the grounds that sin has so vitiated the human mind that it is neither possible for fallen humanity to understand God’s revelation properly, nor to reason correctly. These objections are rooted in a certain understanding of Reformed theology and are expressed in such theologians as Soren Kierkegaard (1813–1855), Herman Dooyeweerd (1894–1977), and Cornelius Van Til (1895–1987). Other Reformed Christians and classical apologists (*see* CLASSICAL APOLOGETICS) reject this dichotomy, claiming that, while sin effaces God’s image in humankind and general revelation, it does not erase them.

Sin and the Mind. *John Calvin.* Protestant Reformers stressed the noetic effects of sin. John Calvin (1509–1564) was quick to point out that the depravity of the human will obscures the ability to understand and respond to the natural revelation of God. He wrote: “Your idea of His [God] nature is not clear unless you acknowledge him to be the origin and foundation of all goodness. Hence, would arise both confidence in Him and a desire of cleaving to Him, did not the depravity of the human mind lead it away from the proper course of investigation” (*Institutes* , 1.11.2).

Calvin believed that complete certainty (*see* CERTAINTY/CERTITUDE) comes only by the Holy Spirit (*see* HOLY SPIRIT, ROLE IN APOLOGETICS) working through this objective evidence to confirm in one’s heart that the Bible is the Word of God. He wrote, “Our faith in doctrine is not established until we have a perfect conviction that God is its Author. Hence, the highest proof of Scripture is uniformly taken from the character of Him whose word it is.” (*see* BIBLE, EVIDENCE FOR). “Our conviction of the truth of Scripture must be derived from a higher source than human conjecture, judgments, or reasons; namely, the secret testimony of the Spirit” (ibid., 1.7.1, cf. 1.8.1).

It is important to remember, however, as R. C. Sproul points out, that “the *testimonium* is not placed over against reason as a form of mysticism or subjectivism. Rather, it goes beyond and transcends reason” (Sproul, 341). In Calvin’s words, “But I answer that the testimony of the

Spirit is superior to reason. For God alone can properly bear witness to his own words, so these words will not obtain full credit on the hearts of men, until they are sealed by the inward testimony of the Spirit" (cited by Sproul, ibid.). It is God working through the objective evidence that provides us with subjective certainty that the Bible is the Word of God (*see* BIBLE, EVIDENCE FOR).

Cornelius Van Til . One of the strongest modern expressions of the destruction of the mind by depravity is in the work of Van Til. He said that the unbeliever has within the knowledge of God by virtue of creation in the image of God. Then he hastens to say in the next sentence: "But this idea of God is suppressed by his false principle, the principle of autonomy" (*In Defense of the Faith* , 170). It is this principle that constitutes Van Til's analogy of the "jaundiced eye," by which all knowing by an unbeliever is distorted and false. The doctrine of radical depravity entails the belief that all unbelieving interpretive activity yields false conclusions.

Arguments in Scripture. The view that sin vitiates human ability to understand God's revelation or receive his redemptive grace most often appeals to certain biblical passages for support:

Dead in Sin. Paul uses the figure of speech that the unregenerate are "dead" in sins (Eph. 2:1). From this it is concluded that the dead neither hear nor see God's general revelation. They do not know it until they are regenerated by the Holy Spirit. Most often Paul is cited saying, "The man without the Spirit does not accept the things that come from the Spirit of God, for they are foolishness to him, and he cannot understand them, because they are spiritually discerned" (1 Cor. 2:14).

Wisdom Does Not Know God. Paul wrote that the world, by its wisdom, did not know God (1 Cor. 1:21). This cannot mean that there is no evidence for God's existence, since Paul declared in Romans 1:19–20 that the evidence for God's existence is so "plain" as to render the heathen "without excuse." The context of 1 Corinthians is not God's existence but his plan of salvation in the cross. This cannot be known by mere reason, but only by divine revelation. It is "foolish" to the depraved human mind. Finally, in this very book of 1 Corinthians, Paul gives his greatest apologetic evidence for the Christian faith—the eyewitness of the resurrection of Christ which his companion Luke called "many infallible proofs" (Acts 1:3 NKJV). So his reference to the world by wisdom not knowing God is not a reference to the inability of human beings to know God through the evidence he has revealed in creation (Rom. 1:19–20) and conscience (Rom. 2:12–15). Rather, it is a reference to the human depraved, foolish rejection of the message of the cross. Even though each person knows clearly through human reason that God exists, depravity "suppresses" or "holds down" this truth in unrighteousness (Rom. 1:18).

Without Faith . . . "Without faith it is impossible to please God" (Heb. 11:6) would seem to argue against the need for reason. In fact, it would appear that asking for reasons, rather than simply believing, displeases God. But God calls upon us to use our reason (1 Peter 3:15 ; *see* APOLOGETICS, NEED FOR). Indeed, he has given "clear" (Rom. 1:20) and "infallible proofs" (Acts 1:3). The text in Hebrews does not exclude "evidence," but actually implies it. For faith is

---

nkjv New King James Version

said to be “the evidence” of things we do not see (Heb. 11:1 NKJV). Just as the evidence that someone is a reliable witness justifies my believing that person’s testimony, so our faith in “things not seen” (Heb. 11:1) is justified by the evidence we have that God exists, which is clearly seen, “being understood from what has been made” (Rom. 1:20).

The One Who Can’t Understand. Paul insisted that “the man without the Spirit does not accept the things that come from the Spirit of God” (1 Cor. 2:14). What use, then, is apologetics? They cannot even “know” him. But Paul does not say that natural persons cannot perceive truth about God, but that they do not receive (Gk. *dekomai* , “welcome”) it. Paul emphatically declared that the basic truths about God are “clearly seen” (Rom. 1:20). The problem is not that unbelievers are not aware of God’s existence but that they do not want to *accept* him because of the moral consequences this would have on their sinful lives. They do not “know” (Gk. *ginomskom* , which frequently means to “know by experience). They *know* God in their mind (Rom. 1:19–20), but they have not accepted him in their heart (Rom. 1:18). “The fool has said *in his heart* , ‘There is no God’ ” (Ps. 14:1).

Response. Even Van Til saw the tension in his own view. He speaks of it as a “difficult point,” one which “we cannot give any wholly satisfactory account of the situation as it actually obtains” (*Introduction to Systematic Theology* , 15). Indeed, if fallen human beings really see everything with a “jaundiced eye,” so that they cannot even understand the truth of general revelation or of the Gospel, they are not morally accountable.

Calvin never carried his belief in the noetic effects of sin to the extreme of claiming no unsaved person could understand God’s revelation to them. In fact, Calvin insisted “that there exists in the human mind, and indeed by natural instinct, some sense of deity” (*Institutes* , 1.3.1). He contended that there is no nation so barbarous, no race so brutish, as not to be imbued with the conviction that there is a God” (ibid.). This “sense of deity is so naturally engraven on the human heart, in the fact, that the very reprobate are forced to acknowledge it” (*Institutes* , 2.4.4). Calvin went further to claim that the invisible and incomprehensible essence of God has been made visible in God’s works, along with proofs of the Soul’s immortality (*Institutes* , 1.5.1–2). For “on each of his works his glory is engraven in characters so bright, so distinct, and so illustrious, that none, however dull and illiterate, can plead ignorance as their excuse” (ibid.).

Commenting on Romans 1:20–21 , Calvin concludes that Paul teaches that “God has presented to the minds of all the means of knowing him, having manifested himself by his works, that they must necessarily see what of themselves they seek not to know—that there is some God” (Commentary on Romans).

For Calvin this innate knowledge of God includes knowledge of his righteous law. He held that, since “the Gentiles have the righteousness of the law naturally engraved on their minds, we cannot say that they are altogether blind as to the rule of life” (*Institutes* , 1.2.22). He calls this moral awareness “ natural law ,” which is sufficient for condemnation but not for salvation (ibid.). By means of this natural law, “the judgment of conscience” is able to distinguish between what is just and unjust (Commentary on Romans, 48). Because of the bright engraving of God’s glory, most people share the same basic ideas of what is right and what must be forbidden. It is

evident that God has left "proof" of himself for all, in both creation and conscience (Commentary on Romans, 48).

Van Til's Extreme View. Even Van Til's disciples have had serious reservations about his view of the total destruction of reason by sin. John Frame responds that "To deny the restraint [of common grace], as Van Til appears to do in the present context, is to deny common grace itself" (Frame, 194). He adds that Van Til's antithesis of the mind with and without Christ requires considerable qualifying. Such an antithesis would seem to suggest that an unbeliever errs with every statement made. Depravity does not necessarily work that way. The formulation also sug gests that the specifically intellectual handicap of human depravity will inevitably show up in what the unbeliever says, does, or makes, rather than in the direction of his or her life. They also fail to convey that the unbeliever's very denial of the truth is in some respects an affirmation of it (Frame, 207).

Frame adds that it is simplistic to hold that the noetic effects of sin amount to a propositional falsification of the unbeliever's every utterance (ibid., 211).

Van Til himself offers statements that do not fit his antithesis. He urges "that we present the message and evidence for the Christian position as clearly as possible, knowing that because man is what the Christian says he is, the non-Christian will be able to understand in an intellectual sense the issues involved" ("My Credo"). But how can the non-Christian understand the issues, even in an intellectual sense, if there is no common ground, or knowledge of any kind—if he sees all with a jaundiced eye?

Scripture clearly declares unregenerate beings to be "without excuse" (Rom. 1:19–20 ; 2:12–15). Adam and Eve were "dead in trespasses and sin" (cf. Eph. 2:1) the very instant they took of the forbidden fruit (Gen. 3:6 ; Rom. 5:12). Yet they heard and understood God speaking to them (Gen. 3:9–19).

A common mistake of Reformed presuppositionalism is to misunderstand the figure of speech of "dead" to be the equivalent of spiritually "annihilated," a mistake which, fortunately, they do not make when speaking of the second death (Rev. 20:14). Death in Scripture is better understood in terms of separation, not annihilation (*see* ANNIHILATIONISM). The prophet said, "Your sins have separated you from your God" (Isa. 59:2 KJV). "Dead" is not the only figure of speech used in the Bible to describe fallen humankind. Sickness, blindness, pollution, and lameness are also used. But none of these imply a person totally unable to understand God's revelation.

Other nonpresuppositional Reformed theologians, such as Jonathan Edwards, B. B. Warfield , John Gerstner, and Sproul believe just as firmly in total depravity without accepting this skewed view of the noetic effects of sin. Total depravity can be understood as the inability to initiate or attain salvation without the grace of God.

---

kjv King James Version

In this same connection, Reformed presuppositionalists often misinterpret 1 Cor. 2:14 to mean that unbelievers cannot even understand God's truth before they are regenerated. Besides the obvious difficulty that they would have to be saved before they believe—the opposite of what Scripture says in John 3:16 , 36 ; Acts 16:31 , and Rom. 5:1 —This is a misreading of the passage. Nor does it help to claim they are regenerated before they are saved (justified), since one is placed in the kingdom of God by regeneration (John 3:3 ; Titus 5:5). As Fred Howe noted, the Greek word for "receive," *dekomai* , means "to welcome." It does not mean they do not understand. They clearly perceive (Rom. 1:19–20), but they are not willing to receive the truths of God (Howe, 71–72). Consequently, they do not know them by experience. They know them only in their mind, not in their heart. A failure to understand these truths leads to misunderstanding of the effects of sin.

Limits of Reason. Following Jewish philosopher Moses Maimonides (1135–1204), Thomas Aquinas (1224–1274) set forth five reasons why we must first believe. Later we may be able to provide good evidence. We must believe,

1. because these truths are deep and subtle and far removed from the senses.
2. because the mind is weak at understanding something new.
3. because a number of facts may need to be assembled for conclusive proof to develop.
4. because some lack the scientific temperament to study philosophical concepts.
5. because we have more to do in life than just think.

It is clear that, if it required total understanding to come to God, few could put together the needed steps of knowledge, and then only after a long time. So the way of faith, which gives access to salvation at any time, is a great benefit (Aquinas, *On Truth* , 14.10, reply). Thus, for certitude in divine things, faith is necessary.

Aquinas stated that

> the mind of man falls far short when it comes to the things of God. Look at the philosophers; even in searching into questions about man they have erred in many points and held contradictory views. To the end, therefore, that a knowledge of God, undoubted and secure, might be present among men, it was necessary that divine things be taught by way of faith, spoken as it were by the Word of God who cannot lie. [Aquinas, *Summa Theologiae* , 2a2ae. 2, 4, 6]

The searching mind will not come to understand the things of God, Aquinas said. A sign of the human deficiency in understanding the divine is the fact that philosophers cannot come even to understand human affairs without error. Therefore, it was necessary for God to deliver divine truths by way of faith, told to human beings by the God who cannot lie (ibid., 2a2ae. 2, 4).

Grace, therefore, is needed to overcome the noetic effects of sin. Aquinas concluded that God must come to human aid with healing grace. We cannot love God or our neighbor without grace. Neither can we believe. But with grace we do have this power. As Augustine says, to whomever this help is given by God, it is given in mercy; to whomever it is denied, it is denied in justice, be cause of original and personal sin (ibid., 2a2ae. 2, 6, ad 1). Aquinas, however, did not believe that sin completely destroyed human rational ability. Rather, "sin cannot destroy man's rationality altogether, for then he would no longer be capable of sin" (ibid., 1a2ae. 85, 2).

Proportionate Effects of Sin. According to Emil *Brunner (1889–1966) the noetic effects of sin are manifest on the mind in direct proportion to the distance of a discipline from religious concern. Effects of the fall are more evident, for example, in philosophy than in economics. Since the discipline of theology is the most religious, there is greater area of disagreement with unbelievers. Brunner saw religious worldview as being progressively less of an issue in ethics, psychology/sociology, physics, and the least important in mathematics. That is, in mathematics Christians and non-Christians have the least disagreement and in ethics the most.

Conclusion. Sin affects the whole person—mind, emotions, and will. Human beings are *radically depraved* in their being. Another way to say this is that they are *extensively* affected by sin. But humans are not totally depraved in an *intensive* sense, since sin does not destroy the image of God (see Gen. 9:6 ; James 3:9). God's image is effaced but not erased.

So revelation can be perceived, even if it is not willingly received by depraved creatures without the work of the Spirit. There is no certain, saving knowledge of God apart from God's special revelation in Scripture and the special grace of the Holy Spirit applying Scripture and convincing the person of sin and need and the truth in general and special revelation. General revelation alone (*see* REVELATION, GENERAL), however, is sufficient to reveal God, if anyone truly desired to see him, so the lost are justly condemned for not receiving what they have clearly seen (Rom. 1:20).

Nominalism. *Nominalism* is the view that neither universals nor essences are real (*see* REALISM), that is, they have no extramental existence. Everything is particular. A universal is a general or class concept that includes all the particulars in it. The class is an abstract concept that exists only in the mind (*see* EPISTEMOLOGY ; FIRST PRINCIPLES).

"Humanness" is a general concept that includes all individual human beings. But nominalists insist that humanness does not exist; only individuals really exist. "Triangleness" is a universal, but it too exists only in the mind. In reality only individual triangular shaped things exist.

Nature of Nominalism. Nominalism can be best viewed by contrast with opposing conceptions. Following >Plato , the Medieval theologian Gilbert of Porree affirmed that universals are *real things.* On the other end of the spectrum, medieval thinker Roscellinus (1050–1125) contended that universals are *a mere sign* , "a puff of the voice." Peter Abelard (1079–1142) claimed that universals are *nouns* formed by a confusion of particular ideas. William of Ockham (1280–1349) was a true nominalist. To him, a universal is a *mere abstract concept in the mind.* John Duns Scotus (1266–1308) believed that universals are *bonds* or *common natures* that in themselves are neither universal or particular. Nature as such is neutral; it can be generalized by the mind or concretized with "thisness." Thomas Aquinas (1224–1274) held a realistic position (*see* REALISM), declaring that a universal is *mental being.* It is a form existing in the mind but rooted in reality.

Problems with Nominalism. From a realistic perspective, nominalism has problems, some with serious consequences for important Christian beliefs.

Nominalism Leads to Skepticism. If there is no basis in reality for our general ideas, then words tell us nothing about reality. We must remain skeptical about the real world. But complete skepticism (*see* AGNOSTICISM) is self-defeating. If it suspended judgment about its own central affirmation, as it demands we do about everything else, the skeptic would have to be skeptical of skepticism. That would destroy the basis for skepticism.

Nominalism Leads to Moral Relativism. If universals have no basis in the real world, there can be no universal moral values. Everything would simply be particular or situational. There would be nothing that one ought to do in every circumstance (such as, be loving or just). However, the denial of all absolutes is self-defeating (*see* MORALITY, ABSOLUTE NATURE OF), for the claim that one absolutely *ought not* believe in moral absolutes is a moral absolute of its own.

Nominalism Leads to Heresy. All orthodox Christians believe that God has one essence or nature, and Christ has two natures (*see* TRINITY). But, if nominalists are right, then God has no

nature. Likewise, Christ could not have both a human and a divine nature, as the creeds assert (*see* CHRIST, DEITY OF). Hence, nominalism is a denial of historic, creedal, orthodox Christianity.

Nominalism Overreacts to Platonism. Plato (428–348 B.C .) believed everything that exists is part of an eternal essence or form. Nominalists deny such changeless essences, affirming that everything is particular or individual. They fail to acknowledge, however, that these are not the only two options. Aquinas showed that, while universals exist in the mind as abstractions from particulars, they are rooted in reality. There is no such entity as human nature. However, each human being shares essential characteristics (= nature or essence). So the abstraction referring to what we call humanness is not a mere name; it is a referent to a relationship that truly exists in reality.

Nostradamus. Nostradamus (1503–1566) was known by the Latin name of Michel de Notredame or Nostredame. He was graduated from University of Montpellier in France and was a physician and astrologer. He published a book of rhymed prophecies titled *Centuries* (1555). He is reputed to have predicted accurately the death of Henry II of France and many other things.

According to Andre Lamont, *Nostradamus Sees All* (“Preface,” 2d. ed., v), “he was well versed in the arts of astronomy, the kabbala, astrology, alchemy, magic, mathematics and medicine.”

Predictions of Nostradamus. Some critics of Christianity hold up Nostradamus as an example of someone who made predictions on the level with those in the Bible, thus canceling the claim of supernatural uniqueness made for biblical prophecy (*see* PROPHECY, AS PROOF OF THE BIBLE). However, on examination they fall far short of this claim. The predictions of Nostradamus show signs of an occult source and may be explained according to purely natural processes.

A Great California Earthquake. Nostradamus is alleged to have predicted a great earthquake in California for May 10, 1981. This was reported on May 6, 1981, in *USA Today.* However, no

such quake occurred. As a matter of fact, Nostradamus mentioned no country, city, or year. He spoke only of a "rumbling earth" in a "new city" and a "very mighty quake" on May 10 [no year].

Hitler's Rise to Power. Lamont claims that Nostradamus gave "a prophecy of the coming of Hitler and Nazism in a world divided within itself" (Lamont, 252). However, Hitler is not mentioned and the prediction gives no date and is vague. It reads: "Followers of sects, great troubles are in store for the Messenger. A beast upon the theater prepares the scenical play. The inventor of that wicked feat will be famous. By sects the world will be confused and divided" (ibid.). In this context there is a reference to "Hister" (not Hitler) by Nostradamus (C4Q68), which is obviously a place, not a person. The attempt to read back into this both his name and birthplace is stretched. What is more, Hitler grew up in Linz, Austria, not in any place called Hister.

Quatrain 2–24 reads: "Beasts mad with hunger will swim across rivers, Most of the army will be against the Lower Danube [*Hister sera*]. The great one shall be dragged in an iron cage when the child brother *[de Germain]* will observe nothing."

This is allegedly a prophecy concerning Adolf Hitler. According to followers of Nostradamus, the lower portion of the Danube is known as either " *Ister* " or " *Hister* " (Randi, 213), which seems to be close enough to "Hitler" for their purposes.

However, the substitution of "l" for "s" in *Hister* , and the inversion of "t" and "s," is totally arbitrary. In another quatrain (4–68), Nostradamus mentions the Lower Danube in conjunction with the Rhine *("De Ryn").* But if *"Hister"* refers to Hitler, then to what does *"De Ryn"* refer? Followers of Nostradamus are inconsistent, treating one river as an anagram and taking the other literally. The Latin phrase *de Germain* should be interpreted "brother" or "near relative," not "Germany" (Randi, 214). Even if these highly questionable interpretations are allowed, the prophecy is still quite ambiguous. What are we to make of the "Beasts" and the "iron cage"? To say that Adolf Hitler ("the great one") will be "dragged in an iron cage" while Germany "will observe nothing" is so ambiguous and confusing it renders the entire prophecy meaningless.

Quatrain 4–68 is also alleged to refer to Hitler. It reads: "In the year very near, not far from Venus, The two greatest of Asia and Africa From the Rhine and Lower Danube, which will be said to have come, Cries, tears at Malta and the Ligurian coast."

As in the previous example, "Lower Danube" is here taken to mean "Hitler." "The two greatest of Asia and Africa" are taken to refer to Japan and Mussolini, respectively. Thus, the second and third lines refer to the Tripartite Pact between Japan, Italy, and Germany. The fourth is taken as a reference to the bombing of Malta and the bombardment of Genoa (Randi, 215).

In addition to the reasons given above, this prophecy claims these events would take place in a "year very near," but the Tripartite Pact (1941) came almost 400 years after the prediction. It is not clear how Asia could refer to Japan, and even more so, how Africa could refer to Mussolini or Italy. Again Nostradamus's followers are inconsistent, for they interpret Asia, Africa, and the Lower Danube figuratively while providing no corresponding interpretation for the Rhine.

Finally, this prophecy is ambiguous on the whole. It could be interpreted in various ways so as to fulfill many different events.

The Second World War. According to Lamont, Nostradamus forecast that, after the first World War, the Spanish Civil War, and other wars, a more furious one was foretold—the Second World War, with its aerial warfare and suffering. But no such details are given. It is typically vague and could be easily forecast without any supernormal powers. The passage reads simply: "After a great human exhaustion, a greater one is being prepared. As the great motor renews the centuries, a rain of blood, milk, famine, iron and pestilence [will come]. In the sky will be seen fires carrying long sparks" (Lamont, 168).

Evaluation. Nostradamus's forecasts are general, vague, and explainable on purely natural grounds. Furthermore, Nostradamus shows clear signs of demonic and occult influence (*see* MIRACLES, MAGIC AND).

False Prophecies. An evident sign of a false prophet is false prophecy (cf. Deuteronomy 18). If Nostradamus' predictions are taken literally, many are false. If they are not, then they can fit many "fulfillments." As John Ankerberg put it, "it is an undeniable fact that Nostradamus gave numerous false prophecies" (Ankerberg, 340). Noted Nostradamus scholar Erika Cheetham said flatly of his prognostications in his *Almanachs* : "Many of these predictions were wrong" (Ericka, 20). Some interpretations are so diverse that while one claims it is a reference to "Calvinist Geneva," another believes it refers to "atomic power" (*The Prophecies of Nostradamus,* 81).

Vague Predictions. The truth is that the vast majority of his prognostications are so ambiguous and vague that they could fit a great variety of events. Consider this one: "Scythe by the Pond, in conjunction with Sagittarius at the high point of its ascendant—disease, famine, death by soldiery—the century/age draws near its renewal" (*Centuries* 1. 6). The lines can be interpreted so as to fit any number of events in the future. When something is judged to be a fulfillment, Nostradamus will seem supernatural. Astrologers and fortune tellers use vague descriptions and imagery all the time. Nostradamus was a master at this art.

Contradictory Interpretations. There is no unanimity among Nostradamus' interpreters about the meaning of his predictions. This lack of agreement is further proof of their ambiguity and lack of authority. In *The Prophecies of Nostradamus* the editors note contradictory interpretations (see I, 16; I, 51; II, 41; II, 43; II, 89; III, 97, etc.).

Predictions after the Fact. Nostradamus himself acknowledged that his predictions were written in such a manner that "they could not possibly be understood until they were interpreted after the event and by it" (Randi, 31). There is nothing miraculous about reading a fulfillment back into a prophecy which could not be clearly seen there beforehand. Not a single prediction of Nostradamus has ever been proven genuine. This means that either he is a false prophet or else he was not really seriously claiming to be giving real predictions. Perhaps he was a con artist or a literary prankster.

Tongue-in-Cheek Prophecies? His prognostications were so vague and unproductive that even the encyclopedia of *Man, Myth and Magic* suggests that "Nostradamus composed them with tongue in cheek, as he was well aware that there is an enduring market for prophecies and particularly for veiled ones" (Cavendish, 2017). As James Randi put it, "The marvelous prophecies of Michel de Nostredame, upon examination, turn out to be a tiresome collection of vague, punning, seemingly badly constructed verses. . . . From a distance of more than 400 years, I fancy I can hear a bearded Frenchman laughing at the naivete of his 20th century dupes" (36).

Confessed Demonic Source. Nostradamus admitted demonic inspiration when he wrote: "The tenth of the Calends of April roused by evil persons; the light extinguished; diabolical assembly searching for the bones of the devil (*damant* —"demon") according to Psellos" (Lamont, 71). Commenting on this, Lamont noted that "The utilization of the demons or black angels is recommended by ancient writers on magic. They claim that they have much knowledge of temporal matters and, once under control, will give much information to the operator." He adds, Nostradamus could not have avoided such a temptation" (ibid.).

Various Forms of Occult Practices. Nostradamus was associated with various occult activities. Lamont observes that "Magic—Astrology—Symbolism—Anagrams—[are a] Key to Nostradamus" (ibid., 69). In *Centuries* , Quatrain 2 is translated: "The wand in the hand seated in the midst of the Branches, He (the prophet) wets in the water both the hem (of his garment) and the foot. A fearfulness and a voice quiver through the sleeves; divine splendor, The Divine is seated near" (ibid., 70). Lamont comments that here "Nostradamus followed the rites of magic according to Iamblichus. It is night—he is seated on the stool or prophetic tripod—a little flame rises. He has the divining rod in his hand" (ibid., 70–71).

In addition to the use of the occult divining rod, Nostradamus was widely known for his knowledge of astrology—another occult practice condemned by the Bible (Deuteronomy 18). But whatever their source, these predictions in no way rival the clear, specific, and highly accurate predictions of Scripture.

Conclusion. There is no real comparison between Nostradamus' predictions and those of the Bible. His are vague, fallible, and occult. Those of the Bible are clear, infallible, and divine (*see* BIBLE, EVIDENCE FOR). The Bible made numerous clear and distinct predictions hundreds of years in advance. Nostradamus did not. There is no evidence that Nostradamus was a prophet at all; certainly he was like none in the Bible. Biblical prophecy stands unique in its claim to be supernatural (*see* PROPHECY, AS PROOF OF THE BIBLE).

Oo

Objectivism. ***See*** **RAND, AYN .**

O'Callahan, Jose. Jose O'Callahan (b. 1922) is a Spanish Jesuit paleographer who made the astounding identification of nine fragments among Qumran's Dead Sea Scrolls as coming from multiple books of the New Testament.

The Fragments. Beginning with his first announcement in 1972, O'Callahan eventually identified the nine fragments from Cave 7 as Mark 4:28 ; 6:48 ; 6:52 , 53 ; 12:17 ; Acts 27:38 ; Romans 5:11–12 , 1 Timothy 3:16 ; 4:1–3 ; 2 Peter 1:15 ; and James 1:23–24 . The fragments were dated: Mark, 50; Acts, 60; and Romans, 1 Timothy, 2 Peter, and James approximately 70. Fragments from Cave 7 had previously been dated between 50 B.C . and A.D . 50. For a more extensive discussion of these fragments, see the articles DEAD SEA SCROLLS ; NEW TESTAMENT MANUSCRIPTS ; NEW TESTAMENT, DATING OF , and NEW TESTAMENT, HISTORICITY OF .

Implications of the Identification. If valid, O'Callahan's conclusions are correct they totally invalidate many New Testament theories. The *New York Times* reported: "If Father O'Callahan's theory is accepted it would prove that at least one of the gospels—that of St. Mark—was written only a few years after the death of Jesus." *United Press International* noted that his conclusions indicated that "the people closest to the events—Jesus' original followers—found Mark's report accurate and trustworthy, not myth but true history" (Estrada, 137). *Time* quoted one scholar who claimed that if correct, "they can make a bonfire of 70 tons of indigestible German scholarship" (ibid., 136).

Dating the Evidence. The early dates (listed above) are supported by the evidence that these pieces were not dated by O'Callahan but by other scholars prior to his identification of them; the dates have never been seriously questioned and fit with the dates determined for other manuscripts found in the same Qumran area. Archaeologists who discovered Cave 7 attested that it showed no signs of being opened since it was sealed in A.D . 70 and that its contents date from no later. The style of writing (in Greek uncials) has been identified as early first century (*see* NEW TESTAMENT MANUSCRIPTS).

O'Callahan is a reputable paleographer who has made many successful identifications of ancient texts. His identifications of these texts fit perfectly with the passages. No viable

alternatives have been found. In fact, two scholars calculated the odds that these letter sequences represent some other text as about 1 in 2.25 x 1065.

Not surprisingly, objections to O'Callahan's identification have been raised. Some have charged that O'Callahan never worked with the original mss. This is false. Others point out that the pieces are small fragments. However, other ancient texts have been identified with equal or less evidence. Some have contended that the Mark 5 manuscript is too dim or indistinct to be truly readable. Very clear photographs are now available, however.

The identification of certain letters has been disputed. If identifications are revised, the identity of the manuscript could change. But O'Callahan has mostly used the letters proposed by the original editors. Where he did not, the editors have concurred that his identification could be correct. Of the crucial Mark 5 text he used all nine whole letters and six of the ten partial letters. Where he differed, his judgment was a possible alternative based on the actual manuscript.

A few critics have offered possible non-New Testament alternatives. In order to be successful, they have had to change the number of letters on a line of ancient text from the twenties to the sixties in some cases. This many letters to a line would be highly unusual. One confirming evidence of O'Callahan's thesis is that no one has found any other non-New Testament text for these manuscripts. Using normal rules, O'Callahan has provided probable New Testament identifications.

Apologetic Relevance. If the identification of even some of these fragments as New Testament is valid, implications for Christian apologetics are enormous. The Gospel of Mark was written within the life time of the apostles and contemporaries of the events (*see* NEW TESTAMENT, DATING OF ; NEW TESTAMENT, HISTORICITY OF). This early date (before 50) leaves no time for mythological embellishment of the records (*see* MYTHOLOGY AND THE NEW TESTAMENT). They must be accepted as historical. Mark is shown to be one of the early Gospels. The chance of there being a *Q* or series of *Q* gospel manuscripts is more remote (*see* Q DOCUMENT). Since these manuscripts are not originals but copies, the New Testament was copied and disseminated quickly. The existence of a New Testament canon from the beginning is hinted at by this selection of books, representing Gospels, Acts, Pauline, and General Epistles—every major section of the New Testament. Sixth, the fragment of 2 Peter would argue for the authenticity of this often disputed Epistle. The absence of fragments of John's writings could indicate that they were written later (80–90), in accordance with the traditional dates.

Ockham, William. ***See*** **WILLIAM OF OCKHAM .**

Ockham’s Razor. *Ockham’s Razor* is the popular name for a principle laid down by William of Ockham (1285–1349). It is also called the Principle of Parsimony. In its popular form it states that the simplest explanation is the best explanation. This is often taken to mean “the fewer, the truer,” and by logical extension “the fewest, the truest.” However, this is not what Ockham had in mind.

In the original form given by Ockham the principle merely affirms that “causes should not be multiplied without necessity.” That is, one should not posit more causes or reasons than are necessary to explain the data. The true explanation could involve many causes, and having fewer would be incorrect. But unnecessarily complicating the problem also makes reasoning incorrect.

Old Testament Manuscripts. The manuscripts of the Old Testament are not as crucial to Christian apologetics as are those of the New Testament (*see* NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT MANUSCRIPTS). However, their reliability in general is important, and the manuscripts play a crucial role in establishing the Old Testament’s reliability. They also help establish the date of Old Testament prophecies (*see* PROPHECY AS PROOF OF THE BIBLE) which play a supporting role in defending Christianity (*see* APOLOGETICS, ARGUMENT OF). Like the New Testament, the original manuscripts (*autographs*) of the Old Testament are not available, but the Hebrew text is amply represented by both pre- and post-Christian manuscripts (see Geisler, “Bible Manuscripts,” 1:248–52). As a result, the reliability of the Hebrew text can be determined from available manuscript evidence. But over 2000 years of copying the text (500 B.C . to A.D . 1500) Jewish scholars performed an unbelievable preservation of the textual traditions.

History of the Old Testament Text. In Judaism a succession of scholars were charged with standardizing and preserving the biblical text:

- The *Sopherim* (from Hebrew meaning “scribes”) were Jewish scholars and custodians of the text between the fifth and the third centuries B.C .

- The *Zugoth* (“pairs” of textual scholars) were assigned to this task in the second and first centuries B.C .

- The *Tannaim* (“repeaters” or “teachers”) were active to 200. The work of Tannaim can be found in the *Midrash* (“textual interpretation”), *Tosefta* (“addition”), and *Talmud* (“instruction”), the latter of which is divided into *Mishnah* (“repetitions”) and *Gemara* (“the matter to be learned”). The Talmud gradually was written between 100 and 500.

- Between 500 and 950 the Masoretes added the vowel pointings and pronunciation marks to the consonantal Hebrew text received from the Sopherim, on the basis of the *Masora* ("tradition") that had been handed down to them. The Masoretes were scribes who codified and wrote down the oral criticisms and remarks on the Hebrew text. There were two major schools or centers of Masoretic activity, each largely independent of the other, the Babylonian and the Palestinian. The most famous Masoretes were the Jewish scholars living in Tiberias in Galilee, Moses ben Asher (with his son Aaron), and Moses ben Naphtali, in the late ninth and tenth centuries The ben Asher text is the standard text for the Hebrew Bible today as best represented by Codex Leningradensis B19A (L) and Aleppo Codex.

At issue today is the standard "Masoretic" Hebrew text—the one used in Bible translation. Frederic Kenyon posed the all-important question when he asked whether the Masoretic Text represents the Hebrew text originally written by the authors. The standard edition of the Masoretic Text was first published under the editorship of a Hebrew Christian, Jacob Ben Chayyim (ca. 1525). It was essentially a recension of the text of the Masorete Ben Asher (ca. 920) (see Geisler, *General Introduction to the Bible,* chap. 25). The answer to Kenyon's question arises from a careful examination of the number and nature of Hebrew manuscripts.

The Number of Manuscripts. The first collection of Hebrew manuscripts, made by Benjamin Kennicott (1776–1780) and published by Oxford, listed 615 manuscripts of the Old Testament. Later Giovanni de Rossi (1784–1788) published a list of 731 manuscripts. The most important manuscript discoveries in modern times are those of the Cairo Geniza (1890s) and the Dead Sea Scrolls (1947 and following years). In the Cairo synagogue attic geniza or storehouse for old manuscripts alone were discovered 200,000 manuscripts and fragments (Kahle, 13, and Wurthwein, 25) some 10,000 of which are biblical (Goshen-Gottstein, 35). According to J. T. Milik, fragments of about 600 manuscripts are known from the Dead Sea Scrolls, not all biblical. Moshe Goshen-Gottstein estimates that the total number of Old Testament Hebrew manuscript fragments throughout the world runs into the tens of thousands (ibid., 31).

Major Collections. About one-half of the 200,000 Cairo Geniza manuscript fragments are housed at Cambridge University. The rest are scattered throughout the world. Cairo Geniza authority Paul Kahle has identified more than 120 rare manuscripts prepared by the "Babylonian group" of Masoretic scribes.

The largest collection of Hebrew Old Testament manuscripts in the world is the Second Firkowitch Collection in Leningrad. It contains 1582 items of the Bible and Masora on parchment (725 on paper), plus 1200 additional Hebrew manuscript fragments in the Antonin Collection (Wurthwein, 23). Kahle contends also that these Antonin Collection manuscripts and fragments are all from the Cairo Geniza (Kahle, 7). In the Firkowitch Collection are found fourteen Hebrew Old Testament manuscripts from between 929 and 1121 that originated in the Cairo Geniza.

Cairo Geniza manuscripts are scattered over the world. Some of the better ones in the United States are in the Enelow Memorial Collection at the Jewish Theological Seminary, New York (Goshen-Gottstein, 44f.).

The British Museum catalog lists 161 Hebrew Old Testament manuscripts. At Oxford University, the Bodleian Library catalog lists 146 Old Testament manuscripts, each containing a large number of fragments (Kahle, 5). Goshen-Gottstein estimates that in the United States alone there are tens of thousands of Semitic manuscript fragments, about 5 percent of which are biblical—more than 500 manuscripts (Goshen-Gottstein, 30).

Hebrew Manuscripts. The most significant Hebrew Old Testament manuscripts date from between the third century B.C . and the fourteenth century A.D . Of these the most remarkable manuscripts are those of the Dead Sea Scrolls, which date from the third century B.C . to the first century A.D . They include one complete Old Testament book (Isaiah) and thousands of fragments, which together represent every Old Testament book except Esther.

Dead Sea Scroll Discoveries. Cave 1 was discovered by the Arab shepherd boy. From it he took seven more-or-less complete scrolls and some fragments:

Isaiah A (IQIsa). St. Mark's Monastery Isaiah Scroll is a popular copy with numerous corrections above the line or in the margin. It is the earliest known copy of any complete book of the Bible.

Isaiah B (IQIsb). The Hebrew University Isaiah is incomplete but its text agrees more closely with the Masoretic text than does Isaiah A.

Other Cave 1 Fragments . This cave also yielded fragments of Genesis, Leviticus, Deuteronomy, Judges, Samuel, Isaiah, Ezekiel, Psalms, and some nonbiblical works, including Enoch, Sayings of Moses (previously unknown), Book of Jubilee, Book of Noah, Testament of Levi, Tobit, and the Wisdom of Solomon. An interesting fragment of Daniel, containing 2:4 (where the language changes from Hebrew to Aramaic), also comes from this cave. Fragmentary commentaries on Psalms, Micah, and Zephaniah were also found in Cave 1.

Cave 2. Cave 2 was first discovered and pilfered by the Bedouins. It was excavated in 1952. Fragments of about a hundred manuscripts, including two of Exodus, one of Leviticus, four of Numbers, two or three of Deuteronomy, one of Jeremiah, Job, Psalms, and two of Ruth, were found.

Cave 3. Cave 3 was found by the archaeologists and searched on March 14, 1952. It disclosed two halves of a copper scroll with directions to sixty or sixty-four sites containing hidden treasures. These sites were mostly in and around the Jerusalem area, ranging from north of Jericho to the Vale of Achor. Thus far, search for the treasures has been unfruitful. Various views have emerged to explain this scroll. It has been suggested that it is the work of a crank, or part of the people's folklore, or possibly a record of the deposits of the tithe money and sacred vessels dedicated to the temple service (see Allegro).

Cave 4. Partridge Cave or Cave 4, after being ransacked by Bedouins, was searched in September 1952, and it proved to be the most productive cave of all. Literally thousands of fragments were recovered by purchase from the Bedouin or by the archaeologists' sifting the dust on the floor of the cave. These scraps represent hundreds of manuscripts, nearly 400 of

which have been identified. They include 100 copies of Bible books, all the Old Testament except Esther.

A fragment of Samuel from Cave 4 (4qsamb) is thought to be the oldest known piece of biblical Hebrew. It dates from the third century B.C . Also found were a few fragments of commentaries of the Psalms, Isaiah, and Nahum. The entire collection of Cave 4 is believed to represent the scope of the Qumran library, and judging from the relative number of books found, their favorite books seemed to be Deuteronomy, Isaiah, Psalms, the Minor Prophets, and Jeremiah, in that order. In one fragment containing some of Daniel 7:28 , 8:1 , the language changes from Aramaic to Hebrew.

Caves 5 and 6. Caves 5 and 6 were excavated in September 1952. Fragments of Tobit and some biblical books, all in an advanced stage of deterioration, were found in Cave 5. Cave 6 produced mostly papyrus, instead of leather fragments. Papyrus pieces of Daniel, 1 Kings, and 2 Kings were among the finds.

Caves 7–10. Caves 7–10, examined in 1955, produced no significant Old Testament manuscripts. Cave 7 did, however, yield some disputed mss. fragments that have been identified by Jose O'Callahan as New Testament portions. If so, they would be the oldest New Testament mss. dating from as early as A.D . 50 or 60.

Cave 11. Cave 11 was excavated in early 1956. It produced a well-preserved copy of thirty-six Psalms, plus the apocryphal Psalm 151 , which was previously known only in Greek texts. A very fine scroll of part of Leviticus, some large pieces of an Apocalypse of the New Jerusalem, and an Aramaic targum (paraphrase) of Job were discovered.

Several recent studies of the Dead Sea Scrolls provide detailed descriptions and inventories. Gleason L. Archer, Jr. has a good summary in an appendix to his *A Survey of Old Testament Introduction* .

Murabba'at Discoveries. Prompted by the profitable finds at Qumran, the Bedouins pursued their search and found caves southeast of Bethlehem that produced self-dated manuscripts and documents from the Second Jewish Revolt (132–135). Systematic exploration and excavation of these caves began in January 1952. The later, dated manuscripts helped establish the antiquity of the Dead Sea Scrolls. From these caves came another scroll of the Minor Prophets, the last half of Joel through Haggai, which closely supports the Masoretic Text. The oldest known Semitic papyrus (a palimpsest), inscribed the second time in the ancient Hebrew script (dating from the seventh–eighth centuries B.C .), was found here (see Barthelemy).

Another site known as Khirbet Mird has produced manuscript materials. On April 3, 1960, a parchment fragment (first century A.D .) of Psalm 15 and part of Psalm 16 was discovered at Wadi Murabba'at (see Cass, 164).

Samaritan Pentateuch. The Samaritans separated from the Jews probably during the fifth or fourth century B.C . after a long, bitter religious and cultural struggle. At the time of the schism one would suspect that the Samaritans took with them the Scriptures as they then existed, and

they prepared their own, revised text of the Pentateuch. The Samaritan Pentateuch is not a version in the strict sense, but rather a manuscript portion of the Hebrew text itself. It contains the five books of Moses and is written in an ancient style of Hebrew script. Some of the older biblical manuscripts from Qumran use this script, since it was revived in the second century B.C . during the Maccabean revolt against the Greeks. Textual critic Frank M. Cross, Jr., believes that the Samaritan Pentateuch probably comes from about the Maccabean period.

A form of the Samaritan Pentateuch text seems to have been known to church Fathers Eusebius of Caesarea (ca. 265–339) and Jerome (ca. 345–ca. 419). It was not available to modern Western scholars until 1616, when Pietro della Valle discovered a manuscript of the Samaritan Pentateuch in Damascus. A great wave of excitement arose among biblical scholars. The text was regarded as superior to the Masoretic Text (MT); until Wilhelm Gesenius in 1815 judged it to be practically worthless for textual criticism. More recently the value of the Samaritan Pentateuch has been reasserted by such scholars as A. Geiger, Kahle, and Kenyon.

No extant manuscript of the Samaritan Pentateuch has been dated before the eleventh century. The Samaritan community claims that one roll was written by Abisha, the great-grandson of Moses, in the thirteenth year after the conquest of Canaan, but the authority is so spurious that the claim may be safely dismissed. The oldest codex of the Samaritan Pentateuch bears a note about its sale in 1149–50, but the manuscript itself is much older. One manuscript was copied in 1204. Another dated 1211–1212 is now in the John Rylands Library at Manchester. Another, dated ca. 1232, is in the New York Public Library.

The standard printed edition of the Samaritan Pentateuch is in five volumes by A. von Gall, *Der Hebraische Pentateuch der Samaritaner* (1914–1918). It provides an eclectic text based on eighty late medieval manuscripts and fragments. Although von Gall's text is in Hebrew characters, the Samaritans wrote in an alphabet quite different from the square Hebrew. Nevertheless, their script, like the Hebrew, descended from old Paleo-Hebrew characters.

There are about 6000 deviations of the Samaritan Pentateuch from the Masoretic Text, most trivial. In about 1900 instances the Samaritan text agrees with the Septuagint against the Ma soretic Text. Some of the deviations were deliberately introduced by the Samaritans to preserve their own religious traditions and dialectic. The Masoretic Text perpetuates Judean dialect and traditions.

In the early Christian era a translation of the Samaritan Pentateuch was made into the Aramaic dialect of the Samaritans. This Samaritan Targum was also translated into Greek, called the *Samaritikon,* which was occasionally cited by Origen. After the eleventh century several translations of the Samaritan Pentateuch were made in Arabic (Kahle, 51–57).

Other Important Discoveries. Nash Papyri. Among the earliest Old Testament Hebrew manuscripts, there is extant one damaged copy of the *Shema* (from Deut. 6:4–9) and two fragments of the Decalogue (Exod. 20:2–17 .; Deut. 5:6–21). The Nash Papyri are dated between the second century B.C . and the first century A.D .

Orientales 4445. Orientales 4445, a British Museum manuscript is dated by Christian D. Ginsburg at between 820 and 850, with notes added a century later. But Paul E. Kahle (see Wurthwein, 18) argues that both consonantal Hebrew texts and pointing (the added vowel points or marks) are from the tenth century. Because the Hebrew alphabet consists only of consonants, Hebrew writing normally shows only those letters, with a few letters used to represent some of the vocalic sounds. Vowel marks or "points" were a medieval development. This manuscript contains Genesis 39:20 — Deuteronomy 1:33 , less Numbers 7:47–73 and 9:12–10:18 .

Codex Cairensis. A codex is a manuscript in book form with pages. According to a colophon, or inscription at the end of the book, Codex Cairensis (C) was written and vowel-pointed in 895 by Moses ben Asher in Tiberias in Palestine (ibid., 25). It contains the Former Prophets (Joshua, Judges, 1 and 2 Samuel, 1 and 2 Kings) and the Latter Prophets (Isaiah, Jeremiah, Ezekiel, and the Minor Prophets). It is symbolized by a C in *Biblia Hebraica Stuttgartensia* and is regarded as the most authoritative Hebrew text based on the Masoretic Text tradition.

Aleppo Codex. Aleppo Codex was written by Shelomo ben Baya'a (Kenyon, 84), but according to a colophon note it was pointed (i.e., the vowel marks were added) by Moses ben Asher (ca. 930). It is a model codex, although it was not permitted to be copied for a long time and was even reported to have been destroyed (Wurthwein, 25). It was smuggled from Syria to Israel. It has now been photographed and is the basis of the *New Hebrew Bible* published by Hebrew University (Goshen-Gottstein, 13). It is a sound authority for the ben Asher text.

Codex Leningradensis. According to a colophon note, Codex Leningradensis (L) was copied in Old Cairo by Samuel ben Jacob in 1008 from a manuscript (now lost) written by Aaron ben Moses ben Asher ca. 1000 (Kahle, 110). It represents one of the oldest manuscripts of the complete Hebrew Bible. Kittel adopted it as the basis for the third edition of his *Biblia Hebraica* , and it continues to be used as such in *Biblia Hebraica Stuttgartensia* , where it is represented under the symbol L.

Babylonian Codex of the Latter Prophets. The Babylonian Codex (V (ar)P) is sometimes called the Leningrad Codex of the Prophets (Kenyon, 85) or the [St.] Petersburg Codex (Wurthwein, 26). It contains Isaiah, Jeremiah, and the Twelve. It is dated 916, but its chief significance is that, through it, punctuation added by the Babylonian school of Masoretic scribes was rediscovered. It is symbolized as V (ar)P in *Biblia Hebraica Stuttgartensia.*

Reuchlin Codex of the Prophets. Dated 1105, Reuchlin Codex is now at Karlsruhe. Like the British Museum manuscript (ca. 1150), it contains a recension of Ben Naphtali, a Tiberian Masorete. These have been of great value in establishing the fidelity of the Ben Asher text (Kenyon, 36).

Erfurt Codices. The Erfurt Codices (E 1, E2, E3) are listed in the University Library in Tubingen. They represent more or less (more in E3) the text and markings of the Ben Naphtali tradition. E1 is a fourteenth-century manuscript. E2 is probably from the thirteenth century. E3, the oldest, is dated before 1100 (Wurthwein, 26).

Lost Codices. There are a number of significant but now lost codices whose peculiar readings are preserved and referred to in *Biblia Hebraica Stuttgartensia.* Codex Severi is a medieval list of thirty-two variants of the Pentateuch, supposedly based on a manuscript brought to Rome in 70 that Emperor Severus (222–35) later gave to a synagogue he had built. Codex Hillel was supposedly written ca. 600 by Rabbi Hillel ben Moses ben Hillel. It is said to have been accurate and was used to revise other manuscripts. Readings from that manuscript are cited by medieval Masoretes and are noted in *Biblia Hebraica Stuttgartensia* (ibid., 27).

Nature of Manuscripts. *Types of Manuscript Errors.* Although the official text of the Old Testament was transmitted with great care, it was inevitable that certain copyist errors would creep into the texts over the hundreds of years of transmission into thousands of manuscripts. There are several kinds of copyist errors that produce textual variants (Archer, 55–57).

- *Haplography* is the writing of a word, letter, or syllable only once when it should have been written more than once.
- *Dittography* is writing twice what should have been written only once.
- *Metathesis* is reversing the proper position of letters or words.
- *Fusion* is the combining of two separate words into one.
- *Fission* is the dividing of a single word into two words.
- *Homophony* is the substitution of a word for another that is produced like it (e.g., “two” for “to”), or the misreading of similarly shaped letters.
- *Homoeoteleuton* is the omission of an intervening passage because the scribe’s eye skipped from one line to a similar ending on another line.
- *Accidental omissions* occur where no repetition is involved (as “Saul was . . . year(s) old,” 1 Sam. 13:1 , RSV), or vowel letters are misread for consonants.

Rules for Textual Criticism. Scholars have developed certain criteria for determining which reading is correct or original. Seven rules may be suggested (ibid., 51–53).

1. An older reading is to be preferred, because it is closer to the original.
2. The more difficult reading is to be preferred, because scribes were more apt to smooth out difficult readings.
3. The shorter reading is to be preferred, because copyists were more apt to insert new material than omit part of the sacred text.

---

rsv Revised Standard Version

4. The reading that best explains the other variants is to be preferred.

5. The reading with the widest geographical support is to be preferred, because such manuscripts or versions are less likely to have influenced each other.

6. The reading that is most like the author's usual style is to be preferred.

7. The reading that does not reflect a doctrinal bias is to be preferred. (Wurthwein, 80–81).

Quality of Manuscripts. Several reasons have been suggested for the relative scarcity of early Hebrew manuscripts. The first and most obvious reason is a combination of antiquity and destructibility; 2000 to 3000 years is a long time to expect ancient documents to last. Nonetheless, several lines of evidence support the conclusion that their quality is very good.

Variant Readings. There are very few variants in the texts available because the Masoretes systematically destroyed old manuscripts once they were carefully copied. Kenyon illustrates the paucity of variations in the Masoretic Text by contrasting the Leningrad Codex of the Prophets, from the Babylonian or Eastern tradition, with the standard Palestinian text (Western) of Ezekiel. In the Western text the Masoretic Text is sometimes corrupt. Yet there are only sixteen real conflicts between the two texts (Kenyon, 45, 70–72).

Jewish Reverence for the Bible. With respect to the Jewish Scriptures, however, it was not scribal accuracy alone that guaranteed their product. Rather, it was their almost superstitious reverence for the Bible. According to the *Talmud* , there were specifications not only for the kind of skins to be used and the size of the columns, but there was even a religious ritual necessary for the scribe to perform before writing the name of God. Rules governed the kind of ink used, dictated the spacing of words, and prohibited writing anything from memory. The lines, and even the letters, were counted methodically. If a manuscript was found to contain even one mistake, it was discarded and destroyed. This scribal formalism was responsible, at least in part, for the extreme care exercised in copying the Scriptures. It was also the reason there were only a few manuscripts (as the rules demanded the destruction of defective copies).

Comparison of Duplicate Passages. Another line of evidence for the quality of the Old Testament manuscripts is found in the comparison of the duplicate passages of the Masoretic Text itself. Several psalms occur twice (for example, 14 and 53); much of Isaiah 36–39 is also found in 2 Kings 18–20 ; Isaiah 2:2–4 is almost exactly parallel to Micah 4:1–3 ; Jeremiah 52 is a repeat of 2 Kings 25 ; and large portions of Chronicles are found in Samuel and Kings. An examination of those passages shows not only a substantial textual agreement but, in some cases, almost word-for-word identity. Therefore it may be concluded that the Old Testament texts have not undergone radical revisions, even if it were assumed that these parallel passages had identical sources.

Support from Archaeology. A substantial proof for the accuracy of the Old Testament text has come from archaeology. Numerous discoveries have confirmed the historical accuracy of the biblical documents, even down to the occasional use of obsolete names of foreign kings. These

archaeological confirmations of the accuracy of Scripture have been recorded in numerous books (*see* ARCHAEOLOGY, NEW TESTAMENT ; ARCHAEOLOGY, OLD TESTAMENT). Archaeologist Nelson Glueck asserts, “It may be stated categorically that no archaeological discovery has ever controverted a biblical reference. Scores of archaeological findings have been made which confirm in clear outline or exact detail historical statements in the Bible” (Glueck, 31).

The Septuagint and Masoretic Text. The *Septuagint* was the Bible of Jesus and the apostles. Most New Testament quotations are taken from it directly, even when it differs from the Masoretic Text. On the whole the *Septuagint* closely parallels the Masoretic Text and is a confirmation of the fidelity of the tenth-century Hebrew text.

If no other evidence were available, the case for the fidelity of the Masoretic Text could be brought to rest with confidence upon textual comparisons and understanding of the extraordinary Jewish scribal system. But with discovery of the Dead Sea Scrolls, beginning in 1947, there is almost overwhelming substantiation of the received Hebrew text of the Masoretes. Critics of the Masoretic Text charged that the manuscripts were few and late. Through the Dead Sea Scrolls, early manuscript fragments provide a check on nearly the whole Old Testament. Those checks date about a thousand years before the Great Masoretic manuscripts of the tenth century. Before the discoveries in the Cairo Geniza and the Dead Sea caves, the Nash Papyrus (a fragment of the Ten Commandments and Shema, Deut. 6:4–9), dated between 150 and 100 B.C ., was the only known scrap of the Hebrew text dating from before the Christian era.

Agreement with the Samaritan Pentateuch. Despite the many minor variants between the Samaritan Pentateuch and the Hebrew text of the Old Testament, there is substantial agreement between them. As noted above, the 6000 variants from the Masoretic Text are mostly differences in spelling and cultural word variation. Nineteen hundred variants agree with the Septuagint (for example, in the ages given for the patriarchs in Genesis 5 and 11). Some Samaritan Pentateuch variants are sectarian, such as the command to build the Temple on Mount Gerizim, not at Jerusalem (e.g., after Exod. 20:17). It should be noted, however, that most manuscripts of the Samaritan Pentateuch are late (thirteenth to fourteenth centuries), and none is before the tenth century (Archer, 44). But the Samaritan Pentateuch still confirms the general text from which it had diverged many hundreds of years earlier.

Check Against the Dead Sea Scrolls. With the discovery of the Dead Sea Scrolls, scholars have Hebrew manuscripts 1000 years earlier than the great Masoretic Text manuscripts, enabling them to check on the fidelity of the Hebrew text. There is a word-for-word identity in more than 95 percent of the cases, and the 5 percent variation consists mostly of slips of the pen and spelling (ibid., 24). The Isaiah scroll (1QIsa) from Qumran led the Revised Standard Version translators to make only thirteen changes from the Masoretic Text; eight of those were known from ancient versions, and few of them were significant (Burrows, 305ff.). Of the 166 Hebrew words in Isaiah 53 , only seventeen Hebrew letters in the Isaiah B scroll differ from the Masoretic Text. Ten letters are a matter of spelling, four are stylistic changes, and the other three compose the word for “light,” (added in verse 11), which does not affect the meaning greatly (Harris, 124). Furthermore that word is also found in that verse in the Septuagint and the Isaiah A scroll.

Conclusion. The thousands of Hebrew manuscripts, with their confirmation by the Septuagint and the Samaritan Pentateuch, and the numerous other cross-checks from outside and inside the text provide overwhelming support for the reliability of the Old Testament text. Hence, it is appropriate to conclude with Kenyon's statement, "The Christian can take the whole Bible in his hand and say without fear or hesitation that he holds in it the true word of God, handed down without essential loss from generation to generation throughout the centuries."

Since the Old Testament text is related in important ways to Christian apologetics, its reliability supports the Christian faith. This is true not only in establishing the dates when supernatural predictions were made of the Messiah, but also in supporting the historicity of the Old Testament that Jesus and New Testament writers affirmed (*see* BIBLE, EVIDENCE FOR ; BIBLE, JESUS' VIEW OF).

Omnipotence of God, Alleged Contradiction of. Some critics have alleged that the theistic (*see* THEISM) view of God is incoherent, since it claims God is omnipotent or all-powerful (*see* GOD, NATURE OF). They argue:

1. An all-powerful Being can do anything.

2. An all-powerful Being can make a stone so heavy that he cannot move it.

3. Hence, an all-powerful Being cannot do everything.

4. But premises 1 and 3 are contradictory.

5. Hence, it is contradictory to hold that God is all-powerful.

No sophisticated theist really believes premise 1 in an unqualified way. What informed theists believe is that:

1a. God can do anything that is possible.

2a. It is not possible to make a stone so heavy that it cannot be moved.

3a. Therefore, it is not possible for God to make a stone so heavy that he cannot move it.

God cannot literally do any task we can imagine. He cannot contradict his own nature. Hebrews 6:18 declares. "It is impossible for God to lie." Neither can God do what is logically impossible, for example, make a square circle. He cannot make two mountains without a valley between. And he cannot deny the law of noncontradiction (*see* FIRST PRINCIPLES).

Further, God cannot do what is actually impossible. For example, he cannot will not to create a world he has willed to create. Of course, he could have willed not to create. But once he willed to create it was impossible for him to will not to create. Neither can God force free creatures (*see* FREE WILL) to believe things against their will. Forcing someone to freely do something is a contradiction in terms (*see* HELL). For if it is free, it is not forced. And if it is forced, then it is not free.

It is actually impossible to make a stone so heavy it cannot be moved. What an omnipotent Being can make, he can move. A finite creature cannot be more powerful in its resistance than the infinite Creator is in his power not to be resisted. If God brought it into existence, he can take it out of existence. Then he could recreate it somewhere else. Therefore, there is no contradiction in believing that God is omnipotent and that he can do anything that is possible to do. The critic has set up a straw-man argument and has not shown any incoherence in God's attribute of omnipotence.

One and Many, Problem of. A classic metaphysical problem asks: Is reality one or many? Or, is it both one and many? If there is an ultimate unity in reality, how is there also real diversity?

Or, if there is real diversity of things, how can there be an ultimate unity? In the final analysis, the problem of the one and many boils down to monism verses pluralism.

The ancient philosopher Parmenides gave the ultimate statement of monism , insisting that there can be only one being, since to assume there is more than one leads to absurdities and antinomies. Two different things would have to differ. And there are only two ways to differ, by being or nonbeing. But to differ by nonbeing or nothing is not to differ at all. However, to differ by being is impossible, because being is the very respect in which all things are identical. And things cannot differ in the very respect in which they are identical. Therefore, there cannot be two or more beings, only one.

Various solutions to the problem of the one and many have been posited (*see* MONISM ; PLURALISM, METAPHYSICAL ; ANALOGY). Atomists suggested that things differ by absolute nonbeing (the void). But to differ by absolutely nothing is not to differ at all. Plato argued that they differ by relative nonbeing, but this too turns out to be no real difference. Nor can they differ as Aristotle said in their simple beings, since simple beings simply cannot differ—they are the same in their beings.

No solution has been successful for a theist (*see* THEISM) except that of Thomas Aquinas. He showed that things can differ in their very being, since they are different kinds of being. An infinite Being differs from a finite being, and a Necessary Being differs from a contingent being. A being of pure Actuality differs from one that has actuality and potentiality. The only kind of being that cannot differ in its being is one of pure Actuality (God). That is, there can be only one such being because it is a one-of-a-kind type Being. It is Being pure and simple. All other beings are complex beings, having a mixture of actuality and potentiality. So, things differ in the kind of being they have, except the One who *is* Being and from whom all other beings *have* their being. This solves the problem of the one and many in the realm of being without going beyond being (to the Unknowable One), as did Plotinus , which leaves one in total ignorance of God (*see* AGNOSTICISM).

Ontological Argument. The ontological argument for the existence or being (Gk. *ontos*) of God proceeds from the mere idea that God is an absolutely perfect or Necessary Being. The ontological argument was first formed by Anselm (1033–1109), although he did not name it. It has been subject to extensive criticism by both defenders of theistic arguments (*see* THOMAS AQUINAS) and opponents (*see* HUME, DAVID ; KANT, IMMANUEL). Immanuel Kant (1724–1804) was the first to call it the ontological argument because he believed it made an illicit transition from thought to being *(ontos).*

Anselm's Form(s). The ontological argument might more accurately be called "the proof from prayer," since it came to Anselm as he meditated on the nature of God. It is widely believed that Anselm developed two forms of the ontological argument. The second emerged in his debate with another monk named Gaunilo.

The first form of the ontological argument is based on the idea of God as an absolutely perfect Being. One cannot conceive of a greater being (see Plantinga, *Ontological Argument,* 3–27). In logical form it is:

1. God is, by definition, a Being, greater than which nothing can be conceived.

2. It is greater to exist in reality than to exist only in the mind.

3. Therefore God must exist in reality. If he didn't he wouldn't be the greatest being possible.

The second form of the argument comes from the idea of a Necessary Being:

1. God is, by definition, a Necessary Being.

2. It is logically necessary to affirm what is necessary to the concept of a Necessary Being.

3. Existence is logically necessary to the concept of a Necessary Being.

4. Therefore, a Necessary Being (= God) necessarily exists.

Objections. *Anselm's Debate with Gaunilo.* The objections of Gaunilo the monk and Anselm's responses help explain the argument.

Objection 1: Necessary Existence. Gaunilo contended that the argument is built on the false premise that whatever exists in the mind must also exist in reality outside the mind. Anselm responded that this is not so. Only in the case of an absolutely perfect being, which would have to be a Necessary Being, is it true that, if it is conceivable, then it must exist outside the mind too. All contingent beings could not exist. Only a Necessary Being cannot not exist.

Objection 2: Conceiving and Doubting. Gaunilo further insisted that, if God's nonexistence were really inconceivable, no one could doubt. But people do doubt or deny it; there are skeptics and atheists. But Anselm responded that, while people can *deny* God's existence, they cannot *conceive* of the nonexistence of a Necessary Being. God's nonexistence is affirmable but not conceivable.

Objection 3: Mental Limitations. Gaunilo asserted that we cannot even form the concept of the most perfect Being possible. It is only a series of words, with no empirical reference or meaning. However, Anselm denied that, giving six reasons for his answer: (1) *God* is a common, familiar word. (2) Faith and conscience provide content for it. (3) Not all conceptions are sensible images, since abstract concepts are possible. (4) God can be understood indirectly, the way the sun is understood from its rays. (5) We can form the concept of the most perfect being by working from the less-than-perfect to the most perfect possible. (6) Even those who deny God must have some conception of what they are denying.

Objection 4: Thought and Reality. Gaunilo contended that the mere idea of a perfect Island did not guarantee its existence, nor does the idea of a perfect Being. But Anselm insisted that there is an important difference; the idea of a perfect island may lack existence, but not the idea

of a perfect Being. It is possible for an island—even a perfect one—not to exist. But it is not possible for a perfect (Necessary) Being not to exist.

Objection 5: Conceiving Nonexistence. Gaunilo offered that God's nonexistence is no more inconceivable than one's own nonexistence. Yet one can conceive of personal nonexistence. However, Anselm was quick to point out that the nonexistence of everything except a Necessary Being is conceivable. For if it is possible for a Necessary Being to exist, then it is necessary for it to exist. Its nonexistence alone is inconceivable.

Objection 6: Proof of Existence. God's existence must be proved before we can discuss his essence (for example, that he is a perfect kind of Being). Hence, we cannot use his essence (as an absolutely perfect Being to prove his existence). Anselm responded that we can compare ideal characteristics before we know something is real. We can define it [for example, the mighty winged horse, Pegasus], and then ask whether it exists.

Finally, Anselm charged Gaunilo with misunderstanding his argument and, therefore, attacking a straw man. He insisted that God is not to be defined as "the greatest of all beings" (as Gaunilo thought) but as "the greatest *possible* Being." Although Gaunilo raised some good questions, none of them really refute Anselm's argument, particularly the second form of it.

Aquinas' Objection. The ontological argument did not convince Thomas Aquinas. His objection to Anselm's argument can be seen in his restatement of Anselm's argument:

1. God is, by definition, a Being, greater than which nothing can be conceived.

2. What exists both mentally and actually is greater than that which exists only mentally.

3. Therefore, God must exist actually, for once the sentence "God exists" is understood, it is seen to be a self-evident proposition.

Aquinas offers three objections to this argument: First, not everyone understands the term "God" to mean "that than which nothing greater can be conceived." Second, even if God is understood this way it does not prove that he actually exists, but only that the conception exists mentally. This point gets to the heart of the common objection to the ontological argument. Third, the proposition, "God, a Necessary Being, exists," is self-evident *in itself,* but it is not self-evident *to us.* For we cannot know God's essence directly, but only through his effects (*see* COSMOLOGICAL ARGUMENT). Hence, we can only arrive at his existence through his effects, *a posteriori* . We cannot know it *a priori* in itself. Only God knows his own essence intuitively. This too is more to the central point of criticism.

Descartes' Form of the Argument. Not much advanced in the dialogue over the ontological argument for centuries. Then the seventeenth-century rationalist Rene Descartes (1596–1650) set off a series of criticisms by reformulating and defending the argument. His statement followed Anselm's second form:

1. It is logically necessary to affirm of a concept what is essential to its nature (e.g., A triangle must have three sides.).

2. But existence is logically necessary to the nature of a necessary Existent (i.e., Being).

3. Therefore, it is logically necessary to affirm that a necessary Existent does exist.

Dialogue with Caterus. As Anselm, Descartes had his antagonists. Caterus, a priest, insisted that the argument proves only a conceptual existence of God. For the complex of words "existent lion" is conceptually necessary, but this does not prove that a lion exists. Only experience can do that. Thus, the complex "Necessary Being" does not prove that God exists.

Descartes replied that Caterus had refuted another argument, not his. His first restatement of the argument is based on his concept of truth as what is clearly perceived:

1. Whatever we clearly and distinctly perceive is true.

2. We clearly and distinctly perceive that existence must belong to a necessary Existent.

3. So, it is true that a necessary Existent does exist.

Descartes' second restatement of his argument takes another form:

1. Whatever is of the essence of something must be affirmed of it.

2. Existence is of the essence of a necessary Existent (= God).

3. Hence, existence must be affirmed of God.

The third restatement of the ontological argument takes this form:

1. God's existence cannot be conceived as only possible but not actual, for then he would not be a necessary *Existent* .

2. We can conceive of God's existence. It is not contradictory.

3. Therefore, God's existence must be conceived as more than possible (viz., as actual).

Debate with Gassendi. Pierre Gassendi's objection to Descartes' arguments took the following form:

1. God need not exist any more than must a triangle. The essence of either can be thought of apart from its existence.

2. Existence is not a necessary property for God, any more than for triangles.

3. It begs the question to list existence as part of God's essence.

4. Essence and existence are not identical, or else Plato as well as God would exist necessarily. If they are not identical, neither exists necessarily.

5. We are just as free to think of God not existing as we are of a nonexistent Pegasus.

6. We must prove triangles have three sides (not just assume it). Likewise, we must prove God exists (not merely assume it).

7. Descartes did not really prove that God's existence is not logically impossible. Hence, he did not prove it is logically necessary.

Descartes' retort took the following shape:

1. Existence is a property in the sense that it is attributable to a thing.

2. Only God has necessary existence, not Pegasus or anything else.

3. It is not begging the question to include existence among the attributes of a necessary Existent. Indeed, it is necessary to do so.

4. Existence and essence cannot be separate in a Being that is a necessary Existent. Hence, God must exist.

Descartes did not answer objection seven. Gottfried Leibniz (1646–1716) attempted to do so by arguing that existence is a perfection and as such is a simple and irreducible quality that cannot conflict with others. Hence, God can have all perfections, including existence.

Other Reactions to Descartes' Proofs. In another negative view of Descartes' ontological argument, his view was restated:

1. If it is not contradictory that God exists, then it is certain that he exists.

2. It is not contradictory that God exists.

3. So, it is certain that God exists.

In view of this new form of the argument, critics offered two objections which, if true, would invalidate Descartes' conclusion. The first is that the minor premise can be doubted or denied. Hence, the argument does not necessarily follow. Second, Descartes admitted that his idea of God was inadequate. But if it is inadequate, then it is unclear. And if it is unclear, then, on Descartes' own definition of truth as "clear and distinct" ideas, it is untrue.

Descartes replied that God's existence is noncontradictory in whichever of the two senses one takes it. If noncontradictory means *whatever does not disagree with human thought,* it is

clearly noncontradictory. For we have not attributed to him anything but what human thought necessitates that we attribute to him. If noncontradictory means *what cannot be known by the human mind,* then no one can know anything, let alone God's existence. Such a definition would overthrow all human thought, which is impossible. Even if our concept of God is inadequate, it does not follow that it is contradictory, since all contradiction arises from a lack of clarity, and we clearly see that God must be a Necessary Being. Descartes further implied that what we do not clearly see does not destroy what we do clearly see. Since we do clearly see that there is no contradiction in the concept of a Necessary Being, the argument follows. For this is all that is necessary to support the disputed minor premise of the argument.

Objections of Hume and Kant. *Hume's Critique of the Ontological Argument.* David Hume (1711–1776) set forth what has become a standard objection to the ontological proof, as well as to other "proofs" for God's existence. It was followed by Kant 's landmark critique of the central premise of the first form of the argument.

Hume's critique of the ontological argument has this basic logical form:

1. Nothing is rationally demonstrable unless the contrary implies a contradiction, for if it leaves open any other possibility, then this position is not necessarily true.

2. Nothing that is distinctly conceivable implies a contradiction. If it were contradictory, it would not be distinctly conceivable; if it is impossible, it cannot be possible.

3. Whatever we conceive to exist we can also conceive as nonexistent. The existence or nonexistence of things cannot be ruled out conceptually.

4. There is no being, therefore, whose nonexistence implies a contradiction.

5. Consequently, there is no being whose existence is rationally demonstrable.

In essence, Hume reasons that no argument for God is rationally inescapable, because it always contains premises that logically can be denied. The conclusions always lack logical necessity, because the premises always admit of other logical possibilities. According to this, the ontological argument fails to be a rational demonstration in the strict sense.

The Critique of Kant. Kant first named the ontological argument, since he thought it made an illicit transition from the sphere of pure thought to that of reality (from *eidos* to *ontos*). Kant had several objections to the argument which he felt were fatal to the whole theistic cause (ibid., 57–64). First, he objected to the fact that we have no positive concept of a Necessary Being. God is defined only as that which cannot *not* be. Further, necessity does not apply to existence but only to propositions. Necessity is a logical, not an ontological, qualifier. There are no existentially necessary propositions. Whatever is known by experience (which is the only way existential matters are knowable) could be unknown. Next, what is logically possible is not necessarily ontologically possible. There may be no logical contradiction in the necessary existence but it still may be actually impossible. Then, there is no contradiction involved in rejecting both the

idea and the existence of a Necessary Being. Likewise, there is no contradiction in rejecting the triangle along with its three-sidedness. Contradiction results in rejecting one without the other.

Finally, existence is not a predicate, as though it were a perfection or property that could be affirmed of a subject or thing. Existence is not a perfection of an essence but a positing of that perfection. Kant utilized the following argument to support this point:

1. Whatever adds nothing to the conception of an essence is not part of that essence.

2. Existence adds nothing to the conception of an essence. No characteristic is added to an essence by positing that it is real rather than imaginary. A real dollar does not have any characteristics that an imagined one lacks.

3. Therefore, existence is not part of an essence. It is not a perfection that can be predicated of something.

If Kant's third point is solid, it invalidates at least the first form of the ontological argument given by Anselm. In view of Kant, Anselm's argument would really amount to this:

1. All possible perfections must be predicated of an absolutely perfect Being.

2. Existence is a possible perfection which may be predicated of an absolutely perfect Being.

3. Therefore, existence must be predicated of an absolutely perfect Being.

An Evaluation of Kant's Critique. According to Kant's criticism, the minor premise is wrong. Existence is not a perfection that may be predicated of anything. Essence gives the definition, and existence provides an example of what was defined. The essence is given in the conceptualization of something; existence does not add to this conceptualization but merely makes it concrete. Hence, existence neither adds nor detracts from the concept of an absolutely perfect Being. This has been a standard objection to the ontological argument since Kant. It can be put in this form:

1. Anselm's argument depends on the premise that existence is a predicate—an attribute or perfection.

2. But existence is not a predicate. (a) Anselm follows a platonic concept of being. (b) Existence is not a perfection but only an instance of a perfection.

3. Hence, Anselm's argument is not valid.

The dollar in my mind has same attributes as the dollar in my pocket. The only difference is that with the one in my wallet I have an instance of one. But a concrete example of a perfection adds nothing to the perfection itself.

Modern proponents of Anselm's argument, such as Norman Malcolm and Charles Hartshorne, reply that Kant's criticism applies only to Anselm's first argument. The second form does not depend on the premise that existence is a perfection.

Leibniz's Statement. Although Gottfried Leibniz is better known for his cosmological argument, he did set forth a form of the ontological argument. Sensing that the basic ontological argument was valid but that it was necessary to demonstrate that the concept of God was not contradictory, Leibniz restated the argument thus (ibid., 54–56).

1. If it is possible for an absolutely perfect Being to exist, then it is necessary that it exist, for (a) By definition an absolutely perfect Being cannot lack anything. (b) But if it did not exist, it would be lacking in existence. (c) Hence, an absolutely perfect Being cannot be lacking in existence.

2. It is possible (noncontradictory) for an absolutely perfect Being to exist.

3. Therefore, it is necessary that an absolutely perfect Being exist.

In support of the crucial minor premise Leibniz gave this argument:

1. A perfection is a simple and irreducible quality without any essential limits.

2. Whatever is simple cannot conflict with other simple qualities, since they differ in kind.

3. And whatever differs in kind with another cannot conflict with it, since there is no area of similarity in which they can overlap or conflict.

4. Therefore, it is possible for one Being (God) to possess all possible perfections.

Not even defenders of the ontological arguments think Leibniz really proved the compatibility of all possible attributes in God (ibid., 156ff.). Malcolm saw two problems with the argument. First, it assumes that some qualities are essentially "positive" and others "negative," whereas this may not be the case. Some qualities may be positive in one context and negative in another. Second, Leibniz wrongly assumes that some qualities are intrinsically simple, contrary to Ludwig Wittgenstein , who showed that what is simple in one conceptual system may be complex in another. A third objection may be added. Leibniz makes an unwarranted movement from the conceptual to the actual.

Spinoza's Ontological Proof. Like Descartes, his contemporary, Benedict Spinoza (1632–1677) held that the existence of God was mathematically demonstrable. He wrote, "We cannot be more certain of the existence of anything, than the existence of a being absolutely infinite or perfect—that is, of God." And, like Descartes, Spinoza felt that this certainty was derived from the ontological proof (ibid., 50–53). Spinoza's statement of the argument is:

1. There must be a cause for everything, either for its existence or for its nonexistence.

2. A Necessary Being (God) necessarily exists, unless there is a cause adequate to explain why he does not exist.

3. There is no cause adequate to explain why a Necessary Being does not exist, (a) for that cause would have to be either inside God's nature or outside of it. (b) But no cause outside of a necessary Existent could possibly annul it. (c) And nothing inside a necessary Existent could annul it, for nothing inside a Necessary Being can deny that it is a Necessary Being. (d) Hence, there is no cause adequate to explain why a Necessary Being does not exist.

4. Therefore, a Necessary Being necessarily exists.

The usual objection could be leveled at Spinoza's proof, that he makes being actually necessary, when it is only necessary as a concept. There is at least one other objection. The first premise affirms that "there must be a cause for nothing." Not only is this premise without proof, but it is contradictory. The law of causality demands only that "there must be a cause for something." It is unwarranted to insist on a cause for nothing. Spinoza's defense of the premise is that "the potentiality of nonexistence is a negation of power." But nonexistence is already a negative and a negation of nonexistence would be an affirmation of existence. However, this would leave the traditional basis for the ontological argument and begin with existence. This is precisely what Spinoza does in his second form of the argument:

1. Something necessarily exists. To deny this one would have to affirm that at least one thing exists, namely, himself.

2. This necessary Existence is either finite or infinite.

3. It is possible for this necessary Existence to be infinite.

4. There must be a cause as to why this is not an infinite existence.

5. No finite existence can hinder this being an infinite Existence, and to say that an infinite Existence hinders its own infinite existence is contradictory.

6. Therefore, this must be an infinite Existence (God).

Two important things must be noted about Spinoza's arguments. First, he borrows from the cosmological argument the premise, "Something exists." This leaves a strictly *a priori* proof, as he admits. Second, the conclusion of Spinoza's argument is not the theistic God of Descartes and Leibniz but a pantheistic God. There is no acknowledgment of Necessary Being and contingent beings. This infinite Existence is absolutely one; there are not, in addition to it, finite substances or creatures. What theists (*see* Theism) call creatures, Spinoza views as merely modes or moments in the one infinite Substance—God.

Findlay's Ontological Disproof. The ontological argument took a radical turn with the attempt of some atheists to turn it into a disproof for God's existence (*see* GOD, ALLEGED

DISPROOFS OF). The ontological argument is widely rejected in modern times. Some have even turned the tables on it, making it a kind of ontological disproof of God. Such was the intention of J. N. Findlay, who argued (ibid., 111–22) that:

1. God must be thought of as a Necessary Being (i.e., as necessarily existing), for anything short of this kind of being would be unworthy of worship.

2. But existentially necessary propositions cannot be true (as Kant showed), for necessity is merely a logical characteristic of propositions, not of reality.

3. Therefore, God cannot exist.

Findlay's argument can be put in this more simple form:

1. The only way God could exist is if he exists necessarily (any kind of existence less than necessary would make him less than God).

2. But nothing can exist necessarily (for necessity does not apply to existence but only to propositions).

3. Therefore, God cannot exist (for the only way he could exist is the very way he cannot exist).

More properly, however, the argument should be stated this way:

1. The only way a Necessary Being could exist is to exist necessarily.

2. The proposition "God exists necessarily" is an existentially necessary proposition.

3. No existentially necessary proposition can be true.

4. Therefore, the proposition "God exists necessarily" cannot be true.

In the second form, the fallacies of the argument become apparent. We will pass by the objection to premise one from the vantage point of finite godism (that God does not have to be conceived as necessarily existing), since the subject here is whether or not the traditional theistic conception of an absolutely perfect Being is correct. The theist would challenge premises two and three.

Granting for the moment that there are no existentially necessary propositions, a theist could change the proposition "God exists necessarily" to "God exists." The theist could then hold that the proposition "God exists" is a logically necessary proposition to hold (see Hughes, 59). In this way, necessity applies only to the proposition and not to existence, thus invalidating the criticism.

But the theist need not grant that there are no existentially necessary propositions. Indeed, some theists have offered examples of what they consider to be existentially necessary statements. Ian T. Ramsey suggests that "I am I." is an example. Malcolm offers "There are an infinite number of prime numbers." as an example. Some feel that "Square circles do not exist." would be existentially necessary, even though it is negative in form. If there can be negative examples, why not positive examples? Negatives presuppose positives.

Still other theists, taking Anselm and Descartes literally, insist that "God necessarily exists" is a special case. It is the only existentially necessary proposition and it is not only unnecessary but impossible to give any other examples of existentially necessary propositions.

It seems, however, that the most effective way to eliminate Findlay's ontological disproof is to show that his premise is self-defeating. The statement "There are no existentially necessary propositions" is itself an existentially necessary proposition. And if it is such, then there are existentially necessary propositions. At least there is this one, and why not others? If it is not a necessary statement about existence, then it does not really eliminate the possibility that there could be an existentially necessary Existent. So either it does not accomplish its intended task of eliminating the possibility of existentially necessary propositions or else it defeats itself by offering an existentially necessary proposition in order to prove that there are no existentially necessary propositions.

Hartshorne's Restatement. After such a checkered history, this venerable argument for theism has lived to see a new day. One of the most ardent defenders of the ontological argument is the panentheist, Charles Hartshorne. His statement and defense of the argument in full view of all the traditional criticisms is instructive (see Plantinga, 123–35). Hartshorne states the argument:

1. The existence of a necessary being is either (a) impossible, and there is no example of it; (b) possible, but there is no example of it; (c) possible, and there is an example of it.

2. But premise "b" is meaningless, like saying there is a round square, for a Necessary Being cannot be merely a possible being.

3. And premise "a" is not eliminated by the ontological argument as such but the meaningfulness of the term Necessary Being is a justifiable assumption that may be defended on other grounds.

After pinpointing what he felt to be the basic logic of the ontological argument, Hartshorne proceeded to give the fuller elaboration:

1. All thought must refer to something beyond itself which is at least possible: (a) Wherever there is meaning, something must be meant. (b) Only contradictory thoughts are impossible. (c) Meaning must refer to something more than its own content and inner consistency or it is meaningless. (d) The move from thought to reality is based on a prior reverse move from reality to thought. (e) Total illusion is impossible; illusion

presupposes a backdrop of reality. (f) Confusion is possible about specific reality but not about reality in general.

2. The necessary existence of a Necessary Being is "at least possible." (a) There is nothing contradictory in the concept of a being that cannot not be. (b) The only way to reject this is to plead a special meaning to the possible. In the usual logical sense of the word possible there is no contradiction in the concept of a Necessary Being.

3. With a Necessary Being an "at-least-possible" existence is indistinguishable from a "possible and actual" existence. A Necessary Being cannot have a "merely possible" existence (if a Necessary Being can be, then it must be), for (a) God by definition is an independent Existence and hence cannot be produced by another as "merely possible" beings can be. (c) God is everlasting and so he could not have come into being as "merely possible" beings can come into existence.

4. Therefore, a Necessary Being necessarily has both a possible and an actual existence.

Hartshorne answers objections to his ontological argument:

It is not possible that God's nonexistence was always logically possible even though he actually always existed. First, this is a special pleading on the meaning of the word *possible.* In all other cases, *possible* refers to beings whose nonexistence is both logically and actually possible. Why should God be made an exception by saying that his nonexistence is actually impossible but logically possible? Further, it is not even logically possible for God to be conceived as having come into being. Indeed, by the very conception of his nature he cannot be even logically conceived as having come into existence. For it is contradictory to even think of God as being produced. By his very definition God is a Necessary Being and a being so defined cannot be merely possible.

One cannot prove a perfect island or a perfect devil on the same premises of the ontological argument. The perfect island is not indestructible, as God is. If it is made indestructible, then it becomes identical with the cosmos as the body of God. (Hartshorne's view of God is panentheistic—the material universe is viewed as the "body" of God (*see* PANENTHEISM). But there is a transcendent pole to God that is more than his cosmic "body.") A perfect demon is unequivocal nonsense, for it would be both infinitely responsible and infinitely adverse to all that exists; both infinitely loving and infinitely hateful toward all that is; it would be both intimately united and savagely opposed to all that exists. But such contradictory attitudes are impossible.

The ontological argument proves more than the mere self-consistency of the idea of a Necessary Being. For all meaning has an external referent that is either possible or actual. And God by definition cannot be merely a possible being. Therefore,

1. All meaning implicitly affirms God in reference to either (a) what he has done (called his consequent nature—God's immanence) or (b) what he can do (called his primordial nature—God's transcendence).

2. Without God as the universal ground of meaning there would be no meaning for universals. Nothing can have objective meaning unless there is a realm that is objectively meaningful.

3. We can be confused as to whether specific things exist but not as to whether God—who is the content of existence itself—exists.

4. The only way to oppose the ontological argument is to make an absolute disjunction between meaning and reality. But this disjunction is meaningless. Meaning and reality must meet at some point; that point we call God.

If existence is not a predicate, then at least the *mode* of existence is implied in every predicate. That is, when a quality is predicated of something, it is implied that something exists either contingently or necessarily. And a Necessary Being (God) cannot exist contingently.

The ontological argument does not make God an exception to general philosophical principles. That essence implies that existence in God is not an exception to philosophical principles but a result of a consistent application of philosophical principles to different kinds of beings. God's nature implies existence as does no other nature, because in God alone there is no distinction between the possible and the actual (God is the actualization of all that is possible for him to actualize). "To say a thing might not exist is not to say there might be a thing without existence. It is rather to say that there might be existence without the thing." Existence must necessarily be; this or that existence need not be.

Mere thought does not produce reality, but necessary thought does. There can be no absolute disjunction between thought and reality. Thinking is a real experience, and we do think of God as possible. Hartshorne concludes:

1. All thoughts are experiences of what is at least possible.

2. We do have thoughts about a Being which must be (a Necessary Being).

3. But a Necessary Being cannot be merely a possible being.

4. Therefore, a Necessary Being must be more than merely possible; it must be actual.

As Hartshorne put it, "We have only to exclude impossibility or meaninglessness to establish actuality." That is, "Either God is a meaningless term or there exists a divine being." Or, to restate the argument:

1. Either the existence of a Necessary Being is (a) less than an idea (i.e., contradictory and impossible), (b) merely an idea but not a reality, or (c) more than a mere idea—a reality.

2. It is not less than an idea, for it is a noncontradictory concept.

3. It is not merely an idea, for it is contradictory to speak of a Necessary Being as merely possible. If a Necessary Being exists at all, it must exist necessarily. There is no other way it can exist.

4. Therefore, the existence of a Necessary Being is more than a mere idea; it is a reality.

The ontological argument is not merely hypothetical; it does not assume existence. The ontological argument is *not* saying:

1. If there is a Necessary Being, then it exists necessarily.

2. There is a Necessary Being (thus begging the whole question).

3. Therefore, a Necessary Being exists necessarily.

This criticism contains the self-contradictory assumption that "if a Necessary Being happens to exist as a mere contingent fact, then it exists not as contingent fact but as necessary truth." This is not the meaning of the major premise. The argument, on the contrary, is not contradictory and should be stated like this:

1. If the phrase *Necessary Being* has any meaning, then what it means must actually exist (outside of the mind).

2. The phrase *Necessary Being* does have a meaning (it is not contradictory).

3. Therefore, a Necessary Being actually exists (outside of the mind).

If does not imply the possibility of nonexistence (for a necessary existence cannot possibly *not* exist). *If* means rather the possibility of meaninglessness. And even the possibility of meaninglessness vanishes, for unless there is a basis for meaning (God), there can be no meaning at all.

Hartshorne rests his case heavily on the ultimate identification of the logical with the ontological, a premise disputed by others. Second, he does not really exclude the possibility that others could show the term *God* to be meaningless. It may be that someone will yet demonstrate a contradiction in the very concept of a Necessary Being. If they do, the ontological arguments fail.

Further, the argument rests on the assumption that there must be an objective basis for meaning in order for there to be *any* meaning. This is precisely what existentialists like Jean-Paul Sartre and Albert Camus denied. They held to a subjective basis for meaning but did not deny all meaning. Their argument is that there is no meaning "out there" in the universe except the subjective meaning one puts there. Objective absurdity would still be an option unless one considers Hartshorne has given a disproof of objective absurdity.

Finally, there is an implied premise in all of the ontological arguments that, if true, would seem to vindicate the argument in the face of its standard criticism (that it makes an illicit transition from the logical to the ontological, from thought to reality). The premise is this: *The rationally inescapable is the real.* If defensible (see Geisler and Corduan, 289–96), this would prove objective absurdity to be wrong. Indeed, if the rationally inescapable is the real, and it is rationally inescapable to think of God as necessarily existing, then it would seem to follow that it is really so that God necessarily exists. But before we assume that the ontological argument has won the day we must examine another statement of it and one final criticism.

Malcolm's Restatement. Norman Malcolm is often credited with reviving the ontological argument in a more viable form, although Hartshorne's work on it said the same thing some twenty years earlier. Malcolm did occasion a popular revival of interest in the argument, at least in the area of analytic philosophy. The first form of Anselm's argument Malcolm considers invalidated by Kant's criticism that existence is not a predicate; the second form Malcolm believes is immune from this (or any other) criticism (see Plantinga, 137–59). Malcolm restates Anselm's second argument:

1. The existence of a Necessary Being must be (a) a necessary or "must-be" existence, (b) an impossible, "cannot-be" existence, or (c) a possible, "may-or-may-not-be" existence.

2. But the existence of a Necessary Being is not an impossible existence. (a) No one has ever shown the concept of a Necessary Being to be contradictory. (b) There is a basis in human experience for "a greater than which cannot be thought" (e.g., the feeling of guilt or the experience of grace). (c) Leibniz's attempt to prove that there is no contradiction fails, for there may be one. We cannot show that there cannot be one. We merely know that no one has shown that there is a contradiction. And the proof stands unless or until someone shows that there is a contradiction in the very concept of a Necessary Being.

3. And the existence of a Necessary Being cannot be merely a possible existence, for a merely possible but not necessary existence of a Necessary Being (a) is contrary to the very nature of a Necessary Being. A "must-be" Being cannot be a "may-or-may-not-be" kind of being. (b) A possible being would be a dependent being, and this is contrary to a Necessary Being which is an independent Being by nature.

4. Therefore, a Necessary Being necessarily exists.

Malcolm's argument may also be put in hypothetical form:

1. If it is possible for a Necessary Being to exist, then it is necessary for it to exist, for the only way a Necessary Being can exist is to exist necessarily.

2. It is possible that a Necessary Being can exist. There is nothing contradictory about affirming the existence of a Necessary Being.

3. Therefore, a Necessary Being necessarily exists.

Or, to restate the heart of the argument in categorical form:

1. A Necessary Being by definition is one which cannot *not* be.

2. That which cannot *not* be, must be, for this is the logical obverse.

3. Therefore, a Necessary Being necessarily must be.

It would appear that the critical premise in the argument is the one affirming that the mere possibility of a Necessary Being is contradictory. Let us state again the argument with Malcolm's fuller defense of this premise.

1. The existence of a Necessary Being must be either (a) a necessary existence, (b) a mere possible existence, or (c) an impossible existence.

2. But it cannot be an impossible existence. There is no contradiction.

3. Nor can it be a mere possible existence, for such an existence would be: (a) A dependent existence. A dependent existence cannot, at the same time, be an independent existence, such as is a necessary existence. (b) A fortuitous existence. If God just happened to be, then he could not be a Necessary Being. (c) A temporal existence. If God came to be, then he would be dependent, which is contrary to his independent or Necessary Being.

4. Therefore, the existence of a Necessary Being is a necessary existence; that is, a Necessary Being necessarily exists.

Malcolm admits that there might be a contradiction in the concept of a Necessary Being and that he knows of no way to prove that there is not a contradiction. This admission means that his "proof" is not foolproof. It is logically possible that it is wrong. Hence, the conclusion is not rationally inescapable. Thus, even granting the validity of the rest of the argument, it is not a proof in the strongest sense of the word.

Plantinga's Critique. Plantinga assesses Malcolm's ontological argument in terms of logical schema (ibid., 160–71):

1. If God does not exist, his existence is logically impossible.

2. If God does exist, his existence is logically necessary.

3. Hence, either God's existence is logically impossible or else it is logically necessary.

4. If God's existence is logically impossible, the concept of God is contradictory.

5. The concept of God is not contradictory.

6. Therefore, God's existence is logically necessary.

Plantinga takes issue with the second premise. God could exist without his existence being logically necessary. God's existence could be logically contingent without being ontologically contingent. Or, to put it another way, Malcolm equivocates on the word *possible.* Malcolm assumes that, because it is not *possible ontologically* for God to be contingent, is it not *possible logically* for God to be contingent. Malcolm overlooks that it is logically *possible* that God is a Necessary Being but not logically *necessary* .

On the other hand, Plantinga is right only if the implied premise in the ontological argument is wrong: "The rationally inescapable is the real." If what is rationally inescapable must be ontologically so, then Hartshorne and Malcolm seem to make a good case against this criticism. They argue that it is logically necessary to think of God as real, since it is logically contradictory to conceive of a Necessary Being as not necessarily having being.

Evaluation. This does not mean that the ontological argument is valid. There is one final and possibly fatal criticism. Plantinga observes that it is also logically "possible" that God never existed at all. In fact, it is logically possible that nothing ever existed, including God. But this may be only an apparent omission in the ontological argument. Perhaps the reason that this logical possibility does not present itself as evident to the proponents of the ontological argument is that they are assuming a cosmological premise. For it seems readily apparent to anyone existing that something does exist. And if something exists, it is not true that nothing exists. And if something exists, that makes false the statement that nothing exists. But if something does exist, it is not true to affirm that nothing exists. Hence, Plantinga's criticism, that the ontological argument is unsuccessful simply because it overlooks the possible truth that nothing exists, fails.

All the proponents of the ontological argument need to do to invalidate Plantinga's criticism is to show that something exists. This is easily accomplished by insisting that no one can deny existence without existing to make the denial. For it is actually impossible to affirm that nothing exists, since there must be someone in existence to make that affirmation. In brief, the ontological arguments based merely on predictability and inconceivability are invalid, but a third argument based on undeniability appears to evade these fallacies. This seems so for the simple reason that the only apparent way to invalidate the second form of the ontological argument is on the conceivability (i.e., logical possibility) of the truth that nothing exists, but this truth is not affirmable because something does exist. Hence, it is undeniable that something exists and therefore God must necessarily exist. Therefore, it would seem that a third form of the ontological argument can successfully defend itself against Plantinga's criticism.

In this revised form, it is not really an ontological argument but a cosmological argument. For there is a difference, as Anselm recognized in his reply to Gaunilo, between the logical possibility that nothing, including God, ever existed and the reality of the statement by someone who does exist, "Nothing, including God, ever existed." Of course, it is undeniably true that something exists, but not because it is inconceivable or logically impossible that nothing exists. It is not logically contradictory to assume that there might never have been anything in existence. Nonbeing is a logical possibility. The only way one can invalidate the logical possibility that "nothing ever was, including God" is to affirm, "Something was or is." But once one affirms the

premise “Something is” and argues from that to “God is,” he has left the ontological argument for the cosmological argument. He has left the *a priori* realm of pure reason and entered into the *a posteriori* domain of existence. The so-called third argument from undeniability of existence is not an ontological argument but a cosmological argument. And it needs more elaboration and defense.

Plantinga’s Argument. After years of studying and critiquing the ontological argument, Plantinga has proposed a version of his own, which he considers to be valid. He has provided several formulations, one of which can be summarized in ten steps (Plantinga, *The Nature of Necessity,* 214–15):

1. *Something has the property of maximal greatness if it has the property of maximal excellence in every possible world.* The *greatest* thing must be the *best* thing, not just in the world that is, but in all possible worlds. A possible world is any logically conceivable world. Any time we can close our eyes and imagine our actual world to be different in some rational way, we are conceiving a logically possible world. Obviously the actual world is a possible world. But there are many other possible worlds. They “are” in the sense that they are logical possibilities, not that they are actual. If something is not the most excellent in all possible worlds, it could not really be the greatest, for one could conceive of a greater.

2. *Maximal excellence entails omniscience, omnipotence, and moral perfection.* With this premise Plantinga defines what one would mean by saying that something is the best. He structures his argument in such a way that the being whose existence he intends to demonstrate will turn out to be God.

3. *Maximal greatness is possibly exemplified.* There is nothing self-contradictory or logically odd about positing that in a possible world we can encounter this quality. This exemplification is elaborated in premise 4, which posits a world W, and essence E, and the property of maximal greatness.

4. *There is a world (* W) *in which the essence (* E) *is such that* E *is exemplified in* W *and* E *entails maximal greatness in* W. In this hypothetical world this hypothetical essence has the property of maximal greatness. We must remember the statement of premise 1. That which is true of an essence would have to be true of an object bearing that essence.

5. *For any object (* X*), if* X *exemplifies* E *, then* X *exemplifies maximal excellence in every possible world.*

6. E *entails the property of maximal excellence in every possible world.* Plantinga argues that the same relationship that is necessarily true in W would be necessarily true in any possible world. Thus he can make such a general statement concerning this essence and the property that it would entail in any possible world.

7. *If* W *had been actual, it would have been impossible that* E *would fail to be exemplified.* This statement is a simple component of modal logic. If something holds for

any possible world, it would certainly also hold if that possible world were the actual world. Thus if the possible world under consideration were actual, then this essence with maximal excellence in every possible world would have to be real. In fact, given the preceding premises, the denial of this reality would be impossible.

8. *What is impossible does not vary from world to world.* Differences among possible worlds are factual. They do not involve logical absurdities. There is no logically possible world in which circles are square or logical deductions do not follow. Logical relationships are constant over all possible worlds. Thus logical necessity or impossibility is the same in every world. Therefore what Plantinga has said about E in W would have to apply to E in every possible world. There also it would be impossible for E not to be exemplified.

9. *There exists a being that has maximal excellence in every world.* So, it follows that

10. *The being that has maximal excellence exists in the actual world.* Thus, using modal logic, Plantinga has demonstrated that God (the Being with omniscience, omnipotence, and moral perfection) exists.

Evaluation. This tight and compelling argument avoids many criticisms traditionally brought against the ontological argument. But it puts into clear focus the critique we have brought against the argument in this context. This approach based on modal logic stipulates from the outset that *something exists.* The concept of possible worlds makes sense only in contrast to an actual world. Only if we, at least for the sake of the argument, allow that there is a reality, can the argument unfold. In short, it assumes something exists. Further, to define a maximally perfect being in theistic terms is gratuitous (premise 2). Why could not perfection be viewed in nonmoral, nonintelligent terms?

But finally, and even more to the point, the argument in premise 4 stipulates the reality of E as an essence. In Plantinga's philosophy essences are not just mental concepts or words, but they exist in a sense as real. Hence the argument is beginning to bear faint resemblance to Descartes' argument, in which he stipulates the idea of a Supreme Being and then attempts to give an account thereof (Descartes, 23–34). But that argument has also been characterized as cosmological. And the same thing may be true for Plantinga's argument. Perhaps the reason it is valid is that it has left the realm of pure ontological arguments.

Conclusion. The ontological argument has taken many forms. Each, however, seems to be invalid. The only feasible way to make it valid (if it can be made valid at all) is to assume or affirm that something exists. And once one argues, "Something exists, therefore God exists," he has really argued cosmologically. The ontological argument by itself, without borrowing the premise, "Something exists," cannot possibly prove the existence of God. For it is always logically possible that nothing ever existed and hence it is not logically necessary to affirm that God exists.

Some have suggested that our conclusion is invalid because the very concept of "nothing" is negative, and thus presupposes that something exists. If this is correct, they contend, then our

contention that “it is logically possible that nothing ever existed” is wrong. This objection, however, confuses the concept of nonbeing (which does presuppose the concept of being) and a state of nonbeing that does not presuppose a state of being. We are referring to the logical possibility of the state of nothingness, not to the concept of nothingness.

It would appear that no valid ontological proof has been given that makes it rationally inescapable to conclude that there is a Necessary Being. On the other hand, neither has anyone made a successful ontological disproof of God, making it logically impossible that there is a God. Necessary to a valid theistic argument is the premise that “something exists or existed.” One who argues that “something exists, therefore God exists” has left the purely *a priori* ontological approach and has moved into an *a posteriori* cosmological approach.

If one could somehow validate a theistic argument by importing the undeniable premise that “something exists” and arguing from this that “something necessarily exists,” it still is a long way from this to the simple and absolutely perfect Being of Christian theism. It is interesting to note that three views of God have been concluded from the same kind of ontological argument, and others feel a fourth may be inferred. Descartes and Leibniz concluded a theistic God. Spinoza argued to a pantheistic God. Hartshorne ended with a panentheistic God (*see* PANENTHEISM). It is also suggested that, apart from importing some kind of Platonic premise, the ontological argument yields polytheistic gods (*see* POLYTHEISM). Even many atheists are willing to recognize the universe is somehow necessary, but in no way do they identify it with God. Since the positions are mutually exclusive, it follows that they cannot all be true.

In order to defend theism, one must apparently go beyond the ontological argument. For the ontological argument alone apparently does not designate which kind of God (or gods) is found at the conclusion.

Ontology. *Ontology* is the study (*logos*) of being (*ontos*). It is the study of reality. It answers the question “What is *real?* ” as ethics answers the question “What is *right?* ” as aesthetics answers the question, “What is *beautiful?* ” and epistemology answers the question, “What is *true?* ”

Ontology and metaphysics are used interchangeably. Both study being as being or the real as real. They are the disciplines that deal with ultimate reality.

Origen. Origen (185–254) was an early church Father and apologist for Christianity. He was heavily influenced by Platonic (*see* PLATO ; PLOTINUS) and Gnostic (*see* GNOSTICISM) thought. As a consequence his defense of the faith tended to sacrifice important teachings. He denied the historicity of crucial sections of Scripture; he taught the preexistence of the soul and universalism (the belief that all will eventually be saved; *see* "HEATHEN," SALVATION OF THE) and denied that Jesus was raised from the dead in a physical body (*see* RESURRECTION, PHYSICAL NATURE OF) . These positions were condemned as heretical by later church councils.

Origen was an early second-century Christian writer from Alexandria, Egypt. He studied eleven years with neoplatonist, Ammonius Saccas where he was a classmate of Plotinus (205–270). Origen headed up a catechetical school in Alexandria (211–232) and later founded a school in Caesarea.

His many works include the *Hexapla,* a six-column comparison of various Greek and Hebrew renditions of the Old Testament. Unfortunately, no copies of this great work survive. He also wrote *Contra Celsus,* an apologetic work answering the philosopher Celsus, and *De Principiis,* a major theological treatise.

The Bible. While Origen claimed that the Bible was divinely inspired, he did not accept the complete historicity of Scripture, nor did he interpret it all literally. Like others in the Alexandrian school of interpretation, he often allegorized crucial sections of Scripture.

Bible Only Partially Historical. Origen insisted: "We have therefore to state in answer, since we are manifestly so of opinion, that the truth of the history may and ought to be preserved in the majority of instances" (*De Principiis,* 4.19). Unfortunately, this did not include crucial sections of the Bible. He asserted that the attentive reader would find numerous passages in the Gospels in which insertions of nonhistoric events had been made. "And if we come to the legislation of Moses, many of the laws manifest the irrationality, and others the impossibility, of their literal observance" (ibid., 4.1.16–17).

Allegorical Interpretation. Accuracy was not such a concern if the message was buried in allegory. Origen sought "to discover in every expression the hidden splendour of the doctrines veiled in common and unattractive phraseology" (ibid., 4.1.7).

The story of Adam and Eve was to be taken figuratively. For "No one, I think, can doubt that the statement that God walked in the afternoon in paradise, and that Adam lay hid under a tree is related figuratively in Scripture, that some mystical meaning may be indicated by it." And "those who are not altogether blind can collect countless instances of a similar kind recorded as having occurred, but which did not literally take place? Nay, the Gospels themselves are filled with the same kind of narratives; for example, the devil leading Jesus up into a high mountain, in order to show him from thence the kingdoms of the whole world, and the glory of them" (ibid., 4.1.16).

Preexistence of the Soul. Origen's argument for the preexistence and eternality of the soul is heavily dependent on Platonism. He argues that God had made other worlds before this one, and would make more in the future (ibid., 2.5.3). In creation, "we are to suppose that God created so great a number of rational or intellectual creatures (or by whatever name they are to be called), which we have formerly termed understandings, as he foresaw would be sufficient" (ibid., 2.9.1).

To deny the eternality of the soul was to do no less than deny God's omnipotence, he believed. The soul must be preexistent and eternal because, "as no one can be a father without having a son, nor a master without possessing a servant, so even God cannot be called omnipotent unless there exist those over whom he may exercise his power; and therefore, that God may be shown to be almighty, it is necessary that all things should exist." Did he gain more power as he created more people? Rather, "He must always have had those over whom He exercised power, and which were governed by Him either as king or prince" (ibid., 1.2.10).

Finally, Origen argues that "If the soul of a man, which is certainly inferior while it remains the soul of a man, was not formed along with his body, but is proved to have been implanted strictly from without, much more must this be the case with those living beings which are called heavenly." Furthermore, "How could his soul and its images be formed along with his body, who, before he was created in the womb, is said to be known to God, and was sanctified by Him before his birth?" (ibid., 1.7.4)

Universalism . Origen believed that in the end everyone would be saved. His view is explicitly universalistic:

> So then, when the end has been restored to the beginning, and the termination of things compared with their commencement, that condition of things will be re-established in which rational nature was placed, when it had no need to eat of the tree of the knowledge of good and evil; so that when all feeling of wickedness has been removed, and the individual has been purified and cleansed, He who alone is the one good God becomes to him "all," and that not in the case of a few individuals, or of a considerable number, but He Himself is "all in all." And when death shall no longer anywhere exist, nor the sting of death, nor any evil at all, then verily God will be "all in all." [Origen, *De Principiis,* 3.6.3]

According to Origen, this saving knowledge would come "slowly and gradually, seeing that the process of amendment and correction will take place imperceptibly in the individual instances during the lapse of countless and unmeasured ages, some outstripping others, and tending by a swifter course towards perfection, while others again follow close at hand, and some again a long way behind." Thus, "through the numerous and uncounted orders of progressive beings who are being reconciled to God from a state of enmity, the last enemy is finally reached, who is called death, so that he also may be destroyed, and no longer be an enemy. When, therefore, all rational souls shall have been restored to a condition of this kind, then the nature of this body of ours will undergo a change into the glory of a spiritual body" (ibid., 3.6.6).

The Biblical Texts. Some of Origen's arguments for universalism are based on biblical texts and others on philosophical speculation.

In the context of God's love in Christ, Origen looked to passages that spoke of God conquering and subduing his enemies. He drew on those passages which quoted Psalm 110:1 , especially 1 Cor. 15:25 : "The Lord said to my Lord: 'Sit at my right hand until I make your enemies a footstool for your feet.'. . . For he must reign until he has put all his enemies under his feet" (*De Principiis,* 1.6.1).

The End Like the Beginning. Origen reasoned from the neoplatonic premise that "the end is always like the beginning: and, therefore, as there is one end to all things, so ought we to understand that there was one beginning; and as there is one end to many things, so there spring from one beginning many differences and varieties, which again, through the goodness of God, and by subjection to Christ, and through the unity of the Holy Spirit, are recalled to one end, which is like unto the beginning" (ibid., 1.6.2).

Reformatory Justice. Origen rejected a penal view of justice (*see* HELL), arguing that "The fury of God's vengeance is profitable for the purgation of souls. That the punishment, also, which is said to be applied by fire, is understood to be applied with the object of healing" (ibid., 2.10.6). He added, "those who have been removed from their primal state of blessedness have not been removed irrecoverably, but have been placed under the rule of those holy and blessed orders which we have described; and by availing themselves of the aid of these, and being remoulded by salutary principles and discipline, they may recover themselves, and be restored to their condition of happiness" (ibid., 1.6.2).

God's Wisdom. Origen insisted that: "God, by the ineffable skill of his wisdom, transforming and restoring all things, in whatever manner they are made, to some useful aim, and to the common advantage of all, recalls those very creatures which differed so much from each other in mental conformation to one agreement of labour and purpose; so that, although they are under the influence of different motives, they nevertheless complete the fulness and perfection of one world, and the very variety of minds tends to one end of perfection." For "it is one power which grasps and holds together all the diversity of the world, and leads the different movements towards one work, lest so immense an undertaking as that of the world should be dissolved by the dissensions of souls." And "for this reason we think that God, the Father of all things, in order to ensure the salvation of all his creatures through the ineffable plan of his word and wisdom, so arranged each of these, that every spirit, whether soul or rational existence, however called, should not be compelled by force, against the liberty of his own will, to any other course than that to which the motives of his own mind led him (lest by so doing the power of exercising free-will should seem to be taken away, which certainly would produce a change in the nature of the being itself)" (ibid., 2.1.2).

God's Omnipotence. " For nothing is impossible to the Omnipotent, nor is anything incapable of restoration to its Creator" (ibid., 3.6.5). This, of course, implies that God desires by his goodness to do so (1 Tim. 2:1 ; 2 Pet. 3:9). But if God wants to save all, and he can save all (i.e., he is all-powerful), then for Origen it would seem to follow that he will save all.

Spiritualism. Origen also denied the permanent physical nature of the resurrection, for which he was condemned by the bishops of the Fifth Ecumenical Council of the Church when they wrote: "If anyone shall say that after the resurrection the body of the Lord was ethereal, . . . and that such shall be the bodies of all after the resurrection; and that after the Lord himself shall have rejected his true body and after others who rise shall have rejected theirs, the nature of their bodies shall be annihilated: let him be anathema"(Canon 10 cited by Schaff, 14:314–19). Likewise, "If any one shall say that the future judgment signifies the destruction of the body and that the end of the story will be an immaterial nature [*phusis*], and that thereafter there will no longer be any matter, but only spirit [*nous*] *:* let him be anathema" (ibid., Canon 11).

In about 400, the Council of Toledo declared emphatically: "We believe verily, that there shall be a resurrection of the *flesh* of mankind" (Parker, 24, 26). And the Fourth Council of Toledo (663) added, "By whose death and blood we being made clear have obtained forgiveness of (our sins) and shall be raised up again by him in the last days in the same flesh wherein we now live, (and) in the manner wherein the same (our) Lord did rise again" (ibid., 26).

Christ Inferior to the Father. Although he did not deny the deity of Christ, nonetheless, Origen did believe Jesus has a subordinate status to the Father even to the point that he forfeited his deity while on earth. Origen wrote: "The Son of God, divesting Himself of His equality with the Father, and showing to us the way to the knowledge of Him, is made the express image of His person" (*De Principiis* 1.2.8).

Even Christ's goodness is derived from the Father: "If this be fully understood, it clearly shows that the existence of the Son is derived from the Father but not in time, nor from any other beginning, except, as we have said, from God Himself" (*De Principiis* 1.2.11).

Origen spoke clearly about Christ's inferior status to the Father when he said, "Grant that there may be some individuals among the multitudes of believers who are not in entire agreement with us, and who incautiously assert that the Saviour is the Most High God; however, we do not hold with them, but rather believe Him when He says, 'The Father who sent Me is greater than I.' We would not therefore make Him whom we call Father inferior—as Celsus accuses us of doing—to the Son of God" (*Contra Celsus* 8.14).

According to Origen, although Christ is eternal, his deity is derived from the Father: "Wherefore we have always held that God is the Father of His only-begotten Son, who was born indeed of Him, and derives from Him what He is, but without any beginning" (*De Principiis* 1.2.2).

In a contorted Platonic logic, Origen even argued that somehow the existence of the Son is dependent on the Father: "For if the Son do, in like manner, all those things which the Father doth, then, in virtue of the Son doing all things like the Father, is the image of the Father formed in the Son, *who is born of Him, like an act of His will proceeding from the mind.* And I am therefore of opinion that the will of *the Father ought alone to be sufficient for the existence of that which He wishes to exist.* For in the exercise of His will He employs no other way than that which is made known by the counsel of His will. And thus also *the existence of the Son is generated by Him"* (*De Principiis* 1.2.6, emphasis added).

Evaluation. Origen was at best a mixed blessing for Christian apologetics. He did defend the basic inspiration and historicity of the Bible. He stressed the use of reason in defending early Christianity against the attacks of paganism and other false teachings. He was a textual scholar.

However, Origen's negatives seem to far outweigh the positives. He denied the inerrancy of the Bible, at least in practice (*see* BIBLE, ALLEGED ERRORS IN). He taught universalism contrary to both Scripture and orthodox creeds. He taught the preexistence of the soul in contrast to the orthodox teaching of creation. He engaged in highly allegorical interpretation of Scripture, undermining important literal truths. He held an aberrant view on the nature of Christ, which gave rise to the later Arian heresy (*see* CHRIST, DEITY OF). He denied the tangible, physical nature of the resurrection body (*see* RESURRECTION, EVIDENCE OF ; RESURRECTION, PHYSICAL NATURE OF) in contrast to the clear teaching of Scripture (Luke 24:39 ; Acts 2:31 ; 1 John 4:2) and the creeds (see Geisler, *The Battle for the Resurrection,* chap. 5, and *In Defense of the Resurrection,* chap. 9).

Origins, Science of. The belief that the universe and all forms of life were created by God is not considered true science by some because science deals with theories that can be verified by testing. There is no way to test creation, since it was a unique past singularity. This objection is based in a misunderstanding of two kinds of science: *empirical* and *forensic* . *Operation science* deals with the world as it now exists and *origin science* with the *past* (Geisler, *Origin Science* , chaps. 1, 6, 7). Operation science is an *empirical* science that deals with present regularities, but origin science is a forensic science that considers past singularities—the *origin* of the universe and life forms.

Since there is no direct way to test a theory or model of origin science, it must be judged to be plausible or implausible, based on how consistently and comprehensively it reconstructs the unobserved past in conformity with the available evidence. Operation science is based on principles of *observation* and *repetition* . The laws of physics and chemistry, for example, are based on the observation of recurring patterns of events. Such observations can be made with the unaided eye or with the aid of sensitive instruments, but observation of some sort is crucial. Likewise, there must be some repetition or recurring pattern. For no scientific analysis can be made on the basis of a singular event. Operation science is based on the repetition of similar patterns of events. For operation science involves not only *present* regularities but *future* ones that can be projected. But no scientific trend or prediction can be made from a singular event.

The operation of the cosmos is studied by the operation science of *cosmology* . But the origin of the cosmos is the field of the science of *cosmogony* . The operational science of *biology* does not properly deal with the beginning of life but with its continuing functioning. How life began is for *biogeny* .

In distinguishing these two areas of investigation, it is important to note substantial differences even in the natural laws and processes they look at. Laws by which something operates today may function quite unlike how they functioned at the beginning. It is difficult to know what factors even existed to interact with one another. A simple and obvious example is that the laws operating during the *running* of a windmill are not sufficient to *produce* that windmill. A windmill functions by purely natural laws of physics—pressure, motion, and inertia. Inertia, however, cannot create the design, weld the metal, assemble the wind-powered generator, or adjust the propeller blades. Someone had to come from outside the windmill system, bringing necessary know-how, plans, and manipulation of materials. Natural laws adequately explain why electricity is generated by a windmill on a continuing basis; they are insufficient to explain the *commencement* of the system.

Only because things operate in a regular way is it possible to make observations and predictions based on them. So a whole different approach and different goals are at work in a forensic science. One normally hears of forensic science in law enforcement, where scientists may attempt to reconstruct what happened to cause an unobserved death, for example. Some elements may be repeatable, but not the essential series of events, since the person at the center of those events is dead. But the lack of empirical science principles does not totally frustrate a scientific analysis of the death. Forensic science has its own rules and principles. Using the evidence that remains (such as weapons, injury patterns, blood splatters, and finger prints), the forensic scientist can make a plausible reconstruction of the original event. In a similar way, the origin scientist attempts to reconstruct the origin of the universe and the origin of life.

Principles of Origin Science. Besides the two obvious principles that every theory or model should be consistent and comprehensive, the most crucial principles of origin science are *causality* and *uniformity* (analogy) (Geisler, *Origin Science* , 131–32).

Causality. Like the forensic scientist, the origin scientist believes that *every event has an adequate cause* (*see* CAUSALITY, PRINCIPLE OF ; FIRST PRINCIPLES). This is true of unobserved as well as observed events. This principle has such universal acceptance that it scarcely needs

justification. It is sufficient to note that Aristotle said, “the wise man seeks causes.” Francis Bacon believed that true knowledge is “knowledge by causes” (Bacon, 2.2.121). Even the skeptic, David Hume agreed (*Letters of David Hume* , 1.187). It is self-evident to most rational beings that *everything that comes to be had a cause* . If this were not so, things would pop into and out of existence willy nilly, but they do not. Indeed, without the principle of causality, no science would be possible.

It is an important aside to note that the principle of causality does *not* claim that *everything* has a cause. With the atheist (*see* ATHEISM) we agree that *if* matter (energy) is eternal and indestructible, then it does not need a cause. Only everything that begins—or is contingent has a cause. If a Being is eternal and independent (whether it is the universe or God), then it does not need a cause. Causality applies to things that *come to be* ; whatever just *is,* is uncaused.

Uniformity (Analogy). Generally stated, the scientific principle of uniformity affirms that “the present is the key to the past.” Applied more specifically to the question of past unobserved causes, the principle of uniformity (analogy) asserts that the cause of certain kinds of events now would have produced like effects in the past. Past events have causes similar to the causes of the present events.

The principle of uniformity derives its name from the *uniform* experience on which it is based. Repeated observation reveals that certain kinds of causes regularly produce certain kinds of events. For example, water flowing over small rolling rocks gradually wears the rock’s surface smooth and rounded. Wind on sand (or water) produces waves. Heavy rain on dirt results in erosion, and so on. These are natural, *secondary* causes. Their effects are produced by natural forces whose processes are an observable part of the ongoing *operation* of the physical universe.

However, the principle of *uniformity* should not be confused with *uniformitarianism* . That latter is a naturalistic (*see* NATURALISM) presupposition which wrongly assumes that all causes of events in the world must be natural causes. This both begs the question and is contrary to the best evidence for the origin of the universe (*see* BIG BANG ; EVOLUTION, COSMIC ; THERMODYNAMICS, LAWS OF). There is no reason to accept the premise that everything that happens in nature was caused by nature (*see* NATURALISM ; MIRACLE). After all, the natural world did not cause itself (*see* COSMOLOGICAL ARGUMENT ; KALAM COSMOLOGICAL ARGUMENT). Even finite minds can intervene all the time in the natural world. There is no reason an infinite Mind cannot do the same.

In addition to secondary causes, there are primary causes. Intelligence is a primary cause. And the principle of uniformity (based on constant conjunction) informs us that certain kinds of effects come only from intelligent causes: language, projectile points, pottery, portraits, and symphonies. So convinced are we by previous repeated experience that only intelligence produces these kinds of effects that when we see even a single event that resembles one of these kinds of effects we invariably posit an intelligible cause for it. When we come across the words “John loves Mary” scratched into a beach, we never assume that waves did it. The question is whether the origin of the first living organism (which we did not observe) was by a secondary (natural) cause or by a primary intelligent cause. The only scientific way to determine this is by analogy with our experience of what kind of cause regularly produces that kind of effect.

The principle of uniformity is an argument from analogy. It is an attempt to get at the unknown (past) through the known (present). Since we do not have direct access to the past, we can "know" it only by analogies with the present. This is how human history, earth history, and life history are reconstructed. Historical geology, for example, is totally dependent as a science on the principle of uniformity. Unless we can presently observe in nature or the laboratory certain kinds of causes producing certain kinds of events, we cannot validly reconstruct geological history. But since we can observe natural causes producing these kinds of effects today, we can postulate that similar natural causes produced similar effects in the geological record of the past. Archaeology as a science is possible only because we assume the principle of uniformity. Certain kinds of tools, art, or writing consistently say certain things about the intelligent beings who produced them. Even simple projectile points lead us to claim what Indians produced them and when. They can be differentiated from pieces of flint or rock shaped by wind and water. When past remains contain writing, art, poetry, or music, we immediately insist they came from intelligent beings.

So whether the evidence calls for a secondary or primary cause, the principle of uniformity is the basis. Unless we have had a constant conjunction of a certain kind of cause with a certain kind of effect in the present, we have no grounds on which to apply the principle to past events known only from their remains.

The Principle of Consistency. All theories must be consistent. Whatever scientific model one constructs of the past must be consistent or noncontradictory with all other elements of one's scientific views. Contradictory views must be rejected. One cannot hold that the universe both had a beginning and did not begin. Nor can one consistently affirm that the cosmos was both created and uncreated. The law of noncontradiction applies to all views (*see* LOGIC ; FIRST PRINCIPLES).

The Principle of Comprehensiveness. Further, scientific explanations must be comprehensive. A good model comprehensively explains the known facts. Anomalies will persist, but no indisputable data can be neglected in theory construction. Thus, all other things being equal, the most comprehensive view is judged to be the best.

Various Areas of Origin Science. Now that the basic principles of origin science are set forth, they can be applied to the three main areas of origin: the beginning of the universe, the emergence of first life, and the appearance of human (rational) beings. In each case this yields a distinction between origin and operation science. Names already exist to distinguish them.

	Origin Science	**Operation Science**
Universe Life	Cosmogony Biogeny	Cosmology Biology
Human Beings	Anthropogeny	Anthropology

The scientific evidence is presented elsewhere for the creationists' view of cosmogony (*see* EVOLUTION, COSMIC), biogeny (*see* EVOLUTION, CHEMICAL), and anthropogeny (*see* EVOLUTION, BIOLOGICAL). Hence, it remains here simply to ask whether creation is a science.

Creation Science. A creationist view of origins can be just as scientific as an evolutionist view. The belief that there is an intelligent Creator of the universe, first life, and new life forms is just as scientific as the naturalistic views of macroevolutionary theory. Both are origin science, not operation science. Both deal with past singularities. Both take a forensic approach by reconstructing a plausible scenario of the past unobserved event in the light of the evidence that remains in the present. Both use the principles of causality and analogy. Both seek an appropriate explanation of the data. Both sometimes appeal to a primary (intelligent) cause to explain the data. Archaeology posits an intelligent cause for pottery. Anthropologists do the same for ancient tools. Likewise, when creationists see the same kind of specified complexity in a simple one-cell animal, such as the first living thing is supposed to be, they too posit an intelligent cause for it. Their view is as scientific in procedure as the evolutionists when they offer a natural explanation for the first living thing.

Likewise, the creationists' view of the origin of the cosmos is as scientific as is the evolutionists' position. Both use scientific evidence in the present. And both use the principle of causality. The creationist points to the evidence for the Second Law of Thermodynamics that the universe is running down as evidence that it had a beginning along with the other evidence for the Big Bang theory. This, combined with the principle of causality, yields the conclusion that:

1. The cosmos had a beginning.

2. Everything that begins had a cause.

3. Therefore, the cosmos had a cause (*see* KALAM COSMOLOGICAL ARGUMENT).

Objections to Origin Science. Two basic objections to origin science surface repeatedly. The first has to do with the scientific method as such and the second with the origin of a scientific model.

Naturalism in the Scientific Approach. At this point it is often objected by the evolutionists that the creationist approach is not scientific because it appeals to a supernatural cause. Evolutionists only assume natural causes. Hence, the creationists' view is disqualified, even as an origin science. This objection is a classic case of begging the issue. Who said science can only allow natural causes for phenomena in the natural world. This move is invalid, for it eliminates creation by definition. One could, by the same move, demand that there are only supernatural causes for all events and eliminate all natural causes by definition (*see* MIRACLES, ARGUMENTS AGAINST). It is a form of methodological naturalism . While it may admit the existence of a supernatural realm, it insists that the scientific method must permit only natural causes. While this may be true of operation science, it is not so of origin science.

Eliminating an intelligent cause of the world and life as a scientific explanation is contrary to the origin and early history of science. Most founders of modern science were creationists who believed that the scientific evidence pointed to an intelligent supernatural Creator of the universe and life. To redefine science so as to eliminate the possibility of an intelligent cause is contrary to the very commencement and character of modern science itself.

A scientific approach should go where the evidence leads, even if it leads to a supernatural cause. What is scientific about an approach that refuses to conclude that there exists the kind of cause to which the evidence points? Should an archaeologist refuse to accept anything but a natural cause for art it unearths?

The only adequate cause for the origin of life and the universe is a supernatural one. After all, if—as all the evidence indicates—the whole natural world had a beginning, then the Cause must have been beyond nature (*see* KALAM COSMOLOGICAL ARGUMENT). That, by definition, means supernatural. By what logic does one cease to draw the logical conclusion simply because one wishes to posit a stipulative definition of "science" so as to exclude that kind of cause from the realm of science.

Even if one stubbornly insists, for whatever reason, to exclude all but natural causes from the word *science* , that does not invalidate supernatural causes or their study. They simply move to another area of intellectual endeavor, be it "philosophy" or whatever. Science is simply impoverished in its own search for truth. There is no valid reason supernatural explanations should be excluded from an academic endeavor interested in finding and teaching the truth about our world.

The Origin of a Scientific Model. Some opponents of origin science insist that the creation model is taken from a religious document, the Bible, and religion has no place in science. While one may object that teaching the Bible in a public school science class is a religious exercise, this objection overlooks a very important distinction: The origin of a scientific theory has no relation to its validity. Some widely accepted scientific findings have had religious sources. Nikola Tesla (1856–1943) got the idea of the alternating current motor from a vision he had while reading the pantheistic poet, Goethe. The model for the benzene molecule was invented by Kekule after seeing a vision of a snake biting its tail. No scientists would reject these scientific findings simply because of their religious source. Likewise, no one should reject the idea of an intelligent Creator of the universe and life simply because it has a religious source. The question is not where the idea came from but whether it adequately explains the facts. And an intelligent Creator does adequately explain the origin of the universe and life.

A "Flat Earth" View. Many who oppose calling creation a scientific view insist that to do so is to open the door for teaching the "flat earth" view as science, too. But this is clearly not the case. Whether the earth is square or spherical is a matter of operation, not origin, science, since the shape of the earth is subject to repeated verification and observation. The ongoing shape of the earth has nothing to do with the question of its origin. There is no need to allow the flat earth view to be taught as science, since it has been scientifically disproven. This can be said of few theories, but the "Square Earth" view is factually false. And there is no reason to allow something that has been falsified to be taught as a legitimate scientific view.

This is not the case with creation, since no one has factually disproven that there could have been an intelligent cause of the universe and life (*see* GOD, ALLEGED DISPROOFS OF). Indeed, there is more plausible evidence for a Creator (*see* COSMOLOGICAL ARGUMENT) and Designer (*see* TELEOLOGICAL ARGUMENT ; ANTHROPIC PRINCIPLE) of the cosmos than for naturalistic evolution (*see* EVOLUTION, BIOLOGICAL).

Creation and Other Religious Views. If one allows the biblical view of creation into science, it is said, the Islamic, Buddhist, Hindu, and other religious views must be allowed in as well. But scientific creationism is not a *religious* point of view; it is a *scientific* view which appeals only to scientific evidence to support its conclusions. Simply because the idea for a scientific view comes from a religious book does not mean that the view is religious. As noted above, the *source* of many scientific views was religious, but the *nature* of the view was not. The implication that allowing creation to be taught alongside evolution would allow an endless number of other views of origin is not the case. Basically, there are two explanations of events of origin: Either the universe had an intelligent cause or a non-intelligent cause. Either the cause is natural or supernatural. All views of origin, whether Buddhist , Hindu , Islamic , or Judeo-Christian, fall into one of these two broad categories. Whether the Cause of the Universe is "God" or is to be worshiped or how to do so, are religious questions and do not come under the purview of origin science.

Aristotle posited an Unmoved Mover (an Uncaused Cause), but he never considered it an object of religious devotion. It was simply a rational explanation for what he observed in the world.

Orr, James. James Orr (1844–1913) was a Scottish theologian and apologist. He attended the University of Glasgow and ministered in the United Presbyterian Church in Hawick (1874–91). He taught at the United Presbyterian Theological College (1891–1901) and thereafter at the United Free Church College in Glasgow. Orr was widely read in Europe and North America. His

wide knowledge, prolific pen, and penetrating analysis endeared him to embattled evangelicals during the ascendancy of classic liberalism.

Orr's early work on apologetics was his most enduring. *Christian View of God and the World* (1893) was a standard reference into the 1950s. Orr was one of the earliest British critics of liberal theologian Albrecht Ritschl (1822–1889) in his *The Ritschlian Theology and the Evangelical Faith* (1897). He defended essential Mosaic authorship of the Pentateuch (*see* PENTATEUCH, MOSAIC AUTHORSHIP OF) against the attacks of Julius Wellhausen. Although he was willing to accommodate some facets of biological evolution (*see* EVOLUTION), his work *God's Image* (1905) stressed the need to acknowledge supernatural creation of the human soul. In *God's Image in Man* (1910), he argued that moral evolution undermined the seriousness of human depravity.

Orr's apologetic approach was distinctive. In *The Progress of Dogma* (1901), he countered Adolf Harnack (1851–1930) and his attack on the history of dogma by showing the inner logic of the development of orthodoxy. *The Virgin Birth of Christ* (1907) and *Revelation and Inspiration* (1910) were significant contributions. Another enduring work was Orr's editorship of the *International Standard Bible Encyclopedia* (1915). Orr also wrote articles for the twelve-volume defense of conservative theology, *The Fundamentals* (1910–15).

Paine, Thomas. Thomas Paine (1737–1809) was among the most militant deists in early America. His political writings, such as *Common Sense* (1776) and *The Rights of Man* (1791–92), were greatly influenced by his deistic beliefs. Paine's thought was influential in both the American and French revolutions. But his importance does not end there. In his work *The Age of Reason* (1794–95) Paine set forth his defense of deism in such a way as to make it readable to all people. Believing that republicanism and egalitarianism were threatened by church leaders, Paine wrote *The Age of Reason* to destroy all claims to supernatural revelation and so discredit the clergy (Morias, 120–22).

View of God. "I believe in one God, and no more," wrote Paine. Like theists , Paine believed that the one God was all-powerful, all-knowing, all-good, infinite, merciful, just, and incomprehensible (*Complete Works of Thomas Paine,* 5, 26, 27, 201). But unlike Christian theists Paine maintained that the only way to discover such a God is "by the exercise of reason." He rejected all forms of supernatural revelation, believing them to be unknowable. He claimed that "revelation when applied to religion, means something communicated *immediately* from God to man." Consequently he disavowed even revelations to other people as having prescriptive authority. What was revealed to a person was revealed to that person only. It is hearsay to anyone else, and, consequently, they are not obliged to believe it (ibid., 26, 7). Hence, although "No man will deny or dispute the power of the Almighty to make such a communication, if he pleases," such a revelation could only be knowable to the person who received it directly from God (ibid.).

Paine also argued that supernatural revelation (*see* REVELATION, SPECIAL) was impossible given the inadequacy of human language to convey it. God's revelation must be absolutely "unchangeable and universal" (ibid., 25). Human language could not be the means for its communication. The changes in the meaning of words, the necessity of translation to other languages, the errors of translators, copyists, and printers, and the possibility of willful alteration all show that no human language can be the vehicle of the Word of God (ibid., 19; cf. 55, 56). Thus Paine rejected all claims to a verbal or written revelation from God. All such beliefs were "human inventions, set up to terrify and enslave mankind, and monopolize power and profit" (ibid., 6). The "revealed religion" he had the most contempt for was Christianity. He summarized his feelings:

> Of all the systems of religion that ever were invented, there is none more derogatory to the Almighty, more unedifying to man, more repugnant to reason, and more contradictory in itself, than this thing called Christianity. Too absurd for belief, too impossible to convince, and too inconsistent for practice, it renders the heart torpid, or produces only atheists and fanatics. As an engine of power, it serves the purpose of despotism; and as a means of wealth, the avarice of priests; but so far as respects the good of man in general, it leads to nothing here or hereafter. [ibid., 150]

"The only religion," added Paine, "that has not been invented, and that has in it every evidence of divine originality, is pure and simple deism." In fact, deism "must have been the first, and will probably be the last that man believes" (ibid.).

Creation. Paine believed that the universe was brought into existence by God and is sustained in existence by him. God created "millions of worlds" and they were all inhabited by intelligent creatures who "enjoy the same opportunities of knowledge as we do." One reason God created all these worlds was so that the "devotional gratitude" and "admiration" of his creatures would be called forth in their contemplation of these worlds (ibid., 46, 47).

"THE WORD OF GOD IS THE CREATION WE BEHOLD: And it is in *this word,* which no human invention can counterfeit or alter, that God speaketh universally to man." (*see* REVELATION, GENERAL) The universe reveals all that is necessary to know of God. Through it we can know that God exists, what God is like, and what God expects (ibid., 24, 26, 309; emphasis Paine's).

The universe reveals the existence of God. It is evident that the things which constituted the universe could not have made themselves (*see* COSMOLOGICAL ARGUMENT). There must be "a first cause eternally existing, of a nature totally different to any material existence we know of, and by the power of which all things exist; and this first cause, man calls God" (ibid., 26; cf. 28). Paine also argued from motion. Since the universe consists of matter that cannot move itself, the origin of the rotation of the planets is impossible unless there exists an external first cause which set them in motion. This First Cause must be God (Aldridge, 6:17). He also argued from design (*see* TELEOLOGICAL ARGUMENT) . Since the "work of man's hands is a proof of the existence of man," and since a watch is "positive evidence of the existence of a watch-maker," then "in like manner the creation is evidence to our reason and our senses of the existence of a Creator" (*Complete Works* , 310). The world also reveals what God is like:

> Do we want to contemplate His power? We see it in the immensity of His creation. Do we want to contemplate His wisdom? We see it in the unchangeable order by which the incomprehensible whole is governed. Do we want to contemplate His munificence? We see it in the abundance with which He fills the earth. Do we want to contemplate His mercy? We see it in His not withholding that abundance even from the unthankful. Do we want to contemplate His will, so far as it respects man? The goodness He shows to all, is a lesson for our conduct to each other. [ibid., 201]

Whatever one needs to know, is available to the human mind by consulting "the scripture called the Creation" (ibid.).

Human Beings. According to Paine, a human being is a rational, personal, and free being. He maintained a belief in the "equality of man" and in the religious duties of each person to do justly, love mercy, and promote the happiness of fellow creatures" (ibid., 5, 41, 309). Paine adamantly denied that the human race was in rebellion against God and in need of salvation. As he stated it, humanity "stands in the same relative condition with his Maker [that] he ever did stand, since man existed, and . . . it is his greatest consolation to think so" (ibid., 24).

As for immortality , Paine could simply say, "I hope for happiness beyond this life" (*Age of Reason* , 1.3). He added, "I trouble not myself about the manner of future existence. I content myself with believing, even to positive conviction, that the Power that gave me existence is able to continue it, in any form and manner he pleases, either with or without this body. . . . It appears more probable to me that I shall continue to exist hereafter than I should have had existence, as I now have, before that existence began" (ibid., 58).

Paine believed that morally good people would be happy in the afterlife and morally wicked people would be punished. Those who were neither particularly good or bad but indifferent would be "dropped entirely" (*Complete Works* , 5, 56).

Evil. Nowhere did Paine attempt to reconcile the presence of evil with the deistic concept of God (*see* EVIL, PROBLEM OF). Indeed, the only evil he even seemed to notice was that caused by social injustice and that brought about by "revealed religion." The former could be dealt with largely on a political level. The latter, which made up the greatest class of evils, could be best prevented by not admitting "of any other revelation than that which is manifested in the book of creation," and by considering every other so-called "word of God" as "fable and imposition" (ibid., 37).

Ethics. Paine summarized the heart of his ethical beliefs as follows:

> the moral goodness and beneficence of God manifested in the creation towards all his creatures; that, seeing, as we daily do, the goodness of God to all men, it is an example calling upon all men to practice the same towards each other; and, consequently, that everything of persecution and revenge between man and man, and everything of cruelty to animals, is a violation of moral duty. [ibid., 56]

If each person was "impressed as fully and as strongly as he ought to be with the belief of a God, his moral life would be regulated by the force of that belief." Humankind "would stand in awe of God, and of himself, and would not do the thing that would not be concealed from either." On the other hand, "It is by forgetting God in his works, and running after the books of pretended revelation that man has wandered from the straight path of duty and happiness, and become by turns the victim of doubt and the dupe of delusion" (ibid., 150, 309).

The Bible and Miracles. Paine wrote no view on history or destiny. However, he was sure that the Bible was historically unreliable (*see* NEW TESTAMENT, HISTORICITY OF) and filled with errors (*see* BIBLE, ALLEGED ERRORS IN). He ridiculed and considered mythical any biblical stories touching on the supernatural (*see* MYTHOLOGY AND THE NEW TESTAMENT). He contended that the traditional ascriptions of authorship to practically every book in the Bible

were wrong and that most were written quite later than traditionally believed. He argued that the entire New Testament was written (*see* NEW TESTAMENT, DATING OF) “more than three hundred years after the time that Christ is said to have lived” (ibid., 9–12, 15, 19, 20, 21, 53, 61–131, 133).

Paine did not believe that supernatural acts of God had ever occurred in history (*see* MIRACLES, ARGUMENTS AGAINST). Accepting the laws of nature as prescriptions for how nature “is supposed to act,” he defined a miracle as “something contrary to the operation and effect of those laws.” But he added that “unless we know the whole extent of those laws, and . . . the powers of nature, we are not able to judge whether anything that may appear to us wonderful or miraculous be within, or be beyond, or be contrary to, her natural power of acting.” Hence, our limited knowledge of nature leaves us with “no positive criterion to determine what a miracle is, and mankind, in giving credit to appearances under the idea of there being miracles are subject to be continually imposed upon.” As a consequence of these considerations “nothing can be more inconsistent than to suppose that the Almighty would make use of means such as are called miracles.” It is far more likely (“millions to one”) that the reporter would lie than that nature would change. “We have never seen, in our time, nature go out of her course, but we have good reason to believe that millions of lies have been told in the same time” (ibid., 51–53).

Evaluation. The basic elements of Paine’s views are evaluated elsewhere. See the articles BIBLE, ALLEGED ERRORS IN ; BIBLE, EVIDENCE FOR ; DEISM ; HELL ; MIRACLES, ARGUMENTS AGAINST , and NEW TESTAMENT, HISTORICITY OF .

Paley, William. William Paley (1743–1805), English apologist, entered Cambridge (1759) to study mathematics. After being ordained to the priesthood (1767) he taught at Cambridge for nine years. He rose to be archdeacon of Carlisle. He wrote three major books, *The Principles of Moral and Political Philosophy* (1785), *A View of the Evidences of Christianity* (1794), and *Natural Theology; or, Evidences of the Existence and Attributes of the Deity* (1802). As late as 1831, while studying for his B.A. examinations at Cambridge, Charles Darwin studied, and was deeply impressed by, Paley's *Evidences* .

Paley's Apologetics. Paley was a classical apologist (*see* CLASSICAL APOLOGETICS). His two books in the area cover the two central areas of traditional apologetics, the existence of God *(Natural Theology)* and the truth of Christianity *(Evidences).*

Argument for God's Existence. Paley offered what has become the classic formulation of the teleological argument. It is based on the watch analogy: If one found a watch in an empty field, one would rightly conclude that it had a maker because of its obvious design. Likewise, when one looks at the even more complex design of the world in which we live, one cannot but conclude that there is a great Designer behind it.

In Paley's words, "In crossing a heath, suppose I pitched my foot against a *stone* and was asked how the stone came to be there, I might possibly answer that for anything I knew to the contrary it had lain there forever . . ." But "suppose I had found a *watch* upon the ground, and it should be inquired how the watch happened to be in that place, I should hardly think of the answer which I had given before, that for anything I knew the watch might have always been there." He asks, "why is it not as admissible in the second case as in the first? For this reason, and for no other, namely, that when we come to inspect the watch, we perceive—what we could not discover in the stone—that its several parts are framed and put together for a purpose . . ." (Paley, 3). Paley shows that the contrivances in nature are more incredible than those in a watch. He is careful to root his argument in observation, saying repeatedly, "We observe . . . ," "These observations . . . ," and "Our observer . . ." (Paley, *Evidences* 10, 11, 16, 17, 20, 29).

The reasoning goes: A watch shows that it was put together for an intelligent purpose (to keep time). It has a spring to give it motion. A series of wheels transmits this motion, made of brass so that they do not rust. The spring is made of resilient steel. The front cover is glass so that one can see through it. All this is evidence of intelligent design.

But the world shows greater evidence of design than a watch. It is a greater work of art than a watch. It has an endless variety of means adapted to ends. The human eye alone would suffice to demonstrate intelligent design in nature. Paley ransacked Kiell *Anatomy* for illustrations of adaptations of means to end in nature, including the bones and muscles of human beings and their equivalents in the animal world.

Paley argued that there must be only one Designer, since there is manifest in nature a uniformity of divine purpose in all parts of the world. This intelligent (personal) Creator is also good, as evidenced from the fact that most contrivances are beneficial and by the fact that pleasure is provided as an animal sensation.

Paley added that an infinite regress of causes is not plausible (*see* INFINITE SERIES). For "a chain composed of an infinite number of links can no more support itself than a chain composed of a finite number of links." This is so "because, by increasing the number of links, from ten, for instance, to a hundred, from a hundred to a thousand, etc., we make not the smallest approach; we observe not the smallest tendency toward self-support" (Paley, 9–10).

An updated version of Paley's argument might go something like this: In crossing a valley, suppose I come upon a round stratified stone and were asked how it came to be such. I might plausibly answer that it was once laid down by water in layers which later solidified by chemical action. One day it broke from a larger section of rock and was subsequently rounded by the natural erosion processes of tumbling in water. I come upon Mount Rushmore with its granite forms of four human faces. Here are obvious signs of intelligent production, not the result of natural processes. Yet why should a natural cause serve for the stone but not for the faces? When we inspect the faces on the mountain we perceive what we could not discover in the stone—that they manifest intelligent contrivance. They convey specifically complex information. The stone, on the other hand, has redundant patterns or strata easily explainable by the observed process of sedimentation. But the faces have sharply defined, complex features. Experience leads us to conclude that such shapes only occur when made by intelligent artisans (see Geisler, *Origin Science,* 159).

Evidences for the Truth. Paley was aware that miracles (*see* MIRACLE) are essential to the certification of the Christian revelation (*see* MIRACLES, APOLOGETIC VALUE OF). He accepted David Hume 's contention that the credibility of miracles depends on the reliability of witnesses. The witnesses for Christianity, he argued, are known to be reliable since they persisted in their report even under the risk of persecution and the threat of death. He rejected other wonders that could be reduced to false perceptions, exaggeration, or that were important to the self-interest of the one claiming them.

Paley rejected Hume's contention that universal experience testified against miracles. This, he held, begged the question, since miracles by definition must be an exception to universal occurrence. The real issue is whether there are reliable witnesses.

Evaluation. Paley is one of the great apologists of the late eighteenth and early nineteenth century. Indeed, his influence continues. Paley used the core arguments. He stressed the evidence to establish the classic arguments. Two disciples, F. R. Tennant and A. E. Taylor (*see*

TELEOLOGICAL ARGUMENT), carried on his version of the teleological argument. Recently Paley's thought has been the subject of a revival through the development of the anthropic principle.

Hume's Critique. It is widely believed that Hume answered Paley's teleological argument in advance. Hume's first objection assumes design in the universe but argues by analogy that finite human designers cooperate to build great works, using trial and error or a long period of time (see Hume). Paley explicitly addressed this point in his argument that the entire world reveals one unified plan—a fact indicative of a single Intelligence.

The second argument of Hume shifted the ground by arguing that the design is only apparent. The adaptation of means to ends may result from chance. He insists that if one grants that the universe of matter in motion is eternal, then in an infinity of chance operations every combination will be realized. Thus, there is no need to posit an intelligent cause (ibid.).

Not only did Paley respond to this objection, but he used Hume's principle of uniformity to disprove Hume's contention that it is reasonable to postulate a natural cause for the manifest contrivances of nature. For Paley argued, following Hume, that "uniform experience" reveals that only an intelligent cause can produce the kinds of effects we see in nature. Paley wrote:

"Wherever we see the marks of contrivance, we are led for its cause to an *intelligent* author. And this transition of the understanding is founded upon *uniform experience.* " Intelligence, Paley said, can be distinguished by certain properties, such as an ultimate purpose, intimate relationship of the parts to one another, and complex cooperation of parts to serve a common purpose. (*Natural Theology* , 37). Uniform experiences (which Hume was even willing to call a "proof") argues against any natural causes of the kinds of effects we see throughout nature. In fact, the only kind of cause known by repeated, uniform experience (which is Hume's basis for knowing a causal connection) is an intelligent cause.

Thus, Hume's argument against design actually boomerangs into an argument for a Designer (*see* TELEOLOGICAL ARGUMENT).

Conclusion. Paley's arguments for God and for Christianity still provide the backbone for much of contemporary apologetics. The only major difference is that we now have much more "meat" to put on the skeleton. With the discovery of evidence for an origin of the universe (*see* BIG BANG), Hume's infinite time has been scientifically eliminated. With the discovery of the anthropic principle it is evident that there is only one supernatural Mind behind the universe from the moment of its inception. Microbiology, with the incredible complexity of the DNA molecule (*see* EVOLUTION, CHEMICAL) adds dimensions of specified complexity and intelligent contrivance to Paley's argument that he never could have imagined.

Panentheism. *Panentheism* is not to be confused with *pantheism* . Pantheism literally means all ("pan") is God ("theism"), but panentheism means "all *in* God." It is also called *process theology* (since it views God as a changing Being), *bipolar theism* (since it believes God has two poles), *organicism* (since it views all that actually is as a gigantic organism), and *neoclassical theism* (because it believes God is finite and temporal, in contrast to classical theism).

Differences between theism and panentheism can be summarized:

Theism	**Panentheism**
God is Creator.	God is director.
Creation is ex nihilo.	Creation is ex materia.
God is sovereign over world.	God is working with world.
God is independent of world.	God is dependent on world.
God is unchanging.	God is changing.
God is absolutely perfect.	God is growing more perfect.
God is monopolar.	God is bipolar.
God is actually infinite.	God is actually finite.

Rather than viewing God as the infinite, unchanging sovereign Creator of the world who brought it into existence, panentheists think of God as a finite, changing, director of world affairs who works in cooperation with the world in order to achieve greater perfection in his nature.

Theism views God's relation to the world as a painter to a painting. The painter exists independently of the painting; he brought the painting into existence, and yet his mind is expressed in the painting. By contrast, the panentheist views God's relation to the world the way a mind is related to a body. Indeed, they believe the world is God's "body" (one pole) and the "mind" is the other pole. This is why the term *bipolar* is used. However, like some modern

materialists who believe the mind is dependent on the brain, panentheists believe God is dependent on the world. Yet there is a reciprocal dependence, a sense in which the world is dependent on God.

Variations on Panentheism. All panentheists agree that God has two poles, an actual pole (the world) and a potential pole (beyond the world). All agree that God is changing, finite, and temporal in his actual pole. And all agree that his potential pole is unchanging and eternal.

The major difference in how they view God is whether God in his actual pole is one actual entity (event) or a society of actual entities. Alfred North Whitehead (1861–1947) holds the former view, and Charles Hartshorne holds the latter.

Most other differences are primarily methodological. Whitehead's approach is more empirical, while Hartshorne's is more rational. Hence, Whitehead has a kind of teleological argument for God, whereas Hartshorne is famous for his ontological argument. Some panentheists, such as John Cobb, reject the disjunction between the two poles in God. He claims that God acts as a unity, not simply in one pole or the other. But all agree that God has two poles which can be diagrammed:

Primordial Nature	**Consequent Nature**
potential pole	actual pole
eternal	temporal
absolute	relative
unchanging	changing
imperishable	perishable
unlimited	limited
conceptual	physical
abstract	concrete
necessary	contingent
eternal objects	actual entities
unconscious drive	conscious realization

Representatives of Panentheism. There were many forerunners of a process view of God. Plato's (428–348 B.C .) Demiurgos eternally struggled with the chaos to form it into the cosmos. This provided the dualistic (*see* DUALISM) background for God's two "poles." Even earlier (ca. 500 B.C .), Heraclitus's flux philosophy asserted that the world is a constantly changing process.

In the modern world, G. W. F. Hegel 's (1770–1831) progressive unfolding of God in the world process took a significant step toward a Panentheism. In the Cosmic Evolutionism of Herbert Spencer (1820–1903) the universe is viewed as an unfolding and developing process. Henri Bergson (1851–1941) then proposed a creative evolution (1907) of a life force *(elan vital)*

which drives evolution forward in "leaps." Later he identified this Force with God (1935). Even before this, Samuel Alexander's *Space, Time and Deity* (1920) pioneered a process view of God's relation to the temporal universe. The main fountainhead of pa nentheism, however, is Whitehead. His influence is manifest in Hartshorne, Schubert Ogden, Cobb, and others.

Basic Beliefs of Panentheism. Although there are intramural differences among panentheists, their basic worldview has the same essential elements. Elements included are:

The Nature of God. All panentheists agree that God has two poles. The consequent or concrete pole is God in reality. It is God as he actually is in his moment-by-moment existence. It is God in the actual particulars of his becoming. In this pole God is finite, relative, dependent, contingent, and in process. God's other pole is the primordial or abstract one. This is God in abstraction, what is common and constant in God's character no matter what world exists. The divine abstract pole gives a mere outline of God's existence without filling it out with concrete or particular content. In this pole God is infinite, absolute, independent, necessary, and immutable.

Panentheists agree that God's abstract pole is included in his concrete pole. His becoming or process characterizes all of reality. But this reality of God is not to be thought of as being, which is static and uncreative. Creativity pervades all that exists. And God is supremely creative.

God is also viewed as personal. There is disagreement over whether he is one actual entity (as in Whitehead) or an ordered series of actual entities (as in Hartshorne). But almost all panentheists believe that God is personal.

Nature of the Universe. The universe is characterized by process, change, or becoming. This is so because it is constituted by a multitude of self-creative creatures that are constantly introducing change and novelty into the universe. Also, the universe is eternal. This does not necessarily mean that the present universe is eternal. Rather it could mean that there have been many universes throughout the infinite past. Some world has existed in some form always and some world in some form will always exist into the infinite future. Lastly, all panentheists reject the traditional theistic understanding of creation out of nothing, that is, *ex nihilo* (*see* CREATION, VIEWS OF). Some, including Ogden, accept the phrase *ex nihilo* but reinterpret creation to mean only that the present world or world-state once was not and was created out of a previous world. Others (like Whitehead and Hartshorne) reject even the notion of creation *ex nihilo* and affirm creation *ex materia* (out of preexistent material). Of course, since the material is really God's physical pole, so creation is also *ex deo.* In fact, the present universe is cocreated by God and man out of the preexisting "stuff." God, of course, is the prime Transformer or Shaper of each world and of each world-state.

Relation of God to Universe. In a panentheistic worldview, God's consequent pole is the world. This does not mean that God and the world are identical, for God is more than the world, and the individuals that make up the world are distinct from God. It does mean, however, that the world is God's cosmic body and that those creatures who make up the world are like cells in his body. This is why God cannot exist without some kind of physical universe. He does not need this world, but he must coexist in *some* world. Similarly, the world cannot exist without God. Hence the world and God are mutually dependent. Moreover, the creatures in the universe

contribute value to God's life. The inclusive aim or goal of all creatures is to enrich God's happiness and thus help him fulfill what he lacks.

Miracles. An implication of panentheism is that supernatural acts are impossible (*see* MIRACLES, ARGUMENTS AGAINST). Since the world is the body of God there is nothing apart from God that can be broken into or interrupted. Indeed, God is largely a passive recipient of his creatures' activity rather than an active force in the world. God is a cosmic Sympathizer rather than a cosmic Activist (*see* FINITE GODISM ; KUSHNER, HAROLD). Consequently miraculous intervention in the world is out of character with the nature of the panentheistic God. Many panentheists reject miracles because the contemporary scientific view of the world rules them out. Ogden takes this stance. This is one reason why he adopts Rudolph Bultmann's program to demythologize the miracle stories recorded in the Bible (*see* MYTHOLOGY AND THE NEW TESTAMENT).

Human Beings. Panentheists agree that humanity is personal and free. In fact, humanity as a whole is a co-creator with God and of God. He not only helps decide the course of human and world events but also those of God. Human identity is not found in some enduring "I" or self. Rather, like the rest of the world, identity is found only in the events or actual occasions of history in which humanity is becoming. The human being is partially creating himself or herself in every decision and act each moment. The goal is to serve God by contributing value to his ever growing experience.

Ethics. Many panentheists believe that there are no absolute values (*see* MORALITY, ABSOLUTE NATURE OF). Since God and the world are in great flux, there can be no absolute, unchanging standard of value. On the other hand, such panentheists as Hartshorne contend that there is a universal basis for ethics, namely, beauty, harmony, and intensity. Anything that promotes or builds upon or acts from this basis is good; anything that does not do so is evil. But even granting this universal aesthetic foundation, specific ethical commands or rules are not universal. Though in general one should promote beauty and not ugliness, exactly how this should be done is relative. Therefore, even though there may be an ultimate basis or ground for ethics, values themselves are not absolute but relative.

Human Destiny. The destiny of humanity is not to be looked for in an actual heaven or hell or a conscious afterlife (*see* IMMORTALITY). Rather, human beings, like all of God's creatures, will live forever only in God's cosmic memory. A person who contributes richly to God's life, will have the satisfaction of knowing that God will fondly remember him or her forever. Those who live without contributing much value to God, who, in other words, live unfaithfully, will not be remembered with much fondness by God.

In panentheism an ongoing evolutionary process helps move events forever forward. God and humanity are also seen as co-creators of history. However, unlike theism, there is no ultimate end of history. There will always be the unsurpassable deity who is constantly growing in perfection. And there will always be some world filled with self-creative creatures whose inclusive aim is to enrich the experience of God. History has no beginning and it has no end. There is no ultimate destiny, utopia, eschaton, or end. History, as everything else, has always

been, is coming to be now, and will always be in process. History is not going anywhere, it is just going on.

Evaluation. *Contributions of Panentheism.* Panentheists seek a comprehensive view of reality. They recognize that a piecemeal understanding of things is inadequate. Instead they have sought to develop a coherent and reasonable view of all that exists, a complete worldview.

Panentheism manages to posit an intimate relation between God and the world without destroying that relation, as does pantheism. God is *in* the world but not identical to it. The presence of God in the universe does not destroy the multiplicity that humans experience, but rather preserves it and even bestows upon it purpose and meaning. Granting the existence of a supreme Being, panentheists show that the world must depend upon God for its origin and continuation. Unless God exists, the world could not continue to exist. They insist that there must be an adequate cause to account for the world.

Panentheists seriously relate their worldview to contemporary theories of science. Whatever worldview one holds, science cannot be ignored. Valid human discoveries in any field or discipline must be incorporated into one's worldview. If reality is truly reasonable and noncontradictory, then all of knowledge can be consistently systematized, no matter who discovers it or where it is found. Panentheists take this to heart.

Criticisms of Panentheism. Some of the more important criticisms will be noted here.

The idea of a God who is both infinite and finite, necessary and contingent, absolute and relative, is contradictory. A contradiction results when opposites are affirmed of the same thing at the same time and in the same manner or respect. For example, to say that a bucket is both filled with water and not filled with water at the same time and in the same respect is contradictory. Such a thing could never occur, for it is logically impossible.

Hartshorne has responded to the charge of contradiction by pointing out that the metaphysical contraries are not attributed to the same divine pole. Rather those attributes that belong together, such as infinity and necessity, are applied to one pole while the other attributes that belong together, such as finitude and contingency, are applied to a different pole. Infinity and finitude, necessity and contingency, though applied to the same being at the same time, are applied to the appropriate poles in God (Hartshorne, *Man's Vision of God,* 22–24). The Christian theist, H. P. Owen, has responded that there seems to be no real distinction between the two divine poles. Since the abstract pole has no concrete or actual existence, then it must be a mere idea, having mental reality but no existence (Owen, 105). Therefore God must not really be infinite, and necessary, for those attributes are in the potential pole that does not exist in reality. God in reality is only finite and contingent. Or God must be both sides of the metaphysical contraries at the same time and in the same pole. The first option makes panentheism's doctrine of God meaningless, and the second makes it contradictory. In either event the bipolar concept of God is incoherent.

The idea of God as a self-caused being is contradictory. It is difficult to see how any being could cause itself to exist. To think this could occur is to believe that potentials can actualize

themselves. Cups could fill themselves with coffee and steel could make itself into a skyscraper. How could a being exist prior to itself in order to bring itself into existence? This is what a self-caused being would have to do in order to exist. A panentheist might respond that God did not bring himself into existence; he has eternally existed. Rather, the panentheistic version of a self-caused God creates his becoming. That is, God produces changes in himself. God actualizes his own potentials for growth.

But this leads to another problem. If God causes his own becoming and not his own being, then what or who sustains God in existence? How can a being change without there existing an unchanging being that grounds the changing being's existence? Everything cannot be in flux. Whatever changes passes from potentiality to actuality, from what it is not to what is. Such change could not actualize itself or be self-caused, for potentials are not yet the something they have the potential to be.

Nothing cannot produce something. Neither could such changes be uncaused, for there must be a cause for every effect or event (*see* CAUSALITY, PRINCIPLE OF). It seems, therefore, that the universe of change, which is the concrete pole of God, must be caused by something that does not change. Something outside of the changing order must sustain the entire order in existence. Therefore there must be a being other than what the process philosopher views as "God" that sustains him in existence. If this is true, then the panentheistic God is not really God, but the Being that grounds him is really God. Such a God is not an immutable-mutable being, as is the process deity, but would have to be simply immutable.

Another aspect of this problem is that the panentheist knows that everything, including God, is relative and changing. How can anyone know that something is changing when there is no stable reference point by which to measure the change? The theist has God and his absolute, unchanging character and will. The panentheist has no such standard. A panentheist could answer that his unchanging measure is the immutable primordial nature of God. But this does not seem adequate. For God's primordial pole is only an abstraction—it has no reality. It can be a conceptual measure, but not an actual one. Besides, a panentheist who says that God is immutable means that God is immutably mutable—He cannot fail to always change and always change for the better (Hartshorne, *Natural Theology,* 110, 276). Hence we seem to be back where we started, with everything changing and nothing that is being changed.

The panentheistic concept of personhood appears to conflict with our experience of ourselves. We, at least, believe ourselves to be personal beings who, to some degree, endure change. Most of us do not believe that we become new persons each moment we exist. In fact, to even say that "I become a new person each moment I exist" assumes that there is something that endures, the "I" to whom the changes occur. Otherwise, what changes? If nothing endures from moment to moment, then can it really be said that anything changes? If there is no sense in which the self is a continuous identity, then it appears that we can only speak of a series of unrelated actual "I" occasions (ibid., 58). And the only thing that can be said to change in that series of "I's" is the series itself, not each individual "I" in the series. This seems to destroy self-identity and to contradict human experience. This problem is particularly acute for Hartshorne. In accord with his view, one goes out of existence every time there is a moment with no conscious "I." That would include periods of sleep or under anesthesia or other moments of lapsed

consciousness. A parent awakening a child from sleep would actually call the young one back into existence.

To say with the panentheist that some world or other must have always existed begs the question. Of course it is impossible that total nothingness could ever be experienced, for no one could be there to experience it. Otherwise it would not be *total* nothingness. But this presupposes that only what can be experienced can be true. Why should this criteria for truth be accepted? Hartshorne implies that it should be accepted because there can be no meaning without experience (ibid.). Thus a concept that cannot be experienced must be meaningless. But if this is so then Hartshorne seems to have won his case by definition. For if there can be no meaning without experience, then total nonbeing, which cannot be experienced, must be meaningless. Hartshorne has established his case by defining meaning in such a way that makes total nonbeing a meaningless concept. He has not proved the meaninglessness of "nothing exists" but only assumed it, which is question-begging.

Even if Hartshorne can establish that total nothingness is not possible, the panentheistic view does not follow. For this would simply be a way of saying that everything cannot be contingent. But this leads naturally to a theistic position (*see* THEISM) in which there must be a Necessary Being beyond the contingent world. It is not necessary to conclude that panentheism is true, simply because a total state of nothingness is not possible.

If the proposition "Nothing exists." is logically possible, then the existence of Hartshorne's and Ogden's God is tenuous. Such a God must keep the universe rolling and change universes quickly, or he poofs out of the picture. He is tied as with an umbilical cord to some world. But if it is logically possible that "some world exists" has not always been true, then it is logically possible that "God exists" has at some time been false. But, according to Hartshorne and Ogden, if God is not logically necessary, a necessary being that must always exist no matter what, then the existence of God must be logically impossible. By this rule the God of Hartshorne and Ogden is necessarily false.

Process theology faces a serious dilemma (Gruenler, 75–79). God comprehends the whole universe at one time, yet God is limited to space and time. But anything limited to space and time cannot think any faster than the speed of light, which takes billions of years to cross the universe at about 186,000 miles a second. However, there seems to be no way that a mind which takes this kind of time to think its way around the universe could simultaneously comprehend and direct the whole universe. On the other hand, if God's mind does transcend the universe of space and time and instantly and simultaneously comprehend the whole, then this is not a panentheistic view of God but a theistic view.

Pantheism. *Pantheism* means all ("pan") is God ("theism"). It is the worldview held by most Hindus , many Buddhists , and other New Age religions. It is also the worldview of Christian Science, Unity, and Scientology.

According to pantheism, God "is all in all." God pervades all things, contains all things, subsumes all things, and is found within all things. Nothing exists apart from God, and all things are in some way identified with God. The world is God, and God is the world. But more precisely, in pantheism all is God, and God is all.

Pantheism has a long history in both the East and the West. From the Eastern mysticism of Hindu sages and seers to the rationalism of such Western philosophers as Parmenides, Benedict Spinoza , and G. W. F. Hegel , pantheism has always had advocates.

Kinds of Pantheism. There are differing types of belief within pantheism. An *absolute* pantheism is represented by the thought of the fifth-century B.C . Greek philosopher Parmenides and the Vedanta school of Hinduism (*see* HINDUISM, VEDANTA). Absolute pantheism teaches that there is only one being in the world, God, and that all else that appears to exist actually does not. Another type is *emanational* pantheism, which was set forth by the third century A.D . philosopher, Plotinus . According to this view, everything flows from God in the same way a flower unfolds from a seed. There is also the *developmental* pantheism of Hegel (1770–1831). Hegel viewed the events of history as the unfolding manifestations of Absolute Spirit. The *modal* pantheism of the seventeenth-century rationalist Spinoza argued that there is only one absolute substance in which all finite things are merely modes or moments. The *multilevel* pantheism is

found in some forms of Hinduism, especially as expressed by Radhakrishnan. This view sees various levels of manifestation of God, with the highest level manifesting God as the Absolute One, and lower levels showing him in increasing multiplicity. *Permeational* pantheism is the view popularized by the *Star Wars* movies of George Lucas, in which the Force (Tao) penetrates all things. This belief is found in Zen Buddhism.

Basic Beliefs. There are other types of pantheism, but these lay out the worldview's commonalities. Each of these types identifies God with the world, but they vary in the conception of this identity. All pantheists believe that God and the real world are one, but they differ as to how God and the world are united. The following are basic beliefs of a pantheistic worldview.

Nature of God. God and reality are ultimately impersonal. Personality, consciousness, and intellect are characteristics of lower manifestations of God, but they are not to be confused with God in his being. In God there is the absolute simplicity of one. There are no parts. Multiplicity may flow from it, but in and of itself it is simple, not multiple.

Nature of the Universe. Those pantheists who grant any kind of reality to the universe agree that it was created *ex deo* , "out of God," not *ex nihilo* , "out of nothing," as theism maintains (*see* CREATION, VIEWS OF). There is only one "Being" or Existent in the universe; everything else is an emanation or manifestation of it (*see* ONE AND MANY, PROBLEM OF). Of course, absolute pantheists hold that the universe is not even a manifestation. We are all simply part of an elaborate illusion. Creation simply does not exist. God exists. Nothing else.

God in Relation to the Universe. In contrast to theists, who view God as beyond and separate from the universe, pantheists believe that God and the universe are one. The theist grants some reality to the universe of multiplicity, while the pantheist does not. Those who deny the existence of the universe, of course, see no real relation between God and the universe. But all pantheists agree that whatever reality exists, it is God.

Miracles. An implication of pantheism is that miracles are impossible. For if all is God, and God is all, nothing exists apart from God that could be interrupted or broken into, which is what the nature of a miracle requires. For more discussion of this, see the article on Spinoza. Since pantheists agree that God is simple (has no parts) and is all there is, then God could not perform any miracles, for a miracle implies a God who is in some sense "outside" of the world in which he "intervenes." The only sense in which God "intervenes" in the world is by a regular penetration of it in accordance with repeated higher spiritual laws, such as the law of *karma* (*see* REINCARNATION). Therefore, the pantheistic worldview rules out miracles (*see* MIRACLES, ARGUMENTS AGAINST).

Human Beings. Pantheists either believe that the human as a distinct being is absolutely unreal (absolute pantheism) or else that humanity is real but far less real than God. The primary teaching of absolute pantheism is that humans must overcome their ignorance and realize that they *are* God. Those who put a distance between God and humanity teach a dualistic view of the person—a body and a soul. The body holds the human down, keeping him or her from uniting

with God. So each must purge his or her body so the soul can be released to attain oneness with the Absolute One. For all pantheists, the chief goal or end of humanity is to unite with God.

Ethics. Pantheists usually strive to live moral lives and to encourage others to do so. Often their writings are filled with exhortations to use good judgment, to be devoted to truth, and to selflessly love others.

However, these exhortations usually apply to a lower level of spiritual attainment. Once a person has achieved union with God, he has no further concern with moral laws. Nonattachment or utter unconcern for one's actions and their results are often taught as a prerequisite to achieving oneness with God. Since God is beyond good and evil, the person must transcend them to reach God. Morality is stressed as only a temporary concern, and underlying this is no absolute basis for right or wrong (*see* ABSOLUTES, MORAL). Prabhavananda and Christopher Usherwood admit as much when they say, "Every action, under certain circumstances and for certain people, may be a stepping-stone to spiritual growth—if it is done in the spirit of nonattachment. All good and all evil is relative to the individual point of growth. . . . But, in the highest sense, there can be neither good nor evil" (*Bhagavad-Gita* , 140).

Thus, for the pantheist, ethical conduct is a means, not an end in itself. It is used only to help one attain a higher level of spirituality. Ultimately reality is neither good nor evil. As Prabhavananda puts it: "If we say, 'I am good,' or 'I am bad,' we are only talking the language of *maya* [the world of illusion] (*see* ILLUSIONISM). 'I am Brahman,' is the only true statement regarding ourselves that any of us can make" (*Spiritual Heritage* , 203).

History and Human Destiny. Pantheists hardly ever talk about history, except in modified forms of pantheism usually influenced by Western theism (as in Hegel). They are not concerned with it, for either it does not exist, or it is regarded as an aspect of the world of appearances, a thing to be transcended. History has no ultimate goal or end. Whenever it is granted a kind of reality, it is always (except in Hegel's pantheism) considered to be cyclical. Like the wheel of *samsara* , history forever repeats itself. There are no unique events or final events of history. There is no millennium, utopia, or eschaton.

As to individual human destiny, most pantheists, especially Eastern varieties, believe in reincarnation. After the soul leaves the body it enters into another mortal body to work off its *karma* . Eventually the goal is to leave the body and, in the case of most pantheists, merge with God. This is called *Nirvana* , and it means the loss of individuality. Ultimate salvation in this kind of pantheistic system is *from* one's individuality, not *in* it as Christians believe (*see* IMMORTALITY).

Evaluation. *Contributions of Pantheism.* Pantheism attempts to explain all of reality, rather than parts of it. If we are part of a *uni* -verse, than any worldview must seek to embrace that unity. Pantheism does have a holistic view of things. Any comprehensive view of God must include God's immanent presence and activity in the world. A God who will not or cannot relate to humanity will not receive worship from many, nor will many think he deserves it. Pantheism rightly stresses that God is in the world and intimately related to it. He is not transcendently remote and totally removed from the universe.

Pantheism teaches that only God is absolute and necessary. Anything and everything else must be less than absolute and be utterly dependent upon God. Unless God exists, nothing else could exist either. Surely, it is necessary for a worldview to so relate everything to the ultimate.

Finally, the stress pantheism places on not ascribing limitations to God in our language about him is appropriate. If God is unlimited and transcendent, then all limitations must be negated from terms that are applied to him. Without this, verbal idolatry results. The Infinite cannot be encompassed by our finite conceptions.

Criticisms. Absolute pantheism is self-defeating. The absolute pantheist claims: "I am God." But God is the changeless Absolute. However, humanity goes through a process of change called enlightenment because he has this awareness. So how could people be God when people change but God does not?

Pantheists attempt to escape this criticism by allowing some reality to humanity, whether it be emanational, modal, or manifestational. But if we are really only modes of God, then why are we oblivious to it? H. P. Owen describes this as a "metaphysical amnesia" that pervades all our lives. If we are being deceived about the consciousness of our own individual existence, how do we know that the pantheist is not also being deceived in claiming to be conscious of reality as ultimately one?

In fact, if the world is really an illusion, how can we distinguish between reality and fantasy at all? Lao-tse puts the question well: "If, when I was asleep I was a man dreaming I was a butterfly, how do I know when I am awake I am not a butterfly dreaming I am a man?" (Guinness, 14). If what we continually perceive to be real is not, how could we ever distinguish between reality and fantasy? Maybe when we cross a busy street, with three lanes of traffic coming toward us, we should not worry, for it's all an illusion anyway. Indeed, should we even look when crossing the street, if we, the traffic, and the street do not really exist? If pantheists would live out their pantheism consistently, there would be no pantheists left.

Self-Refuting Nature of Pantheism. Pantheism is self-refuting *(see)* , at least all forms that claim individuality is an illusion caused by my mind. For according to pantheism, individual minds are themselves aspects of the illusion and can therefore provide no basis for explaining it. If the mind is part of the illusion, it cannot be the ground for explaining the illusion. Hence, if pantheism is true in asserting that my individuality is an illusion, then pantheism is false, since there is then no basis for explaining the illusion (see D.K. Clark, chapter 7).

Pantheism also fails to handle the problem of evil in a satisfactory manner (*see* EVIL, PROBLEM OF). To pronounce evil an illusion (*see* ILLUSIONISM) or as less than real is not only frustrating and hollow to those experiencing evil, but it seems philosophically inadequate. If evil is not real, then what is the origin of the illusion? Why have people experienced it for so long, and why does it seem so real? Despite the pantheist's claim to the contrary, he or she also experiences pain, suffering, and eventually will die. Even pantheists double-over in pain when they get appendicitis. They jump out of the way of an on-coming truck so as not to get hurt.

If God is all, and all is God, as pantheists maintain, then evil is an illusion and ultimately there are no rights and wrongs. For there are four possibilities regarding good and evil:

1. If God is all-good, then evil must exist apart from God. But this is impossible since God is all—nothing can exist apart from It.

2. If God is all-evil, then good must exist apart from God. This is not possible either, since God is all.

3. God is both all-good and all-evil. This cannot be, for it is self-contradictory to affirm that the same being is both all good and all evil at the same time. Further, most pantheists agree that God is beyond good and evil. Therefore God is neither good nor evil.

4. Good and evil are illusory. They are not real categories.

Option four is what most pantheists believe. But if evil is only an illusion, then ultimately there is no such thing as good and evil thoughts or actions. Hence, what difference would it make whether we praise or curse, counsel or rape, love or murder someone? If there is no final moral difference between those actions, absolute moral responsibilities do not exist. Cruelty and noncruelty are ultimately the same. One critic made the point with this illustration:

> One day I was talking to a group of people in the digs of a young South African in Cambridge. Among others, there was present a young Indian who was of Sikh background but a Hindu by religion. He started to speak strongly against Christianity, but did not really understand the problems of his own beliefs. So I said, "Am I not correct in saying that on the basis of your system, cruelty and non-cruelty are ultimately equal, that there is no intrinsic difference between them?" He agreed. . . . The student in whose room we met, who had clearly understood the implications of what the Sikh had admitted, picked up his kettle of boiling water with which he was about to make tea, and stood with it steaming over the Indian's head. The man looked up and asked him what he was doing and he said, with a cold yet gentle finality, "There is no difference between cruelty and non-cruelty." Thereupon the Hindu walked out into the night. [Schaeffer, *The God Who Is There* , 101]

If pantheists are correct that reality is not moral, that good and evil, right and wrong, are inapplicable to what is, then to be right is as meaningless as to be wrong (Schaeffer, *He Is There and He Is Not Silent*). The foundation for morality is destroyed. Pantheism does not take the problem of evil seriously. As C. S. Lewis put it, "If you do not take the distinctions between good and bad seriously, then it is easy to say that anything you find in this world is a part of God. But, of course, if you think some things really bad, and God really good, then you cannot talk like that" (*Mere Christianity* , 30).

In this and other ways, the pantheistic concept of God is incoherent. To say God is infinite, yet somehow shares his being (*ex deo*) with creation, is to raise the problem of how the finite can be infinite, which is what absolute pantheists say. Otherwise, one must consider the finite world less than real, though existing. We have seen the problems with the first, absolute option.

But the second option makes God both infinite and finite, for it is said to share part of its being with creatures which entails an Infinite Being becoming less than infinite. But how can the Infinite be finite, the Absolute be relative, and the Unchanging changed?

Pantheism's God also is unknowable. The very claim, "God is unknowable in an intellectual way," seems either meaningless or self-defeating. For if the claim itself cannot be understood in an intellectual way, then it is self-defeating. For what is being affirmed is that nothing can be understood about God in an intellectual way. But the pantheist expects us to intellectually know this truth that God cannot be understood in an intellectual way. In other words, the pantheist appears to be making a statement about God to the effect that no such statements can be made about God. But how can one make a positive affirmation about God which claims that only negative affirmations can be made about God? Plotinus admitted that negative knowledge presupposes some positive awareness. Otherwise, one would not know what to negate.

Critics further claim that the denial of many pantheists of the applicability of logic to reality is self-defeating. For to deny that logic applies to reality, it would seem that one must make a logical statement about reality to the effect that no logical statements can be made. For example, when Zen Buddhist D. T. Suzuki says that to comprehend life we must abandon logic (Suzuki, 58), he uses logic in his affirmation and applies it to reality. Indeed, the law of noncontradiction (A cannot both be A and not-A) cannot be denied without using it in the very denial (*see* FIRST PRINCIPLES). Therefore, to deny that logic applies to reality, one must not make a logical statement about reality. But then how will the position be defended?

Pascal, Blaise. Blaise Pascal (1623–1662) was a French mathematician, scientist, and philosopher. At age sixteen, he completed an original treatise on conic sections. He contributed to the development of differential calculus, and originated the mathematical theory of probability. Several mathematical propositions and demonstrations have been named in his honor: Pascal's arithmetical triangle, Pascal's law, and Pascal's mystic hexagram.

Pascal's stress on faith brought him in contact with the Jansenists, a splinter Catholic group at odds with the Jesuits. Among the Jansenists he experienced his "first conversion" (1646). Later he experienced his "definitive conversion" when he discovered the "God of Abraham, God of Isaac, God of Jacob, not of philosophers and scholars" (Pascal, 311).

After the condemnation of the Jansenist apologist Antoine Arnuald (in 1655), Pascal wrote his eighteen *Lettres provinciales* (1656–57) which attacked the Jesuit theory of grace and morality. His most famous work is *Pensees* (Thoughts), published after his death from notes he began earlier. *Pensees* vindicated Christianity through the presentation of facts and fulfillment of prophecy and by an appeal to the heart (Cross, 1036).

Faith and Reason. Although Pascal's opposition to Rene Descartes and his Cartesian rationalism earned him the undeserved title of fideist (*see* FIDEISM), Pascal actually offered many evidences in support of the Christian Faith. In the tradition of Augustine , in which he was nourished, he believed that only faith could free from sin and put him in a personal relationship with God. There is always an element of risk in faith, but it is a risk worth taking. He confessed that the "heart has its reasons of which reason knows not." However, this does exclude the use of reason in supporting the truths of the Christian Faith.

Apologetic. Pascal's rational apologetic for Christianity can be divided into three parts. First, his use of evidence; second, the appeal to fulfilled prophecies; and, third, his famous "wager."

The Use of Evidence. Pascal believed "it is a sign of weakness to prove God from nature" (Pascal, no. 466). He adds, "It is a remarkable fact that no canonical author ever used nature to prove God" (ibid., no. 463). However, he listed twelve "proofs" for Christianity:

1. the Christian religion, by the fact of being established so firmly and so gently, though so contrary to nature;
2. the holiness, sublimity, and humility of a Christian soul;
3. the miracles of holy Scripture;
4. Jesus Christ in particular;
5. the apostles in particular;
6. Moses and the prophets in particular;
7. the Jewish people;
8. prophecies;
9. perpetuity: no religion enjoys perpetuity;
10. doctrine, accounting for everything;
11. the holiness of this law, and
12. the order of the world (ibid., no. 482).

Some of these evidences Pascal discusses at great length. The proof from prophecy covers *Pensees* nos. 483–511. He notes their supernatural nature, since they "wrote down these things long before they happened" (ibid., no. 484). He points out their specificity, citing Daniel's prediction of what year the Messiah would die (ibid., no. 485). With regard to messianic prophecy he lists numerous detailed predictions, such as Christ's precursor (Malachi 3), birth (Isaiah 9 ; Micah 5), and his work in Jerusalem to blind the wise and learned, Isaiah 6 , 8 , 29 (ibid., no. 487) (*see* PROPHECY, AS PROOF OF THE BIBLE).

Pascal's Wager. In *Pensees* he offered *Pascal's Wager* . Assuming, as Pascal does, that we cannot know for sure by reason alone whether God exists or what lies beyond this life, how then should we live in this life? What are the odds for there being a God and an afterlife? Pascal wrote:

> Either God is or he is not. But to which view shall we be inclined? Reason cannot decide this question. Infinite chaos separates us. At the far end of this infinite distance a coin is being spun which will come down heads or tails. How will you wager? Reason cannot make you choose either, reason cannot prove either wrong. . . .

Yes, but you must wager. There is no choice, you are already committed. Which will you choose then? Let us see: since a choice must be made, let us see which offers you the least interest. You have two things to lose: the true and the good; and two things to stake: your reason and your will, your knowledge and your happiness; and your nature has two things to avoid: error and wretchedness. . . . Let us weigh up the gain and the loss involved in calling heads that God exists. Let us assess the two cases: if you win you win everything, if you lose you lose nothing. Do not hesitate then; wager that he does exist. . . .

"I confess, I admit it, but is there really no way of seeing what the cards are?" "Yes. Scripture and the rest, etc." "Yes, but my hands are tied and my lips are sealed; I am being forced to wager and I am not free; I am being held fast and I am so made that I cannot believe. What do you want me to do then?" "That is true, but at least get it into your head that, if you are unable to believe, it is because of your passions, since reason impels you to believe and yet you cannot do so. Concentrate then not on convincing yourself by multiplying proofs of God's existence but by diminishing your passions. You want to find faith and you do not know the road. You want to be cured of unbelief and you ask for the remedy: learn from those who were once bound like you and who now wager all they have. These are people who know the road you wish to follow, who have been cured of the affliction of which they began. They behaved just as if they did believe, taking holy water, having masses said, and so on. That will make you believe quite naturally, and will make you more docile." "But that is what I am afraid of." "But why? What have you to lose? But to show you that this is the way, the fact is that this diminishes the passions which are your great obstacles. . . .

I tell you that you will gain even in this life, and that at every step you take along this road you will see that your gain is so certain and your risk so negligible that in the end you will realize that you have wagered on something certain and infinite for which you have paid nothing.

According to Pascal's wager, one cannot lose by wagering that God and immortality exist. Even if one cannot prove God nor an after life, it is a good bet to believe in him. We have nothing to lose. If God does not exist, the life of the believer is a great life anyway. If he does exist, then so much the more. Not only is this life great but the one to come will be even greater. So, believing in God and a life to come is a good bet, both for this life and the one to come.

The wager cannot be avoided. We must either believe in God or not. Since we can't avoid betting, the odds overwhelmingly favor betting on God.

The game of life must be played. Even those who end their life, must play the game; they only shorten its duration. But assuming there is no God to meet beyond the grave is a big gamble—one not worth taking. But assuming there is a God is a gamble not worth missing. For believing there is a God pays in this life for sure and possibly in the next. But assuming there is no God brings unhappiness in this life and the possibility of more to come. In Pascal's own words, "That leaves no choice; wherever there is infinity, and where there are not infinite

chances of losing against that of winning, there is no room for hesitation, you must give everything."

Evaluation. *His Approach Is Fideistic* . Pascal, while emphasizing the heart and faith, is not a fideist. In *Pensees* no. 149 he puts into Jesus' mouth these words:

> I do not mean you to believe me submissively and without reason; I do not claim to subdue you by tyranny. Nor do I claim to account for everything. . . . I mean to show you by clearly, by convincing proofs, marks of divinity within me which will convince you of what I am, and establish my authority by miracles and proofs that you cannot reject, so that you will then believe the things I teach, finding no reason to reject them but your own inability to tell whether they are true or not.

This is clearly not fideism.

His Argument from Prophecy Fails. Pascal's views came in for heavy criticism in the eighteenth century. The deist Francois-Marie Voltaire (1694–1778) is typical. As for miracles, Voltaire wrote: "not a single one of the prophecies that Pascal referred to can be honestly applied to Christ; and that his discussion of miracles was pure nonsense" (Torrey, 264). However, as seen in the article PROPHECY, AS PROOF OF THE BIBLE , the deists' questions can be answered and Pascal's argument can be vindicated as a defense of Christianity.

His Views Were Not Enlightened. Voltaire, in his twenty-fifth philosophical letter, declared that Pascal's Christian view of the fall, redemption, divine providence, predestination, and grace was neither enlightened nor humanitarian and that he encouraged fanaticism.

As for Pascal's "Wager," Voltaire was shocked that he would resort to such a means to prove God. If "the heavens declare the glory of God," why did Pascal downplay the external evidence for God in nature (*see* GOD, EVIDENCE FOR)?

Walter Kaufmann of Harvard once quipped that maybe Pascal's God would "out-Luther Luther." That is, "God might punish those whose faith is prompted by prudence" (Kaufmann, 177). But this too is hardly a critique of the Wager. At best it would only exclude those who believe in God on such grounds. Further, the argument is based on a flawed view of God's character. No morally worthy God, to say nothing of a rational one, would punish someone who uses wisdom in thinking about his ultimate destiny.

Atheist George H. Smith argues that one loses too much by making such a wager. "What have we got to lose? Intellectual integrity, self-esteem, and a passionate, rewarding life for starters. In short, everything that makes life worth living. Far from being a safe bet, Pascal's wager requires the wager of one's life and happiness" (Smith, 184).

But it is not at all clear that this is the case. Pascal himself was a man of great intellect and great integrity, as even most of his enemies are willing to admit. And certainly it is simply false to hold that Pascal and other thinking Christians do not have a "rewarding life." Indeed, this is part of Pascal's wager, namely, that we have nothing to lose, since this life of faith alone—even

if there were no God—is eminently worthwhile. Finally, Smith overlooks the major point Pascal makes: The believer anticipates eternal reward as well. “Everything to gain and really nothing to lose”; unbelief has a difficult time answering Pascal.

One could challenge the premise that believers have nothing to lose. If there is no God, Christians submit to a life of sacrifice for nothing (2 Cor. 11:22–28 ; 2 Tim. 3:12). They missed some fun by being a believer. But considering that the believer has true joy and peace, forgiveness, and hope, even in suffering (Romans 5 , James 1), this is hardly a telling point.

However, the wager is not a proof of God, but a path of prudence. It merely shows that it is foolish not to believe in God. The question remains as to whether the “wise” path leads to truth.

Passover Plot.

The Passover Plot Hypothesis. *The Passover Plot* is a book by radical New Testament scholar, H. J. Schonfield, who proposed that Jesus was an innocent messianic pretender who connived to “fulfill” prophecy in order to substantiate his claims (Schonfield, 35–38). According to the plot, Jesus secretly “schemed in faith” (ibid., 173), connived with a young man, Lazarus, and Joseph of Arimathea, to feign death on the cross, revive in the tomb, and demonstrate to his disciples (who were ignorant of the plot) that he was the Messiah. However, the plan went awry when the Roman soldiers pierced Jesus’ side and he died. Nonetheless, the disciples mistook others as Christ some days later and believed he had risen from the dead (Schonfield, 170–72).

A Challenge to the Passover Plot. If true, the “Passover Plot” would contradict orthodox Christianity, which is built on the beliefs that Jesus was truly the Messiah who supernaturally

fulfilled Old Testament prophecy, and who died on the cross and rose from the dead three days later (1 Cor. 15:1–5). Apart from these basic truths there is no historic Christianity (1 Cor. 15:12–18). Thus, it is incumbent on the evangelical apologist to refute the Passover Plot hypothesis.

At least three basic dimensions of traditional apologetics are called in question by this alleged plot: the character of Christ, the supernatural nature of messianic predictions, and the resurrection of Christ. Each will be addressed in order.

The Character of Christ. If the alleged plot is correct, then Jesus was anything but "innocent." He was a conniving, cunning, and deceptive messianic pretender. He intended to deceive his closest disciples into believing he was the Messiah when he was not. But this thesis is contrary to the character of Christ known from the Gospel records, which have been demonstrated to be reliable (*see* NEW TESTAMENT MANUSCRIPTS ; NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT, DATING OF). The Jesus of the Gospels is the perfect exemplar of honesty and integrity (*see* CHRIST, UNIQUENESS OF).

The Nature of Supernatural Prophecy. Contrary to the "Passover Plot," messianic prophecy is su pernatural (*see* PROPHECY, AS PROOF OF THE BIBLE). And in the case of Christ there are many reasons that he could not have manipulated events to make it look like he fulfilled all the predictions about the Old Testament Messiah.

First of all, this was contrary to his honest character as noted above. It assumes he was one of the greatest deceivers of all time. It presupposes that he was not even a good person, to say nothing of the perfect man the Gospels affirm him to be. There are several lines of evidence that combine to demonstrate that this is a completely implausible thesis.

Second, there is no way Jesus could have controlled many events necessary for the fulfillment of Old Testament prophecies about the Messiah. For example, he had no control over where he would be born (Mic. 5:2), how he would be born of a virgin (Isa. 7:14), when he would die (Dan. 9:25), what tribe (Gen. 49:10) and lineage he would be from (2 Sam. 7:12), and numerous other things.

Third, there is no way short of being supernatural that Jesus could have manipulated the events and people in his life to respond in exactly the way necessary for it to appear that he was fulfilling all these prophecies, including John's heralding him (Matt. 3), his accuser's reactions (Matt. 27:12), how the soldiers cast lots for his garments (John 19:23 , 24), and how they would pierce his side with a spear (John 19:34). Indeed even Schonfield admits that the plot failed when the Romans actually pierced Christ. The fact is that anyone with all this manipulative power would have to be divine—the very thing the Passover hypothesis is attempting to avoid. In short, it takes a bigger miracle to believe the Passover Plot than to accept these prophecies as supernatural.

The Resurrection of Christ. The Passover Plot offers an implausible scenario as an alternative to the resurrection of Christ. This is true for many reasons. First, it is contrary to the Gospel records, which are demonstrably reliable (*see* NEW TESTAMENT, HISTORICITY OF),

having been written by eyewitnesses and contemporaries of the events. Second, it totally overlooks the powerful testimony of the resurrection of Christ (*see* RESURRECTION, EVIDENCE FOR), including: (1) a permanently empty tomb; (2) over five hundred eyewitnesses (1 Cor. 15:5–7); (3) some twelve physical appearances of Christ in the same nail-scarred body (John 20:27); (4) which were spread over a period of forty days (Acts 1:3); (5) during which time Jesus ate with them on at least four occasions and taught them concerning the kingdom of God; (6) and transformed them from scared, skeptical, scattered disciples into the greatest missionary society the world has ever known overnight!

Conclusion. The Passover Plot is in fact an implausible scenario that is based on unjustified presuppositions and is contrary to many known facts. For example, it supposes: (1) unjustified late dates for the Gospels (*see* NEW TESTAMENT, DATING OF); (2) an antisupernatural bias (*see* MIRACLE), (3) a flawed character of Christ (*see* CHRIST, UNIQUENESS OF); (4) the incredible naivete of his disciples; (5) mass cases of mistaken identity after his death (*see* RESURRECTION, EVIDENCE FOR ; RESURRECTION, ALTERNATE THEORIES OF); (6) a miraculous transformation based on a total mistake.

To put it positively, the alleged plot is contrary to (1) the early dates of the Gospels; (2) the multiplicity of the eyewitnesses' accounts; (3) the verification of history and archaeology (*see* ARCHAEOLOGY, NEW TESTAMENT); (4) the known character of Jesus' disciples; (5) the permanently empty tomb; (6) the nature of the resurrection appearances; and (7) the incredible number of eyewitnesses of the resurrected Christ—over five hundred. In short, *The Passover Plot* is just another beautiful theory ruined by a brutal gang of facts.

Pentateuch, Mosaic Authorship of. The Bible attributes the first five books of the Bible, Genesis, Exodus, Leviticus, Numbers, and Deuteronomy, or the Pentateuch, to Moses in Exodus 24:4 ; Joshua 1:7–8 ; Ezra 6:18 ; Daniel 9:11 , and Malachi 4:4 . Jesus quoted from the Pentateuch, attributing the source to Moses in Mark 7:10 and Luke 20:37 . Most modern critics

deny Mosaic authorship and organize the writings around a much later, complex set of priestly scribes and editors. The objective has been to avoid the books' accounts of supernatural occurrences and divine authority (*see* BIBLICAL CRITICISM ; REDACTION CRITICISM, OLD TESTAMENT ; WELLHAUSEN, JULIUS).

As early as the late seventeenth century, Benedict Spinoza denied that Moses wrote the Pentateuch. Many critical scholars joined him in the nineteenth century. Julius Wellhausen claimed that the first five books were written by various persons he called the Jehovist (J), Elohimist (E), Priestly (P), and Deuteronomist (D). Literary characteristics supposedly distinguished these authors.

Among arguments offered as to why Moses could not have written the first books, seven have been particularly argued:

1. Moses could not have written the account of his own death in Deuteronomy 34 .
2. Certain sections are parenthetical, so must have been edited in (for example, Deut. 2:10–12 ; 2:20–23).
3. Moses was not yet alive when the events of Genesis were recorded.
4. Different names for God are used in different sections, reflecting a different author.
5. The style of various sections is from a later period than Moses.
6. The names of some places are not those that would have been used in Moses' day, but rather later.
7. There is reference to Israel being in the promised land, but Moses died before the people entered (Deuteronomy 34).

Responding to the Arguments. Conservative scholars have responded that none of these arguments is strong enough to warrant the extraordinary claims and theories that have arisen from them in Old Testament studies. There are stronger reasons for attributing the Pentateuch to Moses.

The Account of Moses' Death. Since Moses was a prophet (Deut. 18:15 ; Acts 3:22) who possessed miraculous gifts and abilities (see, for example, Exodus 4), there is no reason why he could not have written the account of his death in advance (*see* MIRACLES, APOLOGETIC VALUE OF).

However, since there are no signs in the text of this being a prophecy, it may have been written by his successor. Such scholars as R. D. Wilson, Merrill Unger, Douglas Young, R. Laird Harris, Gleason L. Archer, Jr., and R. K. Harrison easily accept that the final chapter of Deuteronomy was likely appended by Joshua or someone else in Moses' inner circle. This, in fact, supports the view of the continuity of the writing prophets, a theory that each successor

prophet writes the last chapter of his predecessor's book. The addition of a chapter on Moses' funeral by another prophet in accordance with the custom of the day in no sense takes away from the belief that Moses was the author of everything up to that final chapter. This certainly doesn't conform to the J-E-P-D scenario.

Parenthetical Sections. The parenthetical sections in Deuteronomy 2 need not be later redactions. Authors often use editorial (e.g., parenthetical) material in their own writings. Such an addition was made to the previous sentence in this paragraph. No earlier manuscripts omit them. This section fits into the text. So there is no compelling evidence to suggest that they were the work of a later redactor.

But even if parenthetical comments were added into the text, this would not change anything Moses wrote in the rest of the text, nor detract from his claim to authorship of the inspired text. Many evangelical scholars are willing to admit that comments like these could have been made by later scribes to elucidate the meaning of the text. If they are additions, they are uninspired changes that are subject to the same textual debate as Mark 16:9–20 and John 8:1–11 . One can argue on the basis of internal and external evidence whether they should be considered part of the inspired text of Scripture. And, like the King James Version rendering of 1 John 5:7 on the Trinity, if there is no good evidence, the text should be rejected. Lacking that kind of evidence, for this passage it seems best to consider it an editorial comment by Moses himself. In neither case is the Mosaic authorship of the inspired text of the Pentateuch brought into question.

Moses and Genesis. As to the composition of Genesis, God could have revealed the story of beginnings to Moses, as he did other supernatural revelations (for example, Exodus 20). Moses was on the Mount for 40 days, and God could have revealed to him the history up to his time.

Since there is no clear indication in the text that this is what happened, there is perhaps better reason to think that Moses compiled, rather than composed, the record of Genesis. There is indication that Genesis was a compilation of family documents and oral history that had been carefully passed down. Each section has attached to it a phrase "This is the history of . . . " (NKJV) or "account of" (NIV). These phrases occur throughout the book of Genesis (2:4 ; 5:1 ; 6:9 ; 10:1 , 32 ; 11:10 , 27 ; 25:12 , 19 ; 36:1 ; 37:2), tying it together as a series of family records and genealogies. Sometimes the accounts are even called a "book" (5:1 NKJV) or "written" (NIV) account. As leader of the Jewish people, Moses would have had access to these family records of past history and could have compiled them into the form we know as the book of Genesis.

Different Names for God. Critics have argued that different names for God in different passages indicate different authors. They point to Genesis 1 , where the alleged Elohist (E) author uses *Elohim* for God exclusively. Yet in Genesis 2 the phrase *Yahweh Elohim* ("Lord God") is used. The use of *Yahweh* (or Jehovah) is said to indicate the hand of the Jehovist (J).

---

nkjv New King James Version
niv New International Version

But this argument fails. The same kind of thing occurs in the *Qur'an* , which is known to have one source, Muhammad. The name *Allah* is used for God in suras 4, 9, 24, and 33, but *Rab* is used in suras 18, 23, and 25 (Harrison, 517). In the *Qur'an* the names are used in different chapters. In Genesis they are interspersed within the same chapter or section, leading to some incredible dissections of the text. Even J-E-P-D scholars cannot agree where to draw all the lines.

The more natural explanation is that different names of God are used, depending on the subject and aspect of God being discussed. The majestic *Elohim* is an appropriate word when speaking of creation, as in Genesis 1 . *Yahweh* the Covenant- maker is more appropriate when God engages people, as in Genesis 2–3 .

Writing Style. J-E-P-D critics say that the Pentateuch reflects a style of writing and literary forms from a much later period. For example, the Deuteronomist (D) uses seventh-century style and structure. But this contention also cannot be grounded in fact. Archaeological discoveries show that the literary form used in Deuteronomy is, in fact, an ancient one throughout the Near East. Moses follows as a literary device the suzerainty treaties made between kings and their subjects (see Kline).

The argument makes an assumption that is not true in literary history. The critics assume that Moses could not have written in more than one style. As a well-educated Egyptian he had been exposed to suzerainty treaties and every other narrative and artistic writing form then available. Good modern authors change style and form as they change in their own craft and for effect. Sometimes they may use different forms within a single work. A notable example is C. S. Lewis . Bible critics would go crazy if confronted with one author's name over children's stories, in-depth literary critiques, scholarly analysis, allegorical satire, science fiction, biographic narrative, and logic-driven disputations and treatises.

Late Place Names. Late names of places are easily explained as later interpolations. For example, this author's birth town was called Van Dyke, Michigan, but today one finds it on the map as Warren. Later copyists may have updated some place names so the people would better understand. In Joshua 14:15 this is almost certainly the case, since a parenthetical notation has entered the text which says "(Hebron used to be called Kiriath Arba after Arba, who was the greatest man among the Anakites)."

Possession of the Land. Deuteronomy 2:13 refers to Israel in the "land of their possession," which did not take place until after Moses died. Hence, it is argued that Moses could not have written these words.

As Old Testament commentators Kiel and Delitzsch concluded, this reference is to "the land to the east of the Jordan (Gilead and Bashan), which was conquered by the Israelites under Moses and divided among the two tribes and a half, and which is described in chap. iii.20 as the 'possession' which Jehovah had given to these tribes" (Kiel and Delitzsch, 1:293). Also, being a parenthetical reference, 2:13 could have been a later, non-Mosaic interpolation into the original text. Whatever evidence this provides for later editing, it does not support J-E-P-D authorship, nor negate Mosaic authorship of the original inspired text.

Mosaic Authorship of Exodus. There is strong evidence that Moses wrote Exodus. First, no other known person from that period had the time, interest, and ability to compose such a record. Second, Moses was an eyewitness to the events of Exodus through Deuteronomy and so was uniquely qualified. Indeed, the record is a vivid eyewitness account of spectacular events, such as the crossing of the Red Sea, the receiving of the commandments, and the wanderings.

Third, from the earliest known rabbinical records, these books have unanimously been ascribed to Moses. This is true of the Talmud, as well as the works of such Jewish writers as Philo and Josephus .

Fourth, the author reflects a detailed knowledge of wilderness geography (see, for example, Exodus 14). This is highly unlikely for anyone other than Moses, who spent forty years as a shepherd, as well as forty years as a national leader, in the region. The same argument can be used of the detailed reflections of customs and practices of a variety of peoples described throughout the Pentateuch.

The book's internal claim is that "Moses wrote all the words" (Exod. 24:4). If he did not, it is a forgery. Moses' successor, Joshua, claimed that Moses wrote the Law. In fact, when Joshua assumed leadership, he reported that he was exhorted by God: "Do not let this book of the Law depart from your mouth" (Josh. 1:8); he was told to "be careful to obey all the law my servant Moses gave you" (1:7). After Joshua, a long chain of Old Testament figures attributed the books of the law to Moses, among them Josiah (2 Chron. 34:14), Ezra (Ezra 6:18), Daniel (Dan. 9:11), and Malachi (Mal. 4:4). Jesus and New Testament writers also attributed the words to Moses. Scripture in other contexts refers to the Pentateuch as the books or law of Moses.

Jesus, quoting from Exodus 20:12 , used the introduction, "for Moses said" (Mark 7:10 ; cf. Luke 20:37). The apostle Paul declared that "Moses describes in this way the righteousness that is by the law" as he cited Exodus 20:11 (Rom. 10:5). So there is confirmation of Jesus, who by miracles was attested to be the Christ, the Son of God (*see* CHRIST, DEITY OF ; MIRACLES, APOLOGETIC VIEW OF). And there is apostolic authority, which was also confirmed (*see* MIRACLES IN THE BIBLE).

Pharaoh of the Exodus. The predominant view of modern biblical scholars is that the Pharaoh of the Exodus was Rameses II (*see* BIBLE CRITICISM). If so, the Exodus took place about 1270 to 1260 B.C . However, the Bible (Judg. 11:26 ; 1 Kings 6:1 ; Acts 13:19–20), dates the Exodus to about 1447 B.C . Given the commonly accepted dating, that would make the Pharaoh of the Exodus Amenhotep II, an identification archaeologists and biblical scholars have traditionally rejected.

An Early Exodus. Modern scholarship has raised Rameses II and the mid-thirteenth century to the level of unassailable doctrine, but there is sufficient evidence to challenge conventional wisdom about the Exodus, as well as the traditional dating for many pharaohs. Alternative explanations are providing a better accounting of all the historical data, and making 1447 B.C . look like a credible departure date for the Israelites.

The Bible is very specific in 1 Kings 6:1 that 480 years passed from the Exodus to the fourth year of Solomon's reign, about 967 B.C . This would place the Exodus around 1447. This fits also with Judges 11:26 , which affirms that Israel spent 300 years in the Land up to the time of Jephthah (about 1100). Likewise, Acts 13:20 speaks of 450 years of judges from Moses to Samuel, who lived around 1000. Paul said in Galatians 3:17 there were 430 years from Jacob to Moses. That would be from 1800 to 1450. The same figure is used in Exodus 12:40 . If the Bible is wrong at this point, it is certainly consistent and allows for no thirteenth-century exodus.

Possible Solutions. There are at least three ways to reconcile the biblical data with the fifteenth-century date. The first posits the possibility of an early Rameses. The second offers a basis for adjusting the archaeological periods and the third reinterprets the chronology of Egyptian rulers (*see* ARCHAEOLOGY, OLD TESTAMENT). Because these changes would shake up a lot of widely held opinions about ancient history, they have faced much opposition, but the evidence is strong.

The generally accepted date was based on three assumptions:

1. "Rameses" in Exodus 1:11 was named after Rameses the Great

2. There were no building projects in the Nile Delta before 1300.

3. There was no great civilization in Canaan from the nineteenth to the thirteenth centuries.

All of these, if true, would make the conditions described in Exodus impossible before 1300. However, the name *Rameses* runs throughout Egyptian history and the city mentioned in Exodus 1 may have honored an earlier nobleman by that name. Since Rameses the Great is Rameses II, there must have been a Rameses I, about whom nothing is now known. In Genesis 47:11 , the name Rameses is used to describe the area of the Nile Delta where Jacob and his sons settled. This may be the name that Moses normally used to refer to the entire geographical area. Rameses, then, need not refer to a city named after a king at all.

Second, building projects have now been found at Pi-Ramesse (Rameses) and at both possible sites for Pithom dating from the nineteenth to the seventeenth centuries, the era in which the Israelites arrived. These show strong Palestinian influence. Digging done in 1987 shows that there was building at Pi-Ramesse and one of the Pithom sites in the 1400s. So whether Exodus 1:11 refers to the building projects that were going on at the time the Israelites became slaves, or what they were working on at the time of the Exodus, there is evidence building was underway. Surface surveys yielded no signs of civilizations like the Moabites and the Edomites prior to Israel's entrance to the land, but digging deeper has found many sites that fit into the period. Even the man who did the initial research changed his position later. So all three of the arguments for dating the Exodus after 1300 have been proven false. Now if these three assumptions are wrong, then there is no reason to suppose a late date for the Exodus and we can look for evidence to support the Bible's date of about 1447.

Bimson-Livingston Revision. John Bimson and David Livingston proposed in 1987, that the date of the shift from the Middle Bronze to Late Bronze ages has been inaccurate and must be moved. At issue is evidence of destroyed cities in Canaan. Most signs of a serious invasion or conquest have been dated to about 1550 B.C .—150 years too early. This date is assigned to these ruins because it is supposed that they were destroyed when the Egyptians drove out the Hyksos, a hostile nation that dominated Egypt for several centuries. Bimson suggests moving the end of the Middle Bronze Age would show that this destruction was done by the Israelites, not the Egyptians.

Can such a change be justified? The Middle Bronze (MB) was characterized by fortified cities; the Late Bronze (LB) had mostly smaller, unwalled settlements. So whatever caused the destruction of these cities gives us our date for the period division. The evidence is sparse and unclear. Also, there is doubt that the Egyptians, just establishing a new government and armies, were in any position to carry out long sieges throughout Canaan. Positive evidence has come from recent digs which have shown that the last phase of the Middle Bronze period needs more time than originally thought, so that its end is closer to 1420.

This corresponds with the Bible, where the cities in Canaan are "great and fortified up to heaven" (Deuteronomy 1:28) just as Moses said. Also, the extent of destruction, with only a few exceptions, matches the biblical description. "In deed, generally speaking, the area in which destruction occurred at the end of [the Middle Bronze period] corresponds with the area of Israelite settlement, while cities that survived lay outside that area."

Some archaeologists ask where the evidence is of Israelite dominance of the culture in the Late Bronze. We have always held them responsible for the shift from the Bronze Age to the Iron Age in 1200. The problem with that view is that those changes are the same all over the Mediterranean, not just in Palestine. The Hebrews could not be responsible for such widespread change. In fact, as nomads, they probably brought nothing with them, lived in tents for some time, and bought their pottery at the Canaanite markets. Besides, the book of Judges shows that after Israel entered the land, they did not dominate anybody for several hundred years. They were dominated by everyone around them.

Bimson summarizes his proposal in this way:

> We have proposed: (1) a return to the Biblical date for the conquest of Canaan (i.e., shortly before 1400 B.C .), and (2) a lowering of the date for the end of the Middle Bronze Age, from 1550 B.C . to shortly before 1400 B.C . The result is that two events previously separated by centuries are brought together: the fall of Canaan's MB II cities becomes the archaeological evidence for the conquest. These twin proposals create an almost perfect match between the archaeological evidence and the Biblical account.

Velikovsky-Courville Revision. A third possible solution sees a problem in the traditional view of Egyptian history. The chronology of the whole ancient world is based on the order and dates of the Egyptian kings. Mostly, we know this order from an ancient historian named Manetho, who is quoted by three other historians. There are also monuments that give partial lists. This order has been considered unassailable; however, the only absolutely fixed date is its end, when Alexander the Great conquered Egypt. Velikovsky and Courville assert that 600 extra years in that chronology throw off the dates for events all around the Near East.

Setting aside the idea of Egyptian history as fixed, there are three pieces of evidence where the history of Israel matches up with the history of Egypt. This kind of match, where the same event is recorded in both countries, is called a synchronism. The three places we find synchronisms are the plagues of Moses, the defeat of the Amalekites, and the reign of Ahab.

A very old papyrus written by an Egyptian priest named Ipuwer and, though various interpretations have been given, it tells of two unique events: a series of plagues and the invasion of a foreign power. The plagues match very well with the record of Moses'plagues in Exodus 7–12 . It speaks of the river turning to blood (cf. Exod. 7:20), crops consumed (Exod. 9:25), fire (Exod. 9:23–24 ; 10:15), and darkness (Exod. 10:22). The final plague, which killed Pharaoh's son is referred to also: "Forsooth, the children of princes are dashed against the walls. . . . The prison is ruined. . . . He who places his brother in the ground is everywhere. . . . It is groaning that is throughout the land, mingled with lamentations" (Papyrus 2:13; 3:14; 4:3; 6:13). This parallels the biblical account which says, "the Lord struck all the first-born in the land of Egypt, from the first-born of the Pharaoh who sat on his throne to the firstborn of the captive that was in the dungeon . . . and there was a great cry in Egypt, for there was no home where was not someone dead" (Exod. 12:29–30). Immediately following these disasters, there was an invasion of "a foreign tribe" which came out of the desert (Papyrus 3:1). This invasion must have been the Hyksos, who dominated Egypt between the Middle Kingdom and the New Kingdom.

The monolith of el-Arish tells a similar story of darkness and suffering in the land in the days of King Thom. It also relates how the Pharaoh "went out to battle against the friends of Apopi (the god of darkness)," though the army never returned: "His majesty leapt into the so-called Place of the Whirlpool." The place of the incident is Pi-Kharoti, which may be equivalent to Pi-ha-hiroth, where the Israelites camped by the sea (Exod. 14:9). This is very interesting because the name of the city built by the Israelites is Pi-Thom, "the abode of Thom." And the king who reigned just before the Hyksos invasion was (in Greek) Timaios. But the Egyptian date for King Thom is about 600 years too early, around 2000 B.C . Either the Egyptian chronology is wrong, or history repeated itself in very unusual ways.

According to Velikovsky, the Hyksos should be identified as the Amalekites, whom the Israelites met before they even reached Sinai (Exod. 17:8–16). They might have reached Egypt within days after the Israelites left. The Egyptians referred to them as Amu and Arabian historians mention some Amalekite pharaohs. But the scriptural parallels are quite convincing. As the false prophet Baalam faced Israel, he blessed them despite his instructions, but when he turned, facing Egypt, “he looked on Amalek . . . and said, ‘Amalek was the first of the nations’ ” (Num. 24:20). Why did he curse Amalek rather than Egypt, unless Egypt was under Amalekite domination? Also, the names of the first and last Amalekite kings in the Bible (Agag I and II, see Num. 24:7 and 1 Sam. 15:8) correspond to the first and last Hyksos kings. This would indicate that the Hyksos entered Egypt just after the Exodus and remained in power there until Saul defeated them and released the Egyptians from bondage. This would explain the genial relations that Israel had with Egypt in David and Solomon’s time. In fact, Velikovsky shows striking similarities between the Queen of Sheba and the Egyptian queen Hatshepsut. She is said to have journeyed to the Divine Land and the gifts that she received there are much like those of Solomon to his visitor (see 1 Kings 10:10–22). She also built a temple in Egypt that is similar to the temple of Solomon. But according to Egyptian chronology, she lived before the Exodus. Only if this chronology is revised can this parallelism be explained. The invasion of Thutmose III into Palestine might also be equated with the attack of Shishak (2 Chron. 12:2–9).

The third synchronism is a series of letters (on clay tablets) called the el-Amarna letters. These are correspondence between the rulers in Palestine (Jerusalem, Syria, and Sumur) and the pharaohs Amenhotep III and his son Akhnaton. The Palestinians were concerned about an army approaching from the south called the Habiru, who were causing great destruction. On the basis of such a description, it has traditionally been held that these letters speak of the Israelites entering Canaan. Velikovsky shows that a closer look at these tablets reveals another picture entirely. First, Sumur can be identified as the city of Samaria, which was not built until after Solomon (1 Kings 16:24). Second, the “king of Hatti” threatens to invade from the north, which seems to be a Hittite invasion. Third, none of the names in the letters match the names of rulers given in the book of Joshua. In other words, the political situation is all wrong for these letters to have come from the time of the Exodus. If we move their date to the time when Ahab ruled from Samaria and was threatened by both the Moabites and the Hittites, then all of the names, places and events can be located in Kings and Chronicles, even to the names of the generals of armies. But this dates Amenhotep III 500 years later than the standard chronology. Either the chronology is wrong or one has to maintain that history repeated itself exactly half a millennium later.

The picture that emerges is a consistent one only if the Israelite history is used to date Egyptian events. Such an interpretation also requires a new chronology for Egyptian history. Courville has shown that the lists of Egyptian kings should not be understood as completely consecutive. He shows that some of the “kings” listed were not pharaohs, but local rulers or high officials. Among those mentioned are Joseph (Yufni) and Moses’ adopted father Chenephres, who was a prince only by marriage.

Recognition that “kings” of the Thirteenth Dynasty were actually princes over local regions or subrulers provides us with insight into what Manetho regarded as comprising a dynasty. It was evidently not outside his thinking to give the names of the main line of kings as composing one dynasty and then to return on the time scale to pick up a line of secondary rulers as a distinct

dynasty. By labeling these secondary rulers as kings the ancient historian caused an erroneous and grossly expanded chronology of Egypt. Working out this new chronology places the Exodus about 1440 B.C . and makes the other periods of Israelite history fall in line with the Egyptian kings mentioned.

Conclusion. The evidence is strong for a fifteenth-century date for the Exodus. This is at odds with the generally accepted date for Egyptian kings. But it may be that the conventional wisdom for Bronze Age dating, and certainly the chronology of Egyptian rulers may need to be drastically changed. More research and excavations will be needed to learn what theories come closest to describing the flow of events in Egypt and Canaan, but it appears that Bible dating is more accurate than had been suspected, even more accurate than the knowledge collected in the field of study.

Pharaoh, Hardening of. In Exodus 4:21 God declares: "I will harden Pharaoh's heart, so that he will not let the people go." But if God hardened Pharaoh's heart, then Pharaoh cannot be held morally responsible for his actions, since he did not do it of his own free will, but out of constraint (cf. 2 Cor. 9:7 ; 1 Peter 5:2). There appears to be a serious problem here for God's love and justice (*see* EVIL, PROBLEM OF). If God loves everyone, then why did he harden Pharaoh's heart so he would reject God's will? If God is just, why blame Pharaoh for his sin when it was God who hardened his heart to sin?

Proposed Solutions. There are two basic responses to this problem from differing theologies.

The Hard Determinist's Response. Calvinists or hard determinists (*see* DETERMINISM) emphasize God's sovereignty and claim he has the right to harden or soften any heart as he chooses. As for the justice of God, the answer is Paul's in Romans 9:20 : "But who are you, O man, to talk back to God? Shall what is formed say to him who formed it, 'Why did you make me like this?' " God's salvific love is given to the elect. Again, citing Paul, they insist that "God has mercy on whom he wants to have mercy, and he hardens whom he wants to harden" (Rom. 9:18–19). The strong Calvinist's answer to the problem, then, is that Pharaoh was a hardened unbeliever to begin with, and God merely hardened him by withdrawing common grace that softens the effects of the fall in the unbelieving heart. He allowed Pharaoh to intensify his

rebellion, as an unbeliever will do without divine restraint. God did this for the purpose of showing his power and glory. Pharaoh would not have truly repented without positive intervention from God's saving power.

This position is based on an unacceptable voluntaristic view (*see* VOLUNTARISM), wherein God can will either of two opposite actions. This seems to make God arbitrary about what is good. Contrary to the determinist, God is all-loving (John 3:16 ; Rom. 5:6–8 ; 2 Cor. 5:14–15 ; 1 John 2:1) and does not will that any should perish (2 Peter 3:9). Regardless of what the determinist says, God's justice is impugned if he hardens people in sin against their will. Free choice and compulsion are contradictory. As Paul noted about giving, "Each man should give what he has *decided* in his heart to give, not reluctantly or under compulsion, for God loves a cheerful giver" (2 Cor. 9:7). Peter added that leaders of the church in serving God should work, "not because you must, but because you are willing" (1 Peter 5:2).

The Response of Soft Determinists. Others respond to the problem of the hardening of Pharaoh's heart by pointing out that God did not harden Pharaoh's heart contrary to Pharaoh's free choice. The Scripture makes it clear that Pharaoh hardened his own heart. It declares that pharaoh's heart "grew hard" (Exod. 7:13), that he "hardened his heart" (Exod. 8:15), and that "Pharaoh's heart grew hard" the more God worked on it (8:19). Again, when God sent the plague of the flies, "Pharaoh hardened his heart at this time also" (8:32). This same or like phrase is repeated several times (see also 9:7 , 34 , 35). In fact, with the exception of God's prediction of what would happen (Exod. 4:21), the fact is that Pharaoh hardened his own heart first (7:13 ; 8:15 , etc.), and God hardened it later (cf. 9:12 ; 10:1 , 20 , 27).

Scholars have pointed out that different Hebrew words for "harden" are used in this passage (Forster, 1555–68). *Qashah* , meaning "stubbornness" is used twice, once where God is the agent and once where Pharaoh is (7:3 ; 13:15). In both cases it is used of the overall process, not a particular act. *Kabed* , meaning "heavy" or "insensitive" is used many times, not only of Pharaoh's heart, but of the plagues. God sent a "heavy" swarm of flies, hailstones, and swarm of locusts. *Chazaq* , meaning "strength" or "encouragement" is used of Pharaoh's heart. When Pharaoh is the agent of hardening *kabed* is used. When God is the agent, *chazaq* is used. "Although Pharaoh is making his own moral decision, God is going to give him the strength to carry it out," writes Roger Forster (72). On this understanding there is nothing morally sinister about God "hardening," Pharaoh, and it is an understanding with which moderate Calvinists and Arminians could concur.

The sense in which God hardened his heart is similar to the way the sun hardens clay and also melts wax. If Pharaoh had been receptive to God's warnings, his heart would not have been hardened by God. But when God gave Pharaoh a reprieve from the plagues, he took advantage of the situation. "But when Pharaoh saw that there was relief, he hardened his heart and did not heed them [Moses and Aaron], as the Lord had said" (Exod. 8:15).

The question can be summarized as follows: does God harden hearts?

God does not harden hearts	**God hardens hearts**

initially	subsequently
directly	indirectly
against free choice	through free choice
as to their cause	as to their effect

Conclusion. If God is hardening Pharaoh's heart (or anyone else's) in accordance with their own inclination and choice, then God cannot be charged with being unjust, unloving, or acting contrary to their God-given free choice. And the Scriptures are clear that Pharaoh hardened his own heart. So, what God did was in accord with Pharaoh's own free choice (*see* FREE WILL). Events can be determined by God in his foreknowledge, yet free from the standpoint of human choice. Jesus hit this balance when he said in Matthew 18:7 : "Such things must come, but woe to the man through whom they come."

Philo Judaeus. Philo Judaeus (ca. 20 B.C.–A.D . 50) was a Jewish philosopher and exegete from Alexandria, Egypt. Because of his affinity to Platonic philosophy, he is known as the Hebrew Plato. His numerous writings include *Against Flaccus, Procurator of Egypt* ; *Legum Allegoriae* ; *On Providence* ; *On the Eternality of the World* ; *Questions and Solutions in Genesis and Exodus* ; *The Contemplative Life* (*De Vita Contemplativa*), and *The Life of Moses* .

Philo had a considerable influence on Christian leaders of the "Alexandrian School," such as Clement of Alexandria and Justin Martyr. His allegorical method for interpreting Scripture also influenced Origen , Ambrose, Augustine, and others. Other elements of his philosophy made an impact on later Christian thinking, including his use of proofs for God's existence, his Logos doctrine, and his views of the unknowability of God, negative language about God, *ex nihilo* creation (*see* CREATION, VIEWS OF), and particular providence.

Philo's Philosophy. Philo attempted to interpret Scripture in terms of Greek philosophy. His approach was eclectic and innovative.

Concept of God. Philo taught that human beings can know God, whether directly from divine revelation or indirectly through human reason. Various forms of proof for God included Plato's argument for a *Demiurgos* in *Timaeus* and Aristotle 's cosmological argument for an Unmoved Mover. Philo applies the Unmoved Mover to the existence of the world, not just motion. He even adopted the stoic argument for a Mind (God) within nature to show there was a transcendent God beyond nature.

Philo believed such arguments could only show the existence of God, not his nature. For him God was ineffable and unnamed. Only negative knowledge was possible. Positive terms can only describe God's activity, not his essence.

Mysticism and Allegorism. Since God cannot be known in a positive way, Philo, as other Platonists (*see* PLATO) and neo-Platonists (*see* Plotinus), resorted to mysticism. Even God's revelation in Scripture yielded no positive knowledge of God's nature, and could not be taken literally when it spoke of God. Only an allegorical interpretation could yield the true meaning.

Creation and Providence. As a Jewish theist (*see* THEISM), Philo believed in *ex nihilo* creation (*see* CREATION, VIEWS OF). As a Platonist he held that matter existed before creation. In a creative attempt to reconcile these views he posited that there were two creative acts of God, one by which he brought matter into existence, and the other by which he created the world out of preexisting matter.

Since God is all-powerful, he is able to intervene miraculously in the laws of nature he established. However, he does so purposefully. Contrary to Greek philosophy, God has not only general providence over the world but special and particular providence.

Logos. In interacting with Greek philosophy, Philo borrowed certain Platonic concepts to express his own theistic views. His concept of the *Logos* is a case in point. In *De Opificio* he describes the *Logos* as a cosmological principle, saying,

> God, assuming, as God would assume, that a beautiful copy could never come into existence without a beautiful model . . . when He willed to create this visible world, first blocked out the intelligible world, in order that using an incorporeal and godlike model he might make the corporeal world a younger image of the older. . . . When a city is being founded . . . sometimes there comes forward a man trained as an architect, and after surveying the favorable features of the site he first makes an outline in his mind of almost all the parts of the city that is to be built. . . . Then, receiving an impression of each of them in his soul, as if in wax, he models a city of the mind. Looking to this model he proceeds to construct the city of stone and wood, making the corporeal substance resemble each of the incorporeal ideas. In like manner we must think of God. [Dodd, 67]

The similarities and differences between Philo's *Logos* and that of John 1 are instructive (*see* LOGOS THEORY). For both the *Logos* is the image of God, the medium of creation, and the means of God's governance of creation. Only in John, however, is the *Logos* truly personal, who became a truly incarnate human being and yet is identical with God in nature (John 1:1–14). C. H. Dodd notes as a decisive difference that John "conceives of the *Logos* as incarnate, and of . . .

actually living and dying on earth as a man. This means that the *Logos* , which in Philo is never personal . . . is in the gospel fully personal, standing in personal relations both with God and with men, and having a place in history." Further, "the *Logos* of Philo is not the object of faith and love. The incarnate *Logos* of the fourth Gospel is both lover and beloved" (Dodd, 73).

Evaluation. Philo is to be criticized for his purely negative theology (*see* ANALOGY, PRINCIPLE OF), his mysticism , his allegorical method of interpretation, and his excessive attraction to Greek philosophy, which led him into errors. His Logos doctrine was wrongly applied to Christ (*see* LOGOS THEORY) by later writers.

Plato.

Life and Works of Plato. Plato was born in 428 B.C ., the year of Pericles' death. He became a disciple of Socrates at the age of sixteen. Plato was twenty-nine when his mentor died.

His writing career is divided into four periods. In the first period he wrote *Apology, Crito, Pro tagoras,* and *Republic* (Bk I). In the second period he composed *Cratylus, Gorgias,* and *Lysis* . Between the second and third period he founded his Academy. In this third period he produced *Meno, Phaedo, Phaedrus, Symposium,* and the rest of the *Republic* . Before his last period of writing his most famous pupil, Aristotle was born when Plato was forty-three. In his fourth and final period of literary composition Plato wrote *Parmenides, Theaetetus, Sophist, Statesman, Philebus, Timaeus, Critias,* and *Laws.*

Alexander the Great was born when Plato was seventy-two (in 347 B.C .). Just fourteen years later (in 333 B.C .) Alexander began to conquer the world and spread with it the Greek language and culture that has dominated so much of thought since that time.

Plato's Epistemology. Plato believed in innate ideas. Indeed, he believed these were the ideas the mind beheld in the world of pure Forms before birth. The ideas were irreducibly simple, eternal forms (*eidos*) that flowed from the one absolute Form, the Good (*Agathos*). Since they were beheld by the soul in a preincarnate state, all that was necessary was to recollect them. This was accomplished by a dialectical method dialogue illustrated in *Meno* when even a slave boy was able to do Euclidean geometry by simply being asked the right questions. Of course, if someone does not get it right in this life, there is another reincarnation.

When one reasoned back to the foundation of thought he found absolute first principles (*see*) of knowledge that served as the foundation of all knowledge. Skepticism, agnosticism (*see*), and relativism (*see* TRUTH, ABSOLUTE NATURE OF) are self-defeating (*see* SELF-REFUTING STATEMENTS).

Plato's Metaphysics. Plato believed the universe is eternal, an eternal process by which the Creator (*Demiurgos)* beheld the Good (the *Agathos*) and overflowed with Forms (*Eidos*) which informed the material world (*Chaos*) forever, forming it into a cosmos. Creation, then, is an eternal process of *ex materia* creation (*see* CREATION, VIEWS OF). Thus, reality is a basic dualism of Form and matter, both being co-eternal.

As Plato set forth in the famous cave analogy in his *Republic,* the physical world is a world of shadows. The real world is the spiritual world of pure Forms. Each physical thing is structured or shaped by these Forms or universals, as opposed to nominalism (*see*), which denies the reality of universals or essences. For example, all human beings share in the one Form or Essence of humanness. And humanness exists as a pure Form in the real world, the spiritual one behind this material world. And each of these pure Forms come from the Form that contains all Forms in its absolutely perfect nature.

Plato's View of God. For Plato God was not the absolute Form (*Agathos*) but the Former (the *Demiurgos*). His argument for a Demiurgos (World Former) took the following form: (1) The cosmos would be a chaos without forms. Pure stuff without structure is shapeless. (2) Chaos (formless) is evil, and cosmos (form) is good. (3) All forms of good in the world come from a Good Former beyond the world (chaos cannot form itself into cosmos). (4) The Former cannot make good forms without a Form of Good after which to pattern them. (5) The Form after which changing forms are formed must be an unchanging Form. Only the unchanging can be basis of the changing. Only the Intelligible (Ideal) can be basis for Ideas. (6) Therefore, there is both a Former (*Demiurgos*) and the Form (Good) after which all things are formed.

To complete his Triad of ultimates, Plato offered an argument for a First Mover (or World Soul). Just as the Form is needed to explain the source of pure Forms, and the Former is necessary to account for the existence of formed things, even so a First Mover is needed to explain the existence of motion in the world. Plato's reasoning takes this shape: (1) Things move. This is known by observation. (2) But whatever moves is either moved by another or else is self-moved. (3) Self-movers (souls) are prior to non-self-movers. For what does not move itself is moved by what does. (4) Self-movers are eternal; otherwise there would be no motion, since something inert cannot move itself. Plato adds that (5) there must be two self-movers in the universe, one to account for the regular motion (good) and another to explain the irregular

motion (evil). (6) The one who accounts for the good motion is the best, because it is the Supreme Mover, which he calls World Soul. (7) Hence, there is a Supreme Mover (Soul).

The Influence of Plato on Later Thought. Alfred North Whitehead said Western philosophy is a series of footnotes on Plato. This is largely true. Specific influences are manifest in Plotinus, St. Augustine , gnosticism, asceticism, mysticism , innatism, dualism, allegorism, and panentheism . Since Plato held a form of Finite Godism, John Stewart Mill, William James , Brightman, Peter Bertocci, Whitehead, and Charles Hartshorne were also influenced by Plato. Likewise, Friedrich Schleiermacher , Adolph Harnack, and other liberals and humanists (*see* HUMANISM, SECULAR) who hold to man's inherent perfectibility stem from Plato, who believed that to know the good is to do the good. Salvation is by education.

An Evaluation of Plato's Views. Plato's views have numerous enduring values. An incomplete list would include at least the following:

Positive Dimensions. There are numerous positive values in Plato's thought, many of which have been helpful in expressing and defending the Christian faith. Among these are the following.

Foundationalism . Plato's defense of first principles has been a great help to Christian apologists in arguing against agnosticism and conventionalism .

Truth as correspondence. Like other classical philosophers, Plato defined truth as correspondence, thus lending support to the Christian conviction that metaphysical truth is what corresponds to reality. Truth is objective and not merely subjective (*see* TRUTH, NATURE OF).

Epistemological absolutism. Not only was truth objective for Plato, but it was absolute. Plato's arguments are still used by Christian apologists to defend their belief in absolute truth.

Moral absolutism. Plato also believed in absolute values. This too is in accord with the Christian apologetic task of defending moral absolutes (*see* ABSOLUTES, MORAL).

Ethical essentialism . Not only did Plato believe in moral absolutes but he held that they are anchored in the unchanging nature of the Form (the Good).

Universals. Contrary to nominalism , Plato argued, as do orthodox Christians, that there are universals and essences. Indeed, it is part of Christian belief that God has one essence and three persons and that Christ has two essences or natures united in one person (*see* CHRIST, DEITY OF).

Proofs for God. Plato's proofs for God were a forerunner of later Christian forms of the cosmological argument (*see*) or the argument from perfection (*see* GOD, EVIDENCE FOR) used by Augustine , Anselm , and Thomas Aquinas.

Immortality. Plato defended what all orthodox Christians believe, namely, that human beings have a spiritual dimension to their makeup that is immortal (*see* IMMORTALITY).

A life beyond this one. Another dimension of Plato's thought acceptable to Christians is his belief in a spiritual world beyond this one to which people eventually go after death. Plato posited both a heaven and a hell .

Innate intellectual capacity. Most Christian apologists believe there is an innate, God-given, capacity of the human mind. We are not born absolutely blank but with certain rational capacities and abilities given by God. These are manifest in the universality of first principles such as the law of non-contradiction.

Negative Dimensions. Despite the many positive features of the Platonic system, many of Plato's ideas have been a continual nemesis to Christianity. A few of these are noteworthy.

Metaphysical dualism. Unlike Christianity, which holds to a monarchial creation *ex nihilo* (out of nothing), Plato affirmed a dualism of creation *ex materia,* out of preexisting matter (*see* CREATION, VIEWS OF). Thus, for Plato the material universe is eternal, not temporal as Christians believe and offer good evidence to support (*see* KALAM COSMOLOGICAL ARGUMENT ; BIG BANG THEORY).

Finite Godism. Unlike the theistic God of Christianity who is infinite in power and perfection, Plato's God was finite. But there is ample evidence to show that God is infinite.

Anthropological dualism. One of Plato's most enduring but troublesome legacies among Christians is his dualistic view of human beings. According to Plato, man is a soul and only has a body. In fact, humans are imprisoned in their bodies. From this both asceticism (denial of the body) and otherworldliness result, neither of which are endorsed by Christianity.

Allegorism. Because Plato believed that matter was less real and less good than spirit, he downplayed the literal understanding of things. In the field of interpretation this leads to looking for a deeper, more spiritual or mystical understanding of a text. From this both neoplatonism (*see* PLOTINUS) and medieval allegorism developed (*see* ORIGEN), a problem still beleaguering the Christian church.

Innatism of ideas. While Plato correctly pointed to an innate dimension of the human mind, many Christians, following Aquinas reject Plato's belief in innate ideas. Some great Christian thinkers, like Augustine, even went so far as to affirm Plato's concomitant idea of recollection of these ideas from a previous existence, only later to have to retract the view.

Reincarnation. Plato's concept of reincarnation, like that of Eastern views, has been condemned by the Christian church and is refuted by good evidence, both biblical and rational (*see* REINCARNATION).

Humanistic optimism. In some respects Plato is the father of Western humanism (*see* HUMANISM, SECULAR). His belief that human beings are perfectible by education is both contrary to the teaching of Scripture and universal human experience.

Pluralistic dilemma. Like other philosophers following Parmenides, Plato never solved the problem of the one and the many (*see* MONISM). He ended up with many irresolvably simple Forms that could not differ from one another in any real way (*see* PLURALISM, METAPHYSICAL).

Theological inadequacy. Some Christians have seen more Christian truth in Plato than there is to see. Plato's Triad of the Form, the Former, and the World Soul is by no means the Christian Trinity , as some have claimed. For one thing, two of them (the Form and the World Soul) are not even persons in any significant sense of the term. For another thing, they do not all share one and the same nature.

Further, Plato and the other Greek philosophers never got their God and their highest metaphysical principle together, as did Christians (see Gilson). In Plato, for example, the Good is the highest metaphysical principle, but the Good is not identified with God. Rather, the Demiurgos, who is inferior to the Good, is God in Plato's system.

Platonic View of God. ***See*** **COSMOLOGICAL ARGUMENT .**

Plotinus. Plotinus (ca. 204–270) was born in Egypt, and in his late twenties he began to study philosophy at Alexandria. Eventually he studied under Ammonius Saccas, the teacher of Origen , for eleven years. Plotinus did not begin to write until he had taught philosophy in Rome for ten years. His work has been extremely influential in both philosophical and religious thought. He followed the worldview of emanational pantheism.

God and the World. Contrary to vedanta pantheism (*see* HINDUISM, VEDANTA), Plotinus held that being or reality is multiple or many. He counted three levels or planes of being. But prior to and beyond being is the One.

The One is absolutely simple, that is, it has no parts; and it is absolutely necessary, that is, it must exist. The One has not just "happened," but it exists by necessity. This absolute Unity must exist, because multiplicity presupposes a prior unity. We can only know what is many if we

know the One. “Unity must precede Reality and be its author” (*Enneads* , 6.6.13; all further citations are from this source.). The One, therefore, is the absolute source of being. The One is beyond and prior to being.

The Indescribable and Unknowable. Plotinus argues that the One transcends all of which it is the source, which is everything in reality: “Certainly this Absolute is none of the things of which it is the source—its nature is that nothing can be affirmed of it—not existence, not essence, not life—since it is That which transcends all these.” Even its own name, the One, it transcends: “And this name, the One, contains really no more than the negation of plurality. . . . If we are led to think positively of the One, name and thing, there would be more truth in silence” (3.8.101).

If the One is truly indescribable, why does Plotinus attempt to describe it? His writing, he says, is a call to vision, which urges on toward the One.

We can know something about the One through its offspring, *being* (6.9.5). Though we cannot speak or know the One, we can speak or know *of* the One in terms of what has come *from* the One. We must keep in mind, however, that our words and thoughts are only pointers, not truly descriptive but only evocative.

Levels of Reality. Nous. The first level of reality is *Nous* (“Mind”). *Nous* is the Divine Mind; it is God but not the highest God. It is pure Being. Of the emanations from the One, *Nous* is the first (5.1.4, 8). When the One emanates outward, and this emanant looks backward upon its source, there arises the simple duality of Knower and Known (6.7.37). This simple duality is *Nous* . *Nous* in turn gives rise to further emanations by bending inward upon itself. It produces particular intellects or forms that turn outward, producing the world soul, which in turn produces the species of individual souls (6.2.22; 6.7.15). The One, Nous, and World Soul form, not a Trinity but an emanational triad. From this tri-level God flow all other things. Creation is *ex deo* , both emanationally and necessarily (*see* CREATION, VIEWS OF).

World Soul. The second level of reality, the *World Soul* , is a middle position between *Nous* and the corporeal world. It reflects the *Nous* and organizes the corporeal. The *World Soul* is even more multiple than *Nous* , for it is further from the absolute Unity of the One. The *World Soul* emanates forth when *Nous* reflects upon itself (6.2.22). The *World Soul* animates the universe in all its multiplicity, giving it a unity or wholeness (3.1.4, 5).

Matter. The third level of reality is *matter* , the most multiple of all. Since the entire emanational process is a necessary unfolding from unity to multiplicity, it is necessary that the last stage is one step away from complete nonexistence. Plotinus describes matter as non-being, but adds that this should not be understood to mean nonexistence. Rather, matter is an image of being, or something further removed than even an image. The further removed something is from the Source of being, the One, the less unity and being it has (6.9.1). Since matter is the most multiple, it “has no residue of good in it” (1.8.7). Since the absolute Unity is absolutely good, each further degree of multiplicity is less good and capable of greater evil (1.8.5). Matter has no good in it, but it does have the capacity for good. Matter is not pure evil itself. It is simply privated of all good (1.8.3), having only the mere capacity for good left in it.

That which is beyond and prior to being, the One, eternally and necessarily unfolds itself as a seed unfolds into a flower. This produces *Nous* , or what Plotinus calls “One-Many.” *Nous* is the One becoming self-conscious, that is, discovering itself. Now when *Nous* reflects inward upon itself it produces knowing beings, and when it reflects outward it produces world soul, or what Plotinus calls “One-and-Many.” From World Soul all else flows, including matter or the “many.”

The One flows outward from unity to multiplicity. And for Plotinus there is also a return flow back to unity. Just as there is a necessity for the many to unfold from the One, there is a need for the Many to return to the One. The process is like the stretching of a gigantic elastic band. It can be stretched so far before it snaps back to the source.

Human Beings. Plotinus believes that human beings are a soul that has a body. The true self is the eternal soul (*see* IMMORTALITY), which is temporarily coupled with a material shell. Through this attachment with matter, the soul becomes contaminated (1.2.4). If a person does not strive toward the ultimate good and unity, and instead is concerned only with matter, the self will become absolutely evil (1.8.13). To be saved and attain ultimate perfection, the person must turn from matter and toward the One. Salvation consists in overcoming the body-soul dualism. This normally requires many cycles of reincarnation. To escape the cycle, a person must turn to the inner by asceticism and meditation.

Destiny. The first step toward deliverance begins in the realm of sense, where some unity has been imposed by the Absolute above (1.6.2–3). By looking at the “beauties of the realm of sense, images and shadow-pictures, fugitives that have entered into Matter,” one comes to realize that “there are earlier and loftier beauties than these” (1.6.3–4). These objects of sense point us to the source (6.9.11). We are not to stop with them but ascend beyond them. So the first step is from the sensible world to the intellectual world of *Nous* .

As the first step involved a move from the external, the second step continues the ascent from the internal, the soul, toward the eternal, *Nous* . This movement is from the lower soul to a higher soul, and then to *Nous* , which is above the soul. Human mind must identify with Mind. Knower and known must become one. This is done through meditation. Even now, however, ultimate Unity has not yet been attained.

The third and last step leads to the highest possible union—oneness with the One. It can be attained only by a mystical (*see* MYSTICISM) union that puts away all multiplicity, even intellect and reason. Says Plotinus, “One wishing to contemplate what transcends the intellectual attains by putting away all that is of the intellect.” The way journeys past knowing, even the highest objects of knowledge, to the intuitional and mystical. In this last stage, everything is absolute unity again. What emanated out has returned. All that flowed from God has and must return (5.5.6; 6.9.4).

Evaluation. Despite positive features in his system (such as God’s transcendence and human immortality), Plotinus’ views are subject to the same criticisms as other forms of pantheism. A few of his essential premises need special evaluation.

The One and Nonbeing. For Plotinus, the Ultimate (One) is beyond being. But the one must be either in the realm of being or nonbeing. There is nothing in between something and nothing. Since the One is not in the realm of being, it must be nonbeing or nothing. But nothing cannot produce something. Yet Plotinus contends that the One produced all being. This is the ultimate metaphysical absurdity.

Effect and Cause. In the Plotinian system the effect turns out to be greater than the cause. For the one produced being but has no being. Mind emerges from the One, but the One as such has no mind. However, water cannot rise higher than its source. An effect cannot be greater than its cause (*see* CAUSALITY, PRINCIPLE OF ; ANALOGY, PRINCIPLE OF).

Following from the principle of causality is the principle of analogy. Since the cause cannot produce what it does not possess, the effect must resemble its cause. Of course, it cannot be identical, since one is producer and the other the produced. One is superior. But, since only being produces being, there must be some actual similarity between cause and effect. The infinite, uncaused Cause of all other being is Being, though it is not finite, nor is it caused. For Plotinus the One does not share any characteristics with its offspring. It is totally "other." This violates the principle of analogy (*see* FIRST PRINCIPLES).

Knowledge of the Ultimate. Plotinus could ascertain no knowledge of the One. It is beyond being and beyond description. All statements about it are negative or equivocal. However, even Plotinus admitted that we cannot know something is "not that" unless we know what "that" is. Negative knowledge presupposes positive knowledge (6.7.29; 6.9.4).

Summary. Plotinus' emanational pantheism begins in unity, which gives rise to increased multiplicity until being almost reaches the point of nonexistence. Then all returns toward increasingly greater unity, until the greatest unity is reached in the absolute unity of the One. Here one becomes one with the One and all with the All.

If words cannot express the Ultimate, Plotinus himself wrote hundreds of pages describing his view of the ultimate. Only absolute verbal and mental mutism is consistent for a mystic (*see* MYSTICISM). Even evocative language or pointers will not suffice. Unless it points to something we can understand, we still have no understanding.

Plotinus, *Enneads*

Pluralism, Metaphysical. Pluralism affirms that reality is found in many, as opposed to one (*see* ONE AND MANY, PROBLEM OF). It stands in contrast to monism, which claims that reality is one. Pantheism is a form of monism, and theism is a form of pluralism. Monists hold a univocal or equivocal notion of being (*see* PLOTINUS). Theists hold an analogical view of being (*see* ANALOGY, PRINCIPLE OF).

Pluralism, Religious. To better understand religious pluralism, several terms related to religion need to be distinguished: *pluralism* , *relativism* , *inclusivism* , and *exclusivism* :

- *Religious pluralism* is the belief that every religion is true. Each provides a genuine encounter with the Ultimate. One may be better than the others, but all are adequate.

- *Relativism* (*see* TRUTH, ABSOLUTE) claims that there are no criteria by which one can tell which religion is true or best. There is no objective truth in religion, and each religion is true to the one holding it.

- *Inclusivism* claims that one religion is explicitly true, while all others are implicitly true.

- *Exclusivism* is the belief that only one religion is true, and the others opposed to it are false.

Christianity is exclusivistic; it claims to be the one and only true religion (*see* CHRIST, UNIQUENESS OF). This places Christians at odds with the modern movements to study comparative religion and work at interfaith communing. Asks Alister McGrath, “How can Christianity’s claims to truth be taken seriously when there are so many rival alternatives and when ‘truth’ itself has become a devalued notion? No one can lay claim to possession of the truth. It is all a question of perspective. All claims to truth are equally valid. There is no universal or privileged vantage point that allows anyone to decide what is right and what is wrong” (“Challenge of Pluralism,” 365).

Equality among World Religions. Pluralist John Hick argues, “I have not found that the people of the other world religions are, in general, on a different moral and spiritual level from Christians.” For “The basic ideal of love and concern for others and of treating them as you would wish them to treat you is, in fact, taught by all the great religious tradition” (Hick, “A Pluralist’s View,” 39). Hick offers as proof the fact that statements similar to the “Golden Rule” of Christianity can be found in other religions (ibid., 39–40).

It is debatable whether practitioners in non-Christian religions can really display what Galatians 5:22–23 calls “the fruit of the Spirit”: love, joy, peace, patience, kindness, goodness, faithfulness, gentleness, and self-control. Certainly non-Christians do loving things and feel the heart emotion of attachment that we call love. And others are gentle, good, kind, and self-controlled. But are they able to manifest *agape* love? One can lead a philanthropic life and even die in a stand for personal beliefs, yet not show God-founded holistic true love (see 1 Cor. 13:3). Christians are to have a qualitatively different kind of love for one another and especially for God. While God’s common grace enables evil people to do good (see Matt. 7:11), only the

supernatural love of God can motivate a person to express true *agape* (cf. John 15:13 ; Rom. 5:6–8 ; 1 John 4:7).

Before one conclude too quickly that William James demonstrated the equality of all forms of saintliness in *Varieties of Religious Experiences* , Jonathan Edwards' *A Treatise on Religious Affections* should be perused. Edwards argues forcefully that manifestations of Christian godliness are unique, a difference in the highest level of Christian and non-Christian piety.

Even if one could demonstrate a kind of moral equality of practice among most adherents of the great religions, this would not in itself prove moral equality among the religions. A person perfectly practicing a lesser moral code may appear to be more moral than a person imperfectly living according to a higher ethical standard. In order to make a fair comparison one must compare the highest moral teachings of the various religions. For another thing, one must compare the best examples of the adherents to each. A close comparison of the attitudes, goals, and motivations, as well as the actions, of Mother Teresa and Mohandas Gandhi would demonstrate the superiority of Christian compassion for the needy. On the modern religious scene, one must also sort out what is inherent to the moral system of another religion and what has become incorporated into it as the result of Christian missionary activity. Hinduism as a system did not generate social compassion in Gandhi. Gandhi was a student of Christianity who seriously considered conversion. He proclaimed his admiration for Jesus' teaching in the Sermon on the Mount. The social compassion found in some forms of current Hinduism is a foreign import from Christianity, the influence of those like Gandhi who had been touched by Christian principles. Even then it fell short of the full-orbed Christian compassion of Mother Teresa.

Finding a moral principle akin to the Golden Rule (cf. Matt. 7:12) is not enough to show moral equality. This is a manifestation of general revelation, the law written by God in the hearts of all (Rom. 2:12–15). When it was lived out at moments of national spirituality, Christian morality has produced dynamic social compassion, while Eastern religions have produced stagnant societies and Islam has brought intolerant ones (Pinnock in Okhlam, 61).

Hick's analysis begs the question. Only by assuming that the moral common denominator of all religions is the standard by which they should all be judged does he arrive at the not-surprising conclusion that they are all equal. But one had to negate the superior aspects of Christian morality or teaching in order to show that Christianity is not superior. Hick seems to acknowledge this tacitly when he confessed that the "Acceptance of some form of the pluralistic view prompts each to de-emphasize and eventually winnow out that aspect of its self-understanding that entails a claim to unique superiority among the religions of the world" (ibid., 51).

Further, the moral manifestation of a belief does not settle the truth question. For example, the fact that there are outwardly moral Mormons does not prove that Joseph Smith was a true prophet. Indeed, there is strong evidence that he is not a true prophet (see Tanner). Among evidence to the contrary are his demonstrably false prophecies (*see* MIRACLE ; PROPHECY AS PROOF OF BIBLE). There is evidence for whether something is true other than the lifestyle of its adherents. Truth is what corresponds to reality (*see* TRUTH, NATURE OF) and, hence, a religion

is true if its central tenets correspond to the real world, not merely whether its followers live a good life or even a better one than adherents of another religion.

Fifth, in the final analysis the moral superiority of Christianity does not rest on our imperfection as Christians but on Christ's unique perfection as our exemplar. It is not based on our fallible moral character but on his impeccable character (John 8:46 ; 2 Cor. 5:21 ; Heb. 4:15 ; 1 John 3:3). In this context, there is clearly a moral superiority of Christianity over all other religions.

Redemptive Equality of Religions. As for the Christian claim of a superior mode of salvation, Hick believes this either begs the question or is not evident in practice. "If we define salvation as being forgiven and accepted by God because of Jesus' death on the cross, then it becomes a tautology that Christianity alone knows and is able to preach the source of salvation." And "if we define salvation as an actual human change, a gradual transformation from natural self-centeredness (with all the human evils that flow from this) to a radically new orientation centered in God and manifest in the 'fruit of the Spirit,' then it seems clear that salvation is taking place within all of the world religions—and taking place, so far as we can tell, to more or less the same extent" (ibid., 43). Further, what is common to all world religions is an adequate response to the Ultimate. "But they seem to constitute more or less equally authentic human awareness of and response to the Ultimate, the Real, the final ground and source of everything" (ibid., 45). There are, of course, "a plurality of religious traditions constituting different, but apparently more or less equally salvific, human responses to the Ultimate. These are the great world faiths" (ibid., 47).

Hick's analysis of salvation beliefs is based on the assumption that all religions have a proper relation to what is really Ultimate. This begs the question. Maybe some are not connected at all to what is really Ultimate (i.e., the true God). Or, perhaps they are not properly related to what is really Ultimate (God).

Hick wrongly assumes that all religions are merely a human response to the Ultimate. But this assumes an antisupernatural view of religion. In fact, it assumes an Eastern pantheistic view of the Ultimate as what transcends all particular cultural manifestations in the various world religions.

This denial of the truth of any particular religion is itself a form of exclusivism. It favors the particular view known as pantheism in order to deny the particularity of a view known as Christian theism. To assume this kind of pantheistic position as a basis for one's analysis of all religions, including nonpantheistic ones, simply begs the question. Or to put it another way, the pluralist who denies that any particular religion is any more true than others is making a particular truth claim.

The pluralist view often degenerates to the position that whatever is sincerely believed is true. This means that it matters not whether one is a passionate nazi, satanist, or member of the Flat Earth Society. Any view would be truth. Sincerity is clearly not a test of truth. Many people have been sincerely wrong about many things.

Finally, this implies that all truth claims are a matter of "both-and," rather than either-or. By this reasoning there could be square circles, wise fools, and educated illiterates. Mutually exclusive propositions cannot both be true. Opposing truth claims of various religions cannot both be true (*see* LOGIC ; FIRST PRINCIPLES). For example, Hindu pantheism and Christian theism affirm mutually exclusive worldviews. Islam denies and Christianity proclaims Jesus' death on the cross and resurrection from the dead three days later. One or the other must be wrong.

The Uniqueness of Christ. As for the Christian dogma about the uniqueness of Christ (*see* CHRIST, UNIQUENESS OF) to be God incarnate in human flesh, Hick contends that there are two main problems: First, Jesus did not teach this uniqueness himself. Second, the concept that Jesus was both God and human lacks coherence.

Hick rejects apparent statements about the uniqueness of Christ in the Gospels because he sees New Testament scholars doing the same thing. "Among mainline New Testament scholars there is today a general consensus that these are not pronouncements of the historical Jesus but words put in his mouth some sixty or seventy years later by a Christian writer expressing the theology that had developed in his part of the expanding church" (ibid., 52–53). Hick cites a list of biblical writers who allegedly agreed that "Jesus did not claim deity for himself" (ibid.).

Hick is misinformed on both points. The historical reliability of the Gospels is now beyond serious dispute (*see* ACTS, HISTORICITY OF ; NEW TESTAMENT, DATING OF ; NEW TESTAMENT, HISTORICITY OF). Claims that Jesus' statements were edited many years later to fit a religious program simply do not square with the facts. The Gospels were available in the forms we now know within the lifetimes of eyewitnesses and contemporaries of the events. Recent evidence seems to be pushing dates earlier. John, thought to be the last Gospel written, was by a participant of the events (John 21 ; 24). Luke was written by a contemporary disciple who knew the eyewitnesses (Luke 1:1–4). The Gospels are reporting, not creating, the words and deeds of Jesus. There is firm support for his unique claims to be God incarnate (*see* CHRIST, DEITY OF).

Hick's second allegation is that "it has not proved possible, after some fifteen centuries of intermittent effort, to give any clear meaning to the idea that Jesus had two complete natures, one human and the other divine?" (ibid., 55). Hick asks, "Is it really possible for infinite knowledge to be housed in a finite human brain" (ibid., 55). Again, "Do we really want to claim that Jesus was literally omnipotent but pretended not to be, as in Mark 6:5 ?" And "while he was good, loving, wise, just, and merciful, there is an obvious problem about how a finite human being could have these qualities in an infinite degree. . . . A finite being cannot have infinite attributes" (ibid., 56).

Hick falls short of claiming that the incarnation involves an outright logical contradiction, though his language could imply that. If it is not a logical contradiction, there is no demonstrated incoherence in the view. Indeed, Hick himself admits that "It is logically permissible to believe anything that is not self-contradictory" (*Metaphor of God Incarnate,* 104). As for the claim that it is difficult to show just how this is so, on the same grounds one would have to reject both much of our common experience as well as modern science (which has difficulty explaining just how light can be both waves and particles).

Second, Hick appears to be misinformed about the orthodox view of the two natures of Christ. His objections assume an unorthodox view known as the monophysite heresy, which confuses the two natures of Christ. His question: "is it really possible for infinite knowledge to be housed in a finite human brain?" (ibid., 55) reveals this confusion. The orthodox view does not claim that there was infinite knowledge in the finite brain of Christ. Rather, it affirms that there were two distinct natures of Christ, one infinite and the other finite. The person of Christ did not have infinite knowledge. He had infinite knowledge only in his infinite nature. As God, he knew all things. As human, Jesus grew in knowledge (Luke 2:52). The same thing applies to Jesus' other attributes. As God, He was omnipotent. As human, he was not (*see* CHRIST, DEITY OF).

Allegations of Intolerance. Another charge is that exclusivism is intolerant. This is directed at the exclusivists' view that one religious view is true and those opposed to it are false. This, to the pluralists, seems a bit of bigotry. Why should only one view have a franchise on the truth?

By this reasoning, pluralists are also "intolerant." They claim their views are true, to the exclusion of opposing views (including exclusivism). And they certainly would not tolerate the position that pluralistic and opposing nonpluralistic views are both true.

If the charge of intolerance is leveled because of the manner in which some exclusivists express their views, nonpluralists have no monopoly on rudeness, intimidation, and poorly thought-out statements. As is demonstrated in the "politically correct" movement on university campuses, pluralists can be as intolerant as anyone else. In fact, there might be more exclusivists than pluralists who act with respect and restraint. However, it should be noted that the very concept of tolerance implies a real disagreement. One does not tolerate that with which he or she agrees. Tolerance presupposes a self-confident view of truth.

Narrow-Mindedness. The tolerance issue is closely related to a favorite allegation of pluralists that nonpluralists are narrow-minded. They claim that their view is true, and everyone else is in error. This seems presumptuous. Why should only exclusivists be in possession of the truth?

The response is that pluralists (P) and exclusivists (E) make an equal claim to truth and error. Both claim that their view is true and whatever opposes it is false. For example, if E is true, then all non-E is false. Likewise, if P is true then all non-P is false. Both views are "narrow." All truth is narrow. After all, 2 plus 3 has only one true answer—5. That is the way truth is.

Intellectual Imperialism. Another charge is that exclusivists are guilty of intellectual imperialism. Exclusivists are totalitarian with regard to truth. They should be more open to input from many sources, not just to one. Some postmodern pluralists go so far as to claim that the very ideas of truth and meaning smack of fascism (cited in McGrath, "Challenge of Pluralism," 364).

This allegation has a certain appeal, especially to those of a particular political mind set, but it is without merit with regard to determining what is true. The way this allegation is often made is as a form of the *ad hominem* logical fallacy. It attacks the person rather than the position.

This objection also makes an unjustified presumption that truth should be more democratic. But truth is not decided by majority vote. Truth is what corresponds to reality (*see* TRUTH, NATURE OF), whether the majority believe it or not. Do pluralists really believe that all views are equally true and good and should be settled on by majority rule? Is fascism or Marxism as good as democracy? Was nazism as good as any other government? Should we have tolerated the burning of widows at Hindu funerals of their husbands?

Presuppositions of Pluralism. *There Are Transreligious Moral Criteria.* To make the moral equality argument work, one must assume a set of moral criteria not unique to any particular religion by which all can be evaluated. Pluralists generally deny that there is any universally binding moral law. If there were such absolute moral laws there would need to be an absolute Moral Law Giver. But only theistic type religions accept this criteria, and some of them reject the absolute perfect nature of God (for example, Finite Godists). If there is a moral law common to all religions, then it is not unique to one, and no religion can be judged inferior for lacking it.

Finally, if there are no such universal moral laws, then there is no way to judge morally all religions from any standard beyond them. And it is not fair to take the standards of one religion and apply them to another, claiming that the other falls short.

Phenomena Can Be Explained. Beneath the pluralist's attack on exclusivism is a naturalistic presupposition. All religious phenomena can be explained naturalistically. No supernatural explanations are allowed. But this presumptive naturalism is without justification. Miracles cannot be ruled out *a priori* (*see* MIRACLES, ARGUMENTS AGAINST). Neither, as David Hume claimed, are miracles incredible. Nor are miracles without evidence. Indeed, there is substantial evidence for the greatest "miracle" of all, the *ex nihilo* creation of the world out of nothing (*see* BIG BANG and KALAM COSMOLOGICAL ARGUMENT). There is also abundant evidence that the resurrection of Christ occurred (*see* RESURRECTION, EVIDENCE FOR).

The World Is "Religiously Ambiguous." Hick believes that "the universe, as presently accessible to us, is capable of being interpreted intellectually and experientially in both religious and naturalistic ways" (*Interpretation of Religion,* 129; see Geivett, 77). We cannot know the truth about God; what is real cannot be differentiated from what is false.

It is a self-defeating claim that we know that we cannot know the real. Simply because we do not know reality exhaustively does not mean we cannot know it truly (*see* AGNOSTICISM ; REALISM). As Geivett notes, "to the extent that God is known at all, he is known truly." The very notion of an undifferentiated Real is implausible, if not self-defeating. Hick's claim that the Real can be symbolized by the concept of *sunyata* in Buddhism is a case in point. For if the Real is so undifferentiated, then how can any symbol represent it? Neither can the Real be manifested in various traditions, as Hick claims. In order for something to be manifested, at least some of its characteristics must be revealed. But the Real, if totally undifferentiated, has no discernible characteristics. Hence, it could not be manifested in our experience in any meaningful way. There is a kind of mystical epistemology presumed in this "God is Unknowable"approach (*see* MYSTICISM). It rather imperiously decrees how God can and cannot reveal himself (Geivett, 77).

Dialogue Is the Only Way to Truth. Another seriously flawed presupposition is the position that pluralistic interreligious dialogue is the only valid way to discover truth. No genuine religious dialogue is possible if one assumes his religion is true in advance of the dialogue. This is sure proof that he is not "open" to truth. True dialogue assumes one is tolerant, open, humble, willing to listen and learn, and engage in a shared search for truth and a self-sacrificing, other-oriented love (ibid., 239).

However, true dialogue is possible without adopting a pluralistic position on truth. One can have the attitude of humility, openness, and tolerance without sacrificing convictions about truth. Even the pluralist is not willing to give up a commitment to pluralism as a condition for such dialogue. This violates the pluralist's own imperative. In fact, the call to dialogue is usually a disingenuous attempt at evangelism on behalf of the worldview of the one calling for dialogue.

Hick's View Is Religiously Neutral. Hick feigns religious neutrality, but it does not exist. His alleged pluralism is patterned after Hinduism's conception of the Transcendent. And it is antagonistic to the core principles of Christianity. It does not really encourage genuine dialogue between the traditions. Indeed, it renders virtually vacuous the concept of being "in a given religious tradition." After all, according to pluralists, every tradition is essentially the same. So, to accept pluralism is to reject one's own tradition and accept the pluralist's tradition.

A Relativistic View of Truth Is Correct. Beneath the pluralists' assertion that all major religions have equal claim to the truth is a relativistic view of truth (*see* TRUTH, NATURE OF). But the denial of absolute truth is self-defeating. It claims that relativism is true for everyone, everywhere, and always. But what is true for everyone, everywhere, and always is an absolute truth. Therefore, the relativist claims that relativism is absolutely true.

Polygamy. First Kings 11:3 says Solomon had 700 wives and 300 concubines. Other men God highly praised in the Bible had multiple wives (and/or concubines), particularly Abraham and David. And yet the Scriptures repeatedly warn against having multiple wives (Deut. 17:17) and violating the principle of monogamy—one man for one wife (cf. 1 Cor. 7:2 ; 1 Tim. 2:2). This seems to many critics to be a contradiction (*see* BIBLE, ALLEGED ERRORS).

The Problem of Polygamy. Monogamy is God’s ideal standard for the human race. Polygamy was never commanded by God; it was only tolerated.

From the beginning, God set the pattern by creating a monogamous marriage relationship with one man and one woman, Adam and Eve (Gen. 1:27). It is evident in the subsequent statement that “a man will leave his father and mother and be united to his wife [singular], and they will become one flesh” (Gen. 2:24). Polygamy was never established by God for any people under any circumstances.

Following from this God-established example, this was the general practice (Gen. 4:1) until interrupted by sin. The first recorded polygamist, Lamech, was a wicked man (Gen. 4:23).

Christ reaffirmed God’s original intention in Matthew 19:4 , noting that God created one “male and [one] female” and joined them in marriage.

The Law of Moses prohibits polygamy, commanding, “You shall not multiply wives” (Deut. 17:17).

The warning against intermarriage with unbelievers was repeated in the very passage where it numbers Solomon’s wives (1 Kings 11:2). By implication, polygamy can be seen in that statement. Because of both their number and their idolatry, Solomon’s wives did irreparable damage to the house of David and to Israel.

The New Testament stresses that “Each man [should] have his own wife, and let each woman have her own husband” (1 Cor. 7:2). This emphatically excludes polygamy. Paul insisted that a

---

JETS *Journal of the Evangelical Theological Society*

church leader should be "the husband of one wife" (1 Tim. 3:2 , 12). Whatever else this may entail, it certainly implies a monogamous relation.

Monogamous marriage prefigures the relation between Christ and his "bride" (singular), the church (Eph. 5:31–32).

God's judgment on polygamy is evident by example and implication:

1. Polygamy is first mentioned in the context of a society in rebellion against God where the murderer "Lamech took for himself two wives" (Gen. 4:19 , 23).

2. God repeatedly warned polygamists of the consequences of their actions "lest his heart turn away" from God (Deut. 17:17 ; cf. 1 Kings 11:2).

3. God never commanded polygamy—like divorce, he only permitted it because of the hardness of their hearts (Deut. 24:1 ; Matt. 19:8).

4. Every polygamist in the Bible, including David and Solomon (1 Chron. 14:3), paid dearly for his sins.

5. God hates polygamy, as he hates divorce, since it destroys his ideal for the family (cf. Mal. 2:16).

Conclusion. Though the Bible records instances of polygamy, this does not mean God approved of it. Monogamy is taught in the Bible by *precedent,* since God gave the first man only one wife; by the equal *proportion* of males and females God brings into the world; by *precept* of Old and New Testament commands; by *punishment,* since God punished those who violated his standard (1 Kings 11:2); and by the prophetic *picture* of Christ and his pure bride, the church (Eph. 5:31–32).

Polytheism. Polytheism is the worldview that many finite gods exist in the world. There are differing versions of polytheism. In some forms, all the gods are more or less equal. Each has a personal sphere or domain. In others, the gods form a hierarchy. Henotheism has a chief god, such as Zeus. In some forms, such as the Greek and Roman pantheons, the number of gods is

limited. Mormonism supports an indefinite number of gods. Some forms of polytheism stand alone, unconnected with any other worldview. In Hinduism, however, polytheism and pantheism go hand-in-hand with one impersonal Brahman and 330 million-plus personal manifestations of the one impersonal ultimate Reality.

The Rise of Polytheism. The fortunes of polytheism, at least in the West, are inversely related to the health of theism (belief in one God). Greek polytheism declined with the rise of Plato and Aristotle's philosophical theism. Roman polytheism all but died with the rise of Christianity in the West. Augustine's *City of God* narrates the Christian response to Roman polytheism. Polytheism has experienced a revival with the decline of Judeo-Christian views in the broader culture. This has been accompanied with a rise in witchcraft that also embraces polytheism. Margo Adler's book, *Drawing Down the Moon* , chronicles this movement.

David L. Miller, author of *The New Polytheism: Rebirth of the Gods and Goddesses,* argues that polytheism is alive and well in contemporary society. He urges people in Western society to get in tune with the gods in order to liberate themselves to be the kind of people they really are. All citations in this article are to Miller's book.

Basic Beliefs. *Rejection of Monotheism.* The establishment of polytheism necessitates the demolition of monotheism. God must be rejected before the gods can be accepted.

Monotheism is the belief in one God above and beyond the world. Monotheistic thinking gathers all human "explanation systems, whether theological, sociological, political, historical, philosophical, or psychological" under one all-embracing system. This system operates "according to fixed concepts and categories" that are controlled by an either/or kind of logic. Something is "either true or false, either this or that, either beautiful or ugly, either good or evil." But this kind of thinking, says Miller, a people in a time when experience becomes self-consciously pluralistic, radically both/and." This is what Western society is today—radically pluralistic (*see* PLURALISM, RELIGIOUS). The contemporary Westerner lives in a world where truth and morality are relative. "Life often feels anarchistic: no horizons, fences, boundaries, and no center to prove one securely close to home" (7, 9). The contemporary situation is so pluralistic that its modern interpreters "have had to rely on a strange set of words" in their attempt to explain it. Charles Baudouin speaks of *polyphonic meaning* and being. In speaking of the nature of thinking required for contemporary understanding, Philip Wheelwright points to *plurisignificative knowing* and communicating. Norman O. Brown talks about *polymorphous reality* as a key to our history, and Ray Hart names the deepest aspect of our literature articulations of reality with the phrase *polysemous functioning of imaginal discourse* . If we try to make sense of our society Michael Novak suggests it will help to think of America as a pluralistic community of radically unmeltable ethnics. Concerning government and political science, Robert Dahl speaks of " *polyarchy* " (3).

This "poly" kind of thinking betrays the fact that "we have suffered a death of God" (*see* ATHEISM). No longer is there "a single center holding things together." God is dead, as Friedrich Nietzsche so boldly declared. Western civilization has buried the monotheistic way of thinking and speaking about God, being, and reality (37). Released from the "tyrannical imperialism of

monotheism," people can discover new dimensions and diversity. There is a new potential for imaginative hopes and desires, laws and pleasures (4).

Significantly, Miller avoids using references to deities in defining what he means by *polytheism* . Polytheism is "a specific religious situation, . . . characterized by plurality, and plurality that manifests itself in many forms." Socially speaking, it is a "situation" in which pluralism intermingles various values, social patterns, and moral principles. Sometimes these values and patterns work together, but more often they are incompatible and each worldview vies to dominate the "normal social order" (4).

Philosophically, polytheism is experienced when no single "truth" guides people to "a single grammar, a single logic, or a single symbol-system" (ibid.). Polytheism mediates the worldview warfare by introducing "relativism, indeterminacy, plural logic systems, irrational numbers; substances that do not have substances, such as quarks; double explanations for light; and black holes in the middle of actual realities" (5).

Behind this peace-making role, however, polytheism works by seeking to absorb other religious ideas into itself. It remains the worship of multiple gods and goddesses. In the curious popular form, these deities are not worshiped all at the same time. Rather, only one god or goddess at a time can be worshiped. In this, polytheism gives a nod to monotheism, the worship of one God. "Polytheistic religion is actually a polytheistic theology, a system of symbolizing reality in a plural way in order to account for all experience, but that the religious practice is composed of consecutive monotheisms." And this "implies that our experience of social, intellectual, and psychological worlds is religious—that is, it is so profound and far-reaching that only a theological explanation can account for it fully" (6).

At one time polytheism reigned in Western culture. But when Greek culture collapsed, polytheism died and was replaced by monotheism. Although polytheism remained "in the underground or countercultural tradition of the West" throughout the 2000-year reign of monotheistic thought, it did not have any significant effect. With the death of monotheism, says Miller, polytheism may be resurrected again to its proper place. (11).

Miller believes human beings are naturally polytheistic in consciousness, giving polytheism "advantages" over monotheism. "Only a polytheistic consciousness will account realistically for our lives" (81). People are freed from the idea that they must "get it all together"; polytheism al lows an irrationalism in which one may avoid a fully constructed view. Polytheism puts people in touch with the richness and diversity of life. Monotheism encourages thought about what lies behind life, rather than thought about life itself (27, 28).

The World. Miller suggests that the new polytheism gives "a new function for the old Gods and Goddesses" (81) through three aspects. First, the new polytheism "is a modern sensibility." It is not just that "our contemporary society is pluralistic, nor that our roles are many, nor that our morality is relativistic, nor even that our political ideology is fragmented." These are manifestations of something more fundamental. "The more basic feeling is that the Gods and Goddesses are reemerging in our lives" (64).

Second, the new polytheism rethinks old religious and conceptual ways of thinking. Western thought is rooted in the early Greeks, who were largely polytheistic, so the ideas, concepts, and categories deep in the Western psyche fit the thought or logic of mythic tales (40).

Third, the new polytheism helps confused moderns put into order the “many potencies, many structures of meaning and being, all given to us in the reality of our everyday lives” (64, 65).

Given the death of monotheism and the rebirth of polytheism—even a new polytheism—who or what are the gods and goddesses of this polytheism? Miller maintains that the gods are powers or forces. These forces transcend the personal, the historical, and the social. They are not affected by events or desires. Yet they are immanent in the world as potencies in individuals, in societies, and in nature (6, 60). Miller believes these powers provide a structure of reality that informs human social, intellectual, and personal behavior. (6, 7). These powers are “the Gods and Goddesses of ancient Greece—not Egypt, not the Ancient Near East, not Hindu India, not Ancient China or Japan. Greece is the locus of our polytheism simply because, willy-nilly, we are Occidental men and women” (80, 81).

Do these many different gods act harmoniously? Miller says no. They often act in “contention.” Life may even be characterized as “a war of the Powers”:

> Man—his self, his society, and his natural environment—is the arena of an eternal Trojan War. Our moods, emotions, unusual behaviors, dreams, and fantasies tell us those rough moments when the war is no longer a cold war or a border skirmish, but an all-out guerilla conflict. These indicators also tell us, by feeling and intuition, when one God has absented himself and another has not yet rushed into the vacuum. We know the war well. [60]

If modern people acknowledge these gods, new life will be infused into old ways of seeing and thinking. There would be a fresh philosophical structure through which to speak and think about our “deepest experience” (62).

Miller suggests how this new function of the gods and goddesses could work. The tremendous growth in technology can be thought about and informed by the stories of Prometheus, Hephaestus and Asclepius. “Prometheus steals the fire and ends trapped on a rock, gnawed at by the power he has himself supplanted by his knowledge. Hephaestus is the divine smith, the technologist supreme, who is the bastard of his mother and at a total loss for sensuousness and feeling. . . . Asclepius is the technologist of the feelings; he is the psychotherapist whom technology and its civilization will make into the high priest of mental health culture” (66).

The story of the goddess Hera, who “tried to socialize Mount Olympus,” is relived when “computers and statistical procedures come to be revered as true wisdom” and “consultants and experts must attend every decision in business and government” (67). The work of the “ever-present God Pan (“All”) is seen in the irrational that is always just below the surface of the human experience, breaking out into violence or mysticism (68).

At one time the view of the world was framed around the ideas of the second-century A.D. Alexandrian astronomer Ptolemy. The earth was thought to be "an immovable sphere at the center of the universe, around which nine concentric spheres revolve." Thus, all that existed was "organized around a single center," the earth, with the end of the universe imagined to be "fixed and secure." This monotheistic view of the world collapsed with Copernicus (and subsequent scientists). Now the universe has no known center and its horizons are neither fixed nor secure. Instead, it is seen as an "infinitely expanding universe whose center is . . . unknown" (9).

Humankind. Men and women are "the playground" of the gods (55). The gods parade "through our thoughts without our control and even against our will." We do not possess the gods, but they possess us (34). They "live through our psychic structures" and "manifest themselves always in our behaviors." We do not grab the gods, but the "gods grab us, and we play out their stories" (59).

Psychologically, polytheism is experienced in the separate "selves" of personhood. Each self has an autonomy, a life of its own that comes and goes without regard to the will (5). No one can be gripped by more than one God at a time. In this sense Miller and the modern polytheists are monotheistic, or henotheistic. Each person worships one God at a time, the one in control of personhood, out of a large pantheon of gods. However, the story of the one god who is in temporary domination may involve marriages with other gods, parentage by still others, offspring and maiden goddesses. So the conception is always ultimately polytheistic. To think differently is to partake of the self-deception that has been perpetrated by monotheistic thinking (30, cf. 28).

The purpose of humankind is to incarnate the gods, to become aware of their presence, to acknowledge and celebrate them (55). This can occur only when we begin to see our world through polytheistic, mythological glasses (63, 83).

Values. All values are relative (*see* MORALITY, ABSOLUTE NATURE OF). Truth and falsehood, life and death, beauty and ugliness, good and evil, are all mixed together (29). Monotheistic thinking separates values into either/or concepts and categories (7). But this way of thinking does not adequately account for the many sides of human experience. What does is the polytheistic both/and sort of thinking, which recognizes the relativity of all values.

Evaluation. *Some Positive Values of Polytheism.* Polytheism is a reminder of separate realities, though it doesn't adequately decipher them. There is a widespread and growing recognition that humanity is not alone in the universe. Reported contacts with UFO beings or extraterrestrials persist. Even many scientists believe that there are intelligent beings in space. Even many nonpolytheistic religions recognize the existence of super human beings, such as angels and demons. If there is a divine reality, it follows that we should seek to discover our relationship to that reality and how we should respond to it. The emphasis that polytheists place on human beings getting "tuned in" to the divine reality and adjusting their behavior accordingly is commendable.

Polytheists are often praised for positing an analogy between man and the gods. If divine beings exist, and if they had something to do with the creation of humankind, then it would seem

that human nature would in some way reflect deity. A cause cannot give characteristics to others it does not possess itself. As a painting displays some truths about its painter (e.g., the level of skill, the breadth of imagination, or the care taken) so human beings should display some truth about their Creator(s). Hence, if a person is a creation of some divine reality, some human characteristics should resemble the Maker(s). Thus, it would appear reasonable to conclude that there is some analogy between humanity and the gods (*see* ANALOGY, PRINCIPLE OF).

Polytheists recognize that there are various forces in the world, some uncontrollable. Many scholars today have concluded that behind most myths, be they religious or not, lie true stories of human encounters with forces that press in. These may be forces of nature (e.g., wind, rain, earthquakes, tornadoes, or floods), forces prevalent in culture (e.g., greed, hope, love, or a desire for power), or forces believed to lie behind the universe (e.g., gods, angels, demons). Polytheists, through various story forms, have managed to vividly relate human encounter to such forces (*see* SATAN, REALITY OF).

Criticisms of Polytheism. While polytheists have some insights into the nature of reality, nonetheless, their worldview is false. Ultimate reality does not consist of many finite gods. There is good evidence that there is only one God, not many (*see* COSMOLOGICAL ARGUMENT ; GOD, EVIDENCE FOR ; GOD, NATURE OF ; THEISM). This God is Creator of all else. Hence, there are not many divine beings.

If the natural elements, say heaven and earth, had given birth to the gods, then the gods would not be ultimate beings. Whatever is derived from something else is dependent on that something, at least for its origin. How could a being that received its existence from another be above its maker? This would be like a cookie claiming to be greater than its cook, or a computer declaring itself above its creator. Similarly, if nature created the gods, then nature is ultimate. And if, as Paul Tillich thought, worship involves an ultimate commitment to an ultimate, then nature, not the gods, should be worshiped. This would be true regarding whatever was believed to have given birth to the gods or to have preceded them. If the gods are derivative beings, then they are not worthy of ultimate commitment. Why worship something that has no ultimate worth?

Also, as Plotinus noted, all plurality presupposes a prior unity. Many are just a multiple imitation of the One. Thus, many gods are not self-explanatory. What is their basis of unity? And who superintends conflict between them? This is not a polyverse but a universe. If ultimately there is a personal Power behind the universe, it must be a unity.

The anthropic principle reveals that the entire universe was one—with one purpose and Purposer—from the very beginning. From the moment of the big bang the entire universe was fine-tuned for the emergence of human life. This bespeaks of one intelligent Creator. The idea of an eternal universe posited by polytheism has other serious philosophical and scientific objections. One philosophical argument stems from the impossibility of an actual infinite series of events in time. An eternal universe would be a beginningless series of events in time. But how could such a series possibly exist? To illustrate, suppose there were a library with an infinite number of books on its shelves. Imagine that each book is numbered. Since there is an infinite number of books, every book is numbered and every possible number must be printed on the

books in the library. From this it would follow that no new book could be added to the library, for there would be no number left to assign. All the numbers have been used up. But this seems absurd, for all objects in reality can be numbered. Further, it would be easy to add to the library, since one could make a new book by tearing a page out of each of the first fifty books, adding a title page, binding them together and putting the finished product on the shelf. Hence, the idea of an actual infinite series of books appears to be impossible. Therefore, the polytheistic belief in an eternal universe would appear to be impossible (see Craig, passim).

A scientific argument against the idea of an eternal universe can be derived from the modern notion that the universe is expanding. Astronomer Edwin Hubble concluded that the universe is expanding in all directions. If true, it would follow that at some point in the past the universe was only a single point from which it has been expanding. This single point would be one of "infinite density." However, no object could be infinitely dense, for if it contained any mass at all it would not be infinitely dense but finitely dense. Hence, a totally shrunken or contracted universe is really no universe at all. The concept of an expanding universe requires a point at which no universe existed. If this is so, then the universe must have begun from nothing (*see* CREATION, VIEWS OF).

Polytheistic gods are within that universe, not beyond it. But the evidence is that the universe came into existence. If the universe is not eternal but came to exist from nothing (*see* CREATION, EX NIHILO), then the gods posited by polytheism would not be eternal; they would have come into existence. But if they came into existence, then they are not gods but creatures made by some eternal Cause (God). But if the gods of polytheism derive their existence from another, then this other is really the supreme God of monotheism. Thus, polytheism collapses into monotheism. Therefore, if the gods exist, they would ultimately be dependent on a Cause beyond them and beyond the universe. But this conclusion coincides with the claims of theism, not those of polytheism.

The polytheistic analogy between humankind and the gods has been criticized as too anthropomorphic (interpreting what is not human on the basis of human characteristics). Certainly the creature should bear some resemblance to the Creator. But to apply human imperfections to deity renders the divine reality as less than worthy of respect and worship. Gods of polytheism appear to be made in human image, rather than we being made in their image. This tends to give credence to the view that polytheism is a human invention or superstition rather than a depiction of what actually is.

Conclusion. As a worldview, polytheism lacks rational and evidential support. The many spiritual beings that exist are limited and imperfect. Hence, they imply an unlimited and perfect Creator. Polytheism does not account for either ultimate causality or ultimate unity, which is needed to explain a diverse, changing universe.

Pragmatism. *Pragmatism* is an indigenous American philosophy, springing from William James (1842–1910), which stresses the practical results of a theory. John Dewey (1859–1952) is called a pragmatist, but his position might more technically be called *instrumentalism* .

For a pragmatist, an idea is said to be true if it works. A course of action is right if it brings desired results.

The roots of pragmatism are found in the ideas of Charles Sanders Pierce, who used a pragmatic method to clarify (though not to verify) ideas. There are also similarities between pragmatism and utilitarianism, which holds that the right course of action is the one that brings the greatest good. Dewey, as an instrumentalist, stressed practical results of ideas, especially in education.

The pragmatic view has been severely criticized, because something is not true simply because it works. Lying may "work" to avoid a negative result or achieve a desired objective at the expense of another person, but that doesn't make the lies true. Something can be known to be contrary to facts, yet still followed, because it seems the most practical course of action under the circumstances. Neither is something right because it works. Cheating "works," but it is not right.

The ethical philosophy also confuses cause with effect. An idea is not true because it works; it works because it is true. And how does one judge that it has "worked"? Only practical knowledge is considered true knowledge. An eternal perspective does not enter the discussion. Pragmatists recognize only the methods of science to test truth. This absolutizes the scientific method. However, for ethical concerns there are no objective criteria, as there are in science. The success of the result can only be determined by a subjective, personal, and short-sighted perspective.

A pragmatic view of truth also undermines trust. What judge would allow someone to take a courtroom oath to tell, as one philosopher quipped, "the expedient, the whole expedient, and nothing but the expedient" (*see* TRUTH, NATURE OF)?

Presuppositional Apologetics. Presuppositional apologetics is the apologetic system that defends Christianity from the departure point of certain basic presuppositions. The apologist presupposes the truth of Christianity and then reasons from that point. One basic presupposition is that the non-Christian also has presuppositions that color everything he or she hears about God. Another is that in some fashion the person encountered is, as Augustine said, "doing business" with God and, as Romans 1 puts it so damningly, suppressing knowledge of the truth. It is the apologist's role to present the truth of Christianity and the falsehood of any worldview opposed to Christ (*see* PLURALISM, RELIGIOUS).

Differences from Other Methods. Presuppositional apologetics is opposed to evidentialism and classical apologetics (*see* APOLOGETICS, CLASSICAL). Presuppositional apologetics differs from classical apologetics in that presuppositional apologetics rejects the validity of traditional proofs for the existence of God (*see* GOD, EVIDENCE FOR). Further, the presuppositional apologist differs with both classical and historical apologetics in its use of historical evidence. The historical apologist, in agreement with the classical apologist, argues in favor of beginning with reason and evidence to demonstrate the truth of Christianity. The presuppositionalist, on the other hand, insists that one must begin with presuppositions or worldviews. The historical apologist believes that the historical facts "speak for themselves." They are "self-interpreting" in their historical context. The pure presuppositionalist, on the other hand, insists that no facts are self-interpreting, that all facts are interpreted and can be properly understood only within the context of an overall worldview.

Several Kinds of Presuppositionalism. Depending on how one is defined, there are three or four basic kinds of presuppositionalism: (1) *revelational presuppositionalism* (*see* VAN TIL, CORNELIUS); (2) *rational presuppositionalism* (*see* CLARK, GORDON); and (3) *systematic consistency* (*see* CARNELL, EDWARD JOHN). Some view Francis Schaeffer's apologetic as an example of a fourth variation that might be called *practical presuppositionalism* . Each approach differs in the way in which a worldview is judged for truth.

Revelational Presuppositionalism. According to revelational presuppositionalism, one must begin any rational understanding of truth by presupposing the truth of the Christian faith. One must posit that the Triune God (*see* TRINITY) has revealed himself in Holy Scriptures, the divinely authoritative Word of God. Without this presupposition one cannot make any sense out of the universe, life, language, history, or anything else. This kind of argument is sometimes viewed as a transcendental argument, that is, an argument that begins by laying down the necessary conditions under which every other kind of knowledge is possible. These necessary conditions posit that the Triune God has revealed himself in Holy Scriptures.

Rational Presuppositionism. This is the apologetics system of the late Gordon Clark and his noted disciple Carl F. H. Henry. Like other presuppositionalists, the rational presuppositionalist begins with the Trinity revealed in the written Word of God. But the test for whether this is true is simply the law of noncontradiction (*see* FIRST PRINCIPLES). That is, one knows that Christianity is true and all opposing systems are false because all of them have internal contradictions and only Christianity is internally consistent. Thus, a rational principle, the law of noncontradiction, is used as the test for truth.

Systematic Consistency. John Carnell and his disciple, Gordon Lewis, developed a presuppositionalism that has two (or three) tests for the truth of the Christian presupposition. Like rational presuppositionalists, they believe a system must be rationally consistent. But in addition, they hold that the system must comprehensively include all the facts. Later in his life Carnell added a third test—existential relevance. The system must meet life's basic needs. The only system, they believe, that measures up to all three is Christianity. Thus, Christianity is true and all other opposing systems are false.

Practical Presuppositionalism. Francis Schaeffer's apologetic approach has also been listed by many as presuppositional. If so, it is a practical presuppositionalism. One of its chief features is that all non-Christian systems are unlivable. Only Christian truth is livable. In this sense, it uses unlivability as a test for the falsity of non-Christian systems and livability as a test for the truth of Christianity.

Conclusion. Presuppositional apologetics has been criticized from many quarters. Classical apologetics (*see* APOLOGETICS, CLASSICAL) has chal lenged its rejection of traditional proofs for the existence of God (*see* GOD, EVIDENCE FOR). Historical apologetics (*see* APOLOGETICS, HISTORICAL) has defended the neutral nature of historical facts. Others have noted the fideistic nature of revelational presuppositionalism and rejected it for this reason (*see* FIDEISM). Since each system is critiqued under the article on its chief proponent, attention is directed to the articles on Cornelius Van Til, Gordon Clark, and John Carnell.

Princeton School of Apologetics. The Princeton School of Apologetics refers to the apologetic approach taken by "Old Princeton" scholars who flourished at the turn of the twentieth century. Broadly, it fit into the category of Classical apologetics (*see* APOLOGETICS, CLASSICAL), who believe in the validity of general revelation, classical arguments for God's existence (*see* GOD, EVIDENCE FOR), and miracles as confirmation of the truth (*see* MIRACLE).

The philosophical roots of the Princeton apologetic are found in the empirical realism of Scottish Common Sense Philosophy and Thomas Reid (1710–1796) and the rational empiricism of John Locke (1632–1704). His views were exemplified in the writings of J. Gresham Machen (1881–1937), Charles Hodge (1797–1878), and B. B. Warfield (1851–1921). Later there was a radical break in the tradition when Westminster Seminary was founded by faculty and students who broke with the modernist direction in theology being taken at Princeton Seminary. Cornelius Van Til (1895–1987), a disciple of Herman Dooyeweerd (1894–1977), led Princeton into a presuppositional apologetic (*see* APOLOGETICS, PRESUPPOSITIONAL).

The spirit, if not always the letter, of the old Princeton school has been carried on by Kenneth Hamilton, Kenneth Kantzer, John Gerstner, and R. C. Sproul. Their general epistemology and apologetic is dependent to a significant degree on the foundation laid by the old Princeton scholars.

Progressive Revelation. Sometimes critics of Scripture jump to the conclusion that the Bible is in error (*see* BIBLE, ALLEGED ERRORS IN) because God commands something different for one period than for another. The classic example of that is God's command for blood sacrifices to atone for sin under the law of Moses. These are no longer in effect since Christ offered himself as the final atoning sacrifice to which the animal sacrifices looked forward (see Hebrews 7–10). Likewise, God commanded that Adam eat only plants (Gen. 1:29–30). But after the flood, Noah was told to eat meat. The Mosaic Law prohibited certain animals as "unclean" to eat (Leviticus 11). But Jesus pronounced that these animals were clean and could be eaten (Mark 7:19 ; Acts 10:14–15 ; 1 Tim. 4:4). These are not contradictions but examples of *progressive revelation* .

The principle of progressive revelation means that God does not reveal everything at once, nor does he always lay down the same conditions for every period. Later revelations will have things in them that go against earlier ones. Hence the Old Testament revealed only hints of the Trinity taught in the New Testament (for example, Matt. 3:16–17 ; 28:18–20). The New Testament declares explicitly what was only implicit in the Old Testament (*see* TRINITY).

God can change anything that does not involve a contradiction or that does not go against his unchangeable nature (Mal. 3:6 ; 2 Tim. 2:13 ; Titus 1:2 ; Heb. 6:18). God can change nonmoral things without any apparent or stated reason (*see* ESSENTIALISM, DIVINE). The change of the command for humans from being herbivorous to omnivorous (Gen. 1:29–30 ; 9:2–3) is one example; changes in the ceremonial laws are another. They are different commands for different times which God had different reasons for enacting, even if not fully known to us (Deut. 29:29).

Sometimes God commands change because of the changing conditions of humanity. Such is the case with permission for divorce "for any cause" in the Old Testament, and a strong prohibition in the New Testament (Matt. 19:3). Jesus said the original law "was because of the hardness of your hearts" (19:8). God sometimes overlooks certain things because of times of ignorance (Acts 17:30), but later does not.

A major reason for change is that God has an unfolding plan. This plan has stages in which some things are necessary and stages where something else is necessary. Once a prophecy "type" has been fulfilled (the blood of the lamb), when the reality comes, the type is no longer needed. Once the foundation of the church was laid in the apostles (Eph. 2:20), the apostles were no longer needed.

In view of the principle of progressive revelation, the later revelations are not contradictory, but complementary. They do not make mistakes, but reveal more truth. Later revelations do not negate the former; they simply replace them. Since they were not given for all, but only for a specified time, they do not conflict when they change. No two opposing commands are for the same people at the same time.

An example of progressive revelation can be seen in every family with growing children. When they are very small, the parent allows children to eat with their fingers. Later, the parents insist on the use of a spoon. Finally, as the child progresses, the parent commands use of a fork. These commands are temporary, progressive, and appropriate to the situation.

Proper Basicality. *Proper basicality* is a view set forth by contemporary American philosopher Alvin Plantinga, claiming that there are certain beliefs for which it is possible but foolish to require justification. These include the concepts "I exist." and "There is a past." One is entitled to hold these beliefs without giving any further account. Plantinga includes the belief "God exists." among the propositions that are "properly basic." If true, this would undercut natural theology, the need to provide any arguments for God's existence (*see* GOD, EVIDENCE FOR), and classical apologetics (*see* APOLOGETICS, CLASSICAL). Plantinga claims that belief in God is so central that it would be folly to ask for its foundation. The belief itself is the hub of the believer's worldview (*see* Plantinga, 187–98).

Plantinga replaces classic foundationalism with these "basic beliefs." His view is a kind of fideistic foundationalism (*see* FIDEISM).

The denial that there are any self-evident foundational principles of thought involves one either in an infinite regress, where no justification is ever given, or else in an arbitrary cut-off point where one simply stops giving a justification (without a justification for doing so; *see* FIRST PRINCIPLES). Plantinga offers no justification for placing belief that God exists into the category of "properly basic." An unbeliever can simply ask for his reasons for placing it in this category, at which point it is incumbent on him to provide a rational justification, or else he simply begs the question.

Like other fideists, Plantinga here failed to distinguish between belief *in* and belief *that* God exists. One needs evidence for belief *that* God exists, but not for belief *in* God. It would be an insult to one's wife to demand reasons for loving her. But it is not an insult to demand reasons that it is really she, and not the neighbor's wife, before embracing her. It is unworthy of a person's relationship with God to believe in God for the sake of evidence. If there is an Ultimate Value (i.e., God) in the universe, that Being should be believed in for his own sake. But it is not unworthy to ask for evidence that God exists and is the Ultimate Value before one place's faith in him. Reason demands that we look before we leap (Geisler, 68–69).

Prophecy, as Proof of the Bible. One of the strongest evidences that the Bible is inspired by God (*see* BIBLE, EVIDENCES FOR) is its predictive prophecy. Unlike any other book, the Bible offers a multitude of specific predictions—some hundreds of years in advance—that have been literally fulfilled or else point to a definite future time when they will come true. In his comprehensive catalogue of prophecies, *Encyclopedia of Biblical Prophecies* , J. Barton Payne lists 1817 predictions in the Bible, 1239 in the Old Testament and 578 in the New (674–75).

The argument from prophecy is the argument *from* omniscience. Limited human beings know the future only if it is told to them by an omniscient Being (Ramm, 81). It is important to note that this is not an argument *to* omniscience. It is sometimes wrongly argued that a forecast

of unusual events is proof that there is an omniscient Being (*see* God, Nature of). This is not necessarily the case, for the odd does not prove God (*see* MIRACLES, ARGUMENTS AGAINST). No matter what the improbability, an odd event (say, a perfect hand in the card game of bridge, an extremely improbable deal) can, and sometimes does, occur. However, if an omniscient Being is known to exist (*see* GOD, EVIDENCE FOR), and highly improbable predictions are made in his name which come to pass without fail, then it is reasonable to assume that they were divinely inspired. Fulfilled prophecy does not prove the existence of God, but it does show that unusual events predicted in his Name that come to pass are evidence of his special activity.

Predictive Prophecy. If an omniscient God exists who knows the future, then predictive prophecy is possible (*see* THEISM ; GOD, NATURE OF). And if the Bible contains such predictions, then they are a sign of the Bible's divine origin. Not everything called "prophecy" in the Bible is predictive. Prophets *forthtold* God's Word as well as *foretold* the future. There are several earmarks of a supernatural prediction, at least one with apologetic value. First, it is more than a vague guess or conjecture (see Ramm, 82). It cannot be a mere reading of the trends. Second, it deals with human contingencies that are normally unpredictable. Scientific predictions are not of the same order, since they deal with projections based on the regularity of nature, for example, the prediction of an eclipse. Third, it is a highly unusual event, not normally expected. Sometimes the miraculous nature of the prophecy is manifest in the length of time in advance the prediction is made, so as to reduce the probability of guessing. At other times it is revealed in the unique fulfillment itself.

Biblical Predictions. *Messianic Predictions.* There are two broad categories of biblical prophecy: messianic and nonmessianic. Payne (ibid., 665–70) lists 191 prophecies concerning the anticipated Jewish Messiah and Savior. Each was literally fulfilled in the life, death, resurrection, and ascension of Jesus of Nazareth (*see* NEW TESTAMENT, HISTORICITY OF ; CHRIST, DEITY OF). A sampling of these prophecies includes:

Messiah's birth. God said to Satan after he had enticed Adam and Eve to fall into sin, "I will put enmity between you and the woman, and between your offspring and hers; he will crush your head, and you will strike his heel" (Gen. 3:15). The New Testament reveals that Jesus was indeed born of a woman in order to crush Satan's power. For "when the time had fully come, God sent his Son, born of a woman, born under law" (Gal. 4:4 ; cf. Matthew 1 ; Luke 2).

Isaiah 7:14 predicted that one named *Immanuel* ("God with us") would be born of a virgin (*see* VIRGIN BIRTH): "Therefore the Lord himself will give you a sign: The virgin will be with child and will give birth to a son, and will call him Immanuel." This prediction was made over 700 years in advance (*see* ISAIAH, DEUTERO). The New Testament affirms that Christ fulfilled this prediction, saying, "All this took place to fulfill what the Lord had said through the prophet: 'The virgin will be with child and will give birth to a son, and they will call him Immanuel'—which means, 'God with us' " (Matt. 1:22–23). The objection that this is not really a prediction of Christ's birth is answered in the article, Virgin Birth of Christ.

Micah made the unambiguous prophecy, "But you, Bethlehem Ephrathah, though you are small among the clans of Judah, out of you will come for me one who will be ruler over Israel, whose origins are from of old, from ancient times" (Micah 5:2). Even the unbelieving Jewish

scribes identified this as a prediction of the Messiah and directed the inquiring magi to Bethlehem (Matt. 2:1–6):

> After Jesus was born in Bethlehem in Judea, during the time of King Herod, Magi from the east came to Jerusalem and asked, “Where is the one who has been born king of the Jews? We saw his star in the east and have come to worship him.” When King Herod heard this he was disturbed, and all Jerusalem with him. When he had called together all the people’s chief priests and teachers of the law, he asked them where the Christ was to be born. “In Bethlehem in Judea,” they replied, “for this is what the prophet has written: ‘But you, Bethlehem, in the land of Judah, are by no means least among the rulers of Judah; for out of you will come a ruler who will be the shepherd of my people Israel.’ ”

Messiah’s ancestry. God declared in Genesis 12:1–3 that the Messianic blessing for all the world would come from the offspring of Abraham: “I will make you into a great nation and I will bless you; I will make your name great, and you will be a blessing. I will bless those who bless you, and whoever curses you I will curse; and all peoples on earth will be blessed through you” (Gen. 12:2–3 ; cf. 22:18). Jesus was indeed the seed of Abraham. Matthew begins with “A record of the genealogy of Jesus Christ the son of David, the son of Abraham” (Matt. 1:1). Paul adds, “The promises were spoken to Abraham and to his seed. The Scripture does not say ‘and to seeds,’ meaning many people, but ‘and to your seed,’ meaning one person, who is Christ” (Gal. 3:16).

The Redeemer would come through the tribe of Judah: “The scepter will not depart from Judah, nor the ruler’s staff from between his feet, until he comes to whom it belongs and the obedience of the nations is his” (Gen. 49:10). According to the New Testament genealogies this was Jesus’ ancestry. Luke declares: “Now Jesus himself was about thirty years old when he began his ministry. He was the son, so it was thought, of Joseph, the son of Heli, . . . the son of Judah, the son of Jacob, the son of Isaac, the son of Abraham” (Luke 3:23 , 33–34 ; cf. Matt. 1:1–3). Hebrews adds, “For it is clear that our Lord descended from Judah” (Heb. 7:14).

The books of Samuel record the prediction that the Messiah would be of the house of David. God said to David: “When your days are over and you rest with your fathers, I will raise up your offspring to succeed you, who will come from your own body, and I will establish his kingdom. He is the one who will build a house for my Name, and I will establish the throne of his kingdom for ever. I will be his father, and he shall be my son” (2 Sam. 7:14). The New Testament repeatedly affirms that Jesus was “the son of David” (Matt. 1:1). Jesus himself claimed to be “the son of David” (Matt. 22:42–45). The Palm Sunday crowd also hailed Christ as “the son of David” (Matt. 21:9).

Herald of Messiah’s coming. Isaiah predicted that the Messiah would be heralded by a messenger of the Lord who would be “A voice of one calling: ‘In the desert prepare the way for the LORD ; make straight in the wilderness a highway for our God’ ” (40:3). Malachi (3:1) added: “ ‘See, I will send my messenger, who will prepare the way before me. Then suddenly the Lord you are seeking will come to his temple; the messenger of the covenant, whom you desire, will come,’ says the LORD Almighty.” These predictions were literally fulfilled in the ministry of John the Baptist. Matthew records: “In those days John the Baptist came, preaching in the Desert

of Judea and saying, ‘Repent, for the kingdom of heaven is near.’ ” This is he who was spoken of through the prophet Isaiah: “A voice of one calling in the desert, ‘Prepare the way for the Lord, make straight paths for him’ ” (Matt. 3:1–3).

Isaiah 11:2 foretold that the Messiah would be anointed by the Holy Spirit for his ministry: “The Spirit of the LORD will rest on him—the Spirit of wisdom and of understanding, the Spirit of counsel and of power, the Spirit of knowledge and of the fear of the LORD .” This literally happened to Jesus at his baptism. Matthew 3:16–17 says, “As soon as Jesus was baptized, he went up out of the water. At that moment heaven was opened, and he saw the Spirit of God descending like a dove and lighting on him. And a voice from heaven said, ‘This is my Son, whom I love; with him I am well pleased.’ ”

Isaiah 61 said that the Messiah would preach the gospel to the poor and brokenhearted. Jesus pointed out his fulfillment of this ministry in the Nazareth synagogue (Luke 4:17–20):

> He went to Nazareth, where he had been brought up, and on the Sabbath day he went into the synagogue, as was his custom. And he stood up to read. The scroll of the prophet Isaiah was handed to him. Unrolling it, he found the place where it is written: “The Spirit of the Lord is on me, because he has anointed me to preach good news to the poor. He has sent me to proclaim freedom for the prisoners and recovery of sight for the blind, to release the oppressed, to proclaim the year of the Lord’s favor.”

Jesus carefully cut off his reading in the middle of a sentence, failing to add the next phrase, “and the day of vengeance of our God.” That refers to his second coming; it was not fulfilled that day in their hearing, as was the rest of the prophecy.

Isaiah 35:5–6 declared that the Messiah would perform miracles to confirm his ministry, asserting: “Then will the eyes of the blind be opened and the ears of the deaf unstopped.” The Gospel record is filled with Jesus’ miracles. “Jesus went through all the towns and villages, teaching in their synagogues, preaching the good news of the kingdom and healing every disease and sickness” (Matt. 9:35). Jesus even cited these very things for John the Baptist as his messianic calling card. “Jesus replied, ‘Go back and report to John what you hear and see: The blind receive sight, the lame walk, those who have leprosy are cured, the deaf hear, the dead are raised, and the good news is preached to the poor’ ” (Matt. 11:4–5).

Messiah’s work. Malachi 3:1 foretold the authority over the temple worship that Jesus showed when he twice drove out the moneychangers—at the beginning and at the end of his ministry: “ ‘See, I will send my messenger, who will prepare the way before me. Then suddenly the Lord you are seeking will come to his temple; the messenger of the covenant, whom you desire, will come,’ says the LORD Almighty.”

Matthew 21:12–13 relates that: “Jesus entered the temple area and drove out all who were buying and selling there. He overturned the tables of the money changers and the benches of those selling doves. ‘It is written,’ he said to them, ‘My house will be called a house of prayer,’ but you are making it a ‘den of robbers.’ ”

Among many psalms applicable to the ministry of Jesus is 118:22 , which foretells Messiah's rejection by his people: "The stone the builders rejected has become the capstone." This very verse is cited repeatedly in the New Testament. For example, Peter wrote, "Now to you who believe, this stone is precious. But to those who do not believe, 'The stone the builders rejected has become the capstone.' " (1 Peter 2:7 ; cf. Matt. 21:42 ; Mark 12:10 ; Luke 20:17 ; Acts 4:11).

Suffering and death of Christ. One of the most amazing predictions of Christ in all of Scripture is that of Isaiah 53:2–12 . This precise description of Jesus' sufferings and death of Christ was all literally fulfilled (see Matt. 26–27 ; Mark 15–16 ; Luke 22–23 ; John 18–19). Isaiah predicts twelve aspects of Messiah's passion, all fulfilled. Jesus . . .

1. was rejected;
2. was a man of sorrow;
3. lived a life of suffering;
4. was despised by others;
5. carried our sorrow;
6. was smitten and afflicted by God;
7. was pierced for our transgressions;
8. was wounded for our sins;
9. suffered like a lamb;
10. died with the wicked;
11. was sinless; and
12. prayed for others.

Further confirmation of the predictive nature of Isaiah 53 is that it was common for Jewish interpreters before the time of Christ to teach that Isaiah here spoke of the Jewish Messiah (see Driver). Only after early Christians began using the text apologetically with great force did it become in rabbinical teaching an expression of the suffering Jewish nation. This view is implausible in the context of Isaiah's standard references to the Jewish people in the first-person plural ("our" or "we,") whereas he always refers to the Messiah in third-person singular, as in Isaiah 53 ("he" and "his" and "him").

Predictions elsewhere about Christ's death include:

13. the piercing of his hands and feet (Ps. 22:16 ; cf. Luke 23:33);

14. the piercing of his side (Zech. 12:10 ; cf. John 19:34); and

15. the casting of lots for his garments (Ps. 22:18 ; cf. John 19:23–24).

While it wasn't recognized until after the fact, one of the most precise predictions in Scripture gives the very year in which the Christ would die. Daniel was speaking of both the exile of Israel and the atonement for sin when he recorded a prayer of confession for the sins of his people (9:4–19) and a vision in response in which the angel Gabriel gave to Daniel the following foresight (9:24–26):

> Seventy "sevens" are decreed for your people and your holy city to finish transgression, to put an end to sin, to atone for wickedness, to bring in everlasting righteousness, to seal up vision and prophecy and to anoint the most holy. Know and understand this: From the issuing of the decree to restore and rebuild Jerusalem until the Anointed One [Messiah], the ruler, comes, there will be seven "sevens," and sixty-two "sevens." . . . After the sixty-two "sevens," the Anointed One will be cut off.

The context indicates that Daniel knew he was speaking of years, since he was meditating on the "number of years" that God had revealed to Jeremiah that Jerusalem would lay waste, namely, "seventy years" (vs. 2). God then told Daniel that it would be 7 x 70 (years) before the Messiah would come and be cut off (die).

Artaxerxes ordered Nehemiah "to restore and rebuild *Jerusalem* " (Dan. 9:25 ; cf. Nehemiah 2) in 445/444 B.C . From that year, rather than the earlier date when Cyrus approved only the rebuilding of the temple (Ezra 1:3), Daniel predicted that it would be 483 years to the time of Christ's death. Taking the widely accepted date of 33 for the crucifixion (see Hoehner), would be 483 years exactly:

Seven sevens plus sixty-two sevens is 69 x 7 = 483

444 + 33 = 477

Add six years to compensate for the five days in a solar year not in the lunar year followed by Israel (5 x 477 = 2385 days or 6+ years).

477 + 6 = 483 years

This assumes Daniel's 490 (70 x 7) is not a round number, which is possible. The Bible frequently rounds its numbers (*see* BIBLE, ALLEGED ERRORS IN ; CHRONOLOGY, PROBLEMS IN THE BIBLE). In either event, Daniel's prediction takes us to the very time of Christ.

Psalm 16:10 : Christ's resurrection. The Old Testament also foretold the resurrection of the Messiah from the dead. Psalm 2:7 declares: "I will proclaim the decree of the LORD : He said to me, 'You are my Son; today I have become your Father.' " In Psalm 16:10 David adds, "because you will not abandon me to the grave, nor will you let your Holy One see decay."

Both of these passages are cited in the New Testament as predictive of the resurrection of Christ. Peter said explicitly of David's prophecy in Psalm 16 , "But he was a prophet and knew that God had promised him on oath that he would place one of his descendants on his throne. Seeing what was ahead, he spoke of the resurrection of the Christ, that he was not abandoned to the grave, nor did his body see decay" (Acts 2:30–31 ; cf. 13:35). Psalm 2 is cited as a prediction of the resurrection in Acts 13:33–34 (cf. Heb. 1:5). Indeed, using these passages, "Paul went into the synagogue, and on three Sabbath days he reasoned with them from the Scriptures, explaining and proving that the Christ had to suffer and rise from the dead. 'This Jesus I am proclaiming to you is the Christ,' he said" (Acts 17:2–3). This would scarcely have been possible unless his skeptical Jewish audience did not recognize the predictive nature of passages like Psalms 2 and 16 .

The ascension of Christ. In Psalm 110:1 , David even predicted the Ascension of Christ, writing, "The LORD says to my Lord: 'Sit at my right hand until I make your enemies a footstool for your feet' " (cf. Pss. 2:4–6 ; 68:6 ; used in Eph. 4:8). Jesus applied this passage to himself (Matt. 22:43–44). Peter used it as a prediction of the Ascension of Christ: "For David did not ascend to heaven, and yet he said, 'The Lord said to my Lord: "Sit at my right hand until I make your enemies a footstool for your feet" '" (Acts 2:34–45).

Prophecy and the Messiah. It is important to note unique things about biblical prophecies. Unlike many psychic predictions, many of these were *very specific,* giving, for example, the very name of the tribe, city, and time of Christ's coming. Unlike forecasts found in tabloids at the supermarket checkout counter, *none of these predictions failed.*

Since these prophecies *were written hundreds of years* before Christ was born, the prophets could have been reading the trends of the times or making intelligent guesses. Many predictions were beyond human ability to fake a fulfillment. If he were a mere human being, Christ would have had no control over when (Dan. 9:24–27), where (Micah 5:2), or how he would be born (Isa. 7:14), how he would die (Psalm 22 ; Isaiah 53), do miracles (Isa. 35:5–6), or rise from the dead (Psalms 2 , 16).

It is unlikely that all these events would have converged in the life of one man. Mathematicians (Stoner, 108) have calculated the probability of sixteen predictions being fulfilled in one man (e.g., Jesus) at 1 in 1045. That forty-eight predictions might meet in one person, the probability is 1 in 10157. It is almost impossible to conceive of a number that large.

But it is not just a *logical improbability* that rules out the theory that Jesus engineered his prophecy fulfillments; it is *morally implausible* that an all-powerful and all-knowing God (*see* GOD, NATURE OF) would allow his plans for prophetic fulfillment to be ruined by someone who just happened to be in the right place at the right time. God cannot lie (Titus 1:2), nor can he break a promise (Heb. 6:18). So we must conclude that he did not allow his prophetic promises to be thwarted by chance. All the evidence points to Jesus as the divinely appointed fulfillment of the Messianic prophecies. He was God's man, confirmed by God's signs (Acts 2:22).

Nonmessianic Predictions. Other biblical prophecies are specific and predictive. The following are examples:

Daniel 2:37–42 : The Succession of Great World Kingdoms. An amazing prediction in the Bible is the succession of the world empires of Babylon, Medo-Persia, Greece, and Rome by Daniel. Interpreting the metallic man in the dream of King Nebuchadnezzar of Babylon, he told Nebuchadnezzar": 'You, O king, are the king of kings. . . . You are that head of gold. After you, another kingdom will rise, inferior to yours. Next, a third kingdom, one of bronze, will rule over the whole earth. Finally, there will be a fourth kingdom, strong as iron—for iron breaks and smashes everything—and as iron breaks things to pieces, so it will crush and break all the others' " (Dan. 2:38–40).

So precise and accurate is this prophecy that even negative critics agree that Daniel spoke in order of Babylon, Medo-Persia, Greece, and Rome. Critics try to avoid the supernatural nature of the prophecy by claiming these words were written after the fact, in about 165 B.C . But there is no real substantiation for this claim.

Cyrus King of Persia. One of the most specific Old Testament predictions identifies Cyrus of Persia before he was even born. Isaiah 44:28–45:1 : "The LORD . . . who says of Cyrus, 'He is my shepherd and will accomplish all that I please; he will say of Jerusalem, "Let it be rebuilt," and of the temple, "Let its foundations be laid." ' This is what the LORD says to his anointed, to Cyrus, whose right hand I take hold of to subdue nations before him and to strip kings of their armor, to open doors before him so that gates will not be shut."

This prediction was made some 150 years before Cyrus was even born (*see* ISAIAH, DEUTERO). Since Isaiah lived between about 740 and 690 B.C . (2 Kings 25–21) and Cyrus did not make his proclamation for Israel to return from exile until about 536 (Ezra 1), there would have been no human way for him to know what Cyrus would be named or do. The attempt of critics to divide Isaiah and postdate the prophecy is without foundation (*see* ISAIAH, DEUTERO) and is a backhanded compliment to the detail and accuracy of the prediction.

The Return of Israel to the Land. Given their long exile of some nineteen centuries and the animosity of the occupants of Palestine against them, any prediction of the return, restoration, and rebuilding of the nation of Israel was extremely unlikely. Yet predictions made some centuries and over two and a half millennia in advance about the two restorations of the Jews to their homeland and their restoration as a nation have been literally fulfilled. Regarding the 1948 restoration of Israel, Isaiah predicted that "In that day the Lord will reach out his hand a second time to reclaim the remnant that is left of his people from Assyria, from Lower Egypt, from Upper Egypt, from Cush, from Elam, from Babylonia, from Hamath and from the islands of the sea."

The first return was under Ezra and Nehemiah in the sixth century B.C . But Israel was sent again into exile in A.D . 70 when the Roman armies destroyed Jerusalem and leveled the temple. For nearly 2000 years the Jewish people remained in exile and the nation did not exist. Then, just as the Bible foretold, they were reestablished after World War II and a bitter struggle with the Arab Palestinians. Millions have returned and rebuilt their country and in the Six-Day War in 1967 Jerusalem again became a united Jewish city. No other nation in history has managed so successfully to keep a culture, identity, and language intact over hundreds of years, let alone

against the genocidal hatred repeatedly encountered by the Jews. This Bible prediction is incredible evidence of the supernatural origin of the Scriptures.

The Closing of the Golden Gate. The Golden Gate is the eastern gate of Jerusalem, through which Christ made his triumphal entry on Palm Sunday before his crucifixion (Matthew 21). Ezekiel 44:2 predicted that it would be closed one day, and not reopened until the Messiah returned: "The LORD said to me, 'This gate is to remain shut. It must not be opened; no one may enter through it. It is to remain shut because the LORD , the God of Israel, has entered through it.' "

In 1543 Sultan Suleiman the Magnificent closed the gate and walled it up as Ezekiel had predicted. He had no idea he was fulfilling prophecy. He simply sealed it because the road leading to it was no longer used for traffic. It remains sealed to this day exactly as the Bible predicted, waiting to be reopened when the King returns.

The Destruction of Tyre. Tyre, an important sea port in the Eastern Mediterranean, was one of the great cities of the ancient world. It was a heavily fortified and flourishing city. Yet Ezekiel 26:3–14 predicted her doom and entire demolition hundreds of years in advance, declaring: "This is what the Sovereign LORD says: I am against you, O Tyre, and I will bring many nations against you, like the sea casting up its waves. They will destroy the walls of Tyre and pull down her towers; I will scrape away her rubble and make her a bare rock. Out in the sea she will become a place to spread fishing nets. . . . They will plunder your wealth and loot your merchandise; they will break down your walls and demolish your fine houses and throw your stones, timber and rubble into the sea. . . . I will make you a bare rock, and you will become a place to spread fishing nets. You will never be rebuilt, for I the LORD have spoken, declares the Sovereign LORD ."

This prediction was partially fulfilled when Nebuchadnezzar destroyed the city and left it in ruins. However, the stones, dust and timber were not thrown into the sea. Then Alexander the Great attacked the seemingly impregnable Island of Tyre by taking the stones, dust, and timber from the ruined mainland city and building a causeway to the Island. Not only has the city never been rebuilt; today it literally is used as a place "to spread fishing nets."

The Doom of Edom (Petra). Unlike many Old Testament predictions of doom, Edom was not promised any restoration, only "perpetual desolation." Jeremiah wrote in 49:16–17 : " 'The terror you inspire and the pride of your heart have deceived you, you who live in the clefts of the rocks, who occupy the heights of the hill. Though you build your nest as high as the eagle's, from there I will bring you down,' declares the Lord. 'Edom will become an object of horror; all who pass by will be appalled and will scoff because of all its wounds.' "

Given the virtually impregnable nature of the ancient city carved out of rock and protected by a narrow passage way, this was an incredible prediction. Yet, in A.D . 636 it was conquered by Muslims and stands deserted but for tourist and passers by.

Flourishing of the Desert in Palestine. For centuries Palestine lay wasted and desolate. These conditions extended throughout the land. But Ezekiel 36:33–35 predicted that "This is what the

Sovereign LORD says: On the day I cleanse you from all your sins, I will resettle your towns, and the ruins will be rebuilt. The desolate land will be cultivated instead of lying desolate in the sight of all who pass through it. They will say, 'This land that was laid waste has become like the garden of Eden; the cities that were lying in ruins, desolate and destroyed, are now fortified and inhabited.' "

Today roads have been built, the land is being cultivated, and Israel's agriculture is flourishing. This renovation began before the turn of the twentieth century and continues a century later. Agricultural crops, including a large orange harvest, are part of the restoration—just as Ezekiel had predicted.

Increase of Knowledge and Communication. Another biblical prophecy being fulfilled after thousands of years is that of Daniel's forecast of the increase of knowledge and communication in the last days (12:4): God said: "But you, Daniel, close up and seal the words of the scroll until the time of the end. Many will go here and there to increase knowledge."

Never in the history of the world has there been such a burst in knowledge, transportation, and communication as in the late twentieth century. Jet aircraft propulsion and computer microcircuit have caused a transportation and information explosion.

An Important Conclusion. A fact often overlooked by critics is that only one real case of fulfilled prophecy would establish Scripture's supernatural origin (cf. Ramm, 86). Even if most biblical predictions could be explained naturally, even one clear case establishes the rest and confirms the prophetic event. Thus, if the critic is to make the case against prophecy, all instances must be naturally explainable.

Objections to Predictive Prophecy. Numerous arguments have been advanced to negate argument for the supernatural origin of biblical prophecy. The most important ones will be briefly considered:

The Language of Prophecy Is Vague. Critics insist that the language of prophecy is so indefinite that some sort of fulfillment is not difficult to find. Vague predictions are sharpened by their fulfillment.

Not all biblical prophecy is sharp. Some is vague and sharpened by its fulfillment. However, the critic must show that all prophecy is of this nature. But, as shown in the above examples, some prophecies are quite specific. The predictions of when Christ would die (Dan. 9:24f .), in what city he would be born (Micah 5:2), and how he would suffer and die (Isaiah 53) are hardly vague.

Other Religious Books Have Prophecies. It is also protested that prophecies are not unique to the Bible, but are found in other holy books. Hence, it has no value in proving the truth of Christianity over other religions. This argument is similar to David Hume's argument that similar miraculous events are claimed by all religions. Hence, alleged miracles cannot be used to establish the truth of any one religion over another.

This objection is subject to the same criticism as Hume's (*see* MIRACLES, ARGUMENTS AGAINST). First, it is not true that other religions have specific, repeated, and unfailing fulfillment of predictions many years in advance of contingent events over which the predictor had no control. These kinds of predictions are unique to the Bible. A discussion of prophecies made by Muhammad in the *Qur'an* , the Bible's closest competitor is found in the article MUHAMMAD, ALLEGED MIRACLES OF , and shows the disparity between the two books.

R. S. Foster says of other holy books and the writings of pagan religions: "No well-accredited prophecy is found in any other book or even oral tradition now extant, or that has ever been extant in the world. The oracles of heathenism are not to be classed as exceptions. There is not a single one of them that meets the tests required to prove supernatural agency, which every Scripture prophecy evinces" (Foster, 111). M'Ilvaine adds, "the history of pagan nations indeed abounds with stories of auguries and oracles and detached predictions. . . . But innumerable distance separates all the pretended oracles of paganism from the dignity of the prophecies of the Bible" (M'Ilvaine, 246–47). After making a careful examination of Hebrew and Pagan prophets, Calvin Stow concluded that there were no credible prophecies in other writings, but that each "is just what we would expect from men of this world, who have no faith in another" (cited in Newman, 17–18).

Psychics Have Made Predictions Like the Bible's. Contemporary critics of biblical prophecy nominate psychic predictions for equality with Scripture. However, there is another quantum leap between every psychic and the unerring prophets of Scripture (*see* MIRACLES, MAGIC AND). Indeed, one test of a prophet was whether they ever uttered predictions that did not come to pass (Deut. 18:22). Those whose prophecies failed were stoned (18:20)—a practice that no doubt gave pause to any who were not absolutely sure their messages were from God. Amid hundreds of prophecies, biblical prophets are not known to have made a single error. A study of prophecies made by psychics in 1975 and observed until 1981 showed that of the seventy-two predictions, only six were fulfilled in any way. Two of these were vague and two others were hardly surprising—the U.S. and Russia would remain leading powers and there would be no world wars. *The People's Almanac* (1976) did a study of the predictions of twenty-five top psychics. The results: Of the total seventy-two predictions, sixty-six (92 percent) were totally wrong (Kole, 69). An accuracy rate around 8 percent could easily be explained by chance and general knowledge of circumstances. In 1993 the psychics missed every major unexpected news story, including Michael Jordan's retirement, the Midwest flooding, and the Israel-PLO peace treaty. Among their false prophecies were that the Queen of England would become a nun, and Kathy Lee Gifford would replace Jay Leno as host of *The Tonight Show* (*Charlotte Observer* 12/30/93).

Likewise, the highly reputed "predictions" of Nostradamus were not that amazing at all. Contrary to popular belief, he never predicted either the place or the year of a great California earthquake. Most of his "famous" predictions, such as the rise of Hitler, were vague. As other psychics, he was frequently wrong, a false prophet by biblical standards. More about Nostradamus is related in the article Nostradamus.

When Were Biblical Prophecies Made? According to this objection, all biblical prophecies with enough specificity to be unexplainable were made after the events. Daniel's amazing

statements were made quite late, and Isaiah's predictions about Cyrus were edited in after he arrived on the scene. They were recording history, not uttering prophecies. For discussions of the dating of these two books, see DANIEL, DATING OF , and ISAIAH, DEUTERO . Neither these nor other charges of post-dated prophecies have any foundation in fact. And many fulfillments have occurred long after the writings are known to have existed.

Alleged Fulfillments Misinterpret the Texts. Critics argue that the alleged fulfillment of Old Testament predictions are frequently misinterpretations of the Old Testament text. For example, Matthew says repeatedly "that it might be fulfilled" (cf. 1:22 ; 2:15 , 17). However, when the Old Testament passage is examined in context, it turns out that it was not a real prediction of the event to which Matthew applied it.

A case in point is Matthew 2:15 : "And so was fulfilled what the Lord had said through the prophet: 'Out of Egypt I called my son.' " When the Old Testament source passage, Hosea 11:1 , is examined, it is discovered that this is not a predictive prophecy about Jesus coming out of Egypt when he was a child but a statement about the children of Israel coming out of Egypt at the exodus.

It is readily admitted that many "prophecies" are not predictive and that the New Testament *applied* certain Old Testament passages to Christ that were not directly predictive of him. Many scholars speak of these Old Testament texts being "topologically fulfilled" in Christ, without being directly predictive. That is, some truth in the passage is appropriately applied to Christ, even though it was not directly predictive of him.

Others speak of a generic meaning in the Old Testament passage which applies both to its Old Testament reference (e.g., Israel) and the New Testament reference (e.g., Christ), both of whom were God's "son." Some scholars describe this as a double-reference view of prophecy. Whatever the case, these kinds of prophetic passages are not directly predictive and have no apologetic value. There are Old Testament passages that are not merely typological but are manifestly predictive, as was shown above. For example, the time and place of Christ's birth and death were told. What the critic cannot show is that all Old Testament "prophecies" are merely typological and nonpredictive.

Jesus Manipulated Events to Fulfill Prophecy. Another argument used by critics was popularized by Hugh Schonfield's *Passover Plot* . He argued that Jesus manipulated people and events so as to make it appear that he was the predicted Messiah. This interesting theory is destroyed by the facts. First, numerous miracles (*see* MIRACLES IN THE BIBLE) confirmed Jesus to be the Messiah. God would not confirm a fraud to appear to be his Son (*see* MIRACLES, APOLOGETIC VALUE OF). Second, there is no evidence that Jesus was a deceiver. To the contrary, his character is impeccable (*see* CHRIST, UNIQUENESS OF). Third, Jesus had no control over some predictions over which he had no control, such as, his ancestry (Gen. 12:3 ; 49:10 ; 2 Sam. 7:12–16); birthplace (Micah 5:2), time of death (Dan. 9:24–27); and conditions of his death (Isaiah 53). Fourth, in order to manipulate all the people (including his enemies) and even his disciples in order to make it appear that he was the promised Messiah, Jesus would have needed supernatural powers. But if he had such powers, he must have been the Messiah he claimed to be.

Only the Successful Prophecies Are Recorded. This objection affirms that Old Testament prophets were just as fallible as any other prophets. They got some right and some wrong. However, only the ones that succeeded were placed in the Bible. Thus, there is really nothing supernatural about them. After all, if only the successful predictions of Jean Dixon were collected into one volume long after her death, she too would look as supernatural as the biblical prophets.

This objection is based on fallacious premises. First of all, it is the fallacy of the Argument from Ignorance. It presents no evidence that there were other prophecies that failed. It merely *assumes* that there were. The burden of proof is to show that there were. Second, what it admits is sufficient to destroy its contention. If all the prophecies in the Bible are good ones, then we have numerous positive evidence, that the Bible is unfailing in its predictive power—a sure sign of their divine origin and far beyond the best psychics on their best days. Third, the argument is a false analogy, since in the case of the psychics we have numerous known examples of where they were wrong. In the case of the Bible we have none. It also assumes the prophet's contemporaries would have gone along with the misses and accepted the hits as from God. As noted, that is not how it worked.

Some Biblical Predictions Were Not Fulfilled. A number of critics have argued that not all the predictions of the Bible were fulfilled. Jonah's prediction that Nineveh would be destroyed in forty days was not (Jonah 3:4). Christ did not return in one generation, as he said he would. Indeed, Christ has not returned and set up a literal kingdom as he promised (Matthew 24–25). Neither has God destroyed the world by fire (2 Peter 3:10–13) and set up a perfect Paradise (Revelation 21–22).

The alleged unfulfilled prophecies all fall into one of the following categories (see Payne):

Some were conditional. Jonah's warning to Nineveh was conditioned on their continuing rebellion. When they repented (3:5–9), God relented of the impending doom. As Jesus said to those of his day, "Unless you repent, you too will all perish" (Luke 13:3). Likewise, there is an implied "unless you repent" in every prophet who warns of God's judgment. As Peter said, "The Lord . . . is patient with you, not wanting anyone to perish, but everyone to come to repentance" (2 Peter 3:9). The same is true of Deuteronomy 11:25 where God said to Israel, "No man will be able to stand against you. The LORD your God, as he promised you, will put the terror and fear of you on the whole land, wherever you go." Yet they did suffer defeats, for example, at Ai (Joshua 7). But when this promise is examined, it is clearly conditional—"if you carefully keep all these commandments" (vs. 22). When Israel did obey God, they were undefeatable, even against overwhelming odds (cf. Joshua 6 , 8–11).

Some simply have not yet been fulfilled. Most of these relate to Jesus' second coming which has not yet occurred. It is simply fallacious to claim the Bible has false prophecies because they have not yet all been fulfilled. As Peter warned (2 Peter 3:4–5 , 8–9):

> First of all, you must understand that in the last days scoffers will come, scoffing and following their own evil desires. They will say, "Where is this 'coming' he promised? Ever since our fathers died, everything goes on as it has since the beginning of creation."

> . . . But do not forget this one thing, dear friends: With the Lord a day is like a thousand years, and a thousand years are like a day. . . . The Lord is not slow in keeping his promise, as some understand slowness. He is patient with you, not wanting anyone to perish, but everyone to come to repentance.

The other alleged unfulfilled prophecies are not errors in the Bible but *errors in the critics'* understanding of the Bible. For example, Jesus did not say he would return to earth in the disciples' lifetime (in Matt. 24:34). He never said "I will return in your life time." What he said was, "This generation will certainly not pass away until all these things have happened." This phrase can mean one of several different things. To make their point, the critics must assume that it can mean only one thing.

Further, "generation" in Greek *(genea)* can mean "race." One interpretation of Jesus' statement is that the Jewish race would not pass away until all things are fulfilled. There were many promises to Israel, including the eternal inheritance of the land of Palestine (Genesis 12 , 14 , 15 , 17) and the Davidic kingdom (2 Samuel 7), yet the nation was about to be destroyed by the Romans. Jesus could be promising God's preservation of the nation of Israel in order to fulfill his promises to them. Paul speaks of a future of the nation of Israel when they will be reinstated in God's covenantal promises (Rom. 11:11–26). And Jesus' response to his disciples' last question implied that there would yet be a future kingdom for Israel, when they asked: "Lord, will You at this time restore the kingdom to Israel?" Rather than rebuking them for their misunderstanding, he replied that "It is not for you to know times or seasons which the Father has put in his own authority" (Acts 1:6–7).

What is more, "generation" could also refer to a generation in its commonly understood sense of the people who will be alive at the time indicated. In this case, "generation" would refer to the group of people who are alive when these things come to pass in the future. The generation alive when these things (the abomination of desolation [vs. 15], the great tribulation [vs. 21], and the sign of the Son of Man in heaven [vs. 30]) begin to come to pass will still be alive when these judgments are completed. Since it is commonly believed that the tribulation is a period of some seven years (Dan. 9:27 ; cf. Rev. 11:2) at the end of the age, then Jesus would be saying that "this generation" alive at the beginning of the tribulation will still be alive at the end of it.

In any event, there is no reason to assume that Jesus made the obviously false assertion that the world would come to an end within the lifetime of his contemporaries.

Summary. The Bible is filled with specific predictive prophecies that have been literally fulfilled. The *Encyclopedia of Biblical Prophecies* calculated that 27 percent of the entire Bible contains predictive prophecy (Payne, 675). This is true of no other book in the world. And it is a sure sign of its divine origin.

Qq

***Q* Document.** The *Gospel of Q* or *Q Document* is a hypothetical collection of Jesus' sayings that supposedly antedates the four Gospels. The *Q* hypothesis comes from the German word *Quelle* , meaning "sources." *Q* was used heavily by the Jesus Seminar to arrive at their radical conclusions. Since *Q* allegedly contains sayings, not works or miracles of Jesus, it is used as a basis for denying the resurrection. Since the earliest *Q* contained no references to Jesus' deity, this too is held to be a later mythological invention. If true, this would undermine the historic apologetic for Christianity (*see* APOLOGETICS, HISTORICAL ; NEW TESTAMENT, HISTORICITY OF).

Supposed States and Dates of Q. According to *Q* proponent Burton Mack, there were really four successive states of *Q* : proto- *Q* 1, *Q* 1, proto- *Q* 2, and *Q* 2. The gospel(s) of *Q* supposedly developed between 30 and 65, before any canonical Gospels appeared. Thus, *Q* is supposed to provide, along with the *Gospel of Thomas* (*see* NAG HAMMADI GOSPELS), the earliest view of Jesus' followers.

Some scholars distinguish between *Q* 1 (ca. 50), consisting of short sayings of Jesus, and *Q* 2 (50–60), which may have been against the original Jesus group as evidenced by the judgmental tone of *Q* 2. This includes apocalyptic pronouncements of doom on those who refused their kingdom program. After the Jewish War (70), they upgraded their mythology (*Q* 3) to include statements about Jesus being divine (Mack, 53). On this breakdown, *Q* 1 presents Jesus as a sage, a wise teacher; *Q* 2 portrays him as prophetic and apocalyptic; and *Q* 3 as superhuman, embodying the wisdom of God and divine authority (Boyd, 121).

History of the Q Hypothesis. Judging from its widespread acceptance today, one would expect that the *Q* hypothesis had been around since the early church. The truth is that Friedrich Schleiermacher (1768–1834), the father of modern liberalism, gave impetus to the idea when he reinterpreted a statement by Papias (ca. 110) about Matthew compiling "the oracles" of Jesus (Gk. *ta logia*). This, Schleiermacher decided, was a document consisting only of Jesus' "sayings," rather than both "what the Lord said or did" (*see* Linnemann, *Is There a Synoptic Problem?* 20). Later, Christian Hermann Weisse (1801–1866) claimed that this saying-source was used by Luke in compiling his Gospel, thus giving rise to the concept of *Q* . Others added that Mark was used by both Matthew and Luke. Thus, *Q* is posited to account for the material used by Matthew and Luke that is not found in Mark, their common source.

However, in spite of its popularity, *Q* has been rejected by many biblical scholars from the time it was first proposed. B. F. Westcott (1825–1901), Theodore Zahn (1838–1933), and Adolf Schlatter (1852–1938) are examples of older scholars. Eta Linnemann, John Wenham, and William Farmer are examples of contemporary scholars.

Alleged Basis of Q. According to proponents, "the *Q* hypothesis, together with Marcan priority, is the most efficient way of accounting for the myriad details in the relationship of these three texts to one another." For "Matthew and Luke agree in their sequence of events in the life of Jesus only when they also agree with Mark." And "this peculiar pattern has led almost all scholars of the New Testament to the conclusion that Matthew and Luke must have made use of Mark as a kind of outline for their respective works, but quite independently of one another."This Marcan priority, however, doesn't account for a good deal of material shared by Matthew and Luke. "How could Matthew and Luke have included these several sayings, parables, and occasional stories—sometimes offering versions that are very close in wording—independently of one another?" In view of this, "the *Q* hypothesis arose as a way of accounting for the material common to Matthew and Luke, but not found in Mark" (Patterson, 39–40). This similarity in content and order of events is used to show literary dependence of the latter documents on the former, that is, of Matthew and Luke upon Mark and *Q* .

Evaluation. From an apologetic vantage point, the so-called "Gospel of *Q* " has serious implications for the authenticity of the Gospels and the historic apologetic for Christianity. But the evidence shows that the hypothesis in no way undermines the authenticity of the biblical Gospels.

A central consideration is that there is not one shred of documentary evidence that *Q* ever existed. No manuscript or any version of it has ever been found. No church Father ever cited any work corresponding to what current scholars mean by *Q* . From what is known of the documentary tradition of the early Christian centuries, this lacuna is improbable in the extreme if the work ever existed. Former *Q* proponent Linnemann observes the reverence with which critics regard *Q* : "This is the stuff of fairy tales" (Linnemann, "Is There a *Q* ?" 19). Apologists can assume with confidence that *Q* is a modern creation and that no manuscript will turn up next week to prove them wrong.

As Gregory Boyd observes, "we could account for such similarities in other ways that don't require relying on a hypothetical document." For example, "from what we know about Jewish oral tradition and memorization, we could convincingly argue that the commonalities between Luke and Matthew simply indicate the reliability of the oral traditions that lie behind both. A number of reputable scholars take this position. Others argue that Luke used Matthew as a source document. Luke 1:1–4 indicates that he used several sources. This would account for similarity" (Boyd, 119–20).

The argument for *Q* is circular reasoning. Mack, for example, argued that "frequently the way sayings are grouped together or ordered [in *Q*] makes a point. Sometimes a saying offers a specific interpretation of a preceding unit of material" (Mack, 106). And "the order and organization of material are . . . clear signs of the coherence of a particular layer of tradition" (ibid., 108). However, the only *Q* we possess was constructed by *Q* proponents from Matthew

and Luke. They decided how these sayings would be put together. So it is no surprise that they were ordered to make a point, since it is those who constructed *Q* who ordered them in this way (ibid., 125). They are begging the question.

The *Q* hypothesis is based on a reconstructionist view of history that rejects New Testament history in Acts. If the *Q* hypothesis is correct as interpreted by some modern scholars, the book of Acts must be altogether false. Yet no book in the New Testament has more authentication of its historical accuracy than Acts. Historians specializing in the Roman Empire, such as A. N. Sherwin-White and Colin Hemer, have provided overwhelming evidence of its authenticity (*see* ACTS, HISTORICITY OF). Sherwin-White wrote: "For Acts the confirmation of historicity is overwhelming. . . . Any attempt to reject its basic historicity even in matters of detail must now appear absurd. Roman historians have long taken it for granted" (Sherwin-White, 189). Before them there was the work of William Ramsay who, after decades of research, concluded that in the presentation of hundreds of historical details, Dr. Luke has not made a single mistake (see Ramsay). But if Acts is good history, the historical reconstruction of *Q* is mythology.

An important event in early Christianity was the Council of Jerusalem in 49, at which the teaching of Paul was the central focus of the controversy. As Linnemann notes, "Are we to believe that this Council was content to quibble over the interpretation of Jewish law, as Luke reports, when Paul was 'mythologizing' the gospel, claiming Jesus to be God's son, while the *Q* people believed him to be no more than a Sage?" (Linnemann, "Is There a *Q* ?" 20). Surely, if the people of *Q* were Jesus people, not Christians, there would be some trace of this conflict in the New Testament. There is not (ibid.).

Neither order of events nor similarity of content is convincing grounds for positing literary dependence. The only way to show literary dependence is to prove a high percentage of identical literary construction. But this is not the case, as Linnemann has demonstrated (ibid., 21–23). "Similarity in content is in itself no proof of literary dependence. It could also be caused by different people covering the same event. A saying of Jesus should not have differed much as reported independently by two or more people who heard it. Similarity might be historically, not literarily, transmitted" (ibid., 22). Nor can the existence of a source document be demonstrated by sequence of accounts. Only twenty-four pairs of parallels, 36.9 percent, occur within one chapter of each other. Only five (7.69 percent) occur in the same point of narrative in Matthew and Luke. In view of this, Linnemann argues, "It takes a robust imagination" to suppose literary dependence (ibid.).

Literary dependence assumes identical wording. But the number of identical words in parallel verses is 1792 or 41 percent of Matthew's *Q* portion and 42 percent of Luke's. In seventeen of the sixty-five parallel pairs alleged to have come from *Q* , one-quarter of *Q* , the number of identical words is less than 25 percent. In the parable of the talents (Matt. 25:14–30), the longest *Q* passage, only sixty of 291 words are identical with Luke 19:11–27 . Of these words, nine are the word *and* , seven are articles, and six are pronouns. That leaves thirty-eight of 291 words on which to establish dependence. Most of those occur in direct speech. "Thus the similarity is easily accounted for by a historically reliable memory that reached both Matthew and Luke" (ibid.). The longest passage in the high-agreement area has 78 percent identical words. That is no longer than Psalm 1 , a text many know by heart. Says Linnemann, "It is not

difficult to imagine accounts of this length being committed to memory in the oral culture of Jesus' day" (ibid.).

There is no reason to accept the assumption that nearly all of *Q* is contained in Matthew and Luke. The primary argument is that, since Matthew and Luke retain a large amount of Mark in their Gospels, they would do the same for *Q* . But this does not follow, since Matthew and Luke may both have valued Mark more highly.

It is also assumed that there were several versions of *Q* . Besides the subjective criteria on which this was decided, it may be a violation of "Ockham's Razor," that hypotheses should not be multiplied without necessity. There is a more simple explanation if one predicates that the Gospels were assembled by eyewitnesses and contemporaries who had access to the original sayings and deeds of Jesus.

Overlap in the Gospels can be accounted for on the premise that either (1) the writers were independent eyewitnesses whose accounts would naturally overlap; (2) the later Gospel writers used the first Gospel written, plus their independent sources, and/or a common pool of oral sayings of Jesus; or (3) an early edition of Matthew or Mark was used later by the author as well as the other Gospel writers. The sources Luke mentions (Luke 1:1–4) may be other canonical Gospels composed by eyewitnesses.

If a precanonical Gospel record of Jesus existed, there is no good reason to believe it omitted the miracle or deity claims. Indeed, since the Old Testament claimed deity for the Messiah (esp. Pss. 45:6 ; 110:1 ; Isa. 7:14 ; 9:6 ; Micah 5:2 ; Zech. 12:10), there is no reason why someone claiming to be the Jewish Messiah would not do so as well (*see* CHRIST, DEITY OF ; VIRGIN BIRTH).

Even if there had been some miracleless deposit of original sayings of Jesus prior to the Gospels, this would not prove Jesus did not do miracles nor say many other things. It may have been an early disciple accustomed to keeping records, such as Matthew the former tax collector, recorded the sayings of Jesus because he knew they would be needed later. For example, if we had only Galatians (and not Romans, 1 Corinthians, and 1 Thessalonians), we might assume that Paul was not concerned about the resurrection. Galatians only mentions it once. Possessing an early document of sayings does not allow us to conclude that Christ did not perform miracles unless the document explicitly says so. Or, it might have been that, in view of the tremendous impact the world's greatest Teacher made on their minds and hearts for three years, there was an oral deposit of Jesus' words in the memories of the disciples before there were any written records. Indeed, according to John, Jesus promised that the Holy Spirit would bring to mind the things he had taught them (John 14:26 ; 16:13).

And if we take the presupposition so far as to imagine that an anti-miracle version of *Q* existed, it could have been an early revision of Jesus' words and deeds in opposition to the original disciples. After all, serious doctrinal deviations appeared even during the apostles' time (cf. Colossians 2 ; 1 Timothy 4 ; 1 John 4). Jesus warned of false prophets (Matt. 7:15).

When segments of text attributed to *Q* are examined as a whole, there is evidence of Jesus' miracles and divinity. Jesus claimed his "father" gave him authority over the whole world (*Q* s24). Jesus considered himself greater than Solomon or the prophet Jonah (*Q* s32). He believed those who disowned him would be disowned by God (*Q* s37). Jesus would determine who would be excluded from God's kingdom (*Q* s47). He predicted the future (*Q* s49). Jesus demanded that his disciples put him over all human beings, even their parents (*Q* s52). His followers would sit on thrones judging the twelve tribes of Israel (*Q* s62). Jesus even referred to his resurrection via the "sign" (miracle) of Jonah (*Q* s32). No doubt this evidence is one reason critics attempt to stratify *Q* into multiple documents, pushing the statements to as late a period as possible. However, the grounds for doing so are highly subjective, and, even so, the statements are still early enough to be authentic—during the time eyewitnesses were still alive.

In contrast to the hypothetical *Q* , the earliest known actual manuscript and documents of the Christian faith contained references to Christ's miracles and divinity. John is filled with both (*see* JOHN, GOSPEL OF) and the John Rylands Fragment is the earliest undisputed manuscript of Christian origins (*see* NEW TESTAMENT MANUSCRIPTS). First Corinthians is accepted even by critics as coming from the pen of Paul in 55 or 56, only twenty-two or twenty-three years after Jesus' death. It refers to the resurrection as having been "received" from Paul in his earlier teachings (1 Cor. 15:1 , 4–8).

The Q Assumptions. Obviously, though most *Q* advocates would be reluctant to admit it, there is an antisupernatural bias behind their view. Following the naturalistic approach to the Gospels that began with David Strauss in 1835–1836) they assume the miraculous does not occur. Thus, all records of miraculous events are categorized as later results of mythmaking (*see* MYTHOLOGY AND THE NEW TESTAMENT). The haste at which they jump to this conclusion when, even granting an early "sayings" source, betrays a desire to eliminate the supernatural. The confidence with which critics come to an antisupernatural conclusion on such speculative and hypothetical grounds supports the thesis that they really begin with a naturalistic presupposition. Compare the words of one *Q* advocate: "The narrative canonical gospels can no longer be viewed as the trustworthy accounts of unique and stupendous historical events at the foundation of the Christian faith." Instead, "the gospels must now be seen as the result of early Christian mythmaking" (Patterson, "The Lost Gospel," 40).

Beginning with a disbelief in miracles , it comes as no surprise that their imaginary reconstruction of *Q* in the early time period is devoid of miracle stories, including the resurrection .

The *Q* hypothesis is based on an incredible number of assumptions (see Boyd, 122–24):

1. Mark was the earliest Gospel and Matthew and Luke followed its form and content. The same data can be explained by positing an oral tradition or putting Matthew first.

2. *Q* existed as a written document. There is no proof for this.

3. A *Q* can be reconstructed from what Matthew and Luke have in common that is not found in Mark. But if *Q* existed there is no objective way to know how much of it was used.

4. *Q* was composed to express everything early Christians believed about Jesus. Why could it not have been simply a collection of sayings?

5. It is also assumed that a community of people created *Q* . There is no proof of this. One person could just as easily have collected Jesus' sayings.

6. *Q* can be accurately understood by discerning its various literary stages. No objective criteria are offered by which this can be done.

7. These alleged states reflect various stages of the thinking of Jesus' followers. The various views could as easily have been concurrent.

8. The views of Christ are incompatible with one another. Jesus could have been teacher, prophet, and divine authority. If these elements are together at the end, why could they not have all been there at the beginning?

Boyd summarizes: "We see, then, that the liberal revision of the picture of Jesus and of early church history on the basis of *Q* amounts to nothing more than a pile of arbitrary assumptions built on other arbitrary assumptions" (Boyd, 24).

Conclusion. The argument for the *Q* hypothesis, particularly in its naturalistic form, are without historical, documentary, or literary foundations. As Boyd noted, "among other things, the entire scheme is completely conjectural. These scholars ask us to trade the reliable Gospel portrait of Christ for a hypothetical reconstruction of history based on a hypothetical reconstruction of a hypothetical document" (Boyd, 121–22). There is nothing in the canonical Gospels that cannot be accounted for by positing that the authors were eyewitnesses and/or contemporaries of the events and that they provided an accurate account of what they reported just as Luke claims (Luke 1:1–4).

In the words of one former *Q* disciple, "The Gospels report the words and deeds of Jesus. They do this partly through direct eyewitnesses (Matthew and John) and partly through those who were informed by eyewitnesses (Mark and Luke). The similarities as well as the differences in the Gospel accounts are just what one expects from eyewitness reminiscence" (ibid.).

Qur'an **, Alleged Divine Origin of.** Orthodox Islam and historic Christianity cannot both be true. Either religion claims that its scriptures alone are the inspired Word of God. They also contain mutually exclusive claims: God is three persons. God is only one person. The Bible says Christ died on the cross and rose from the dead three days later. The *Qur'an* says that he did not (*see* CHRIST, DEATH OF ; CHRIST'S DEATH, MORAL OBJECTIONS TO ; CHRIST'S DEATH, SUBSTITUTION LEGEND ; RESURRECTION, EVIDENCE FOR). Thus, it is necessary for the Christian apologist to challenge the divine authority claims of the *Qur'an* .

Origin of the Qur'an. The Islamic claim for the *Qur'an* is unparalleled by that in any other major religion. Is the *Qur'an* a miracle? Muhammad claimed it was—indeed it was the only miracle he offered as proof of his claims to be a prophet (sura 17:88). The evidence Muslims give for this claim includes the following points.

Argument from Unique Literary Style. Eloquence is highly questionable as a test for divine inspiration, yet a foundation stone of the Islamic position is that the *Qur'an* possesses a literary quality and style that could only have come directly from God. At best the *Qur'an* 's literary qualifications prove that Muhammad was a gifted person. But amazing artistic and intellectual gifts are hardly supernatural. Mozart wrote his first symphony at the age of six and produced his entire music corpus before age 35 when he died. Muhammad did not begin to write until age 40. But what Muslim would say that Mozart's works are miraculous? If eloquence were the test, a case could be made for the divine authority of many literary classics, from Homer's *Iliad* and *Odyssey* to Shakespeare.

BR *Bible Review*

Further, even some early Muslim scholars admitted that the *Qur'an* was not perfect in its literary form. The Iranian Shiite scholar Ali Dashti notes that "among the Moslem scholars of the early period, before bigotry and hyperbole prevailed, were some such as Ebrahim on-Nassam who openly acknowledged that the arrangement and syntax of the Qoran are not miraculous and that works of equal or greater value could be produced by other God-fearing persons." Although some condemned this view (based on their interpretation of sura 17:90), on-Nassam had many defenders, among them several leading exponents of the Motazelite school (Dashti, 48).

The *Qur'an* is not unrivaled, even among works in Arabic. Islamic scholar, C. G. Pfander, points out that "it is by no means the universal opinion of unprejudiced Arabic scholars that the literary style of the *Qur'an* is superior to that of all other books in the Arabic language." For example, "some doubt whether in eloquence and poetry it surpasses the Mu'allaqat, or the Magamat or Hariri, though in Muslim lands few people are courageous enough to express such an opinion" (Pfander, 264). Dashti, contends, however, that the *Qur'an* contains numerous grammatical irregularities. He notes that:

> The Qoran contains sentences which are incomplete and not fully intelligible without the air of commentaries; foreign words, unfamiliar Arabic words, and words used with other than the normal meaning; adjectives and verbs inflected without observance of the concord of gender and number; illogical and ungrammatically applied pronouns which sometimes have no referent; and predicates which in rhymed passages are often remote from the subjects.

He adds, "these and other such aberrations in the language have given scope to critics who deny the Qoran's eloquence" (Dashti, 48–49). He lists numerous examples (suras 74:1; 4:160; 20:66; 2:172, etc.), one of which is "In verse 9 of *Sura* 49 (*ol-Hojorat*), 'If two parties of believers have started to fight each other, make peace between them." The verb for "have started to fight" is in the plural, whereas it ought to be in the dual like its subject, "two parties." Anis A. Shorrosh lists other literary flaws in the *Qur'an* . For example, in sura 2:177 he points out that the word *Sabireen* in Arabic should have been *Sabiroon* because of its position in the sentence. Likewise, *Sabieen* in sura 5:69 is more correct Arabic than *Sabioon* . Also, Shorrosh notes that there is "a gross error in Arabic" in sura 3:59 (Shorrosh, 199–200). Dashti counts more than 100 aberrations from normal rules and structures of Arabic (Dashti, 50). With such problems, the *Qur'an* may be eloquent, but it is neither perfect nor unparalleled.

As Pfander observed, "even were it proved beyond the possibility of doubt that the *Qur'an* far surpassed all other books in eloquence, elegance, and poetry, that would no more prove its inspiration than a man's strength would demonstrate his wisdom or a woman's beauty her virtue" (Pfander, 267). There is no logical connection between literary eloquence and divine authority. The sovereign God (whom Muslims accept) could chose to speak in plain everyday language, if he wished. At best one might attempt to argue that if God said it, he would say it most eloquently. Even so, it would be a logical fallacy to argue that simply because it is eloquent God must have said it. Humans can speak eloquently, and God can speak in common language.

Other religions have used the beautiful literary style of their work as a sign of its divine origin. Would Muslims accept the inspiration of these works? For example, the Persian founder

of the Manichaeans, Mani, “is said to have claimed that men should believe in him as the Paraclete [“Helper” Jesus promised in John 14] because he produced a book called *Artand* , full of beautiful pictures.” Further, “he said that the book had been given him by God, that no living man could paint pictures equal in beauty to those contained in it, and that therefore it had evidently come from God himself” (Pfander, 264). Yet no Muslim will accept this claim. Why then should non-Muslims accept literary beauty as a valid test for the divine authority of the Qu’ran?

Argument from Muhammad’s Illiteracy. In addition to its style, the human source and content of the *Qur’an* is proof of its divine origin. They insist that no book with its message could have come from an illiterate prophet, as was Muhammad.

It is questionable that Muhammad was actually illiterate. As one authority noted, the Arabic words *al umni* , translated “the unlettered” prophet in the *Qur’an* (sura 7:157), “may be [rendered] ‘heathen’ rather than ‘illiterate.’ ” Pfander prefers the translation, “the Gentile Prophet,” agreeing that the term does not imply illiteracy (Pfander, 254). The same word is rendered “gentiles” in sura 62:2: “He it is Who hath sent among gentiles (*al umni*),” and in suras 2:73; 3:19, 69; 7:156.

The evidence suggests that Muhammad was not illiterate. For example, “when the Treaty of Hudaibah was being signed, Muhammad took the pen from Ali, struck out the words in which Ali had designated him “the apostle of God” and wrote instead with his own hand the words, “son of Abdu’llah.” And “tradition tells us too that, when he was dying, Muhammad called for pen and ink, to write a command appointing his successor, but his strength failed him before writing-materials were brought” (Pfander, 255).

W. Montgomery Watts informs us that “many Meccans were able to read and write, and there is therefore a presumption that an efficient merchant, as Muhammad was, knew something of the arts” (Watt, 40). Even Muslim scholars refer to Muhammad as being “perfect in intellect” (Gudel, 72). If Muhammad lacked formal training in earlier years, there is no reason why such an intelligent person could not have caught up on his own later.

Third, even if it were granted that Muhammad was illiterate, it does not follow that the *Qur’an* was dictated to him by God. There are other possible explanations. Even if he was not formally trained, Muhammad was a bright person possessing great skills. His scribe could have made up for deficiencies by stylizing the work. This was a common practice. Homer was blind, and so he probably did not write his epics himself. Some critics argue that it is possible that Muhammad’s first impression was right, that he received the information from an evil spirit, who might have aided his ability (*see* MUHAMMAD, ALLEGED DIVINE CALL OF).

Argument from the Preservation of the Qur’an. Does perfect preservation prove divine inspiration? Muslims imply that the *Qur’an* is identical to the original, and this sets the book above the Bible. *Qur’an* critics dispute this. First, there is often a serious over-claim as to the preservation of the *Qur’an* . While it is true that the present *Qur’an* is a nearly perfect copy of its seventh-century original, it is not true that this is exactly the way it came from Muhammad.

The *Qur'an* was originally given orally by Muhammad and memorized by devout followers, most of whom where killed shortly after Muhammad's death. According to early tradition, Muhammad's scribes wrote on pieces of paper, stones, palm-leaves, shoulder-blades, ribs, and bits of leather. Muslims believe that during the lifetime of Muhammad the *Qur'an* was written down. But, according to the testimony of Zayd, a contemporary and follower of Muhammad, he was requested by Abu Bakr to "search out the [various chapters and verses of] the *Qur'an* and gather it together." He responded, "accordingly, I sought out the *Qur'an* : I gathered it together from leafless palm branches and thin white stones and men's breasts . . ." (Pfander, 258–59). In the 650s, during the reign of Uthman ibn Affan, the third Muslim Caliph, it was reported that several Muslim communities were using different versions of the *Qur'an* . Once again, Zayd was called in to prepare the official revised version. It is this version that has remained uniform and intact, not any original version that came directly from Muhammad.

In his book *Materials for the History of the Text of the Qur'an* , European archaeologist, Arthur Jeffry, revealed his discovery of one of three known copies of some early Islamic works called *Masahif* . These books related the state of the *Qur'an* text prior to its standardization under Uthman. It reveals, contrary to Muslims' claim, that there were several differing texts prior to Uthman's revision. In fact, as Dashti points out, some *Qur'anic* verses were changed due to the scribes' suggestions to Muhammad and others by the influence of Umar I, second caliph of the Muslim Empire, on Muhammad.

Jeffry concludes that Uthman's recension "was a necessary stroke of policy to establish a standard text for the whole empire." Since there were wide divergences between the *Qur'ans* of Medina, Mecca, Basra, Kufa, and Damascus, "Uthman's solution was to canonize the Medinan Codex and order all others to be destroyed." Therefore, he concludes, "there can be little doubt that the text canonized by Uthman was only one among several types of text in existence at the time" (Jeffry, 7–8).

Not all Muslims today accept the same version of the *Qur'an* . The Sunnite Muslims accept the Sahih tradition of Masud as authoritative. Masud was one of the few people authorized by Muhammad to teach the *Qur'an* . Yet the Ibn Masud Codex of the *Qur'an* has a multitude of variations from the Uthmanic recension. In the second sura alone there are nearly 150 variations. It takes Jeffry some ninety-four pages to show the variations between the two. He also demonstrates that the variant readings are not just a matter of dialect, as many Muslims claim. Some variations involved a whole clause and others omitted complete sentences. Jeffry concludes that the Uthman text that was canonized was only one out of many, and "there is grave suspicion that Uthman may have seriously edited the text he canonized" (Jeffry, ix–x).

Islamic tradition reveals certain things not found in the present *Qur'an* . One tells us that Ayishah, one of Muhammad's wives, said: "Among what was sent down of the *Qur'an* were ten well known (verses) about—Suckling, which prohibited: then they were annulled by five well known ones. Then the Apostle of God deceased, and they are what is recited of the *Qur'an* " (Pfander, 256). Another example of something not found in today's *Qur'an* is what Umar said: "Verily God sent Muhammad with the truth, and He sent down upon him the Book, accordingly the Verse of Stoning was part of what God Most High sent Down: the Apostle of God stoned, and we stoned after him, and in the Book of God stoning is the adulterer's due" (Pfander, 256).

This original rev elation was apparently changed and one hundred stripes replaced stoning as the punishment for adultery (sura 24:2)

The so-called "satanic verses" illustrate another change in the original text. According to one version of these verses Muhammad had an early revelation in Mecca, which allowed intercession to certain idols, which said:

Did you consider al-hat and al-Uzza

And al-Manat, the third, the other?

Those are the swans exalted;

Their intercession is expected;

Their likes are not neglected (Watt, 60).

Sometime after this Muhammad received another revelation canceling the last three lines (verses) and substituting what we now find in sura 53 verses 21–23 which omit the part about interceding to these gods. According to Watt, both versions had been recited publicly. Muhammad's explanation was that Satan had deceived him and inserted the false verses without his knowing it!

W. St. Clair-Tisdall, who long worked among Muslims, pointed out that even in the present *Qur'an* there are some variations.

> Among various readings may be mentioned: (1) in Surah XXVIII, 48, some read "Sahirani" for "sihrani": (2) in Surah XXXII, 6, after "ummahatuhum" one reading adds the words "wa hua abun lahum": (3) in Surah XXXIV, 18, for "rabbana ba'id" some read "rabuna ba'ada": (4) in Surah XXXVIII, 22, for "tis'un" another reading is "tis'atun": (5) in Surah XIX, 35, for "tantaruna" some read "yamtaruna" (Clair-Tisdall, 60).

Although Shi'ite Muslims are in the minority, they are the second largest Islamic sect in the world, with more than 100 million followers. They claim that Caliph Uthman intentionally eliminated many verses from the *Qur'an* which spoke of Ali.

L. Bevan Jones summed up the matter well in his book, *The People of the Mosque* , when he said: "while it may be true that no other work has remained for twelve centuries with so pure a text, it is probably equally true that no other has suffered so drastic a purging" (Jones, 62).

Even were the *Qur'an* a perfect word-for-word copy of the original as given by Muhammad, it would not prove the original was inspired of God. All it would demonstrate is that today's *Qur'an* is a carbon copy of whatever Muhammad said. It would say or prove nothing about the truth of what he said. The Muslim claim that they have the true religion, because they have the only perfectly copied holy book, is as logically fallacious as someone preferring a perfectly printed counterfeit $1000 bill over a slightly imperfect genuine one. The crucial question, which

Muslim apologists beg by this argument, is whether the original is God's Word, not whether they possess a perfect copy of it.

Argument from Prophecies. Does the *Qur'an* contain predictive prophesies which prove its divine origin? This is treated in detail in the article MUHAMMAD, ALLEGED MIRACLES OF . Points include:

Most of the predictions are really exhortations of a religious military leader to fight on and God will give them the victory. The one substantive prediction was about the Roman victory over the Persian army at Issus (in sura 30:2–4) did not come within the time period given by the prophecy of "within a few years" and was to be expected.

The only other notable prophecy is a reference to ten nights found in sura 89:2 that is interpreted as a veiled prediction of the ten years of persecution suffered by early Muslims. This is a doubtful interpretation, since the line apparently speaks of pilgrimage (*see* PROPHECY AS PROOF OF THE BIBLE).

Argument from Unity. Insisting that the *Qur'an* must be divine revelation because it is self-consistent and non-contradictory is also unconvincing. As noted, Muhammad's revelations were sometimes changed, including the cited "satanic verses" where the original revelation permitted a certain tribe to worship pagan gods in sura 53:21–23. This is a serious matter for a prophet who believes polytheism is the ultimate sin.

The whole concept of abrogation (*mansukh*) where previous mistakes were corrected by later verses (called *nasikh*) reveals a lack of unity in the *Qur'an* . sura 2:106 says, "Such of Our revelations as We abrogate or cause to be forgotten, We bring (in place) one better or the like thereof. Knowest thou not that Allah is Able to do all things?" For example, what is called "the sword verse" (sura 9:5) supposedly annuls 124 verses which originally encouraged tolerance (cf. sura 2:256). The *Qur'an* says emphatically "Let there be no compulsion In religions" (sura 2:256), yet in other places it urges Muslims to "Fight those who believe not" (sura 9:29) and "fight and slay The Pagans wherever ye find them" (sura 9:5). *Nasikh* is a contradiction in that the *Qur'an* claims that "No change there can be in the Words of God" (sura 10:64), which they say the *Qur'an* is. For "there is none That can alter the Words (and Decrees) of God" (sura 6:34). Yet the *Qur'an* teaches the doctrine of abrogation by which later revelations annul previous ones.

As Gerhard Nehls keenly observed, "we should like to find out how a divine revelation can be improved. We would have excepted it to have been perfect and true right from the start" (Nehls, 11). Some Muslims, like Ali, claim that abrogation is just "progressive revelation," adapt ing God's same message to different people living at different periods. "But Sura 2:106 [on abrogation] does not speak of culture or progressive revelation with reference to scriptures given prior to Mohammed, but to Quranic verses only!" (Nehls, 12). It makes sense that God would progressively reveal himself over 1500 years of time, as in the Bible (*see* PROGRESSIVE REVELATION). But the Bible brings to fulfillment and expands on earlier teaching, rather than making corrections, and certainly not within twenty years. This seems particularly true in view of the fact that the correction verses are often near the ones being correcited. What is more, there

are verses that the Quranic abrogations apparently forgot to redact. In sura 7:54 (and 32:4) we are told that the world was made in six days. But in sura 41:9–12 it says it took God a total of eight days to create the world (two plus four plus two). How can both be correct?

The *Qur'an* also claims humans are responsible for their own choices (sura 18:29), yet it claims God has sealed the fate of all in advance, saying, "Every man's fate We have fastened On his own neck: On the Day of Judgment We shall bring out For him a scroll, Which he will see Spread open" (sura 17:13; also see 10:99–100).

Even if the *Qur'an* were consistent, unity or self-consistency is at best a negative test for truth, not a positive one. Of course, if a Book is from God who cannot err, then it won't have any contradictions in it. However, just because a book has no contradictions does not mean God is the author. As John W. Montgomery insightfully observed, Euclid's geometry is self-consistent, but this is not ground to call it divinely authoritative (Montgomery, 94).

Self-consistency is the kind of argument that others (including Christians) use for their holy books. But not all can be the inspired Word of God since they are mutually contradictory. Unity in itself does not prove divine authenticity, or all self-consistent but opposing holy books are all true. The Bible is at least as self-consistent as the *Qur'an* , but no Muslim would admit that it therefore is inspired of God.

Argument from Scientific Accuracy. This argument has gained popularity in recent times, primarily due to Maurice Bucaille's book, *The Bible, the Qur'an and Science* , in which Christianity is attacked for holding back the progress of science, and the *Qur'an* is exalted as promoting science. Indeed, he insists that the *Qur'an* marvelously fore-shadowed modern science in many of its statements, thus miraculously confirming its divine origin.

But Christianity, not Islam, was the mother of modern science. M. B. Foster, writing for the prestigious English philosophy journal *Mind* noted that the Christian doctrine of creation is the origin of modern science (see Foster, Whitehead, 13–14). The founders of almost every area of modern science were Christians working from their worldview. This includes men such as Nikolai Copernicus, Johannes Kepler, William Kelvin, Isaac Newton, Blaise Pascal , Robert Boyle, James Clark Maxwell, and Louis Agassiz (*see* SCIENCE OF ORIGINS).

So while Islamic monotheism made many contributions to modern culture, it is an overstatement to claim credit for the origin of modern science. Muslim armies destroyed vast resources of knowledge. Pfander, for example, notes that under the Caliph Umar the Muslim soldiers destroyed the vast libraries at Alexandria and Persia. When the general asked Umar what he should do with the books, he is said to have replied: "Cast them into the rivers. For, if in these books there is guidance, then we have still better guidance in the Book of God. If, on the contrary, there is in them that which will lead astray, then may God protect us from them" (Pfander, 365).

Second, it is a mistake to assume that a book is inspired simply because it conforms with modern science (*see* SCIENCE AND THE BIBLE). Muslim and Christian apologists have made the mistake of assuming the truth of a particular scientific knowledge system. Scientific knowledge

changes. Then what appeared to be “harmony” can vanish. Embarrassing mistakes have been made by defenders attempting to see modern scientific theories in their Holy Book.

Even if perfect harmony could be demonstrated between the *Qur’an* and scientific fact, this would not prove the divine inspiration of the *Qur’an* . It would simply prove that the *Qur’an* made no scientific error. At best, scientific accuracy is a negative test for truth. If error were found, it would prove that it was not the Word of God. The same applies to the Bible or any other religious book. Of course, if a book consistently and accurately anticipated by centuries what was only later discovered, then this could be used in a theistic context to indicate a supernatural source. But the *Qur’an* shows no evidence of supernatural predictions as does the Bible.

Some critics question just how scientifically accurate the *Qur’an* is. Take, for example, the *Qur’an* ’s highly controversial statement that human beings are formed from a clot of blood. Surah 23:14 reads, “Then We made the sperm Into a clot of congealed blood; Then of that clot We made A (foetus) lump; then We Made out of that lump Bones and clothed the bones With flesh.” This is scarcely a scientific description of embryonic development. In order to avoid the problem, Bucaille retranslates the verse, rendering the Arabia word *alaq* (“blood clot”) as “the thing which clings” (Bucaille, 204). However, this is questionable. It is contrary to the work of recognized Islamic authorities who did the major English translations. And Bucaille himself recog nized that “a majority of translations describe . . . man’s formation from a ‘blood clot’ or ‘adhesion’ ” (Bucaille, 198). This leaves the impression that his own home-made translation was generated to solve the problem, since he recognizes that “a statement of this kind is totally unacceptable to scientists specializing in this field” (ibid.).

Likewise, other critics note that the *Qur’an* in sura 18:86 speaks of one traveling west “till, when he reached the setting-place of the sun, he found it setting in a muddy spring.” But even in his attempt to explain this problem, Yusuf Ali admits this has “puzzled Commentators.” Nor does he really explain the problem, but simply asserts that this cannot be “the extreme west, for there is no such thing” (Ali, 754, n. 2430). Indeed, there is no extreme west, nor can anyone by traveling west come to the place eventually to the place where the sun sets. But this is what the text says, unscientific as it may be.

Others have observed that the so-called scientific foreshadowing of the *Qur’an* is highly questionable. Kenneth Cragg notes that “It has been frequently claimed by some Muslim exegetes of the *Qur’an* that modern inventions and scientific data, even nuclear fission, have been anticipated there and can now be detected in passages not hitherto appreciated for their prescience. Meanings earlier unsuspected disclose themselves as science proceeds.” This conclusion, however, “is strongly repudiated by others as the kind of corroboration the *Qur’an* , as a ‘spiritual’ Scripture, neither needs nor approves.” (Cragg, 42).

Even if the *Qur’an* were proven to be scientifically accurate, it would not thereby be divinely authoritative. All accuracy would prove is that the *Qur’an* made no scientific blunders. This would not be unparalleled. Some Jewish scholars claim the same for the Torah and many Christians claim exactly the same thing for the Bible, using very similar arguments. But Bucaille would not allow that this demonstrates that the Old and New Testaments are the Word of God.

Argument from Mathematical Structure. One popular proof for the *Qur'an* 's divine origin is its alleged miraculous basis in the number nineteen. Nineteen is the sum of the numerical value of all the letters in the word "one" (from the basic belief that God is one). Such an apologetic method does not find a great deal of acceptance in scholarly circles for good reason. No Muslim would accept a message claiming to be from God if it taught idolatry or immorality. Certainly no message containing such claims would be accepted on mathematical grounds alone. So even if the *Qur'an* were a mathematical "miracle," this would not be sufficient to prove that it was of God even to thinking Muslims.

Second, even if the odds are astronomic against the *Qur'an* having all these amazing combinations of the number 19, it proves nothing more than that there is a mathematical order behind the language of the *Qur'an* . Since language is an expression of the order of human thought and since this order can often be reduced to mathematical expression, it is not unusual that a mathematical order can be found behind the language of a document. In fact, there is nothing so unusual about sentences having nineteen letters.

Further, the same kind of argument (based on the number seven) has been used to "prove" the inspiration of the Bible. Take the first verse of the Bible "In the beginning God created the heavens and the earth." G. Nehls points out that:

> The verse consist of 7 Hebrew words and 28 letters (7x4). There are three nouns: "God, heavens, earth". their total numeric value . . . is 777 (7x11). The verb "created" has the value 203 (7x29). The object is contained in the first three words—with 14 letters (7x2). The other four words contain the subject—also with 14 letters (7x2) [and so on].

But no Muslim would allow this to count as an argument in favor of the divine inspiration of the Bible. At best the argument is esoteric and unconvincing. Even most Muslim scholars avoid using it.

Argument from Changed Lives. Apologists point to the transformation of lives and culture by the *Qur'an* as a proof of its divine origin. Such transformations should be expected. When one fervently believes something to be true they live by it. But this still leaves open the question as to whether it is the Word of God. Any set of ideas fervently believed and applied will transform believers and their culture. This is true whether the ideas are Buddhistic , Christian, Islamic, or Judaistic. What Muslim would accept the argument that Karl Marx 's *Das Capital* is inspired because it transformed millions of lives and many cultures?

Critics find it no surprise that so many converted to Islam when it is remembered what the promised reward was for those who did and the threatened punishment for those who did not. Those who "submitted" were promised Paradise with beautiful women (sura 2:25; 4:57). But "The punishment of those Who wage war against God And His Apostle, and strive With might . . . Is: execution, or crucifixion, Or the cutting off of hands And feet from opposite sides, Or exile from the land" (sura 5:36). Islamic tradition reports that Muhammad gave the exhortation to his followers that: "The sword is the key of heaven and of hell; a drop of blood shed in the cause of God, a night spent in arms, is of more avail than two month's fasting and prayer. Whoever falls in battle, his sins are forgiven at the day of judgment" (Gibbon, 360–61).

Human greed played a part. “Arab warriors were . . . entitled to four-fifths of all the booty they gathered in the form of movable goods and captives” (Noss, 711). It was of great advantage for the enemy to submit. Polytheists had two choices: submit or die. Christians and Jews had another alternative: they could pay heavy taxes (sura 9:5, 29). Also Islamic conquests were successful because in some of the conquered lands the people were fed up with the maltreatment of their Roman rulers and willingly accepted Islam’s emphasis on equality and brotherhood.

Further, a Christian or Jewish person could argue for the truth of their religions on the same ground. It should not be surprising that sincere belief in God, his moral law, and a final day of judgment would change one’s life—things which all moral monotheists believe. But one cannot jump from this to prove Muhammad is the last and final prophet of God.

If it is possible to prove that changed lives in one religion are evidence of its unique divine origin, then in view of the transforming power of the Gospel (Rom. 1:16), Christianity is equal, if not superior, to Islam. In his famous *Evidences of Christianity* , William Paley observes:

> For what are we comparing? A Galilean peasant accompanied by a few fishermen with a conqueror at the head of his army. We compare Jesus, without force, without power, without support, without one external circumstance of attraction or influence, prevailing against the prejudices, the learning, the hierarchy, of his country, against the ancient religious opinions, the pompous religious rites, the philosophy, the wisdom, the authority, of the Roman empire, in the most polished and enlightened period of its existence,—with Mahomet making his way amongst Arabs; collecting followers in the mist of conquests and triumphs, in the darkest ages and countries of the world, and when success in arms not only operated by that command of men’s wills and persons which attend prosperous undertakings, but was considered as a sure testimony of Divine approbation. That multitudes, persuaded by this argument, should join the train of a victorious chief; that still greater multitudes should, without any argument, bow down before irresistible power—is a conduct in which we cannot see much to surprise us; in which we can see nothing that resembles the causes by which the establishment of Christianity was effected. [Paley, 257]

Argument from the Rapid Spread of Islam. Some Muslim scholars point to the rapid spread of Islam as proof of its divine origin. According to one Muslim apologist, “the rapid spread of Islam shows that God Most High sent it as His final revelation to men” (Pfander, 226). Islam teaches that it is destined to be the universal religion. There are several serious problems with this reasoning. First, one could question both size and rapid growth as definitive tests for truth. The majority is not always right. Indeed, history has shown they are often wrong.

Even by its own test Islam is not the true religion, since Christianity has been and still is the largest religion in the world in number of adherents—a fact that is a great embarrassment to Muslims. Further, even if rapid growth is used as a test of the truth of a system, Christianity, not Islam, would prove to be the true religion. For it grew faster at the beginning by its simple message and under heavy persecution by the Romans than did Islam by force of arms. In fact, it not only gained thousands of immediate converts from its Jewish roots within days and weeks (

Acts 2:41 ; 4:4 ; 5:14), but it conquered the Roman empire by spiritual force, within its first few centuries.

To be sure, Christian crusaders (twelfth–fourteenth centuries) also engaged in the use of the sword, which Jesus forbid his disciples to do to spread his message (Matt. 26:52). But this was long after Christianity had conquered the world without it. By contrast, Islam did not grow on the mere strength of its message but only later when it used the sword. Indeed, early Christianity grew the most when the Roman government was using the sword on Christians during the first three centuries.

There are perfectly natural reasons for Islam's later rapid spread, says Shorrosh. Islam glorified Arabic people, customs, and language. It provided an incentive to conquer and plunder other lands. It utilized the ability to fight in the desert. It provided a heavenly reward for dying, and it absorbed many pre-Islamic practices in Arab culture. Even if one points to more positive reasons, such as moral, political, and cultural improvements, there seems to be no reason to posit anything but natural causes for the spread of Islam. Finally, there were natural incentives for the many converts. Soldiers were promised paradise as a reward for dying in the spread of Islam. And the people who did not submit were threatened with death, slavery, or taxation. There is no need to appeal to the supernatural to account for growth of Islam under these conditions.

Islamic scholar, Wilfred Cantwell Smith pinpoints the Muslim dilemma. Muslims believe Islam is God-willed and destined to dominate the world, so its failure to do so must be an indication that God's sovereign will is being frustrated. But Muslims deny that God's will can be frustrated. Hence, logically they should conclude that it is not God-willed. Muhammad's biographer, M. H. Haykal misses the point in his response that human beings are free, and any defeat or set-backs are to be attributed to them (Haykal, 605). If in fact God has willed the supremacy of Islam, then his sovereign will has been frustrated, through human freedom or without it. For Islam is not and has not been since the time of its in ception the enduring dominant religion of the world numerically, spiritually, or culturally. Even if Islam should have a sudden burst of success and surpass all other religions, this would not prove it is of God. Logically, all that success proves is that it succeeded, not necessarily that it is true. For even after something succeeds we can still ask: Is it true or false?

Argument from God Speaking in First Person. Muslims appeal to the fact that God speaks in the first person as evidence that the *Qur'an* is the Word of God. In the Bible God is generally referred to in the second or third person, from a human point of view. However, not all the *Qur'an* speaks of God in the first person, so by this logic only those sections in the first person are inspired. No Muslim would willingly say that. Also, in much of the Bible God speaks in the first person yet Muslims do not admit that these passages *are* the words of God, especially when God blesses Israel, giving them the land of Palestine as an inheritance.

The truth is that both the *Qur'an* and the Bible have passages which speak of God in the first person and in the third person. So, Muslims can hardly use this as a unique proof of the divine origin of the *Qur'an* .

Evidence of a Human-Inspired Qur'an. Not only is evidence lacking for a divine origin of the *Qur'an* , but there is strong indications that its origin is not divine.

Fallibility. God cannot make mistakes or change his mind. Yet, as was shown above, the *Qur'an* reflects such fallibility on many occasions.

Purely Human Sources. Based on the findings of reputable scholars of Islam, the content of the *Qur'an* can be traced to either Jewish or Christian works (often from Jewish or Christian apocrypha) or pagan sources. Arthur Jeffry, in his technical and scholarly volume, *The Foreign Vocabulary of the Qur'an* , ably demonstrates that "not only the greater part of the religious vocabulary, but also most of the cultural vocabulary of the *Qur'an* is of non-Arabic origin" (Jeffry, 2). Some of the vocabulary sources include Abyssinian, Persian, Greek, Syriac, Hebrew, and Coptic (ibid., 12–32).

St. Clair-Tisdall, in *The Sources of Islam* , also reveals the direct dependence of certain *Qur'anic* stories from the Old Testament on the Jewish *Talmud* . The influence of the Talmud can be seen on the *Qur'anic* stories of Cain and Abel, Abraham and the idols, and the Queen of Sheba. The direct influence of Christian apocrypha can be seen in the story of seven sleepers and the childhood miracles of Jesus, and Zoroastrian doctrines appear in descriptions of the houris (virgins) in Paradise and the Sirat (the bridge between hell and paradise; Tisdall, 49–59, 74–91). Muslim practices of visiting the shrine of Ka'aba, and the many details of the ceremony of Hajj, including visits to the hills of Safa and Marwa, and the throwing of stones against a stone pillar symbolizing Satan, were all pre-Islamic practices of pagan Arabia (Dashti, 55, 93–94, 164).

The Genius of Muhammad. As was noted above, Muhammad may not have been illiterate, and even if he had no formal training, he was a bright and talented person. There is no reason that such a creative mind could not have been the source of teachings in the *Qur'an* that have no known human antecedents.

Muhammad biographer Haykal identifies a possible source of Muhammad's "revelations" in his description of the creative Arab imagination: "Living as he does under the vault of heaven and moving constantly in search of pasture or trade, and being constantly forced into the excesses, exaggerations, and even lies which the life of trade usually entails, the Arab is given to the exercise of his imagination and cultivates it at all times whether for good or for ill, for peace or for war" (ibid., 319).

Possible Satanic Sources of the Qur'an. It is also possible that Muhammad could have received his revelations from an evil spirit. He himself at first believed that his "revelations" were coming from a demon but he was encouraged by his wife Khadija and her cousin, Waraqah, to believe the revelation came from God. This is told more fully in the article MUHAMMAD, ALLEGED DIVINE CALL OF . Whether by his own genius, other human sources, or finite evil spirits, there is nothing in the *Qur'an* that cannot be explained without divine revelation.

Conclusion. In spite of the above evidences against any divine origin of the *Qur'an* , it is interesting that Muslim authors have been most unwilling to address the issue of the human origins of the *Qur'an* , but have simply repeated their dogmatic assertions about its divine

source. In fact, seldom does one find an acknowledgment of problems, let alone a defense, among Muslim scholars.

Ramm, Bernard. Christian apologist and philosopher Bernard Ramm (1916–1992) was born in Butte, Montana. Ramm began his academic career in 1943 at the Bible Institute of Los Angeles (now Biola University). He finished his career at the American Baptist Seminary of the West (1959–74; 1978–86). Ramm was author of eighteen books and more than 100 articles and reviews. His works on apologetics include: *Problems in Christian Apologetics* (1949); *Protestant Christian Evidences* (1953); *The Christian View of Science and Scripture* (1954); "The Evidence of Prophecy and Miracle" in Carl F. H. Henry, ed., *Revelation and the Bible* (1958); *Varieties of Christian Apologetics* (1962); and *The Witness of the Spirit* (1959). *The God Who Makes a Difference* (1972) was his major apologetic work.

Ramm's Apologetic Approach. Although Ramm's earlier approach stressed the evidences for Christianity, his mature view was a form of presuppositionalism similar to that of Edward John Carnell . His logical starting point was akin to the scientific method.

Rejection of Theistic Arguments. Like other presuppositionalists Ramm rejected traditional theistic arguments for God's existence. He offered three reasons: First, God cannot be known apart from faith (*Witness of the Spirit* , 82–83). Second, the noetic effects of sin prevent theistic proofs from being effective (*Protestant Christian Evidences* , 29). Third, such proofs are abstract and do not reach the God of revelation (ibid., 41–42; cf. *Philosophy of the Christian Religion* , 101–4).

Ramm concluded that "The philosophical approach to the existence of God and the biblical approach to the reality of the living God are fundamentally different" (*God Who Makes a Difference* , 104). Indeed, "we can say epigrammatically that the proof of the existence of God is Holy Scripture *if* we know what we are saying." He explains: "This statement presumes an understanding of Scripture as the vicarious representative of historical events of God's action and God's word. Through the use of such events and words the Spirit of God makes God the Reality that he is to us" (ibid., 105). We know God exists, Ramm is saying, not because of any philosophical proofs, but because he acts in history as Scripture attests.

Logical Starting Point. Ramm believed one should survey the options, commit to a hypothesis, and then test it. He held that progress in knowledge is possible only if one moves from facts to some theory or hypothesis that integrates and explains the facts (*Philosophy of the Christian Religion* , 32).

The content of Ramm's choice of presuppositions was: "The Christian religion is the redemptive and revelatory work of the Holy Spirit which reaches its highest expression in revelation and redemption in the Incarnation of God in Christ; and this religion is preserved for all ages and is witnessed for all ages in the inspired Holy Scripture" (ibid., 33).

Verification of the Presupposition. According to Ramm, there are three concentric circles of verification. These represent three stages in the confirmation of the Christian truth claim.

Internal witness. In the first circle of verification the sinner hears the Gospel and is convinced of its truth by the Holy Spirit. The primary verification of religion must be internal and spiritual, or verification is by a process alien to religion (ibid., 44). This persuasive influence of the Holy Spirit is inward but not subjective (*see* HOLY SPIRIT, ROLE IN APOLOGETICS).

God's action in history. Ramm affirmed that the primary function of Christian evidences is to provide a favorable reception for the Gospel. These evidences are not the Gospel and do not replace it. God's action in history, the second circle, verifies that the biblical God makes a difference and "does come into our time, our history, our space, our cosmos. . . . Because God makes this difference, we know that we are believing truth and not fiction or mere religious philosophy" (ibid., 57).

Thus, Christianity is confirmed by objective facts. Miracles and fulfilled prophecies provide the best evidence (*see* PROPHECY, AS PROOF OF THE BIBLE). "Evidentialists believe that the evidences do establish the divine origin of the Christian faith" (*God Who Makes a Difference* , 55). Supernatural events validate the theological. Revelation is tested by reason.

Adequacy of worldview. Christianity is also tested by its ability to provide a synoptic vision of the whole of the world, humankind, and God. The third circle is that Christianity is true because its principles make the most sense out of life and the world. A worldview is "That pattern or that picture which has the most appeal to him, that puts things together for him in the most meaningful way" (ibid., 60). "A responsible synoptic vision" must have taken into account the facts, must be testable from some kind of criteria, and must be internally coherent (ibid., 67).

These criteria are similar to factual fit and logical consistency proposed by Carnell. Carnell is convinced of the validity of the law of noncontradiction (*see* FIRST PRINCIPLES). It is a necessary test for truth. Indeed, we cannot think without it (ibid., 68–69; *Protestant Christian Evidences* , 41, 54). However, Ramm does not put the kind of emphasis on logic equal to that of such presuppositionalists as Gordon Clark .

The Question of Certainty. Ramm distinguished between certainty and certitude. He believed that (1) through Scripture and the internal witness of the Holy Spirit, a Christian may have full spiritual certitude that God is, that Christ is his Lord and Savior, that he is a child of God. The word *probably* is unneeded to answer these questions. Further, (2) Christian faith is a matter of history. Historical facts cannot be known with certainty, but they can be known with a high degree of probability. (3) Christians then rest their faith in full certitude, believing in the objective historical and factual basis of the Christian revelation with a high degree of probability (Carnell, *Philosophy* , 73).

So, the Christian "is convinced of the truth of his faith by the witness of the Spirit. He is convinced of the truth of his faith by the actions of the living God in the Cosmos which make a difference. And he is a Christian because he believes that the Christian faith gives him the most adequate synoptic vision there is with reference to man, humanity, the world, and God" (ibid., 61).

Rand, Ayn. Ayn Rand (1905–1977) was an atheist (*see* ATHEISM) writer and intellectual. Born in Russia and educated at the University of Leningrad, Rand emigrated to the United States in 1926. Her most important works, written during the late 1950s and early 1960s, included *Atlas Shrugged* , *For the New Intellectual* , *Fountainhead* , and *The Virtue of Selfishness* (1961).

Influences on Rand. Rand's philosophy, called Objectivism, combined elements from Aristotelian rationalism (*see* ARISTOTLE), Nietzschean atheism (*see* NIETZSCHE, FRIEDRICH), Adam Smith's capitalism, Sigmund Freud 's illusionism, and hedonistic egoism. She populated her novels with heroic men and women who, by their courage and independence, changed the face of the earth.

Some philosophers earned Rand's scorn. She considered W. F. G. Hegel "a witch doctor," castigated Immanuel Kant for his deleterious influence on modern thought, and branded the pragmatism of William James "neo-mystic." She decried the philosophy of Karl Marx as pure

materialism which proclaimed that "mind does not exist, that everything is matter" (*For the New Intellectual* , 32–34).

Rand's Beliefs. *Atheism.* Rand created her own unique form of optimistic and egocentric atheism. She wrote: "I raise this god over the earth, this god whom men have sought since men came into being, this god who will grant them joy and peace and pride. This god, this one word: I" (ibid., 65).

With Freud she saw belief in God as an illusion: "And that is the whole of their shabby secret," she wrote. "The secret is all their esoteric philosophies, all their dialectics and super-senses, . . . is to erect upon that plastic fog a single holy absolute: their Wish" (ibid., 149). Rand chides all believers that "those irrational wishes that draw you to their creed, those emotions you worship as an idol, on whose altar you sacrifice the earth, that dark, incoherent passion within you, which you take as the voice of God or of your glands, is nothing more than the corpse of your mind" (ibid., 151).

Rand does not deny that some people feel that they experience God. She only asserts that "When a mystic (*see* MYSTICISM) declares that he feels the existence of a power superior to reason, he feels it all right, but that power is not an omniscient super-spirit of the universe. It is the consciousness of any passer-by to whom he has surrendered his own" (ibid., 161). What prompts such surrender? "A mystic is driven by the lure to impress, to cheat, to flatter, to deceive, to force that omnipotent consciousness on others" (ibid.).

"Faith in the supernatural begins as faith in the superiority of others," Rand avers (ibid.). There is no conscious, rational being other than the human. "Man is the only living species who has to perceive reality—which means to be *conscious* —by choice" (ibid., 5).

Following the First Law of Thermodynamics (*see* THERMODYNAMICS, LAWS OF), Rand declared that life spontaneously generated itself from eternal matter (*see* EVOLUTION, CHEMICAL): "Matter is indestructible; it changes its forms, but it cannot cease to exist." It is only "a living organism that faces a constant alternative: the issue of life or death" (*Virtue of Selfishness* , 15). Life was not created but was self-generated (*see* EVOLUTION, BIOLOGICAL). "Life is a process of self-sustaining and self-generated action" (ibid.).

Human Beings. According to Rand, humanity is distinguished from other living species in that the human consciousness is volitional (ibid., 19–20). Further, "to think, to feel, to judge, to act are functions of the ego" (*For the New Intellectual* , 78). Unlike animals, humankind has the ability to make "conceptions" (ibid., 14). Indeed, the mind is the only human weapon (ibid., 78). Rand adds, "Your mind is your only judge of truth—and if others dissent from your verdict, reality is the court of final appeal" (ibid., 126).

A human being, as Aristotle said, is a rational animal. But thinking is not automatic nor instinctive. The laws of logic are needed to direct thinking (*Virtue of Selfishness* , 21–22).

The Nature of Truth. Truth is what corresponds to reality. In Rand's words, "Truth is the recognition of reality; reason, man's only means of knowledge, is his only standard of truth"

(ibid.). Indeed, “moral perfection is an unbreached rationality, . . . the acceptance of reason as an absolute” (ibid., 178–79). Hence, truth is objective. It must be measured by the real world. And human reason is the only way to attain truth (*see* RATIONALISM).

The Virtue of Selfishness. Altruism demands that people live for others and place others above themselves. But no one can live for another, truly sharing the spirit (ibid., 79–80). Hence, morality should teach people, not how to suffer, but how to enjoy and live (ibid., 123). Indeed, “The creed of sacrifice is a morality for the immoral—a morality that declares its own bankruptcy by confessing that it can’t impart to men any personal stake in virtue or values, and that their souls are sewers of depravity, which must be taught to sacrifice” (ibid., 141).

If we choose to love others, they must earn it. Rand wrote that she would not love someone else without reason: “I am neither foe nor friend to my brothers, but such as each of them shall deserve of me. And to earn my love, my brothers must do more than to have been born” (ibid., 65).

Based on her precept that the only god worthy of worship is one’s self, Rand propounds one “ultimate value”: “An organism’s life is its *standard of value;* That which furthers its life is the *good* ; that which threatens it is the *evil* ” (ibid., 17). She opposed a pragmatism that dismissed all absolute principles and standards (*For the New Intellectual* , 34). “The Objectivist ethics holds man’s life as the *standard* of value—and *his own life* as the ethical *purpose* of every individual man” (*Virtue of Selfishness* , 25). “No value is higher than self-esteem” (*For the New Intellectual* , 176). Thus, “every ‘ *is* ’ implies an ‘ *ought* ’ ” (ibid., 22).

Utopian Goal. As a capitalist who had fled the USSR, Rand resisted the arguments pressed by communism (*see* MARX, KARL). For when it is said “that capitalism has had its chance and has failed, let them remember that what ultimately failed was a ‘mixed’ economy, that the controls were the cause of the failure” (ibid., 53). If “the original American system, *Capitalism* ” were practiced in its pristine purity, a kind of hedonistic utopia would emerge (*Virtue of Selfishness* , 33). The ones who were the real conquerors of life’s physical realities, she said, were not those who were able to put up with their surroundings, sleeping on their bed of nails, but those who found the way to trade their bed of nails for an innerspring mattress (*For the New Intellectual* , 170).

Evaluation. *Positive Contributions.* The philosophy of objectivism has insights. Traditional theists can agree with some of her ideas.

As an objectivist, Rand defended an objectively real world. She embraced realism and was an incisive critic of mushy forms of subjectivism, existentialism , and mysticism that dominate contemporary thought. Rand emphasized reason and the objectivity of truth (*see* TRUTH, ABSOLUTE NATURE OF). Truth is not putty to be shaped as we wish. It is hard reality.

Rand strongly defended the validity of the laws of logic (*see* LOGIC ; FIRST PRINCIPLES). Her emphasis on reason to test the truth and know reality was a welcome corrective to the irrational strain in contemporary philosophy. Rare as an atheist, Rand does not eschew absolutes

(*see* MORALITY, ABSOLUTE NATURE OF). She embraced at least the absolute value of human life. Again, this is welcomed by theism .

Rand correctly took Marxism (*see* MARX, KARL) to task for its skewed economics and its pure materialism.

Negative Features. Some of the difficulties with Rand's philosophy can be noted in such articles as ATHEISM ; EVOLUTION, BIOLOGICAL ; FREUD, SIGMUND ; HUMANISM, SECULAR , and MORALITY, ABSOLUTE NATURE OF . On the inadequacy of naturalism, see MIRACLES, ARGUMENTS AGAINST .

Like most atheists, Rand creates substitutes for God. She even speaks of "the grace of Reality" (God?). She argues that it is "By the grace of reality and the nature of life, [that] man—every man—is an end in himself" (ibid., 123). This is particularly ironic, since it is by the grace of the Ultimate (reality) that each individual is made ultimate.

While criticizing Marxist materialism , she seems unaware that her own materialism is similar. She believes that only matter is eternal and indestructible. If so, then in the final analysis, mind and reason—which she treasures, must be reduced to matter. And thought has no more reality than a chemical process.

Although Rand speaks of the superiority of mind over matter, her materialistic philosophy does not really allow for such a distinction. Mind also is reducible to, and totally dependent on, matter. How then can it be superior to it? Further, the origin of mind is matter. In the beginning, matter produced mind. But how can the effect be greater than the cause. This violates everything reason tells us about reality—the very method she hails for discovering truth.

Her argument for atheism is dependent on a univocal view of being which she never defends (*see* ANALOGY). It is commendable that Rand, as an atheist, speaks of objective and ultimate truth. However, Augustine argued that there can be no absolute truth apart from God. Truth is what is known by a mind, and absolute truth must reside ultimately in an Absolute Mind (= God). But Rand's atheism rejects any Absolute Mind.

A positive dimension of Rand's thought leads to theism, not to the atheism she professes. For she claims that one has an absolute moral obligation or duty. But absolute prescriptions are only possible if there is an Absolute Prescriber (*see* MORAL ARGUMENT FOR GOD). Absolute moral laws can come only from an Absolute Moral Law Giver (= God). The only logical conclusion for an atheist is to deny all moral absolutes, as did Nietzsche and Jean Paul Sartre.

Rand said plainly that "every *'is'* implies an *'ought'* " (ibid., 22). But as any good text on logic will inform us, this is a fallacy of reasoning. Just because something is, does not mean that it ought to be. The descriptive is not the basis of the prescriptive. Like other atheists who deny all (or all but one) absolute, Rand inevitably slips into others. For example, she insists that "no man may initiate . . . the use of physical force against others" (ibid., 134). Her stress on reason makes it clear that she also believes that "Everyone should always be rational." Indeed, her ethical

egoism yields the absolute that “Everyone should always respect the rights of others.” And life is such a fundamental right.

Rational Presuppositionalism. ***See*** **APOLOGETICS, PRESUPPOSITIONAL ; CLARK, GORDON .**

Rationalism. *Rationalism* as a philosophy stresses reason as the means of determining truth. Mind is given authority over senses, the *a priori* over the *a posteriori* . Rationalists are usually foundationalists (*see* FOUNDATIONALISM), who affirm that there are first principles of knowledge, without which no knowledge is possible (see below). For a rationalist, reason arbitrates truth, and truth is objective (*see* TRUTH, NATURE OF).

Although Aristotle (384–322 B.C .) believed that knowledge began in the senses, his stress on reason and logic made him the father of Western rationalism. Rene Descartes 1596–1650), Benedict Spinoza (1632–1677), and Gottfried Leibniz (1646–1716) were the chief modern rationalists.

Most worldviews have at least one major rationalist proponent. Leibniz embraced theism . Spinoza held to pantheism . Ayn Rand (1905–1977) professed atheism . Most deists (*see* DEISM) held some form of rationalism. Even pantheism is represented by strong rationalistic proponents, such as Charles Hartshorne (b. 1897). Finite godism has been rationally defended by John Stuart Mill (1806–1873) and others.

The reason that various worldviews all have forms of rationalism is that rationalism is an epistemology, whereas a worldview is an aspect of metaphysics. Rationalism is a means of discerning truth, and most worldviews have exponents who use it to determine and defend truth as they see it.

Central Premises. *Premises Shared by Rationalists.* Some ideas are common to virtually all rationalists. These include the following factors, even though some rationalists defend them, modify them, or limit them in ways others do not.

Foundationalism. Foundationalism believes that there are first principles of all knowledge, such as the principle of noncontradiction, the principle of identity, and the principle of the excluded middle (*see* LOGIC). Certain foundationalists believe there are other principles, either the principle of sufficient reason (*see* SUFFICIENT REASON, PRINCIPLE OF) or the principle of causality (*see* CAUSALITY, PRINCIPLE OF). All rationalists are foundationalists, and all foundationalists believe in some foundational principles.

Objectivism. Rationalists also believe that there is an objective reality and that it can be known by human reason. This distinguishes them from mysticism , existentialism , and other forms of subjectivism. For a rationalist, the real is rational, and reason is the means of determining what is real.

Exclusivism. Rationalists are also exclusivists. They believe that mutually exclusive opposites cannot both be true. According to the law of noncontradiction, if atheism is true, then all nonatheism is false. If Christianity is true, then all non-Christian systems are false. But opposite truth claims cannot both be true (*see* PLURALISM, RELIGIOUS ; WORLD RELIGIONS, CHRISTIANITY AND).

A Priorism. All rationalists believe there is an *a priori* element to knowledge. Reason is in some sense independent of experience. Even rationalists who are also empiricists (for example, Thomas Aquinas, Aristotle , and Leibniz), believe that there is nothing in the mind that was not first in the senses except the mind itself. Without this *a priori* (independent of experience) dimension to knowledge, nothing could be known.

Differences among Rationalists. The role of the senses. Some rationalists downplay, if not negate, any determinative role of the senses in the knowing process. They stress the rational exclusively. Spinoza is an example of this view. Others combine senses and reason, such as Aquinas and Leibniz. The former are more deductive in their approach to learning truth; the latter are more inductive and inferential.

The limits of reason. A crucial difference among rationalists is found in the scope of reason. Some rationalists, such as Spinoza, give reason an all-encompassing scope. It is the sole means of determining truth. Others, such as Aquinas, believe reason is capable of discovering some truths (for example, the existence of God), but not all truth (for example, the Trinity). Those in the latter category believe that there are truths that are in accord with reason and some that go beyond reason. Even the latter are not *contrary* to reason. They simply are *beyond* the ability of reason to attain on its own. They can be known only from special revelation (*see* REVELATION, SPECIAL).

Evaluation. Rationalism as a whole has both positive and negative dimensions for an apologist. Unlimited rationalism that denies all special revelation, obviously is unacceptable for a theist (*see* BIBLE, EVIDENCE FOR ; FAITH AND REASON). Nor is any form of rationalism that denies theism in accord with orthodox Christianity.

However, foundationalism's stress on the need for first principles, is both true and valuable. Also valuable is the belief in objective truth. The rationalist's emphasis on the exclusive nature of truth claims is also a benefit to Christian apologetics.

From a Christian perspective, the rationalist theologian Jonathan Edwards made an important distinction: All truth is given by revelation , either general or special, and it must be received by reason. Reason is the God-given means for discovering the truth that God discloses, whether in his world or his Word. While God wants to reach the heart with truth, he does not bypass the mind along the way. In this modified sense, there is great value in Christian rationalism.

Realism. *Realism* is the view that there is a reality external to our minds that we can know (*see* EPISTEMOLOGY). This view is opposed by skepticism, agnosticism , and solipsism. Christian realists believe that there is an infinite Spirit (God) and a real, finite world, comprised of both spirits (angels) and human beings. In contrast to dualism, realists believe that the all finite beings are created and not eternal. Contrary to idealists (e.g., George Berkeley), they believe that there is a real, extra-mental, material world.

Realists also believe that there is a correspondence between thought and thing, between the mind and reality (*see* TRUTH, NATURE OF). For classical realists, such as Aristotle and Thomas Aquinas, this correspondence is made possible by means of first principles of knowledge. Since Immanuel Kant it has been customary to distinguish critical realism from classical realism. The former begins with the premise that we know the real world, and the latter senses an obligation to prove we do. To state it differently, the post-Kantian realist sees a need to address Kant's agnosticism , since the Kantians do not believe we can know reality.

Knowledge of Reality. What is at question is whether our thoughts correspond to the real world. Or, more basically, whether the principles by which we know are adapted to reality. Without such principles of knowledge, classical realists believe that our knowledge of the real world is impossible. Aristotle and Aquinas, for example, held that there are undeniable first principles by which the real world can be known.

Classical realists believe first principles are self-evident. That is, once the terms are known, it is clear to a rational mind that they are true. For example, once we know what *wife* means and what *married women* means, it is self-evident that "All wives are married women." However, for classical realists such as Aquinas, self-evident does not necessarily mean *a priori* or independent of experience. For the realists, first principles are known because the mind knows reality. In fact, these epistemological principles have an ontological basis in reality.

Without such valid principles of knowing reality, it is impossible to really know. There must be a relationship between thought and thing, be tween the principles of knowledge and the object of knowledge. But what is it, and how can it be established? This is the critical problem for a critical realist.

First Principles and Reality. By "reality" a realist means not only the mind, but the extra-mental realm as well. Reality is that which is. It is all that is. Reality is being, and nonreality is nonbeing. For the classical realists it was sufficient *that* we know being (or that we know that we know being) and that in reality our knowledge of first principles is based in our most fundamental knowledge of being. As Eric Mascall pointedly observed, it is as unnecessary to expound one's epistemology before beginning to talk about God as it is to understand human physiology before beginning to walk (Mascall, 45). Aristotle and Aquinas saw no need to justify this knowledge any more than one could directly demonstrate a first principle. They are self-evident. We know that they are true, even before we can explain why they are true. That something exists is known by direct intuition. It is obvious and immediate. This is not to say that there is no way to defend first principles but to note that they are self-evident, once the terms are properly known.

The Undeniability of First Principles. As was shown in the article First Principles, these precepts are undeniable or reducible to the undeniable. That is, one cannot deny them without using them. For example, the principle of noncontradiction cannot be denied without using it in the very denial. The statement, "Opposites can be true" assumes that the opposite of that statement cannot be true. While most would grant this, not all skeptics grant that the principle of causality, which is crucial in all cosmological arguments for God, is an undeniable first principle. Not every skeptic admits that something exists. Thus, it is necessary to comment on their undeniability (*see* VERIFIABILITY STRATEGIES).

The statement "I exist" is undeniable. Were I to say, "I do not exist," I would have to exist in order to say it. In explicitly denying my existence, I implicitly affirm it. Likewise, one cannot deny that reality is knowable. For the affirmation that reality is not knowable is itself an assertion of knowledge about reality. Total agnosticism is self-defeating.

Realism, then, is unavoidable. The fact that we are sometimes mistaken or deceived about reality does not negate all knowledge of it. Indeed, it requires it. For we could not know an illusion unless it was seen on the backdrop of reality.

Redaction Criticism, New Testament. ***See*** **BIBLE CRITICISM .**

Redaction Criticism, Old Testament. A *redactor* edits or changes a text composed by another. Redaction criticism of the Bible claims that subsequent editors (redactors) changed the text of Scripture. If such alleged changes were substantial, it would seriously damage the credibility of Scripture (*see* BIBLE, EVIDENCE FOR). We could not be sure what was in the original text. For redaction critical views regarding the New Testament, see the article BIBLE CRITICISM .

Nature of Redaction Views. Redaction views are held by both evangelicals and non-evangelicals. The latter are more radical in their assertion of the kinds of changes they believe have occurred in the text.

Radical Views. Emanuel Tov is often quoted in support of the redacted-canon view. On the alleged redactions of Jeremiah, he argued that both minor and major details were changed. He believed these changes apparent in

1. text arrangement;
2. the addition of headings to prophecies;
3. repetition of sections;
4. addition of new verses and sections;
5. addition of new details; and
6. changes in content (Tov, 217).

Of courses, substantial changes in content would undermine the credibility of the Old Testament and particularly its apologetic value. How could one be sure that the prophecies were not tampered with later to make them fit what had actually happened.

“Inspired” Redactors. Some evangelicals have attempted to accommodate redactional models by proposing an “inspired redactor.” In this way they hope both to explain the evidence for redaction while maintaining the inspiration of the Scriptures (*see* BIBLE, EVIDENCE FOR ; NEW TESTAMENT MANUSCRIPTS ; OLD TESTAMENT MANUSCRIPTS). For example, Bruce Waltke claims “that the books of the Bible seem to have gone through an editorial revision after coming from the mouth of an inspired spokesman.” In the same passage he speaks of “later editorial activity.” Waltke claims there is evidence of redaction from 1800 B.C . to A.D . 200 (Waltke, 78, 79, 92). However, respondents to Waltke’s proposal strongly reject his position (ibid., 133). Even his concessions tend to undermine the biblical text.

Arguments for Redactors. Attention is focused here on the Old Testament redaction, especially as held by Waltke and some other evangelical scholars who insist that “inspired redactors” made substantial changes in the biblical writings. Along with more critical redactors, they believe that the content of biblical writers underwent continual changes until it reached its final form.

In support of this position the following arguments are sometimes offered.

1. Someone after Moses, possibly Joshua, wrote the last chapter of Deuteronomy (chap. 34), since it is not prophetic and records Moses’s death.

2. Certain sections of Deuteronomy (2:10–12 , 20–23) show evidence of a later redactor. They are editorial and parenthetical in nature.

3. Arrangement of the psalms into five books or sections is undoubtedly the work of compiler-editors.

4. Proverbs passed through the hands of editors after Solomon (10:1 ; 22:17 ; 25:1 ; 30:1 ; 31:1), some of whom lived in Hezekiah’s day, two centuries after Solomon (25:1).

5. Some books, such as Jeremiah, survive in two substantially different versions. The longer (Hebrew) version is one-seventh larger than the Greek Septuagint version, an example of which survives in fragments from Qumran (4 QJerb).

6. The books of Chronicles present themselves as being based on prior prophetic records (1 Chron. 9:1 ; 27:24 ; 29:29 ; 2 Chron. 9:29 ; 13:22 ; 16:11 ; 20:34 ; 25:26 ; 27:7 ; 28:26 ; 32:32 ; 33:19 ; 35:27 ; 36:8) which were redacted by the author(s) of Chronicles.

Response to Arguments. None of the arguments advanced in support of inspired redaction are definitive. Merrill Unger granted only slight “editorial additions to the Pentateuch, regarded as *authentically* Mosaic.” But he flatly rejected the notion that later non-Mosaic additions were made on the Pentateuch by redactors, inspired or not (Unger, 231–32). The response to the “inspired redactor” theory will follow the order of their arguments given above.

The Account of Moses’ Death. For a full discussion of this point, see PENTATEUCH, MOSAIC AUTHORSHIP OF . That Moses might not have written Deuteronomy 34 has long been accepted by

conservative scholars, even Unger. However, this is not a *redaction* in the content of anything Moses wrote. It is an *addition* of events that, humanly speaking, Moses could not have written, namely, an account of his own funeral (Deuteronomy 34). Of course, it is always possible that Moses could have written this by supernatural revelation, but there is no claim or evidence that he did. Completion of the book by another inspired prophet, Joshua in particular, would not compromise its authority.

Editorial Comments in Deuteronomy 2 . This is also discussed in PENTATEUCH, MOSAIC AUTHORSHIP OF . The parenthetical sections in Deuteronomy 2 need not be later redactions. They fit into the text, and there is no reason Moses could not have included them to amplify and clarify. If these additions were made by later scribes, they are uninspired and subject to the same textual skepticism as Mark 16:9–20 and John 8:1–11 . Lacking evidence to the contrary, it seems reasonable to consider these to be editorial comments by Moses.

Adding and Rearranging. Simply compiling and arranging inspired writings (individual psalms) is not proof of the redaction model. Adding psalms to the psalter as they were written fits perfectly with the prophetic model of the canon. What the redactional model would have to prove is that later inspired writers made deliberate content changes in Psalms (or other books) already in the canon, not simply rearranging what is there. There is no proof of this in the Psalms.

Small *editorial* additions to a text are not the problem. The inspired redactor view accepts *substantial* changes in content.

Proverbs Shows No Evidence of Redaction. None of the passages cited from Proverbs prove that the original author's writing (whether Solomon [1–29], Agur [30], or Lemuel [31]) were not accepted by the believing community immediately and continuously without subsequent content changes. The phrase out" (25:1) does not mean "changed in content" but merely transcribed onto another manuscript. Whether this process involved a selection and rearrangement of what Solomon had previously written is irrelevant. As with Psalms, there is a big difference between *rearranging* what Solomon wrote and *redacting* (changing) its content. There is no evidence of the latter.

Two Editions by Jeremiah. Conservative scholars acknowledge that there may have been two versions (editions) of Jeremiah that originated with Jeremiah himself, possibly through Baruch his scribe (Archer, 361–62). This would account for differences found in the manuscripts. In this case there is no need to posit a *later* redactor. Jeremiah himself, while alive, could have directed a later version of his book with more prophecies in it. Jeremiah preached and prophesied as the occasion called for it. It is understandable that the collection of his writings would grow. The *Septuagint's* scholars may have had access to a preliminary version.

Citing Other Sources. The passages cited in Chronicles (1 Chron. 9:1 ; 27:24 , etc.) do not mean that the writer of Chronicles (possibly Ezra) was *redacting* some other books. Rather he used them as sources to write his own book, just as Daniel (9) uses Jeremiah (25), and 2 Samuel 22 uses Psalm 18 . Luke evidently used other records (Luke 1:1–4).

Further, it is not necessary to take all these Old Testament citations as being from inspired writings. Some were court records (e.g., 1 Chron. 9:1 ; 27:24 ; 2 Chron. 20:34). The books by "Samuel the Seer and Nathan the Prophet" (1 Chron. 29:29) may be the prophetic writing now known as 1 Samuel. Still others may have been uninspired commentaries (e.g., 1 Chron. 13:22). Paul uses uninspired sources in his works (cf. Acts 17:28 ; Titus 1:12). This is not making changes in an inspired book.

Problems with "Inspired" Redaction. The inspired-redactors view that editors made deliberate and substantial changes in the content of previous prophetic material is unacceptable.

It Is Contrary to God's Warning. God gave repeated warning to his prophets not to "add to the word which I [God] am commanding you" (Deut. 4:2 ; cf. Prov. 30:4 ; Rev. 22:18–19). This of course does not mean that another prophet cannot have added separate revelation to complete Deuteronomy. It does mean that no one was permitted to change (redact) the revelation God had given to another prophet, or, for that matter, to himself. No one was to add to or take way from what God had spoken (cf. Rev. 22:19).

It Confuses Textual Criticism and Canonicity. The redaction view confuses canonicity and lower textual criticism (*see* BIBLE CRITICISM). Canonicity (Gk. *canon* , rule or norm) deals with which books are inspired and belong in the Bible (*see* BIBLE, CANONICITY OF). Lower textual criticism studies the text of canonical books, attempting to get as close to the original text as possible. Now the question of scribal changes in transmitting a manuscript of an inspired book is one of lower textual criticism, not canonicity. Likewise, if material was added later, as in 1 John 5:7 (KJV) or John 8:1–11 , this is a matter of textual criticism to determine whether it was in the original writing. It is not properly a question of canonicity.

Lower textual criticism is a legitimate discipline because it does not seek to change or *redact* the original text but simply to *reconstruct* it from the available manuscripts.

It Is Contrary to the Meaning of Inspired. The so-called "inspired redactor" view is contrary to the biblical use of the word *inspired* or *God-breathed* in 2 Timothy 3:16 . The Bible does not speak of inspired *writers* , but only of inspired *writings* (*see* BIBLE, EVIDENCE FOR). An inspired author would be infallible and inerrant, not simply the author of an infallible and inerrant book.

It Is Contrary to Inspired Autographs. This redaction view is contrary to the evangelical view that only the autographs (original texts) are inspired. The *autograph* is the original text (or an exact replica) as it came from the prophet. Only this is believed to be inspired and, therefore, without error. Copies are inspired to the degree that they accurately reproduce the original.

But according to the "inspired redactor" view, the final redacted version is inspired. If this is so, then the original writings were not the ones breathed out by God. For God cannot err (Titus 1:2 ; Heb. 6:18), nor change (Mal. 3:6 ; Heb. 1:12 ; 13:8 ; James 1:17). If there was an "inspired redactor," God made content changes in his successive inspired editions.

---

kjv King James Version

Further, the “inspired redactor” view requires rejection of the evangelical view of a definite written original that God breathed out through a given prophet. Instead, the autographs would be a fluid manuscript in process, perhaps over centuries. It would in effect promote scribes to the rank of prophets. God would have to breathe out the copies (including their errors) as well as the originals.

It Eliminates Verification of a Work. Inspired redaction eliminates the means by which a prophetic utterance could be tested by those to whom it was given. According to the redaction view, the prophetic work as such was not presented to the contemporary believing community. Rather it was finished and endowed to the church by someone decades (or even centuries) later. When there was need, God confirmed his prophets by signs and wonders (cf. Exodus 3–4 ; 1 Kings 18 ; Acts 2:22 ; Heb. 2:3–4). Contemporaries of the prophet could test the man of God’s claims (cf. Deuteronomy 18). But if the “inspired redactor” view is correct, there is no way to confirm whether that writing (in its eventual edited form) actually came from a prophet of God. Only if the original and unchanged message was confirmed by the original audience can we have assurance of its rightful place in the canon.

It Shifts Authority away from Scripture. The redaction model shifts the locus of divine authority from the original prophetic message (given by God through the prophet) to the community of believers generations later. It is contrary to the principle of canonicity that God *determines* canonicity and the people of God *discover* what God determined as inspired. In effect the redaction model locates the authority in the church rather than in the God-given prophetic message to the church.

It Involves Deception. A redaction model of canonicity entails acceptance of deception as a means of divine communication. In significant ways, a message or book which claims to come from a prophet came actually from later redactors. As applied to the Gospels, redaction criticism claims that Jesus did not necessarily say or do what the Gospel writer claims he did. Redactors literally put their own words in Jesus’ mouth. But this involves intentional misrepresentation, which is deceptive (*see* NEW TESTAMENT, HISTORICITY OF). The same criticism applies if later redactors changed what a prophet wrote. That would be a deception, misleading the reader to believe that God directed what original writers had said. But God cannot lie (Heb. 6:18).

It Confuses Proper Editing with Redacting. The redaction model of the canon confuses legitimate scribal activity, involving grammatical *form* , up dating of names and arrangement of prophetic material, with the illegitimate redactional changes in actual *content* of a previous prophet’s message. It confuses acceptable scribal *transmission* with unacceptable redactional *tampering* . It confuses proper discussion of which is the earlier *text* with improper claims that latter prophets changed the *truth* of earlier texts?

It Is Refuted by Jewish History. The redaction theory assumes there were inspired redactors well beyond the period in which there were prophets (viz., fourth century B.C .). There can be no inspired works unless there are living prophets. And the Jews recognized no prophets after the time of Malachi (ca. 400 B.C .). Josephus, the Jewish historian, explicitly referred to revelation ceasing by “the reign of Artaxerxes king of Persia” (Josephus, 1.8). He added: “From Artaxerxes

until our time everything has been recorded, but has not been deemed worthy of like credit with what preceded, because the exact succession of the prophets ceased" (ibid.).

Additional rabbinical statements on the cessation of prophecy support this (see Beckwith, 370): Seder Olam Rabbah 30 declares "Until then [the coming of Alexander the Great] the prophets prophesied through the Holy Spirit. From then on, 'Incline thine ear and hear the words of the wise.' " Baba Bathra 12b declares: "Since the day when the Temple was destroyed, prophecy has been taken from the prophets and given to the wise." Rabbi Samuel bar Inia said, "The Second Temple lacked five things which the First Temple possessed, namely, the fire, the ark, the urim and thummim, the oil of anointing and the Holy Spirit [of prophecy]."

Thus, any changes in the Old Testament text after this time could not have been inspired, since there were no prophets. Thus they are a matter of textual criticism, not canonicity.

It Is Refuted by Textual Criticism. The scholarly discipline of textual criticism refutes the claims of redaction criticism. For the history of the biblical text is well known (*see* NEW TESTAMENT MANUSCRIPTS). Thousands of manuscripts trace the changes. The original text can be reconstructed with a great degree of confidence. There are no redactions in the content of the prophetic message by either inspired or uninspired editors. Most changes have to do with form, not content. They are grammatical, not theological. The scribes were faithful in copying the text. This being the case, there is no reason to believe the original message of the biblical writer has been redacted. The brieftime gap and the large number of manuscripts compared to other works of antiquity vouch for the fact that the content of the biblical texts has been unchanged.

Reductio ad Absurdum. *Reductio ad Absurdum* refers to a logic-based argument that reduces opposing views to the absurd by showing that two or more of its central premises, or those that

follow logically from them, are logically contradictory (*see* LOGIC). One system of Christian apologetics, the rational presuppositionalism of Gordon Clark , depends entirely on this type of argument (*see* APOLOGETICS, PRESUPPOSITIONAL).

Reid, Thomas. Thomas Reid (1710–1796) was a founder of the Scottish philosophy of common sense. Born in Strachan near Aberdeen, Reid was influenced by his teacher at Marischal College, George Turnbell, who stressed the priority of sense knowledge, though under the cloak of Berkeleism. After studying David Hume's *Treatise of Human Nature* (1739), Reid renounced his Berkeleian views (*see* BERKELEY, GEORGE). Reid taught at King's College, Aberdeen, until 1751. He helped form the Aberdeen Philosophical Society, which often discussed Hume. In 1764 he published his *Inquiry into the Human Mind on the Principles of Common Sense* and the same year began teaching at Old College in Glasgow. His two major works were *Essay on the Intellectual Powers* (1785) and *Essay on the Active Powers* (1788).

Philosophical Views. Unlike David Hume , Reid believed that conceptions rise from the innate powers of conception in the mind that manifest themselves in accordance with original first principles of the mind. Evidence is the ground of belief and arises out of the use of intellect. We know these faculties are trustworthy because, however we try to refute these principles, they prevail. Further, all thinking depends on the assumption that they are reliable. In response to skeptics who distrust their faculties, Reid observes that even Hume trusted his senses in practice and is guilty of pragmatic inconsistency.

By virtue of his belief in active powers, Reid held that he was the active cause of his own acts. Free acts are not the result of antecedent causes but of will. Free actions are neither determined by another (*see* DETERMINISM) nor fortuitous (*see* INDETERMINISM), but are caused by oneself (*see* FREE WILL).

Reid taught that common sense beliefs are "the inspiration of the Almighty." One does not have to believe in God in order to hold them, but they are imposed by our created nature. When we try to explain them we understand that God gave them to us. Indeed, we have the same evidence for God that we have for intelligence and will in another person. So those who reject God should also reject the existence of other minds.

Reid's common sense realism had an extensive influence, particularly on Old Princeton including Charles *Hodge and B. B. Warfield (*see* PRINCETON SCHOOL OF APOLOGETICS) in America (see Martin).

Reincarnation. *Reincarnation* means literally "to come again in the flesh." This is not to be confused with Christ's "incarnation" as when he came "in the flesh" once and for all (1 John 4:1–2) (*see* CHRIST, DEITY OF). *Re-* incarnation means that after death the human soul attaches to another body and returns to live another life.

There are many forms of reincarnation. The most common spring from Hinduism and Buddhism (*see* ZEN BUDDHISM) and are based in the inexorable law of *karma* . Under the law of *karma* , what one sows in this life is reaped in the next. Every action in this life has a reaction or consequence in this life or in the next.

Cycles of Life. *Popularity of Reincarnation.* Reincarnation is not only the dominant belief in Eastern religions, but it has gained increased popularity in the Western world. About one in four Americans believe in reincarnation. Among college age young people the figure is nearly one in three. Surprisingly, about one in five who attend church regularly also believe in reincarnation, in spite of the fact that the Bible and orthodox Christian belief reject reincarnation.

Many celebrities have proclaimed their belief in reincarnation. One of the most vocal has been Shirley MacLaine. Other famous celebrities who believe in reincarnation have included Glenn Ford, Anne Francis (*Honey West*), Sylvester Stallone (*Rocky* , *Rambo*), Audry Landers (*Dallas*), Paddy Chayevsky (author of *Marty* , *The Hospital* , *Altered States*), General George S. Patton, Henry Ford, Salvador Dali, and Mark Twain. In music, ex-Beatle George Harrison, Ravi Shankar, Mahavishnu, John McLaughlin, and John Denver have been dedicated to spreading the message of their spiritual beliefs in a second chance. Even some comic books have gotten in on the act. *Camelot 3000* , *Ronin* , and *Dr. Strange* have all dealt with themes of reincarnation.

Source of the Doctrine. Reincarnation has a long history. Many believe that the original source of the doctrine appears to be the Hindu Vedas (Scriptures). Buddhist, Jainist, and Sikh forms seem to have been derived from these, as have teachings of Transcendental Meditation and Hare Krishna. Some Western forms may have arisen from Greek philosophy without direct influence from the Hindu teaching, beginning with the Pythagoreans. Psychic Edgar Cayce and adherents of the late-eighteenth-century theosophical movement, including writer Helena Blavatsky, were influential teachers about multiple lives. Several Christian theologians have attempted to harmonize forms of reincarnation with Christianity, among them Geddes MacGregor and John Hick .

Kinds of Reincarnation. Philosophically, reincarnation is wrapped up in Eastern religions such as Hinduism, Buddhism, and Taoism. It is strongly rejected by Islam, Judaism, and Christianity). But it was never confined to the East. Some early Western philosophers also

believed that the soul lives on in different forms. Pythagoras (ca. 580–ca. 500 B.C .), Plato (428–348 B.C .), and Plotinus (205–270) all believed that the spirit or soul was eternal and could not be destroyed (*see* IMMORTALITY).

Plato taught that the immortal soul takes on a body only as punishment for some sin, for which suffering will be tenfold; the soul must leave the ideal realm and enter into the material world. Man is "a soul in a body, and his soul needs to grow toward the highest good, that it may no longer have to suffer continued rebirth but go into that state in which it may, like God, behold and enjoy forever the hierarchy of ideal forms, in all their truth, beauty, and goodness" (Noss, 52). Before this final blissful state is realized we may come back, even as animals.

The similarities between Plato and the Hindu doctrine are striking, especially Ramanuja's "personal" system. This school developed from the earlier "impersonal" view, but the key ingredients are the same: The soul is called *jiva* or *jivatman* and it survives death as a mental entity called the *subtle body* . This entity will enter a new embryo, bringing with it the *karma* of all its past lives. *Karma* includes both actions and the ethical consequences attached to them. You definitely reap what you sow. If you do good deeds, you are born into a "pleasant womb." If you do evil, your destiny will be proportionately less noble. You might even find yourself in a "foul and stinking womb," be it animal, vegetable, or mineral. The cycle of death and rebirth (*samsara*) is often depicted as a wheel, with death as the gateway to new life. The goal, though, is to escape from this cycle.

This escape is called *moksha* , and it is here that the difference arises between the personal and impersonal forms of the doctrine. The impersonal version says that once all karmic debt is eliminated, the soul loses all identity and simply becomes one with the One; the self merges with Brahman, a divine, impersonal force. The personal view says that the soul is simply liberated to be itself, fully devoted to *Bhagwan* (the personal God).

Other forms of the doctrine of reincarnation differ with regard to what happens at the point of death and the nature of the ultimate state of *moksha* , but the general pattern is retained. Buddhists say that the unconscious soul (*vinnana*) continues, but the self (intellect, emotions, and consciousness) is obliterated at death. Its *karma* remains in the cycle of rebirth called *samsara* . There are four interpretations of the final state in Buddhism, *nirvana,* which is attained by the grace of Buddha. Jainism and Sikhism follow the same patterns as personal and impersonal Hinduism, respectively.

Most unorthodox Christian forms of reincarnation do not differ in their basic concept, but are influenced by other factors. Most important, during human existence, a decision is made about whether to accept or reject Christ. In the simplest model, those who accept Christ go to be with God, while those who reject him are reincarnated. The cycle will continue until all recognize Christ. In this way, all will eventually be saved (*see* UNIVERSALISM). Some Christian reincarnation theories provide ultimate punishment for those who are lost causes. In MacGregor's view the punishment is annihilation (*see* ANNIHILATIONISM). Hick's theory is somewhat novel in that he supposes that humans are reincarnated to lives on other planets.

Reason for Belief. Several rationales are given to justify belief in reincarnation. Three of the most basic reasons are the belief in an immortal soul, psychological evidence of past-lives, and the argument from justice through reincarnation.

Immortality of the Soul. Plato's main reason for believing in transmigration of souls (another name for souls going to a different body) was that he considered the immaterial part of each human being to be uncreated and indestructible. It existed before we were born, and it continues to exist after we die. Nothing, either good or evil, can corrupt it. If that is the case, then reincarnationists argue that it is likely that it appears in the world in different bodies at various times. This is part of its perfecting process. In the same way, pantheistic philosophies assume that all is eternal and divine, so the soul is equally incorruptible.

Psychological Evidences. Ian Stevenson, a parapsychologist and researcher of past-life recall, has said,

> The idea of reincarnation may contribute to an improved understanding of such diverse matters as: phobias and philias of childhood; skills not learned in early life; abnormalities of child-parent relationships; vendettas and bellicose nationalism; childhood sexuality and gender identity confusion; birthmarks, congenital deformities and internal diseases; differences between members of monozygotic twin pairs; and abnormal appetites during pregnancy. [Stevenson, 305]

Past life regression, through hypnosis or other altered consciousness states, has been helpful to some to explain feelings that the patient cannot account for or overcome. By finding some experience in a past life, many have been relieved of feelings of fear, depression, or unwantedness. Though many psychologists and hypnotists who work with past-life recall do not really believe that the events recounted by their patients are real, they use it because it works. As one therapist said, "It doesn't matter if it is real or imagined if it helps someone make sense out of their lives. . . . If it works, who cares?" (Boeth, H3).

Need for Justice. To many, the idea of having more than one chance at life seems to be the most equitable solution. *Karma* is just. If you do bad things, you pay the price; if you do good, you get a reward. Punishment is in proportion to how bad your *karma* is, not all or nothing. The idea of condemning someone to an everlasting hell for a finite amount of sin sounds too harsh. Also, suffering in this life can be justified if it is really an outworking of *karma* from past lives. This explanation eliminates the need to make God responsible for suffering. All suffering can be explained as the just outworking of bad deeds done in former incarnations.

As Quincy Howe observes, "One of the most attractive aspects of reincarnation is that it removes entirely the possibility of damnation" (Howe, 51). The doctrine of eternal punishment seems totally incompatible with the love of God to many people. Reincarnation suggests a way in which God can punish sin (through the law of *karma*), demand faith in Christ (during at least one lifetime), and still save everyone ultimately. Someone who rejects Christ gets more chances. This even protects human freedom, because God does not coerce anyone to believe; he merely gives them more time to exercise their freedom. Moral progress and spiritual growth can also

occur during successive lifetimes, which will allow individuals to understand the love of God better. Some think that moral perfection cannot be attained without reincarnation.

Finally, it is argued that reincarnation is just because it makes salvation a personal matter between the individual and God. Rather than dealing with problems of imputed guilt from Adam's sin or being reckoned righteous by faith, everyone is responsible for taking care of his or her own *karma* . Howe, arguing that the atonement by a substitute is no longer valid, says, "Man himself must make his peace with God" (Howe, 107). MacGregor says, "My *karma* is particular to *me* . It is *my* problem and the triumph over it is *my* triumph." This eliminates the injustice of being punished in any way for Adam's sin and the injustice of Christ dying for sins that he did not commit. Instead, Jesus' death becomes our inspiration, "the perfect catalyst" for working out our salvation and assuring us that we stand in the unfailing light of God's love. He died as our example, not as our substitute. In these ways, reincarnation satisfies justice.

Evaluation. *Response to the Arguments.* The arguments for reincarnation are without real foundation. At best they show only the possibility of reincarnation, not its reality.

Immortality does not prove reincarnation. Even if one could demonstrate the immortality of the soul on purely rational grounds, it would not thereby prove immortality. The soul could survive forever in a disembodied form. Or the soul could be reunited once with its body in a permanent immortal resurrection body, such as orthodox Jews, Muslims, and Christians believe.

Past life "memories" do not prove reincarnation. There are other ways to explain the so-called "memories" or past lives. First, they may be false memories. Many other so-called "memories" have been shown to be false. Some people have "remembered" things that were empirically proven not to have happened. Many people have recovered from the false memory syndrome. Second, these so-called "memories" of previous lives are more abundant among those who have been reared in cultures or contexts where they were exposed to the teaching of reincarnation. This suggests that they received these ideas when they were young and later revived them from their memory bank. Third, there are notable cases, such as Bridie Murphy, where the alleged "memories" of past lives turned out to be nothing more than stories her grandmother read to her when she was a little girl. Other false memories have been implanted by hypnosis (the power of suggestion) or guided imagery therapy during counseling or teaching sessions. The false memory syndrome is recognized by psychologists today.

Reincarnation does not solve the problem of justice. Rather than solving the problem of unjust suffering, reincarnation simply says that it is just after all. The innocent are not really innocent because the *karma* of their past lives is causing suffering. Reincarnationists complain that a Christian faced with the grieving mother of a dying four-month-old can only say, "I don't know." But the law of *karma* can give her an answer: "Your sweet, innocent angel is dying because in an earlier incarnation she was a scumball." This is not a *solution* to the problem, it is merely a *subversion* of it. It doesn't *deal* with the difficulty; it *dismisses* it.

Is it really fair for God to punish children for the sins they don't even remember committing? It seems morally repugnant and terribly unjust to mete out judgment on someone who does not even know what his crime was. Besides this, by putting the guilt back one lifetime, one begins an

infinite regress of explanations that never really pays off with an explanation. If the suffering of each life depends on the sins of a former life, then how did it all begin? If there was a first life, where did the karmic debt come from to explain the suffering in that life? Is evil an eternal principle, right alongside God? You can't keep "back pedaling" forever to solve the problem of evil. The law of *karma* fails to resolve the conflict. It merely pushes the problem back into previous lives without ever coming to a solution.

One gets the impression, and some argue, that *karma* is the same as the biblical law—a rigid, universal moral code. However, *karma* is not a moral prescription. It is a system of retribution only; it has no content to tell us what to do. It is an impersonal, amoral law of act-consequence relations. Even comparisons with the act–consequence relationship in Proverbs fail to recognize that the Old Testament puts these forth as general principles, not absolute, unbreakable sanctions of retribution. For that matter, the law was not as unalterable as *karma* —it was part of a higher law of forgiveness and grace. The comparison is invalid.

Arguments against Reincarnation. Not only do the arguments for reincarnation fail to prove it is so, but there are arguments against reincarnation. Several of the most important can be summarized.

The moral argument. In pantheistic systems there is no source for the moral standards that *karma* enforces (*see* PANTHEISM). Why punish people for some wrong if there is no moral standard of right and wrong? For in pantheism, there is no ultimate difference between good and evil. *Karma* is not a moral law. As for morality, all is relative. Allan Watts, a spokesman for Zen Buddhism, has written, "Buddhism does not share the Western view that there is a moral law, enjoined by God or by nature, which it is man's duty to obey. The Buddha's precepts of conduct—abstinence from taking life, taking what is not given, exploitation of the passions, lying and intoxication—are voluntarily assumed rules of expediency" (Watts, 52).

This relativism poses real problems for reincarnation. Relativism is an impossible position to hold in ethics. You can't say, "Relativism is true," or even, "Relativism is better than absolutism," because these statements assume an absolute value that contradicts relativism. As C. S. Lewis explains,

> The moment you say that one set of moral ideas can be better than another, you are, in fact, measuring them both by a standard, saying that one of them conforms to that standard more nearly than the other. But the standard that measures the two things is something different from either. . . . You are, in fact, comparing them both with some Real Morality, admitting that there is such a thing as real Right, independent of what people think, and that some people's ideas get nearer to that real Right than others. [Lewis, 25]

In order to say that relativism is right, you have to assume that some absolute Right exists, which is impossible in relativism. Unless something is absolutely right, nothing can be actually right; and if nothing is right (or wrong), then *karma* has no business punishing anyone for it (*see* MORALITY, ABSOLUTE NATURE OF).

The humanitarian argument. Reincarnation is ultimately anti-humanitarian. It generates no social compassion. Anyone who helps the thousands of poor, crippled, maimed, homeless, and starving people on the streets of India is working against the law of *karma* . People suffer to work off their karmic debt and if you helped them, then they would have to come back again and suffer even more to work off that debt. According to traditional Hindu belief, anyone who helps the suffering is not increasing their *karma* but one's own. The social compassion that exists in India is the result of non-Hindu, largely Christian, influence. Hinduism did not produce Mother Teresa.

The psychological argument. Reincarnation depends on the premise that an individual had a highly developed sense of self-consciousness before birth, so as to receive and store information for later recall. It is a scientific fact that this ability does not develop until one is about eighteen months of age. This is why we do not remember when we were one year old. To assert that every human being somehow mysteriously "forgets" his/her past highly developed consciousness and that most never regain it—unless they are trained and "enlightened" to do so—is highly implausible. The hypothesis is without foundation and is entirely *Deus ex machina* .

The scientific argument. Scientifically, we know that an individual life begins at conception, when the twenty-three chromosomes of a male sperm unite with the twenty-three chromosomes of a female ovum and form a forty-six-chromosome human zygote. At that point a unique, new human life begins. It has life (soul) and a body. It is a unique individual human being. It did not exist before. To claim that its soul (life) existed in previous body has no scientific basis. The scientific evidence points to human conception as the point of origin of an individual human being.

The social argument. If reincarnation were correct, society should be improving. After all, if we have had hundreds, even thousands, of chances to improve over millions of years, then there should be some evidence of it. There is no evidence that such moral progress is being made. All we have improved is the means by which we can manifest hate, cruelty, racism, and barbarism toward other human beings. Even a realistic optimist who hopes for a better day must acknowledge that there is no indisputable evidence that any significant moral improvement has occurred over the thousands of years we know about.

The Problem of Evil and Infinite Regress. If suffering in this life always results from evil done in a previous life, then there would have to be an infinite regress of previous lives. But an infinite regress in time is not possible, since if there were an infinite number of moments before today, then today would never have come. But today has come (*see* KALAM COSMOLOGICAL ARGUMENT). Therefore, there was not an infinite number of previous lives as traditional reincarnation seems to entail.

On the other hand, if there were not an infinite number of lives before this one, then there must have been a first life in which a previous incarnation was not the cause of its evil. But this is what Theism holds, namely, that evil originated because of an individual's free choice in that first life-time (e.g., Lucifer among the angels and Adam the first human) (*see* EVIL, PROBLEM OF).

Problem of Infinite Time and Lack of Perfection. Even on the reincarnationist's assumption that there has been an infinite amount of time before today, his view faces another serious problem. In an infinite amount of moments there is more than enough time to achieve the perfection of all souls which reincarnation is designed to do. In short, all souls should have received oneness with God by now, if there had been an infinite amount of time to do so. But they have not. Hence, reincarnation has failed as a solution to the problem of evil.

Biblical Arguments. Human beings are created. Fundamental to all the biblical reasons to reject reincarnation is the doctrine of creation. The Bible is the inspired Word of God (*see* BIBLE, EVIDENCE FOR). As such, it has divine authority in whatever it teaches. According to the Bible, human beings were created (Gen. 1:27). God is eternal (1 Tim. 6:16). All other things were created by him (John 1:3 ; Col. 1:15–16). Everything else exists only because God brought it into existence from nothing (*see* CREATION, VIEWS OF). This was not only true of Adam and Eve, the first human beings, but of all other human beings after them (Gen. 5:3 ; Ps. 139:13–16 ; Eccles. 7:29). All humans since Adam begin at conception (Ps. 51:5 ; Matt. 1:20). This being the case, there can be no preincarnate existence of our soul.

The intermediate state is disembodied. Scriptures teach that, upon death, the soul leaves the body and goes into the spirit world where it awaits resurrection. The apostle Paul wrote: "We are confident, I say, and would prefer to be away from the body and at home with the Lord" (2 Cor. 5:8). Second, contemplating death, Paul added, "I am torn between the two: I desire to depart and be with Christ, which is better by far" (Phil. 1:23). The "souls" of those who had just been martyred were conscious in heaven. "When he [Christ] opened the fifth seal, I saw under the altar the souls of those who had been slain because of the word of God and the testimony they had maintained" (Rev. 6:9). Jesus promised the repentant thief on the cross conscious bliss that very day of his death, saying: "I tell you the truth, today you will be with me in paradise" (Luke 23:43). Even Moses and Elijah, who had been dead for centuries, were consciously engaging in conversation about Christ's death on the Mount of Transfiguration (Matt. 17:3). Even the disembodied souls of the lost are conscious. For the beast and false prophet who where thrown alive into the Lake of Fire (Rev. 19:20) were still conscious "a thousand years" later (Rev. 20:10). There is not the slightest hint anywhere in Scripture that the soul after death goes into another body, as reincarnationists claim. It simply goes into the spirit world to await the resurrection.

The state after disembodiment is resurrection. Reincarnation is the belief that, after death, the soul passes on to another body. By contrast, the Bible declares that, after death, the same physical body is made incorruptible at the resurrection (*see* RESURRECTION, EVIDENCE FOR). Rather than a series of bodies that die, resurrection makes alive forever the same body that died. Rather than seeing personhood as a soul in a body, resurrection sees each human being as a soul-body unity. While reincarnation is a process of perfection, resurrection is a perfected state. Reincarnation is an intermediate state, while the soul longs to be disembodied and absorbed in God; but, resurrection is an ultimate state, in which the whole person, body and soul, enjoys the goodness of God.

The differences between resurrection and reincarnation are as follows:

Resurrection	Reincarnation
happens once	occurs many times
into the same body	into a different body
into an immortal body	into a mortal body
a perfect state	an imperfect state
an ultimate state	an intermediate state

So there is a vast difference between the Christian doctrine of resurrection and the doctrine of reincarnation. The Bible teaching of the resurrection (for example, in John 5:28–29 ; 1 Corinthians 15 ; Rev. 20:4–15), therefore, is contrary to the doctrine of reincarnation.

Humans die only once. According to Scripture, human beings die only once, followed by the judgment. For "Just as man is destined to die once, and after that to face judgment" (Heb. 9:27). We are born once, we live once, and we die once. But according to reincarnation, we live many times. We are born and reborn over and over again. The Hindu apologist Radhakrishna recognized that this verse spelled the definitive difference between Christianity and Hinduism. He wrote: "There is a fundamental difference between Christianity and Hinduism; it is said that it consists in this: that while the Hindu to whatever school he belongs believes in a succession of lives, the Christian believes that 'it is appointed to men once to die, but after this the judgment' " (Radhakrishna, 14, 118).

Judgment is final. Not only do human beings live and die once, followed by judgment, but the judgment is final (*see* HELL). Once one goes to his destiny, there is a "great gulf fixed" that no one can cross (Luke 16:26). Indeed, the judgment is described as "eternal destruction" (2 Thess. 1:9) and "everlasting fire" (Matt. 25:41). If it lasts forever, then there is no possibility of a reincarnation into another body. There is resurrection into one's own body, which receives the final judgment of salvation or of damnation (John 5:28–29).

Jesus rejected reincarnation. When asked whether a man's sin before birth was the cause of his sin, Jesus replied: "Neither this man nor his parents sinned," said Jesus, "but this happened so that the work of God might be displayed in his life" (John 9:3). Whereas this is probably a reference to the false Jewish belief that one could sin in the womb before birth, thus producing physical deformity, Jesus' reply excludes any belief in prebirth sins and *karma* . Elsewhere, Jesus made it very emphatic that one person's unfortunate lot in life is not necessarily because of sin (Luke 13:4–5). This is true whether one is referring to early life, prenatal life, or alleged preincarnate life.

Grace is contrary to reincarnation. Reincarnation is based in the doctrine of *karma* , which dictates that, whatever one sows in this life, one reaps in the next life. *Karma* is an inexorable law, with no exceptions. Sins cannot be forgiven; they must be punished. If one does not get his due in this life, he must get it in the next life.

But, according to Christianity, forgiveness is possible. Jesus forgave his enemies who crucified him (Luke 24:34). Christians are to forgive as Christ forgave us (Col. 3:13).

Forgiveness is contrary to the doctrine of *karma* and renders reincarnation entirely unnecessary. Salvation is a "gift" (John 4:10 ; Rom. 3:24 ; 5:15–17 ; 6:23 ; 2 Cor. 9:15 ; Eph. 2:8 ; Heb. 6:4) which is received by faith. Rather than working to merit God's favor, the believer is given grace or unmerited favor and pronounced righteous. God's justice is satisfied because Jesus was punished for the sins of the whole world in his death. Our sins were not simply ignored, or swept under the rug. Jesus paid (Rom. 3:25 ; Heb. 2:17 ; 1 John 2:2 ; 4:10) God's demand for justice by bearing our guilt as our substitute. This penalty paid by Christ is contrary to the karmic doctrine and strikes at the heart of the need for reincarnation.

Summary. The doctrine of reincarnation, based on *karma* , is without objective evidence. It is contrary to common sense, science, sound psychology of human development, and morality. Further, it is opposed by clear teaching of Scripture. Hence, in spite of its popularity, even in the West, it is without rational and evidential foundation.

Resurrection, Alternate Theories of. The evidence for the supernatural physical resurrection of Christ is compelling (*see* RESURRECTION, EVIDENCE FOR , and RESURRECTION, PHYSICAL NATURE OF), and the objections can be adequately answered (*see* RESURRECTION, OBJECTIONS TO). Alternate explanations to a supernatural physical resurrection have been attempted, but a brief survey will show that they too fail.

Naturalistic Theories. In all naturalistic theories, in which the assumption is that Jesus died and did not return to life, two issues are inevitable problems: First, given the inescapable fact that Jesus actually died on the cross (*see* CHRIST, DEATH OF ; SWOON THEORY), a basic problem with all naturalistic theories is to explain what happened to the body. It is necessary to explain why the earliest records speak of an empty tomb or why the dead body was never found. Second, the earliest disciples testified to seeing an empty tomb and being with Jesus in the weeks after his death. If untrue, why did these reports so motivate them to extraordinary actions?

The Authorities Moved the Body. One hypothesis proposes that the Roman or Jewish authorities took the body from the tomb to another place, leaving the tomb empty. The disciples wrongly presumed Jesus to be raised from the dead.

If the Romans or the Sanhedrin had the body, why did they accuse the disciples of stealing it (Matt. 28:11–15)? Such a charge would have been senseless. And if the opponents of Christianity had the body, why didn't they produce it to stop the resurrection story? The reaction of the authorities reveals that they did not know where the body was. They continually *resisted* the apostles' teaching, but never attempted to refute it.

This theory is contrary to the conversion of James and especially Saul. How could such a severe critic as Saul of Tarsus (cf. Acts 8–9) be so duped?

Certainly, this theory does not explain the resurrection appearances. Why did Jesus keep appearing to all these people in the same nail-scared body in which he was placed in the tomb? It is also contrary to the conversions of people from the opposition to Jesus' side. It assumes Paul was duped when he was deep in the Jewish anti-Christian camp yet unaware the body was available. And he was duped into believing in the resurrection.

The stolen body hypothesis is a fallacious argument from innocence. There is not a shred of evidence to support it.

The Tomb Was Never Visited. One theory is that in the two months after Jesus' death he appeared in some spiritual form to some of the disciples, and they preached the resurrection based on this. But no one ever checked the tomb to see if Jesus' dead body actually was there. Why should they, if they had already seen him alive?

If we can believe nothing else from the earliest record in the Gospels, we can hardly avoid the point that Jesus' tomb was a busy place on that early morning. If the issue just never came up, it certainly burned the minds of the writers of the Gospels. A harmonization of the order of events is found in the article RESURRECTION, OBJECTIONS TO . The women who came to finish burial procedures (Mark 15:1) saw the stone rolled away and the empty tomb. John reached the grave site and saw the burial clothes, followed by Peter who entered the tomb and saw the grave clothes and a headcloth (a strip wrapped around the head to keep the jaw closed) lying separately (John 20:3–8). While Paul does not mention the empty tomb explicitly, he implies it when speaking of Jesus' burial as a precondition of his resurrection (1 Cor. 15:4).

The guards were sure to have made a thorough search of the tomb before they reported to the Jewish leaders that his body had vanished (Matt. 28:11–15). Their lives were forfeited if they had been derelict in their duty. These guards would not have had to agree to the cover story that the disciples had stolen the body if they could have offered some reasonable alternative explanation. But the story of the guards does not explain the resurrection appearances, the transformation of the disciples, or the mass conversions of people only weeks later in the very city where it had happened.

The Women Went to the Wrong Tomb. Some suggest that the women went to the wrong tomb in the darkness, saw it empty and thought he had risen. This story was then spread by them through the ranks of the disciples and led to their belief in the resurrections of Christ. There are serious problems with such a simplistic story. If it was so dark, why did Mary Magdalene assume the gardener was working (John 20:15)? Why did Peter and John make the same mistake as the women when they arrived later, in daylight (John 20:4–6)? It was light enough to see the grave clothes and the rolled-up headcloth in a dim, cave-like tomb (vs. 7).

If the disciples went to the wrong tomb, the authorities had only to go to the right one and show them the body. That would have easily disproved all claims to a resurrection.

And, as with other naturalistic theories (*see* NATURALISM), this offers no explanation for the reports that Jesus appeared.

The Disciples Stole the Body. The guards spread the story that the disciples had stolen the body in the night and took it to an unknown location. This is still a popular claim, particularly in Jewish circles. It explains the story of an empty tomb and the inability of anyone to disprove the claim that Jesus rose from the dead.

Grave robbery is not in keeping with what we know of the moral character of the disciples. They were honest men. They taught and lived according to the highest moral principles of honesty and integrity. Peter specifically denied that the apostles followed cleverly devised tales (2 Peter 1:16). Furthermore, the disciples do not come off as particularly subtle or clever. If they were trying to make Christ's predictions come true, up until this time they had not understood how the prophecies fit Jesus. They had not even understood that he was going to die, let alone that he was to be raised (John 13:36).

At the grave scene we find these conspirators confused and bewildered, just as we would suspect if they had not a clue what was happening. They did not know what to think when they first saw the empty tomb (John 20:9). They scattered and hid in fear of being caught (Mark 14:50).

Perhaps the most serious objection is that the hoax was so totally successful. For that to happen the apostles had to persist in this conspiracy to the death and to die for what they knew to be false. People will sometimes die for what they believe to be true, but they have little motivation to die for what they know to be a lie. It seems unbelievable that no disciple ever recanted belief in the resurrection of Christ, in spite of suffering and persecution (cf. 2 Cor. 11:22–33 ; Heb. 11:32–40). Not only did they die for this "lie," but the apostles placed belief in the resurrection at the center of their faith (Rom. 10:9 ; 1 Cor. 15:1–5 , 12–19). Indeed, it was the theme of the earliest preaching by the apostles (Acts 2:30–31 ; 3:15 ; and 4:10 , 33).

It is contrary to the conversions of James and Paul (John 7:5 ; Acts 9 , and 1 Cor. 15:7). These skeptics would certainly have learned of the plot eventually, and they would never have remained in the faith on such a basis.

Finally, if the body was stolen and still dead, then why did it keep appearing alive, both to disciples and to others who were not disciples? Jesus appeared bodily to Mary, to James (Jesus' unbelieving brother), and later to Paul, the greatest Jewish opponent of early Christianity.

Joseph of Arimathea Took the Body. A similar notion is that Joseph of Arimathea stole the body of Jesus. He was a secret believer in Jesus, and Jesus was buried in Joseph's tomb. The problems of this theory boil down to "Why?" "When?" and "Where?"

Why would he take the body? Joseph really had no reason. It could not be to prevent the disciples from stealing it, since he was a disciple (Luke 23:50–51). If he had not been a follower of Christ, he could have produced the body and squelched the whole story.

When could he (or the disciples for that matter) have taken it? Joseph was a devout Jew who would not have broken the Sabbath (see Luke 23:50–56). At night, the torches he carried would

have been seen. A Roman guard was posted in front of the tomb (Matt. 27:62–66). The following morning the women came by dawn (Luke 24:1). There was simply no opportunity.

If Joseph took it, where did he put it? The body was never found, even though almost two months elapsed before the disciples began preaching. This was plenty of time to expose a fraud. There is no motive, opportunity, or method to support this theory, and it gives no explanation of the appearances of Christ in his resurrected body.

And again, there is no good explanation, other than a supernatural resurrection, for eleven appearances over the subsequent forty days to more than 500 people (*see* RESURRECTION, EVIDENCE FOR). They saw him, handled him, ate with him, talked with him, and were completely transformed overnight from scared, scattered, skeptics to the world's greatest missionary society. Much of it happened in the same city in which Jesus was crucified.

Appearances Were Mistaken Identity. One naturalistic theory made more visible by Schonfield's *The Passover Plot* is that the post-death appearances that were the heart of the disciples' belief in the resurrection were all cases of mistaken identity. This is allegedly reinforced by the fact that the disciples themselves even believed at first that the person appearing was not Jesus. Mary thought she saw a gardener (John 20). The two disciples thought it was a stranger traveling in Jerusalem (Luke 24), and later they supposed they saw a spirit (Luke 24:38–39). Mark even admits the appearance was in "a different form" (Mark 16:12). According to Schonfield, the disciples mistook Jesus for different people at different times (Schonfield, 170–73).

This theory is beset with many difficulties. First, on none of these occasions mentioned did the disciples go away with any doubt in their minds that it was really the same Jesus they had known intimately for years who was appearing to them in physical form Their doubts were only initial and momentary. By the time the appearance was over, Jesus had convinced them by his scars, his ability to eat food, by their touching him, by his teaching, by his voice, and/or by miracles that he was the same person with whom they had spent over three years (*see* RESURRECTION, EVIDENCE FOR). Schonfield neglects all this evidence and takes their initial doubt, which is a sign of the authenticity of the account, totally out of context.

Second, the mistaken identity hypothesis does not account for the permanently empty tomb. If the disciples were seeing different persons, the Jews or Romans could have gone to Jesus' tomb and produced the body to refute their claim. But there is no evidence that they did, even though they had every reason to want to do so. The fact is that no one ever found the body. Instead, the disciples were absolutely convinced they were encountering the same Jesus in his same resurrected physical body whom they had known so closely all those years.

Third, this speculation does not account for the transformation of the disciples. Mistaken identity and a dead body rotting in some grave does not explain why the scared, scattered, and skeptical disciples were transformed into the world's greatest missionary society overnight by their mistaken encounter with several mortal beings.

Fourth, it is highly unlikely that many people could be fooled on that many occasions. After all, Jesus appeared to over five hundred people on eleven different occasions over a forty-day period. It is less miraculous to hold in the supernatural resurrection of Christ than to believe that all of these people on all of these occasions who totally deceived and yet so totally transformed. It is easier to believe in the resurrection.

Finally, it is contrary to the conversion of skeptics as James and Saul of Tarsus. How could such critics be so duped?

God Destroyed (Transformed) the Body. All of the above theories are purely naturalistic. Another group contends that some kind of miracle occurred, but it was not the miracle of a physical resurrection of the body of Jesus after he had died. Rather, this alternative to the physical resurrection contends that God destroyed (transformed) the body of Jesus so that it mysteriously and immediately disappeared from view (see Harris). The later appearances of Christ were, according to some, theophany-like appearances, and according to others, they were appearances wherein Jesus assumed bodily form(s) in which the scars he showed were replicas to convince others of his reality but not of his materiality. This view is far more sophisticated and less naturalistic. It does not fall into the typical naturalistic or liberal camp. Rather, it is more in line with the neo-orthodox error on the resurrection. Many cults, such as the Jehovah's Witnesses, hold a form of this view. But like the naturalistic views, these views too are subject to fatal flaws.

To explain away the one simple miracle of Jesus being raised immortal in the same physical body in which he died, those who seek a spiritual-body explanation posit that at least two miracles happened. First God immediately and mysteriously destroyed or transformed the physical body into a nonphysical body. Some say it was turned into gases which leaked out of the tomb (*see* BOYCE), others that it was vaporized or transmuted. God also had to miraculously enable the non-physical Jesus to assume physical form(s) on different occasions by which he could convince the apostles that he was alive.

This hypothesis uses two miracles to explain away one and in the process makes Jesus into a deceiver. For he told his disciples both before and after his resurrection that he would be raised in the same body. He even left the empty tomb and grave clothes as evidence, yet he was not raised immortal in the body that died. Speaking of his resurrection, Jesus answered them, "Destroy this temple [physical body], and I will raise *it* [the same physical body] again in three days" (John 2:19 , emphasis added). This was a lie unless Jesus was raised in the numerically same physical body in which he died. Furthermore, after his resurrection Jesus presented his crucifixion wounds to his disciples as evidence that he had indeed risen in the same body in which he was crucified (cf. John 20:27). "While they were still talking about this, Jesus himself stood among them and said to them, 'Why are you troubled, and why do doubts rise in your minds? Look at my hands and my feet. It is I myself! Touch me and see; a ghost does not have flesh and bones, as you see I have' " (Luke 24:36–39). It would have been nothing short of deceptions to offer his crucifixion wounds as evidence that he had really risen unless it was in the same body that had been crucified. The whole point of the empty grave clothes (John 20:6–7 ; cf. Mark 16:5) was to show that the body that died was the one that had risen (cf. John 20:8). If Jesus had risen in a spiritual form there is no reason the physical body could not remain in the

tomb. After all God is capable of convincing people of his presence and reality without a bodily form. he can do it with a voice from heaven and other miracles, as he did on other occasions (cf. Gen. 22:1 , 11 ; Exod. 3:2 ; Matt. 3:17).

This view would make the apostles' testimony to the resurrection false, since they affirmed that Jesus was raised from the dead in the same physical body in which he died. Speaking of the *resurrection* , Peter said: "he [David] foreseeing this, spoke concerning the resurrection of the Christ, that his soul was not left in hades, nor did his flesh see corruption. This Jesus God has raised up, of which we are all witnesses" (Acts 2:31–32). If this is true, then Jesus body was not destroyed; his same body of "flesh" (*sarx*) was raised up. It was "this Jesus," the same one who was "crucified" (vs. 23), "dead and buried" (vs. 29). The apostle John shows the continuity between the preresurrection body of flesh and the one in which Jesus was raised and still has at the right hand of the Father. John wrote, "That which was from the beginning, which we have heard, which we have seen with our eyes, which we have looked at and our hands have touched — this we proclaim concerning the Word of life" (1 John 1:1). John said that "every spirit that acknowledges that Jesus Christ has come [and now remains] in the flesh is from God" (1 John 4:2). The use of the perfect participal (past action with continuing results in the present), along with the present tense (2 John 7) in a parallel passages emphasizes that Jesus was still (now in heaven) in the same flesh in which he came into this world. Thus, to deny that Jesus was raised in the same physical body in which he died makes Jesus a deceiver and his disciples false teachers.

Such a conception is strongly contrary to Jewish and biblical understanding of the resurrection, whereby the body that died is the one that comes out of the grave in the flesh. Job said, "I know that my Redeemer lives, and that in the end he will stand upon the earth. And after my skin has been destroyed, yet in my flesh I will see God" (Job 19:25–26). Daniel spoke of a physical resurrection from the grave, saying, "Multitudes who sleep in the dust of the earth will awake: some to everlasting life, others to shame and everlasting contempt" (Dan. 12:2). Jesus affirmed that what is resurrected is the physical bodies that come out from the grave: "a time is coming when all who are *in their graves will* hear his voice and *come out*— those who have done good will rise to live, and those who have done evil will rise to be condemned" (John 5:28–29). Paul held out to bereaved believers the expectation of seeing their loved ones in their resurrection bodies (1 Thess. 4:13–18), noting that we will have bodies like Christ's (Phil. 3:21).

Conclusion. There are various attempts to explain away the physical resurrection of Christ. Besides the overwhelming evidence for the physical resurrection of Christ in the same body in which he lived and died (*see* RESURRECTION, EVIDENCE FOR), there is no basis in fact for any of these theories. None of them explain the data. Most are purely naturalistic, which is contrary to the fact that God exists (*see* COSMOLOGICAL ARGUMENT ; MORAL ARGUMENT FOR GOD ; TELEOLOGICAL ARGUMENT) and that he can do and has done miracles (*see* MIRACLE ; MIRACLES, ARGUMENTS AGAINST). Others allow some kind of mysterious divine intervention to produce an empty tomb, but at the same time unnecessarily demean both the biblical data and the character of Christ (*see* CHRIST, UNIQUENESS OF).

Resurrection of Christ.

Order of Events. *Background.* Critics often object that the Gospel record, especially that of the resurrection, is not credible because of the contradictions in the accounts. For example, the order of events appears to be different in the various accounts. For example, the Gospels list Mary as the first person who saw Jesus after his resurrection whereas 1 Corinthians 15:5 lists Peter as first. Likewise Matthew 28:2 lists Mary Magdalene and the other Mary as the first at the tomb whereas John 20:1 names only Mary Magdalene as being there.

Nonetheless, despite these differences, closer scrutiny of the resurrection accounts reveals a hidden harmony. Indeed, it demonstrates the kinds of unity in differences one would expect from independent, reliable witnesses who were not in collusion. Hence, the contention that the Gospels contradict each other fails for many reasons.

The Harmony of the Resurrection Accounts. There is a discernible overall order of postresurrection events in the New Testament accounts. All the other events can be fit into this overall list as follows.

	Matt	**Mark**†	**Luke**	**John**	**Acts**	**1 Cor.**
1. Mary Magdalene		×		×		
2. Mary &	×	×				

† These verses in Mark are not in some of the earliest mss. of the NT

Women						
3. Peter				×		×
4. Two Disciples		×		×		
5. Ten Apostles			×	×		
6. Eleven Apostles				×		
7. Seven Apostles				×		
8. All Apostles (Gt. Commission)	×	×				×
9. 500 Brethren						×
10. James						×
11. All Apostles (Ascension)	×					
12. Paul					×	×

Peter saw the empty tomb, not Christ

Other scholars (cf. Wenham, 139) reverse numbers 3 and 4 (but see Luke 24:34) and some combine 8 and 9. But this is of no consequence in reconciling all the data. There is no demonstrable contradiction either way.

Once several factors are noted, there is no major problem in fitting the various appearances together.

First, because Paul is defending the resurrection, he provides an official list that includes only men (women at that time were not allowed to give testimony in court).

Second, it is understandable that Christ's appearance to Paul would not be listed in the Gospels, since their narration ends by the time of Christ's ascension and Paul saw Christ many years later (Acts 9:3f .; 1 Cor. 15:7).

Third, since Paul's point is to provide proof of the resurrection it was fitting that he singled out the appearance to the five hundred witnesses, most of whom were still alive when he wrote (ca. A.D . 55).

Fourth, the rest of the appearances, such as those to James (1 Cor. 15:7) and the two disciples on the road to Emmaus (Luke 24:13f .) fit in as supplementary information that does not contradict the other appearances.

Fifth, even the difficulty in discerning the exact order of events of the first appearances to the women is not insurmountable. The following order of events appears to account for all the data consistently:

1. "Mary Magdalene" visited Jesus' tomb early Sunday morning "while it was still dark" (John 20:1). (It is possible that someone else was with her, since she refers to "we" [John 20:2].)

2. Seeing that the stone had been rolled away (John 20:1), she ran back to Peter and John in Jerusalem and said, "We do not know where they have laid him" (v. 2).

3. Peter and John ran to the tomb and saw the empty graveclothes (John 20:3–9) and then "the disciples" (Peter and John) "returned to their homes" (v. 11).

4. Mary Magdalene had followed Peter and John to the tomb. After Peter and John left, Mary Magdalene, lingering at the tomb, saw two angels "where the body of Jesus had lain" (John 20:12). Then Jesus appeared to her (Mark 16:9) and told her to return to the disciples (John 20:14–17).

5. As Mary Magdalene was leaving, the "other women" arrived at the tomb with spices to anoint the body of Jesus (Mark 16:1). By this time, it "began to dawn" (Matt. 28:1). The group including the "other Mary" (Matt. 28:1), the mother of James (Luke 24:10), Salome (Mark 16:1), and Johanna (Luke 24:1 , 10) also saw that the stone had been rolled away (Matt. 28:2 ; Mark 16:4 ; Luke 24:2 ; John 20:1). Entering the tomb, they saw "two men" (Luke 24:4), one of whom spoke to them (Mark 16:5) and told them to return to Galilee, where they would see Jesus (Matt. 28:5–7 ; Mark 16:5–7). These two young "men" were actually angels (John 20:12).

6. As Mary Magdalene and the women left to go tell the disciples, Jesus appeared to them and told them to go to Galilee to his "brethren" (Matt. 28:9–10). Meanwhile, the "eleven disciples went to Galilee, to the mountain which Jesus had appointed for them" (Matt. 28:16 ; Mark 16:7).

7. Mary Magdalene with the "other women" (Luke 24:10) returned that evening to the eleven (Luke 24:9) and "all the rest" (v. 11) now reassembled in Galilee behind closed doors "for fear of the Jews" (John 20:19). Mary Magdalene told them she had seen the Lord (v. 18). But the disciples did not believe her (Mark 16:11). Neither did they believe the story of the other women (Luke 24:11).

8. Upon hearing this news, Peter got up and ran again to the tomb. Seeing the empty graveclothes (Luke 24:12), he marveled. There are noticeable differences between this visit and his first one. Here Peter is alone, whereas John was with him the first time (

John 20:3–8). Here, Peter is definitely impressed; the first time, only John “saw and believed” (John 20:8).

Conflict in Independent Testimony. The fact that various accounts do not fit together with perfect ease is to be expected of independent authentic testimony. Indeed, were the accounts perfectly harmonious on the surface, we would have to suspect collusion. But the fact that the many events and general order are clear is exactly what we should expect of a credible account (verified by great legal minds who have scrutinized the Gospel accounts and pronounced them so). Simon Greenleaf , the famous Harvard lawyer who wrote a textbook on legal evidence, was converted to Christianity based on his careful examination of the Gospel witnesses from a legal perspective. He concluded that “Copies which had been as universally received and acted upon as the Four Gospels, would have been received in evidence in any court of justice, without the slightest hesitation” (Greenleaf, 9–10).

Positive Evidence for Authenticity. There is overwhelming positive evidence that the Gospel records are authentic. There are a greater number of manuscripts for the New Testament than for any other book from the ancient world (*see* NEW TESTAMENT MANUSCRIPTS). Indeed, even taking the criteria for credibility of the great skeptic, David Hume, the New Testament passes with flying colors (*see* NEW TESTAMENT WITNESSES, TESTS FOR CREDIBILITY OF). There is no reason, then, to reject the authenticity of the New Testament accounts based on their alleged disorder. Given the fact that there are five major accounts of Jesus’ postresurrection appearances (Matt. 28 ; Mark 16 ; Luke 24 ; John 20–21 ; Acts 9 ; 1 Cor. 15) filled with eyewitness accounts, there is no reasonable doubt about the reality of his resurrection.

Resurrection Claims in Non-Christian Religions. Some critics of Christ’s resurrection point to claims that many non-Christian leaders also rose from the dead. If true, the resurrection of Jesus would not be a unique confirmation of his claim to deity (*see* CHRIST, DEITY OF). In particular, Robert Price claims that the many post-death phenomena found in other religions rival Christian claims about Christ (Price, 2–3, 14–25). If so, then the resurrection of Christ cannot be used to support the truth of Christianity over other religions (*see* PLURALISM, RELIGIOUS ; WORLD RELIGIONS AND CHRISTIANITY).

Apollonius of Tyana. Apollonius of Tyana (d. A.D . 98) is said to rival Christ's claim to be the son of God, and his biographer Philostratus is supposed to have reported post-death appearances. Actually, stories about Apollonius fit more under the apotheosis category than as resurrection accounts. In an apotheosis legend, a human is deified.

These claims are questionable (see Habermas, "Resurrection Claims"). The biography ends with the death of Apollonius. There is nothing about any resurrection. The after-death record comes from what Philostratus called "stories." They are later legends that were appended to the biography after it was written. The biography is the primary source for his life, along with one other minor one. There is no other confirmation.

The source for Philostratus's stories is said to be "Damis," which many scholars think was a nonexistent person used as a literary device. There is no other evidence. Damis's credibility is not helped by the fact that his birth place is given as Nineveh, a city that had not existed for 300 years. The writing style also was a popular literary form of the day called "romance" or "romance fiction." It is not to be taken literally or historically. The plot unfolds through contrived situations, it involves exotic animals and formal descriptions of works of art; it has lengthy speeches, and it has frequent historical inaccuracies. More about these is given in the article Apollonius of Tyana.

It is also notable that Philostratus was commissioned to compose this biography by Julia Domna, the wife of the emperor Septimus, 120 years after Apollonius's death. Since the author's patroness was to become a high priestess of Hellenistic polytheism, there may have been an anti-Christian polemic agenda in adding a resurrection-like ending. Those writing about Jesus clearly had a very different set of motives. They wanted to show that he was the long-awaited Messiah, the Savior of the world (John 20:31).

The one reported "resurrection" appearance that Philostratus adds in the appendix was a vision to a sleeping man in the year 273, nearly two centuries after his death. The story also was given that Apollonius might not have actually died, but instead been deified. This is in the context of Greek polytheism. Greeks and Romans did not believe in a resurrection in the same physical body. They followed a reincarnation model. The philosophers mocked the apostle Paul when he proclaimed a bodily resurrection on Mar's Hill (Acts 17:19 , 32). For the Greeks who believed in immortality, salvation involved deliverance from their body, not resurrection in their body.

Sabbatai Sevi. Sabbatai Sevi was a seventeenth-century Jewish teacher who claimed to be the Messiah and was heralded by a contemporary named Nathan. It was reported many years later that, after Sevi's death in 1676, his brother found his tomb empty but full of light (see Scholem).

Actually, there were two conjectures about Sevi. Many of his followers refused to believe he had really died, so they refused to believe he had risen from the dead. Whatever happened to him, no one ever reported seeing him again. His disappearance, like that of Apollonius, has characteristics of an apotheosis legend. Such legends lack historical support. The story of Sabbatai Sevi itself lacks any kind of evidence. If the story of Jesus grew from such fragmentary

reports it would be rejected by any credible scholar. The role of Nathan is conflicting. One letter reported that Nathan taught that Sevi had never died. Another source reported that Nathan had died one month before Sevi, and that they had never actually met one another (Habermas, “Resurrection Claims,” 175).

Rabbi Judah. Rabbi Judah was a major figure in Judaism and was involved in the completion of the *Mishnah* in about 200. According to the *Talmud* , after Rabbi Judah died, “he used to come home again at twilight every Sabbath Eve.” Allegedly, when a neighbor approached the rabbi’s door to greet him they were turned away by his maid. When the rabbi heard of this he stopped coming, so as not to upstage other good persons who returned to their homes after their deaths (*Talmud* , 3.12.103a).

While the rabbi died in 220, the first reference to his appearances came in the fifth century (“Resurrection Claims,” 173). This gap is too large to support credibility. No reputable scholar would accept the claims about Jesus if they came from one witness two centuries after he died. In addition, the testimony is too scant. There is only one witness to the event—the maid. Nor is there any attempt to provide substantiation. The only possible confirmatory testimony was the neighbor, who was turned away.

The immediate cessation of the appearances after others inquired about him casts suspicion on whether he had appeared at all. The reason given for his failure to return seems disingenuous. No evidence of an empty tomb or a physical appearance were ever presented. At best there seemed to be only one person with a vested interest who had some kind of subjective experienced regarding a person she no doubt missed very much. If it happened at all, this event seems more a candidate for a psychological than a supernatural explanation.

Kabir. Kabir was a fifteenth-century religious leader who combined facets of the Muslim and Hindu religions. After his death in 1518, his followers were divided over whether to cremate his body, which Hindus favor but Muslims oppose. Kabir himself is said to have appeared to stop the controversy. When he directed them to draw back the cloth placed over his body, they found only flowers underneath. His Hindu followers burned half of the flowers, and the Muslims buried the other half.

Little or nothing is extant from contemporaries of Kabir. Some of his teachings may have been written down about fifty years after his death, but these contain nothing about a resurrection (Archer, 50–53).

There is evidence of a growing set of legends that grew up among his followers. These include a miraculous birth, miracles performed during his life, and appearances to his disciples after his death. As Habermas notes, “It was found that this is a very natural and expected process in the formation of Indian legend” (“Resurrection Claims,” 174).

Since resurrection of the same physical body is contrary to Hindu belief in soul transmigration to another body, it is unlikely that his Hindu followers, dedicated as they were to Hindu practices, would have come to believe that their leader was raised bodily from the dead.

The scant evidence suggests a contrived plan to pacify both sets of followers and keep the movement together. It looks like a clever plot to satisfy both religious burial practices without offending either.

Conclusion. There is no real comparison between these stories and the accounts of Christ's resurrection. The non-Christian resurrections set the Bible's quality of truth in sharp relief. Consider the significant differences in most, if not all, cases:

Christ's Resurrection	**Non-Christian Resurrections**
numerous credible witnesses	no credible eyewitnesses
numerous contemporary records	no contemporary records
abundant physical evidence	no physical evidence given
claims to deity made	some claims to deification only
other confirming miracles	no corroborating miracles

"Non-Christian resurrection claims have not been proven by evidence," notes Habermas. "Any of several naturalistic hypotheses is certainly possible and, in some cases, one or more can specifically be postulated as a probable cause. . . . Simply to report a miracle is not sufficient to establish it, especially if that miracle is going to be used to support a religious system" (ibid., 177).

Resurrection, Evidence for. The bodily resurrection of Christ is the crowning proof that Jesus was who he claimed to be, God manifested in human flesh (*see* CHRIST, DEITY OF). Indeed, the resurrection of Christ in flesh is of such importance to the Christian faith that the New Testament insists that no one can be saved without it (Rom. 10:9 ; 1 Cor. 15:1–7).

Direct Evidence. Some have opted for a spiritual or immaterial resurrection body (*see* RESURRECTION, PHYSICAL NATURE OF), but the New Testament is emphatic that Jesus rose in the same physical body of flesh and bones in which he died. The evidence for this consists in the New Testament testimony of numerous appearances of Christ to his disciples for a period of forty days, in the same physical, nail-scarred body in which he died, now immortal.

Of course, the evidence for the resurrection of Christ depends on the fact of his death. For arguments that Jesus actually died physically on the cross, see the article CHRIST, DEATH OF ; SWOON THEORY . It remains here only to show that the same body that permanently vacated his tomb was seen alive after that time. The evidence for this is found in his twelve appearances, the first eleven of which cover the immediate forty days after his crucifixion (*see* RESURRECTION, EVIDENCE FOR).

Appearances. To Mary Magdalene (John 20:10–18). It is an unmistakable sign of the authenticity of the record that, in a male dominated culture, Jesus first appeared to a woman. In the first-century Jewish culture, a writer inventing a resurrection account would never have taken this approach. A woman's testimony was not even accepted in court. Anyone faking the record would have Jesus appear first to one or more of his twelve disciples, probably a prominent one such as Peter. Instead, Jesus' first postresurrection appearance was to Mary Magdalene. During this appearance there were unmistakable proofs of the visibility, materiality, and identity of the resurrection body.

She *saw* Christ with her natural eyes. The text says, "she turned around and saw Jesus standing there" (vs. 14). The word "saw" (*theoreo*) is a normal word for seeing with the naked eye. It is used elsewhere in the New Testament for seeing human beings in their physical bodies (Mark 3:11 ; 5:15 ; Acts 3:16) and even for seeing Jesus in his preresurrection body (Matt. 27:55 ; John 6:19).

Mary *heard* Jesus. "Woman, why are you crying? Who is it you are looking for?" (vs. 15). Then again, she heard Jesus say "Mary" and she recognized his voice (vs. 16). Of course, hearing alone is not a sufficient evidence of materiality. God is immaterial, and yet his voice was heard in John 12:28 . Nevertheless, physical hearing connected with physical seeing *is* significant supportive evidence of the material nature of what was seen and heard. Mary's familiarity with Jesus' voice is evidence of the identity of the resurrected Christ.

Mary *touched* Christ's resurrection body. Jesus replied, "Do not hold on to me, for I have not yet returned to the Father" (vs. 17). The word "hold" (*aptomai*) is a normal word for physical touching of a material body. It too is used of physical touching of other human bodies (Matt. 8:3 ; 9:29) and of Christ's pre-resurrection body (Mark 6:56 ; Luke 6:19). The context indicates that Mary was grasping on to him so as not to lose him again. In a parallel experience the women "clasped his feet" (Matt. 28:9).

Mary “went to the tomb and saw that the stone had been removed from the entrance.” So she ran to Peter and announced that the body was gone (vs. 2).

The parallel account in Matthew informs us that the angels said to her, “Come and see the place where he lay” (Matt. 28:6). Both texts imply that she saw that the tomb was empty. Later, Peter and John also went into the tomb. John “bent over and looked in at the strips of linen lying there” and Peter “went into the tomb. He saw the strips of linen lying there, as well as the *burial cloth* that had been around Jesus’ head” (vss. 5–7). But seeing the same physical body that once laid there is proof of the numerical identity of the pre- and postresurrection body.

In this one account Jesus was seen, heard, and touched. In addition, Mary witnessed both the empty tomb and Jesus’ grave clothes. All the evidence for an unmistakable identity of the same visible, physical body that was raised immortal are present in this first appearance.

To the Women (Matt. 28:1–10). Jesus not only appeared to Mary Magdalene but also to the other women with her (Matt. 28:1–10), including Mary the mother of James and Salome (Mark 16:1). During this appearance there were four evidences presented that Jesus rose in the same tangible, physical body in which he was crucified.

First, the women *saw* Jesus. They were told by the angel at the empty tomb, “He has risen from the dead and is going ahead of you into Galilee. There you will see him.” And as they hurried away from the tomb, “suddenly Jesus met them. ‘Greetings,’ he said” (vs. 9). So they received visual confirmation of his physical resurrection.

Second, the women *clasped his feet* and worshiped him. That is, they not only saw his physical body but they felt it as well. Since spiritual entities cannot be sensed with any of the five senses, the fact that the women actually handled Jesus’ physical body is a convincing proof of the tangible, physical nature of the resurrection body.

Third, the women also *heard* Jesus speak. After giving greetings (vs. 9), Jesus said to them, “Do not be afraid. Go and tell my brothers to go to Galilee; there they will see me” (vs. 10). Thus the women saw, touched, and heard Jesus with their physical senses, a three-fold confirmation of the physical nature of his body.

Fourth, the women *saw the empty tomb* where that body had lain. The angel said to them at the tomb, “He is not here; he has risen, just as he said. Come and see the place where he lay” (vs. 6). The “he” who had been dead is now alive, demonstrated by the fact that the same body that once lay there is now alive forevermore. So in both the case of Mary Magdalene and the other women, all four evidences of the visible, physical resurrection of the numerically identical body were present. They saw the empty tomb where his physical body once lay and they saw, heard and touched that same body after it came out of the tomb.

To Peter (1 Cor. 15:5 ; cf. John 20:3–9). First Corinthians 15:5 declares that Jesus “was seen of Cephas (Peter).” There is no narration of this event, but the text says he was *seen* (Gk. *ōphthē*) and implies that he was *heard* as well. Certainly Peter was not speechless. Jesus definitely spoke with Peter in a later appearance when he asked Peter to feed his sheep (John

21:15 , 16 , 17). Mark confirms that Peter (and the disciples) would " *see* him, just as he told you" (Mark 16:7). Peter, of course saw the *empty tomb* and the *grave clothes* just before this appearance (John 20:6–7). So Peter experienced at least three evidences of the physical resurrection; he saw and heard Jesus, and he observed the empty tomb and grave clothes. These are definite pieces of evidence that the body that rose is the same, visible, tangible, material body he had before the resurrection.

On the Emmaus Road (Mark 16:12 ; Luke 24:13–35). During this appearance three evidences of the physical resurrection were presented. They not only saw and heard Jesus but they also ate with Jesus. Combined they provide clear proof of the tangible, physical nature of the resurrection body.

There were two disciples, one of which was named Cleopas (vs. 18). As they were walking toward Emmaus, "Jesus himself came up and walked along with them" (vs. 16). At first they did not recognize who he was; they nevertheless clearly *saw* him. When they finally realized who it was, the text says "he disappeared out of their *sight* " (vs. 31). Jesus' resurrection body was as visible as any other material object.

They *heard* Jesus with their physical ears (vss. 17 , 19 , 25–26). In fact, Jesus carried on a lengthy conversation with them. For "beginning at Moses and all the Prophets, he explained to them what was said in all the Scriptures concerning himself" (vs. 27). Of course, they were not the only ones Jesus taught after the resurrection. Luke informs us elsewhere that "he appeared to them [the apostles] over a period of forty days and spoke about the kingdom of God" (Acts 1:3). During these times he "gave many convincing proofs that he was alive" (vs. 3).

They *ate* with him. Luke says, "when he was at the table with them, he took bread, gave thanks, broke it and began to give it to them" (vs. 30).

Although the text does not say specifically that Jesus also ate, it is implied by being "at table with them." And later in the chapter it is explicitly stated that he ate with the ten apostles (vs. 43). In two other places Luke states that Jesus did eat with the disciples (Acts 1:4 ; 10:41). So on this appearance of Christ the eyewitnesses saw him, heard him, and ate with him over a considerable period of time one evening. It is difficult to image how Jesus could have done any thing more to demonstrate the physical nature of the resurrection body.

To the Ten (Luke 24:36–49 ; John 20:19–23). When Jesus appeared to ten disciples, Thomas being absent, he was seen, heard, touched, and they saw him eat fish. Thus four major evidences of the visible, physical nature of the resurrection body were present on this occasion.

"While they were still talking about this, Jesus himself stood among them and said to them, 'Peace be with you.' " In fact, Jesus carried on a conversation with them also about how "everything must be fulfilled that is written about me in the Law of Moses, the Prophets and the Psalms" (vs. 44). So Jesus was obviously *heard* by the disciples.

The disciples also *saw* Jesus on this occasion. In fact, they thought at first that he was a "spirit" (vs. 37). But Jesus " *showed* them his hands and his feet." So they clearly saw him as

well as heard him. In the parallel account, John records that "the disciples were overjoyed when they *saw* the Lord" (John 20:20 ; cf. vs. 25).

It may be inferred from the fact that they were at first unconvinced of his tangible materiality when Jesus presented his wounds to them that they *touched* him as well. In fact, Jesus clearly said to them, "Touch me and see; a ghost does not have flesh and bones, as you see I have" (vs. 39). Jesus' use of "I" and "me" in connection with his physical resurrection body expresses his claim that he is numerically identical with his preresurrection body. Jesus also *"showed them his hands and feet* , *"* confirming to his disciples that his resurrection body was the very same nail-scared body of flesh and bones that was crucified.

On this occasion Jesus *ate* physical food to convince the disciples that he was resurrected in a literal, physical body. "They gave him a piece of broiled fish, and he took it and ate it in their presence" (vs. 43). What makes this passage such a powerful proof is that Jesus offered his ability to eat physical food as a proof of the material nature of his body of flesh and bones. Jesus literally exhausted the ways in which he could prove the corporeal, material nature of his resurrection body. Thus, if Jesus' resurrection body was not the same material body of flesh and bones in which he died, he was being deceptive.

To the Eleven (John 20:24–31). Thomas was not present when Jesus appeared to his disciples (John 20:24). Even after his fellow apostles reported who they had seen, Jesus, Thomas refused to believe unless he could see and touch Christ for himself. A week later his wish was granted: "A week later his disciples were in the house again, and Thomas was with them. Though the doors were locked, Jesus came and stood among them and said, 'Peace be with you!' " (John 20:26). When Jesus appeared to Thomas he saw, heard, and touched the resurrected Lord.

Thomas *saw* the Lord. Jesus was clearly visible to Thomas who later said to him, "you have *seen* me" (vs. 29).

Thomas also *heard* the Lord say, "Put your finger here; see my hands. Reach out your hand and put it into my side. Stop doubting and believe" (vs. 27). To this unquestionably convincing display of physical evidence Thomas replied, "My Lord and my God!" (vs. 28).

It can be inferred that Thomas also *touched* the Lord. Certainly this is what Thomas said he wanted to do (vs. 25). And Jesus told him to (vs. 27). Although the text only says Thomas saw and believed (vs. 29), it is natural to infer that he also touched Jesus. Jesus was touched on at least two other occasions (John 20:9 , 17). So it may very well be that Thomas also touched him on this occasion also. At any rate, Thomas certainly encountered a visible, physical resurrection body with his natural senses. Whether Thomas touched Christ, he certainly *saw his crucifixion wounds* (John 20:27–29). The fact that Jesus still had these physical wounds from his crucifixion is an unmistakable proof that he was resurrected in the material body in which he was crucified. This was the second time that Jesus exhibited his wounds. It is difficult to imagine that he could have offered greater proof that the resurrection body is the same body of flesh that was crucified and now glorified.

To the Seven Disciples (John 21). John records Jesus' appearance to the seven disciples who went fishing in Galilee. During this appearance the disciples saw Jesus, heard him, and ate breakfast with him.

The Bible says that "Jesus *appeared* again to his disciples, by the Sea of Tiberias" (John 21:1). Early in the morning they saw him standing on the shore (vs. 4). After he talked and ate with them, the text says, "this is now the third time Jesus appeared to his disciples after he was raised from the dead" (vs. 14).

The disciples also *heard* Jesus speak (vss. 5 , 6 , 10 , 12). Jesus carried on an extended conversation with Peter in which he was asked three times whether he loved Jesus (vss. 15 , 16 , 17). Since Peter had denied Jesus three times, not only did Peter hear Jesus speak but Jesus' words no doubt rang in his ears. Jesus also told Peter how he would die (vss. 18 , 19).

Jesus apparently also *ate* with the disciples during this appearance. He asked them, "Friends, haven't you any fish?" (vs. 5). After telling them where to catch some (vs. 6), Jesus told them to "Bring some of the fish you have just caught" (vs. 10). Then he said to the disciples, "Come and have breakfast" (vs. 12). As they did, "Jesus came, took the bread and gave it to them, and did the same with the fish" (vs. 14). Although the text does not explicitly state that Jesus ate, nevertheless, as host of the meal it would have been note worthy had he not. It is safe to say that, in addition to seeing and hearing Jesus, the disciples shared a physical meal with him.

To Commission Apostles (Matt. 28:16–20 ; Mark 16:14–18). The next appearance of Christ was at the Great Commission (Matt. 28:16–20). As Jesus commissioned them to disciple all nations, he was both seen and clearly heard by all the apostles.

The text says that the disciples went to Galilee where Jesus had told them to go (vs. 16). And "when they *saw* him, they worshiped him" (vs. 17). Mark adds that they were eating (Mark 16:14), although this version is in the questionably authentic final section of Mark. However, it was not simply what they saw but what they heard that left a lasting impression.

Jesus said, "All authority in heaven and earth has been given to me. Therefore go and make disciples of all nations, baptizing them in the name of the Father and of the Son and of the Holy Spirit" (Matt. 28:19). The fact that this small band shortly became the world's greatest missionary society is ample testimony for how powerfully what the apostles *heard* Jesus speak impressed them.

To Five Hundred (1 Cor. 15:6). There is no narration of this appearance. It is simply noted by Paul in 1 Corinthians 15:6 where he says: After that, he *appeared* to more than five hundred of the brothers at the same time, most of whom are still alive.

Since Jesus was *seen* on this occasion and since he left such a lasting impression on them, it can be assumed that they *heard* him speak. Why else would Paul imply their readiness to testify on behalf of the resurrection, saying in essence, "If you do not believe me, just go and ask them?"

Despite its brevity, this one verse is a powerful testimony to the bodily resurrection of Christ. It has the ring of truth about it. Paul is writing in 55 or 56, only twenty-two or twenty-three years after the resurrection (33). Most of these eye witnesses were still alive. And Paul challenges his reader to check out what he is saying with this multitude of witness who saw and probably heard Christ after his resurrection.

To James (1 Cor. 15:7). Jesus' brothers were unbelievers before his resurrection. The Gospel of John informs us that "even his own brothers did not believe in him" (John 7:5). But after his resurrection at least James and Jude, the half-brothers of Jesus, became believers (cf. Mark 6:3). However, the Scriptures say explicitly that Jesus " *appeared* to James" (1 Cor. 15:7). No doubt Jesus also *spoke* to James. At least as a result of his experience James became a pillar of the early church and played a prominent part in the first church council (Acts 15:13).

James also wrote one of the books of the New Testament in which he spoke of "the crown of life" (James 1:12) and of the "Lord's coming" (5:8) which was made possible only through the resurrection of Christ (2 Tim 1:10). So whatever James saw or heard during this resurrection appearance of Christ not only converted him but made him into a prominent figure in the apostolic church.

At the Ascension (Acts 1:4–8). Jesus' last appearance before his ascension was again to all the apostles. During this time they saw him, heard him, and ate with him. These three lines of evidence are the final confirmation of the literal, material nature of his resurrection body.

Jesus was *seen* by his apostles on this occasion. Luke says, "after his suffering, he *showed* himself to these men and gave many convincing proofs that he was alive" (Acts 1:3). He adds, Jesus " *appeared* to them over a period of forty days."

They also *heard* Jesus, since on this occasion he " *spoke* about the kingdom of God" (Acts 1:3). And during this specific appearance Jesus commanded them: "Do not leave Jerusalem, but wait for the gift my Father promised, which you have *heard* me speak about" (vs. 4). So it was not only a familiar voice but a familiar teaching that confirmed that this was the Jesus who had taught them before the crucifixion.

Luke also says in this passage that Jesus *ate* with the disciples, as he had done on many occasions. For this last appearance before the ascension was "on one occasion, while he was eating with them" (Acts 1:4). This is the fourth recorded instance of Jesus eating after the resurrection. It was apparently something he did rather often, since even the short summary of his ministry by Peter in Acts 10 declares that the apostles "ate and drank with him after he rose from the dead" (vs. 41). Surely, both the intimate fellowship and the physical ability to eat food was more than sufficient proof that Jesus was appearing in the same tangible, physical body he possessed before his resurrection.

To Paul (Acts 9:1–9 ; 1 Cor. 15:8). Jesus' last appearance was to Paul (see 1 Cor. 15:8). It is important to note that this appearance was no vision that occurred only within the mind of Paul. Rather, it was an objective, external event observable to all who were within visual distance.

- Paul called this an “appearance” (Gk. *ōphthē*), the same word used of Christ’s literal appearances to the other apostles (1 Cor. 15:5–7). Indeed, Paul calls it the “last” appearance of Christ to the apostles.

- Seeing the resurrected Christ was a condition for being an apostle (Acts 1:22). Yet Paul claimed to be an apostle, saying, “Am I not an apostle? Have I not seen Jesus our Lord?” (1 Cor. 9:1).

- Visions are not accompanied by physical manifestations, such as light and a voice.

The resurrection experiences, including Paul’s, are never called “visions” (*optasia*) anywhere in the Gospels or Epistles. During the appearance to Paul, Jesus was both seen and heard. The Gospels do speak of a “vision” of angels (Luke 24:23), and Acts refers to Paul’s “heavenly vision” (Acts 26:19) which may be a reference to the vision(s) he and Ananias received later (Acts 9:11–12 ; cf. 22:8 ; 26:19). As for the actual appearance to Paul, Christ was both seen and heard with the physical senses of those present. In 1 Corinthians 15 Paul said Jesus “ *appeared* to me also” (vs. 8). In the detailed account of it in Acts 26 , Paul said “I *saw* a light from heaven” (vs. 13). That Paul is referring to a physical light is clear from the fact that it was so bright that it blinded the physical eyes (Acts 22:6 , 8). Paul not only saw the light but he saw Jesus.

Paul also *heard* the voice of Jesus speaking distinctly to him “in Aramaic” (Acts 26:14). The physical voice Paul heard said, “Saul, Saul, why do you persecute me?” (Acts 9:4). Paul carried on a conversation with Jesus (vss. 5–6) and was obedient to the command to go into the city of Damascus (9:6). Paul’s miraculous conversion, his tireless efforts for Christ, and his strong emphasis on the physical resurrection of Christ (Rom. 4:25 ; 10:9 ; 1 Corinthians 15) all show what an indelible impression the physical resurrection made upon him (*see* RESURRECTION, PHYSICAL NATURE OF).

Not only did Paul see the light and hear the voice but those who were with him did as well (Acts 22:8). This shows that the experience was not private to Paul. It was not purely subjective but had an objective referent. It happened “out there” in the real physical world, not merely in the world of his private spiritual experience. Anyone who had been there could also have seen and heard the physical manifestation.

A Summary of the Direct Evidence. The witness evidence for the physical resurrection of Christ is massive. Compared to the evidence for other events from the ancient world, it is overwhelming:

	Saw	**Heard**	**Touched**	**Other Evidence**
1. Mary Magdalene John 20:10–18	×	×	×	empty tomb
2. Mary /women Matt.	×	×	×	empty tomb

28:1–10				
3. Peter 1 Cor. 15:5	×	×		empty tomb, clothes
4. Two disciples Luke 24:13–35	×	×		* ate with him
5. Ten disciples	×	×	** X	saw wounds
Luke 24:36–49 ; John 20:19–23				ate food
6. Eleven disciples John 20:24–31	×	×	** X	saw wounds
7. Seven disciples John 21	×	×		* ate food
8. All disciples —commissioning Matt. 28:16–20 ; Mark 16:14–18	×	×		
9. 500 brethren 1 Cor. 15:6	×	×		
10. James 1 Cor. 15:7	×	×		
11. All apostles —Ascension Acts 1:4–8	×	×		ate food
12. Paul Acts 9:1–9 ; 1 Cor. 15:8	×	×		

During the first eleven appearances alone Jesus appeared to more than 500 people over a forty-day period of time (Acts 1:3). On all twelve occasions Jesus was seen and probably heard. Four times he offered himself to be touched. He was definitely touched twice. Jesus revealed his crucifixion scars on two occasions. In four testimonies the empty tomb was seen, and twice the empty grave clothes were viewed. On another four occasions almost certainly Jesus ate food. The

* Implied
** Offered himself to be touched
** Offered himself to be touched
* Implied

sum total of this evidence is overwhelming confirmation that Jesus arose and lived in the same visible, tangible, physical body of flesh and bones he had possessed before his resurrection body.

Indirect Evidence. In addition to all the direct evidence for the bodily resurrection of Christ, there are lines of corroboration. These include the immediate transformation of the men who became the apostles, the reaction of those who rejected Christ, the existence of the early church, and the immediate, amazingly rapid spread of Christianity.

The Transformed Disciples. After Jesus' death his apostles were scared, scattered, and skeptical. Only one, John, was at the crucifixion (John 19:26–27). The rest fled (Matt. 27:58). They also were skeptical. Mary, the first one to whom Jesus appeared, doubted, thinking she had seen a gar dener (John 20:15). The disciples doubted the reports of the women (Luke 24:11). Some doubted until they saw Christ for themselves (John 20:25). One would not even believe when all the other apostles told them Christ had appeared to them. Two disciples on the road to Emmaus even doubted as they talked with Jesus, thinking he was a stranger (Luke 24:18).

A few weeks these very same men and women who had huddled in secret (John 20:19) were fearlessly and openly proclaiming the resurrection of Christ—even before the Sanhedrin that was responsible for Christ's death (Acts 4–5). The only thing that can account for this immediate and miraculous change is that they were absolutely convinced they had encountered the bodily resurrected Christ.

The Theme of Apostolic Preaching. Of all the wonderful things Jesus taught the disciples about love (Matt. 22:36–37), non-retaliation (Matthew 5), and the kingdom of God (cf. Matthew 13), the dominant theme of apostolic preaching was none of these themes. Above all else, they proclaimed the resurrection of Christ. It was the subject of Peter's first sermon at Pentecost (Acts 2:22–40) and his next sermon at the temple (Acts 3:14 , 26). It was the content of his message before the Sanhedrin (Acts 4:10). Indeed, everywhere and "with great power the apostles gave witness to the resurrection of the Lord Jesus" (Acts 4:33 ; cf. 4:2). Being a witness to the resurrection was a condition for being an apostle (Acts 1:22 ; cf. 1 Cor. 9:1). The best explanation of why this theme was their immediate preoccupation within weeks of his death was that they had, as the Gospels tell us, repeatedly encountered him alive in the days after his crucifixion.

The Reaction of Those Who Rejected Christ. The reaction of the Jewish authorities is also testimony to the fact of Christ's resurrection. They did not produce the body, nor even organize a search. Instead, they bribed the soldiers who had guarded the tomb to lie (Matt. 28:11–15), and they *fought* the disciples who testified they had seen the body alive. The fact that they *resisted* , rather than *refuted,* the disciples' claims speaks for the reality of the resurrection.

The Existence of the Early Church. Another indirect proof of the resurrection is the very existence of the early church. There are good reasons why the church should not have been born:

The first church consisted largely of Jews who believed there was only one God (Deut. 6:4), and yet they proclaimed that Jesus was God (*see* CHRIST, DEITY OF). They prayed to Jesus (Acts 7:59), baptized in his name (Acts 2:38), claimed he was exalted to God's right hand (Acts

2:33 ; 7:55), and called him Lord and Christ (2:34–36), the very title which earned Jesus the charge of blasphemy from the Jewish High Priest at his trial (Matt. 26:63–65).

The first Christians had insufficient time to establish themselves before they were persecuted, beaten, threatened with death, and even martyred (Acts 7:57–60). Yet they not only maintained their belief but quickly grew in number. If what they testified to was not real, they had every reason and opportunity to give it up. But they did not. Only a real encounter with the resurrected Christ can adequately account for their existence as a Jewish sect that came to be known as Christians (Acts 11:26).

The Growth of Christianity. By contrast to other religions, like Islam which grew slowly at first, Christianity experienced an immediate and rapid growth. Three thousand were saved the very first day (Acts 2:41). Many others were added to their ranks daily (Acts 2:47). Within days 2000 more became believers (Acts 4:4). The "number of the disciples was multiplying" so rapidly that deacons had to be appointed to care for the widows (Acts 6:1). Surely nothing other than the bodily resurrection of Christ and his sending of the Holy Spirit (Acts 1:8) can sufficiently account for this immediate and amazing growth.

Summary of the Evidence. Evidence for the resurrection of Christ is compelling. There are more documents, more eyewitnesses, and more corroborative evidence than for any other historical event of ancient history. The secondary, supplementary evidence is convincing; when combined with the direct evidence, it presents a towering case for the physical resurrection of Christ. In legal terminology, it is "beyond all reasonable doubt."

Objections to the Resurrection. Many objections have been leveled against the physical resurrection of Christ. Some claim that this would qualify as a miracle, and miracles are not believable (*see* MIRACLES, ARGUMENTS AGAINST). Others claim that the documents and witnesses recording these events were not reliable (*see* NEW TESTAMENT DOCUMENTS, RELIABILITY OF ; NEW TESTAMENT, HISTORICITY OF). Still others have devised alternative theories opposing the resurrection (*see* CHRIST'S DEATH, SUBSTITUTION LEGEND ; RESURRECTION, ALTERNATE THEORIES). But those who try to get around the resurrection walk against the gale-force winds of the full evidence. The facts are that Jesus of Nazareth really died (*see* CHRIST, DEATH OF) and actually came back from the dead in the same physical body.

Resurrection, Objections to. Among standard objections raised against the physical resurrection of Christ, some aver that miracles in general, including the resurrection miracle, are not credible (*see* MIRACLES, ARGUMENTS AGAINST). These are specifically answered in the article Miracles, Arguments Against. Others insist that we cannot know the true happenings surrounding the death and resurrection of Christ because the New Testament documents are flawed. Regarding this uncertainty, see ACTS, HISTORICITY OF ; ARCHAEOLOGY, NEW TESTAMENT ; BIBLE CRITICISM ; JESUS SEMINAR ; NEW TESTAMENT MANUSCRIPS and NEW TESTAMENT, HISTORICITY OF .

In the late twentieth century, two other objections have arisen. One is that the Gospel sequences of events cannot be harmonized. A second theory that has gained some following even in evangelical New Testament scholarship argues that the resurrection body of Christ was a spiritual, not a physical, body. Murray Harris was at the forefront of this view until he quietly modified his view. However, a number of other New Testament scholars, including George Ladd, held the same view. Because several facets of this view need to be considered, objections to the resurrection will be answered here, and the overall consideration of the resurrection body—Christ's and ours—is discussed at some length in RESURRECTION, PHYSICAL NATURE OF .

Harmony of the Accounts. It is often objected by critics that the resurrection record is self-contradictory. The order of events appears to differ among the accounts. For example, the Gospels list Mary of Magdala as the first to see Jesus after the resurrection (cf. Matt. 28:1f .), whereas 1 Corinthians 15:5 lists Peter as the first to see the resurrected Christ. Likewise, Matthew (28:2) lists "Mary Magdalene and the other Mary" as first at the tomb, whereas John (20:1) names only Mary Magdalene.

Closer scrutiny reveals that the descriptions are saying the same things from different perspectives; they do harmonize when closely compared.

There is a discernible overall order of postresurrection events in the New Testament accounts. The other events fit around this overall schema (*see* RESURRECTION, EVIDENCE FOR):

	Matt	Mark	Luke	John	Acts	1 Cor.
1. Mary Magdalene			×		×	
2. Mary /women	×	×				
3. Peter			×		×	
4. Two disciples		×	×			
5. Ten			×	×		

disciples						
6. Eleven disciples		×				
7. Seven disciples				×		
8. Commission of apostles	×		×		×	
9. 500 brethren					×	
10. James					×	
11. Ascension	×					
12. Paul					×	×

Earliest and most reliable manuscripts do not have Mark 16:9–20 .

Peter saw the empty tomb; he did not immediately encounter Christ.

Other scholars (cf. Wenham, 139) reverse numbers 3 and 4 (but see Luke 24:34), and some combine 8 and 9. These differences are of no consequence in reconciling the events (*see* RESURRECTION OF CHRIST).

Some factors help in understanding why some writers approached the subject as they did:

- Paul in 1 Corinthians is summarizing the defense of the resurrection from a legal and official viewpoint, not giving a blow-by-blow account. Therefore, he presents an official list of witnesses, which would never have included women in a Greco-Roman setting like Corinth. A woman’s testimony was not allowed in court.

- Christ’s appearance to Paul was not listed in the Gospels, since Paul saw Christ years after the ascension (Acts 9 ; cf. 1 Cor. 15:7).

- As an apologist, Paul would highlight the impressive appearance to the 500 witnesses, most of whom were still alive when he wrote 1 Corinthians (ca. 55).

- Other appearances, as to James (1 Cor. 15:7) and on the road to Emmaus (Luke 24:13–34), fit as supplementary information. They do not come up in the harmonizing debate.

The Women’s Story. Even the confusing events of the first morning involving the women are not too difficult to sort out (*see* RESURRECTION OF CHRIST).

Conflict in Independent Testimony. The fact that various accounts do not fit together with perfect ease should be expected of authentic testimony from independent witnesses. Were the accounts perfectly harmonious on the surface, there would be suspicion of collusion. That the events and order are described from differing perspectives that depend on personal involvement of the participants and some confusion of detail at an intense and bewildering moment is exactly what one would expect of credible accounts. Indeed, many legal minds, trained in sleuthing out false witnesses, have scrutinized the Gospel accounts and pronounced them credible. Simon Greenleaf, the Harvard law professor who wrote the standard study of legal evidence, counted his own conversion to Christianity from his careful examination of the Gospel witnesses. He concluded that "copies which had been as universally received and acted upon as the Four Gospels, would have been received in evidence in any court of justice, without the slightest hesitation" (Greenleaf, 9–10).

The Essentially Physical Nature of the Resurrection Body. Several passages are used by critics to argue that Jesus' resurrection body was not continuously and essentially physical (Harris, *From Grave to Glory* , 373). However, none state that Jesus' body was ever nonphysical.

Paul and the "Spiritual Body." Proponents of the view that the postresurrection body is immaterial cite 1 Corinthians 15:44 . Paul refers to the resurrection body as a "spiritual body," in contrast to the preresurrection "natural body" (1 Cor. 15:44). But a study of the context does not support this conclusion.

A "spiritual" body denotes an immortal one, not an immaterial one. A "spiritual" body is one dominated by the spirit, not one devoid of matter. The Greek word *pneumatikos* (translated "spiritual" here) means a body directed by the spirit, as opposed to one under the dominion of the flesh. It is not ruled by flesh that perishes but by the spirit that endures (vss. 50–58) So "spiritual body" here does not mean immaterial and invisible but immortal and imperishable.

"Spiritual" also denotes a supernatural body, not a nonphysical one. The resurrection body Paul refers to is supernatural. The series of contrasts used by Paul in this passage reveals that the resurrection body was a supernatural body. Notice the parallels:

Preresurrection Body—Earthly	**Postresurrection Body—Heavenly**
perishable (vs. 42)	imperishable
weak (vs. 43)	powerful
mortal (vs. 53)	immortal
natural (vs. 44)	[supernatural]

The complete context indicates that "spiritual" (*pneumatikos*) could be translated "supernatural" in contrast to "natural." This is made clear by the parallels of perishable and imperishable, corruptible and incorruptible. In fact, *pneumatikos* is translated "supernatural" in 1 Corinthians 10:4 when it speaks of the "supernatural rock that followed them in the wilderness" (

RSV). The *Greek-English Lexicon of the New Testament* explains, “That which belongs to the supernatural order of being is described as *pneumatikos:* accordingly, the resurrection body is a *sōma pneumatikos* [supernatural body].”

“Spiritual” refers to physical objects. A study of Paul’s use of the same word in other passages reveals that it does not refer to something that is purely immaterial. First, Paul spoke of the “spiritual rock” that followed Israel in the wilderness, from which they got “spiritual drink” (1 Cor. 10:4). But the Old Testament story (Exodus 17 ; Numbers 20) reveals that it was a physical rock from which they got literal water to drink. But the actual water they drank from that material rock was produced supernaturally. Hence, the Revised Standard Version properly translates it as follows: “All ate the same supernatural food and all drank the same supernatural drink. For they drank from the supernatural Rock which followed them, and the Rock was Christ” (1 Cor. 10:3–4).

That is to say, the supernatural Christ was the source of these supernatural manifestations of natural food and water. But just because the physical provisions came from a spiritual (i.e., supernatural) source did not make them immaterial. When Jesus supernaturally made bread for the 5000 (John 6), he made literal bread. However, this literal, material bread could have been called “spiritual” bread because of its supernatural source. In the same way, the literal manna given to Israel is called “spiritual food” (1 Cor. 10:4).

Further, when Paul spoke about a “spiritual man” (1 Cor. 2:15) he obviously did not mean an invisible, immaterial man with no corporeal body. He was speaking of a flesh-and-blood human being whose life was lived by the supernatural power of God. He was referring to a literal person whose life had spiritual direction. A spiritual man or woman is one who is “taught by the Spirit” and who “accepts the things that come from the Spirit of God” (1 Cor. 2:13–14). The resurrection body can be called a “spiritual body” in much the same way we speak of the Bible as a “spiritual book.” Regardless of the spiritual source and power, both the resurrection body and the Bible are material objects.

The New International Dictionary of New Testament Theology says that *spiritual* is used “in contrast to the *merely* material or to those activities, and attitudes that derive from the flesh and draw their significance from the *merely* physical, human and worldly” (Brown, 3.707). So “spiritual” does not mean something purely immaterial or intangible. The spiritual man, like the spiritual rock and spiritual food, was a physical being that received spiritual or supernatural help.

Christ’s Ability to Appear. It is argued that the resurrection body was essentially invisible and, therefore, not an object observable in our history. The New Testament says that it could “appear” (Harris, *Raised Immortal* , 46–47). Therefore, it must have been invisible before it appeared (see Luke 24:34 ; Acts 9:17 ; 13:31 ; 26:16 ; 1 Cor. 15:5–8). Each of these times it says, “he appeared” or “he let himself be seen” (in the Greek’s aorist passive). Grammatically, the action rests on the one who appears, not on the one who sees him appear. This, it is argued, implies that Jesus took the initiative to make himself visible at his resurrection appearances.

---

rsv Revised Standard Version

However, Christ's resurrection body could be seen with the eye. Appearance accounts use the word *horaō* ("to see"). Although this word is sometimes used of seeing invisible realities (cf. Luke 1:22 ; 24:23), it often means to see by the eye. The usual word meaning "vision" is *orama* , not *horaō* (see Matt. 17:9 ; Acts 9:10 ; 16:9). In the New Testament a vision usually, if not always, refers to something that is essentially invisible, such as, God or angels. For example, John uses *horaō* of seeing Jesus in his earthly body before the resurrection (6:36 ; 14:9 ; 19:35) and also of seeing him in his resurrection body (20:18 , 25 , 29). Since the same word for *body* (*sōma*) is used of Jesus before and after the resurrection (cf. 1 Cor. 15:44 ; Phil. 3:21), and since the same word for its appearing (*horaō*) is used of both, there is no reason to believe the resurrection body is not the same physical body now immortal.

Even the phrase "he let himself be seen" (aorist passive, *ōphthē*), simply means that Jesus took the initiative to disclose himself, not that he was essentially invisible until he did so. The same form ("He/they appeared") is used in the Greek Old Testament (2 Chron. 25:21), in the Apocrypha (1 Macc. 4:6), and in the New Testament (Acts 7:26) of human beings appearing in physical bodies (Hatch, 2.105–7). In further references *ōphthē* is used of ocular vision.

In its passive form *ōphthē* means "to initiate an appearance for public view, to move from a place where one is not seen to a place where one is seen." It does not mean that what is by nature invisible becomes visible. When the expression "he let himself be seen" (*ōphthē*) is used of God or angels (cf. Luke 1:11 ; Acts 7:2), who are invisible realities, then *in that context* it refers to an invisible entity becoming visible. But since the same expression is used of other humans with physical bodies and since Christ is said to have had a body (*sōma*), there is no reason to take the expression to refer to anything but a literal, physical body, unless the context demands otherwise. To say otherwise contradicts the emphatic declaration of John that the body of Jesus, even after the resurrection (when John wrote) was continuously physical (1 John 4:2 ; 2 John 7).

The same event that is described by "he appeared" or "let himself be seen" (aorist passive), such as the appearance of Christ to Paul (1 Cor. 15:8), is also found in the active mood. Paul wrote of this experience in the same book, "Have I not seen Jesus our Lord?" (1 Cor. 9:1). But if the resurrection body can be seen by the eye, then it is not invisible until it makes itself visible by some kind of "materialization."

Christ's "appearances" were natural. The word "appeared" (*ōphthē*) refers to a natural event. Arndt and Gingrich's *Greek-English Lexicon of the New Testament* points out that the word is used "of persons who appear in a natural way." *The Theological Dictionary of the New Testament* notes that appearances "occur in a reality which can be perceived by the natural senses." In his *Linguistic Key to the New Testament* , Fritz Rienecker notes that *appeared* means "He could be seen by human eyes, the appearances were not just visions" (Rienecker, 439).

This is not to neglect texts which at least may be interpreted to suggest a miraculous appearance or disappearance. Christ was God and did work miracles. So a distinction must be drawn between Christ's essential resurrection body and the power of Christ as God incarnate. *That* Jesus could be seen was not a miracle, but the *way* in which he appeared was miraculous. The texts are simply ambiguous about what these sudden appearances involved, and some believe Jesus came and went quickly in a normal human manner. But there is a strong suggestion

that he appeared *suddenly* . And the texts also speak of sudden disappearances. Luke writes of the two disciples on the road to Emmaus, "Then their eyes were opened and they recognized him, and he disappeared from their sight" (Luke 24:31 ; cf. Luke 24:51 ; Acts 1:9). This would indicate an act of power, a sign of his identity.

The text nowhere states that Jesus became nonphysical when the disciples could no longer see him. Just because he was out of their sight does not mean he was out of his physical body. God has the power to miraculously transport persons in their preresurrection physical bodies from one place to another. Although the precise meaning of the text is unclear, it would seem that this happened to Philip the evangelist when he was "caught up by the spirit" to journey to a city miles away (Acts 8).

The writers may stress Christ's self-initiated "appearances" precisely because of their apologetic value as signs. The appearances proved that he had conquered death (Acts 13:30–31 ; 17:31 ; Rom. 1:4 ; cf. John 10:18 ; Rev. 1:18). The translation, "He let himself be seen," is a perfectly fitting expression of self-initiated triumph. Christ was sovereign over death and in his resurrection appearances.

The reason for the stress on the many appearances of Christ is not because the resurrection body was essentially invisible and immaterial, but rather it was material and immortal. Without an empty tomb and repeated appearances of the same body that was once buried in it raised immortal, there would be no proof of the resurrection. So it is not surprising at all that the Bible strongly stresses the many appearances of Christ. They are the real proof of the physical resurrection.

Resurrection Appearances as "Visions." The contention that resurrection appearances are called "visions" is also used to support the nonphysical view of the resurrection body. Luke records that women at the tomb "had seen a vision of angels, who said he was alive" (Luke 24:23). But visions are always of invisible, unseen realities, not of physical, material objects. The miracle is that these spiritual realities can be seen. Hence. it is argued that a spiritual body is angel-like and, therefore, cannot be seen. Some point to the fact that those who were with Paul during his Damascus road experience did not see Christ (Pannenberg, 93). Hence, the experience of the resurrected Christ is called a vision. But this reasoning is flawed.

Luke 24:23 does not say that seeing the resurrected Christ was a vision; it refers only to the vision of seeing angels at the tomb. The Gospels never refer to a resurrection appearance of Christ as a vision, nor does Paul in his list in 1 Corinthians 15 . The only possible reference to a resurrection appearance as a vision is in Acts 26:19 where Paul says: "I was not disobedient to the heavenly vision." But even if this is a reference to the Damascus appearance of Christ, it is merely an overlap in usage of the words. For Paul clearly calls this event an "appearance" (1 Cor. 15:8) in which he saw Jesus and was given apostolic credentials (1 Cor. 9:1 ; cf. Acts 1:22).

It is possible that even in Acts 26:19 the word "vision" refers to the subsequent revelation to Ananias, through whom God gave Paul's commission to minister to the Gentiles (Acts 9:10–19). Paul says nothing about seeing the Lord, as he does when referring to his Damascus experience

(cf. Acts 22:8 ; 26:15). When having a “vision” (*optasia*), Paul clearly designates it as such (2 Cor. 12:1), in distinction from a real appearance.

Most significant, however, is that when Paul referred to the vision he was not relaying the content of the experience on the road but what he learned later. Paul did not received his specific missionary mandate immediately (Acts 9:1–9). Rather, he was told “to go into the city, and you will be told what you must do” (vs. 5). It was there in the city through a “vision” (vs. 10) to Ananias that Paul was given his missionary mandate “to carry my [Christ’s] name before the Gentiles” (9:15). Paul may have had a supplementary vision to that of Ananias while “praying in the house of Judas on Strait Street in Damascus” (Acts 9:11 , 12). It was here that he was told specifically that Ananias would lay hands on him (vs. 12). So when Paul said “I was not disobedient to the heavenly vision” in Acts 26:19 , it was probably to the mandate through Ananias’s vision that he refers.

The word *vision* (*optasia*) is never used of a resurrection appearance anywhere else in the New Testament. It is always used of a purely visionary experience (Luke 1:22 ; 24:23 ; 2 Cor. 12:1). Whatever the case, the *Theological Dictionary of the New Testament* correctly notes that the New Testament distinguishes visions from the Damascus experience.

Appearances differ from visions. The postresurrection encounters with Christ are usually described as literal “appearances” (1 Cor. 15:5–8), and never as visions. The difference between a mere vision and a physical appearance is significant. Visions are of invisible, spiritual realities, such as God and angels. Appearances are of physical objects that can be seen with the naked eye. Visions have no physical manifestations associated with them; appearances do.

People sometimes “see” or “hear” things in visions (Luke 1:11–20 ; Acts 10:9–16) but not with their physical eyes. When someone truly saw or had physical contact with angels (Gen. 18:8 ; 32:24 ; Dan. 8:18), it was not a vision but an appearance of the angel in the physical world. During these appearances the angels assumed a visible form, then returned to their normal invisible state. However, the resurrection appearances of Christ were experiences of seeing Christ in his continued visible, physical form with the natural eye.

The contention that Paul’s experience must have been a vision because those with him did not see Christ also is unfounded. Paul’s companions on the way to Damascus did not see or understand everything, but they did share in the sound and light phenomena. The Bible says, “they heard the sound” (Acts 9:7) and “saw the light” (Acts 22:9). They heard, but did not understand, the meaning of what was said. That they “did not see anyone” (Acts 9:7) is not surprising. Paul was physically blinded by the brightness of the light (Acts 9:8–9). Apparently only Paul looked straight into the blaze of divine glory. Hence, only he actually saw Christ, and only he was literally stricken blind by it (cf. Acts 22:11 ; 26:13). But it was, nonetheless, an experience of a real physical reality, for those who were with Paul also saw and heard it with their natural eyes and ears.

Appearances Only for Believers. It is argued that Jesus’ sovereignty over his appearances indicates that he was essentially invisible, making himself visible only when he wished to do so.

In this connection they note that Jesus did not appear to unbelievers, supposedly indicating that he was not naturally visible.

But Scripture never says Jesus did not appear to unbelievers. He appeared to his unbelieving brother (1 Cor. 15:7 ; James), and Matthew 28:17 indicates that not all believed who saw him. He appeared to the most hostile unbeliever of all, Saul of Tarsus (Acts 9). As far as his resurrection is concerned, even his disciples were at first unbelievers. When Mary Magdalene and others reported that Jesus was resurrected “they did not believe the women, because their words seemed to them like nonsense” (Luke 24:11). Later Jesus had to chide the two disciples on the road to Emmaus about disbelief in his resurrection, foolish you are, and how slow to believe all that the prophets have spoken!” (Luke 24:17). Even after Jesus had appeared to the women, to Peter, to the two disciples and to the ten apostles, still Thomas said, “Unless I see the nail marks in his hands and put my finger where the nails were, and put my hand into his side, I will not believe it” (John 20:25).

Selectivity does not prove invisibility. The fact that Jesus was selective about those he wanted to see him does not indicate that he was essentially invisible. Jesus was also in control of those who wanted to lay hands on him before the resurrection. On one occasion an unbelieving crowd tried to take Jesus and “throw him down a cliff. But he walked right through the crowd and went on his way” (Luke 4:30 ; cf. John 8:59 ; 10:39).

Jesus was also selective about those for whom he performed miracles. He refused to perform miracles in his own home area “because of their lack of faith” (Matt. 13:58). Jesus even disappointed Herod, who had hoped to see him perform a miracle (Luke 23:8). The truth is that Jesus refused “to cast pearls before swine” (Matt. 7:6). In submission to the Father’s will (John 5:30) he was sovereign over his activity both before and after his resurrection. But this in no way proves that he was essentially invisible and immaterial either before or after his resurrection.

Passing Through Closed Doors. It is inferred by some that, since the resurrected Christ could appear in a room with closed doors (John 20:19 , 26), his body must have been essentially immaterial. Others suggest that he dematerialized on this occasion. But these conclusions are not warranted.

The text does not actually say Jesus passed through a closed door. It simply says that “when the disciples were together with closed doors for fear of the Jews, Jesus came and stood among them” (John 20:19). The text does not say how he got into the room. Since the text does not explicitly say how Jesus got in behind closed doors, any suggestion is only speculation. We do know that angels used their special powers to unlock prison doors to release Peter (Acts 12:10). The supernatural Christ certainly possessed this power. Although physical, the resurrection body is by its very nature a supernatural body. Hence, it should be expected that it can do supernatural things like appearing in a room with closed doors.

If he chose to do so, Jesus could have performed this same feat before his resurrection with his physical body. As the Son of God, his miraculous powers were just as great before the resurrection. Even before his resurrection Jesus performed miracles with his physical body that

transcended natural laws, such as walking on water (John 6:16–20). But walking on water did not prove that his preresurrection body was not physical or even that it could dematerialize.

According to modern physics it is not impossible for a material object to pass through a door. It is only statistically improbable. Physical objects are mostly empty space. All that is necessary for one physical object to pass through another is for the right alignment of the particles in the two physical objects. This is no problem for the One who created the body to begin with.

The Decaying Physical Body. Another argument given in favor of an immaterial resurrection body is that a physical resurrection body would imply "a crassly materialistic view of resurrection according to which the scattered fragments of decomposed corpses were to be reassembled" (Harris, *Raised Immortal* , 126).

It is unnecessary to the orthodox view to believe that the same particles will be restored in the resurrection body. Even common sense dictates that a body can be the same physical body without having the same physical particles. The observable fact that bodies eat food and give off waste products, as well as get fatter and skinnier, is sufficient evidence of this. Certainly, we do not say a body is not material or not the same body because someone loses ten pounds—or even fifty.

If necessary it would be no problem for an omnipotent God to bring all of the exact particles of one's body together again at the resurrection. Certainly he who created every particle in the universe could reconstitute the relatively few particles in a human body. The God who created the world out of *nothing* is surely able to fashion a resurrection body out of *something* . But, as already noted, this is not necessary, for the resurrection body does not need the same particles in order to be the same body.

In the light of modern science it is unnecessary to believe that God will reconstitute the exact particles one had from the preresurrection body. For the physical body remains physical and retains its genetic identity, even though the exact physical molecules in it change every seven years or so. The resurrection body can be just as material as our present bodies and still have new molecules in it.

Unlike our bodies, Jesus' body did not become corrupted while in the tomb. Quoting the psalmist, Peter said emphatically of Jesus, "he was not abandoned to the grave, nor did his body decay" (Acts 2:31). Paul adds by contrast that the prophet could not have spoken about David since "his body decayed" (Acts 13:36). So in Jesus' case most (if not all) of the material particles in his preresurrection body were in his resurrection body. Some say there may have been some dissolution involved in Jesus' body, since death itself involves some breaking down of organic molecules. Then again, this may apply only to mortal humans. In any event there was no *eventual* dissolution, since his resurrection reversed the process of decay (Schep, 139).

The Body Destroyed. Paul said, " 'Food for the stomach and the stomach for food'—but God will destroy them both" (1 Cor. 6:13). From this text some have argued that "the resurrection body will not have the anatomy or physiology of the earthly body" (Harris, *Raised Immortal* , 124). However, this inference is unjustified.

Study of the context here reveals that when Paul says God will destroy both food and the stomach he is referring to the *process* of death, not to the *nature* of the resurrection body. For he refers to the process of death by which "God will destroy them both" (vs. 13).

As already noted, while the resurrection body may not have the necessity to eat, it does have the ability to eat. Eating in heaven will be a joy without being a need. Jesus ate at least four times in his resurrection body (Luke 24:30 , 42 ; John 21:12 ; Acts 1:4). Hence, his resurrected body was capable of assimilating physical food. To argue that there will be no resurrection body because the stomach will be "destroyed" is tantamount to claiming that the rest of the body—head, arms, legs, and torso—will not be resurrected because death will also turn them into dust.

"Flesh and Blood" and the Kingdom. Paul said "flesh and blood cannot inherit the kingdom of God" (1 Cor. 15:50). As early as the second century Irenaeus noted that this passage was used by heretics in support of their "very great error" (Irenaeus, 30.13), that the resurrection body will not be a body of physical flesh.

The very next phrase omitted from 1 Corinthians 15:50 shows clearly that Paul is speaking not of flesh as such but of corruptible flesh, for he adds, "nor does the perishable inherit the imperishable." So Paul is not affirming that the resurrection body will not have flesh; rather it will not have *perishable* flesh.

In order to convince the frightened disciples he was not an immaterial spirit (Luke 24:37), Jesus emphatically told them that his resurrection body had flesh. He declared: "Look at my hands and my feet. It is I myself! Touch me and see; a ghost does not have flesh and bones, as you see I have" (Luke 24:39).

Peter said that Jesus' resurrection body is the same body of flesh, now immortal, that went into the tomb and never saw corruption (Acts 2:31). Paul reaffirmed this truth in Acts 13:35 . And John implies that it is against Christ to deny that he remains "in the *flesh* " even after his resurrection (1 John 4:2 ; 2 John 7).

This conclusion cannot be avoided by claiming that Jesus' resurrection body had flesh and bones but not flesh and blood. For if it had flesh and bones, then it was a literal, material body, whether or not it had blood. Flesh and bones stress the solidity of Jesus' physical post-resurrection body. They are more obvious signs of tangibility than blood, which cannot be as easily seen or touched.

The phrase "flesh and blood" in this context apparently means *mortal* flesh and blood, that is, a mere human being. This is supported by parallel uses in the New Testament. When Jesus said to Peter, "Flesh and blood has not revealed this to you" (Matt. 16:17), he could not have been referring to the mere substances of the body. Obviously those could not reveal that he was the Son of God. Rather, as J. A. Schep concludes, "the only correct and natural interpretation [of 1 Cor. 15:50] seems to be that *man, as he now is, a frail, earth-bound, perishable creature,* cannot have a place in God's glorious, heavenly kingdom" (Schep, 204).

Biblical scholar Joachim Jeremias observes that a misunderstanding of this text “has played a disastrous role in the New Testament theology of the last sixty years.” After careful exegesis of the passage, he concludes that the sentence “flesh and blood cannot inherit the kingdom of God” refers not to the resurrection, but to the changes that will take place in the living at Christ’s coming (Jeremias, 154).

Resurrection and Resuscitation. Jesus’ resurrection was more than the resuscitation of a physical corpse, argue those who say the resurrection was spiritual. But this is insufficient grounds to deny the physical nature of the resurrection body. Jesus’ resurrection assuredly was more than a resuscitation, but it was not less than one. Resuscitated corpses die again, but Jesus’ resurrection body was immortal. He conquered death (1 Cor. 15:54–55 ; Heb. 2:14), whereas merely resuscitated bodies will eventually be conquered by death. For example, Jesus raised Lazarus from the dead (John 11), but Lazarus eventually died again. Jesus was the first to be raised in an immortal body, one that will never die again (1 Cor. 15:20). However, simply because Jesus was the first to be raised in an immortal body does not mean it was an immaterial body. It was more than a reanimation of a physical corpse, but it was not less than that.

It does not follow that, because Jesus’ resurrection body could not die, therefore, it could not be seen. What is immortal is not necessarily invisible. The recreated physical universe will last forever (Rev. 21:1–4), yet it will be visible. Here again, the resurrection body differs from resuscitation, not because it is immaterial but because it is immortal (1 Cor. 15:42 , 53).

Jesus’ “Different Form.” Harris wrote, “We cannot rule out the possibility that the visible form of Jesus had been altered in some mysterious way, delaying recognition of him.” This suggests that “the expression ‘he appeared in another form’ in the Marcan appendix (Mark 16:12) encapsulates this” (Harris, *From Grave to Glory* , 56). However, this conclusion is unnecessary.

There are serious questions about the authenticity of this text. Mark 16:9–20 is not found in some of the oldest and best manuscripts. And in reconstructing the original texts from the existing manuscripts, many scholars believe that the older texts are more reliable.

Even granting its authenticity, the event of which it is a summary (cf. Luke 24:13–32) says simply “they were kept from recognizing him” (Luke 24:16). This makes it clear that the miraculous element was not in Jesus’ body but *in the eyes of the disciples* (Luke 24:16 , 31). Recognition of Jesus was kept from them until their eyes were opened. At best it is an obscure and isolated reference upon which it is unwise to base any significant doctrinal pronouncement. Whatever *another form* means, it certainly does not mean a form other than a real physical body. On this very occasion Jesus ate physical food (Luke 24:30). Later in Luke 24 he said that his ability to eat was a proof that he was not an immaterial spirit (vss. 38–43).

One authority on the meaning of New Testament Greek says that *another form* simply means that, just as Jesus appeared in the form of a gardener to Mary, so here, he appeared in the form of a traveler (Friedrich, *Theological Dictionary*).

Raised "In the Spirit" (1 Pet. 3:18). According to Peter, Jesus was "put to death in the flesh, but made alive in the spirit" (KJV). This has been taken to prove that the resurrection body was "spirit" or immaterial. This interpretation, however, is neither necessary nor consistent with the context of this passage and the rest of Scripture.

The passage can be translated "He was put to death in the body but made alive by the [Holy] Spirit" (NIV). The passage is translated with this same understanding by the New King James Version and others. The parallel between death and being made alive normally refers in the New Testament to the resurrection of the body. For example, Paul declared that "Christ died and returned to life" (Rom. 14:9) and "He was crucified in weakness, yet he lives by God's power" (2 Cor. 13:4).

Even if *spirit* refers to Jesus' human spirit, not to the Holy Spirit, it cannot mean Jesus had no resurrection body. Otherwise, the reference to his "body" (flesh) before the resurrection would mean he had no human spirit then. It seems better to take *flesh* in this context as a reference to his whole condition of humiliation before the resurrection and *spirit* to refer to his unlimited power and imperishable life after the resurrection (Schep, 77).

Like Angels in the Resurrection. Jesus said that in the resurrection we "will be like the angels" (Matt. 22:30). But angels have no physical bodies; they are spirits (Heb. 1:14). Thus, it is argued, we will have no physical resurrection bodies.

This misinterprets the passage. The context is not the nature of the resurrection body but whether there will be marriage in heaven. Jesus' reply was that there will no more be human marriages than there are angelic ones. Jesus said nothing here about having immaterial bodies. He did not say they would be like angels in that humans would be immaterial but because they will be immortal (cf. Luke 20:36).

A Life-Giving Spirit. According to 1 Corinthians 15:45 Christ was made a "life-giving spirit" after his resurrection. This passage is used to prove that Jesus had no physical resurrection body.

Life-giving spirit does not speak of the *nature* of the resurrection body, but of the divine *origin* of the resurrection. Jesus' physical body came back to life only by the power of God (cf. Rom. 1:4). So Paul is speaking about its spiritual *source* , not its physical *substance* as a material body.

If *spirit* describes the nature of Christ's resurrection body, then Adam (with whom he is contrasted) must not have had a soul, since he is described as "of the dust of the earth" (vs. 47). But the Bible says clearly that Adam was "a living being [soul]" (Gen. 2:7).

Christ's resurrection body is called a "spiritual body" (vs. 44). We have seen that Paul uses this terminology to describe material food and a literal rock (1 Cor. 10:4). It is called a "body" (*sōma*), which always means a physical body in the context of an individual human being (Gundry, 168).

---

niv New International Version

The resurrection body is called “spiritual” and a “life-giving spirit” because its source is the spiritual realm, not because its substance is immaterial. Christ’s supernatural resurrection body is “from heaven,” as Adam’s natural body was “of the earth” (vs. 47). But just as the one from “earth” also has an immaterial soul, so the One from “heaven” has a material body.

What We Shall Be. First John 3:2 has been used to argue that the resurrection body will differ from a physical body. John said, “Dear friends, now we are children of God, and what we will be has not yet been made known. But we know that when he appears, we shall be like him, for we shall see him as he is” (1 John 3:2).

When John speaks of not knowing what we shall be he is referring to our *status* in heaven, not the *nature* of the resurrection body. For he is contrasting it with our status now as “sons of God,” claiming he does not know what higher status we may have in heaven. He does know that we shall be like Christ. Paul said the same thing in Philippians 3:21 : God will use his power to “transform our lowly bodies so that they will be like his glorious body [*sōma*]” (Phil. 3:21).

Also in 1 John the apostle affirms that Jesus now has a body of “flesh” (*sarx*) in heaven. “Every spirit that acknowledges that Jesus Christ has come in the flesh is from God” (1 John 4:2). The use of the perfect tense (“has come”) indicates past action with continuing results in the present. That is, Jesus came in the past in the flesh and he is still in the flesh after the resurrection. The same is affirmed in the present tense in 2 John 7 . Jesus is in the flesh in heaven.

Indeed, Jesus will return in the same physical body in which he left (Acts 1:10–11), physical scars and all (Rev. 1:7).

Confusion Regarding Christ’s Body. There are two common areas of confusion in the use of biblical material to prove that Jesus did not rise in an essentially physical body. One is that the resurrection body’s *attributes* are confused with its *activities* . In none of the clear passages about the physical nature of the resurrection body is it stated that Jesus ceased to have a physical body at any point (Harris, *From Grave to Glory* , 390). None of these verses even addresses *what* the resurrection body *is.* At issue is what it can *do* . For example, it can pass through solid objects, suddenly appear, or suddenly disappear. But the fact that Jesus’ body could pass through a solid object no more proves it was immaterial than his walking on water proves his feet were made of balsa wood.

A second blunder is to assume that, because some passages speak of Jesus as *unseen* by the disciples at certain times, he was therefore *invisible* during these periods. However, this is a confusion of *perception* and *reality* . It fails to distinguish *epistemology* (the study of what we know) from *metaphysics* (the study of what really is). Common sense informs us that, even if we cannot see something, it may not be invisible and immaterial. The summit of Mount McKinley is hidden in clouds most of the time, but it still is material all of the time.

Conclusion. The evidence for the physical resurrection is compelling, and its importance to Christianity can scarcely be overestimated.

The New Testament passes the criteria for credibility. There is every reason to accept the authenticity of the New Testament accounts, with all their supposed disorder (*see* NEW TESTAMENT, HISTORICITY OF). Six accounts of the post resurrection appearances, Matthew 28 ; Mark 16 ; Luke 24 ; John 20–21 ; Acts, 9 ; and 1 Corinthians 15 , cover a forty-day period in which Jesus was seen alive by more than 500 persons on eleven occasions. Given that some of these witnesses saw the empty tomb and grave clothes, touched Jesus' scars, and saw him eat, there is no reasonable doubt about the reality of his resurrection.

There is no biblical basis for believing that Jesus was not raised in the same physical body of "flesh and bones" in which he died. There is no indication in any New Testament text that our bodies or Jesus' body will be anything less than physical in heaven. As biblical scholar Joachim Jeremias put it: "look at the transfiguration of the Lord on the mountain of transfiguration, then you will have the answer to the question how we shall imagine the event of the resurrection" (Jeremias, 157). Jesus' material body was manifested in its glory. Similarly, his resurrection body will do the same.

All the arguments used to show that Jesus was raised in a numerically different, invisible, immaterial body are unbiblical and unconvincing. To be sure, the resurrection body was imperishable and immortal, but the contention that it was not visible and material is unfounded. At best it is a speculative inference from isolated references using questionable interpretations. Often, arguments against the material resurrection are clear misinterpretations of the text. They always run contrary to the overwhelming evidence that the resurrection body was the real physical body of "flesh and bones" Jesus said it was (in Luke 24:39).

Historic Christianity stands or falls on the historicity, tangibility, and materiality of the bodily resurrection of Christ (1 Cor. 15:12f .; Luke 24:37).

Resurrection, Physical Nature of. Even some who acknowledge that Jesus' body mysteriously vanished from the tomb and that he appeared in bodily form on several occasions thereafter deny the essential physical nature of the resurrection body. That is, they deny the orthodox belief that Jesus was raised in the same physical body—crucifixion scars and all—in which he died.

The resurrection of Christ loses its apologetic value unless it is a physical resurrection of the same body that died. Indeed, the apostle Paul is willing to say that Christianity is false if Christ was not raised bodily from the grave. Hence, the defense of the resurrection as a physical event involving a reanimation of the physical body of Christ that died is crucial to Christian apologetics. Denial of the physical resurrection of Christ is tantamount to a denial of the resurrection itself, since it is only the physical body, not the soul, that dies. And if that physical body does not come back to life, then there was no *bodily* resurrection.

The Importance of a Body. The significance of the physical resurrection of Christ is far-reaching, and the implications of its denial are fundamental to orthodox Christianity. In fact, a denial of it affects both Christian apologetics and our very salvation (Rom. 10:9 ; 1 Cor. 15:12f .).

Apologetic Considerations. Why is it so important to Christ's claim to deity that his resurrection body be the same physical body that was laid in the tomb? The answer is twofold.

Verification of the real God. First, this is the only way to know for sure that the resurrection occurred. The empty tomb in itself does not prove the resurrection of Christ any more than does the report that a body has turned up missing at a morgue. Neither does an empty tomb plus a series of appearances prove the resurrection. The original body could have disappeared and the appearances could be by someone else or by the same person in another body—which is reincarnation, not resurrection. But in a theistic (*see* THEISM) context where miracles are possible, an empty tomb plus appearances of the *same physical body* , once dead but now alive, are proof of a miraculous resurrection.

Without this physical identity connecting the pre- and postresurrection body, the apologetic value of the resurrection is destroyed. If Christ did not rise in the same physical body that was placed in the tomb, then the resurrection proves nothing of his claim to be God (John 8:58 ; 10:30). The resurrection only substantiates Jesus' claim to be God if he was resurrected in the same literal body in which he was crucified.

The truth of Christianity is based squarely on the bodily resurrection of Christ. Jesus offered the resurrection as a proof of his deity throughout his ministry (Matt. 12:38–40 ; John 2:19–22 ; 10:18). In one passage he presented his resurrection as the unique evidence of his identity. Jesus said to those seeking a "sign," "None will be given it except the sign of the prophet Jonah. For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will be three days and three nights in the heart of the earth" (Matt. 12:40).

Not only did Jesus present his resurrection as the proof of his deity, but for the apostles his resurrection appearances were "many convincing proofs" (Acts 1:3). When presenting the claims of Christ they continually used the fact of Christ's bodily resurrection as the basis of their argument (cf. Acts 2:22–36 ; 4:2 , 10 ; 13:32–41 ; 17:1–4 , 22–31). Paul concluded that God "has given proof . . . to all men by raising him from the dead" (Acts 17:31).

The physical continuity between the pre- and postresurrection body of Christ is made repeatedly in apostolic preaching. Peter's first sermon declared that the Jews "put him to death by nailing *him* to the cross. But God raised *him* from the dead . . ." (Acts 2:23–24). He adds, "he was not abandoned to the grave, nor did *his body* see decay. God has raised *this Jesus* to life, and we are witnesses of the fact" (vss. 31–32). Paul is equally specific in making the connection between the actual body that was put in the grave and the one that was resurrected. He says, "they took him down from the tree and laid *him* in a tomb. But God raised *him* from the dead" (Acts 13:29–31).

Verification of the real event. Second, unless Christ rose in a physical, material body the resurrection is unverifiable. There is no way to verify that he was really resurrected unless he was resurrected in the same tangible, physical body in which he died and was buried. If the resurrected body was essentially immaterial and "angel-like" (Harris, *Raised Immortal* , 53, 124, 126), then, there is no way to verify that the resurrection occurred. A manifestation in an angel-like form does not prove a bodily resurrection. At best, an angelic-like manifestation proves that there is a spirit with the power to materialize after it has departed from the body.

Even angels who are pure spirits (Heb. 1:14) had the power to "materialize" (Genesis 18). The angels that appeared to Abraham assumed a visible form (Gen. 18:8 ; 19:3). But this was not proof that by nature they possessed physical bodies. In fact, they do not; they are spirits (Matt. 22:30 ; Luke 24:39 ; Heb. 1:14). Nor were their manifestations in physical continuity with a previous earthly body, as is the case in the resurrection body of Christ. The angelic manifestations were merely temporarily assumed forms to facilitate communication with human beings. To place Jesus' appearances in this category is to reduce the resurrection to a theophany.

It not only demeans the nature of the resurrection body of Christ to call it "angel-like," but it destroys its evidential value. For there is a real difference between an angelic manifestation and a literal physical body. Resurrection in an immaterial body is no proof that Christ conquered the death of his material body (cf. 1 Cor. 15:54–56). An immaterial resurrection body does not differ substantively from no resurrection body at all.

Theological Considerations. The problem of creation. God created a material world and pronounced it "very good" (Gen. 1:31 ; cf. Rom. 14:14 and 1 Tim. 4:4). Sin disrupted the world and brought decay and death (Gen. 2:17 ; Rom. 5:12). The whole of material creation was subjected to bondage because of sin (Rom. 8:18–25). However, through redemption decay and death will be reversed. For "creation itself will be liberated from its bondage to decay" (vs. 21). Indeed, "the whole [material] creation has been groaning . . . as we wait eagerly for our adoption as sons, the redemption of our bodies" (vss. 22–23). God will reverse the curse upon material creation by a material resurrection. Anything less than the resurrection of the physical body would not restore God's perfect creation as a material creation. Hence, an immaterial resurrection is contrary to God's creative purposes. Just as God will recreate the physical universe (2 Pet. 3:10–13 ; Rev. 21:1–4), even so he will reconstitute the material human body in redeeming the one that died.

Anything short of a material recreation of the world and a material reconstruction of the body would spell failure for God's creative purpose. New Testament scholar Robert Gundry notes, "Anything less than that undercuts Paul's ultimate intention that redeemed man possess physical means of concrete activity for eternal service and worship of God in a restored creation." So "to dematerialize resurrection, by any means, is to emasculate the sovereignty of God in both creative purpose and redemptive grace" (Gundry, 182).

The problem of salvation. There are serious *salvation* problems with denying the physical nature of the resurrection of Christ. The New Testament teaches that belief in the bodily resurrection of Christ is a condition for salvation (Rom. 10:9 , 10 ; 1 Thess. 4:14). It is part of the essence of the Gospel itself (1 Cor 15:1–5). The New Testament understanding of *body* (*sōma*) was of a literal, physical body. Hence, a denial of the physical resurrection of Christ undercuts the Gospel.

Further, without a physical resurrection there is no material continuity between the pre- and postresurrection body. Indeed, they would be two different bodies (Harris, *From Grave to Glory* , 54–56, 126). However, as Gundry observes, "A physical continuity is also needed. If a human spirit—a sort of third party—be the only connection between the mortal and resurrected bodies,

the relationship of the two bodies to each other is extrinsic and to that decree unimpressive as a demonstration of Christ's victory over death" (Gundry, 176).

In stronger terms Gundry concludes that "the resurrection of Christ was and the resurrection of Christians will be physical in nature" (Gundry, 182). Without a physical resurrection there is no grounds for celebrating victory over physical death.

The problem of the incarnation. The denial of the physical nature of the resurrection body is a serious *doctrinal* error. It is a kind of neodocetism (*see* DOCETISM). The docetists were a second-century unorthodox group who denied that Jesus was truly human (Cross, 413). They believed that Jesus was really God but that he only appeared to be human. They denied that he had real human flesh.

A similar doctrinal error existed in the first century. John warns against those who deny that "Jesus Christ has come in the *flesh* " (1 John 4:2 ; cf. 2 John 7). In fact, when John said "has come" (perfect participle) he implies that Christ came in the flesh and still remains (after his resurrection) in the flesh. In 1 John 4:2 the perfect participle (*eleluthota*) means "not only that Jesus Christ came in the fullness of time clothed with flesh, but that thus he is *still present* . . . He is a Christ who is come, who came and who abides in the flesh" (Schep, 71, 72). Commenting on the parallel passage in 2 John 7 , Greek scholar, A. T. Robertson, observes that it is the (present middle participle) construction treats the incarnation as a continuing fact. That is what docetic Gnostics (*see* GNOSTICISM) denied (Robertson, 6:253). Denying that Christ had a material body either before or after his resurrection is false doctrine. The current postresurrection docetism denies that the one who came in the flesh was also raised in the flesh (Harris, *From Grave to Glory* , 124–26).

Having human flesh is essential to the full humanity of Christ and is used repeatedly to describe it (John 1:14 ; 1 Tim. 3:16 ; 1 John 4:2 ; 2 John 7). If this is so, then unless Christ arose immortal in the flesh, he was not fully human. This is particularly acute, since Christ's ministry for our salvation did not end at the cross. According to Hebrews, Christ "ever lives to make intercession for us" (Heb. 7:24). Indeed, it is because Jesus is fully human that he is able "to sympathize with our weakness" in his high priestly ministry (Heb. 4:15). Therefore, Christ's full humanity is necessary for our salvation. But according to Scripture, human *flesh* was a necessary part of his full humanity. Hence, unless Christ rose in that human flesh, then he is not fully human and cannot be effective in achieving our salvation.

The problem of human immortality. Further, denying the physical resurrection leaves a serious problem about Christian immortality. If Christ did not rise in the same physical body in which he was crucified, then we have no hope that we will be victorious over physical death either. It is only through the physical resurrection of Christ that the believer can triumphantly proclaim: "Where, O death, is your victory? Where, O death, is your sting?" (1 Cor. 15:55). For it is only through the physical resurrection that God has "destroyed death and has brought life and immortality to light through the gospel" (2 Tim. 1:10). As Paul told the Corinthians, "if Christ has not been raised . . . those who have fallen asleep in Christ are lost" (1 Cor. 15:18).

The problem of moral deception. There is a serious *moral* problem of deception with denying the physical resurrection. No one can look squarely at the Gospel record of Christ's postresurrection appearances and deny that Jesus tried to convince the skeptical disciples that he had a real physical body. He said, "Look at my hands and my feet. It is I myself! Touch me and see; a spirit does not have flesh and bones, as you see I have" (Luke 24:27). He ate in their presence (vss. 41–43). He challenged Thomas: "Put your finger here; see my hands. Reach out your hand and put it into my side. Stop doubting and believe" (John 20:27 ; *see* RESURRECTION, EVIDENCE FOR).

Given the context of Jesus' claim and of the Jewish belief in the physical resurrection (cf. John 11:24 ; Acts 23:8), there is no other reasonable impression these statements could have left on the disciples' minds than that Jesus was trying to convince them that he arose in the same physical body in which he died. If Jesus' resurrection body was only an immaterial body, then Jesus misled his disciples. If Jesus' resurrection body was not a tangible, physical body, then he was lying.

Evidence of a Physical Resurrection. As shown in the article Resurrection, Objections to, arguments against the resurrection are groundless. What is more, the evidences in favor of the physical nature of the resurrection are also overwhelming. While some of the following are also evidences for the historicity of the resurrection, they also verify that Jesus was not "angel-like" in his appearances. Rather he displayed a very real body—the same body in which he was crucified.

Jesus Was Touched by Human Hands. Jesus challenged Thomas, "Put your finger here; see my hands. Reach out your hand and put it in my side" (John 20:27). Thomas responded, "My Lord and My God!" (vs. 28). Likewise, when Mary clung to Jesus after his resurrection he commanded, "Do not hold on to me, for I have not yet returned to the Father" (John 20:17). Matthew adds that the women clasped Jesus' feet and worshiped him (Matt. 28:9). Later, when Jesus appeared to the ten disciples he said, "look at my hands and my feet. It is I myself! *Touch me* and see" (Luke 24:39). Jesus' resurrection body was a physical body that could be touched, including the nail and spear prints.

Jesus' Body Had Flesh and Bones. Perhaps the strongest evidence of the physical nature of the resurrection body is that Jesus said emphatically "Touch me and see; a spirit does not have flesh and bones, as you see I have" (Luke 24:39). Then to prove his point he asked for something to eat and "They gave him a piece of broiled fish, and he took it and ate it in their presence" (vss. 41–42).

Paul correctly noted that corruptible "flesh and blood cannot inherit the kingdom of God" (1 Cor. 15:50), but Jesus did not have corruptible flesh; he was sinless (2 Cor. 5:21 ; Heb. 4:15). He was fleshy but not fleshly. He did not have *sinful* human flesh (Heb. 4:15); nevertheless, he died and rose from the dead in actual human flesh (*sarx* , Acts 2:31). John stressed Jesus' continuing incarnation in flesh, when he warned: "Many deceivers, who do not acknowledge Jesus Christ as coming [and remaining] in the flesh, have gone out into the world" (2 John 7). The use of the present participle in Greek means Christ remained in the flesh even while this was

written. The claim that it was physical flesh before the resurrection but non-physical flesh after is a form of Gnosticism or docetism.

Jesus Ate Physical Food. Another evidence Jesus offered of the physical, tangible nature of his resurrection body was the ability to eat, which he did on at least four occasions (Luke 24:30 , 41–43 ; John 21:12–13 ; Acts 1:4). Acts 10:40 indicates that Jesus ate often with the disciples after his resurrection, speaking of the apostles who "ate and drank with him after he arose from the dead."

Unlike angels, Jesus' resurrection body was material by nature (Luke 24:39). Given this context, it would have been sheer deception by Jesus to have shown his flesh and bones and offered his ability to eat physical food as proof of his physical body, if he had not been resurrected in a physical body.

Jesus' Body Has His Wounds. Another unmistakable evidence of the physical nature of the resurrection body was that it possessed the physical wounds from Jesus' crucifixion. No so-called "spiritual" or immaterial body would have physical scars (John 20:27). Indeed, in this same physical body Jesus ascended into heaven where he is still seen as "a Lamb, looking as if it had been slain" (Rev. 5:6). And when Christ returns, it will be " *this same Jesus* , who has been taken away from you into heaven" (Acts 1:11). These same physical scars of his crucifixion will be visible at his second coming, for John declared: "Look, he is coming with the clouds, and *every eye will see him, even those who pierced him* " (Rev. 1:7).

Jesus' Body Was Recognized. The usual words for "seeing" (*horao* , *theoreo*) and "recognizing" (*epiginosko*) physical objects were used over and over again of Christ in his resurrection state (see Matt. 28:7 , 17 ; Mark 16:7 ; Luke 24:24 ; John 20:14 ; 1 Cor. 9:1). Occasionally Jesus was not ini tially recognized by some of the disciples, some perhaps supernatural. Luke says of one occasion that "their eyes were prevented from recognizing him" (24:16) and later "their eyes were opened and they recognized him" (vs. 31). However, often there were purely natural factors, such as their perplexity (Luke 24:17–21), sorrow (John 20:11–15), the dimness of the light (John 20:14–15), the visual distance (John 21:4), the suddenness of Jesus' appearance (Luke 24:36–37), the different clothes he had on (John 19:23–24 ; 20:6–8), or their spiritual dullness (Luke 24:25–26) and disbelief (John 20:24–25). In every case the difficulty was temporary. Before the appearances were over there remained absolutely no doubts in their minds that Christ had arisen in a literal, material body.

Jesus' Body Could Be Seen and Heard. Jesus' resurrection body could not only be touched and handled, it could also be seen and heard. Matthew says that "when they *saw* him, they worshiped him" (Matt. 28:17). The Emmaus disciples recognized him while eating together (Luke 24:31), perhaps from his bodily movements (cf. vs. 35). The Greek term for recognize (*epiginosko*) means "to know, to understand, or to recognize." It is a normal term for recognizing a physical object (Mark 6:33 , 54 ; Acts 3:10). Mary may have recognized Jesus from the tone of his voice (John 20:15–16). Thomas recognized him, probably even before he touched the crucifixion scars (John 20:27–28). During the forty-day period, all the disciples saw and heard him, and experienced the "convincing proofs" that he was alive (Acts 1:3 ; cf. 4:2 , 20).

Resurrection Is Out from among Dead. Resurrection in the New Testament is often described as "from (*ek*) the dead" (cf. Mark 9:9 ; Luke 24:46 ; John 2:22 ; Acts 3:15 ; Rom. 4:24 ; 1 Cor. 15:12). Literally, this Greek word *ek* means Jesus was resurrected "out from among" the dead bodies, that is, from the grave where corpses are buried (Acts 13:29–30). These same words are used to describe Lazarus's being raised "from the dead" (John 12:1). In this case there is no doubt that he came out of the grave in the same body in which he was buried. Thus, resurrection was of a physical corpse out of a tomb or graveyard. As Gundry correctly noted, "for one who had been a Pharisee, such phraseology could carry only one meaning—physical resurrection" (Gundry, 177).

Sōma Always Means a Physical Body. When used of an individual human being, the word *body* (*sōma*) always means a physical body in the New Testament. There are no exceptions to this usage in the New Testament. Paul uses *sōma* of the resurrection body of Christ (1 Cor. 15:42–44), thus indicating his belief that it was a physical body. The definitive exegetical work on *sōma* was done by Gundry (ibid.). As evidence of the physical nature of the resurrection body, he points to "Paul's exceptionless use of *sōma* for a physical body" (Gundry, 168). Thus he concludes that "the consistent and exclusive use of *sōma* for the physical body in anthropological contexts resists dematerialization of the resurrection, whether by idealism or by existentialism" (ibid.).

For those who think Paul should have used another word to express physical resurrection, Robert Gundry responds: "Paul uses *sōma* precisely because the physicality of the resurrection is central to his soteriology" (Gundry, 169). This consistent use of the word *sōma* for a physical body is one more confirmation that the resurrection body of Christ was a literal, material body.

The Tomb Was Vacated. Joined with the appearances of the same crucified Jesus, the empty tomb provides strong support of the physical nature of the resurrection body of Christ. The angels declared, "he is not here; he has risen, just as he said. Come and see the place where he lay" (Matt. 28:6). Since it was a literal, material body that was placed there, and since *that same physical body* had come alive, it follows that the resurrection body was that same material body that died.

The Grave Clothes Were Unwrapped. When Peter entered the tomb he "saw strips of linen lying there, as well as the burial cloth that had been around Jesus' head. The cloth was folded up by itself, separate from the linen" (John 20:6–7). Certainly, if thieves had stolen it, they would not have taken time to take off and fold the head cloth. Nor if Jesus had vaporized through the grave clothes would the head cloth have been in a separate place all folded up by itself. These details reveal the truth that the material body of Jesus that had once laid there had been restored to life (Acts 13:29–30). John was so convinced by this evidence of a physical resurrection that when he saw it he believed Jesus had risen, though he had not yet seen him (John 20:8).

The Body That Died Is the Same One Raised. If the resurrection body is numerically identical to the post-resurrection body and the pre resurrection body is unquestionably material, then it follows that the resurrection body is also material. This, of course, does not mean every particle is the same. Even our pre resurrection body changes its particles continually, yet it is the same material body. It means that the resurrection body is one and the same substantial and continuous

material body, whatever accidental changes there may be in its given molecules. In addition to the empty tomb, the empty grave clothes, the seed analogy, and the crucifixion scars there are other lines of evidence that the resurrection of Christ was in the same physical body that died.

First, Jesus said in advance that the same temple, his body, would be destroyed raised again. He said "destroy this temple, and in three days I will raise *it* up" (John 2:21–22). The *it* manifests that the body raised is one and the same as the body destroyed by death.

Second, the same identity is implied in the strong comparison between Jesus' death and resurrection and Jonah's experience in the great fish (Matt. 12:39 ; 16:4). He said, " *As* Jonah was three days and three nights inside the belly of a huge fish, *so* the Son of Man will be three days and three nights in the heart of the earth" (Matt. 12:40). Obviously, in both cases the same physical body that went in was the same one that came out. Thus, the inseparable identity between the pre- and postresurrection body of Jesus by Paul, the converted Pharisee, is strong confirmation that he is affirming the physical nature of the resurrection body.

Third, Paul added, "The perishable must clothe itself with the imperishable, and the mortal with immortality" (1 Cor. 15:53). It is noteworthy that Paul does not say that this corruptible body will be *replaced* by an incorruptible model. Rather, this physical body which is now corruptible will "clothe itself" with the additional element of incorruptibility. If a material body was buried and a spiritual or immaterial body were raised, it would not be the same body. But in this text Paul affirms the numerical identity between the pre- and postresurrection body.

Fourth, Paul's sermon in Antioch reveals the identity between the body that was killed on the cross and the one that was raised from the dead. He said, "When they had carried out all that was written about *him* , they took *him* down from the tree and laid *him* in a tomb. But God raised *him* from the dead " (Acts 13:29–30).

Finally, the close connection between the death and resurrection points to numerical identity *of the resurrection body* . Paul considered it of first importance that "Christ died for our sins, . . . that he was buried, that he was raised on the third day" (1 Cor. 15:3 , 4). Elsewhere, Paul declares that what was "buried" was "raised from death" (Rom 6:3–5 ; cf. Acts 2:23–24 ; 3:15 ; 4:10 ; 5:30 ; 10:39–40 ; 13:29–30 ; Col. 2:12). It is noteworthy that, "as an ex-Pharisee, Paul could not have used such traditional language without recognizing its intent to portray the raising of a corpse" (Gundry, 176).

In view of the evidence, there is no justification for the claim that the pre- and postresurrection body has no "material identity" and "the resurrection body will not have the anatomy or physiology of the earthly body" (Harris, *Raised Immortal* , 124, 126). And since believers will have bodies like his (Phil. 3:21), it follows that theirs will also be material. Indeed, many of the above arguments can be directly applied to believers. For example, the Bible says they will rise out of "the dust of the earth" (Dan. 12:2) and "come forth" from being "in the graves" (John 5:28 , 29), thus indicating the material nature of their resurrected bodies.

Conclusion. Murray Harris claimed that the resurrection body is "spiritual" and not really a physical body of flesh and bones. He wrote: "Consequently the material 'flesh and bones' that

Jesus had during this encounter with his disciples were not integral to his ‘spiritual body’ but had been assumed temporarily, but none the less really, for evidential reasons, as accommodations to the understanding of his disciples” (Harris, *From Grave to Glory* , 392). But if the crucifixion scars were not in the actual “spiritual” resurrection body, but only in the one temporarily assumed for evidential reasons, then Jesus deceived his disciples when he said of this temporary body of flesh and bones “Look at my hands and my feet. It is I myself!” (Luke 24:39). According to Harris, this temporary body was neither the physical body in which Jesus was crucified nor his real (“spiritual”) resurrection body. If Harris’s assertion is correct, Jesus flatly deceived his disciples.

The only body that actually had the crucifixion scars in it was the physical body of flesh and bones in which Jesus died. But, according to Harris, the temporarily assumed material body in which Jesus appeared was not the same body of flesh which had the actual crucifixion scars in it. It follows, then, that the temporarily assumed physical body which Jesus showed his disciples was only a replica of the crucifixion body. If Harris is right, then Jesus flatly lied; this seems a serious objection to Harris’s view.

The Bible is very clear about the nature of the resurrection body. It is the same physical, material body of flesh and bones that dies. There are, in fact, numerous lines of evidence to support this. The evidence for the physical nature of the resurrection body is overwhelming (*see* RESURRECTION, EVIDENCE FOR). And its importance to Christianity can scarcely be overestimated. Any denial of the physical bodily resurrection of Christ is a serious matter. Denials by evangelicals are even more serious, including some who use the traditional term *bodily resurrection* to affirm their view. For “bodily” resurrection has always meant that Jesus was resurrected in the same physical, material body in which he died. As the poet John Updike put it,

Make no mistake; if He rose at all

it was as His body,

if the cells’ dissolution did not reverse, the molecules

reknit, the amino acids rekindle,

the Church will fall.

That Jesus rose from the dead in the essentially same physical body of flesh and bones in which he was crucified is a linchpin of orthodox theology and apologetics. Historic Christianity stands of falls on the historicity and materiality of the bodily resurrection of Christ.

Revelation, General. *General revelation* refers to God's revelation in nature as opposed to his revelation in Scripture (*see* NATURAL THEOLOGY). More specifically, general revelation is manifest in physical nature, human nature, and history. In each case God has disclosed something specific about himself and his relation to his creation. General revelation is important to Christian apologetics, since it is the data with which the theist constructs arguments from the existence of God (*see* COSMOLOGICAL ARGUMENT ; TELEOLOGICAL ARGUMENT). Without it there would be no basis for apologetics (*see* CLASSICAL APOLOGETICS).

God's Revelation in Nature. "The heavens declare the glory of God; the skies proclaim the work of his hands" (Ps. 19:1), the psalmist wrote. "The heavens proclaim his righteousness, and all the peoples see his glory" (Ps. 97:6). Job added, "Ask the animals, and they will teach you, or the birds of the air, and they will tell you; or speak to the earth, and it will teach you, or let the fish of the sea inform you. Which of all these does not know that the hand of the Lord had done this?" (Job 12:7–9).

Paul spoke of "the living God, who made heaven and earth and sea and everything in them. In the past, he let all nations go their own way. Yet he has not left himself without testimony: He has shown kindness by giving you rain from heaven and crops in their seasons; he provides you with plenty of food and fills your hearts with joy" (Acts 14:15–17). He reminded the Greek philosophers that "The God who made the world and everything in it is the Lord of heaven and earth and does not live in temples built by hands. And he is not served by human hands, as if he needed anything, because he himself gives all men life and breath and everything else" (Acts 17:24–25).

Paul instructed the Romans that even the heathen stand guilty before God, "since what may be known about God is plain to them, because God has made it plain to them. For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that men are without excuse" (

Rom. 1:18–20). In view of this the psalmist concluded, “The fool says in his heart, ‘There is no God’ ” (Ps. 14:1).

God is revealed in nature in two basic ways: as *Creator* and as *Sustainer* (*see* CREATION AND ORIGINS ; ORIGINS, SCIENCE OF). He is both the cause of the *origin* as well as the *operation* of the universe. The first speaks of God as the originator of all things. “By him all *were created* ” and “in him all things *hold together* ” (Col. 1:16–17); God “ *made* the universe” and he also “ *sustains* all things by his powerful word” (Heb. 1:2–3); he “ *created* all things” and by him “all things *have their being* ” (Rev. 4:11).

In addition to *Originator* , God is also the *Sustainer* of all things. He is active not only in the universe *coming to be* but also in its *continuing to be* . The psalmist referred to this latter function when he said of God: “He makes springs pour water into the ravines. . . . He makes grass to grow for the cattle, and plants for man to cultivate—bringing forth food from the earth” (Ps. 104:10 , 14).

God’s Revelation in Human Nature. God created human beings in his image and likeness (Gen. 1:27). Something about God, therefore, can be learned from studying human beings (cf. Psalm 8). Since humans are like God, it is wrong to murder them (Gen. 9:6) and even to curse them (James 3:9). The redeemed human self is “renewed in knowledge in the image of its Creator” (Col. 3:10). Paul affirmed that God created:

> From one man he made every nation of men, that they should inhabit the whole earth; and he determined the times set for them and the exact places where they should live. God did this so that men would seek him and perhaps reach out for him and find him, though he is not far from each one of us. “For in him we live and move and have our being.” As some of your own poets have said, “We are his offspring.” Therefore since we are God’s offspring, we should not think that the divine being is like gold or silver or stone—an image made by man’s design and skill. [Acts 17:26–29]

By looking at the creature we can learn something about the Creator (*see* ANALOGY, PRINCIPLE OF). For “Does he who implanted the ear not hear? Does he who formed the eye not see? Does he who disciplines nations not punish? Does he who teaches man lack knowledge?” (Ps. 94:9–10). Even Christ in the flesh is said to be an “image” of the invisible God (John 1:14 ; Heb. 1:3).

God is manifested not only in the intellectual nature of human beings, but also in their moral nature (*see* MORALITY, ABSOLUTE NATURE OF). God’s moral law is written in human hearts. For “when Gentiles, who do not have the law, do by nature things required by the law, they are a law for themselves, even though they do not have the law, their conscience also bearing witness” (Rom. 2:12–15). Since moral responsibility entails the ability to respond, man in God’s image is also a free moral creature (Gen. 1:27 ; cf. 2:16–17).

God’s Revelation in Human History. History has been called “His-story.” It is the footprints of God in the sands of time. Paul declared that God “determined the times set for them [the nations] and the exact places they should live” (Acts 17:26). God disclosed to Daniel that “the

Most High is sovereign over the kingdoms of men and gives them anyone he wishes and sets over them the lowliest of men" (Dan. 4:17). God also revealed to Daniel that human history is moving toward the ultimate goal of the kingdom of God on earth (Daniel 2 , 7). So a proper understanding of history informs us about the plan and purpose of God.

God Is Revealed in Human Art. The Bible declares that God is beautiful, and so is his creation. The psalmist wrote: "O LORD , our Lord, how majestic is your name in all the earth!" (Ps. 8:1). Isaiah beheld a marvelous display of God's beauty when he "saw the Lord seated on a throne, high and exalted, and the train of his robe filled the temple" (Isa. 6:1). Scriptures encourage us to "worship the LORD in the beauty of holiness" (Ps. 29:2 ; cf. 27:4).

Solomon pointed out that God has made everything "beautiful in its time" (Eccles. 3:11). The psalmist speaks of his city of Zion as "perfect in beauty" (Ps. 50:2). What God created is good like himself (Gen. 1:31 ; 1 Tim. 4:4), and the goodness of God is beautiful. So, insofar as creation reflects God, it is also beautiful. Not only is God beautiful and has made a beautiful world, but he has created beings who can appreciate beauty. Like him, they can also make beautiful things. Human beings are, as it were "sub-creators." God endows certain humans with special creative gifts which reveal something of his marvelous nature.

God Is Revealed in Music. God apparently loves music, since he orchestrated the angelic choir at creation when "the morning stars sang together and all the angels shouted for joy" (Job 38:7). Angels also continually chant the *tersanctus* in his presence, "Holy, holy, holy" (Isa. 4:7 ; 6:3). Furthermore, angels gather around God's throne and "in a loud voice they sing: Worthy is the Lamb, who was slain" (Rev. 5:12).

Moses' sister, Miriam, led the triumphant Israelites in singing after God delivered them through the Red Sea (Exod. 15). David, the "sweet psalmist of Israel," set up a choir for the temple and wrote many songs (psalms) to be sung in it. Paul admonished the church to "Speak to one another with psalms, hymns and spiritual songs. Sing and make music in your heart to the Lord" (Eph. 5:19).

We learn something more about God's nature through the human voice, a God-ordained instrument of music. Even the Jewish high priest entered within the holy of holies with bells on his garment. And the psalmist commanded that God be praised with trumpet, harp, lyre, tambourine, and cymbals (Ps. 150:3–5). In heaven the angels play trumpets (Rev. 8:2) and others play harps (Rev. 14:2). Music too is a gift and manifestation of God. Like the rest of his creation, it is a manifestation of his glory.

So even apart from God's special revelation in Scripture, he has manifested himself in general revelation in nature.

General and Special Revelation. While the Bible is God's only *written* revelation (*see* BIBLE, EVIDENCE FOR), it is not God's only revelation. God has more to say to us than is in the Bible. His general revelation in nature, man, history, art and music offers vast opportunities for continual exploration. The following chart summarizes this relationship:

Special Revelation	General Revelation
God as Redeemer	God as Creator
norm for church	norm for society
means of salvation	means of condemnation

The Role of Special Revelation. Special revelation contributes uniquely to Christian theology. The Bible alone is infallible and inerrant (*see* BIBLE, ALLEGED ERRORS IN). Further, the Bible is the only source of both God's revelation as Redeemer and his plan of salvation. Thus Scripture is normative for all (*see* REVELATION, SPECIAL).

The Bible alone is infallible and inerrant. The Bible is normative for all Christian thought. It is a revelation of Christ (Matt. 5:17 ; Luke 24:27 , 44 ; John 5:39 ; Heb. 10:7). The task of the Christian, then, is "to bring every thought captive to Christ" (2 Cor. 10:5) as revealed in Scripture. We must think as well as live Christocentric lives (Gal. 2:20 ; Phil. 1:21).

The Bible alone reveals God as Redeemer. While general revelation manifests God as Creator, it does not reveal him as Redeemer. The universe speaks of God's greatness (Ps. 8:1 ; Isa. 40:12–17), but only special revelation reveals his redeeming grace (John 1:14). The heavens declare the glory of God (Ps. 19:1), but only Christ declared his saving grace (Titus 2:11–13).

The Bible alone has the message of salvation. In view of God's general revelation all are "without excuse" (Rom. 1:20). For all who sin apart from the [written] law will also perish apart from the law" (Rom. 2:12). General revelation is a sufficient ground for condemnation. However, it is not sufficient for salvation. One can tell how the heavens move by studying general revelation, but not how to go to heaven (*see* HEATHEN, SALVATION OF). For "there is no other name under heaven [except Christ's] given to men by which men must be saved" (Acts 4:12). To be saved, one must confess "Jesus is Lord" and believe that God has raised him from the dead (Rom. 10:9). But they cannot call upon someone of whom they have not heard, "and how can they hear without someone preaching to them?" (Rom. 10:14). Thus, preaching the Gospel in all the world is the Christian's great commission (Matt. 28:18–20).

The Bible is the written norm. Without the truth of Scripture there would be no Church, for "the church is built on the foundation of the apostles and prophets" (Eph. 2:20). The revealed Word of God is the norm for faith and practice. Paul said "all Scripture is God-breathed and is useful for teaching, training, rebuking, correcting and training in righteousness" (2 Tim. 3:16). However, not all unbelievers have access to a Bible. Nonetheless, God holds them responsible to his general revelation. For "all who sin apart from the [written] law will also perish apart from the law," since they have a law in their hearts (Rom. 2:12 , 14).

The Role of General Revelation. While the Bible is all true, God has not revealed all truth in the Bible. Whereas the Bible is only truth, it is not the only truth. All truth is God's truth, but all God's truth is not in the Bible (*see* TRUTH, NATURE OF). General revelation, then, plays an important role in God's plan, and as such it has several unique roles.

General is broader than special revelation. General revelation encompasses much more than special revelation. Most of the truths of science, history, mathematics, and the arts are not in the Bible. The bulk of truth in all these areas is found only in God's general revelation. While the Bible is everywhere scientifically accurate, it is not a textbook on science. The mandate to do science is not a redemption mandate; it is a creation mandate. Right after God created Adam he commanded him to "fill the earth and subdue it" (Gen. 1:28). Likewise, there are no mathematical errors in God's inerrant Word, but then again there is very little geometry or algebra and no calculus in it either (*see* SCIENCE AND THE BIBLE). Similarly, the Bible records accurately much of the history of Israel, but has little on the history of the world, except as it bears on Israel. The same is true of every area of the arts and science. Whenever the Bible speaks in these areas, it speaks authoritatively, but God has largely left the discoveries of his truths in these areas to a study of general revelation.

General revelation is essential to human reason. Not even an unbeliever thinks apart from God's general revelation in human reason (*see* FAITH AND REASON). God is a rational being, and humanity is made in his image (Gen. 1:27). Just as God thinks rationally, so human beings were given that capacity. Brute beasts, by contrast, are called "irrational" (Jude 10). Indeed, the highest use of human reason is to love the Lord with "all our mind . . ." (Matt. 22:37).

The basic laws of human reason are common to believer and unbeliever (*see* LOGIC ; FIRST PRINCIPLES). Without them no writing, thinking, or rational inferences would be possible. But nowhere are these laws of thought spelled out in the Bible. Rather, they are part of God's general revelation and the special object of philosophical thought.

General revelation is essential to government. God has ordained that believers live by his written law, but he has written his law in the hearts of unbelievers (Rom. 2:12–15). Divine law in Scripture is the norm for Christians, but natural law is binding on all. Nowhere in Scripture does God judge the nations by either the law of Moses he gave to Israel (Exod. 19–20) or by the law of Christ he enjoins on Christians. To think otherwise is the central error of theonomists. Nowhere, for example, were non-Jewish nations ever condemned in the Old Testament for not observing the Sabbath or sacrificing a lamb. Strangers and sojourners in Israel were, of course, required to respect the civil and moral laws of Israel as long as they were in the country. But this no more means the Jewish law was intended for them than that Christians are under the *Quranic* law because they must abide by it when in Muslim lands.

The law of Moses was not given to the Gentiles. Paul said clearly, "the Gentiles who have not the law" (Rom. 2:14). The psalmist said "He has revealed his word to Jacob, his laws and decrees to Israel. He has done this for no other nation: they do not know his laws" (Ps. 147:19–20). This is confirmed by the fact that, in spite of the many condemnations of Gentiles' sins in the Old Testament, never once were they condemned for not worshiping on the Sabbath or not making pilgrimages or bringing tithes to Jerusalem. This does not mean that there is no law of God for non-believers; they are bound by the law "written in their hearts" (Rom. 2:2–15). While they have no special revelation in holy Scripture, they are responsible to general revelation in human nature.

General revelation is essential to apologetics. Without general revelation there would be no basis for Christian apologetics (*see* CLASSICAL APOLOGETICS). For if God had not revealed himself in nature, there would be no way to argue from the design evident in it to the existence of a Designer, known as the teleological argument for God's existence. Nor would there be any way to argue from the beginning or contingency of the world to the existence of a First Cause, known as the cosmological argument. Likewise, unless God had revealed himself in the very moral nature of human beings it would not be possible to argue to a Moral Lawgiver (*see* MORAL ARGUMENT FOR GOD). And, of course, without a God who can act in creating the world, there could be no special acts of God (miracles) in the world (*see* MIRACLE).

Interaction Between Revelations. Since it is the task of a systematic thinker to organize all truth about God and his relation to his creation, both general and special revelation are needed. However, since special revelation overlaps with general revelation, it is necessary to discuss the interaction between general and special revelation. God has revealed himself in his Word and in his world. His truth is found both in Scripture and in science. The problem arises when they seem to conflict. It is too simplistic to conclude that the Bible is always right and science wrong.

When dealing with conflicts between Christianity and culture we must be careful to distinguish between *God's Word* , which is infallible, and *our interpretation* of it which is not. We must further distinguish between *God's revelation* in his world, which is always true, and current *understanding* of it, which is not always correct and is likely to change. In the past, Christians have frequently given up claims to biblical truth for scientific theories that are no longer held to be so.

Two important things follow from these distinctions. First, God's revelations in his Word and his world never contradict each other. God is consistent; he never talks out of both sides of his mouth. Second, whenever there is a real conflict, it is between a human interpretation of God's Word and a human understanding of his world. Either one or both of these are wrong, but God has not erred.

Which gets the priority? When conflicts in understanding God's general and special revelations occur, which one gets the priority? The temptation might be to give precedent to the biblical interpretation because the Bible is infallible, but this overlooks the crucial distinction just made. The Bible is inerrant, but interpretations of it are prone to error. The history of interpretation reveals that God's infallible Word is as capable of being misunderstood as is anything else, including the arts and science.

This does not leave one at an impasse. Whenever there is a conflict between an interpretation of the Bible and a current understanding of God's general revelation, priority should generally be given to the interpretation that seems more certain. Sometimes this is our understanding of special revelation, and sometimes it is our understanding of general revelation, depending on which one is more thoroughly proven. A few examples will help illuminate the point.

Some interpreters have wrongly concluded on the basis of Biblical references to "the four corners of the earth" (Rev. 7:1) that the earth is flat. However, science has proven with *certainty* that this is wrong. Therefore, in this case the certainty in interpreting God's general

revelation takes precedence over whatever uncertainty there may be in interpreting these biblical references. “Four corners” can be understood as a figure of speech.

Others have claimed that the sun moves around the earth on the basis of Bible references to “sun set” (Josh 1:15) or the sun “standing still” (Josh. 10:13). However, this interpretation is not necessary. It could be only the language of appearance from an observer’s point of view on the face of the earth (*see* SCIENCE AND THE BIBLE). Furthermore, since Copernicus there is good reason to believe that the sun does not move around the earth. Hence, we assign a higher *probability* to the heliocentric interpretation of God’s world at this point than to a geocentric interpretation of his Word.

Unfortunately some are willing to believe in a given interpretation of God’s Word, even if it involves a logical contradiction. But general revelation demands (by way of the law of noncontradiction) that opposites cannot both be true (*see* FIRST PRINCIPLES). Hence, we cannot believe that God is both one person and also three persons at the same time and in the same sense. Thus, both monotheism, so defined, and Trinitarianism (*see* TRINITY) cannot be true. We can, and do, believe that God is three Persons in one Essence. For even though this is a mystery, it is not a contradiction. Therefore, we can be *absolutely certain* that any interpretation of Scripture that involves a contradiction is false. However, there are times when an interpretation of Scripture should take precedence over even highly popular views in science.

Macroevolution is a good example (*see* EVOLUTION, BIOLOGICAL ; EVOLUTION, CHEMICAL). It is *virtually certain* that the Bible cannot be properly interpreted to accommodate macroevolution (see Geisler). The Bible teaches that God brought the universe into existence out of nothing (Gen. 1:1), that he created every basic kind of animal and plant (Gen. 1:21), and that he specially and directly created man and woman in his image (Gen. 1:27). Hence, in spite of the prevailing and popular (though not highly probable) evolutionary views to the contrary, the Christian must give priority to this highly probable interpretation of Scripture over the improbable theory of macroevolution.

Mutual Enrichment. Often there is no serious conflict between widely accepted Bible interpretation and the general understanding of the scientific world. Rather, there is mutual enrichment. For example, a knowledge of the content of the Bible is essential for much of western Art and Literature. Further, biblical history and world history overlap significantly, so that neither should be ignorant of the other. More neglected is the connection between modern science and the biblical idea of creation. In this connection it is important to note that the biblical concept of creation helped give rise to modern science. Of course, in the study of origins there is a direct overlap and mutual enrichment of the scientific and biblical data.

Conclusion. The Bible is essential to both systematic thinking and to apologetics. It is the only infallible writing we have. It speaks with unerring authority on every topic it covers, whether spiritual or scientific, whether heavenly or earthly. However, the Bible is not God’s only revelation to mankind. God has spoken in his world as well as in his Word. It is the task of the Christian thinker to appropriate the information from both and to form a worldview that includes a theocentric interpretation of science, history, human beings, and the arts. However, without

God's revelation (both general and special) as the basis, this task is as impossible as it would be to move the world with no place to put one's fulcrum.

In theology the interaction between biblical studies and other disciplines should always be a two-way street. No one provides a monologue for the other; all engage in a continual dialogue. Although the Bible is infallible in whatever it addresses, it does not speak to every issue. And while the Bible is infallible, our interpretations of it are not. Thus, those in biblical studies must listen to as well as speak to the other disciplines so that a complete and correct systematic view can be constructed.

Revelation, Progressive. ***See*** **PROGRESSIVE REVELATION .**

Revelation, Special. *Special revelation* (*see* BIBLE, EVIDENCE FOR) is God's revelation in his Word (Scripture), as opposed to God's revelation in his world (*see* REVELATION, GENERAL). Special revelation may have originally been given orally or some other way (cf. Heb. 1:1) but has subsequently been written down and is now found only in God's written Word, the Bible (2 Tim. 3:16–17).

God's special revelation has been confirmed by miracles (*see* MIRACLE ; MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE). This is how the canon of Scripture was determined (*see* APOCRYPHA, OLD AND NEW TESTAMENT ; BIBLE, CANONICITY OF).

Revelational Presuppositionalism. ***See*** **VAN TIL, CORNELIUS ; PRESUPPOSITIONAL APOLOGETICS .**

Russell, Bertrand. Bertrand Russell (1872–1970) was born in Ravenscroft, England, to freethinking parents who were friends of John Stuart Mill. After the death of his parents, he was reared by austere grandparents who changed from being Presbyterians to Unitarians. He began questioning the immortality of the soul by the time he was fourteen and abandoned his belief in God by eighteen (in 1890) after reading Mill's *Autobiography* .

He studied philosophy at Cambridge and later taught at its Trinity College, from which he was eventually dismissed because of his pacifistic activism (1916). He said, "when the war came I felt as if I heard the voice of God. I knew that it was my business to protest." Russell lectured in the United States several times (1896, 1927, 1929, 1931, 1938f.). He was married and divorced many times, spent six months in prison for antigovernment activity (1918) where he wrote *Introduction to Mathematical Philosophy* , and in 1940 he was ruled morally unfit to teach in New York. Yet Russell was eventually awarded a Nobel Prize for literature (in 1950) for championing freedom of thought.

The writings of Russell are voluminous, including everything from co-authoring the weighty *Principia Mathematica* (1910) with Alfred North Whitehead to his more popular *Why I Am Not a Christian* (based on a 1927 series of lectures). Other works include *A Critical Exposition of the Philosophy of Leibniz* (1900), "Free Man's Worship" (1903), "The Essence of Religion" (1912), *Religion and Science* (1935), "The Existence of God Debate" with Father Copleston (1948), "What Is An Agnostic?" (a 1953 interview), and "Can Religion Cure Our Troubles?" (based on 1954 articles). His primary works on philosophy express a linguistic atomism. He was a mentor to Ludwig Wittgenstein , wrote the introduction to Wittgenstein's *Tractatus* , and acknowledged Wittgenstein's influence on his own logical atomism.

Russell's Religion. Bertrand Russell's religious view evolved considerably over his ninety-eight-year life. For the first fourteen years of his life he was a theist (*see* THEISM). Between fourteen and eighteen he adopted a deistic (*see* DEISM) position. At eighteen he became a-theistic (i.e., non-theistic). At thirty-one he embraced a kind of fatalistic Stoic naturalism expressed in "Free Man's Worship." By age forty he had a kind of experiential pantheism that Friedrich Schleiermacher (1768–) might have approved (see Russell, "The Essence of Religion"). Later, he became a militantly antitheistic and anti-Christian. At age 76, he described himself as an "agnostic" (*see* AGNOSTICISM) in his interview with *Look* magazine (1953).

Agnosticism and Antireligion. Whatever one calls Russell's metaphysical wanderings, he was consistently anti-Christian and antireligious, though he did not consider himself an atheist. "My position is agnostic," he said (Russell, "The Existence of God Debate," 144). In his *Look* magazine interview he claimed that "An agnostic thinks it is impossible to know the truth in matters such as God and the future life with which Christianity and other religions are concerned." After this strong statement, he then hedges his bet, adding: , if not impossible, at least impossible at the present time" ("What Is an Agnostic?" 577).

Russell distinguishes agnosticism from atheism, claiming that “An atheist, like a Christian, holds that we *can* know whether or not there is a God; the atheist, that we can know there is not (*see* ATHEISM). The agnostic suspends judgment, saying that there are not sufficient grounds either for affirmation or for denial. . . . An Agnostic may hold that the existence of God, though not impossible, is very improbable” (ibid.).

From Russell’s pen came a relentless attack, not only on Christianity, but on religion in general. He wrote, “I am as firmly convinced that religions do harm as I am that they are untrue” (*Why I Am Not a Christian* , xi). The basic reason is that they are based on a belief that is generated through fear, which in essence is bad. Organized religion retards progress in the world. In particular, “I say quite deliberately that the Christian religion, as organized in its Churches, has been and still is the principal enemy of moral progress in the world” (ibid., 15).

No Authority Accepted. Russell claimed to reject all authority. The agnostic, he said, holds that a man should think out personal conduct, listening to the wisdom of others. “No one but a fool indulges every impulse, but what holds a desire in check is always some other desire” (“What Is an Agnostic?” 578).

He denied having “faith in reason alone,” insisting that there is more than facts and reason. He saw himself guided by his thought-through purposes or ends. “The Agnostic will find his ends in his own heart and not in an external command” (ibid., 583). For example, reason can tell how to get to New York, but only the individual can come up with the reason (purpose) for going there.

Sin is not a useful notion, though some kinds of conduct are desirable and some are undesirable (ibid., 578). But he hastens to add that punishment for undesirable conduct should only be a deterrent or reformatory and not penal.

Problems with Christianity. The Bible is rejected with all other authority. Russell considered it legendary history on a level with Homer. Some of its moral teaching is good, but much of it is very bad (ibid., 579).

Russell doubted whether Christ ever lived. “Historically,” he claimed, “it is quite doubtful whether Christ ever existed at all, and if he did we do not know anything about him” (*Why I Am Not a Christian* , 11). Nonetheless, he claims that “Most [which does not necessarily include himself] agnostics admire the life and moral teachings of Jesus as told in the Gospels [which he does not accept], but not necessarily more that those of certain other men. Some [not Russell] would place him on the level with Buddha, . . . Socrates and some with Abraham Lincoln” (“What Is an Agnostic?” 579). Unlike many unbelievers, Russell declared: “I do not think that Christ was the best and wisest of men” (“Can Religion Cure Our Troubles?” 2). Russell’s estimation of the Jesus of the Bible was that he was unwise, unmerciful, inhumane, and cruel (see below). He presented Socrates in a better light. He wrote, “There is one very serious defect to my mind in Christ’s moral character, and that is that he believed in hell. I do not myself feel that any person who is really profoundly humane can believe in everlasting punishment” (*Why I Am Not a Christian* , 12).

No Immortality. Russell disbelieved in any afterlife, whether heaven or hell. Speaking of agnostics in general, he said: "An Agnostic, as such, does not take a view about survival unless he thinks that there is evidence one way or the other." For himself, Russell adds, "I do not think there is any good reason to believe that we survive death" ("What Is an Agnostic?" 580). For "it is rational to suppose that mental life ceases when bodily life ceases" ("What I Believe," 40). He adds, "I believe that when I die I shall rot, and that nothing of my ego will survive" (*Why I Am Not a Christian* , 43).

While somewhat uncertain about an afterlife in general, he was absolutely certain that there is no hell. For "Belief in hell is bound up with the belief that the vindictive punishment of sin is a good thing. . . . There might conceivably someday be evidence of its [heaven's] existence through spiritualism, but most Agnostics do not think there is such evidence, and therefore do not believe in heaven" ("What Is an Agnostic?" 580–81). As to whether he fears God's judgment, Russell responded: "Most certainly not. I also deny Zeus and Jupiter and Odin and Brahma, but these cause no qualms. . . . If there were a God, I think it is very unlikely that He would have such an uneasy vanity as to be offended by those who doubt his existence" (ibid., 581).

Naturalistic Denial of Miracles . As for the supernatural, Russell asserted that "Agnostics do not think there is any evidence of 'miracles' in the sense of happenings contrary to natural law." Indeed, "it is possible to dispense with miracles, since Providence has decreed that the operation of natural laws shall produce the best possible results" (*Why I Am Not a Christian* , 42). He admits there are unusual events, but these are not miraculous. "We know that faith healing occurs and is in no sense miraculous." He saw as much miraculous evidence for the Greek gods in Homer as for the Christian God in the Bible" ("What Is an Agnostic?" 581).

Along the same line, he regarded the virgin birth as a vestige of pagan mythology (*see* MITHRAISM ; MYTHOLOGY AND THE NEW TESTAMENT). He pointed to a virgin birth story attached to Zoroaster and the fact that Ishtar, the Babylonian goddess, is called "the holy virgin" (ibid., 579).

Russell also rejected the idea of a purpose for life. "I do not think that life in general has any purpose. It just happened. But individual human beings have purposes, and there is nothing in Agnosticism to cause them to abandon these purposes" (ibid., 582).

Early Buddhism the Best Religion. Asked which religions he most respected, Russell responded that he preferred Buddhism, "especially in its earliest forms, because it has had the smallest element of persecution." He admired Confucianism and liberal Christians who reduced dogma to a minimum. But that there is actually a God behind any religion, he said the only evidence he would accept would be a voice from the sky accurately predicting all that would happen in the next twenty-four hours. However, even that would only convince him of a superhuman intelligence. He could, in fact, think of no evidence that would convince him of a God's existence (ibid., 583–84).

Evaluation. Such antagonism even to the possibility of proof for God's existence calls into question Russell's definition of *agnosticism* . His attitude differs little from that of most atheists

who claim to know (on "very probable" grounds) that God does not exist. What is the difference? Few atheists claim to be absolutely certain that there is no God (*see* GOD, ALLEGED DISPROOFS OF). At one point in his *Look* interview, Russell admitted that, for all practical purposes he was "at one with the atheists" (ibid., 577). Such reluctance to admit atheism brings to mind Karl Marx 's quip that "an agnostic is nothing but a gutless atheist."

Self-Defeating Agnosticism. If Russell was an "agnostic," he was a hard-core one, claiming it "impossible" to know if there is a God. This boils down to the statement: "I know for sure about God's existence that you cannot know anything for sure about God's existence." Adding the caveat "at the present time" does not mitigate the problem. The statement is still self-defeating "at the present time."

Russell's evaluation of religion is shallow and faulty. His claim that all religions are based on fear is a "sociological fallacy." That is, it uses descriptive statements as though they were prescriptive. Fear is a factor in bringing some to religion, but it is insufficient to give a genuine or enduring faith. People seek religion also for happiness, security, freedom from guilt, and other factors. Russell seemed to have a pathological fear of fear. Not all fear is bad. There is a wholesome fear that warns one of possible danger or negative consequences. The fear of failing an exam can be a helpful motivation to study. The fear of being hit by a drunk driver can make one more watchful on the road. Also, psychological reasons do not explain the origin of a belief. They help to show *why* people believe, but do not account for *what* they believe (see Woods, 23). Finally, the origin does not determine the value of a thing. Most people fear fire, but this says nothing about the value of a fire.

The Need for God. Though Russell did not believe, a need for God is occasionally implicit. At one of his more candid moments he wrote: "Even when one feels nearest to other people, *something in one seems obstinately to belong to God, and to refuse to enter into any earthly communion* —at least that is how I should express it if I thought there was a God. It is odd, isn't it? I care passionately for this world and many things and people in it, and yet . . . what is it all? *There must be something more important, one feels,* though I don't believe there is" (*Autobiography* , 125–26, emphasis added).

Authority of Reason. Russell claimed to reject all authority, yet he acknowledged the final authority of human reason. He denied having "faith in reason alone," only in the sense that human purposes helped determine his actions. But one does not have faith in purposes but in some source of, and test for, truth. Reason alone suffices here. Hence, it is fair to say that Russell rejects any authority except that of human reason (*see* RATIONALISM). Of course, "reason is concerned with matters of fact, some observed, some inferred" ("What Is an Agnostic?" 583). So, Russell did have a final authority.

Like other agnostics and atheists, Russell had an inconsistent view of sin. He denied its validity, reducing everything to the "desirable" or "undesirable." Yet, when it came to issues of free speech and life style he expressed unmovable moral convictions. Russell seem to have no doubt that belief in hell was really and truly "cruel," "unmerciful," and "inhumane." These are moral absolutist positions. If morality is merely the "desirable" or "undesirable," then there is no real moral grounds to say anything is cruel or wrong. To be consistent, he should have said only

that the concept of hell was contrary to his desires. He had no moral grounds to make any value judgment (*see* MORALITY, ABSOLUTE NATURE OF).

Further, there is a basic ambivalence in Russell's view of humanity. R. E. D. Clark observed that Russell based his code of morality on essential human goodness, then elsewhere urges that a good God could never have created such a revolting biped.

Authority and Christianity. Russell's dislike for all things Christian rises with the sensitivity of a Geiger counter when he approaches anything smacking of authority or a claim on his own life and freedom. He rejects the Bible along with all other authority. He likes some of its moral teachings, but those that bother him are "very bad" (ibid., 579). His attacks against Jesus, besides his basic unbelief in Jesus' existence, seem to stem from the fact that Christ in Scripture is an authority figure. Buddha, who he likes better, makes few commands and offers a personally-tailored road of wisdom. Socrates is even less directive.

Why Russell Rejected Christ. The militant anti-Christianity in *Why I Am Not a Christian* leaves the impression of one strongly atheistic. But he seemed more intent in setting up a straw-man argument against the Christian authoritarian personality and lifestyle. His ideal of the Christian religious person is one who does good and does not follow creeds. Christians must be more than do-gooders, however, or nothing would distinguish them from other religionists, such as Muslims. Minimally a Christian believes certain things about the existence of God, immortality, and the character and person of Christ. None of these can Russell accept. In particular, Russell came to the following positions:

The Fallacy of the First-Cause Argument. Russell rejected the traditional arguments for God's existence (*see* GOD, EVIDENCE FOR), in particular the cosmological argument for a First Cause. He reasoned that if something can exist without a cause, then it could be the world, just as it could be God. He attributed belief that the world had a beginning to the poverty of human imagination.

According to Russell, the very concept of a "cause," on which the Cosmological Argument depends, had lost its vitality in current philosophy. But even granting causality, he posed this dilemma:

1. Either all things are caused or else they are not.

2. If all beings are caused, then so is God since he is a being.

3. If all things are not caused, then neither is the world since it is something.

4. So either God is caused by another (and is not the First Cause) or else the world is not caused by any God (and no God exists).

5. In either event there is no First Cause.

Logically it does not follow that, just because God can be without a cause, the world can too. God and the world are in two different categories. Since one is Creator and the other created, only the world needs a cause, not God. Also, there are good scientific and philosophical reasons for believing that the world had a beginning, something Russell brushes aside without due consideration (*see* BIG BANG ; KALAM COSMOLOGICAL ARGUMENT). Hence, Russell's anti-first-cause argument fails.

Russell's question "Who caused God?" is based on a misstatement of the principle of causality (*see* CAUSALITY, PRINCIPLE OF). Thomas Aquinas did not argue that *everything* needs a cause. Rather, *contingent* or *dependent* beings need a cause. For example, beings that have a beginning need a cause. For whatever comes to be needs a cause to bring it to be. But an eternal independent Being, such as God is, does not need a cause. Hence, to ask "Who made God?" is absurd. It is asking who made the unmade? It should not be difficult for Russell to understand this. He believed that the world did not need a cause; it was simply "there" ("Existence of God Debate"). But if the universe can be uncaused, so can God.

The Argument from Natural Law. The argument from natural law is rejected by Russell because it depends on understanding laws in a prescriptive sense (arguing that every prescription has a prescriber). But the laws of nature are only descriptive, not prescriptive. Hence, he insisted, the natural law argument fails. Further,

1. If God created law, then it was either for a reason or not for a reason.

2. It could not have been for a reason, since in that case God would be subject to it and not ultimate.

3. It could not have been for no reason, for in that case a rational God would not have done it. For God has a reason for everything.

4. Therefore, God could not have created law (i.e., there is no need for a Creator of law).

Russell is correct in pointing out that the laws of nature are only descriptive, not prescriptive. But it does not follow from this that the regular patterns and order of nature need no Orderer (*see* TELEOLOGICAL ARGUMENT ; ANTHROPIC PRINCIPLE ; EVOLUTION, CHEMICAL). Indeed, many modern agnostics and atheists contemplating the anthropic principle have had serious second thoughts. For who ordered the universe by specifying from the very beginning the precise conditions that would make human possible?

Further, Russell poses a false dilemma about whether God had a reason for creating law. The reason does not have to be beyond himself, or it can be totally absent. God's reason for doing things is in himself: He is the ultimate Reason, for he is the ultimate rational Being in the universe.

The Argument from Design. Following David Hume and Charles Darwin , Russell rejected the concept of design in nature that leads to positing a Designer of nature. His reasoning can be put in this form:

1. Either living things are adapted to their environment because of design or because of evolution.

2. Science has demonstrated via natural selection that they are adapted to their environs because of evolution.

3. Hence, they were not designed by a Designer.

Russell's argument against design is a classic fallacy in logic. He sets up alternatives and then he selects which he wishes to deny. The inevitable result is begging the question. He also ignores evidence. He argues fallaciously that adaptation results from *either* design *or* evolution and then that it results only from evolution (affirming one alternate). The implication: It does not result from design. But in order for there to be a valid conclusion, one must deny one of the two alternates. He overlooks the possibility that adaptation might result from both design and evolution. After all, the Creator could have designed evolution as the means to accomplish his purpose (*see* EVOLUTION). Further, Russell assumes that the evidence for evolution is greater than that for creation. But this is not the case (*see* EVOLUTION, BIOLOGICAL).

The Moral Argument. Russell chided Immanuel Kant for his moral argument for God. He insists that one does not easily get rid of what was learned at a mother's knee, and this is where Kant learned to believe in God. This *ad hominem* argument aside, Russell posed this logical dilemma for those who argue from a moral law to a Moral Law Giver:

1. If there is a moral law, it either comes from God's fiat (will) or it does not.

2. But it cannot be from God's fiat or else he would not be essentially moral but arbitrary.

3. Neither can it not be by God's will, for in that case God would be subject to a moral standard beyond himself and would not be God (i.e., the Ultimate).

4. In either event there is no reason to posit a God as the source of moral law.

Putting Russell's *ad hominem* fallacy aside as unworthy of comment, his argument is another false dilemma. For the moral law does not have to be either arbitrary or outside of God (*see* ESSENTIALISM, DIVINE); it can be inside (viz., his own unchangeable moral nature). Hence, God can be ultimate without being arbitrary.

The Argument from Remedial Justice. Theists have sometimes argued that there must be a next life and a morally perfect God to remediate the injustice of this life. But Russell responds that whatever we find true here is probably true elsewhere. And we find that injustice rules in this life. There is no reason to believe it would not also rule in all other possible worlds.

It is not necessarily the case that what is true here is also true elsewhere. A desert in Arizona does not mean there is one in Florida or Alaska. Even if it were true that human behavior in one place is indicative of human behavior elsewhere under similar conditions, Russell's argument would fail. After all, heaven is an entirely different condition—one of perfection. If this is so,

then one would expect human behavior to be different there. Russell also overlooks the prescriptive nature of the moral law. If there is an absolutely perfect God, then he cannot allow injustice to rule forever. He must rectify it. And Russell cannot assume that no morally perfect God exists as a basis for proving that no such God exists.

The Character of Christ. Not only did Russell reject the arguments for God's existence and immortality, but he also denied that Christ was a person of high moral character. He believed that Jesus' character had serious moral flaws.

Russell's belief about Jesus' character has flaws of its own. First, he entirely overlooks all the positive evidence for Christ's impeccable character (*see* CHRIST, UNIQUENESS OF). Second, his negative arguments all fall short of being actual proofs of flaws in Christ's character..

Jesus lacked wisdom. A very wise man cannot be wrong about important things. Yet Jesus was wrong about one of his important teachings, namely, that he would return immediately to earth after his death (Matt. 24:34). Hence, Jesus was not a very wise man. On another occasion, he manifested his lack of wisdom by cursing a fig tree for not having fruit before it was the season for bearing fruit (Matt. 21:19 ; cf. Mark 11:14). No truly wise person would do such a thing.

Russell wrongly assumes that Jesus claimed he would return within the life-time of his disciples (*Why I Am Not a Christian* , 11). The evidence is to the contrary. Jesus did not say he would return immediately but only immanently (cf. Acts 1:7). The reference to "this generation" (Matt. 24:34) could refer to the Jewish nation not passing away before he returns, since the word for generation (*genea*) can refer to a race or nation (cf. Matt. 23:36). Or, it may refer to the fact that he would come before the end of the generation in the future when the events predicted in this passage begin to come to pass (Matt. 24:33). Jesus explicitly said no one knew the time of his coming (Matt. 24:36 ; Acts 1:7). Thus, it is contrary to his very teaching in this same passage to understand him as telling them when he would return.

As to whether it was unwise to curse the fig tree, Russell misses an important point. It was the time of year (Passover) in which early figs do appear. This is why the text says: "and seeing from afar a fig tree *having leaves* , he went to find out if it had any fruit" (vs. 13). He certainly would not have done this unless figs sometimes appeared, as they do, under new leaves at this time of year.

Further, if Jesus is the Creator, then simply because a finite being does not see a reason for some event does not mean that an infinite Mind has none. As it turns out, Jesus' purpose here is expressed: The fig true illustrated Israel's fruitless rejection of the Messiah, and it would lead to disaster. Immediately following this he was accosted in the temple by the Jewish leaders (Mark 11:15f .) who soon thereafter called for his crucifixion.

Jesus was not profoundly humane. According to the Gospels, Jesus believed in hell—the eternal suffering of the lost (Matt. 5:22 ; 10:28). Russell insisted that no one who is profoundly human would believe in a place like hell.

The fact that Jesus believed in hell does not make him any more inhumane than someone who believes in the Jewish holocaust. Certainly, if the holocaust happened, then is not inhumane to believe in it. Likewise, if hell is real, then one is not inhumane for believing it is real. The question is one of truth, not of humanity.

Jesus was vindictive. Russell believes that Jesus was vindictive toward his enemies, pronouncing woes and judgments on them (cf. Matt. 23). But vindictiveness toward one's enemies is a moral flaw. Therefore, Jesus' character was morally flawed.

Contrary to Russell's claim, there is no evidence that Jesus was vindictive. He retaliated against no one. He warned them of the destructive end of their life, unless they turned around. And that is a merciful thing to do. Jesus exercised one of the greatest acts of non-vindictive mercy known to many when he look at those who torturously crucified him and said, "Father, forgive them for they do not know what they are doing" (Luke 23:34). Jesus explicitly taught that we should not be vindictive, insisting that: "If someone strikes you on the right cheek, turn to him the other also." He added, "Love you enemies, bless those who hate you, and pray for those who spitefully use you and persecute you" (Matt. 5:39 , 44).

Jesus lacked proper kindness. Russell argued that any one who threatened people with eternal unforgiveness was not properly kind. Yet Jesus did this on occasion (Matt. 5:22 ; 23:35–36 ; John 5:24–29 ; 12:48).

That Jesus warned people about hell does not prove he lacked proper kindness. In fact, if there is a hell—and who is in a better position to know than is the Son of God (*see* CHRIST, DEITY OF)—then Jesus would have been unkind not to warn people about it. What would Russell think about someone who failed to warn him that there was a gaping fault in the road ahead of him in which he would perish if he did not turn around?

Jesus promoted cruelty. Another flaw in the character of Christ, according to Russell, was that he unnecessarily drowned a herd of pigs. Such an act is unkind to animals, unnecessarily destroying them in a lake. This reveals another flaw in Jesus' character.

There was no moral imperfection in the act of drowning a herd of pigs (Matt. 8:32). As God, Jesus was sovereign over all life. He created it, and he had the right to take it (Deut. 32:39 ; Job 1:21). All animals eventually die at the Creator's fiat anyway. That it happens earlier or later is irrelevant. The purpose of this herd of swine was not to give swine milk. The owners were going to take their lives anyway. Jesus did not directly kill the pigs anyway; the demons did. Jesus simply cast the demons out of the man and the demons entered the pigs and drove them over the cliff. Jesus was more concerned about saving the person, and Russell is more interested in the pigs.

Summary. Russell argued that there is no real basis to believe in either the existence of God or the high moral character of Christ (*see* CHRIST, UNIQUENESS OF). And since both of these beliefs are essential to being a Christian, he did not wish to call himself a Christian. But Russell's arguments fail to take way the Christian arguments for the existence of God and the

moral superiority of Christ. They lack both a logical and a factual basis to do the job he desired. They indicate more about what he wanted to be the case, rather than an honest search for truth.

Sagan, Carl. Carl Sagan (d. 1996) was a popular television personality, author of science and science fiction and an agnostic astronomer who strongly defended naturalistic evolution (*see* EVOLUTION, BIOLOGICAL). He wrote numerous books, including *Cosmos* , *Cosmic Connection* , *Life in the Universe* , and *Broca's Brain* .

Although a confessed agnostic (*see* AGNOSTICISM), Sagan made a surrogate religious experience of celebrating the cosmos. The universe, in his system of belief, functioned like a god. The cosmos is ultimate, eternal, creator, and object of worship. The set for his popular-level Public Broadcasting Service series, "Cosmos," was consciously decorated to give the feeling of both a space ship and a cathedral. The theme statement of those programs, Sagan's books, and much of his life's work was " *THE COSMOS IS ALL THAT IS OR EVER WAS OR EVER WILL BE* " (*Cosmos* , 4). The cosmos is supreme and all-encompassing. It is COSMOS, with all capitals.

In the Image of the COSMOS. Sagan believed that human beings are "created" in the image of the cosmos. He writes: "The ocean calls. Some part of our being knows this is from where we came. We long to return. These aspirations are not, I think, irreverent, although they may trouble whatever gods may be" (ibid., 5). Everything in the universe employs the same patterns over and over. Conservatively and ingenuously. This is true of plants and animals, oak trees and humans. Humanity is the product of a long series of biological accidents (*Cosmic Connection* , 52). As to human origins, Sagan states plainly, "Evolution is a fact, not a theory" (*Cosmos* , 27). Humans emerged by a powerful but random process (ibid., 282).

A Moral Duty to the COSMOS. Since humankind is created in the image of the cosmos, people have a moral obligation to their creator. "Our obligation to survive is owed, not just to ourselves but also to the COSMOS, ancient and vast, from which we spring" (ibid., 345). Since we have received our existence, we have a duty to perpetuate its existence. Indeed, "the very key to our survival is the cosmos, on which we float like a speck of dust in a beam of light" (ibid., 4). In such a universe, present and future well-being depends upon scientific knowledge (*UFO's—A Scientific Debate* , xv).

Salvation from the COSMOS. An openness to the cosmos is necessary to advance our knowledge (*Broca's Brain* , 58). Since humans evolved on earth, Sagan reasoned that life evolved elsewhere as well. Every star may be a sun to someone (*Cosmos* , 5). Contact with these

extraterrestrials could be the salvation of the human race. So we must tune in to outer space by way of radio telescopes to receive possible messages. “Receipt of a single message from space would show that it is possible to live through such technological adolescence” (*Broca’s Brain* , 275). After all, the transmitting civilization survived. Sagan believed such knowledge might be worth a great deal. Such a message might strengthen the bonds that join all beings on this planet. Since the cosmos is our creator and may be our savior, we have a moral duty to it. Scientists, and particularly astronomers, are priests who remind us of our ethical obligations and show us the way of cosmic salvation.

Evaluation. While Sagan presented his views as scientific, they really are religious. He goes way beyond science into the realm of speculative philosophy and religion. He deifies the cosmos (notice the capital letters, “COSMOS”). It replaces God as Creator and Object of moral duty and religious worship. Sagan even looks to it as the source of our salvation as a race.

Sagan either overlooks or downplays the vast scientific evidence for the existence of God and the creation of life (*see* GOD, EVIDENCE FOR). He admitted that the second law of thermodynamics (*see* THERMODYNAMICS, LAWS OF) would imply a Creator but countered that the first law of thermodynamics shows that the cosmos is eternal and needs no creator. This, however, misunderstands the first law, which does not in its scientific form say anything about whether energy can or cannot be created, but merely that the existing amount of actual energy in the universe remains constant.

By contrast with Sagan, another agnostic astronomer is more fair with the scientific evidence from which one can infer a Creator. Robert Jastrow, founder and director of the Goddard Institute for Space Research, notes that the evidence for a beginning of the universe has mounted. “For the scientist who has lived by his faith in the power of reason, the story sounds like a bad dream. He has scaled the mountains of ignorance; he is about to conquer the highest peak; as he pulls himself over the final rock, he is greeted by a band of theologians who have been sitting there for centuries” (Jastrow, 15).

Inconsistent References to Design. Sagan is inconsistent in his inferences from complex design (specified complexity). He admits that one short message from outer space implies an intelligent being(s) as its source (*see* EVOLUTION, CHEMICAL). Yet he denies the human brain, with some 20 million volumes of the same kind of specified complexity needs an intelligent Creator (*see* TELEOLOGICAL ARGUMENT ; ANTHROPIC PRINCIPLE). Sagan wrote that “the neurochemistry of the brain is astonishingly busy, the circuitry of a machine more wonderful than any devised by humans” (*Cosmos* 278).

If a single message from space requires an intelligent creator, how about 20 million volumes of information? If ordinary machines need an intelligent cause, how about one more wonderful than any devised by humans? Another unbelieving astronomer, Fred Hoyle, was converted to theism when he discovered that the chances of a one-celled organism emerging by purely natural process was 1 in 10 40,000 (see Hoyle).

Salvation of Infants. ***See*** **INFANTS, SALVATION OF .**

Sartre, Jean Paul. Jean Paul Sartre (1905–1980), a popular French atheist (*see* ATHEISM) of the mid twentieth century, approached philosophy from an existential perspective. He, along with Albert Camus, stressed the absurdity of life. Sartre was born in Paris to nominal Christians (Catholic-Protestant mix), educated in Germany, and taught philosophy in France. His first work of note was *La Nausea* (*Nausea*). In 1938, Sartre was captured by Germany (1940), returned to France, and taught philosophy until 1944. He attempted an abortive leftist political movement (1951), and later cooperated with French Communists, trying to reconcile Existentialism and *Marxism.

Becoming an Atheist. In his autobiography, *Words* , Sartre wrote of his training, "I was taught . . . the Gospel, and catechism without being given the means for believing" (*Words* , 249). He added, "My family had been affected by the slow movement of dechristianization that started among the Voltairian upper bourgeoisie and took a century to spread to all levels. . . . Good Society believed in God in order to speak of Him. How tolerant religion seemed! How comfortable it was" (ibid., 97, 98).

Sartre said he was sickened by the mysticism and indifference of his grandparents. Outwardly he continued to believe, but he thought of God less and less (ibid., 100–101). As for the origin of his atheism, Sartre wrote: "Only once did I have the feeling that He existed. I had been playing with the matches and burned a small rug. I was in the process of covering up my crime when suddenly God saw me. I felt his gaze inside my head and on my hand. . . . I flew into a rage against so crude an indiscretion, I blasphemed. . . . He never looked at me again" (ibid., 102).

His conversion was confirmed one day, at age 12, when he tried to think about God and could not. From that moment he thought the matter settled, but it wasn't entirely. "Never have I had the slightest temptation to bring Him back to life. But the other One remained, the Invisible One, the Holy Ghost. . . . I had all the more difficulty getting rid of Him in that he had installed himself at the back of my head. . . . I collared the Holy Ghost in the cellar and threw him out; atheism is a cruel and long-range affair: I think I've carried it through. I see clearly, I've lost my illusions" (ibid., 252–53).

There were many philosophical influences on Sartre. From German philosopher Edmund Husserl (1859–1938) he learned the *phenomenological. Dialectical* negations (freedom is negativity) came from G. W. F. Hegel (1770–1831). *Atheism* he learned from Friedrich Nietzsche (1844–1900). His *metaphysics* was influenced by Martin Heidegger (1889–1976), though Heidegger disowned Sartre's "Existentialism."

Important Writings. Sartre's majors works follow the development of his thought. The early period of his career was dominated by phenomenological psychology under the influence of Husserl. Here he produces *Transcendence of the Ego* (1936 French, 1937 English), *The Emotions: Outline of a Theory* (1939, 1948), and *The Psychology of Imaginations* (1940, 1948). The middle period focused on ontology of human existence from Heidegger. Here he produced *Being and Nothingness* (1943, 1956) and *Existentialism and Humanism* (1946, 1948). In a latter period his concerns turned toward Marxism. He wrote *Questions de methode* (1960) and *Critique de la raison dialectique* (1960).

The Atheism of Sartre. *View of God.* Like other atheists Sartre believed God's existence was impossible because God is by his very nature a self-caused being (*see* GOD, ALLEGED DISPROOFS OF). But one would have to be ontologically prior to himself in order to cause himself, which is impossible. In Sartre's terms, the "being-for-itself" can never become the "being-in-itself" (*Being and Nothingness* , 755–68). That is, the contingent cannot become the necessary. Nothing cannot become something. So God, a self-caused being, cannot exist.

View of Human Beings. Sartre viewed humanity as an empty bubble on the sea of nothingness. The basic human project is to become God. But it is impossible for the contingent to become a necessary being, for the subjective to become objective, or for freedom to become determined. The individual is, in fact, condemned to freedom (*see* FREE WILL). If one were to attempt to escape his destiny he would still be freely fleeing it. Even suicide is an act of freedom by which one would vainly attempt to avoid his freedom. So the human "essence" is absolute freedom, but absolute freedom has no objective or definable nature. The "I" (subject) always transcends the "me" or "it" (object).

View of Ethics. There are no absolute or objective moral prescriptions. For "no sooner had you [Zeus] created me than I ceased to be yours," wrote Sartre. "I was like a man who's lost his shadow. And there was nothing left in heaven, no right or wrong, nor anyone to give me orders. . . . For I, Zeus, am a man, and every man must find out his own way" (*No Exit* , 121–23).

Not only are there no divine imperatives or moral prescriptions, but there are no objective values. In the last lines of *Being and Nothingness* , Sartre wrote, "it amounts to the same thing whether one gets drunk alone or is a leader of nations." For all human activities are equivalent. We must, in fact, repudiate this "spirit of seriousness" which assumes there are absolute or objective values and accept the basic absurdity and subjectivity of life (see de Beavoir, 10, 16–18, 156).

What then should one do? Literally, "his own thing." Since there are no ultimate and objective values, we must create them. A person can act for personal good or for the good of all

humanity. But there is no ethical obligation to think about others. In the final analysis, each is responsible only for the use of personal, unavoidable freedom.

View of the World and Destiny. The world for Sartre is real but contingent. It is simply there. It, like human life, is a given. Philosophically, it is uncaused. It is the field in which subjective choices are performed. It has no objective meaning. Each person creates personal meaning. The fact that several people may choose the same subjective projects (like Marxism for Sartre) makes no difference. Each person still is objectively the result only of the personal choices he or she has made. For example, Sartre said, "I am my books." Yet each transcends the world that has been personally created. The author is more than the words. He or she is the "Nothing" (freedom) out of which it was created.

Evaluation. Beside the general case for theism (*see* APOLOGETICS, ARGUMENT FOR ; COSMOLOGICAL ARGUMENT ; MORAL ARGUMENT FOR GOD ; TELEOLOGICAL ARGUMENT) and the answers to atheists' objections (*see* GOD, OBJECTIONS TO PROOF FOR), there are things that can be said of Sartre's form of atheism.

First, God is not a *self-caused* Being, which is impossible; he is an *uncaused* Being. By creating a false definition of God, Sartre was able to dismiss God too easily. But this was only a straw man, not the real God.

Second, God is not a contradiction to human freedom and creativity. God is the supreme creator and man is sub- and co-creator of good and value. God is the primary cause, and human freedom is the secondary cause. Free will and determinism are not logically contradictory, for God can predetermine that a person is free.

Third, Sartre makes an unjustified, radical disjunction between subject and object, fact and value. But in an individual human being this is a distinction without a real difference. I am me. An attack upon my objectivity (say, my body) is an attack upon me. When one kills a body the person leaves too. Someone cannot cut off my arm in anger without attacking me. My objectivity and subjectivity are not separable in this life.

Fourth, if there are no objective values and each is fully responsible only for self, then there is no meaningfully ethical sense in which one ought to choose responsibly for others. Indeed, there is no moral obligation to do anything. Atheistic existentialists do what they do only because they choose to do it. Atheistic existentialism reduces to antinomianism (*see* MORALITY, ABSOLUTE NATURE OF).

Fifth, despite his autobiographical comments, Sartre was unable to dismiss God so easily. Before he died, he turned back to the God who created him. As reported in a French magazine, Sartre embraced Christian theism before he died. In his own words (Spring 1980): "I do not feel that I am the product of chance, a speck of dust in the universe, but someone who was expected, prepared, prefigured. In short, a being whom only a Creator could put here; and this idea of a creating hand refers to God." Sartre's mistress, Simone de Beavoir, reacted to Sartre's apparent recantation, complaining, "How should one explain this senile act of a turncoat?" She adds: "All

my friends, all the Sartrians, and the editorial team of *Les Temps Modernes* supported me in my consternation" (cited in *National Review* , 677).

If view of this conversion, it was little wonder that his existential colleagues reacted as they did, for it is a tacit self-condemnation of Sartrian Humanism by Sartre himself. Two men, Alain Larrey and Michael Viguier, who lived in Paris in 1980, report that two months before his death, Sartre complained to his Catholic doctor that he "regretted the impact his writings had on youth," that so many had "taken them so seriously."

Satan, Reality of. A good deal of skepticism has been expressed about Satan. Those who take the Bible seriously are obliged to believe in Satan's existence, since the Bible unmistakably refers to the demonic. Nonetheless, it is objected by skeptics and atheists (*see* ATHEISM) that belief in a sinister evil power in the universe is outmoded and superstitious.

In Defense of Satanic. A real personal Devil is given distinctive traits of personality, including intellect (2 Cor. 11:3 ; Luke 4:1f .). Ascribed to him are the emotions of desire (1 Tim. 3:6 ; cf. Isa. 14:12f .), jealousy (Job 1:8 , 9), hatred (1 Peter 4:8), anger (Rev. 12:12), and will. The Devil commands (Luke 4:3 , 9) and leads rebellions (Rev. 12:1–3).

Some evidence for the personality and reality of Satan is direct. In total, it is sufficient to establish existence of a personal Devil.

The Authority of Bible. Once the authenticity and Divine origin of the Bible are established (see BIBLE, EVIDENCE FOR ; NEW TESTAMENT, HISTORICITY OF), the existence of Satan follows.

Genesis 3:1 describes Satan as a personal enemy of God and humans who deceives: "Indeed, has God said, 'You shall not eat from any tree of the garden?' " The historicity of this passage is confirmed by New Testament references to the historicity of Adam and Eve (see ADAM, HISTORICITY OF ; EDEN, GARDEN OF) and their fall (cf. Rom. 5:12 ; 1 Tim. 2:13–14).

First Chronicles 21:1 and Psalm 109:6 describe Satan as standing against God's people. Job 1–2 records that Satan has access to God's presence and accuses people: "Now there was a day when the sons of God came to present themselves before the Lord, and Satan also came among them" (1:6). Satan is the real cause of Job's otherwise unexplainable suffering.

Nineteen of the twenty-seven New Testament books refer to Satan (and four more to demons). We gain a lot more informed understanding of this sphere of rebellion against God. The personal encounters and conversations of Christ with Satan and demons made it evident that Jesus believed in a real, personal Satan. Jesus made twenty-five of the twenty-nine references to Satan found in the Gospels. Indeed, Jesus carried on an extended conversation with Satan during his temptation. Matthew 4 and Luke 4 describe a personal encounter between Satan and Jesus. Mark 1:12 and Hebrews 4:13 refer to this confrontation. To deny the reality of a personal Satan in this passages is to impugn the integrity or sanity of Christ (*see* CHRIST, DEITY OF). In Revelation 12:9 several names describing Satan are mentioned in one passage: "And the great dragon was thrown down, the serpent of old who is called the devil and Satan, who deceives the whole world; he was thrown down to the earth, and his angels were thrown down with him." Rev. 20:2 speaks of an angel of God who "laid hold of the dragon, the serpent of old, who is the devil and Satan, and bound him for a thousand years."

The events surrounding the temptation are all historical—the ministry of John the Baptist and baptism of Jesus (cf. Matthew 3). The nature and reality of the account is too vivid to be merely symbolic. The Gospels accord considerable significance to the event as a watershed point in the life of Christ and salvation history. He declared himself to be the Son of God; he conquered temptation. He passed the test the first Adam had failed.

The Enemy of God's People. The history of both Israel and the church are difficult to understand apart from a personal Satan who seeks to thwart God's plan for history. At the fall it was announced that human salvation would come through the promised seed of the woman (Gen. 3:15). This covenant promise was eventually narrowed to the offspring of Abraham through Isaac and Jacob (Gen. 12:1–3 ; 36 ; 46). The covenant came to be centered in twelve tribes of Israel (Genesis 49). Satan relentlessly attacked that bloodline (cf. Num. 24:10 ; Zech 3:1).

Considering the relative insignificance of Israel in the history of the world, they have been the continual, repeated victims of programs of genocide, starting with the Persians (cf. Esther). The Greek conquest of Palestine was a studied attempt to destroy the Jewish culture with few parallels. From Haman through medieval pogroms to Hitler, Stalinization, and Sadam Hussain, this tiny people have been targeted. This conspiracy of hatred against the Jews is best explained as emanating from one sinister evil mind. This is to say nothing of the two millennia of attacks on Christian identity, purity, and community. On nu merous occasions these attacks have seemed perilously close to demolishing God's new covenant people.

The Reality of Demons. Another argument in support of the reality of the Devil is that of demons who express a unified conspiracy against God, his plan, and his people. Without a leader the demonic forces would not manifest such an organized show of force against God. Indeed, the Bible describes Satan as their "prince" (Luke 11:15) and "king" (Rev. 9:11). The increasing evidence for true demonic possession is an extrabiblical source of support for the reality of demons.

The Universality of Temptation and Evil. Another evidence of the reality of a personal Devil is the universal, powerful and persistent nature of the temptation to do evil. What else accounts for heinous crimes committed by seemingly decent people, from David to the present. Even law-abiding people (who pass for what we call "good") show that they are not good by feeling the urge to do things totally out of keeping with their character. And this includes Christians. The universal temptation to sin, even by godly people, is best explained by a sustained, personal attack. Evil does not fit the impersonal force category under which it is often placed. Gravity and magnetism are impersonal forces, but they do not personally allure. Evil by its very nature interacts with intellect and will.

The Proliferation of Deception. The existence of thousands of false religions and cults testifies to the existence of a great Deceiver. Paul wrote: "The Spirit clearly says that in latter times some will abandon the faith and follow deceiving spirits and things taught by demons. Such teachings come through hypocritical liars, whose consciences have been seared as with a hot iron" (1 Tim. 4:1–2).

Considered as a whole the direct and indirect evidence for the existence of a personal evil power behind this world is substantial. It is based both in history and in personal experience.

Objections to the Devil. A common objection to the existence of the demonic is that there are natural explanations for what is sometimes called "demonic" or evil. A common argument is that sicknesses once attributed to the demonic, even by the Bible, are now known to have natural causes. This objection overlooks that the Bible distinguishes between sickness and demonic possession. Jesus differentiated between them when he listed them as separate miracles the apostles were given power to do: "Heal the sick, raise the dead, cleanse those who have leprosy, drive out demons" (Matt. 10:8). The Bible does not claim that all sickness is demonically caused. The Bible recommends the use of medicine in treating natural sickness (cf. 1 Tim. 5:23).

Similar symptoms may be present in sicknesses and some demon possessions, but that does not prove there is a natural explanation for both. The young man from whom a demon was cast in Matthew 17:14–17 had symptoms similar to those of an epileptic seizure, but that doesn't mean he had epilepsy. Similar effects do not prove identical causes (*see* MIRACLES, FALSE). Both God and the magicians of Egypt turned water blood-red. Even a demon-caused illness might respond to medicine. Many induced sicknesses can be treated. Because a mind caused it (whether human or demonic) does not mean medicine cannot relieve symptoms.

At least some demonic activity manifests distinctive spiritual characteristics not present with natural sickness. These symptoms could include such things as opposition to God, violent

reaction to Christ, and the manifestation of supernormal strength (cf. Mark 5:1–4). These do no respond to any purely natural treatment.

Another argument is that belief in satanic activity is characteristic among the uneducated. These beliefs diminish as a society moves to a modern culture. However, this may partly be due to different strategies Satan uses among different peoples. He can adapt to the culture he is deceiving. What better way to deceive the sophisticated anti-supernaturalists than to lead them to believe he does not exist. The Bible declares that Satan disguises himself as an angel of light (2 Cor. 11:14). But it is not true that demonic manifestations occur only among "primitive" people. With the "post-Christian age" the Western world has seen far more occultic activity and reports of demonic manifestations.

Some of the greatest Western minds have believed in Satan and the demons. This includes Augustine, Anselm, Thomas Aquinas, Blaise Pascal, Soren Kierkegaard, and C. S. Lewis. It is not the degree of intelligence or education that determines whether one believes in a personal Satan. Rather, it depends on whether one has rejected the supernatural revelation of Scripture (*see* BIBLE, EVIDENCE FOR).

Schaeffer, Francis. Francis Schaeffer (1912–1984) was born in Germantown, Pennsylvania. After being graduated from Hampden-Sydney College, he came under the teaching of Cornelius Van Til at Westminster Seminary and the biblical/historical evidence focus of Allan MacRae at Faith Seminary. After ten years in the pastorate in the United States, he and his wife Edith went to Switzerland as child evangelism missionaries in 1948. After a personal spiritual and ecclesiastical crisis in 1955, during which he was abandoned by his mission board, he began L'Abri Fellowship there as an outreach primarily to U.K. and American college students wandering Europe. L'Abri became an intellectual center that critiqued culture and challenged those influenced by existentialism and modernist European theologies.

Many of Schaeffer's works are related to apologetics, but three in particular spell out his views: *The God Who Is There* (written first but published 1968), *Escape from Reason* (1968), and *He Is There and He Is Not Silent* (1972). *Genesis in Space and Time* (1972) and *No Final Conflict* (1975) engage in biblical apologetics. While *How Shall We Then Live?* (1976), *Whatever Happened to the Human Race?* (1979), and *A Christian Manifesto* (1981) can be viewed as cultural apologetics. *Back to Freedom and Dignity* (1972) defended human free choice

(*see* FREE WILL) and the image of God against the determinism of B. F. Skinner. Schaeffer also wrote many books on the spiritual life including *The Mark of a Christian* (1970) and *True Spirituality* (1971).

Schaeffer's Apologetic Approach. Schaeffer was neither a professional philosopher nor an apologist. He considered himself an evangelist, though more properly he was a pre-evangelist or popular apologist. As such, he did not employ terms in a precise or technical sense. Nor did he write systematically. His early apologetic works first were given as lectures (Duriez, 252). The result is that his precise apologetic method is difficult to reconstruct; elements in his approach, however can be distinguished.

Presuppositional Starting Point. Thomas V. Morris points to presuppositional elements in Schaeffer's approach (*see* PRESUPPOSITIONAL APOLOGETICS). Schaeffer refused to be pigeonholed as either a presuppositionalist or an evidentialist (cited by Ruegsegger, 64). Nonetheless, he was influenced by Van Til and considered presuppositions "crucial" (Duriez, 256). He went so far as to say that presuppositional apologetics would have stopped the decay of modern culture. "So now for us, more than ever before, a presuppositional apologetic is imperative" (*The God Who Is There* , 15). Schaeffer even speaks of "necessity" for his arguments (Morris, 31), though Gordon Lewis insists that this is a "descriptive necessity" (Lewis, 88) of a popular evangelist, not a philosophical necessity of a technical apologist. Schaeffer biographer Colin Duriez describes Schaeffer's theme of the " 'necessity' of historic Christianity," that "without God's existence and communication there are no answers to the fundamental human questions" (Duriez, 256). This is a transcendental argument. Schaeffer, like other presuppositionalists, begins with the Christian starting point of the triune God revealed in Scripture.

Schaeffer's presuppositional starting point, like Van Til's, was the "infinite-personal God" of the Bible (Schaeffer, *The God Who Is There* , 94). Schaeffer noted that "every person we speak to, whether the shop girl or university student, has a set of presuppositions, whether they have analyzed them or not" (ibid., 109). Presuppositions provide a starting point for spiritual journey (ibid., 126). One must go on to provide a rational verification of beliefs. In this context, Kenneth Harper views Schaeffer as an "inconsistent presuppositionalist," for, unlike Van Til, Schaeffer believed in common ground with unbelievers (Harper, 138). However, even Van Til recognized common ground in a formal sense as well as verification by means of a transcendental argument.

Logical Coherence. Over against the radical existentialism, irrationalism, and growing mysticism of culture, Schaeffer stressed the principle of noncontradiction (*The God Who Is There* , 109). He believed that modern people were engaged in an "escape from reason." All non-Christian views are inconsistent. Christianity by contrast, "constitutes a non-self-contradictory answer" (ibid., 156). Logic is part of God's image in man by which truth claims are to be tested. Without logical coherence there is no truth. Schaeffer refers often to this theme.

Pragmatic Element. Since the thrust of Schaeffer's apologetic strategy was to show that the non-Christian view was *unlivable* , there is a pragmatic dimension to it (see Geisler, *Christian Apologetics* , chap. 6). Only Christian presuppositions can be lived out consistently, according to Schaeffer. He insists that " we must be able to live consistently with our theory" if it is true (*The*

God Who Is There , 109). The materialistic (*see* MATERIALISM) view is false because "man simply cannot live as though he were a machine." The Christian view "can be lived with, both in life and in scholarly pursuits." Furthermore, the Christian "has years of experimental evidence" in support of his belief. Thus, livability is a test for the truth of a view and unlivability is a test for its falsity (ibid., 109–11).

Verification Aspect. Gordon Lewis sees his own from of presuppositionalism in Schaeffer, which is patterned after that of John Carnell . He prefers to call it a verification apologetic that is neither deductive nor inductive but an abductive approach (Lewis, "Schaeffer's Apologetic Method"). Indeed, Schaeffer does say rationality is gained "on the basis of what is open to verification and discussion" (*Escape from Reason* , 82). He even defines *verification* as "the procedure required for the establishment of the truth or falsity of a statement" (*The God Who Is There* , 180). He lists a two-fold form of verification, though the first one contains two elements:

1. The theory must be non-contradictory, and it must give an answer to the phenomenon in question.

2. We must be able to live it out consistently (ibid., 109).

So Schaeffer's definition of *verification* is more broad than that of science. As noted above, at times he seem to engage in a kind of transcendental argument, setting forth the necessity of God's being there and not being silent in order for us to make sense out of the world.

Evaluation. *Positive Contributions.* There are many commendable things about Francis Schaeffer's approach to apologetics. Among these the following should be noted.

The propositional authority of Scripture. Schaeffer, like other presuppositionalists, began with the triune God (*see* TRINITY) who has revealed himself in Scripture. He stressed the need for propositional revelation (ibid., 109; *see* BIBLE, EVIDENCE FOR). Schaeffer never wavered on his belief that the inerrancy of Scripture is a "watershed" issue. It is God's objective, propositional revelation to mankind. He encouraged the formation of the International Council of Biblical Inerrancy (ICBI), 1978–1988, which produced the "Chicago Statement" on inerrancy and the book *Inerrancy* . Schaeffer attended one of its early formation meetings of the ICBI. His book *No Final Conflict* drew a line in the sand for evangelicals on this issue.

The rational character of belief. He constantly stressed the objective, rational character of belief. In *Escape from Reason* he critiques the irrationalism, subjectivism, and existentialism that had permeated so much of the twentieth century. In this context, Schaeffer had a greater appreciation for human reason than did Van Til.

Schaeffer was adamant about the objective nature of truth (*see* TRUTH, NATURE OF). Truth "open to verification [and] can also be communicated verbally in writing" (ibid., 141). There are no special tests for religious truth, for "scientific proof, philosophical proof and religious proof follow the same rules" (ibid., 109). Truth is truth. Although since the term has been diluted to mean subjective truth, Schaeffer sometimes refers to objective truth by the deliberately redundant phrase, "true truth."

The need for common ground. Another positive dimension of Schaeffer's approach was his stress on the need for common ground in discussions with unbelievers. This he believed was rooted in the fact that "we are made in the image of God" (*Escape from Reason* , 83). The fall does not mean we cease to be human or rational (*The God Who Is There* , 178). Nonbelievers share with believers both moral and rational absolutes. Both a moral framework and moral guilt is experienced by unbelievers (ibid., 102). Further, humans have the "power to reason consistently" (ibid., 179). The law of noncontradiction is not from Aristotle but is part of being created in the image of God (*see* FIRST PRINCIPLES). While these factors are shared with unbelievers, they deny the adequate ground for them in God (*He Is There and He Is Not Silent* , 65).

Negative Aspects of Schaeffer's Apologetic. Much of the negative reaction to Schaeffer's approach is generated by his imprecise use of terms. Most of this can be explained by his lack of scholarly background in philosophy or apologetics. By his own confession he was an evangelist who developed a practical method for doing evangelism, or better, pre-evangelism. Nonetheless, Schaeffer must take responsibility for the inaccuracies and insufficiencies in his system.

Misunderstanding of modern thinkers. While Schaeffer generally intuited correctly the major flow of modern thought, nonetheless, he often misunderstood the actual sources. Most experts on Soren Kierkegaard believe that Schaeffer wrongly understood him to be an irrationalist. Schaeffer also misunderstood Thomas Aquinas, characterizing him as someone who separated faith and reason, thus giving rise to modern Humanism (*see* FAITH AND REASON). In an unmistakable distortion of Aquinas, Schaeffer contended that, as a result of Aquinas, philosophers "were making the particulars autonomous and thus losing the universal that gave rise to the particulars meaning." Thus, "if nature or the particulars are autonomous from God, then nature begins to eat up grace. Or, we could put it this way: all we are left with are particulars, and universals are lost, not only in the area of morals, which would be bad enough, but in the area of knowing" (Schaeffer, *He Is There and He Is Not Silent* , 41–42). As detailed analysis of the writings of Aquinas reveal (see Geisler, *Inerrancy* , all), nothing could be farther from the truth. Aquinas was one of the greatest defenders of universals in knowledge and moral absolutes of all time.

Duriez attempts in vain to exonerate Schaeffer of this charge by citing obscure references and secondary sources but fails to produce any text from Aquinas to support his misunderstanding (Duriez, 252–54). His effort to show indirect causal relations only manifests misuse (not proper use) of Aquinas (see Geisler, *Inerrancy* , chaps. 1, 5).

Lack of appreciation for classical apologetics. Although some of his own reasoning can be construed in the form of a teleological argument or cosmological argument for God's existence, Schaeffer makes these no formal part of his apologetic system. In fact, he explicitly rejects classical apologetics (*The God Who Is There* , 15). He does not seem to appreciate the need expressed by the great Christian apologists from earliest times to offer theistic arguments to establish the existence of God—the linchpin of theistic apologetics.

Ironically, while Schaeffer rejects classical apologetics, he nonetheless at times emulates what would be arguments for the existence of God. For example, employing a transcendental

form of argument, he concludes that *"everyone has to explain the fact that the universe and he, the individual exist; thus, something has 'been there'!"* (*He Is There and He Is Not Silent* , 92, emphasis added). He even uses the basic premises of the cosmological argument, namely, that 1) something exists, and 2) nothing cannot produce something. For he rejects the view that "everything that exists has come out of absolutely nothing" (ibid., 7).

Invalid reasoning processes. From a philosophical or apologetic standpoint Schaeffer's logic is often loose and lacking. As Lewis notes, "Schaeffer would have done well to define the law of noncontradiction more carefully. His popular purposes actually led him to inaccuracy, since not every 'opposite' is a contradictory" ("Schaeffer's Apologetic Method," 81).

Others have seen a logical fallacy of affirming the consequent in his presuppositional approach. It argues if "P" is true, then "Q" is true. "Q" is true. Therefore, "P" is true. This is the same difficulty faced by scientific forms of reasoning. Some contend that it can be overcome by divergent lines of evidence (ibid., 99). Others conclude that this is why the scientific method can falsify views but not verify any. Of course this can be overcome if one's argument is put in a valid transcendental form. But there seems to be no valid way to do this—at least not with all that Schaeffer and other presuppositionalists wish to pack into their presuppositions, namely, the Trinity and inspiration of the Bible (see Van Til).

Insufficient pragmatic element. While Schaeffer has more than a pragmatic dimension to his apologetic (there being rational and evidential elements as well), nonetheless, he places great emphasis on the "unlivability" of the non-Christian views. This no doubt arose out of his use of apologetics as a practical aid to evangelism. However, even "practical" approaches should involve valid thinking. And it is not sufficient to test a view on the basis of its "livability" or "unlivability." First, it is a pragmatic test subject to all the criticism of that test for truth (*see* TRUTH, NATURE OF ; PRAGMATISM). Second, "livability" will be defined differently by different worldviews. And it begs the question to use a Christian view to test whether a Hindu or some other view is livable.

Third, of course, if a view is true it should be livable. But this does not mean that if something is livable then it must be true. In fact, simply because some people find Christianity unlivable does not mean it is false. They may not be living it correctly, namely, by the power of God.

Insufficient systematic coherence. If Schaeffer's view is considered substantially the same as that of John Carnell's, as Lewis suggests, then it is subject to the same criticism discussed in the articles on Carnell and Presuppositionalism. More than one worldview may be systematically consistent with the facts as they are interpreted. However, each worldview interprets the facts differently. By systematic coherence alone one cannot properly adjudicate between conflicting worldviews. Hinduism and Zen Buddhism are internally consistent and account for all the data of experience as they understand it (though they fall on other grounds). So the Christian worldview cannot be proven unique by this method.

Overstating his conclusions. Even some defenders of Schaeffer's method admit that he overdraws his conclusions. Lewis observes that "Schaeffer often thinks he has examined all

possible hypothesis when he has examined few” (ibid., 100). One cannot know that all non-Christian views are incoherent and/or unlivable unless he has carefully examined all of them. Schaeffer nowhere even attempts to do this in his writings.

Schleiermacher, Friedrich. Friedrich Schleiermacher (1768–1834) was a German theologian educated in Moravian pietism. He was ordained and preached in Berlin (1796) before teaching theology at Halle (1804) and Berlin (1810). His two major works are *On Religion* (1799), which is experiential in its orientation, and *The Christian Faith* (1821–22), which is doctrinal in approach. He also wrote a *Brief Outline on the Study of Theology* and a posthumously published book *Hermeneutics* .

Schleiermacher was influenced by pietism, which stressed the devotional over the doctrinal; romanticism, which included a belief in pantheism in contrast to theism, and agnosticism, following Immanuel Kant that emphasized the practical over the theoretical.

Schleiermacher himself exerted a tremendous influence on his followers. As the father of modern liberalism, he influenced most major liberals after him, among them Albrecht Ritschl (1822- 1889), *Critical History of the Christian Doctrine of Justification and Reconciliation* ; Adolf von Harnack (1851–1930), *What is Christianity?* , and Julius Wellhausen (1844–1918), who wrote *Introduction to the History of Israel* in which he defended the J-E-P-D hypothesis of authorship/ redaction of the Pentateuch (*see* PENTATEUCH, MOSAIC AUTHORSHIP OF).

Elements of Religion. For Schleiermacher, the basis of religion is human experience, rather than divine existence. We must *have* it before we can *utter* it. The locus of religion is in the self. The inner is key to the outer. The object of religion is the "All," which many call "God." And the nature of religion is found in a feeling (sense) of absolute dependence, which is described as a sense of creaturehood, an awareness that one is dependent on the All, or a sense of existential contingency.

Schleiermacher distinguished religion from ethics and science in the following manner:

Ethics	Science	Religion
way of living	way of thinking	way of feeling
way of acting	way of knowing	way of being (sensing)
practical	contemplative rationalization	attitudinal intuition
self-control		self-surrender

The relation of religion to doctrine is that of a sound to its echo or experience to an expression of that experience. Religion is found in feeling, and doctrine is only a form of the feeling. Religion is the "stuff" and doctrine the structure. Doctrine is not essential to religious experience and is scarcely necessary to expressing it, since it can be expressed in symbol as well.

As to the universality of religion, Schleiermacher believed that all have a religious feeling of dependence on the All. In this sense there are no atheists (*see* ATHEISM). In this he foreshadowed Paul *Tillich.

Being primarily a feeling, religion is best communicated by personal example. It is better caught than taught. Religion can also be communicated through symbols and doctrines. But doctrines are accounts of religious feeling. They are statements about our feeling, not about God, his attributes, or his nature. So there is an endless variety of religious expression, due largely to personality differences. The pantheistic expression results from those who delight in the obscure. Theists (*see* THEISM) by propensity are those who delight in the definite.

The aim of religion is the love of the All, the World-Spirit. This is achieved through loving other human beings. The result of religion is unity of life. And its influence is manifest in morals. Religion produces a wholeness of life, but it has no specific influence on individual acts. We act *with* religion, not *from* it.

Likewise, the influence of religion on science is not direct. One cannot be scientific without piety. For the feeling of dependence on the All removes presumption to knowledge, which is ignorance. The true goal of science cannot be realized without a vision arising from religion.

The Test for Truth. Religions are neither true nor false, as such. Truth categories do not apply to a feeling of absolute dependence. Truth and falsity relate to ideas (*see* TRUTH, NATURE OF). And the truth of an idea is determined by two sets of criteria, scientific and ecclesiastical. Scientific criteria include clarity, consistency, coherence, and fit with other doctrines into a system. The ecclesiastical criteria apply to the life of the church. Indeed the knowledge of God is mediated through the corporate experience of redemption, rather than in a body of doctrine. It is for this reason that Schleiermacher relegated his treatment of the Trinity to an appendix. He believed it a speculation divorced from piety.

For example, Schleiermacher's evaluation of the doctrine of God's timelessness (*see* GOD, NATURE OF) yielded these results:

1. Timelessness does not fit well with the incarnation. How can the eternal become temporal?

2. Timelessness conflicts with the doctrine of creation. How can the eternal act in time?

3. Timelessness conflicts with foreknowledge, or even with knowledge. Why does the Bible speak of God as foreknowing? How could a timeless God know anything in time?

4. Timelessness conflicts with God's personality. How can God plot his purpose and respond to happenings in time if eternal?

5. Timelessness conflicts with God's worship-appropriateness. It necessitates God's immutability. Who can worship a God who cannot be moved to change in an way?

Hence, timelessness is rejected as a true doctrine.

Schleiermacher's concept of salvation was not orthodox. He understood redemption to be the impression made by Jesus. This unclouded God-consciousness transformed the Christian community when an impoverished God-consciousness was replaced with that of Jesus. His view of miracles and providence was ambivalent. And his almost complete stress on God's immanence made him liable to the charge of pantheism .

Evaluation. Christian apologists take note of a number of Schleiermacher's views, particularly his views of God, religion, truth, and biblical criticism .

Schleiermacher offered insight into religion with his stress on the contingent and dependent nature of all creatures; his emphasis on the importance of religious experience; his distinctions between religion, science, and ethics; his belief that truth needs to be tested; his stress on community; and his belief in systematic theology.

But this doesn't mitigate some serious problems: his experimental form of pantheism; his acceptance of Kantian epistemology (*see* KANT ; AGNOSTICISM); his disjunction of experience and doctrine; his contention that truth does not apply to religion (*see* TRUTH, NATURE OF); his reduction of theology to anthropology (see Barth); and his acceptance of negative higher criticism of the Bible (*see* BIBLE CRITICISM).

Schopenhauer, Arthur. Arthur Schopenhauer (1788–1860) was born in Danzig, Germany. He was educated in France, England, and India. He came from a mentally unstable family. His father probably committed suicide. He became completely estranged from his mother and had unfortunate relationships with women in general. His academic career was cut short for lack of students; he deliberately scheduled classes to compete with W. F. G. Hegel at the peak of Hegel's career. After years of solitude and resentment in which his work was never widely accepted, he died in 1860.

Schopenhauer's books include his published dissertation, *On the Fourfold Root of the Principle of Sufficient Reason* (1813) and *The World as Will and Representation [or Idea]* (1818/1819). In 1844 the latter volume was enlarged by fifty chapters. He also produced *On the Will in Nature* (1836) and *The Basis of Morality* (1841).

Philosophy. Although he studied under Friedrich Schleiermacher (1768–1834) and Johann Fichte (1762–1814), they disappointed him. Plato (428–348 B.C .) and Immanuel Kant impressed him. He also acknowledged Hindu influences and the idealism of George Berkeley . Through his mother, a novelist, he learned the ideas of poet and dramatist Johann Goethe (1749–1832).

Epistemology. Schopenhauer was an archenemy of both rationalism and empiricism (*see* HUME, DAVID). The senses offer us only impressions of the phenomenal world (appearance), as David Hume informed us. And the mind cannot know reality as Kant demonstrated.

He severely criticized the principle of sufficient reason used by Gottfried Leibniz and the rationalists. He noted their confusion between real cause and a sufficient reason. Sufficient reason is an *a priori* structure of consciousness; it can't be proven. It applies only to objects of thought, that is, to phenomena and not to the noumena or real world. The four roots of sufficient reason are being, becoming, acting, and knowing.

There is disagreement over whether Schopenhauer was a true atheist (*see* ATHEISM), or perhaps adopted some kind of pantheism . He was clearly opposed to theism. He contended that the ontological argument is based on a confusion by Rene Descartes between cause and reason. A cause demands something beyond it *ad infinitum* . But reason needs no cause beyond it; reason can be itself (*see* CAUSALITY, PRINCIPLE OF). So, the principle of sufficient reason does not lead to a First Cause (God).

The ontological argument is a "charming joke," a sleight of hand, according to Schopenhauer. It assumes existence of God by definition, and then pretends to arrive at the proof for God in the conclusion (*see* GOD, EVIDENCE FOR). Aristotle showed that defining (*what* it is) differs from existing (*that* it is). Hence, existence can never belong to the essence of a thing, as the ontological argument affirms.

World as Representation (or Idea). Central to Schopenhauer's system is the premise of the world as representation, that is, that which directly confronts the one who perceives it.

The world is the individual's presentation (or Idea). It appears phenomenally as a mental presentation, and noumenally (really) as thing-in-itself or will. He cites Berkeley that "to be is to be perceived" in support of this. He rejects Fichte's reduction of object to subject and Friedrich Schelling's subject to object. He reduces Kant's forms and categories to space, time, and cause. Reason is the tool of will in opposition to Hegel's concept of the rule of reason.

There are distinctive elements in Schopenhauer's view of reality (metaphysics). Reality is not rational; it is volitional. The thing-in-itself is "cosmic will." Appearance manifests reality (phenomena reveals the noumena). Humanity carries the answer to metaphysical puzzles in his own breast in the principle of freedom.

Cosmic Pessimism. Schopenhauer's cosmic pessimism stood against both the "enlightenment" and "mechanism" of his day. He viewed reality as a universal will, that is, a single whole, omnipresent in nature as opposed to many individual wills. Will is the nonrational and irrational ground of every sufficient reason. It is a blind cosmic force, incessantly striving to embody itself in space and time. Its operations are without ultimate purpose of design. Nature is a vast phenomenological field for the multitudinous projects of will.

This cosmic dynamism is essentially a will-to-live. The subjective will-to-live is manifest in various degrees of objectification. In fact, these func tion like Platonic forms (*see* PLATO).

There are higher and lower forms that are more or less adequate expressions for will. These forms are engaged in an incessant strife to provide a place in the world for will. This strife leads to optimism in Leibniz where God is needed to order them. But it leads to pessimism in Schopenhauer, since there is no such God and will is essentially at variance with itself.

Will has essential and internal hostilities so that moments of happiness (accord) are accidental. Pain is the positive essence of life. Will is based in need, deficiency, and pain. It is constantly striving because it hurts. Reason is only a byproduct of this vital force (will). And the human being is worse off with reason, since it anticipates future pain and meditates on the certainty of approaching death. It only enables man to outdo the animals in evil. Freedom is the strongest motive in man, and it alone provides a sufficient reason for action.

Human Nature. Human beings are the embodiment of will, a microcosm of the universe. Will and the body are the same thing, only under different aspects. The mind is the servant of will, not its master. "Schopenhauer utterly rejected such ideas as the inevitability of human progress and the perfectibility of man and replaced them with a picture of mankind in general as doomed to an eternal round of torment and misery," relates biographer Patrick Gardner (*Schopenhauer* , 329). He denied that even radical changes in the social order would solve anything, since "the evil condition of life as we find it is merely the reflection of the aggressive and libidinous urges rooted in our own natures" (ibid.).

Art and Morality. Schopenhauer's pessimism led him to contemplate suicide as the remedy for misery. But he rejected suicide and suggested art as a temporary release from the tensions of life. Suicide yields to irrational will which should be resisted.

Art provides a way of escape. A person should lose himself in quiet contemplation of ideal nature—looking for the perfect forms within the natural world. Art draws one out of self into a painless and timeless knowledge. It is a kind of knowledge vastly superior to that found in natural sciences, which provide only knowledge of the phenomenal world. Art, however, provides insight into the very archetypal (Platonic) forms of which this world is at best an inadequate expression. Creative genius possesses surplus energy of the will, enabling one to concentrate on these ideas.

Morality is an even better release than art. Its sympathy delivers us from egoism and its denunciation delivers us from suffering. The moral worth of an individual is found in his ability to liberate himself from the pressures and urges of irrational will. But ultimate salvation (from suffering) is found in nothingness (*see* HINDUISM, VEDANTA ; ZEN BUDDHISM).

Music , of all human expressions, stands closest to ultimate reality. It is not concerned with the representation of reality in ideas or with the fundamental ideas (forms) that underlie them. Rather, it speaks in "the universal imageless language of the heart" (ibid.). This idea was expressed by Richard Wagner in his opera *Tristan und Isolde* , though Schopenhauer actually disliked the opera.

Evaluation. *Positive Dimensions. Realistic view of human nature.* In stark contrast to the perfectibility of humankind held by so many of his contemporaries, Schopenhauer saw more

clearly the true human nature. Self-made progress and perfectibility are an illusion. Humankind of itself is doomed to a perpetual suffering and misery.

Emphasis on pessimism. Likewise, he correctly affirmed that pain is the essence of life. Apart from any transcendent hope, a legitimate pessimism emerges. Given the history of human terror, there is no realistic reason to believe that changing social structures will change human nature.

Insufficiency of sufficient reason . Schopenhauer accurately assessed the rationalistic principle of sufficient reason. If everything has a reason, so does God. This observation has been made by theists (see Gurr). If, on the other hand, God is his own reason (ground), then he is a self-caused Being. But this is impossible, since one cannot be ontologically prior to oneself.

Invalidity of the ontological argument . Like Kant and most philosophers since, Schopenhauer saw that the ontological argument is invalid. It does smuggle existence into its premises. For only *if* one assumes that a Necessary Being exists, does it follow that it must in reality exist necessarily. In like manner, only *if* a triangle really exists, does it in really have to have three sides.

The volitional nature of reality. Although Schopenhauer carried it to an irrational extreme, he was certainly correct in observing that ultimate reality has a volitional element. This factor was largely neglected by the rationalists and idealists of this day.

Criticisms. Schopenhauer's atheism as such is subject to the same criticisms as other forms of atheism, which are described in the articles ATHEISM and GOD, ALLEGED DISPROOF OF . A few of his crucial premises are worthy of particular note.

Self-defeating nature. Like others who follow Kant, Schopenhauer's denial of knowledge of God was self-defeating. Indeed, his whole system is a description of ultimate reality as he sees it—the very thing that is not possible on Kantian premises. He is claiming to know with his mind that reality cannot be known with the mind.

Unjustified dismissal of the law of causality. He was correct in dismissing the principle of sufficient reason, but not the principle of causality (*see* CAUSALITY, PRINCIPLE OF). He chided Kant for applying causality to the real (noumenal) world, but he did the same implicitly. He believed that cosmic will was the *cause* of phenomena we observe. But how could he know this unless the principle of causality applied. It does not help to claim that there no Cosmic Mind out there. To argue from what we observe to a real Cause of any kind is to use the principle of causality.

Self-destructive nature of denying rationality. To claim that ultimate reality is not rational is self-defeating. The assertion that all reality is irrational is to deny the reality of the very mind asserting this (*see* REALISM ; FIRST PRINCIPLES). Further, how can the effect be greater than the cause. How can nonrational will be the cause of rational mind (*see* CAUSALITY, PRINCIPLE OF).

Science and the Bible. The conflict between science and the Bible has been bitter, especially in the last 150 years. Most reasons for this hostility relate to what one perceives to be the nature and procedure of either domain. For many, the alleged conflict is resolved by separating the two spheres entirely. This is sometimes done by limiting the role of religion or the Bible to matters of faith and science to matters of fact. Specifically, some Christians in science argue that the Bible tells us "Who and Why" (God), and science deals with "How."

However, this neat separation of the domains of science and the Bible is unsatisfactory since the Bible does not so limit itself to questions of Who and Why. It often makes assertions of fact about the scientific world. Neither does science limit itself merely to questions of How. It also deals with origins (*see* ORIGINS, SCIENCE OF).

From a Christian perspective the relation between the Bible and Nature is the relation between two revelations of God, special revelation and general revelation (*see* REVELATION, GENERAL and REVELATION, SPECIAL). The first is found in God's revelation in Scripture (*see* BIBLE, EVIDENCE FOR) and the latter in his revelation in Nature. Between these two, when properly understood, there are no conflicts, since God is the Author of both, and he cannot contradict himself.

However, since scientific understanding is merely a fallible human understanding of Nature and since Bible scholars have only a fallible interpretation of infallible Scripture, it is understandable that there will be contradictions in these areas. The situation can be diagrammed as follows:

Scripture	**no conflict**	Nature
Theology	**some conflict**	Science

Biblical theology involves human understanding of the biblical text. As such, it is subject to misunderstanding and error. Likewise, science is fallible human attempts at understanding the universe. So conflict is inevitable. For example, most scientists believe the universe is billions of years old. Some Bible scholars hold that it is only thousands of years old. Obviously, both cannot be right.

Principles of Reconciliation. Before areas of specific conflicts are noticed, several guidelines are useful to the nature and procedure of both disciplines.

Either Group Is Subject to Error. Informed persons from both sides, both Bible interpreters and scientists, have made mistakes. Many Bible scholars once believed the sun revolved around the earth (as did many scientists); some believed the earth to be square. But they were wrong. Likewise, the model of an eternal cosmos has been discarded in favor of the big bang model. Evolutionary theories about inheriting acquired characteristics have been overthrown (*see* EVOLUTION, BIOLOGICAL ; EVOLUTION, CHEMICAL).

Either Group Is Subject to Correction. Another important principle is that both areas are subject to correction by the other. For example, scientific fact has refuted the flat-earth theory. Hence, any interpretation that takes verses about the "four corners of the earth" as literal depictions of geography are wrong. Science has proven them wrong.

Likewise, scientists who insist that the universe is eternal hold a theory that has been proven false, both by science and in critiques by Christians (*see* CREATION, VIEWS OF ; EVOLUTION, COSMIC ; BIG BANG THEORY).

Not all conflicts are so easily resolved. Very few things are proven with certainty in science. Some things are only probable or highly probable. For example, that the earth moves around the sun is not absolutely proven. This theory fits the facts as they are known and is a highly probable scientific interpretation of Nature that conflicts with a disputable interpretation of Scripture, then we should assume the latter is wrong. And vice versa. For example, macro-evolution is disputable and the creation of the universe, first life, and new life forms is highly probable. Hence, creation should be accepted as true and macro-evolution rejected (*see* EVOLUTION).

The Bible Is Not a Science Textbook. One principle that some overzealous Christian apologists sometimes forget is that, while the Bible makes no scientific mistakes (*see* BIBLE, ALLEGED ERRORS IN), neither is it a science textbook. It does not speak in technical scientific terms nor with precision. It uses round numbers. It employs observational, rather than astronomical, language (*see* BIBLE, ALLEGED ERRORS). The Bible only affirms partial truths in the various areas of science. It does not teach much geometry, any algebra, or trigonometry. One cannot assume conflicts without taking these factors into consideration.

Science Is Constantly Changing. Science understandings change continually. That means an apologist of years ago who succeeded in reconciling the Bible to some view of science might have been absolutely wrong since there wasn't a real conflict to reconcile. Perfect conformity may be wrong today as well, since science may change tomorrow. Given that science is a

tentative and progressive discipline, never reaching a final conclusion on everything, it behooves us not to assume that there are scientific errors in the Bible unless

1. something is known for certain to be a scientific fact, and

2. it conflicts with an interpretation of Scripture that is beyond all doubt.

For example, it is beyond any reasonable doubt that the Bible teaches that a theistic God exists (*see* THEISM). Hence, one would have to prove that it was a scientific fact beyond all uncertainty that God did not exist in order to show a real conflict. It is unlikely that *real* conflicts between science and the Bible will ever be demonstrated. Some apparent conflicts deserve note, along with some probable and even highly probable views of modern science that find an amazing parallel in the Bible. It is to these that we first turn.

Bible and Science Converge. Given that not much scientific information was known in Bible times, the Bible speaks with considerable scientific credibility, an evidence of its supernatural nature.

Origins. Universe had a beginning. The very first verse of the Bible proclaims that "in the beginning God created the heavens and the earth." It was common in ancient views to consider the universe eternal, yet the Bible taught that it had a beginning. This is precisely what most scientists now believe in accepting the Big Bang theory. Agnostic astrophysicist Robert Jastrow wrote that "three lines of evidence—the motions of the galaxies, the laws of thermodynamics, and the life story of the stars—pointed to one conclusion: All indicated that the Universe had a beginning" (*God and the Astronomers* , 111).

Order of events. Genesis 1 also indicates a progressive creation, universe, followed by formless earth, followed by what happened to give form to the earth. This is a much more scientifically sophisticated conception than held by the common ancient creation story. The Bible affirms that God said in the beginning, "Let there be light. And there was light" (Gen. 1:3). Jastrow wrote of the parallel of this statement with modern science, "the details differ, but the essential elements in the astronomical and biblical accounts of Genesis are the same: the chain of events leading to man commence suddenly and sharply at a definite moment in time, in a flash of light and energy" (ibid., 14).

No new matter is being created. The Bible declared from the beginning that creation is complete. God rested from his work (Gen. 2:2) and is still at rest (Heb. 4:4f .). In short, no new matter (energy) is coming into existence. This is precisely what the First Law of Thermodynamics declares, namely, that the amount of actual energy in the universe remains constant (*see* THERMODYNAMICS, LAWS OF).

Universe is running down . According to the second law of thermodynamics , the universe is running out of useable energy. It is literally growing old. This is precisely what the Psalmist said: "In the beginning you laid the foundations of the earth, and the heavens are the work of your hands. They will perish, but you remain; like clothing you will change them and they will be discarded" (Ps. 102:25–27).

Genesis declares that life first appeared in the sea (Gen. 1:21), and only later on land (1:26–27). This accords with the view that multicellular life teamed in the Cambrian waters before it multiplied on land.

Life produces after its kind. In Genesis 1:24 God said, “Let the land produce living creatures according to their kinds: livestock, creatures that move along the ground, and wild animals, each according to its kind.” According to agnostic paleontologist Stephen Jay Gould, “Most species exhibit no directional change during their tenure on earth. They appear in the fossil record looking much the same as when they disappear; morphological change is usually limited and directionless” (Gould, “Evolution’s Erratic Pace,” 13–14). In that fossil record, as in Genesis, human beings were the last to appear.

Humans made from the earth. Unlike ancient myths or the Qur’an, which claims that humans were made from a “clot of congealed blood” (see Sura 23:14), the Bible states that “the LORD God formed the man from the dust of the ground and breathed into his nostrils the breath of life, and the man became a living being” (Gen. 2:7). Fur ther, it adds, “By the sweat of your brow you will eat your food until you return to the ground, since from it you were taken; for dust you are and to dust you will return” (Gen. 3:19). According to science, the constituent elements of the human body are the same as those found in the earth.

Earth Sciences. Water returns to its source. Scripture affirms that “All streams flow into the sea, yet the sea is never full. To the place the streams come from, there they return again” (Eccles. 1:7 ; cf. Job 37:16). While the author may not have been aware of the exact process of evaporation, condensation, and precipitation, his description is in perfect harmony with these processes.

The earth is round . Isaiah spoke of God who “sits enthroned above the circle of the earth” (40:22). This is a remarkably accurate description for an eighth-century B.C . prophet (*see* ISAIAH, DEUTERO). And Solomon had given the same truth in the tenth-century B.C . (Prov. 8:27).

The earth hangs in space. In an era when it was common to believe the sky was a solid dome, the Bible accurately speaks of God spreading out the northern skies over empty space and suspending the earth over nothing (Job 26:7).

The Bible is not only compatible with true scientific findings, but it anticipated many of them. Scientific knowledge is compatible with the truths of Scripture.

Other scientific findings. Many other things discovered by modern science were stated in the Bible hundreds and even thousands of years in advance. These include the fact that: (1) the sea has paths and channels (2 Sam. 22:16 ; Ps. 8:8 ; Prov. 8:28); (2) the sea has boundaries (Prov. 8:29); (3) life is in the blood (Lev. 17:11); (4) disease can be spread by physical contact (Lev. 13).

Alleged Conflicts. *Genesis 1–2* . The most frequently cited example of conflict between science and the Bible is over the doctrine of creation. There is conflict over the origin of the

universe (*see* ORIGINS, SCIENCE OF); conflict over the origin of first life, and the conflict over human origins. A forceful attack against the Bible from the scientific standpoint is found in the book *The Bible, the Qur'an and Science* by Muslim author Maurice Bucaille. Some of the following specific examples of alleged conflict are cataloged by Bucaille. A strong Christian response to this work appeared in William Campbell, *The Qur'an and the Bible in the Light of History and Science* .

Days of Genesis. It is argued by critics that, since the "days" of Genesis are obviously twenty-four hours long, the Bible is in conflict with modern scientific dating which has proven that the origin of the world and life took a much longer period of time. But it has been shown in the article GENESIS, DAYS OF , that the Hebrew word for "day" can mean era or eon, and that if "solar days" are in view they need not have been successive twenty-four-hour periods. Also, scientific dating methods are built around two unprovable presuppositions: (1) that the original conditions were pure and uncontaminated and (2) that the rate of change has not fluctuated since the original conditions.

Genesis 1:2 . Genesis 1:2 has been called "a masterpiece of inaccuracy from a scientific point of view" (Bucaille, 40). Bucaille cites the fact that Genesis 1:2 mentions water in an early stage of the earth's history, yet he insists, "to mention the existence of water at this period is however simply pure allegory" (Bucaille, 41).

This is a strange charge, for Bucaille himself admits that "there is every indication that at the initial stage of the formation of the universe a gaseous mass existed" (ibid.). Yet water itself has a gaseous state known as vapor. Further, scientific views change. The theories of today are often discarded tomorrow. So, even if there were some theory today that holds there was no water in the initial states of the universe, it remains highly theoretical. Further, there was water in the early stages of earthhistory, at least in the form of vapor. This is one reason life as we know it is possible on earth, but not on other planets in our solar system. So in his haste to find errors in the Bible Bucaille has made one of his own.

Genesis 1:3–5 . About Genesis 1:3–5 Muslim critic Bucaille affirms, "it is illogical, however, to mention the result (light) on the first day, when the cause of this light [the sun] was created three days later" (ibid., 41).

But the sun is not the only source of light in the universe. Further, it is not necessary to understand the text as saying the sun was created on the fourth day. It may have been only *made to appear* on the fourth day, after the mist of water vapor had cleared away so that its outline became visible. (The Hebrew word for *made* , *asah* , occurs about 1200 times in the Old Testament. It has a wide range of meanings, including: did, made, show, appear, reveal, and made to appear.) Before this its light may have been shining through, as on a misty day, without observers on earth being able to see the outline of the sun.

Genesis 1:14–19 . Many would agree with Bucaille that "to place the creation of the Sun and Moon after the creation of the Earth is contrary to the most firmly established ideas on the formation of the elements of the Solar System" (Bucaille, 42).

Again, there are two problems. One is to assume that even the most prevailing scientific ideas are to be taken as absolute fact. Indeed, it is strange that Muslims use this argument, since they too point to the mistake of theologians who once assumed that the almost universally prevailing scientific view of a geocentric (earth-centered) universe was a scientific fact. In like man ner, prevailing scientific ideas about the origin of the sun and moon *could* be wrong.

But, as we have seen above in comments on Genesis 1:3–5 , it is not necessary to believe that the sun and moon were created on the fourth day. Rather, for whatever reason (perhaps as the original vapor disappeared), their form may have only become visible from the face of the earth on the fourth day.

Genesis 1:19–23 . Critical scholars find two things unacceptable in Gen. 1:19–23 : "the fact that continents emerged at the period in earth's history, when it was still covered with water" and "that a highly organized vegetable kingdom with reproduction by seed could have appeared before the existence of the sun" (Bucaille, 42).

The first point is unsubstantiated, and the second one was answered under Genesis 1:3–5 . Who finds it acceptable that God created seed-bearing plants early in earth's history? Nontheistic evolutionists who reject God and his special work of creation might find it difficult. It should not be unacceptable to a Muslim, such as Bucaille, who claims to believe the *Qur'an* . The *Qur'an* affirms that God created the world and all that is in it in a few days. The contradiction here is between the Bible and a prevalent scientific hypothesis (see Denton; Johnson; Geisler, chaps. 5–7).

Genesis 1:20–30 . Bucaille insists that this passage contains unacceptable assertions that the animal kingdom began with creatures of the sea and winged birds. However, birds did not appear until after reptiles and other land animals (ibid., 42–43).

The Bible does not actually say that God created feathered birds before reptiles. It refers to winged creatures (Gen. 1:21). This is often translated "birds" (i.e., flying animals) but is never rendered " *feathered* creatures." And, according to science, winged creatures did exist before feathered birds. Their mention with the "great sea creatures" is an indication that the reference is to winged dinosaurs. Bucaille here assumes an evolutionary scenario. But evolution is an unsubstantiated hypothesis. To offer as scientific proof that "numerous biological characteristics common to both species makes this deduction possible" is to make a fallacious deduction. For common characteristics do not prove common ancestry; it may indicate a common Creator. After all, there is a progressive similarity in automobiles from the first ones to current ones. No one, however, believes that one evolved from another by natural processes.

Finally, some contemporary scientists are questioning the long-held assumption that all winged creatures appeared after reptiles. Some fossils of flying marine animals have been found in earlier strata that were commonly assigned to the origin of reptiles. In any event, there is no contradiction, except between theories of science and some misinterpretations of Genesis.

Genesis 2:1–3 . Commenting on the biblical teaching that God created in six days (Gen. 2:1–3), Bucaille contends that "today we are perfectly aware that the formation of the Universe and

the Earth took place in stages that lasted for very long periods." This was shown above to be without grounds in the article Genesis, Days of.

Genesis 2:4–25 . Bucaille adopts the outdated view that Genesis 2 contradicts the account given in Genesis 1 . The charge here is that Genesis 1 declares that animals were created before humans, while Genesis 2:19 seems to reverse this, saying, "the LORD God had formed out of the ground all the beasts of the field . . . He brought them to the man to see what he would name them," implying Adam was created before they were (*see* ADAM, HISTORICITY OF ; GARDEN OF EDEN).

The solution to this problem, however, becomes apparent when we take a closer look at the two texts. The differences appear from the fact that Genesis 1 gives the *order* of events; Genesis 2 provides more *content* about them. Genesis 2 does not contradict chapter 1 , since it does not affirm exactly when God created the animals. He simply says he brought the animals (which he had previously created) to Adam in order that he might name them. The focus in chapter 2 is on the naming of the animals, not on creating them. Thus, Genesis 2:19 , stressing the naming (not the creating) of animals, simply says: "Now the LORD God [who] had [previously] formed out of the ground all the beasts of the field . . . He brought them to the man to see what he would name them."

Genesis 1 provides the outline of events, and chapter 2 gives details. Taken together, the two chaps. provide a harmonious and more complete picture of the creation events. The differences, then, can be summarized as follows:

Genesis 1	**Genesis 2**
chronological order	topical order
outline	details
creating animals	naming animals

Once this is understood, the two texts are perfectly complementary.

Genesis 2–3 . Many Bible critics have charged that there is no scientific evidence that the Garden of Eden ever existed, as the Bible maintains. But besides being an argument from silence which is a form of the fallacy of the argument from ignorance, this is not true. There is ample historical and geographical evidence for the existence of a literal Garden of Eden.

Genesis 4 . The problem here is that the Bible says Cain married when there was apparently no one to marry. Cain and Abel were the first children born to Adam: There were no women for Cain to marry. There was only Adam, Eve (Gen. 4:1), and his dead brother Abel (4:8). Yet the Bible says Cain married and had children.

Although this is a favorite of Bible critics, the solution is rather simple. Cain married his sister (or possibly a niece). The Bible says Adam "begot sons and *daughters* " (Gen. 5:4). In fact, since Adam lived 930 years (Gen. 5:5), he had plenty of time to produce plenty of

children. Cain could have married one of his many sisters, or even a niece, if he married after his brothers or sisters had grown daughters.

As to the subsidiary problem of forbidden and genetically dangerous incest (Levit. 18:6) if Cain married his sister, the solution is not difficult either. First of all, there were no genetic imperfections at the beginning of the human race. God created a genetically perfect Adam (Gen. 1:27). Genetic defects resulted from the Fall and only occurred gradually over long periods of time. Further, there was no command in Cain's day not to marry a close relative. This command (Leviticus 18) came thousands of years later in Moses' day (ca. 1500 B.C .). Finally, since the human race began with a single pair (Adam and Eve), Cain had no one else to marry except a close female relative (sister or niece).

Genesis 5 . The problem of the long lives of people before the flood is obvious: Adam lived 930 years (Gen. 5:5); Methuselah lived 969 years (Gen. 5:27), and the average age of those who lived out their normal life-span was over 900 years old. Yet even the Bible recognizes what scientific fact shows, namely, that most people live only seventy or eighty years before natural death (Ps. 90:10).

It is a fact that people do not live that long today. But this is merely a descriptive statement, not a prescriptive one. No scientist has shown that it is impossible for someone to live that long. In fact, biologically there is no reason humans could not live hundreds of years. Scientists are more baffled by aging and death than by longevity.

Second, the reference in Psalm 90 is to Moses' time (1400s B.C .) and later, when longevity had decreased to seventy or eighty years for most, though Moses himself lived 120 years (Deut. 34:7).

Third, some have suggested that these "years" are really only months, which would reduce nine hundred years to the normal life span of eighty years. However, this is implausible. There is no precedent in the Hebrew Old Testament for taking the word *year* to mean "month." And Mahalalel had children when he was "only" sixty-five (Gen. 5:15), and Cainan had children when he was seventy (Gen. 5:12); this would mean they were less than six years old—which is not biologically possible.

Fourth, others suggest that these names represent family lines or clans that went on for generations before they died out. However, this does not make sense. For one thing, some of these names (e.g., Adam, Seth, Enoch, Noah) are definitely individuals whose lives are narrated in the text (Gen. 1–9). For another, family lines do not "beget" family lines by different names. Neither do family lines "die," as each of these individuals did (cf. 5:5 , 8 , 11). Furthermore, the reference to having "sons and daughters" (5:4) does not fit the clan theory.

Fifth, it seems best to take these as years (though they were lunar years of 12 x 30 = 360 days).

The Bible is not alone in speaking of hundreds of years life spans among ancients. There are also Greek and Egyptian records of humans living hundreds of years.

A related problem noted is that in Genesis (6:3) God decided just before the Flood to limit man's life span to 120 years. In Genesis 11:10–32 , however, the ten descendants of Noah had life spans from 148 to 600 years (Bucaille, 39–40).

Even on the assumption that 6:3 refers to the life span of Noah's descendants, it does not say that this shortening of life would take place *immediately* . It may refer only to the eventual life span of the postdiluvians. Indeed, Moses, who wrote these words, lived to exactly 120 years (Deut. 34:7).

Furthermore, there is no need to take it as a reference to the life span of individuals after the flood at all. It likely refers to the length of time humankind then had left before God would send his fatal judgment. This fits better with the immediate context that speaks of how long God would exhort humankind to repent before he sent a flood.

Genesis 5 , 11 . Critics claim that the Bible makes a scientific error when it dates humankind around 4000 B.C . But the Bible nowhere gives any such total of years. In fact, there are demonstrable gaps in the biblical genealogies. Hence, it is impossible to obtain a total of years from Adam to Abraham. The Bible has *accurate outline genealogies* in which there are demonstrable gaps (*see* GENEALOGIES, OPEN OR CLOSED).

Genesis 6–9 . The flood story has been charged with scientific improbabilities, including the fact that there is no geological evidence, and it would be impossible to get all the animal species in the world in such a small boat. But it has been shown (*see* FLOOD, NOAH'S) that there is evidence for a flood, and that the size of the ark was huge, sufficient to house the kinds of animals that could not survive the flood.

Genesis 30 . According to Genesis 30 , Jacob seemed to accept the unscientific view of his time that prenatal influence on a mother affects the physical characteristics of the unborn. For he got streaked, speckled, and spotted kids by placing stripped rods before the parent goats while they mated (Gen. 30:37).

While the spotted kids were not born because of Jacob's scheme with the rods, there is a scientific basis for his results. "[T]o the casual observer they were of solid color, for all the spotted goats had been removed; but their hereditary factors or genes for color were mixed, the condition which the geneticist calls heterozygous." For "breeding tests have shown that spotting is recessive to solid color in goats, making it possible for a goat to have spots that can be transmitted, although they do not appear to the eye" (ASA, 71).

God blessed Jacob, in spite of his scheme to get his crooked uncle's livestock. The Lord revealed to Jacob in a dream the real reason the kids were born that way: "Look up and see that all the male goats mating with the flock are streaked, speckled or spotted, *for I have seen all that Laban has been doing to you* " (Gen. 31:12 , emphasis added).

Exodus 14 . According to this account of the crossing of the Red Sea, the massive group of fleeing Israelites must have had no more than twenty-four hours to cross through the portion of the Red Sea which God had prepared. However, according to the numbers given, there were

some 2 million of them (see Num. 1:45–46). But, for a multitude of this size, a twenty-four-hour period is just not enough time to make such a crossing.

It should be noted that, although the passage may give the idea that the time that the nation of Israel had to make the crossing was short, this is not a necessary conclusion. The text states that God brought forth an east wind which drove back the waters “all that night” (Exod. 14:21). Verse 22 seems to indicate that it was the very next morning when the multitude of Israelites began their journey across the sea bed. Verse 24 then states, “Now it came to pass, in the morning watch, that the Lord looked down upon the army of the Egyptians.” Finally, according to verse 26 God told Moses to “stretch out your hand over the sea, that the waters may come back upon the Egyptians.” There is no time reference to this command, however, and it is not necessary to conclude that Israel had completed their crossing that very morning.

A twenty-four-hour crossing is not as impossible as it may seem. The passage never states that the people crossed in single file, or that they crossed over on a section of ground the width of a modern superhighway. In fact, it is much more likely that God prepared a section several miles wide. This would certainly fit the situation, since the camp of Israel on the bank of the Red Sea probably stretched out for three or four miles along the shoreline. When the time came for the people to cross on dry ground, they probably moved as one magnificent throng, moving as a great army advancing upon the enemy lines. The Red Sea stretches some 1450 miles, and averages 180 miles wide. If this great multitude crossed in such a manner as described, to cross a distance of 180 miles in a twenty-four-hour period they would have had to move at about eight miles an hour. This would have been a reasonable pace and sufficient time to cross over the long and narrow body of water.

Leviticus 11 . In Leviticus 11:5–6 , two animals, the rock hyrax and the rabbit, were designated as unclean by Leviticus because, although they chew the cud, they do not divide the hoof. But, modern science has discovered that these two animals do not chew the cud. Thus, the Bible would appear to be in error at this point.

It is unfair to impose a modern scientific understanding on the ancient phrase “chew the cud.” Rabbits do not chew the cud in the technical sense, they engage in a chewing action called “refection,” which looks the same to an observer. This is known as “observational language,” and we use it all the time, especially when speaking with people who are unfamiliar with the technical aspects of a subject. For example, we use observational language to talk about the sun rising and setting. The description is not technically correct by modern scientific standards, but it is functionally useful for the level of understanding of the pre-scientific common person. The biblical phrase should be taken as a broad, practical observation that includes both the modern technical definition of cud chewing or *rumination* , as well as other animals, including rabbits, that appear to chew the cud. They are listed with animals that chew the cud so that the common person could make the distinction in everyday observation.

This is a good example of why the Bible has no factual errors, but it is not a scientific textbook in the modern sense. The distinctions being made in Leviticus were practical, not scientific. They were to help people select food. Animals which chew the cud are identified as ruminants from “to ruminate,” which is the action of regurgitating food into the mouth to be

chewed again. Ruminants normally have four stomachs. They were normally “clean,” acceptable food for the Israelites. Neither the rock hyrax (translated “rock badger” in the NASB) nor the rabbit are ruminants and technically do not chew the cud. However, both move their jaws in such a manner as to appear to be chewing the cud. Even the Swedish scientist Linnaeus originally classified them as ruminants.

Refection is a process in which indigestible vegetable matter absorbs certain bacteria and is passed as droppings and then eaten again. This process enables the rabbit to better digest it. The process is similar to rumination.

Leviticus 13 . Leviticus 13 lists “leprosy” as an infectious disease that can contaminate clothing. However, leprosy is a disease caused by a bac terium and does not affect inanimate objects such as garments.

Bible scholars have observed in response that this is simply a matter of the use of a word changing over time. What in modern times is called leprosy is known as Hansen’s Disease. This is not the same type of infection that is described as “leprosy” in the Old Testament. The bacterial disease now identified as leprosy does not produce the symptoms described in various Old Testament passages. The Hebrew term *tsarath* , translated “leprosy,” is a more general term for any serious skin disease or sign of infection or defilement on the surface of inanimate objects. The defilement on garments, or walls as in Leviticus 14:33–57 , was probably some type of fungus or mold. Garments found to be infected were burned (Lev. 13:52). Infected houses were cleansed. If the infection could not be eradicated, the houses were demolished and the ruins were taken outside the city (Lev. 14:45).

Numbers 5 . Here Moses allegedly commanded the practice of a superstition that has no basis in science. The accused wife was found guilty after drinking bitter water only if her stomach swelled. But, both the innocent and guilty wives drank the same bitter water, which shows that there was no chemical or biological basis for one swelling and the other not.

In response, several things are of importance. First, the text does not say that the difference in the guilty woman’s condition had a *chemical* or *physical* cause. In fact, it indicates that the cause was *spiritual* and *psychological* . “Guilt” is not a physical cause. The reason the belly of a guilty woman might swell can be easily explained by what is known scientifically about psychosomatic (mind over matter) conditions. Many women have experienced “false pregnancies” where their stomach and breasts enlarge without actually having any baby growing in their uterus. Some people have even experienced blindness from psychological causes. Experiments with placebo pills (sugar pills) indicate that many people with terminal illnesses get the same relief from them as from morphine. So, it is a scientific fact that the mind can have a great effect on bodily processes.

The text says the woman was placed under an “oath” before God and under the threat of a “curse” (vs. 21). If she was guilty, the bitter water would have worked like a psychosomatic lie

---

nasb New American Standard Bible

detector. A woman who really believed she would be cursed and knew she was guilty would be affected. But those who knew they were innocent would not.

Finally, the text does not say anyone actually drank the water and experienced an enlarged stomach. It simply says "if" (cf. vss. 14 , 28) she does, then this will result. No doubt just the *belief* that this would happen and that one would be found guilty would have convinced the woman who knew she was guilty not to subject herself to the process.

Joshua 6 . Joshua 6 records the conquest and destruction of the city of Jericho. If this account is accurate, it would seem that modern archaeological excavations would have turned up evidence of this monumental event. However, no such evidence from Joshua's time has been unearthed.

For many years the prevailing view of critical scholars has been that there was no city of Jericho at the time Joshua was supposed to have entered Canaan. Although earlier investigations by the notable British archaeologist Kathleen Kenyon confirmed the existence of ancient Jericho and its sudden destruction, her findings led her to conclude that the city could have existed no later than ca. 1550 B.C . This date is much too early for Joshua and the children of Israel to have been party to its demise.

However, recent reexamination of these earlier findings, and a closer look at current evidence indicates that not only was there a city that fits the biblical chronology, but that its remains coincide with the biblical account of the destruction of this walled fortress. In a paper published in *Biblical Archaeology Review* (March/April 1990), Bryant G. Wood, visiting professor to the department of Near Eastern Studies at the University of Toronto, has presented evidence that the biblical report is accurate. His detailed investigation has yielded the following conclusions:

First, the city which once existed on this site was strongly fortified, corresponding to the biblical record in Joshua 2:5 , 7 , 15 ; 6:5 , 20 .

Second, the ruins give evidence that the city was attacked after harvest time in the spring, corresponding to Joshua 2:6 ; 3:15 ; 5:10 .

Third, the inhabitants did not have the opportunity to flee with their foodstuffs from the invading army, as reported in Joshua 6:1 .

Fourth, the siege was short, not allowing the inhabitants to consume the food which was stored in the city, as Joshua 6:15 indicates.

Fifth, the walls were leveled in such a way to provide access into the city for the invaders, as Joshua 6:20 records.

Sixth, the city was *not* plundered by the invaders, according to God's instructions in Joshua 6:17–18 .

Seventh, the city was burned after the walls had been destroyed, just as Joshua 6:24 says.

Although some dispute that these are from the right time period, there is evidence that they are (see Wood). At any rate, the possibility that this is indeed the remains of Joshua's Jericho has not been disproved. Hence, no scientific disproof of the biblical story of Jericho has been made. What is more, even if there were no present or remaining evidence does not prove that it did not occur. It is possible that the evidence may have been destroyed or be in another place. The argument that "No evidence exists, therefore, there is none" is tenuous at best. It involves the argument from ignorance fallacy.

Joshua 10 . During the battle with the kings of the land, God gave Israel the power to overcome their enemies. As the armies of the people of the land fled from before Israel, Joshua sought the Lord to cause the sun to stand still so that they might have sufficient daylight to complete the destruction of their enemies. But critics insist that there are at least two scientific errors here. First, Joshua is affirming wrongly a geocentric (earth-centered) view of the solar system. Second, even if one accepts that this occurred by the earth halting in its spin on its axis as it moves around the sun, this would only cause greater problems. For example, such slowing would cause things on earth to fly off into space.

This argument is based on the unproven assumption that miracles are not possible (*see* MIRACLE ; MIRACLES, ARGUMENTS AGAINST). The God who made the sun and the earth can certainly make the sun to shine on it longer in one day if he wishes to do so. Some orthodox scholars (e.g., Robert Dick Wilson of Princeton) held that the Hebrew word *dom* (trans. "stand still") can be translated "be silent," "cease," or "leave off." Thus, they take it to mean the sun ceased to pour down its intense heat so the troops were able to do the work of two days in one. This view would involve no slowing down of the earth on its axis. However, it is hard to reconcile with verse 13 which states that "the sun stopped in the middle of the sky and did not hasten to go down for about a whole day."

Further, even if the earth did slow down in its rotation, it is not necessary to conclude that the earth's rotation was completely halted. Verse 13 states that the sun "did not hasten to go down for about a whole day." This could indicate that the earth's rotation was not completely halted, but that it was retarded to such a degree that the sun did not set for about a whole day. Or, it is possible that God caused the light of the sun to refract through some cosmic "mirror" so that it could be seen a day longer. If the earth's rotation was completely stopped, we must remember that God is not only capable of halting the rotation of the earth for a whole day, but he is also able to prevent any possible catastrophic effects that might result from the cessation of the earth's rotation. Although we do not necessarily know *how* God brought about this miraculous event, this does not mean we cannot know *that* he did it.

The phrase "the sun stood still" is no more unscientific that the phrases "sun rise" and "sun set" used by scientists (meteorologist) every day as they report the weather. It is simply an observational statement from the vantage point of a person on the face of the earth which is, after all, where we are. In short, there is no scientific proof that Joshua did not get about an extra day of light to finish his battle.

1 Kings 7:23 . Some critics have alleged a scientific error in Scripture since according to 1 Kings 7:23 , Hiram constructed a "Sea of cast bronze ten cubits from one brim to the other; it

was completely round. Its height was five cubits, and a line of thirty cubits measured its circumference.” From this report we learn that the ratio of the circumference to the diameter is three to one. However, this is an inaccurate value of *pi* which is actually 3.14158, etc.

Apologists have offered two possible solutions to this problem. Harold Lindsell writes that 1 Kings did not error in the use of *pi* . For if the ten cubits width of the bronze container is measured from outside brim to brim and the circumference is only of the water which is the inside of the container, then *pi* would be 3.14. In this way the inside measurement of the container would be less than 10, thus accounting for how the circumference of the water (or the inside of the container) would be only 30 and still be 3.14 times the diameter of 9.58 (= 30.0).

There are two difficulties with this view. First, one has to assume a width of the bronze container of .21 cubits, which is not stated in the text. Second, one must assume that the diameter is measured from the outside but the circumference from the outside. But this seems unusual and is not mentioned in the text.

Round Number View. According to this view, it is characteristic of the Bible to speak in round numbers (*see* BIBLE, ALLEGED ERRORS IN), and 3 is the rounded number for 3.14. The biblical record of the various measurements of the different parts of the temple are not necessarily designed to provide precise scientific or mathematical calculations. Scripture simply provides an approximation. The evidence seems to support this view. The rounding of numbers or the reporting of approximate values or measurements was a common practice in ancient times when exact scientific calculations were not used. The Bible uses round numbers elsewhere (cf. Josh. 3:4 ; cf. 4:13 ; 2 Chron. 9:25 ; 13:17). Even 3.14 is not precise. Nor is 3.1415, since pi goes on indefinitely without coming out even. So even “scientific precision” is a relative term with pi. But 3 is relatively correct, since that is what pi is for all practical purposes. And that was sufficient to make a pool by the ancient temple. To get a man on the moon takes more precision. But it is anachronistic to superimpose this kind of mathematical precision on the Bible.

2 Kings 20 . In response to Hezekiah’s prayer, God instructed Isaiah to prophesy to Hezekiah that God would add fifteen years to Hezekiah’s life (2 Kings 20:11). When he heard this, Hezekiah asked for a sign to confirm God’s promise. The sign was that the shadow would retreat ten degrees. This would involve making the shadow go backwards instead of forward as the sun set. But critics insist that it is not scientifically possible for shadows to retreat. In order to do so, the earth would have to suddenly reverse its spin.

This objection has the same problems as does critics’ complaints about the sun standing still in Joshua’s time. In a theistic (*see* THEISM) universe there is no reason that a miracle like this could not happen. It is credible to believe that some miraculous events have occurred (*see* MIRACLES, ARGUMENTS AGAINST), including creation out of nothing (*see* CREATION, VIEWS OF).

The retreat of Ahaz’s sun dial was undoubtedly a miracle. Things like this do not occur naturally. Indeed, Hezekiah realized that it would not be a miraculous confirmation of God’s promise if the sign involved some phenomenon that could be explained (2 Kings 20:10). It was the miraculous nature of the event that qualified it as a sign from God. Any attempt at an

explanation of how this was accomplished would be pure speculation. Although God can employ the forces of nature to accomplish his purposes, he can also accomplish his will in a way that transcends natural law. The Bible does not indicate precisely how God did this, but this is not uncommon for miracles which involve the direct intervention of God. As to whether God miraculously reversed the earth's spin on its axis or the shadow of the sun (say, by refraction) need not concern us. It is sufficient to note that God can perform miracles, and this was clearly a miracle.

Job 38:7 . Many Bible critics believe that the Old Testament errs when it speaks of the firmament as a solid dome. Job speaks of God who "spread out the skies" like "a cast metal mirror" (37:18). Indeed, the Hebrew word for the "firmament" (*raqia*) which God created (cf. Gen. 1:6) is defined in the Hebrew lexicon as a solid object. But this is in clear conflict with the modern scientific understanding of space as nonsolid and largely empty.

It is true that the origin of the Hebrew word *raqia* meant a solid object. However, meaning is not determined by *origin* (etymology), but by *usage* . Originally, the English word "board" referred to a wooden plank. But when we speak of a board of directors, the word no longer has that meaning. When used of the atmosphere above the earth, "firmament" clearly does not mean something solid (see Newman).

The related word *raqa* ("beat out, spread out") is correctly rendered "expanse" by recent translations. Just as metal spreads out when beaten (cf. Exod. 39:3 ; Isa. 40:19), so the firmament is a thinned out area. The root meaning "spread out" can be used independently of "beat out," as it is in several passages (cf. Ps. 136:6 ; Isa. 42:5 ; 44:24). Isaiah wrote, "So says Jehovah God, he who created the heavens and *stretched them out* , spreading out the earth and its offspring" (Isa. 42:5 NKJV). This same verb is used of extending curtains or tents in which to dwell, which would make no sense if there was no empty space there in which to live. Isaiah, for example, spoke of the Lord "who sits on the circle of the earth, and its people are like grasshoppers; who *stretches out the heavens like a curtain, and spreads them out like a tent to dwell in* " (Isa. 40:22 NKJV).

The Bible speaks of rain falling through the sky (Job 36:27–28). But this makes no sense if the sky is a metal dome. Nowhere does the Bible refer to little holes in a metal dome through which the drops fall. It does speak figuratively of the "windows of heaven" opening for the Flood (Gen. 7:11). But this should probably not be taken any more literally than our idiom, "It is raining cats and dogs."

The creation account speaks of birds that "fly above the earth across the face of the firmament" (Gen. 1:20). But this would be impossible if the sky was solid. Thus, it is more appropriate to translate *raqia* by the word "expanse" (as the NASB and NIV). And in this sense there is no conflict with the concept of space in modern science.

---

nkjv New King James Version
niv New International Version

Even if taken literally, Job's statement (37:18) does not affirm that the "skies" *are* a "metal mirror," but simply that they are *as* [or like] a mirror. It is a poetic comparison that need not be taken literally, any more does the statement in Proverbs 18:10 that God is a "strong tower." Further, the point of comparison in Job is not the solidity of the "skies" and a mirror, but their respective durability (*strong* [*chazaq*]).

Jonah 1 . Many people have difficulty believing that a person could live inside a whale for three days and nights. The problem of breathing, to say nothing of the gastronomical processes would surely have been fatal well before three days.

Again, the event is presented as a miracle (Jonah 1:17 ; cf. Matt. 12:40). The God who created Jonah and the whale could preserve Jonah's life in the whale. Second, Jonah and his prophetic ministry are mentioned in the historical book of 2 Kings (14:25). There is archaeological confirmation of a prophet named Jonah whose grave is found in northern Israel, from which Jonah comes. There are even credible stories from modern history of persons who have survived in whales without any special divine intervention.

A strong argument for the historical accuracy of Jonah is that it was attested by Jesus, the Son of God (*see* CHRIST, DEITY OF). In Matthew 12:40 , Jesus predicts his own burial and resurrection as a sign to the doubting scribes and Pharisees on the order of the sign of Jonah. Jesus says, "For as Jonah was three days and three nights in the belly of the great fish, so will the Son of Man be three days and three nights in the heart of the earth." If the tale of Jonah's experience in the belly of the great fish was fiction, then this provided no prophetic support for Jesus' claim. As far as Jesus was concerned, the historical fact of his own death, burial, and resurrection was on the same historical ground as Jonah in the belly of the fish. To reject one is to cast doubt on the other (cf. John 3:12).

Jesus went on to mention the significant historical detail. His own death, burial, and resurrection was the supreme sign that verified his claims. When Jonah preached to the unbelieving Gentiles, they repented. But, here was Jesus in the presence of the very people of God, yet they refused to believe. Therefore, those of Nineveh would stand up to give testimony against them at the judgment, because the Ninevites repented at the preaching of Jonah (Matt. 12:41). If the events of the book of Jonah were merely parable or fiction, and not literal history, then the men of Nineveh did not really repent, and any judgment upon the unrepentant Pharisees would be unjust and unfair. Because of the testimony of Jesus, we can be sure that Jonah records literal history.

Conclusion. All attempts to convict the Bible of a scientific error fail. Both Nature and Scripture are revelations of God, and God cannot contradict himself (*see* GOD, NATURE OF ; TRUTH, NATURE OF). Conflicts that exist are not between Nature and Scripture but between fallible understandings of one or the other of them, or both.

Scientific Dating. *The Problem.* The generally accepted dating (GAD) in the scientific community poses several problems for Christian apologetics, since it posits 10 to 20 billion years for the universe and hundreds of thousands of years for human life. This is contrary to a widely assumed dating of 10,000 to 20,000 years for the universe and human life by many evangelical Christians.

Actually, there are four separate problem with GAD for the defense of historic Christianity: (1) Does GAD support evolution? (2) Does GAD contradict the biblical view of the age of the universe? (3) Does GAD conflict with the biblical view of the age of the human race? (4) Does GAD conflict with the biblical view of creation in "six days"? Since the last one is discussed in detail elsewhere (*see* GENESIS, DAYS OF), only the first three will be discussed here.

Scientific Dating and Evolution. Even assuming GAD's conclusion that the universe is billions of years old and that life is at least a half billion years old, macroevolution does not follow (*see* EVOLUTION, BIOLOGICAL). For billions of years are only a *necessary* condition for the truth of evolution but not a *sufficient* condition for it. A longer period of time is simply not sufficient to explain how gradual changes by natural processes could produce a man from a microbe. Multi-millions of years are a necessary condition for all living things to evolve. However, long periods of time are not sufficient to prove that macroevolution is true for two

---

CT *Christianity Today*

basic reasons: (1) long time periods do not produce specified complexity; and (2) a natural mechanism is needed to explain macroevolution.

Long Time Periods Do Not Produce Specified Complexity. There is no empirical or experimental evidence that long periods of time produce the kind of incredible specified complexity and irreducible complexity found in living things (*see* EVOLUTION, CHEMICAL). Simple observation reveals that if one drops bags of red, white, and blue confetti from an airplane a thousand feet above the ground it will not form an American flag on someone's lawn. The laws of nature, apart from intelligent intervention, will randomize the colors; they will not form fifty stars and thirteen stripes out of them. And both observation and experimentation demonstrate that dropping the colored paper fragments from ten thousand feet will not provide the necessary time for them to organize. There is only one cause known to human beings that can organize these tiny pieces of paper into an American flag, and that is intelligence. But intelligent intervention is not naturalistic evolution; it is creation.

The Need for a Natural Mechanism. If naturalistic evolution is to occur, there must be more than long periods of time. There must also be some natural causes that can account for the increased complexity in living things from the original one-celled organism all the way up to a human being. No such mechanism has ever been found. Natural selection does not do it. It is only a principle of survival of existing types of life, not the arrival of brand-new types (*see* DARWIN, CHARLES). Natural mutations do not do it either. They are generally not helpful and are often lethal. Variation with populations are only sufficient to account for small changes within specific types of life and not for the macroevolutionary changes needed between all the various forms of life from simpler to more complex. So, long time periods do not explain how macroevolution could occur. What is needed are natural causes that can be shown to produce increased specified complexity apart from any intelligent cause. But in fact the evidence is to the contrary (*see* TELEOLOGICAL ARGUMENT ; ANTHROPIC PRINCIPLE). Natural laws do not specify; they randomize. They do not cause greater specified order; they cause disorder. They do not create life; they cause decay.

Short Time Is Fatal to Macroevolution. One reason that naturalistic evolutionists are so vehemently opposed to dating schemes that posit a young universe (of 10,000 to 20,000 years of age) is that this is fatal to evolutionary theory. Evolution simply must have longer periods of time than just several thousand years. Thus, while long periods of time posited by the GAD scheme do not eliminate creation, short periods of time do eliminate evolution.

Scientific Dating and the Age of the Universe. The GAD view does not pose a problem for all orthodox Christians—only for those who hold to a young universe (of thousands of years). Young-universe apologists, such as Henry Morris (see Morris, all) and followers, must object to GAD. This they do in two ways.

Negative Scientific Arguments Against an Old Universe. The minimal essential element of a young-universe apologetic is to find loopholes in the currently accepted scientific dating scheme. This is attempted in several ways.

Unprovable Presuppositions. Young-universe proponents point out that there are unprovable presuppositions of old-universe dating methods. For example, radiometric dating methods assume an original condition of the substance that was "pure." They also assume that there has been a constant rate of change since that time. For example, to argue from the amount of salt in the sea to an old earth one must assume there was no salt there to begin with and that salt has been deposited in it by rivers and streams at a relatively constant rate since the beginning. But both of these premises are questionable, especially if there was a universal flood (*see* NOAH, FLOOD OF). Likewise, to argue to an old-universe of billions of years from the lead isotopes in uranium one must assume that there were none there at the beginning and that the rate of decay has been constant ever since. This too has been challenged.

Furthermore, there is always the problem of a contaminated sample or some other factor to throw off the rate of decay or deposit. That is, to maintain the old-universe argument one must show that the sample used has not been contaminated with material from a later time. This is particularly true of carbon dating. Otherwise, the date one gets is not the original date of the material.

Positive Arguments for a Young Universe. Another tactic open to young-universe apologists is to provide scientific evidence that the universe is young. Many such arguments have been offered. The problem with this method is that it too must accept some unproven (or unprovable) presuppositions like an original condition and a constant process since then. But these are the very things they challenge in the old-universe view. For example, some young-universe proponents have argued from the shallow depth of moon dust that the moon is only thousands of years old. But to do this they must assume that the moon had no dust to begin with and that the rate of buildup since has been relatively constant per year. These too are unproven, if not practically unprovable. Nonetheless, young-universe proponents have every right to offer positive scientific evidence for their view, whether it is by the nature of a universal flood, or the faster rate of decay or deposits. And if the weight of the evidence favors their view, then the weight of the evidence goes against macroevolution, which demands long time periods.

The Other Alternative: An Old Universe. Other orthodox Christians defend their stance by accepting the possibility of an old universe of billions of years and pointing to the fact that the Bible nowhere commits them to a young universe. They usually point to several factors. First, Genesis 1:1 only says there was a "beginning" but not exactly when that was. Second, the "days" of Genesis may represent long periods of time. Third, there may be a time gap before the days of Genesis begin (as in some form of Gap Theory). Fourth, there are known gaps in the genealogical record (*see* GENEALOGIES, OPEN).

Scientific Dating and the Age of the Human Race. Another problem that both young-earth Christians and even many old-earthers have is reconciling the GAD of the age of the human race with the biblical record. Since this is discussed in more detail elsewhere (*see* MISSING LINKS), it will only be touched on here. There are several ways this problem may be resolved.

Rejecting the Dating Methods for the Human Race. The dating methods for the antiquity of the human race are subject to even more debate than those for the date of the universe—and for the same reasons, only to a higher degree in some cases. First, there is the problem of assuming

the original state was pure. Second, there is also the problem of demonstrating a constant, uninterrupted rate of decay. Third, there is the question of contamination of the sample or influence of other forces. In addition, some dating methods (like Carbon 14) are only accurate for thousands, not hundreds of thousands or millions of years. Other dating methods like the interglacial periods are even less accurate.

Challenging the Human Status of the Fossils. Another problem is the assumption that human-like anthropoids or Hominids of great age were really human beings created in the image and likeness of God rather than just highly developed apelike creatures. After all, morphology (bone structure) and even skull size does not prove true humanness. Nor does simple tool-making prove humanness, since some animals today are known to use simple tools (like seals using stones to open shells). Most scholars admit, civilized man is not hundreds of thousands of years old. And human beings with evidence of religion and God-consciousness are not much earlier. These much later forms point to the time of origin of true human beings made in God's image, that is, beings with rational, moral, and religious capacity.

Demonstrating Gaps in the Biblical Genealogies. It is true that if one assumes there are no gaps in the biblical genealogies, then the human race must be little more than six thousand years old. However, there are demonstrable gaps in the ancestral records in the Bible (cf. Matt. 1:8 and 1 Chron 3:11–14), even in the early tables in Genesis (cf. Luke 3:36 with Gen. 11:12). This is discussed in more detail elsewhere (*see* GENEALOGIES, OPEN). Many noted evangelical scholars have held this view, from B. B. Warfield to Gleason Archer.

Conclusion. While there are conflicts between certain interpretations of the biblical record and prevailing theories of the age of the earth and humankind, there are no real contradictions. This is true for two basic reasons. First, no one has proven with absolute certainty that the universe is a given age, young or old. Second, there are different ways to interpret the biblical record so as to avoid conflict with the GAD of billions of years. Hence, while there is conflict with prevailing scientific theory and favored interpretations of the biblical record, there is no irresolvable contradiction.

Scientism. *Scientism* is the belief that the scientific method is the only method for discovering truth. The father of modern scientism was the atheist (*see* ATHEISM) Auguste Comte (1798–1857), who also began a religion of secular humanism (*see* HUMANISM, SECULAR). Comte’s view is also known as positivism, an ancestor to the logical positivism of A. J. Ayer.

Since scientism often embraces many individual beliefs, including atheism, evolution theories (*see* EVOLUTION BIOLOGICAL), antisupernaturalism (*see* MIRACLES, ARGUMENTS AGAINST), and materialism , it is evaluated in those articles. Those who reject God fail to seriously appreciate the weight of evidence (*see* GOD, EVIDENCE FOR). This misuse of the scientific method is restricted and truncated (*see* FAITH AND REASON ; ORIGINS, SCIENCE OF), being a form of naturalism and often materialism.

The methods of scientism are questionable, even if there is one universally agreed-upon scientific method. There is no reason to believe the scientific method is the only way to acquire truth.

This dependence on the scientific method also leaves out differences that most scientists see between operation sciences, which are empirically studied, and the equally legitimate forensic sciences, for which a strict scientific methodology is impossible (*see* ORIGINS, SCIENCE OF). The forensic sciences are not religion-based, though one of them, Origin science, has religious implications. But origin science is the only way to look at some key questions about humanity and its significance. Unlike scientism, it does draw on evidence to back up its assumptions. Those assumptions do lead toward a beginning point and the existence of an intelligent Designer (*see* ANTHROPIC PRINCIPLE ; BIG BANG ; EVOLUTION, CHEMICAL ; TELEOLOGICAL ARGUMENT). The findings of origin science directly contradict scientism.

Even empirical scientists recognize the limitations of the scientific method (see Sullivan), since it can only deal with observable phenomena. It begs the question in favor of materialism to assume that there is nothing beyond the observable. Other aspects of reality cannot be captured by the scientific method (see Gilson). Some are known intuitively (*see* FIRST PRINCIPLES), others inferentially (*see* CAUSALITY, PRINCIPLE OF) or transcendentally (*see* TRANSCENDENTAL ARGUMENT), and some only by special revelation (*see* REVELATION, SPECIAL).

Self-Evident Truths. As applied to propositions, self-evident means that once the terms are known the truth of the proposition is evident in itself, needing no elucidation or confirmation from anything outside it. For example, "All wives are married women" is self-evident, since the terms *wives* and *married women* mean the same thing. This kind of self-evident statement is said to be a tautology since it is empty of all meaning, not really stating that there are any wives. It simply means, " *If* there is a wife, then she is a married woman."

Self-Evident First Principles. First principles are said to be self-evident since they are the foundation (*see* FOUNDATIONALISM) on which all other true statements. Though there seems to be an order of priority among some first principles.

In contrast to foundationalism, coherentism rejects all first principles and self-evident truths, except tautologies which they claim are vacuous and useless in knowing reality. They insist that there need be no ultimate foundation for truth but merely consistency among its statements.

"I am I" is a self-evident statement. One needs no further information to know it is true. Once the terms are understood, it is evident within itself that it is true. Also, the basic laws of logic are held to be self-evident. For example, the law of noncontradiction states that a proposition cannot be both true and false at the same time and in the same sense. This is an irreducible truth in terms of which all other truths are known to be true. Without the law of noncontradiction, nothing else can be known to be true. It is a self-evident first principle.

Defense of Self-Evident Statements. There is no *direct* proof of a self-evident proposition in terms of anything but itself. It is known to be true simply by examining its terms. If the predicate is reducible to the subject, then it is self-evident. Self-evident statements cannot be proven in terms of anything else. If they could, then they would not be *self-* evident. That is, they would not be evident within themselves.

There is, however, an indirect "proof" of self-evident statements. For a self-evident truth cannot be denied without affirming it. For example, I cannot deny "I exist" unless I exist to deny

it. Likewise, the law of noncontradiction cannot be denied without implying that it is true. The statement: “A statement can be both true and false at the same time and in the same sense”—must be true or false. But it can only be accepted as true or opposed as false if the law of noncontradiction is valid. One has to assume the law is valid before affirming that it is not.

In this way there is an indirect “proof” of self-evident truths: They cannot be denied without employing them. This kind of proof is sometimes put in the form of a transcendental argument.

Self-Refuting Statements.

Various Names. Self-refuting statements are those which fail to satisfy their own criteria of validity or acceptability. They are also called self-referential, self-stultifying, self-destructive, and self-falsifying.

Some Examples. Statements such as “I cannot express a word in English” are self-refuting because that very statement is an expression in English. Likewise, the statement “I do not exist” is self-defeating, since the statement implies that I do exist in order to make the statement.

The principle of self-stultification is a handy apologetic tool, since most, if not all, non-Christian views involve self-defeating statements. Take, for example, the following self-refuting statements:

1. “Be skeptical about all truth claims.”

2. “No truth can be known.”

3. “No statements are meaningful.”

The problem with (1) is that it is a truth-claim about which it is not skeptical. But this is inconsistent with its own claim. Likewise, (2) is itself a truth-claim that can be known which is contradictory to what it affirms (namely, no truth can be known). The same point can be made about (3), which is offered as a meaningful statement that no meaningful statement can be made.

Defense of Principle of Self-Falsification. The principle of self-falsification is not a first principle, such as the law of non-contradiction. Rather, it is based in the law of non-contradiction. For a statement is self-refuting when it entails two statements that are contradictory, one that it makes explicitly and a contradictory one implied in the very act or process of making the first one. Hence, self-refuting statements are contradictory. And the law of non-contradiction is a self-evident first principle that is known to be such by examining the statement to see if the predicate is reducible to the subject.

Undeniability Principle. The principle of undeniability is also known as the principle of self-stultification, or of self-referentiality. The flip side of undeniability is unaffirmability. Certain things are undeniable because any attempt to deny them affirms them in the very process. So, they are literally unaffirmable without denying what they affirm or affirming what they deny. For example, the statement “I cannot utter a word in English” is obviously not true, because it is

the utterance of a sentence in English, claiming not to be able to utter a sentence in English. As such, it cuts its own throat.

Value of the Undeniability Principle. The principle of undeniability is used by many theists to establish a starting point for its argument for God's existence (*see* GOD, EVIDENCE FOR). It begins with "Something exists" (e.g., I do). This must be true since any attempt to deny my existence affirms it in the process. For I must exist in order to deny that I exist. Hence, my existence is undeniable.

Comparison and Contrast with Other Principles. However, the principle of undeniability is not to be confused with the first principle of logical thought, such as the law of non-contradiction.

Difference from The Laws of Logic. The laws of logic are self-evident and rationally necessary. And logical necessity affirms that the opposite cannot possibly be true. For example, it is logically necessary for a triangle to have three sides. And a square circle is logically impossible. It is also logically necessary—if there is a Necessary Being—for it to exist necessarily. However, it is not logically necessary for there to be a Necessary Being. It is logically possible that there could have been a total state of nothingness forever (*see* ONTOLOGICAL ARGUMENT). This is not to say that there cannot be an undeniable argument for God's existence (*see* GOD, EVIDENCE FOR); it is only to note that there is a difference between *logical necessity* (which some allege for invalidating the ontological argument) and *actual undeniability* (which other theists claim for the cosmological argument).

Likewise, my nonexistence is *logically possible* . But it is not *actually affirmable* . Indeed, it is actually undeniable, since I have to exist in order to deny that I do not exist.

There is, however, an important connection between the laws of logic and the principle of undeniability. The law of non-contradiction, for example, can be defended by showing that it is self-evident in that its predicate is either identical or reducible to its subject. So, self-refuting statements are false because they are contradictory. And contradictions are false because they violate the self-evident principle of noncontradiction.

Difference from a Transcendental Argument. The principle of undeniability bears resemblance to a transcendental argument. Both claim that certain conditions are necessary preconditions of other things. For example, I cannot deny truth (*see* TRUTH, ABSOLUTE) unless I affirm it by claiming that the statement "There is no truth" is true. A transcendentally necessary truth is an undeniable truth. But a transcendental argument posits something beyond what is being affirmed. For instance, it is a transcendentally necessary precondition of meaning that there is a mind behind meaning. In this sense, a transcendental argument is a kind of indirect form of undeniability. For its posits that certain things could not be true unless other preconditions prevailed.

However, the statement "No sentence is meaningful including this one" is directly self-defeating because it pulls the rug out from under itself without appealing to the necessity of any other conditions. Thus, a transcendental argument involves an indirect form of undeniability.

Status of the Principle of Undeniability. The principle of undeniability is not self-evident the way the traditional first principles are said to be. Some claim it is a metaprinciple, that is, a principle about principles. If so, it is neither arbitrary nor noninformative. It is applicable to reality (*see* REALISM). It is a principle that grows out of the very project of futile attempts to deny first principles or other statements that cannot be denied without affirming them. It is a principle that emerges from the impossible attempts to escape certain things without affirming them (either directly or indirectly) in the very process. It is not deduced or induced but adduced. It is not prescriptive but is descriptive of a process of thought that boomerangs and is self-destructive.

Undeniability is not a new rule for the game of truth but more of a referee. Using the rules of logic (such as the law of non-contradiction), it simply calls attention to the fact that certain statements have eliminated themselves from the game of truth by being self-contradictory or self-destructive. In this sense the principle of undeniability indirectly "referees" the truth game by pointing out which kinds of statements are allowed into the game. It points to certain "statements" that do not really belong in the truth game because they imply opposite statements in the very process of making them. They have eliminated themselves (*see also* FIRST PRINCIPLES ; REALISM ; AGNOSTICISM).

Sevi, Sabbatai. Sabbatai Sevi was a seventeenth-century Jewish teacher who claimed to be the Messiah and was apparently heralded by a contemporary named Nathan. After Sevi's death in 1676, it was reported that his brother Elijah went to the tomb and found it empty but full of light. Many of his followers believed he had not really died and that he would soon reveal himself (see Scholem).

Critics of the resurrection use Sabbatai Sevi as one reason for claiming that the claims concerning the resurrection are not unique to Christianity. A close look at the facts, however, shows that the reports about this teacher place them solidly in the category of legend (*see* RESURRECTION CLAIMS IN NON-CHRISTIAN RELIGIONS).

Jesus started on a higher footing from Sevi. Dozens of Old Testament predictions were fulfilled in Jesus of Nazareth before his death. He then fulfilled prophetic prediction about how he would die (Isaiah 53) and even the approximate year of his death (ca. A.D . 33, Daniel 9:24–26). For more on the prophecies regarding Jesus, see PROPHECY AS PROOF OF THE BIBLE .

Another difference is that many of Sabbatai Sevi's followers refused to believe he had died and arisen because they believed he could not die at all. His general disappearance theme fits more under apotheosis legends, in which a human being achieves divinity.

Using the group's documents, researcher Gershom Scholem is able to trace the development of the story that Sabbatai's brother found the empty tomb. While critics of Christianity theorize about the Christ legend changing and growing over time, there is no proof of the existence of protogospels, and at least one or two of the four Gospels we have apparently can be dated within the first three decades after the resurrection (*see* RESURRECTION, EVIDENCE FOR). Despite this the accounts of Jesus' life, death, and resurrection have neither changed nor been embellished in the orthodox church since those original documents.

In the case of Sabbatai Sevi, there is conflicting evidence even about whether Nathan taught that the teacher was still alive. One letter that has been found relates that Nathan actually preceded Sevi in death by one month, and the two never actually had met one another.

Sherlock, Thomas. Thomas Sherlock (1678–1761) wrote against deism in the early eighteenth century. He penned *The Use and Interest of Prophecy in the Several Ages of the World* (1725) against deist (*see* DEISM) Anthony Collins, author of *Grounds of the Christian Religion* . Sherlock is best known for *The Tryal of the Witnesses of the Resurrection of Jesus* (1729), which is a reply to Thomas Woolston's *Discourses on the Miracles* . *The Tryal* went through fourteen editions and is a model of the early use of courtroom procedure to defend Christianity:

> The judge and the rest of the company were for bringing on the cause a week sooner; but counsel for Woolston took the matter up, and said, Consider sir, the gentleman is not to argue out of Littleton, Plowden, or Coke, authors to him well known; but he must have his authorities from Matthew, Mark, Luke, and John; and a fortnight is time little enough of all conscience to gain familiarity with a new acquaintance; and turning to the gentleman, he said, I will call on you before the fortnight is out, to see how reverend an appearance you make behind Hammond on the New Testament, a Concordance on one hand and a folio Bible with references on the other.

Following a legal procedure model, others have come to vindicate the truth of Christianity. Evidential specialist Simon Greenleaf took that approach, as did John Warwick Montgomery and others.

Shroud of Turin.

Description. The Shroud of Turin is a linen cloth that measures 14.25 feet by 3.58 feet (*Biblical Archaeology Review* [1986]: 26) and is housed in Turin, Italy. There is a double, head-to-head image of a man on the material, revealing the front and back of his body.

The Shroud has been known to exist since 1354, but many believe it is much older. In 1978, the Shroud was subjected to extensive scientific investigation. No sign of paint or dye that could

account for the image was on it. The image was thought to be three-dimensional and was found only on the surface of the cloth.

However, in 1988, three independent laboratories made carbon-dating tests of threads of the Shroud. They all gave it a late medieval date. Proponents of the Shroud objected that the sample was too fragmentary and was from a contaminated section of the Shroud that reflected a medieval church fire.

Authenticity. The authenticity of the Shroud is hotly debated. Those favoring it stress its unique features. Those against it point to the lack of historical evidence and the scientific dating evidence against it.

Arguments for Authenticity. Those who believe the Shroud is authentic (see Habermas) argue that (1) there is no known naturalistic way to explain the unique images on it; (2) there is no other explanation for the pollen unique to Palestine found on it; (3) the weave is compatible with first-century cloth; (4) the coin over the eye is quite possibly that of Pontius Pilate, minted around A.D . 29–32; (5) it fits with first-century crucifixion procedure and burial rights; (6) the lack of composition marks on the cloth reveals that the body exited quickly; (7) in 1982, a "secret" dating reportedly dated a thread to the first or second century A.D .

Arguments Against Authenticity. Those who reject its authenticity (see Mueller) note that none of the above arguments is definitive. For (1) there are some possible natural explanations, and there may be as yet an unknown natural explanation of the images; (2) the pollen may represent a time it spent in the Holy Land during the Middle Ages or pollen carried from there; (3) the weave is not necessarily unique to the first century or it could be a later reduplication of it or even a medieval image put on a first-century cloth; (4) the alleged coin is not clear enough to be beyond dispute, and if the Shroud is a fraud, then the coin is not real but only an artificially produced image; (5) detailed knowledge of first-century crucifixion and burial may have been known to some in the late Middle Ages; (6) the lack of composition marks could also be part of a knowledgeable artist's reconstruction; (7) this "secret" dating is unconfirmed and contradicted by the three independent medieval scientific datings done in 1988.

Further, opponents of the Shroud argue that: (1) the lack of any early history of the Shroud places it in doubt; (2) the Bible speaks of many pieces of cloth, not just one (John 19:40); (3) independent carbon tests all point to a late medieval date, not to the first century (*Time,* 81). Even defenders of the Shroud admit that "It is still possible that the shroud is a fake" (Habermas, "Turin, Shroud of," 1116). The Roman Catholic Church never officially pronounced it authentic. Indeed, "Shortly after the earliest known exhibit of the shroud, in 1354, a French bishop declared it to be a fraud" (*Time,* 81). And when the scientific dating proved negative, Pope John Paul ordered "Publish it" (ibid.).

Apologetic Value. As far as the apologetic value of the Shroud, the matter of its authenticity is not really relevant. All the essential evidence to defend Christianity is in fact apart from the Shroud. If it is authentic, it provides no essential evidence for Christ's death or resurrection that we do not already possess elsewhere. And if it is not authentic, then we risk using a bad argument for a good cause and lose credibility for Christian apologetics.

Essential Value. There is no essential apologetic value in the Shroud. The evidence for Christianity is more than sufficient without it. The miracles of Jesus confirm that he is the Son of God. Both Jesus and supernatural prophecy are sufficient to support the claim that the Bible is the Word of God. No other evidence is needed. Christianity does not stand or fall in any sense on the question of the authenticity of the Shroud of Turin.

Theoretical Value. Theoretically, the Shroud has some factual apologetic value. If authentic, it would tend to confirm both the death and resurrection of Christ. Certainly the former, and possibly the latter, since resurrection would be a plausible explanation for the image on the Shroud.

Tactical Value. Given the dispute about the Shroud and the possibility that it may be a fraud, the tactical value of using it apologetically is negative. Since it is both unnecessary to the Christian apologetic and highly disputed, it is tactically wiser not to use it as evidence for the truth of Christianity.

Sikhism.

The Roots of Sikhism. Sikhism is one of the youngest world religions, stemming from only the fifteenth century. Its founder, Nanak, was a Hindu who desired to cleanse Hinduism by way of Islam. He claimed a revelation from a monotheistic God ("The true Name"), who charged him with this redemptive mission.

Early Reformers of Hinduism. By the tenth century there were militant forms of Islam in India pressing for a purification of decadent Hinduism . By the eleventh century Islam dominated northwest India. In the twelfth century a reformer-poet called Jaidev, taught a key idea of future Sikhism, namely, that religious ceremonies and asceticism were of no value compared to the pious repetition of God's Name. By the fourteenth century another reformer named Ramananda established a Vishnuite sect that sought to purge Hinduism of certain Hindu beliefs and practices such as the caste system and prohibitions against eating meat.

Kabir (1440–1518): Forerunner of Sikhism. Ramandanda's chief claim to fame was that he had a follower who was greater than himself. A contemporary of the Protestant Reformer, Martin Luther , who tacked up his 95 theses the year before Kabir died, Kabir caught his hatred of idols from Muslims (*see* ISLAM). As a monotheist he declared that the God of mercy was able to free anyone from the law of karma (*see* REINCARNATION). He denied the special authority of the Hindu Vedas (*see* HINDUISM) and attacked both Brahmins and Muslims for their barren ritualism (see Noss, 311–12).

After his death in A.D . 1518, his Muslim and Hindu followers were divided over whether or not to cremate his body (which Hindus favor and Muslims oppose). Kabir himself is said to have appeared to stop the controversy. When he directed them to draw back the cloth placed over his body, they found only flowers there. His Hindu followers burned half of the flowers and the Muslims buried the other half. Although some claim this is proof of his resurrection, there are substantial grounds for rejecting this claim (*see* RESURRECTION, NON-CHRISTIAN CLAIMS FOR).

Nanak: Founder of Sikhism. Nanak was born in 1469 in the village of Talwandi near Lahore, the capital of Punjab. His parents were Hindus, and his town ruler, Rai Bular, converted to Islam and encouraged reconciliation of the two religions.

Nanak is said to have been a precocious youth and a poet by nature. However, he was a failure as a husband and father, eventually leaving his wife and two children. Then "One day after bathing in the river Nanak disappeared into the forest, and was taken in a vision to God's presence." After accepting a cup of nectar, it is claimed that God said to him: "I am with thee. I have made thee happy, and so those who shall take thy name. Go and repeat Mine, and cause others to do likewise. Abide uncontaminated by the world. Practice the repetition of My name, charity, ablutions, worship, and meditation. I have given thee this cup of nectar, a pledge of My reward" (see Noss, 313).

Nanak is said to have uttered the preamble of the Japji, which is repeated silently each morning by Sikhs: "There is but one God whose name is True, the Creator, devoid of fear and enmity, immortal, unborn, self-existent, great and bountiful. The True One was in the beginning, the True One was in the primal age. The True One is, was, O Nanak, and the True One also shall be" (ibid.).

After three days Nanak is said to have left the forest and after remaining silent for one day he uttered: "There is no Hindu and no Musalman." This was the beginning of his evangelistic campaign to convert all India, Persia, and Arabia. He wandered through cities, singing his hymns on a small stringed instrument.

The Ten Gurus. Nanak appointed his successor and so on through the Ten Gurus: Nanak (1469–1538); Angad (1538–52); Amar Das (1552–74); Ram Das Sodhi (1574–81); Arjun Mal (1581–1606); Hargobind (1606–44); Har Raj (1644–61); Hari Krishen (1661–64); Tegh Bahadur (1664–75); and Gobind Rai (1675–1708). The succession ended when Gobind Rai had no sons left and appointed no successor.

The Sikh Bible. Guru Arjun, the fifth Guru, gathered many of the hymns and writings to that point. This collecting process continued until it was completed by the tenth Guru, Gobind Rai. These volumes containing the doctrines of Sikhism are known as the *Siri Guru Granth Sahib* (also called *Adi Granth*).

Sikh Doctrines and Practices. The teachings of Sikhism include monotheism, meditation, Reincarnation with its samsara and karma (see Mather, 257–58). Stricker Sikhs, called Khalsa, practice the five K's: (1) *kesa* —long hair kept uncut; (2) *kangha* —comb; (3) *kacha* —short pants; (4) *kacku* —metal bracelet; and (5) *kirpan* —weapon or sword.

Sikhs are forbidden to worship icons, though the *Adi Granth* has become an object of devotion. Their temples are called *Gurdwaras* . Sacred times, usually in the mornings, are reserved for prayers.

Sikhism gained a considerable influence in the West through Yogi Bhajan, who established a unique form of Sikhism known as Sikh Dharma. In 1968 he founded the Healthy, Happy, Holy Organization (3HO), beginning his first ashram in Los Angeles. Many young Americans of the counterculture movement joined him. From there he moved to a forty-acre ranch in New Mexico, where his follows practice methods of awakening Kundalini by staring into the eyes of fellow practitioners or at pictures of their Guru and uttering a mantra. They are strict vegetarians and live a drug-free life, egalitarian life.

Evaluation. Sikhism is certainly to be commended for its stress on monotheism and its iconoclastic crusade against idolatry, empty ritualism, and asceticism. Likewise, its emphasis on the nature of God and ethical life rank it among the other ethical monotheisms of the world such as Judaism, Christianity, and Islam .

However, its belief in reincarnation has been severely criticized by Christian theists. And the lack of any verified supernatural confirmations of his claims to be a prophet (*see* MIRACLES AS CONFIRMATION OF TRUTH) disqualify Sikhism as being the true religion such as Christianity claims. Its origins can be explained in terms of its roots, a natural reaction against decadent Hinduism in favor of a more Muslim form of monotheism without buying into the Islamic rituals. This kind of syncretism is typical of the Indian mind-set.

Smith, Wilbur M. Although Wilbur Smith (1894–1977) never earned a formal degree, he taught for many years at major evangelical institutions. Smith was a Bible teacher at Moody Bible Institute (1939–47), a member of the founding faculty at Fuller Theological Seminary (1947–63), and professor emeritus of English Bible at Trinity Evangelical Divinity School (1963–68). His major apologetic works include *The Supernaturalness of Christ* (1940) and *Therefore Stand* (1945).

Smith's most comprehensive case for Christianity is found in *Therefore Stand* . The book studies Paul's three points as he spoke in the Areopagus (Acts 17:24–31): creation, resurrection, and judgment. Around these themes, the first two of which are discussed below, Smith constructed his apologetic.

Existence of God. Smith argues for the Christian view of creation by appealing to science. All scientific inquiry is founded on the principles of causality and uniformity (*see* ORIGINS, SCIENCE OF). The former states that whatever has a beginning has a cause, the latter that whatever causes a certain effect in the present probably caused the same effect in the past. From these principles Smith developed a pair of cosmological arguments. The first shows that there must be a first cause of the universe because of the impossibility of an infinite series of past events (*see* KALAM COSMOLOGICAL ARGUMENT). This first cause, furthermore, must be a Mind, because the order and unity of the universe betray a certain intelligence (*see* TELEOLOGICAL ARGUMENT).

The second argument attempts to show that the universe needs a cause, not only to get started, but for its continual existence. For if the universe consists wholly of contingent things, the universe itself must be contingent. But if the universe as a whole is contingent, it must require a Cause beyond the universe. This Cause is God.

Resurrection. Smith held the resurrection of Christ to be the very citadel of faith (*see* RESURRECTION, EVIDENCE FOR). "If this goes, so must almost everything else that is vital and unique in the Gospel" ("Scientists and the Resurrection," 22). Fortunately, the most evidence is found where evidence is needed the most. Smith proceeds to give historical evidence in support of the burial of Jesus, the empty tomb, and the resurrection of Jesus, along the way refuting various naturalistic explanations (*see* MIRACLES, ARGUMENTS AGAINST ; NATURALISM) of the data (*see* RESURRECTION, ALTERNATIVE THEORIES). He concludes that evidence for the resurrection "is so overwhelming that by no honorable intellectual device can the evidence be set aside" (*Therefore Stand* , 406).

Son of Man, Jesus as. The phrase *Son of Man* is used more frequently to denote Jesus than is any other name, except the word *Jesus* itself. *Son of Man* occurs in all four Gospels; it appears thirty times in Matthew, fourteen in Mark, twenty-five in Luke, and thirteen in John (Marshall, 777). It is also found in Acts 7:56 . Hebrews 2:6 and Revelation 14:14 refer to “a son of man.”

The problem posed is why Jesus refers to himself almost exclusively as “the Son of Man,” when Christians claim he is the Son of God. Is this a tacit denial of his deity? Beyond the literal meaning of the words, Scriptures are used to argue this view: Psalms 8:4 ; 80:17 , and Ezekiel 2:1 ; 3:1 ; 4:1 , and others.

The literal meaning of the words does not necessarily convey the literal meaning of the expression. A lot of projects are “in the bag” that would not literally fit into a grocery sack or duffel bag. An organization’s “board” is not a wood plank, the original meaning of the word. Context has to help us understand these expressions. Ezekiel is responsible for ninety-three Old Testament appearances of the term. In most God is speaking, and they seem to express special intimacy toward Ezekiel, the servant. Daniel uses the term only twice but raises the stakes, for Daniel 7:13 is displaying a king Messiah in all his glory in the very presence of God. This is the One Daniel said looked “like a man” in 8:15 , with the implication that he was far more than flesh and blood. Interestingly, in 8:17 the Messiah passes on his name. Daniel is called by the name of the Messiah: “Son of man.” There are, obviously, some complex and subtle nuances at work in the Old Testament use of this term.

Whether Jesus uses the self-identification “Son of Man” to stress his own humanity and servanthood as in Ezekiel, or to announce his Messiahship as in Daniel, or both, the phrase certainly isn’t a denial of deity.

New Testament scholar I. Howard Marshall points out, that Jesus often employed the phrase when he was highlighting his divinity (ibid.; *see* CHRIST, DEITY OF). Jesus said to the crowd that he had forgiven the sins of the paralytic, “that you may know that the Son of Man has authority on earth to forgive sins” (Mark 2:10). Rather than figuring that he was denying divinity, the crowd was ready to stone him for his blasphemy.

Jesus repeatedly said that the Son of Man would die and rise from the dead, events that gave his messianic credentials. Mark wrote: “He then began to teach them that the Son of Man must

suffer many things and be rejected by the elders, chief priests and teachers of the law, and that he must be killed and after three days rise again" (8:31 ; cf. Mark 9:9 , 12 , 31 ; 10:33 ; 14:21). Jesus also used the phrase in connection with his second coming in power and glory. When asked by the high priest, "Are you the Christ, the Son of the Blessed One?" Jesus replied: "I am, and you will see the Son of Man sitting at the right hand of the Mighty One and coming on the clouds of heaven." It was on the basis of these words that the Sanhedrin condemned Jesus to death for blasphemy (Mark 14:62–64). They recognized that the Son of Man in view was clearly the mighty man in Daniel's vision:

> "In my vision at night I looked, and there before me was one like a son of man, coming with the clouds of heaven. He approached the Ancient of Days and was led into his presence. He was given authority, glory and sovereign power; all peoples, nations and men of every language worshiped him. His dominion is an everlasting dominion that will not pass away, and his kingdom is one that will never be destroyed." [7:13–14]

In the Matthew account of Jesus' trial (27:63), Jesus described himself as the "Son of Man sitting at the right hand of the Power [God]." Who else but the Christ, the Son of God, could sit in the honored position at the right hand of God?

Further, when a voice from heaven confirmed Christ's deity and glory, Jesus spoke of the Son of Man being "lifted up" in death (John 12:28–32). Then the crowd replied, "We have heard from the Law that the Christ will remain for ever, so how can you say, 'The Son of Man must be lifted up'?" The crowd obviously understood the meaning of the phrase. It is used interchangeably with *Messiah* and the concept from Isaiah 48:11 of the Messiah's "glory of the Father," which God declared he would not share with another.

Even if the phrase were only a reference to humanity, that would not be a denial of his deity. Jesus clearly claimed to be God in various ways and on multiple occasions, as is shown in the article, Christ, Deity of. He also accepted acclaim as God on other occasions (see, for example, Matt. 16:16–18 ; John 20:28–29).

Soul, Immortality of. ***See*** **IMMORTALITY .**

Spinoza, Benedict. Benedict Spinoza (1632–1677) was born to Portuguese Jewish refugee parents in Amsterdam. Although a lens grinder by trade who never taught philosophy at university, he exerted a strong influence on modern philosophy. He has particularly made a

negative impact on orthodox Christianity. Spinoza was even excommunicated from his synagogue in 1656 for believing that God is "extended," a form of pantheism , that angels are imaginary, and that there is no immortality of the soul.

The Medieval philosopher Moses Maimonides (1135–1204), through his *A Guide for the Perplexed* , helped Spinoza conceptualize God as a Necessary Being and to employ human reason independent of divine revelation. Anselm 's (ca. 1034–1109) idea of God as an absolutely perfect and necessary being was also formative on Spinoza's thought. The French rationalist Rene Descartes (1596–1650), who penned the *Meditations* , taught Spinoza the use of mathematical methods in philosophy. The first-century Jewish philosopher Philo (13 B.C .– A.D . 45) influenced Spinoza to believe that God is ground of all being and that the Bible should be understood allegorically. Euclid's (ca. 300 B.C .) geometry taught Spinoza his deductive rationalism. From his Jewish background he brought a strong stress on the unity of God. All these and other factors contributed to a unique form of rationalistic pantheism.

The two primary works of Spinoza are *Tractatus Theologico-politicus, Tractatus Politicus* (1670), and *Ethics* (1674).

Philosophy. As Euclid, Spinoza begins by defining his axioms and then proceeds to make deductions from them. In this way alone, he writes, can one find certainty in his conclusions. Truth is known only through a true idea. Perfect truth is known only through the perfect idea. Error has four causes: (1) Our minds provide only fragmentary expression of ideas. (2) Imagination is affected by the physical senses and confuses us. (3) Reasoning is too abstract and general. (4) We fail to begin with the perfect idea. The remedy for error is to return to the perfect Idea of God. The more one feeds on the perfect Idea, the more perfect one becomes. Sensations are confused and blurred.

Spinoza's philosophy begins with the perfect Idea of God as an absolutely necessary and perfect being. God must be conceived as a being existing through himself—that is, self-caused. But there can only be one absolutely independent Being. All other beings are modally dependent on God. These "modes" are aspects or moments of God, God's attributes in himself and properties to us. The only two attributes of God we know are thought and the *extension* of God infinitely in space.

Proofs for God. Spinoza believed the existence of God could be proven with mathematical certainty. The first form of his proof can be stated:

1. There must be a cause for everything, both existing and nonexistent.

2. A Necessary Being must necessarily exist, unless there is a cause adequate to explain its nonexistence.

3. But there is no cause adequate to explain why a Necessary Being does not exist: (a.) Such a cause would have to be either inside God's nature or outside of it. (b.) No cause outside a necessary existence could possibly annul its existence, (c.) and nothing inside a

Necessary Being denies it is a necessary Being. (d.) So there is no cause adequate to explain why a Necessary Being does not exist.

4. Therefore, a Necessary Being necessarily exists.

The second form of Spinoza's argument is this:

1. Something necessarily exists.

2. This Necessary Existence is either finite or infinite.

3. But no finite cause can hinder infinite existence,

4. and it is contradictory to say that an infinite Cause hindered infinite Existence.

5. Therefore, there must be an infinite Existence.

Creation differs from God only as a mode differs from its substance or a thought from the mind that thought it. All modes flow necessarily from God as 180 degrees flows from a triangle. This is creation *ex Deo* , not creation *ex nihilo* (*see* CREATION, VIEWS OF). The effect must be as infinite as the Cause. Will is not an attribute of God but only a mode (hence, it is not a source of creation).

This world is the most perfect world possible. Evil is necessary. Natural world operates by natural (scientific) law (*see* NATURALISM). Newton's law of gravity is universal and is the model for all scientific laws. There are no exceptions to a true law.

The Impossibility of Miracles **.** Spinoza believed that there could be only one infinite substance, and that, therefore, the universe was uncreated. God is identical with the universe. He could not have created it, for it is of his substance (*see* MIRACLES, IMPOSSIBILITY OF). For Spinoza, God is not transcendent; he is not beyond or "other" than creation. This means God's creativity is no more than nature's activity. If Spinoza's supposition is true, miracles are impossible. If God (the supernatural) is identical with nature (the natural), there is no supernatural intervention into nature from outside it. With this general framework in mind, we can examine Spinoza's arguments against miracles.

Spinoza declared that "nothing then, comes to pass in nature in contravention to her universal laws, nay, everything agrees with them and follows from them, for . . . she keeps a fixed and immutable order." In fact, "a miracle, whether in contravention to, or beyond, nature, is a mere absurdity." Spinoza was dogmatic about the impossibility of miracles. He proclaimed, "We may, then, be absolutely certain that every event which is truly described in Scripture necessarily happened, like everything else, according to natural laws" (*Tractatus* , 1:83, 87, 92).

Spinoza's argument against miracles goes something like this:

1. Miracles are violations of natural laws.

2. Natural laws are immutable.

3. It is impossible to violate immutable laws.

4. Therefore, miracles are impossible.

The second premise is the key to Spinoza's argument. Nature "keeps a fixed and immutable order" (ibid., 83). Everything "necessarily happens . . . according to natural laws" (ibid., 92, emphasis added). If it is true that "nothing comes to pass in nature in contravention to her universal laws," then Spinoza is right in believing a miracle "is a mere absurdity" (ibid., 83, 87).

To appreciate the implications, one must be aware that Spinoza was a rationalist who tried to construct his philosophy around Euclidean geometry (*Ethics* , 1.1–42). He believed that one should accept as true only what is self-evident or what is reducible to the self-evident. Like Descartes , Spinoza argued in a geometric way from axioms to conclusions contained in these axioms. Spinoza lived in an age that was impressed by the orderliness of a physical universe. This is why it was axiomatic that natural laws are immutable.

Biblical Criticism . Spinoza's rationalism and naturalism have far-reaching consequences for anyone who believes in either miraculous events or supernatural revelations. Spinoza became one of the first modern intellectuals to engage in systematic higher criticism of the Bible (*see* BIBLE CRITICISM ; WELLHAUSEN, JULIUS). His book, *A Theologico-Political Treatise* , widely circulated in the late seventeenth century, was chiefly a critical commentary of the Bible. He came to some radical conclusions that, if true, falsifies supernaturally inspired Scriptures.

Spinoza's naturalism led him to conclude that Moses could not have written many passages in the Pentateuch (*see* PENTATEUCH, MOSAIC AUTHORSHIP OF), so the view that Moses was its author is unfounded (*Tractatus* , 126). He believed that Ezra the scribe wrote the first five books of the Old Testament, as he wrote the rest of the Old Testament (ibid., 129–30).

Not surprisingly, Spinoza rejected the Gospel accounts of the resurrection. The apostles, he said, preached a universal religion based only in the crucifixion (ibid., 170). Christianity was a mystical, nonpropositional religion without foundations. Essentially, Spinoza agreed with Paul in 1 Corinthians 15 that, without the resurrection of Christ, Christianity is a religion without hope. Not believing the resurrection happened, that was his conception of it. All other miracles are likewise condemned. He commends "anyone who seeks for the true causes of miracles and strives to understand natural phenomena as an intelligent being" (*Ethics* , Appendix, pt. 1, proposition 36). Not only did everything happen according to natural laws, but Scripture itself "makes the general assertion in several passages that nature's course is fixed and unchangeable" (*Ethics* , 92, 96).

For Spinoza, Scripture merely " *contains* the word of God" (*Tractatus* , 165, emphasis added). This position was characteristic of later liberal Christianity from Friedrich Schleiermacher (1768–1834). It is false to say that the Bible *is* the Word of God (*see* BIBLE, EVIDENCE FOR). Parts of the Bible that *contain* the word are known to be such because the morality conforms to a natural law known by human reason (ibid., 172, 196–97).

The prophets did not speak from supernatural “revelation” and “the modes of expression and discourse adopted by the *apostles in the Epistles, show very clearly that the latter were not written by revelation and divine command, but merely by the natural powers and judgment of the authors” (ibid., 159). Spinoza occasionally says the prophets spoke by “revelation,” but he understands this as the extraordinary power of the imagination (ibid., 24).

The general concepts and antisupernaturalism of Spinoza’s biblical criticism is still widely held by both secular and liberal Christian scholars.

Evaluation. Three elements in Spinoza’s thought are of interest to Christian apologetics, his pantheism , his antisupernaturalism (*see* MIRACLES, ARGUMENTS AGAINST), and his biblical criticism . The three are related. Since pantheism and biblical criticism are critiqued in those respective articles, the focus here will be on naturalistic presuppositions and their consequences on belief in the inspiration of Scripture.

Spinoza’s attack on miracles rests on the foundations of Euclidean geometry or deduction, rationalism, natural determinism, and his view of the nature of God.

A Stacked Deductive Deck. Spinoza’s deductive, rationalistic pantheism suffers from an acute case of *petitio principii* or begging the question. This is true both of his pantheism and the antisupernaturalism that flows from it. As David Hume noted, anything validly deducible from premises must have already been present in those premises from the beginning. If God is defined as an absolutely necessary being, of which all else is nothing but a mode, then of course pantheism follows. For this builds a pantheistic definition of God into the axiom. If a pantheistic conception is stuffed into the hat, it is no surprise that it later can be pulled out.

Likewise, if materialism is already presupposed in Spinoza’s rationalistic premises, it is no surprise that he attacks the miracles of the Bible. The question is whether his rationalistic premises are defensible. He provides no convincing argument. But once one defines natural laws as “fixed,” “immutable,” and “unchangeable,” there is no great leap to the position that miracle reports are irrational. Nothing can break the unbreakable.

Spinoza’s God and Science. Spinoza’s God was of one substance with the universe. Miracles as supernatural interventions are possible only in a theistic universe. Hence, scientists will want reason to believe that a theistic God (*see* THEISM) exists before they are likely to believe there is any evidence for miracles. In a Nature = God universe, miracles simply do not happen.

Albert Einstein ’s belief in Spinoza’s God gave rise to one of the fascinating stories in modern science. Astrophysicist Robert Jastrow tells of the reluctance of scientists to conclude that the universe came into existence through a “big bang” billions of years ago. Jastrow offers several lines of scientific evidence that support a beginning to the universe: the fact that the universe is running down, Einstein’s theory of relativity, and the expansion pattern and radiation echo that can be detected. The radiation echo “has convinced almost the last doubting Thomas” (Jastrow, 15). Einstein developed the general theory of relativity but failed to observe that an expanding universe followed as a conclusion from his own theory. The Russian mathematician Alexander Friedmann pointed out the reason for Einstein’s omission, a schoolboy’s error in

algebra. In effect, he had divided by zero. Einstein responded by defending his original thesis, only he made another mistake in this proof.

Eventually Einstein recognized his error and wrote, “My objection rested on an error in calculation. I consider Mr. Friedmann’s results to be correct and illuminating.” However, “this circumstance [of an expanding universe] irritated me.” Elsewhere he said, “To admit such possibilities seems senseless” (ibid., 16, 25–28).

Why would the view that the universe had a beginning seem “senseless” and so irritating that it caused Einstein to make a mathematical error? The answer, writes Jastrow, came when Einstein described his own religion as belief “in Spinoza’s God, who reveals himself in the orderly harmony of what exists” (ibid., 28).

Conclusion. Spinoza was a rationalist (*see* RATIONALISM) for whom God’s essence was equated with the universe, and for whom the universe is eternal and operates according to the uniformity of natural law. He led the philosophical attack against miracles and the Bible’s testimony about a personal God and Savior. But as shown, this faith presupposition begs the question when defended logically, because his definition of miracles, without foundation, assumes them to be unbreakable (*see* MIRACLES, ARGUMENTS AGAINST).

What Spinoza needed to do, but did not, was to provide a sound argument for his rationalistic presuppositions. His reasoning is geometric, but he spun his axioms out of thin air rather than empirical observation.

Spinoza’s concept of natural law as a deterministic system is self-defeating. If everything is determined, then so is the view of any that determinism is wrong. But determinism cannot be both true and false. Thus, Spinoza’s basis for antisupernaturalism is unfounded. Therefore, miracles cannot be pronounced as impossible.

Finally, the evidence has mounted for a unique beginning of the space-time universe (*see* BIG BANG THEORY ; EVOLUTION, COSMIC). If this is so, then there is an irrefutable example of a miracle, and the Spinozan hypothesis is falsified. Further, concluding that the universe had a beginning strikes a devastating blow to Spinoza’s concept of God, who does not exist beyond the universe.

Strauss, David. David Strauss (1808–1874) was a German native of Ludwigsburg, who launched the quest for the historical Jesus with his naturalistic biography of the life of Christ.

Strauss studied under F. C. Baur (1792–1860) and came under the influences of Friedrich Schleiermacher (1768–1834) and G. W. F. Hegel (1770–1831) at Tubingen. After studying at Berlin he was appointed lecturer on Hegel at Tubingen (1832). His demythologized *Life of Jesus* (2 vols.) appeared in 1835–36, and in the resulting uproar Strauss was dismissed. In 1840–41 he published *History of Christian Doctrine* , a polemical history from the development of the New Testament to its dissolution in Hegel. In 1862 he wrote on biblical critic Herman Samuel Reimarus, whose *Fragments* in 1778 gave rise to the first quest for the historical Jesus (*see* JESUS, QUEST FOR THE HISTORICAL). Late works included *The Life of Jesus for the German People* (1864), *The Life of Christ and the History of Jesus* (1865) and *The Old Faith and the New* (1872/1873). The latter called for a new humanist religion that traded belief in theism and immortality for scientific materialism. It promoted Darwinian evolution (*see* DARWIN, CHARLES ; EVOLUTION, BIOLOGICAL).

Strauss moved from an earlier form of Hegelian developmental pantheism to materialistic evolutionism. Following David Hume, he rejected all miracles as myths. He eventually denied all belief in God and immortality of the soul. Since he rejected miracles, he viewed the Gospels as unintentional myths created by the piety of the early second century (*see* MYTHOLOGY AND THE NEW TESTAMENT). They were steeped in the messianic anticipation of the Old Testament and an eagerness to prove that Jesus was the Messiah (*see* CHRIST OF FAITH VS. JESUS OF HISTORY). Strauss was the first to consistently apply this thesis throughout the New Testament.

Sufficient Reason, Principle of. The principle of sufficient reason arises out of modern rationalism , particularly as developed by Gottfried Leibniz (1646–1716). It was developed by Christian Wolfe and originally accepted by Immanuel Kant (1724–1804), though Kant subsequently rejected its metaphysical value, since he believed it led to contradictions and agnosticism .

The principle claims that “Everything has a sufficient reason, either in another or in itself.” That is, there is either a sufficient reason outside of everything, or else it is its own sufficient reason. Leibniz believed that since the world was contingent, it had a sufficient reason outside of itself (in God). And the sufficient reason for God is inside himself.

Since “reason” for the world means “ground” or “cause,” then the principle of sufficient reason means that everything that exists has a cause, either outside itself or inside itself. It did not take philosophical agnostics (*see* AGNOSTICISM), such as Kant, or atheists, such as Arthur Schopenhauer (1788–1860), long to figure out that this either leads to an infinite regress (*see* INFINITE SERIES), or else to a self-caused being, which is impossible. If literally *everything* has a cause, either the series of causes never ends, or it ends in a being who caused its own being. Since nothing can lift itself from ontological nonbeing, then the very concept of God is contradictory. God could not exist.

Many critics of rational theism believe the principle of sufficient reason spells the end of all theistic arguments (*see* GOD, EVIDENCE FOR ; GOD, OBJECTIONS TO PROOFS FOR) that use any causal premise (*see* COSMOLOGICAL ARGUMENT). This is not the case. There is a great difference between the principles of sufficient reason and cause. Criticisms of sufficient reason do not apply to the principle of causality (*see* CAUSALITY, PRINCIPLE OF). The latter was held by Thomas Aquinas, who never referred to any principle of sufficient reason, though some scholastic philosophers after Leibniz did mistakenly buy into it (see Gurr). The two principles are:

Principle of Sufficient Reason:	**Principle of Causality:**
1. All things need a cause.	1. Contingent things need a cause.
2. God is the Ultimate Reason.	2. God is the only Ultimate Being.
3. God is a Self-Caused Being.	3. God is an Uncaused Being.

The principle of sufficient reason leads to a contradiction. The principle of causality does not. Leibniz’s principle leads logically to modern atheism. Aquinas’s principle leads to theism. The God of the principle of sufficient reason is a God of reason, not reality. The God of the existential principle of causality leads to a God who exists and, in fact, is existence itself (*see* GOD, NATURE OF). It is no more incoherent to have an uncaused God than for atheists to claim there is an uncaused universe. Nor is there an inherent logical contradiction in the concept of a Being who just *is* and ever has been.

Swoon Theory. *The swoon theory* is the naturalistic (*see* Naturalism) view that Christ was not dead when taken from the cross and placed in the tomb. Therefore, he was not raised from the dead (*see* RESURRECTION, EVIDENCE FOR). It was proposed by H. E. G. Paulus in *The Life of Jesus* (1828).

This theory has serious failings as an alternate explanation of the resurrection (*see* RESURRECTION, ALTERNATE THEORIES), since there is strong evidence that Jesus experienced an actual physical death on the cross (*see* CHRIST, DEATH OF), and hundreds of witnesses who saw him in a fully whole and transformed resurrection body (*see* RESURRECTION, EVIDENCE FOR). Even the naturalistic work, *A New Life of Jesus* (1879) by David Strauss debunked the swoon theory:

> It is impossible that a being who had stolen half-dead out of the sepulchre, who crept about weak and ill, wanting medical treatment, who required bandaging, strengthening and indulgence, and who still at last yielded to his sufferings, could have given to his disciples the impression that he was a Conqueror over death and the grave, the Prince of Life, an impression which lay at the bottom of their future ministry. . . . Such a resuscitation could only have weakened the impression which he had made upon them in life and in death, at the most could only have given it an elegiac voice, but could by no possibility have changed their sorrow into enthusiasm, have elevated their reverence into worship. [Strauss, 1.412]

Tautology. A *tautology* is a contentless statement; something true by definition and uninformative of the real world. "All bachelors are unmarried men" is a tautology, as is "All triangles have three sides." Neither statement informs us that the subject exists. They only mean, X exists, then it is X." If there are any bachelors in the universe, they are unmarried. The tautology does not tell us that a bachelor really exists. David Hume called this kind of statement the "relation of ideas." Immanuel Kant called them "analytic."

Tautologies and Empirical Statements. Tautologies are usually contrasted with empirical statements that have content: "The tree outside my window is an oak." "The car in my yard is black." While empirical statements have content, they are not logically necessary. That is, they may be false. Tautologies, on the other hand, are logically necessary, since they are true by definition. They do not say a thing, but they are necessarily true.

An analytic statement is simply expletive because the predicate explains the idea present in the subject. Unlike empirical statements, analytic statements are not ampliative. The predicate doesn't add to what is known from the subject. "The house is brown"is ampliative, since the predicate amplifies on the subject. We learn the color of the house, which we would not have known simply from examining the concept "house."

While all tautologies are absolutely certain, not everything that is absolutely certain is a tautology. "I exist." is certain. I cannot deny it unless I actually exist to deny it. Likewise the assertion about my existence, "I am I" is not a mere tautology, since it asserts something about existence. Also, "Being exists" is not an empty statement, since it affirms existence (*see* FIRST PRINCIPLES ; METAPHYSICS ; REALISM).

While tautologies or statements true by definition are empty in themselves, they can be filled with content and used to prove something is true. The statement, "If this is an effect, it must have a cause" is an empty statement. But once it is combined with a statement about the real world, such as "The existing world is an effect," then it can be used to assert that the world has a Cause (*see* GOD, EVIDENCE FOR). So simply because a statement is analytic (true by definition) does not mean it cannot be used to demonstrate something about the real world.

Teleological Argument. Four kinds of "classical" arguments have attempted to establish the existence of God, the *ontological argument,* the *moral argument* , the *cosmological argument* ,

and the *teleological argument* . The ontological argument argues from the concept of a Necessary Being to that Being's existence. Since the time of Immanuel Kant , the ontological argument has been widely believed to be invalid. The moral argument is the argument from a moral law to a Moral Law Giver. The cosmological argument reasons from the existence of the cosmos to a Creator. The teleological argument moves from design to a Designer. Forms of the teleological argument can be found in early Greek philosophy. It can be found in Socrates (Xenophon's *Memorabilia* 1.4.4ff.); Plato (*Phaedo*), and Philo (*Works, of Philo* 3.182, 183.33). But it came to fruition later in the middle ages and modern world (*see* PALEY, WILLIAM).

Design Arguments. *Thomas Aquinas's World Governor.* While Thomas Aquinas is better known for his cosmological argument, the last of his "Five Ways" to prove the existence of God is a teleological argument. Aquinas calls it the argument from *"the governance of the world"* (Aquinas 1.2.3):

1. Every agent acts for an end, even natural agents.

2. Now what acts for an end manifests intelligence.

3. But natural agents have no intelligence of their own.

4. Therefore, they are directed to their end by some Intelligence.

The first premise is simply the self-evident *principle of teleology* or finality (*see* FIRST PRINCIPLES). Between the first and second premise exists an unstated assumption that all or most things in nature can be called "agents." They do move toward an end, be it staying alive or reproducing, and they move toward secondary purposes that have nothing to do with themselves. In the big picture their existence and actions make the world habitable, or beautiful, or enjoyable, or meaningful. These agents act in predictable, purposeful ways that seem to work toward the best results. If one accepts the assumption and the reasonable first two premises, the trap is sprung in the third premise, whatever lacks knowledge must be directed toward an end, as an arrow is directed by the archer. Whatever intelligence is directing it all fits the concept *God* (Burrill, 165–70).

Paley's Watchmaker. One of the most popular forms of the argument was given by William Paley (1743–1805), the archdeacon of Carlisle. Paley insisted that if one found a watch in an empty field, one would rightly conclude that it had a watchmaker because of its obvious design. Likewise, when one looks at the even more complex design of the world in which we live, one cannot but conclude that there is a great Designer behind it. Let us put the argument in summary form (ibid.).

1. A watch shows that it was put together for an intelligent purpose (to keep time): (a) It has a spring to give it motion. (b) It has a series of wheels to transmit this motion. (c) The wheels are made of brass so that they do not rust. (d) The spring is made of steel because of the resilience of that metal. (e) The front cover is of glass so that one can see through it.

2. The world shows an even greater evidence of design than a watch: (a) The world is a greater work of art than a watch. (b) The world has more subtle and complex design than a watch. (c) The world has an endless variety of means adapted to ends.

3. Therefore, if the existence of a watch implies a watchmaker, the existence of the world implies an even greater intelligent Designer (God).

Cleanthes's Machine Maker. In David Hume's *Dialogues Concerning Natural Religion* , the fictional theist Cleanthes offers a similar form (171–76):

1. All design implies a designer.

2. Great design implies a great designer.

3. There is great design in the world (like that of a great machine).

4. Therefore, there must be a great Designer of the world.

The argument extends beyond Paley's. Cleanthes uses illustrations of design other than a watch or a machine. The human eye, male-female relations, a book, and a voice from heaven are all used to illustrate design. He also makes it clear that the teleological argument is an *argument from analogy* , insisting that like effects have like causes. Cleanthes alludes to chance as an improbable explanation that a distinct voice from heaven could have been an accidental whistling of the wind. Finally, he insists that irregularities in nature do not effect the argument. Rather, these are the exceptions that establish the rule.

Hume used this argument to anticipate some of his own criticisms, thus making his final case all the stronger. However, Hume did not do justice to Paley's argument (*see* PALEY, WILLIAM).

Mill's Objection. John Stuart Mill (1806–73) objected to Paley's form of the argument from analogy and then offered what he thought was a better one. His objection does not destroy the argument, but it does weaken it (ibid., 177–84):

1. Paley's argument is built on analogy—similarity in effect implies similarity in cause.

2. This kind of analogy is weaker when the dissimilarities are greater.

3. There is a significant dissimilarity that weakens this argument. (a) Watches imply watchmakers only because, by previous experiences, we know that watches are made by watchmakers. (b) In like manner, footprints imply human beings, and dung implies animals only because previous experience informs us that this is so, not because of any intrinsic design in the remains.

4. Therefore, Paley's argument is weaker than he thought.

After criticizing Paley's form of the teleological argument, Mill offered what he considered to be a stronger expression of it. It is built on Mill's inductive "method of agreement." This argument was the weakest of Mill's inductive methods but he considered the teleological argument to be a strong form of this kind of induction. Mill began with the organic rather than the mechanical aspect of nature.

1. There is an amazing concurrence of many diverse elements in a human eye.

2. It is not probable that random selection brought these elements together.

3. The method of agreement argues for a common cause of the eye.

4. The cause was a final (purposing) cause, not an efficient (producing) cause.

But Mill admitted that the alternative explanation of evolution diminishes the strength of this form. Much of what appears to be design is accounted for in evolution by the survival of the fittest (*see* EVOLUTION, BIOLOGICAL).

Hackett's Rejoinder. Stuart C. Hackett takes issue with Mill on the question of whether the method of analogy inherently weakens the argument (Hackett, 106):

1. All composites that involve the relation of complex means so as to produce a significant result are composites of whose cause purposive intelligence is an indispensable aspect.

2. The space-time universe is a composite in which complex means are so related as to produce significant results (*see* ANTHROPIC PRINCIPLE).

3. Therefore, the space-time universe is a composite of whose cause purposive intelligence is an indispensable aspect.

Certainly this argument proceeds by analogy, since the space-time universe is placed alongside all other apparently similar composites. But Hackett asserts that this feature can hardly be considered a flaw. He states, "Granted that the reasoning involves analogy; nevertheless it should be pointed out that virtually all reasoning about matters of fact involves analogy, . . . so that the rejection of the analogical principle would be virtually tantamount to rendering all factual reasoning spurious" (ibid., 104).

The weakness of dissimilarity shown in Mill's third premise has been attacked by others. As Hackett also points out, however, the similarity for the analogy does not lie in the production of the artifact, but in its features that lead us to draw conclusions regarding its production.

Alvin Plantinga, though not himself a proponent of the teleological argument, also showed that this criticism is not as forceful as it appears. The universe is unique in many ways, but in crucial ways it surely bears sufficient resemblance to other things so that we cannot immediately rule out inductive analogies (Plantinga, 97–107).

Still, Mill leaves us with the possibility that apparent design is only the result of natural selection. That point is examined more closely by Russell.

Russell's Evolutionary Disproof. Bertrand Russell (1872–1970) attempted a disproof of the teleological argument from evolution. The logic can be put in this form (Russell, 589):

1. The adaptation of means to end in the world is either the result of evolution or else the result of design.
2. This adaptation is the result of evolution.
3. Therefore, this adaptation is not the result of design.

Russell's point is that, if adaptation can be accounted for by the survival of the fittest, there is no need to invoke design to explain it. Of course, Russell's argument does not follow logically, for there is no logical reason why adaptation cannot be the result of both evolution and design (*see* EVOLUTION, BIOLOGICAL). Further, one need not grant that natural selection can explain all adaptation (Geisler, *Origin Science*). And if natural selection cannot explain all apparent design, it gives some force to the design argument. Hence, Russell's argument does not disprove the teleological argument; at best it only forces a modification in the argument.

Hume's Alternatives to Teleology. The most famous critique of the teleological argument comes from Hume. Although many scholars believe it is Hume's own view, he placed two responses to the teleological argument in the mouth of a skeptic, Philo.

Hume's argument assuming design. The first argument is based on the assumption that there is design in nature (Burrill, 184–91). It rather considers what this reasoning might prove about God. At best, the God indicated by this design would be:

1. different from human intelligence, since human inventions differ from those of nature.
2. finite, since the effect is finite (and the cause is like the effect).
3. imperfect, for there are imperfections in nature.
4. multiple, for the creation of the world is more like the cooperative building of a ship.
5. male and female, for this is the way humans generate.
6. anthropomorphic, for his creatures have eyes, ears, noses, and other physical traits.

According to Hume, the best one could conclude from assuming there is design in the world is that the world arose from something like design. At worst, the world may be the crude product of some infantile god(s) or the inferior result of some senile deity(ies).

Hume's argument not assuming design. The second argument of Hume (through the literary figure "Philo") does not assume that there is design in the world (ibid., 191–98). It insists it is possible that the world arose by chance:

1. The apparent order in the world resulted from either design or from chance (but not both, for they are mutually exclusive).

2. It is entirely plausible that the world resulted from chance. (a) It is possible that the universe of matter in motion is eternal. (b) In an infinity of chance operations every combination will be realized. (c) Combinations that best fit will tend to perpetuate themselves once they happen. (d) What does not fit tends to move around until it, too, settles down. (e) Hence, the present "ordered" arrangement of the universe may be the result of pure chance.

Philo adds the argument of evolutionary adaptation: Animal adaptation cannot be used to prove design, for they could not survive unless they adapt to their environs. If things could not have been otherwise, that is not an evidence of intelligent planning. However, Philo admits that it is difficult to explain organs not needed for survival. Why two eyes and two ears? Noting that the design theories have problems and absurdities, Philo suggests suspending judgment on the whole question of whether there is a God. The groundwork for this shift in method was laid by Hume in the argument by Philo. From this point, any argument on either side needs to reckon with the choice between a cosmic Designer and chance. And to make this kind of argument work, it is not enough to simply endorse one's own view. It becomes necessary to show that the argument of the other side is insufficient. The teleological theist must show both that the existence of God explains design, and that the world did not come about by chance.

Taylor's Anticipatory Design. With the rise of evolution, it seemed to some theists that the survival of the teleological argument hinged upon its ability to handle both the evolutionary and chance alternatives. This is precisely what A. E. Taylor hoped to accomplish with his argument based on the apparent advanced planning within nature (Burrill, 209–32). It can be summarized:

1. Nature reveals an anticipatory order; it plans for its preservation. (a) Bodily need for oxygen is anticipated by membranes that provide it. (b) Many insects deposit eggs where food is available for their babies. (c) A cat's movements are prospectively adapted to capture prey.

2. Nature's advanced planning cannot be accounted for by physical laws alone. There are countless ways electrons could run, but they move in accord with the advanced planning needed to preserve the organism. (a) This is true in healthy and unhealthy organisms (e.g., antibodies). (b) On the basis of physical laws alone, misadaptations would be as probable as adaptations. (c) Unless we retreat to the absurd, something more than physical laws must account for overcoming the high improbabilities.

3. Mind or intelligence is the only known condition that can remove these improbabilities against life's emergence. (a) The human mind is direct evidence of anticipatory adaptation. Humans plan ahead. Aged people make wills. No jury considers a man guilty

of first-degree murder unless he anticipated the result of his actions. (b) Even scientists who reduce anticipation to complicated reflex action do not live that way. They write books in hope that others will read them. They vote in hope that it will provide a better future.

4. The mind or intelligence that explains anticipatory adaptations cannot be explained as a result of evolution. (a) Mind is not a life-force that resulted from evolution and then took over and captured lifeless matter, since the advanced planning which gave rise to mind can only be explained as a result of Mind. We use tools that other minds make, but some mind had to make the tool to begin with. Likewise, the fact that mind can use nature as a tool assumes that the process of nature that produced mind is itself intelligently directed. (b) The very appearance and persistence of species is impossible without preparatory adaptation of the environment. Without the right chemicals and under different conditions, life would not be possible. (c) Therefore, either prospective adaptation is meaningless or else a Mind guides the whole process.

5. Darwinian (*see* DARWIN, CHARLES) natural selection cannot explain the advance planning evident in nature, for: (a) The fittest are not necessarily the best; the most stupid sometimes survive (e.g., a drunk in an accident). (b) Even mutations imply design, since to make evolution work, mutations must not be random and impartial but occur in trends, implying design. Also mutations must not be small and gradual but large and sudden. This indicates design. (c) Darwinism does not explain, but merely presupposes, life with a preparatory environment. (d) The human mind cannot be explained by survival of the fit or adaptation, for there is no reason these adjustments should produce foresight, and the human mind does not adapt to the environment but transforms it. (e) Therefore, if Mind was not totally produced by nature, it must have been active in the producing of nature, since nature indicates advanced planning accountable only by intelligence.

Taylor's advanced planning argument is further discovery of what is known as the anthropic principle. According to this principle, the possibility of human life and all that leads up to it was set from the very moment of the big bang origin of the material universe. For had the conditions which were set then have been off in the most infinitesimal way, neither life nor human life could have arisen. This is strong evidence for anticipatory design from the moment of the inception of the universe (see Ross).

Taylor admits that objections can be leveled against the teleological argument. He contends, however, that they do not affect the basic argument but are applicable only to certain unjustifi able assumptions that have sometimes been connected with the argument. The teleological argument itself, at least as based on the design apparent in the anticipatory adaptations of nature, is valid.

The Argument's New Form. Hume's second critique of the teleological argument succeeded in shifting the form of the argument itself. In essence the reasoning took on this form:

1. The universe resulted either from design or from chance.

2. It is highly improbable that it resulted from chance.

3. Hence, it is highly probable that the universe was designed.

The high improbability of a chance happening is due to the fact that there is not, as Hume's Philo assumed, an eternity of time in which to realize the ordered arrangement in which things now find themselves. There are only so many billions of geological years for things to take their present arrangement. Hackett said, "I conclude that the notion of chance simply does not provide any rationally plausible explanation of the significant order in the universe, and that therefore the principle of purposively directed activity provides an overwhelmingly more reasonable explanation" (Hackett, 106).

Attempting to Plug the Loophole. The chances for chance are slim. Defenders of the teleological argument attempted to fill the loopholes created by Hume's chance argument. Some took the bull by the horn and argued simply that the chances for a chance explanation are not very good.

Theists (*see* THEISM) argued that the chances that one will get two sixes on a roll of two dice is one in thirty-six, but this does not mean that it will actually take thirty-six rolls to get two sixes. They may come on the first roll. Likewise, the *a priori* odds against the universe happening by chance alone are immense. Nonetheless, in actual fact (*a posteriori*) the universe does exist, and it could have happened that way, however remote the odds.

Julian Huxley , an arch-defender of evolution, estimated that at the known rate of helpful mutations over the known time scale, the odds against evolution happening by pure chance are 1 followed by 3 million zeros (fifteen hundred pages of zeros) to one (Huxley, 46). Huxley felt, however, that natural selection was the process that overcame these stupendous odds. But from the teleologist's point of view, natural selection functions as a kind of supreme intelligence, deciding with apparent foresight at thousands of points against thousand-to-one odds. What but intelligent advance planning could possibly make the right selection so consistently, against such overwhelming odds?

Perhaps the gravest objection to the teleological argument comes from the chance hypothesis: that the design in the knowable universe may be only a temporary and fragmentary episode in the history of the whole universe (a kind of oasis of design in the much wider desert of chance). F. R. Tennant replies to this alternative (in Hick, 120–36) by pointing out that it is conceivable but highly improbable because.

1. The mere possibilities of the unknowable (or unknown) world cannot be used to refute the probabilities within the knowable world.

2. There is no evidence to support the thesis that the knowable world is a lie to the unknowable world.

3. The knowable universe is not isolated from the unknowable, but is interwoven and interdependent with it.

4. Thermodynamics makes completely random development unlikely.

5. Chance reshuffling of matter by mechanical forces cannot explain the origin of mind and personality.

6. The qualitative greatness of human values in the oasis of the knowable world outweigh the quantitative immensity of the unknowable world.

After attempting to plug the alleged loophole in the teleological argument, Tennant offers his own revised form. It is based on what he calls a wider teleology: Innumerable cases of design have conspired to produce and maintain, by united and reciprocal action, a general order. The value in arguing that nature as a whole is designed is, according to Tennant, that such an argument is not susceptible to many of the criticisms to which the "narrow" teleology is open.

For instance, a wider teleology does not demand that every detail of the process be foreordained. A purposeful process may produce as a by-product some inevitable evils. (For example, a by-product of lakes to enjoy is that some persons will drown in them.) Tennant sees six areas in which the world reflects its wider teleology:

1. adaptation of thought to thing (the thinkability of the world),

2. adaptation of the internal parts of organic beings,

3. adaptation of inorganic nature to purposeful ends,

4. adaptation of nature to human aesthetic needs,

5. adaptation of the world to human moral goals, and

6. adaptation of world processes to culminate in the rational and moral status of a human being.

All the parts and processes of the world contrived to produce the human. This places beyond any reasonable doubt the fact that the world was planned. William Lane Craig agrees that "the cosmic considerations have also breathed new life into the argument from design" (Craig, 73).

Hume's Uniformity Principle. Another alternative to Hume's chance argument is to use his own principle of uniformity. That is precisely what Paley did. Indeed, when Hume is arguing against miracles (*see* MIRACLES, ARGUMENTS AGAINST) he bases his reasoning on what he called "uniform experience." This amounts to a practical "proof" because a conjunction of events is repeated without exception so often that one cannot help but posit a causal connection. Using the information from modern microbiology to state Hume's principle, the teleological argument can be restated as follows:

1. Living cells are characterized by their specified complexity. (a) Crystals are specified but not complex. (b) Random polymers are complex but not specified. (c) Living cells are both specified and complex.

2. A written language has specified complexity (Yockey, 13–31). (a) A single word repeated over and over is specified. (b) A long series of random letters has complexity. (c) A sentence has specified complexity.

3. Uniform experience informs us that only intelligence is capable of regularly producing specified complexity.

4. Therefore, it is reasonable to assume that living organisms were produced by intelligence (*see* EVOLUTION, CHEMICAL).

The same is true of recent biological considerations which show a strong analogy (actually, mathematical identity) between the genetic code in living organisms and that of a human language produced by intelligence. Leslie Orgel noted that "living organisms are distinguished by their *specified complexity* . Crystals . . . fail to qualify as living because they lack *complexity;* random mixtures of polymers fail to qualify because they lack *specificity* " (Orgel, 189, emphasis added). Michael Behe has further shown that this specified complexity is irreducible, demonstrating that it could not have evolved in steps (*see* Behe). All basic elements must be present simultaneously from the beginning in order for it to function. In this light, Paley's argument can be restated:

1. A living being, from the simplest one-celled organism to a human being, displays many structures that are both complex and specified. These structures are like those in all other organisms at the same level of being.

2. Human bodies are complex systems of complex systems and fit into a larger natural ecosystem context. At each level, immense complexity is organized in a very specific way and fits the need of all the higher levels of organization.

3. Therefore, the uniformity of specified design at all levels intensely implies an intelligent Designer (God).

Two things should be noted about the teleological argument in this form. First, it is based on the scientific principle of regularity. The cause of an event is that which can regularly produce that event. Second, as applied to the origin of life, this argument is based on the Humean principle of uniformity: A constant conjunction of antecedent and consequent factors is the basis for attributing causal connection (*see* SCIENCE OF ORIGINS). Paley clearly accepted this Humean principle and used it in his argument:

> Wherever we see marks of contrivance, we are led for its cause to an *intelligent* author. And this transition of the understanding is founded upon uniform experience. We see intelligence constantly contriving; that is, we see intelligence constantly producing effects, marked and distinguished by certain properties . . . We see, wherever we are

> witnesses to the actual formation of things, nothing except intelligence producing effects so marked and distinguished in the same manner. We wish to account for their origin. Our experience suggests a cause perfectly adequate to this account . . . because it agrees with that which in all cases is the foundation of knowledge—-the undeviating course of their experience. [Paley, 37]

Therefore, Hume did not answer Paley in advance. Rather, Paley based his argument on the principle of uniformity (constant conjunction) that he borrowed from Hume. Thus, he argued that since intelligence is the only cause constantly joined with design (such as in a watch), then intelligence is the most reasonable cause to postulate for nature that manifests this same kind of design. Paley was, of course, unaware of microbiology, so he did not foresee how his argument would be strengthened by the discovery of specified complexity in DNA.

In view of the rediscovered principle of uniformity (constant conjunction) as a basis for the teleological argument, a new critique to the chance alternative suggested by Hume emerges: It is contrary to the principle of constant conjunction laid down by Hume himself. That is, chance is not a rational explanation on Hume's own grounds, since a rational person should posit as a cause only that which is constantly conjoined to the effect. But the only cause constantly conjoined to specified complexity (such as is found in living things) is intelligence. Hence, only intelligence (not chance) should be posited as the cause of life.

Rational or scientific thinking is not based on chance occurrences but on constant conjunction. Hence, to posit a nonintelligent natural force as a cause of specified complexity, one must show how it constantly conjoined to a purely natural nonintelligent cause. This has not been done. In fact, purely naturalistic explanations of the origin of life have been demonstrated to be implausible (see Thaxton). Even biologically interesting chemicals (such as amino acids), which are as far from a living cell as a few words are from a volume of an encyclopedia, result only when there is illegitimate intelligent intervention (as in Urey's and Miller's experiments). Hackett makes a strong case for the teleological argument, but only after he has argued that the world is an effect with God for its cause. Serious questions, such as those brought up by Kant and C. J. Ducasse, will ultimately lead us to look for an argument behind the teleological argument. Kant says it is the ontological, whereas Ducasse looks for the cosmological argument.

Other Objections. *Ontological Defects in the Teleological Argument.* Those opposed to the teleological argument offer still other objections. Kant neither offered a disproof of God nor suggested a complete disregard of the teleological argument (*see* GOD, OBJECTIONS TO PROOFS FOR). He did, however, insist that the teleological argument is inconclusive:

1. The teleological argument is based on experience of design and order in the world.

2. But experience never provides us with the idea of an absolutely perfect and necessary Being. For, (a) If God is only the highest in an actual chain of experienced beings, then a higher is possible. (b) And if God is separate from this chain, then he is not being based in experience. And we have thereby left the experiential basis for the argument and imported an invalid ontological argument from pure thought (Burrill, 199–207).

3. Hence, a Necessary Being cannot be proved from design in the world.

This is not to say, however, that there is no force to the teleological argument. Kant, too, was impressed when he looked at the stars. When he put this experience in logical summary it took this form:

1. There is everywhere in the world clear indication of intentional arrangement.

2. The fitness of this arrangement is foreign to the things themselves. They possess this order contingently, not spontaneously.

3. Hence, there is a sublime and wise cause (or causes) that arranged the world.

4. That this cause is one may be inferred from the reciprocal relation of the parts to the whole universe in a mutual fit, forming a unified whole.

Kant concluded that the teleological argument, while not conclusive, does have value. Even though it does not prove a Creator, it does indicate an Architect. Since the cause can only be proportioned to the effect, the Architect is only a very great being and not an all-sufficient being. The argument at best yields only the highest cause which is not a sufficient basis of religion. The step from the highest actual cause indicated by experience to the highest possible cause demanded by pure reason is an unjustifiable ontological leap. Kant concluded that theists using the teleological argument to prove the existence of God made a desperate leap from the soil of experience to fly in the thin air of pure possibility without even admitting that they left the ground.

Most theists readily admit that the teleological argument alone does not prove an infinite, Necessary Being who created the universe out of nothing (*see* CREATION, VIEWS OF). The cosmological argument is intended to do that. However, when combined with the cosmological argument the teleological argument does show that the infinite Cause of all finite being is an intelligent one, was evidenced by the extremely complex design manifested in the universe. The cosmological argument does not "fly in the thin air of pure possibility." Rather, it begins in the actual existing finite world and moves to an actual existing infinite God. There is no more ontological sleight of hand in it than to conclude that a person with a real navel had a real mother.

The Perfection Problem. According to Ducasse, the teleological argument suffers from other defects (ibid., 234–39). He lists three basic defects.

1. It does not prove a perfect Creator. (a) Design in the world is not perfect, and it needs only an imperfect cause to explain it. Human beings are just as capable of judging what is not purposeful as what is purposeful. (b) Evil, waste, and disease all show lack of purpose (*see* EVIL, PROBLEM OF).

2. Designers can be inferior to what they design. Microscopes, steam shovels, and computers all have powers their inventors do not.

3. The teleological argument has the same defects as the cosmological argument: (a) If the world needs a designer then so does that designer, ad infinitum. (b) But if everything is caused (according to the principle of sufficient reason), then there can be no first cause.

Then, Ducasse offers what he considers a more plausible alternative to the teleological argument. It involves no creator of any kind.

1. The most economical explanation is probably the correct one.

2. The world is more economically explained by a purposeless craving within human beings (Schopenhauer) than by some intelligence beyond the world. (a) It is simpler, since it is located in humanity and not dependent on causes beyond the world. (b) It explains things as well as God does. For example, the eye is a purposeless craving for sight which is never satisfied.

3. Therefore, it is more probable that the world is the result of a purposeless craving, than that it has arisen through intelligent design.

This argument is far from definitive. It is open to challenge at several points. First, is the principle of economy or simplicity appropriately applied to the question of the cause of the universe? Hume's skeptic argued against applying it, and skepticism cannot have it both ways. It appears to beg the question by assuming that the best cause will come from within the universe but not beyond it. Second, even granting that the simplest explanation is best, is a purposeless craving really the simplest explanation? It appears far more obscure and complicated in some respects. Third, how can a purposeless craving result in purposeful activity? How can the effect be greater than the cause?

Conclusion. The teleological argument, as such, is a highly probable but not absolutely certain argument for intelligent design manifested in the world. Chance is possible though not probable. The teleological evidence favors the unity of this cause since this world is really a universe, not a multiverse. This is especially evident in view of the anthropic principle which reveals that the world, life, and humankind were anticipated from the very moment of the origin of the material universe (*see* EVOLUTION, COSMIC).

The teleological argument as such does not demand that this cause be absolutely perfect. Nor does it *ipso facto* explain the presence of evil and disorder in the world. The teleological argument is dependent on the cosmological and moral arguments to establish these other aspects of a theistic God.

It is really a causal argument from effect to cause, only it argues from the intelligent nature of the effect to an intelligent cause. This last point is important. For if the principle of causality (*see* CAUSALITY, PRINCIPLE OF) cannot be supported, then admittedly one cannot insist that there must be a cause or ground of the design in the world. Design might just be there without a cause. Only if there is a purpose for everything can it follow that the world must have a Purposer. The teleological argument depends on the cosmological argument in this important sense that it borrows from it the principle of causality. As can be readily seen from every form of the design

argument, the underlying assumption is that there needs to be a cause for the order in the world. Deny this and the argument fails, for the alleged design (if uncaused) would be merely gratuitous.

Tertullian. Quintus Septimius Florens Tertullianus (160/70–215/20) was an early Christian apologist from Carthage, North Africa. He was educated in law and converted to Christianity in about 190. He devoted himself to the study of the Scriptures. He broke from the mainline church and became head of a small Montanist group. His interaction with the unbelievers of his day is illustrative of an early Christian interaction view of faith and reason.

Among Tertullian's many works were *Apologeticus* , *On Baptism* , *The Prescription Against Heretics* , *Against Hermogones* , *On the Flesh of Christ* , *The Treatise on the Soul* , *To Scapula* ,

and *Against Marcion* . While Justin Martyr and Clement of Alexandria are wrongly considered rationalists, Tertullian is often falsely accused of fideism.

Tertullian's alleged fideism is based on several passages. He wrote: "With our faith, we desire no further belief" (Tertullian, *The Prescription against Heretics* , 7). He also asked: "What indeed has Athens to do with Jerusalem? What concord is there between the Academy and the Church?" (ibid.). He even called philosophers "those patriarchs of all heresy" (Tertullian, *Against Hermogones* , 8). In his most famous passage Tertullian went so far as to declare of the crucifixion of Christ "it is by all means to be believed, because it is absurd." He added, "And He [Christ] was buried, and rose again, the fact is certain, because it is impossible" (Tertullian, *On the Flesh of Christ* , 5).

Tertullian was neither an irrationalist, nor a fideist. Contrary to popular belief, Tertullian never said " *Credo ad absurdum* ." He did not use the Latin word *absurdum* here, meaning a rational contra diction. Rather, he used the word *ineptum* or "foolish" in this quote. Like the apostle Paul (in 1 Cor. 1:18) he was simply noting that the Gospel seems "foolish" to unbelievers, but he never affirmed that it was logically contradictory in itself. Likewise, the resurrection is only "impossible" in a human way but not divinely or actually impossible.

Tertullian's Stress on Reason. As a lawyer and defender of the Christian Faith, Tertullian knew well the value of human reason in the declaration and defense of the Christian Faith. He spoke of the rationality of all goodness (*Against Marcion* , 1.23). He said, "nothing can be claimed as rational without order, much less can reason itself dispense with order in any one" (ibid.). Even when speaking of the mystery of human free choice (*see* FREE WILL), Tertullian declared that "It cannot even in this be ruled to be irrational" (ibid., 1.25). He also speaks of applying "the rule of reason" as the guiding principle in the interpretation of Scripture (*The Prescription against Heretics* , 9). Tertullian also declared that "all the properties of God ought to be as rational as they are natural." For "nothing else can properly be accounted good than that which is rationally good; much less can goodness itself be defected in any irrationality" (*Against Marcion* , 1.23). He was even against someone being baptized into the Christian Faith if he is "content with having simply believed, without full examination of the grounds or the tradition" (*On Baptism* , 1).

Occasionally, Tertullian even spoke favorably of philosophers, admitting, "Of course we shall not deny that philosophers have sometimes thought the same things as ourselves." This is because of God's revelation in "nature," that is, "by the common intelligence wherewith God has been pleased to endow the soul of man" (*Treatise on the Soul* , 2). His highest praise for human reason was reserved for the testimony of God in the human soul. "These testimonies of the soul are as simple as true, commonplace as simple, universal as commonplace, natural as universal, divine as natural. . . . And if you have faith in God and Nature, have faith in the soul; thus you will believe yourself" (*Treatise on the Soul* , 5). This is not to say that Tertullian rejected general revelation in the external world. In fact he said, "We are worshippers of one God, of whose existence and character Nature teaches all men" (*To Scapula* , 2).

Conclusion. Despite his strong emphasis on faith, Tertullian, like Justin and Clement, believed there was a significant role for human reason in defense of the truth of the Christian

religion (*see* FAITH AND REASON). He believed in general revelation in both the external and internal world of the soul, though he stressed the latter.

Theism. *Theism* is the worldview that an infinite, personal God created the universe and miraculously intervenes in it from time to time (*see* MIRACLE). God is both transcendent over the universe and immanent in it. The three great theistic religions are Judaism, Islam , and Christianity.

Finite godism, deism , and, to some extent, even Western panentheism , grew out of the theistic (*see* THEISM) worldview. The central difference between theism and finite godism is the question of whether God is infinite or finite. Deism is primarily a theistic view minus supernatural intervention in the world (*see* MIRACLE). Panentheism modifies theism to posit a finite God with two poles, one being theoretical infinitude. It is sometimes called “neoclassical theism.”

Different Kinds of Theism. One of the most helpful ways to distinguish among theist systems is to note the perspective from which each approaches God. There are *rational* theists such as Rene Descartes and Gottfried Leibniz , *existential* theists such as Soren Kierkegaard , *phenomenological* theists such as Peter Koestenbaum, *analytic* theists such as Alvin Plantinga, *empirical* theists such as Thomas Reid , *idealistic* theists such as George Berkeley , and *pragmatic* theists such as Charles Sanders Pierce. Each of these uses a somewhat distinct philosophical method to approach belief in God.

Theists can also be distinguished by what they believe about God and his relation to the world. Most believe the material world is real, but some believe it exists only in minds and ideas (Berkeley). Most theists believe God is unchangeable, but some (generally influenced by panentheism) believe God can and does change. Some theists believe it is possible that the created universe is eternal (Thomas Aquinas), while most believe the universe must be temporal (Bonaventure). Perhaps the most important difference among theists is that many believe God is

only one person (monotheism), such as Judaism and Islam. Others, notably orthodox Christians, believe in a *trinitarian* form of monotheism: God has three centers of personhood within one perfect monotheistic unity.

Among the leading defenders of classical theism were Augustine (354– 430), Anselm (1033–1109), and Thomas Aquinas (1224–1274). In the modern world Descartes (1596–1650) Leibniz (1646–1716), and William Paley (1743–1805) are some the more noted defenders of theism. Perhaps the most popular exponent of theism in the twentieth century was C. S. Lewis (1898–1963). Since theism is described in detail in articles for these representatives, only a summary of theistic views will be included here.

Outline of a Theistic Worldview. Those who hold a theistic worldview have a common core of beliefs. To the degree theists are consistent, their thoughts and actions are shaped from this core:

God Exists beyond and in the World. Theism holds to both the *transcendence* and *immanence* of God. God exists beyond and independently of the world, yet governs all parts of the world as the sustaining Cause. The world was *originated* by God and it is *conserved* by him (*see* CREATION AND ORIGINS).

The World Was Created Ex Nihilo. The world is not eternal. It came into existence by God's fiat (decree). Its existence is totally contingent and dependent. The universe was not created from pre-existing material (*ex materia*), as in dualism or materialism , nor was it made out of God's essence (*ex Deo*), as in pantheism . It was brought into existence by God, but from nothing (*ex nihilo* ; *see* CREATION, VIEWS OF).

Miracles Are Possible. Although God operates his universe in a regular and orderly way by the laws of nature, nevertheless, God does transcend those laws. Nature is not the "whole show." There is a supernatural realm (*see* NATURALISM). This supernatural can invade the natural realm. The sovereign Creator cannot be locked outside his creation. Although God normally works in a regular way, on occasion he directly intervenes. This occasional invasion of nature by the supernatural is called a "miracle."

Most theists not only believe that miracles can happen; they believe some actually *have* happened (*see* MIRACLES, ARGUMENTS AGAINST). Jewish theists point to the miracles surrounding the exodus, Muslims to God's revelations to Muhammed, and Christian theists point to the birth and resurrection of Christ as chief examples of miracles.

People Are Made in God's Image. Theism believes in the creation of humankind in God's image. This means man has both freedom (*see* FREE WILL) and dignity that ought to be treated with utmost respect. Humans are God's representatives on earth. Human life is sacred. Humans should be loved as persons, not used as things.

As creatures of God, men and women are not sovereign over their own lives. No one has the right to take his or her own life nor end the life of another, except as killing is directly sanctioned. Only God gives life, and only God can take it or command that it be taken.

Humanity had a beginning in time. There was no preexistent soul, so no eternality, but the soul was created to be immortal (*see* IMMORTALITY). Nor is there annihilation of the soul (*see* ANNIHILATIONISM), as is the belief of atheism and some theists. Each person is immortal, not by his essence, but because God will sustain us forever.

There Is a Moral Law. Since the theist God is a moral being and since humankind is created in God's image, a moral corollary of theism is that the ultimate duty of people is to obey the moral law. This law is absolutely binding since it comes from God (*see* MORALITY, ABSOLUTE NATURE OF). It is over and above any human laws. It is prescriptive, not merely descriptive, as are laws of nature.

Rewards and Punishment Await. Each individual life, like all of history, is pointed toward an end or goal. Human moral actions will be rewarded or punished. There will be no reincarnated nor post-death second chance. Each person will be rewarded or punished according to the individualrelation to God during life (*see* HELL). This has to do with what the person has "done," or on God's grace. Some modern theists minimized (or negate) the punishment aspect of human destiny in hope that all might be saved (*see* UNIVERSALISM) or at least annihilated if unsaved. But traditional theists believe this is wishful thinking. All theists, however, acknowledge a day that will bring about justice.

Evaluation. Many nontheists literally believe that theism is too good to be true. Sigmund Freud wrote, "We say to ourselves: it would indeed be very nice if there were a God, who was both creator of the world and a benevolent providence, if there were a moral world order and a future life, but at the same time it is very odd that this is all just as we should wish it ourselves" (Freud , 57–58).

The real question, of course, is not how satisfying a view is, but whether it is true. Many nontheists believe it is not true (*see* GOD, ALLEGED DISPROOFS OF). Other are content with simply attempting to show that arguments for the existence of God fail (*see* GOD, OBJECTIONS TO PROOFS FOR). Both are unsuccessful, and there are good arguments that a theistic God exists (*see* COSMOLOGICAL ARGUMENT ; MORAL ARGUMENT ; TELEOLOGICAL ARGUMENT), that there are moral absolutes, and that there is a life after death—all of which are essential parts of a theistic worldview.

Theistic Evolution. *See* EVOLUTION, THEISTIC .

Thermodynamics, Laws of. Thermodynamics is a field of physical science that relates matter to energy. The principles of thermodynamics are re garded as inviolable and are applied constantly to engineering and the sciences, including origin science (*see* ORIGINS, SCIENCE OF). Thermodynamic principles work within what are called macroscopic systems, mass or energy that can be isolated and studied in its properties, such as Temperature, density, volume, compressibility, expansion and contraction with temperature changes. Macroscopic systems are studied in equilibrium with their surroundings, including their ultimate context—the entire universe. Changes in context—temperature for example—produce reactions in the system that compensate and bring toward a new equilibrium. The move from one equilibrium to another is called a "thermodynamic process." The limitations on thermodynamic processes that have been discovered led to the formation of the *laws* of thermodynamics.

Two laws of thermodynamics, the first and second, hold important implications for creationists and materialists (*see* MATERIALISM) in their debate over origins. Both sides invoke the laws with surprising frequency, and varying degrees of comprehension of what they truly mean. Other laws also have occasional roles to play in apologetics.

Zeroth Law. The first law is not truly the "first" listed law of thermodynamics, for there is a zeroth law which states that when each of two systems is in equilibrium with a third, the first two systems must be in equilibrium with each other. This shared property of equilibrium is the temperature. Basically that means that any object will eventually reach the temperature of its surroundings. This law occasionally is referred to in planetary physics and theories of how the earth, with its internal molten core furnace precious heat from the sun and exposure to frigid space came to establish a atmosphere-insulated thermal equilibrium conducive for life (*see* ORIGINS, SCIENCE OF).

First Law. The first law of thermodynamics is sometimes stated: "Energy can be neither created nor destroyed." In this form the law is often used by nontheists to show that the universe is eternal and that there is no need for God. Certainly there can be no God who created a temporal world *ex nihilo* (*see* CREATION, VIEWS OF).

The first law is a law of energy conservation. Heat is measured in calories of energy. Calories can drift from one object to another, can be converted into mechanical work, and can be stored, even though energy is not a material substance. But not one calorie of energy actually goes out of existence. It merely changes form.

Another, more accurate, way to state this law of conservation is that "The amount of *actual* energy in the universe remains constant." This says nothing about how the energy came to be in the universe. It also has no power to theorize about whether God could bring new energy into the system if he so wished. It is a statement of observation that the energy does not just disappear, and no more has been seen popping into existence from nonexistence.

The statement "Energy can neither be created nor destroyed" expresses philosophical dogmatism. This is a metaphysical pronouncement not supported by observation. As far as we can observe, no new energy is coming into existence, and no actual energy is going out of existence.

As such, the First Law supports neither a theistic or nontheistic worldview. It does not claim that energy is eternal, so God is unnecessary. But neither does it claim that God has endowed the system with energy at any point. It simply affirms that right now the actual amount of energy—however long it has been here—is not changing.

Second Law. The second law of thermodynamics is a whole other story. It can be stated: "In a closed, isolated system, the amount of usable energy in the universe is decreasing." It is being changed, the *dynamics* part of *thermodynamics* , into unusable heat energy, the *thermo* part. Notice that this law does not infringe on the First Law; it amplifies on it. If energy is constant, why do we keep needing more electricity? The answer is that *entropy* happens. The second law states that "overall, things left to themselves tend to disorder." Overall, the amount of disorder is increasing. The entropy—that is, the disorder—of an isolated system can never decrease. When an isolated system achieves maximum entropy, it can no longer undergo change: It has reached equilibrium. We would say it has "run down."

The second law is supportive of one form of cosmological argument for God's existence. If the universe is running down it cannot be eternal (*see* KALAM COSMOLOGICAL ARGUMENT ; BIG BANG THEORY ; EVOLUTION, CHEMICAL). If there was a beginning, there had to be a cause (*see* CAUSALITY, PRINCIPLE OF). Therefore, the universe had a Cause.

The Second Law is also used by creationists to argue against macro-evolution (*see* EVOLUTION, BIOLOGICAL). Evolutionists object, noting that the second law only applies to closed systems, such as the whole universe, rather than to open systems, like living organisms. True, an organism can take in energy from outside, so in that respect the second law does not apply. On the other hand, the second law does say that this undirected natural energy of food, water, and sunshine cannot increase in specified complexity. Calories of sun energy do not help a creature grow new eyes with which to see the sun's light. It does not even charge a creature's batteries so that it can live indefinitely. Entropy happens in both the individual organism's life cycle and in species' life.

The second law assures that a perpetual motion machine (or universe) will not work either. All engines expend some fraction of its heat input to entropy, or exhaust. The second law of thermodynamics places an upper limit on the efficiency of a system. It is always less than 100 percent.

Third Law. There is a third law of thermodynamics which seldom if ever comes up in apologetic considerations. This law basically says that a system never completely reaches "zero" in energy. There is an absolute temperature scale, with an absolute zero temperature. The third law of thermodynamics states that absolute zero can be approached very closely, but it can never be reached.

Thomas Aquinas. Thomas Aquinas (1224–1274) was a theologian, philosopher, and the consummate apologist of the medieval church. Born in Italy, he joined the Dominican order. He studied at Naples and Paris. He started a school at Cologne and taught at Paris throughout his career except for eight years at the papal Curiae at Rome. He was canonized by the Roman church in 1326. Aquinas wrote *De anima* (*On the Soul*), *De Ente et Essentia* (*On Being and Essence*), *De veritate* (*On Truth*), *On the Power of God* , *Summa contra Gentiles* , and *The Unity of the Intellect Against the Averoeists* . By far his most important and influential writing went into his *magnum opus* systematic theology, *Summa Theologica* , which was still unfinished at his death.

The thought of Aquinas is rich and varied. He wrote on many topics, including faith and reason, revelation, knowledge, reality, God (*see* GOD, EVIDENCE FOR ; GOD, NATURE OF), analogy (*see* ANALOGY, PRINCIPLE OF), creation (*see* CREATION AND ORIGINS ; CREATION, VIEWS OF), human beings, government, and ethics (*see* MORALITY, ABSOLUTE NATURE OF). His mind was intensely analytical, making his arguments difficult for the modern reader to follow. His writing style is sometimes dialectical and highly complex, especially in *Summa Theologica* . This is less true in *Summa contra Gentiles* .

Theology and Apologetics. *Revelation.* God has revealed himself in both nature and Scripture. His natural revelation (Rom. 1:19–20) is available to all and is the basis for natural

---

CT *Christianity Today*

theology (*see* REVELATION, GENERAL). The creation reveals one God and his essential attributes, but not the Trinity or the unique doctrines of the Christian faith, such as the incarnation of Christ (*see* CHRIST, DEITY OF) or the way of salvation. This revelation in nature also includes a moral law that is binding on all people (Rom. 2:12–15). God's divine law is for believers; it is revealed in Scripture (*see* REVELATION, SPECIAL). Although written by humans with differing literary styles (*Summa Theologica* , 2a2ae. 173, 3,ad1), the Bible is the only divinely authoritative writing (ibid., 1a.1, 2, ad2). The Bible is inspired and inerrant (*see* BIBLE, INSPIRATION OF), even in matters that are not essential to redemption (ibid., 1a.1, 10, ad3). No other Christian writing, neither the Fathers nor the creeds, are inspired or revelatory. They are only human interpretations of God's revelation in Scripture (ibid., 2a2ae. 1, 9).

Faith and Reason. Following Augustine , Aquinas believes faith is based on God's revelation in Scripture. Support for faith, however, is found in miracles (*see* MIRACLES, APOLOGETIC VALUE OF) and probable arguments (Aquinas, *De Veritate* [*On Truth*], 10, 2). Although God's existence is provable by reason (*see* COSMOLOGICAL ARGUMENT), sin obscures our ability to know (*Summa Theologica* , 2a2ae. 2, 4) and so belief (not proof) *that* God exists is necessary for most persons (*Summa Contra Gentiles* , 1.4, 3–5). Human reason, however, is never the basis for faith *in* God. Demanding reasons for belief in God actually lessens the merit of faith (*Summa Theologica* , 2a2ae. 2, 10). Believers, nonetheless, should reason about and for their faith (*see* APOLOGETICS, CLASSICAL).

According to Aquinas, there are five ways we can demonstrate God's existence. We can argue: (1) from motion to an Unmoved Mover; (2) from effects to a First Cause; (3) from contingent being to a Necessary Being; (4) from degrees of perfection to a Most Perfect Being; and (5) from design in nature to a Designer of nature (ibid., 1a, 2, 3). Behind these arguments is the premise that all finite, changing beings need a cause outside themselves.

There are mysteries of the Christian faith, however, such as the Trinity and the incarnation (*see* CHRIST, DEITY OF), which can be known only by faith in God's revelation in Scripture (*Summa Contra Gentiles* , 1.3, 2). These go beyond reason, but are not contrary to reason.

Knowledge. Aquinas believes that knowledge comes either by supernatural revelation (in Scripture) or by natural means (*see* EPISTEMOLOGY). All natural knowledge begins in experience (Aquinas, *De Anima* [*On the Soul*], 3.4). We are born, however, with an *a priori* , natural, innate capacity to know (*Summa Theologica* , 1a2ae. 17, 7). Everything that is in our mind was first in the senses, except the mind itself. Knowing something for certain is possible by means of first principles. First principles are known by way of inclination before they are known by cognition. These include: (1) the principle of identity (being is being); (2) the principle of noncontradiction (being is not nonbeing); (3) the principle of excluded middle (either being or nonbeing); (4) the principle of causality (nonbeing cannot cause being; *see* CAUSALITY, PRINCIPLE OF); and (5) the principle of finality (every being acts for an end). By these and other first principles, the mind can attain knowledge of reality—even some certain knowledge. Once the terms are properly understood, these first principles are self-evident and, thus, undeniable (Aquinas, *Summa Theologica* , 1a. 17, 3, ad2).

Reality. Like Aristotle , Aquinas believes it is the function of the wise person to know order. The order that reason produces in its own ideas is called logic. The order that reason produces through acts of the will is ethics. The order that reason produces in external things is art. The order that reason contemplates (but does not produce) is nature. Nature, when it is contemplated insofar as it is sensible, is physical science. Nature, when it is studied insofar as it is quantifiable, is mathematics. The modern concept of mathematics is much broader, and includes more abstract and nonquantifiable dimensions. Aquinas would have considered this philosophy, not mathematics. Nature or reality, when studied insofar as it is real, is metaphysics. Metaphysics, then, is the study of the real as real or being, insofar as it is being.

The heart of Aquinas's metaphysics is the real distinction between *essence* (*what* something is) and *existence* (*that* which is) in all finite beings (*De Ente et Essentia* [*On Being and Essence*]). Aristotle had distinguished between actuality and potentiality, but applied this only to things composed of form and matter, not to the order of being. Aquinas takes Aristotle's distinction between act and potency and applies it to form (being). Aquinas argues that only God is Pure Being, Pure Actuality, with no potentiality whatsoever (*see* GOD, NATURE OF). Hence, the central premise of the Thomistic view of reality is that actuality in the order in which it is actuality is unlimited and unique, unless it is conjoined with passive potency. God alone is pure act (or actuality) with no potentiality or form. Angels are completely actualized potentialities (pure forms). Humankind is a composition of form (soul) and matter (body) which is progressively actualized.

God. God alone *is* Being (I am-ness). Everything else merely *has* being. God's essence is identical to his existence. It is of his essence to exist. God is a Necessary Being. He cannot not exist. Neither can God change, since he has no potentiality to be anything other than what he is. Likewise, God is eternal, since time implies a change from a before to an after. But as the "I AM," God has no befores and afters. God also is simple (indivisible) since he has no potential for division. And he is infinite, since pure act as such is unlimited, having no potentiality to limit it (Aquinas, *Summa Theologica* , 1a. 3; 1a. 7–11). Besides these metaphysical attributes, God is also morally perfect and infinitely wise (ibid., 1a. 4, 5).

Analogy. Natural knowledge of God is derived from his creation, as an efficient cause is known from its effects. Since God made the world, his creation resembles him. It is not the same as him (univocal), but it is like him. Our natural knowledge of God is based on that resemblance or analogy. Neither can it be totally different from him (equivocal), since the cause communicates something of itself to its effects. Univocal (totally the same) knowledge of God is impossible, since our knowledge is limited and God is unlimited. Equivocal (totally different) knowledge of God is impossible, since creation resembles the Creator; the effect resembles its efficient cause. Of course, there are great differences between God and creatures. Hence, the *via negativa* (the way of negation) is necessary. That is, we must negate all limitations from our concepts before we apply them to God. We must apply to God only the perfection signified (such as goodness or truth), but not the finite mode of signification (*see* ANALOGY, PRINCIPLE OF).

So the same attribute will have the same definition for creatures and Creator but a different application or extension. Like God, I can know that 2 + 2 = 4. But the mathematical facts I know, and the other attributes I share with God, are limited and contingent. And I cannot do with that

knowledge what God can. The reason for this is that creatures are only finitely good while God is infinitely Good. So before we can appropriately apply the term "good" to God, we must negate the finite mode (how) in which we find good among creatures and apply the meaning (what) to God in an unlimited way (*Summa Contra Gentiles* , I, 29–34; *Summa Theologica* , 1a. 13).

Creation. God did not create the world out of himself (*ex Deo*) or out of preexisting matter (*ex materia*). Rather, he created it out of nothing *ex nihilo* (*see* CREATION, VIEWS OF). Although an eternal creation is theoretically possible, since there is no logical reason why an eternal Cause cannot keep causing eternally. Nevertheless, divine revelation teaches that the universe had a beginning. So God created a temporal universe. There was literally no time before God created—only eternity. God did not create *in* time; rather, with the world there was the creation *of* time. So there was no time before time began (*Summa Theologica* , 1a. 44–46).

Further, the universe is dependent on God for its existence. He not only caused it to come to be, but he also causes it to continue to be. God is both the Cause of the origination of the whole of creation and the Cause of its continuation. The universe is absolutely dependent on God; it is contingent. Only God is necessary.

Human Beings. A human being is a matter/ form unity of soul and body. Despite this unity, there is no identity between soul and body. The soul survives death and awaits reunion with the physical body at the final resurrection (Aquinas, *Summa Theologica* , 1a. 75–76). The human soul is the formal cause while the body is the material cause of a human being. God, of course, is the efficient cause. Parents are only the instrumental cause of the body. The final cause (purpose) is to glorify God, who created us. Adam was directly created by God at the beginning, and God directly creates each new soul in the womb of its mother (ibid., 1a. 90–93).

Ethics. Just as there are first principles of thought, so there are first principles of action, called laws. Aquinas distinguishes four kinds of law (*see* LAW, NATURE AND KINDS OF):

Eternal law is the plan by which God governs creation.

Natural law (*see* MORALITY, ABSOLUTE NATURE OF) is the participation of rational creatures in this eternal law.

Human law is a particular application of natural law to local communities.

Divine law (*see* REVELATION, SPECIAL) is the revelation of God's law through Scripture to believers (ibid., 1a2ae. 91).

Aquinas divides virtues into two classes: natural and supernatural. Prudence, justice, courage, and temperance are natural virtues. These are revealed through natural revelation and are applicable to all human beings. Supernatural virtues consist of faith, hope, and love. They are known from supernatural revelation in Scripture and are binding on believers (ibid., 1a. 60–61).

Evaluation. Criticisms have been leveled at Aquinas's views by atheists and agnostics, and are covered in those articles. Relativists' arguments with his thought are covered in MORALITY, ABSOLUTE NATURE OF . Some have objected that his proofs for God are invalid (*see* GOD,

OBJECTIONS TO PROOFS FOR). Others have denied his doctrine of analogy (*see* ANALOGY, PRINCIPLE OF). Still others attack his epistemology and use of first principles. Likewise, his dependence on Aristotelian logic has been critiqued. Nonetheless, the philosophy of Aquinas has undergone a renaissance in recent years, particularly among evangelicals.

Tindal, Matthew. Matthew Tindal (1656–1733), an English lawyer, was one of the best known and most respected deists (*see* DEISM) of his time. His most important deistic work, *Christianity as Old as the Creation: or, the Gospel, a Republication of the Religion of Nature* (1730), was not published until he was about seventy-four years of age. Because of its influence and completeness, it has been called the "Deistic Bible" and its author "The great Apostle of Deism." This major work prompted more than 150 replies, including the classic critique of deism, Joseph Butler 's *Analogy of Religion* (1872).

Existence and Nature of God. Tindal's view of the existence and nature of God was very similar to that of theists. He believed God to be completely perfect, infinitely loving, eternal, just, merciful, immutable, omnipresent, omniscient, true, omnibenevolent, wise, without parts, and invisible (Tindal, 39, 41, 42, 44, 45, 65, 66, 87). He also held God to be impassable, that is, without passions. As he argued,

> If we dare consult our Reason, it will tell us that Jealousy in point of Honour and Power, Love of Fame and Glory can only belong to limited Creatures; but are as necessarily excluded from an unlimited, absolutely perfect Being, as Anger, Revenge, and such like Passions; which would make the Deity resemble the weak, womanish, and impotent part of our Nature, rather than the manly, noble, and generous. [ibid., 39]

Likewise, God is not moved by man's actions. For "Cou'd God strictly speaking, be made angry, provok'd, or griev'd by the Conduct of us wretched Mortals, he wou'd not enjoy a Moment's Quiet; but must be much more miserable than the most unhappy of his Creatures." Or, "Had God any Comfort, or Satisfaction to gain from the Thoughts and Actions of his Creatures, he wou'd never have been without an Infinity of them jointly contributing to this End" (ibid.).

Creation and Humanity. According to Tindal, the universe was created by God *ex nihilo* (out of nothing). Human beings were also brought into existence by a direct creative act of God: " 'tis God, who from Nothing brings us into Being, frames us after the Manner that best pleases him, imprints on us what Faculties, inclinations, Desires and Passions he thinks fit" (ibid., 29, 30, 106).

As to why God created all things, Tindal states that it was not because of any lack or need in God, since he is absolutely perfect. Rather God's motive for creating was solely for the good of his creatures (ibid., 30).

God's Relation to the World. According to Tindal, God not only created all things, but he constantly preserves or sustains all things as well. Hence everything is dependent on God for its existence and preservation, whereas God is dependent on nothing for his existence or character. Indeed, God needs nothing from his creatures since he is totally perfect and all-sufficient in himself (ibid., 30, 44–46).

God is also the cosmic Governor of the world. His divine laws are those of nature which govern the activities of his creatures. These natural laws are perfect, immutable, and eternal, for these laws govern God's own actions. Consequently, these laws are the same ones by which God "expects all the rational world should govern" their actions. To insure this, God "continues daily to implant" his law "in the Minds of all Men, Christians as well as Others" (ibid., 59, 114).

God has established the end or goal of all actions—the honor of God and the good of man—but not the means:

> It not only commands that *Evil Doers should be punish'd* , but that Men, according to the different Circumstances they are under, should take the most proper Methods for doing it, and vary as Exigencies require; so it not only requires that Justice should be done Men as to their several Claims, but that the readiest, and most effectual Way of doing it should be taken; and the same may be said of all other Instances of this Nature (ibid., 115).

Natural law reveals *what* people should work toward, but it does not reveal exactly *how* to attain that end (ibid., 70, 107). This is only proper. "If God interposes further, and prescribes a

particular Way of doing these Things, from which Men at no Time, or upon no Account ought to vary; he not only interposes unnecessarily, but to the Prejudice of the End for which he thus interposes" (ibid., 115). Therefore God does not need to intercede in the affairs of his creation, nor should he. The natural laws that he has established are sufficient for the continued governance of the world. Miracles do not occur (*see* MIRACLES, ARGUMENTS AGAINST).

Human Beings. Humans are personal, rational, and free, but it is reason "which makes us the Image of God himself, and is the common Bond which unites Heaven and Earth." By reason we can prove the existence of God, demonstrate God's attributes, and discover and work out the whole of natural religion. Tindal defined *natural religion* as "the Belief of the Existence of a God, and the Sense and Practice of those Duties, which result from the Knowledge, we, by our Reason, have of him, and his Perfections; and of ourselves, and our own Imperfections; and of the Relation we stand in to him, and to our Fellow-Creatures" (ibid., 13).

Every person is capable of arriving at the basic articles of natural religion: (1) belief in God; (2) worship of God, and (3) doing what is for one's personal good or happiness, and promoting the common happiness (ibid., 11–18).

Tindal readily acknowledged that not all people accepted the natural religion revealed in nature. The reason for this, he thought, was because of an "innate weakness" to believe in superstition. From this weakness came most of the problems of humankind (ibid., 165, 169).

Although many people have strayed from natural religion, God has made human nature to act in conformity with the rest of nature. Those who do not act this way are contradicting their own rational nature, thus acting irrationally (ibid., 26).

Origin and Nature of Evil. Tindal believed that evil came about because people succumb to superstition and act against the natural order of things (*see* EVIL, PROBLEM OF). He did believe that some people were in need of a savior for their wicked ways. Jesus Christ came to "teach" these people "to repent of the Breach of known Duties." As Tindal points out, Jesus said, "I am not come to call the righteous, but sinners to repentance" (Matt. 9:13). There are two types of people, Tindal said, the ' "whole or righteous," and the "sick or Sinners." Jesus did business entirely with the latter, for "there is but one universal Remedy for all sick Persons, *Repentance* and *Amendment* ." This has been revealed in nature since creation (ibid., 48, 49). Further, if God, who is no respecter of persons, will judge the world in righteousness and will accept the righteous, the righteous need no physician. They are already living in a way that pleases God. Christ came to reform those who do not have a good enough level of morality (ibid., 49).

Nature of Ethics. "The Principle from which all human Actions flow is the Desire of Happiness," wrote Tindal. This central principle is the "only innate Principle in Mankind" and so it must be implanted by God. Since human beings are rational creatures, their happiness is found when they govern all their "Actions by the Rules of right Reason." These rules of self-discipline are grounded in the moral perfections of God discoverable in nature. When people live "according to the Rules of right Reason, we more and more implant in us the moral Perfections of God, from which his Happiness [and ours] is inseparable" (ibid., 23, 24, 30).

"From these Premises," said Tindal, "we may conclude, that Men, according as they do, or do not partake of the Nature of God, must unavoidably be either happy, or miserable." In the wisdom of God, the consequences of both good and evil actions are found in happiness and unhappiness in this life. Hence, "there's no Virtue, but what has some Good inseparably annex'd to it; and no Vice, but what as necessarily carries with it some Evil" (ibid., 25).

Tindal rejected the idea that any book or books could have been used by God to reveal what is right and wrong . One book could not cover every case. However, the light of nature teaches us our duty in most cases (ibid., 27).

History and Destiny. Tindal had little to say about history. He does think that history shows how people have been duped by greedy, dishonest religious leaders who have taken advantage of man's proneness to believe in superstition (ibid., 169).

He also attempted to discredit the historicity of the Bible (*see* BIBLE CRITICISM). He ridiculed many Bible stories, such as the accounts of the garden of Eden, the Fall of man, Jacob's wrestling with God, and Balaam's talking donkey. He also argued that many of the miracles recorded in the Bible had parallels in pagan mythical stories and thus were mythical as well (ibid., 170, 192, 229, 340, 349).

Tindal did believe in an afterlife. Humanity's rational nature will survive death and pass on to another life where there are no "sensual things to divert his Thoughts." There will also be a "last Day" wherein God will judge every human being, not for what was said or believed, "but what you have done more than others." God's judgment will be impartial and fair since "God, at all Times, has given Mankind sufficient Means of knowing whatever he requires of them; and what those Means are" (ibid., 1, 25, 26, 51).

Evaluation. The antisupernaturalism of deism is critiqued in articles on deism, such deists as Thomas Jefferson and Thomas Paine , and in articles on such particular miracles as the Virgin Birth and Resurrection of Christ. See also MIRACLE and MIRACLES, ARGUMENTS AGAINST . Historically, two of the best critiques of Tindal were by Butler (*Analogy of Religion*) and Jonathan Edwards in various of his critiques on deism, rationalism, and universalism.

Transcendental Argument. *The transcendental argument* is used by some presuppositional apologists (*see* PRESUPPOSITIONAL APOLOGETICS) to demonstrate the truth of Christianity. It is patterned after Immanuel Kant 's reasoning in *Critique of Pure Reason* . A transcendental argument is neither deductive nor inductive. It is more reductive, arguing back to the necessary preconditions of something being the case.

As used by presuppositional apologetics, the transcendental argument affirms that, in order to make sense of the world, it is necessary to postulate the existence of the triune God as revealed in the Bible. This argument is employed by Cornelius Van Til and a modified form is used by Francis Schaeffer .

Van Til's thought is rooted in Herman Dooyeweerd, who got it from Kant. Once Kant's agnosticism is accepted, first principles, such as the principle of causality cannot be applied to the real world. This occasions the necessity of finding some other way to get at reality. The transcendental realist (*see* REALISM) argues that this can be done in the same way that Kant posited the existence of *a priori* forms and categories of sense and the mind. Using this kind of reduction, they seek to find the necessary conditions for something being so. Kant himself concluded that it was necessary to posit God and immortality in order to make sense out of moral obligations (*see* MORAL ARGUMENT).

Some apologists have made a minimal use of the transcendental argument. John Carnell , for example, seemed to use it to defend the principle of causality (*see* CAUSALITY, PRINCIPLE OF). Van Til made maximal use of it, claiming that the whole Christian system is based on it. Others are in-between, asserting that it is necessary to posit the existence of the basic laws of reason (*see* LOGIC ; FIRST PRINCIPLES), a theistic God, and perhaps some other things in order to make sense out of the world.

Transcendental and First Principles. Classical apologetics is based on such first principles, as *noncontradiction* , *causality* , and *analogy* (*see* COSMOLOGICAL ARGUMENT). Presuppositionalists reject traditional proofs for God's existence (*see* GOD, EVIDENCES FOR) in favor of many of the atheistic and agnostic arguments (*see* AGNOSTICISM ; ATHEISM). They seem to replace the traditional first principles of knowing the real world with a new *transcendental principle* . This raises the question of the relationship between the transcendental principle and the traditional first principles.

Similarities and Differences. There are similarities and differences in the use of the transcendental principle and of first principles by evangelical apologists. In general, the following comparison will represent the thinking of representatives of the positions of Thomas Aquinas and Van Til. Other viewpoints differ but generally follow one of these two lines of thinking (*see* APOLOGETICS, TYPES OF).

Similarities. In both systems the principles operate like a first principle. There is nothing more basic than either in terms of which it can be proven to be true. It is interesting that transcen dentalists give a status to their principle that they deny to traditional first principles. This appears to be a valid criticism of transcendental apologetics.

Both believe their respective principle(s) can be used to prove the existence of God.

Both hold that their principle(s) apply to the real world. Unlike Kant, however, they believe one can know reality (*see* REALISM ; AGNOSTICISM) by means of their principle(s).

Both hold that their principle(s) can be understood in a meaningful way, even by finite human beings. They do not have equivocal meaning as understood by God and by us (*see* ANALOGY).

Both believe their arguments are valid, even if rejected by others.

Differences. Transcendentalists have only one principle—the transcendental principle. Traditionalists look to many first principles, including noncontradiction, causality, and analogy.

Transcendentalists presuppose their first principle with no attempt to demonstrate it. Traditionalists offer proof of the first principles by showing that they are self-evident or reducible to the self-evident. This can be seen in the article on First Principles.

While both imply a causal connection between the world and God, transcendentalists deny the ontological validity of the principle of causality. The transcendentalists insist that it is transcendentally necessary to posit a First Cause (i.e., God) of the finite world in order for it to make sense. But how does this differ from saying that every finite, contingent existence needs a First Cause, which is precisely what the first principle of causality demands?

The transcendental principle formally speaks of the necessary condition, but not the sufficient condition, of something. The principle of causality gives both. Thus, the transcendental principle does give only a necessary condition, not an actual cause, of the finite world. For a necessary condition (e.g., dry leaves) only explains how a fire is possible. It still takes ignition (a sufficient condition) to explain how it is actual.

Conclusion. The transcendental principle is neither self-evident, nor can it, by definition, be justified in terms of something more basic than itself. As such, it is without foundation. However, first principles, such as noncontradiction and causality, are self-evident or reducible to the self-evident. Hence, they serve better as a basis for apologetics.

Trinity. *Trinity* simply means "triunity." God is not a simple unity; there is plurality in his unity. The Trinity is one of the great mysteries (*see* MYSTERY) of the Christian Faith. Unlike an antinomy (see Kant) or paradox, which is a logical contradiction (*see* LOGIC), the Trinity goes beyond reason but not against reason. It is known only by divine revelation, so the Trinity is not the subject of natural theology but of revelation (*see* REVELATION, SPECIAL).

The Basis for the Trinity. While the word *Trinity* does not occur there, the concept is clearly taught in the Bible. The logic of the doctrine of the Trinity is simple. Two biblical truths are evident in Scripture, the logical conclusion of which is the Trinity:

1. There is one God.

2. There are three distinct persons who are God: Father, Son, and Holy Spirit.

One God. The central teaching of Judaism called the *Shema* proclaims: "Hear, O Israel: The LORD our God, the LORD is one" (Deut. 6:4). When Jesus was asked the question, "What is the greatest commandment?" he prefaced the answer by quoting the *Shema* (Mark 12:29). In spite of his strong teaching on the deity of Christ (cf. Col. 2:9), the apostle Paul said emphatically, "there is but one God, the Father, from whom all things came and for whom we live" (1 Cor. 8:6a). From beginning to end, the Scriptures speak of one God and label all other gods as false (Exod. 20:3 ; 1 Cor. 8:5–6).

The Bible also recognizes a plurality of persons in God. Although the doctrine of the Trinity is not as explicit in the Old Testament as the New Testament, nonetheless, there are passages where members of the Godhead are distinguished. At times they even speak to one another (see Ps. 110:1).

The Father Is God. Throughout Scripture God is said to be a Father. Jesus taught his disciples to pray, "Our Father in heaven" (Matt. 6:9). God is not only "our heavenly Father" (Matt. 6:32) but the "Father of our spirits" (Heb. 12:9). As God, he is the object of worship. Jesus told the woman of Samaria, "Yet a time is coming and has now come when the true worshippers will worship the Father in spirit and truth, for they are the kind of worshippers the Father seeks" (John 4:23). God is not only called "our Father" (Rom. 1:7) many times but also "the Father" (John 5:45 ; 6:27). He is also called "God and Father" (2 Cor. 1:3). Paul proclaimed that "there is but one God, the Father" (1 Cor. 8:6). Additionally, God is referred to as the "Father of our Lord Jesus Christ" (Rom. 15:6). Indeed, the Father and the Son are often related by these very names in the same verse (Matt. 11:27 ; 1 John 2:22).

The Son Is God . The deity of Christ is treated below in the section on attacks on the Trinity and most extensively in the article Christ, Deity of. As a broad overview it should be noted that:

Jesus claimed to be *Yahweh* God. *YHWH* ; translated in some versions *Jehovah* , was the special name of God revealed to Moses in Exodus 3:14 , when God said, "I AM WHO I AM ." In John 8:58 , Jesus declares: "Before Abraham was, I am." This statement claims not only existence before Abraham, but equality with the "I AM " of Exodus 3:14 . The Jews around him

clearly understood his meaning and picked up stones to kill him for blaspheming (see Mark 14:62 ; John 8:58 ; 10:31–33 ; 18:5–6). Jesus also said, "I am the first and the last (Rev. 2:8).

Jesus took the glory of God. Isaiah wrote, "I am the LORD [*Yahweh*], that is my name; I will not give to another, or my praise to idols" (42:8) and, "This is what the LORD [*Yahweh*] says . . . I am the first, and I am the last; apart from me there is no God" (44:6). Likewise, Jesus prayed, "Father, glorify me in your presence with the glory I had with you before the world began" (John 17:5). But *Yahweh* had said he would not give his glory to another.

While the Old Testament forbids giving worship to anyone other than God (Exod. 20:1–4 ; Deut. 5:6–9), Jesus accepted worship (Matt. 8:2 ; 14:33 ; 15:25 ; 20:20 ; 28:17 ; Mark 5:6). The disciples attributed to him titles the Old Testament reserved for God, such as, "the first and the last" (Rev. 1:17 ; 2:8 ; 22:13), "the true light" (John 1:9), the "rock" or "stone" (1 Cor. 10:4 ; 1 Peter 2:6–8 ; cf. Ps. 18:2 ; 95:1), the "bridegroom" (Eph. 5:28–33 ; Rev. 21:2), "the chief Shepherd" (1 Peter 5:40), and "the great shepherd" (Heb. 13:20). They attributed to Jesus the divine activities of creating (John 1:3 ; Col. 1:15–16), redeeming (Hosea 13:14 ; Ps. 130:7), forgiving (Acts 5:31 ; Col. 3:13 ; cf. Ps. 130:4 ; Jer. 31:34), and judging (John 5:26). They used titles of deity for Jesus. Thomas declared: "My Lord and my God!" (John 20:28). Paul calls Jesus, "the one in whom the fullness of deity dwells bodily" (Col. 2:9). In Titus, Jesus is called, "our great God and savior" (2:13), and the writer to the Hebrews says of him, "Thy throne, O God, is forever" (Heb. 1:8). Paul says that, before Christ existed as a human being, he existed as God" (Phil. 2:5–8). Hebrews 1:5 says that Christ reflects God's glory of God, bears the stamp of his nature, and upholds the universe. The prologue to John's Gospel also minces no words, stating, "In the beginning was the Word, and the Word was with God, and the Word [Jesus] was God' (John 1:1).

Jesus claimed equality with God in other ways. He claimed the prerogatives of God. He claimed to be Judge of all (Matt. 25:31–46 ; John 5:27–30), but Joel quotes *Yahweh* as saying, "for there I will sit to judge all the nations on every side" (Joel 3:12). He said to a paralytic, "Son, your sins are forgiven" (Mark 2:5b). The scribes correctly responded, "Who can forgive sins but God alone?" (vs. 7b). Jesus claimed the power to raise and judge the dead, a power which only God possesses (John 5:21 , 29). But the Old Testament clearly taught that only God was the giver of life (Deut. 32:39 ; 1 Sam. 2:6) and the one to raise the dead (Ps. 2:7).

Jesus claimed the honor due God, saying, "He who does not honor the Son does not honor the father, who sent him" (John 5:23b). The Jews listening knew that no one should claim to be equal with God in this way and again they reached for stones (John 5:18). When asked at his Jewish trial, "Are you the Christ (Messiah), the Son of the Blessed One?" Jesus responded, "I am, and you will see the Son of Man sitting at the right hand of the Mighty One and coming on the clouds of heaven" (Mark 14:61b–62).

The Holy Spirit Is God. The same revelation from God that declares Christ to be the Son of God also mentions another member of the triunity of God called the Spirit of God, or Holy Spirit. He too is equally God with the Father and the Son, and he too is a distinct person.

The Holy Spirit is called “God” (Acts 5:3–4). He possesses the attributes of deity, such as omnipresence (cf. Ps. 139:7–12) and omniscience (1 Cor. 2:10 , 11). He is associated with God the Father in creation (Gen. 1:2). He is involved with other members of the Godhead in the work of redemption (John 3:5–6 ; Rom. 8:9–17 , 27–27 ; Titus 3:5–7). He is associated with other members of the Trinity under the “name” of God (Matt. 28:18–20). Finally, the Holy Spirit appears, along with the Father and Son, in New Testament benedictions (for example, 2 Cor. 13:14).

Not only does the Holy Spirit possess deity but he also has a differentiated personality. That he is a distinct person is clear in that Scripture refers to “him” with personal pronouns (John 14:26 ; 16:13). Second, he does things only persons can do, such as teach (John 14:26 ; 1 John 2:27), convict of sin (John 16:7–7), and be grieved by sin (Eph. 4:30). Finally, the Holy Spirit has intellect (1 Cor. 2:10 , 11), will (1 Cor. 12:11), and feeling (Eph. 4:30).

That the three members of the Trinity are distinct persons is clear in that each is mentioned in distinction form the others. The Son prayed to the Father (cf. John 17). The Father spoke from heaven about the Son at his baptism (Matt. 3:15–17). Indeed, the Holy Spirit was present at the same time, revealing that they coexist. Further, the fact that they have separate titles (Father, Son, and Spirit) indicate they are not one person. Also, each member of the Trinity has special functions that help us to identify them. For example, the Father planned salvation (John 3:16 ; Eph. 1:4); the Son accomplished it on the cross (John 17:4 ; 19:30 ; Heb. 1:1–2) and at the resurrection (Rom. 4:25 ; 1 Cor. 15:1–6), and the Holy Spirit applies it to the lives of the believers (John 3:5 ; Eph. 4:30 ; Titus 3:5–7). The Son sub mits to the Father (1 Cor. 11:3 ; 15:28), and the Holy Spirit glorifies the Son (John 16:14).

A Philosophical Defense of the Trinity. The doctrine of the Trinity cannot be proven by human reason; it is only known because it is revealed by special revelation (in the Bible). However, just because it is beyond reason does not mean that it goes against reason (*see* MYSTERY). It is not irrational or contradictory, as many critics believe.

The Logic of the Trinity. The philosophical law of non-contradiction informs us that something cannot be both true and false at the same time and in the same sense. This is the fundamental law of all rational thought. And the doctrine of the Trinity does not violate it. This can be shown by stating first of all what the Trinity is not. The Trinity is not the belief that God is three persons and only one person at the same time and in the same sense. That would be a contradiction. Rather, it is the belief that there are three persons in one *nature* . This may be a mystery, but it is not a contradiction. That is, it may go beyond reason’s ability to comprehend completely, but it does not go against reason’s ability to apprehend consistently.

Further, the Trinity is not the belief that there are three natures in one nature or three essences in one essence. That would be a contradiction. Rather, Christians affirm that there are three *persons* in one essence. This is not contradictory because it makes a distinction between person and essence. Or, to put it in terms of the law of non-contradiction, while God is one and many at the same time, he is not one and many in the *same sense* . He is one in the sense of his essence but many in the sense of his persons. So there is no violation of the law of non-contradiction in the doctrine of the Trinity.

A Model of the Trinity. By saying God has one essence and three persons it is meant that he has one "What" and three "Whos." The three Whos (persons) each share the same What (essence). So God is a unity of essence with a plurality of persons. Each person is different, yet they share a common nature.

God is one in his substance. The unity is in his essence (what God is), and the plurality is in God's persons (how he relates within himself). This plurality of relationships is both internal and external. Within the Trinity each member relates to the others in certain ways. These are somewhat analogous to human relationships. The Bible's descriptions of *Yahweh* as Father and Jesus as Son says something of how the Son relates to the Father. Also, the Father sends the Spirit as a Messenger, and the Spirit is a Witness of the Son (John 14:26). These descriptions help us understand the functions within the unity of the Godhead. Each is fully God, and each has his own work and interrelational theme with the other two. But it is vital to remember that the three share the same essence, so that they unify as one Being..

Some Illustrations of the Trinity. No analogy of the Trinity is perfect, but some are better than others. First, some bad illustrations should be repudiated. The Trinity is *not* like a chain with three links. For these are three separate and separable parts. But God is neither separated nor separable. Neither is God like the same actor playing three different parts in a play. For God is simultaneously three persons, not one person playing three successive roles. Nor is God like the three states of water: solid, liquid, and gaseous. For normally water is not in all three of these states at the same time, but God is always three persons at the same time. Unlike other bad analogies, this one does not imply tritheism. However, it does reflect another heresy known as modalism.

Most erroneous illustration of the Trinity tend to support the charge that trinitarianism is really tritheism, since they contain separable parts. The more helpful analogies retain the unity of God while they show a simultaneous plurality. There are several that fit this description.

A Mathematical Illustration. One aspect of the problem can be expressed in mathematical terms. Critics make a point of computing the mathematical impossibility of believing there is a Father, Son and Holy Spirit in the Godhead, without holding that there are three gods. Does not $1 + 1 + 1 = 3$? It certainly does if you *add* them, but Christians insist that the triunity of God is more like $1 \times 1 \times 1 = 1$. God is triune, not triplex. His one essence has multiple centers of personhood. Thus, there is no more mathematical problem in conceiving the Trinity than there is in understanding 1 cubed (1^3).

A Geometric Illustration. Perhaps the most widely used illustration of the Trinity is the triangle. One triangle has three corners, which are inseparable from, and simultaneous to, one another. In this sense it is a good illustration of the Trinity. Of course, the triangle is finite and God is infinite, so it is not an imperfect illustration.

Another aspect of the Godhead is that Christ is one person (shown as one corner of the triangle), yet he has two natures, a divine nature and a human nature. Some show this aspect graphically by symbolizing Christ's divinity by the corner of the triangle and using another geometric figure, a circle for instance, to illustrate the human nature. At the point of the person

of Jesus Christ, the circle is welded onto the triangle, human nature touching, but not mixed with, divine. Human and divine natures exist side-by-side without confusion in the Son. His two natures are conjoined in one person. Or, in Christ there are two *Whats* and one *Who* , whereas, in God there are three *Whos* and one *What* .

A Moral Illustration. Augustine suggested an illustration of how God is both three and one at the same time. The Bible informs us that "God is love" (1 John 4:16). Love involves a lover, a beloved, and a spirit of love between lover and loved. The Father might be likened to the Lover; the Son to the One loved, and the Holy Spirit is the Spirit of love. Yet love does not exist unless these three are united as one. This illustration has the advantage of being personal, since it involves love, a characteristic that flows only from persons.

An Anthropological Illustration. Since humankind is made in the image of God (Gen. 1:27), it would seem reasonable that men and women bear some snapshot of the Trinity within their being. One that causes more problems than it solves is to visualize the human being as a "trichotomy" of body, soul, and spirit. Whether the trichotomist position is accurate, this is not a helpful illustration. Body and soul are not an indivisible unity. They can be (and are) separated at death (cf. 2 Cor. 5:8 ; Phil 1:23 ; Rev. 6:9). The nature and persons of the Trinity cannot be separated.

A better illustration based in human nature is the relation between the human *mind,* to its *ideas,* and the expression of these ideas in *words.* There is obviously a unity among all three of these without there being an identity. In this sense, they illustrate the Trinity.

An Islamic Illustration of Plurality in God. When talking with Muslims, the best illustration of a plurality is the relation between the Islamic conception of the Qur'an and God. Yusuf K. Ibish in an article entitled, "The Muslim Lives by the Qur'an," cited by Charis Waddy, *The Muslim Mind* , described it this way: The Qur'an "is an expression of Divine Will. If you want to compare it with anything in Christianity, you must compare it with Christ himself. Christ was the expression of the Divine among men, the revelation of the Divine Will. That is what the Qur'an is."

Orthodox Muslims believe the Qur'an is eternal and uncreated. It is not the same as God but is an expression of God's mind as imperishable as God himself. Surely, there is here a plurality within unity, something that is other than God but is nonetheless one with God in essential characteristics.

Attacks on the Trinity. The Trinity is at the heart of orthodox Christianity. But many critics—Jews and Muslims in particular—contend that it is incoherent and contradictory. Orthodox Christians insist that the teaching that God is one in essence but three in personhood is complex, but not contradictory.

The central issue is the deity of Christ (*see* CHRIST, DEITY OF), a doctrine inseparable from the Trinity. If one accepts the biblical teaching about the deity of Christ, then a plurality in the Godhead has been acknowledged. Conversely, if the doctrine of the Trinity is received, the deity of Christ is part of the package. Of course, strict monotheists (*see* ISLAM), such as Muslims and

Orthodox Jews, reject both the deity of Christ and the Trinity as a denial of the absolute unity of God.

Muslim Misunderstanding. Obstacles in the Muslim mind hinder acceptance of the triunity of God. Some are philosophical; some biblical. Islamic scholars often engage in an arbitrary and selective use of the biblical texts as it suits their purposes (*see* BIBLE, ISLAMIC VIEW OF). However, even the texts they pronounce "authentic" are twisted or misinterpreted to support their teachings (*see* NEW TESTAMENT, HISTORICITY OF).

Christ as "begotten" of God. Perhaps no Christian concept draws so violent a reaction among Muslims than that of Jesus as the "only begotten Son of God." This raises red flags immediately, because Muslims understand the words in a grossly anthropomorphic way. Evangelical Christians likewise would be offended to hear what Muslims think they hear in this term. Clearing away this misunderstanding is necessary.

The King James Version Bible refers to Christ as the "only begotten" Son of God (John 1:18 ; cf. 3:16). However, Muslim scholars often misconstrue this in a fleshly, carnal sense of someone who literally begets children. To "beget" implies the physical act of sexual intercourse. This they believe, and Christians agree, is absurd. God is a Spirit with no body. As the Islamic scholar Anis Shorrosh contents, "He [God] does not beget because begetting is an animal act. It belongs to the lower animal act of sex. We do not attribute such an act to God" (Shorrosh, 254). But only a few cults, notably the Latter-Day Saints (Mormons) have a teaching that approaches this view of "begetting."

Further, to the Islamic mind, *begetting* is "creating." "God cannot create another God. . . . He cannot create another uncreated" (ibid., 259). Once again, Christians would agree fully. The foregoing statements reveal the degree to which the biblical concept of Christ's Sonship is misunderstood by Muslim scholars. For no orthodox Christian equates the King James Version translation of "begat" with "made" or "create." Arianism taught that and was strenuously fought wherever it has appeared in church history. Its primary adherents today belong to another cult, the Jehovah's Witnesses. No wonder 'Abdu 'L-Ahad Dawud concludes that from a "Muslim point of belief the Christian dogma concerning the eternal birth or generation of the Son is blasphemy" (205).

New, more accurate English translations have been more careful to say in English what was originally meant in Greek. *Only begotten* does not refer to any physical generation but to a special relationship between the Son and the Father. It means a unique relationship, or could be translated, as the New International Version, "one and only Son." It does not imply creation by the Father or any other sort of generation. Just as an earthly father and son have a special filial relationship, so the eternal Father and his eternal Son are uniquely and intimately working in concert with one another. It does not refer to physical generation but to an eternal *procession* from the Father. Just as for Muslims the Word of God (Qur'an) is not identical to God but eternally proceeds from him, even so for Christians, Christ, God's "Word" (sura 4:171) eternally proceeds from him (*see* QUR'AN, ALLEGED DIVINE ORIGIN OF). Words like *generation* and *procession* are used of Christ in a filial and relational sense, not in a carnal and physical sense.

Some Muslim scholars confuse Christ's Sonship with his virgin birth . Michael Nazir-Ali noted that "in the Muslim mind the generation of the Son often means his birth of the Virgin Mary" (Nazir-Ali, 29). As Shorrosh notes, many Muslims believe Christians have made Mary a goddess, Jesus her son, and God the Father her husband (114). With such a carnal misrepresentation of a spiritual reality, there is little wonder Muslims reject the Christian concept of eternal Father and Son.

Islamic misunderstanding of the Trinity is encouraged by the misunderstanding of Muhammad, who said, "O Jesus, son of Mary! didst thou say unto mankind: Take me and my mother for two gods beside Allah?" (sura 5:119). Hundreds of years before Muhammad Christians condemned such a gross misunderstanding of the sonship of Christ. The Christian writer Lactantius (240–320), writing in about 306, said, "He who hears the words 'Son of God' spoken must not conceive in his mind such great wickedness as to fancy that God procreated through marriage and union with any female,—a thing which is not done except by an animal possessed of a body and subject to death." Furthermore, "since God is alone, with whom could he unite? or [sic], since He was of such great might as to be able to accomplish whatever He wished, He certainly had no need of the comradeship of another for the purpose of creating" (Pfander, 164).

Distortion of John 1:1 . If rejection of the eternal Sonship of Christ is based on a serious misunderstanding of the Christian concept of Christ as God's Son, another text proclaiming Christ's deity is often distorted: "In the beginning was the Word, and the Word was with God, and the Word was God" (John 1:1). Without textual support from even one of the 5300 plus Greek manuscripts, Muslims render the last phrase, "and the Word was *God's* ." Dawud declares, without any warrant, "the Greek form of the genitive case ' *Theou* ,' i.e., 'God's' was corrupted into ' *Theos* '; that is, 'God,' in the nominative form of the name!" (16–17).

This translation is not only arbitrary, but it is contrary to the rest of the message of John's Gospel where the claims that Christ is God are made multiple times (cf. John 8:59 ; 10:30 ; 12:41 ; John 20:28).

Misconstruing Thomas's confession. When Jesus challenged Thomas to believe after seeing him in his physical resurrection body (*see* RESURRECTION, EVIDENCE FOR), Thomas confessed Jesus' deity, declaring, "My Lord and My God" (John 20:28). Many Muslim writers diminish this proclamation of Christ's deity by reducing it to an ejaculatory exclamation, "My God!" Deedat declares, "What? He was calling Jesus his Lord and his God? No. This is an exclamation people call out. . . . This is a particular expression" (Shorrosh, 278).

Deedat's alternative reading is not viable. First, in an obvious reference to the content of Thomas's confession of Jesus as "my Lord and my God," Jesus blessed him for what he had correctly "seen" and "believed" (John 20:29). Thomas's confession of Christ's deity comes in the context of a miraculous appearance by the risen Christ, not to mention at the climax of the post-resurrection ministry, when Jesus' disciples were gaining increasing belief in Christ, based on his miraculous signs (cf. John 2:11 ; 12:37). Thomas's confession of Christ's deity fits with the stated theme of the Gospel of John "that you may believe that Jesus is the Christ, the Son of God, and that believing you may have life in his Name" (John 20:31). Even putting all this

aside, Thomas was a devout Jew who revered the name of God. He simply would not have used God's name in so profane an ejaculation.

No doubt there was an amazed note in Thomas's voice as he pronounced Christ's deity, but to reduce it to an emotional ejaculation is to claim that Jesus blessed Thomas for breaking the commandment against using God's name in vain.

David's Son and David's Lord. In Matthew 22:43 , citing Psalm 110 , Jesus said, "How is it then that David, speaking by the Spirit, calls him 'Lord' [Messiah]?" According to Dawud, "By his expression that the 'Lord,' or the 'Adon,' could not be a son of David, Jesus excludes himself from that title" (89).

However, a careful look at the context shows that Jesus is saying just the opposite. Jesus stumped his skeptical Jewish questioners by presenting them with a dilemma that blew their own neat calculations about the Messiah out of the sky. How could David call the Messiah "Lord" (as he did in Ps. 110:1), when the Scriptures also say the Messiah would be the "Son of David" (which they do in 2 Sam. 7:12f .)? The only answer is that the Messiah must be both a man (David's son or offspring) *and* God (David's Lord.) Jesus is claim ing to be both God and human. The Islamic mind should have no more difficulty understanding how Jesus can unite in one person both divine and human natures than their own belief that human beings combine both spirit and flesh, the enduring and the transient in one person (sura 89:27–30; cf. 3:185). Even according to Muslim belief, whatever Almighty God, the Creator and Ruler of all things, wills in his infinite wisdom he is also able to accomplish for "He is the irresistible" (sura 6:61).

God only good. Many Islamic scholars claim that Jesus denied being God when he rebuked the rich young ruler, saying, "Why do you call me good? No one is good—except God alone" (Mark 10:18). A careful look at this text in its context reveals that Jesus was not denying his deity. He was rather warning the young man to consider the implications of his careless appellation. Jesus does not say, "I am not God, as you claim" or "I am not good." Indeed, both the Bible and *Qur'an* teach that Jesus is sinless (cf. John 8:46 ; Heb. 4:14). Rather, Jesus challenged him to examine what he was really saying when he called Jesus "Good Master." In essence, Jesus was saying, "Do you realize what you are saying when you call Me 'Good Master'? Only God is good. Are you calling me God?" The fact that the young ruler refused to do what Jesus said, proves that he did not really consider Jesus his Master. But nowhere did Jesus deny that he was either the Master or God of the rich young ruler. Indeed, elsewhere Jesus freely claimed to be both Lord and Master of all (Matt. 7:21–27 ; 28:18 ; John 12:40).

The greater Father. Jesus' assertion that "My Father is greater than I" (John 14:28) is also misunderstood by Muslims. It is taken out of its actual context to mean that the Father is greater in *nature* , but Jesus meant only that the Father is greater in *office* . This is evident from the fact that in this same Gospel (of John) Jesus claimed to be the "I Am" or Yahweh of the Old Testament (Exod. 3:14). He also claimed to be "equal with God" (John 10:30 , 33). In addition, he received worship on numerous occasions (John 9:38 ; cf. Matt. 2:11 ; 8:2 ; 9:18 ; 14:33 ; 15:25 ; 28:9 , 17 ; Luke 24:52). He also said, "He who does not honor the Son does not honor the Father who sent him" (John 5:23).

Further, when Jesus spoke of the Father being "greater" it was in the context of his "going to the Father" (John 14:28). Only a few chapters later Jesus speaks to the Father, saying, "I have completed the work you gave me to do" (John 17:4). But this functional difference of his role as Son in the very next verse reveals that it was not to be used to diminish the fact that Jesus was equal to the Father in nature and glory. For Jesus said, "And now, Father, glorify me in your presence with the glory which I had with you before the world began" (John 17:5).

Misunderstood Philosophical Concepts. Islamic scholars also offer philosophical objections to the doctrine of the Trinity. These too must be cleared away before they will be able to understand the biblical teaching about a plurality of persons within the unity of God.

Emphasis on the Oneness of God is fundamental to Islam. One Muslim scholar said, "In fact, Islam , like other religions before it in their original clarity and purity, is nothing other than the declaration of the Unity of God, and its message is a call to testify to this Unity" (Mahud, 20). Another author adds, "The Unity of Allah is the distinguishing characteristic of Islam. This is the purest form of monotheism, i.e., the worship of Allah Who was neither begotten nor beget nor had any associates with Him in his Godhead. Islam teaches this in the most unequivocal terms" (Ajijola, 55).

Because of this uncompromising emphasis on God's absolute unity, in Islam the greatest of all sins is the sin of *shirk* , or assigning partners to God. The *Qur'an* sternly declares "God forgiveth not (The sin of) joining other gods With Him; but He forgiveth Whom He pleaseth other sins Than this: one who joins Other gods with God, Hath strayed far, far away (From the Right)" (sura 4:116). However, this misunderstands the unity of God.

The Trinity and heresy. There are two primary heresies from which the Trinity is to be distinguished: modalism and tritheism. The heresy of modalism, also called Sabellianism, denies there are three distinct eternal persons in the Godhead. It believes that the so-called "persons"of the Trinity are modes of God substance, not distinct persons. Like water with its three states (liquid, solid, and gaseous), the Trinity is said to be only three different modes of the same essence. Unlike modalists, trinitarians believe there are three distinct persons (not just modes) in the one substance of God.

Both Islam and Christianity proclaim that God is one in essence. What is in dispute is whether there can be any plurality of persons in this unity of nature. The inadequacies in the Muslims' view of God arise in part out of their misunderstanding of Christian monotheism (*see* THEISM). Many Muslims misconstrue the Christian view of God as tritheism rather than as monotheism. The opposite error of tritheism affirms that there are three separate gods. Few, if any, Christian theologians or philosophers have held this view, but it often has been attributed to trinitarians. Unlike tritheists, trinitarians do not affirm a god with three different substances; they confess that God is three distinct persons in one substance.

The Bible declares emphatically: "The LORD our God, the LORD is one" (Deut. 6:4). Both Jesus (Mark 12:29) and the apostles repeat this formula in the New Testament (1 Cor. 8:4 , 6). And early Christian creeds speak of Christ being one in "substance" or "essence" with God. The Athanasian Creed, reads: "We worship one God in Trinity, and Trinity in Unity; Neither

confounding the Persons; nor divining the Substance (Essence).” So Christianity is a form of monotheism, believing in one and only one God.

The Trinity and complexity. Many Muslims complain that the Christian concept of the Trinity is too complex. They forget, however, that truth is not always simple. As C. S. Lewis aptly puts it, “If Christianity was something we were making up, of course we could make it easier. But it is not. We cannot compete, in simplicity, with people who are inventing religions. How could we? We are dealing with fact. Of course anyone can be simple if he has no facts to bother about” (Lewis, 145).

The fact confronting Christians which led to their formulating this complex truth was, of course, the claims and credentials of Jesus of Nazareth to be God (*see* CHRIST, DEITY OF). This led them of necessity to posit a plurality within deity and thus the doctrine of the Trinity, since this Jesus was not the same as the one whom he addressed as Father. So Christians believe and Muslims deny that there are three persons in this one God. At this point the problem gets philosophical.

The Neoplatonic concept of unity. At the heart of the Muslim inability to understand the Trinity is the neoplatonic concept of oneness. The second-century A.D . philosopher Plotinus , who heavily influenced the thinking of the middle ages, viewed God (the Ultimate) as the One, an absolute unity in which is no multiplicity at all. This One was so absolutely simple that it could not even know itself, since self-knowledge implies a distinction between knower and known. It was not until it emanated one level down, in the *Nous* or Mind, that it could reflect back on itself and therefore know itself. For Plotinus, the One itself was beyond knowing, beyond consciousness, and even beyond being. It was so undividedly simple that in itself it had no mind, thoughts, personality, or consciousness. It was void of everything, even being. Thus, it could not be known, except by its effects which, however, did not resemble itself (Plotinus, 1.6; 3.8–9; 5.1, 8; 6.8, 18).

It is not difficult to see strong similarities between the Plotinian and Muslim views of God. Nor is it hard to see the difficulty with this view. It preserves a rigid unity in God at the expense of real personality. It clings to a rigid simplicity by sacrificing relationship. It leaves us with an empty and barren concept of deity. By reducing God to a bare unity, they are left with a barren unity. As Joseph Ratsinger insightfully noted,

> The unrelated, unrelatable, absolutely one could not be a person. There is no such thing as a person in the categorical singular. This is already apparent in the words in which the concept of person grew up; the Greek word *“prosopon* ” means literally “(a) look towards”; with the prefix *‘pros’* (toward). It includes the notion of relatedness as an integral part of itself. . . . To this extent the overstepping of the singular is implicit in the concept of person. [Ratsinger, 128–29]

Confusion Regarding the Trinity. Confusing unity with singularity. The Muslim God has unity and singularity. But these are not the same. It is possible to have unity without singularity. For there could be plurality within the unity. Indeed, the Trinity is precisely a plurality of persons within the unity of one essence. Human analogies help to illustrate the point in a superficial way.

My mind, my thoughts, and my words have a unity, but they are not a singularity, since they are all different. Likewise, Christ can express the same nature as God without being the same person as the Father.

In this connection, Muslim monotheism sacrifices plurality in an attempt to avoid duality. In avoiding the extreme of admitting any partners to God, Islam goes to the other extreme and denies any personal plurality in God. But, as Joseph Ratsinger observed, "belief in the Trinity, which recognizes the plurality in the unity of God, is the only way to the final elimination of dualism as a means of expanding plurality alongside unity; only through this belief is the positive validation of plurality given a definite base. God stands above singular and plural. He bursts both categories" (Ratsinger, 128).

Confusing person (who) and nature (what). That Christ "bursts the categories" explains why Christian and non-Christian alike, have struggled to understand the two natures of Christ. One of the better explanations of what Christians believe, though it doesn't go far toward explaining it, is found in one of the sixteenth-century Reformation statements of faith, the Belgic Confession, chapter 19:

> We believe that by this conception [of two natures], the person of the Son is inseparably united and connected with the human nature; so that there are not two Sons of God, nor two persons, but two natures united in one single person; yet each nature retains its own distinct properties. As, then, the divine nature has always remained uncreated, without beginning of days or end of life, filling heaven and earth, so also has the human nature not lost its properties but remained a creature, having beginning of days, being a finite nature, and retaining all the properties of a real body . . . . But these two natures are so closely united in one person that they were not separated even by his death. . . . Wherefore we confess that he is *very God* and *very man* : very God by His power to conquer death; and very man that He might die for us according to the infirmity of His flesh.

Orthodox Christianity does not believe Jesus Christ was like a milkshake, the two natures blended together in an indistinguishable mass. Neither do Christians believe Jesus had a schizophrenically split identity in which divine and human natures were so distinct they would have had to call one another long-distance. These views and other equally wrong ideas have muddied Christian theology throughout its history. A popular modern theory, which misses the whole point of Philippians 2 and the reason God had to take on a human nature states that Jesus emptied himself of all his divine attributes of power and authority and kept only his moral perfection.

So how is it conceivable? The orthodox view is that God the Son took off nothing of his godhood, but rather added to it the human nature. He accepted limitations. As a human being, Jesus had to grow up and learn. He felt want and sorrow and there were things the human nature of Jesus did not know, such as the date of his return (Matt. 24:36).

One theologian, Charles *Hodge, wondered if God did not draw the clearest analogy of the two natures in the design of Israel's temple at Jerusalem. The inner court where the daily work of

worship and the sacrifice happened was the court of Israel or the holy place. But within this space was another room that represented the presence of God in the midst of his people. This central room, the “holy of holies” was only entered by the high priest once a year. A curtain separated the two sections of the sanctuary so that the room was hidden. But symbolically it empowered the priests in their daily life in temple worship. The two were unmixed but united and inseparable.

The orthodox view of the two natures of Christ is that one person is both God and human. The two natures commune intimately but do not overlap. Christ possesses two natures united. Hence, when Jesus died on the cross for our sin he died as the God-man. It is not going too far, said John Calvin , to say that at the moment Jesus was hanging on the cross his power as Creator God was holding together the hill on which the cross stood. Unless Jesus is God and human he cannot reconcile God and humanity. But the Bible says clearly, “there is one God and one mediator between God and men, the man Christ Jesus” (1 Tim. 2:5).

Since Christ is one *Who* (person) with two *Whats* (natures), whenever one question is asked about him it must be separated into two questions, one applying to each nature. For example, did he get tired? As God, no; as human, yes. Did Christ get hungry? In his divine nature, no; in his human nature, yes. Did Christ die? In his human nature, he did die. His divine nature is eternally alive. He died as the God-man, but his Godness did not die.

When this same logic is applied to other theological questions raised by Muslims it yields the same kind of answer. Did Jesus know everything? As God he did, since God is omniscient. But as man Jesus did not know the time of his second coming (Matt. 24:36), and as a child he “increased in wisdom” (Luke 2:52).

Could Jesus sin? The answer is the same: as God, no; as man yes (but he didn’t). God cannot sin. For example, the Bible says “it is impossible for God to lie” (Heb. 6:18 ; cf. Titus 1:2). Yet Jesus was “in all points tempted as we are, yet without sin” (Heb. 4:15). While he never sinned (cf. 2 Cor. 5:21 ; 1 Peter 1:19 ; 1 John 3:3), he was really tempted and it was possible for him to sin. Otherwise, his temptation would have been a charade. Jesus possessed the power of free choice which means that when he chose not to sin it was a meaningful choice. He could have done otherwise.

Dividing every question of Christ into two and referring them to each nature unlocks a lot of theological puzzles that otherwise remain shrouded in ambiguity. And it makes it possible to avoid logical contradictions which are urged upon Christians by Muslims and by other nonbelievers.

Conclusion. The doctrine of the Trinity is one of the great mysteries of the Christian Faith. That is, it transcends reason without being contrary to reason (*see* FAITH AND REASON). It is not known by reason (*see* REVELATION, GENERAL) but only by special revelation (*see* REVELATION, SPECIAL). God is one in essence but three in persons. He is a plurality within unity. God is a triunity, not a rigid singularity.

Once those conceptions are understood, many of the barriers that separate even such radical monotheists as Orthodox Jews and Muslims fall.

Troeltsch, Ernst. Ernst Peter Wilhelm Troeltsch (1865–1923) was born in Haunstetten and educated at Gottingen, Berlin, and Erlangen. Troeltsch was minister of education for Germany before World War I and taught, primarily at Berlin and Heidelberg, from 1894 until his death. He was a liberal theologian who was intensely involved in social and political issues, as well as a historian and philosopher. His work dismissed the Bible and regarded all religion as culturally conditioned, yet he detested the relativism his ideas promoted. Troeltsch believed Christianity to be the religion best suited for the Western world, and he sought to legitimize it through social action in modern history rather than supernatural action in the ancient world. Among his works were *Christian Thought in History and Application* (1924/trans. 1923), and *The Social Teaching of the Christian Church* (1912/1931).

Troeltsch laid down the rule of analogy: The only way one can know the past is by analogies in the present. The unknown of the past is arrived at only through what is known. On this principle, some argue that the miracles of the Bible should not be believed, since they do not relate to anything happening now (*see* MIRACLES, ARGUMENTS AGAINST). A proper historical method, thus, eliminates the miraculous. Antony Flew added his own twist to the "critical historical argument."

Troeltsch used the *principle of analogy* and Flew the *principle of critical history* against miracles. Both have the same naturalistic basis (*see* NATURALISM).

It should be noted that the term *principle of analogy* is used in two entirely differing senses. For a discussion on the principle of analogy related to reason and knowledge of God, see the article ANALOGY, PRINCIPLE OF .

The Principle of Analogy. This principle of analogy, according to Troeltsch, asserts that "on the analogy of the events known to us we seek by conjecture and sympathetic understanding to explain and reconstruct the past." Without uniformity of the past and present, we could not know anything from the past. For without analogies from the present we cannot understand the past (Troeltsch, *Historicism and Its Problems*).

On the basis of this principle, some have insisted that "no amount of testimony is ever permitted to establish as past reality a thing that cannot be found in present reality." Even if the witness has a perfect character, the testimony has no power as proof (Becker, "Detachment and the Writing of History," 12–13). This means that, unless one can identify in today's world such miracles as are found in the New Testament, we have no reason to believe they occurred in the past either. The philosopher F. H. Bradley (1846–1924) stated the problem this way:

> We have seen that history rests in the last resort upon an inference from our experience, a judgment based upon our own present state of things; . . . when we are asked to affirm the existence in past time of events, the effects of causes which confessedly are without analogy in the world in which we live, and which we know—we are at a loss for any answer but this, that . . . we are asked to build a house without a foundation. . . . And how can we attempt this without contradicting ourselves? [Bradley, 100]

It is widely admitted on all sides of the issue that no virgin births , no raising the dead and no walking on water are occurring today, then it follows by the principle of analogy that such events cannot be known to have happened in history. So biblical miracles are historically unknowable.

Similar to Troeltsch's "Principle of Analogy" is Flew's "critical history." Critical history owes its existence partly to two principles stated by David Hume, which attempt to undermine the credibility of miracles (Hume, *Treaties on Human Nature* , 2.3.1; *Inquiry Concerning Human Understanding* , 8; *see* MIRACLES, ARGUMENTS AGAINST). Flew comments:

1. "The present detritus [remains] of the past cannot be interpreted as historical evidence at all, unless we presume that the same basic regularities obtained then as today."

2. “The historian must employ as criteria all his present knowledge, or presumed knowledge, of what is probable or improbable, possible or impossible” (Flew, 350).

Only by presuming that the laws of today also governed reality in the past can the historian rationally interpret evidence and construct an account of what actually happened (ibid., 351).

Flew concludes that the critical historian dismisses a story of a miracle. With Hume, he argues that reasonable people regard the “absolute impossibility or a miraculous nature” as sufficient to refute reported occurrences (ibid., 352). Miracles are possible in principle, but in practice the historian must always reject them. The very nature of the historical method demands that the past be interpreted in accordance with the (naturalistic) regularities of the present. In logical structure, this argument against miracles can be summarized:

1. All critical history depends on the validity of two principles: (a) The remains of the past can be used as evidence for reconstructing history only if we presume the same basic regularities of nature held then as now. (b) The critical historian must use today’s knowledge of the possible and probable as criteria for knowing the past.

2. Belief in miracles is contrary to both these principles.

3. Therefore, belief in miracles is contrary to critical history.

Conversely, only the naive and uncritical can believe in miracles. The past can be known only in terms of the regular patterns of the present. And these patterns of nature in the present rule out any knowledge of miracles in the past.

Evaluation. It should be noted first that this argument does not claim to eliminate the possibility of miracles (*see* SPINOZA, BENEDICT). It simply attempts to rule out their *knowability* by what Flew calls “critical history.” Further, the argument (as Flew admits) follows the basic form of Hume’s antisupernaturalism, which has been critiqued in the article MIRACLES, ARGUMENTS AGAINST . That is to say, it assumes that to be truly critical and historical, one must be antisupernatural. Anyone who allows for the supernatural is automatically naive (incidentally, an *ad hominem* attack). However, one would think that closed-mindedness would not be lauded as a prerequisite for evaluating evidence and compiling history.

It is a valid principle that “the present is the key to the past,” or that “the past is known by analogy with the present.” This is so since those living in the present have no direct access to the past. We were not there and cannot go back. We must depend, therefore, on comparing remains of the past with events in the present. This is precisely how origin science works (*see* ORIGINS, SCIENCE OF), whether applied to archaeology, biology, or geology. In geology the principle of analogy is known as the principle of uniformity or uniformitarianism. However, the two should be distinguished. For uniformitarianism is loaded with an extraneous antisupernatural bias. Whereas, in sciences about the past, the principle of uniformity (analogy) is legitimate. When an archaeologist finds a piece of pottery, it helps to know what pottery is used for in the present, how different materials, forms, and glazes apply to different functions, and how the potter

performs the craft. The archaeologist postulates from that what the origin of this potsherd might have been.

A valid application of the principle that "the present is the key to the past" is that "the kinds of causes known to produce certain kinds of effects in the present can be assumed to produce similar kinds of effects in the past." But, contrary to Troeltsch and Flew, this principle does not rule out a credible belief in past miracles, even if no such miracles exist in the present. This use misapplies the principle.

Problems with the Arguments. Several difficulties involved in the arguments against miracles are discussed in the section on arguments against miracles from analogy in the article MIRACLES, ARGUMENTS AGAINST . In abbreviated form those arguments are:

Both Troeltsch and Flew adopt historical uniformitarianism. They assume all past events are uniformly the same as all present ones. By uniformitarian logic, geology long overlooked the fact that many past processes were catastrophic and caused change faster than what can be observed. By the uniformitarian argument, scientists should not study the singular, unrepeatable events surrounding the origins of the universe and life on earth.

The historical argument confuses uniformity with uniformitarianism. It does not follow that the object in the past cannot be a singularity. Unique finds by archaeologists can be studied by analogy to other finds. They may not be uniformly the same, perhaps nothing like, but that does not disqualify their study. The SETI (Search for Extra-Terrestrial Intelligence) program is not unscientific in believing that receipt of a unique message from space will reveal the existence of intelligent life (*see* SAGAN, CARL). The *basis* for knowing that a singular group of radio waves is produced by intelligence is their organized complexity, not receipt of more messages. Historical evidence provides ample grounds for affirming that the miracles of Christ occurred, even if none occur today.

It is special pleading to assume that no miracles are occurring. God may or may not still work in this way. Troeltsch and Flew do not demonstrate that miracles never happen today. If there are miracles, an analogy for knowing the past does exist.

In practice, Flew says that miracles are "absolutely impossible" and must be dismissed out of hand. This is the fallacy of *petitio principii* or question begging. Why should a critical thinker be so biased against the historical actuality of a miracle as to begin with a mind closed to all other evidence?

By closing off discussion and mocking those who disagree with their assumptions, uniformitarians are actually betraying the foundations of science. A recent example is the time and energy wasted in avoiding the evidence that the universe had a beginning, though the explosive eruption of mass in the big bang is readily accepted today.

Why should exceptional events of the past be judged against normal events of today's world? The healing of a man born blind seemed as incredible in Jesus' day as it would if it happened now (see Matthew 9). The only legitimate comparison of a past anomaly is comparison with today's anomalous happenings, rather than the general run of life.

The uniformitarian argument proves that much of what uniformitarians believe about the past cannot be true. Many historical events they do accept were exceptional or unique.

“Critical history” does not criticize the uncritical, unreasonable acceptance of presuppositions that eliminate valid historical knowledge. It legislates, rather than seeks, truth.

Conclusion. Troeltsch sought to synthesize religion and social culture, but he seldom could come to a final conclusion about where the synthesis was headed, so he made a sometimes helpful but incomplete theology of Christian action in the world. Part of the problem was his theological liberal skepticism, which left unanswered the question of the foundations of Christianity and where this religion itself fit in the world of reality. Much of the problem with his historical philosophy related to his “Principle of Analogy,” a uniformitarian dogma that dismissed the uniqueness of Christ’s life and miracles. Who Christ was and what he did could not even be considered without similar occurrences repeating now. This historical naturalism assumes that all events can be naturally explained. This, however, is contrary to rational thought in general and scientific thought in particular (*see* ORIGINS, SCIENCE OF).

Trueblood, Elton. Elton Trueblood (1900–1994) was an American Quaker theologian and philosopher. After serving as Stanford University chaplain, he became a philosophy professor at Earlham College. He retired from Earlham in 1966 to become professor at large.

Trueblood published thirty-seven books, including *The Essence of Spiritual Religion* (1937), *The Predicament of Modern Man* (1944), *The Company of the Committed* (1961), *The Incendiary Fellowship* (1967), and *While It Is Day: An Autobiography* (1974). Of special interest to apologists is his *Philosophy of Religion* (1957).

While remaining true to his Quaker beliefs in the “inner light,” pacifism, and civil rights, Trueblood moved into the mainstream of evangelicalism. His work on the *Philosophy of Religion* went beyond traditional Quaker mysticism .

Trueblood argued that “revelation must be tested by reason for the simple reason that there are false claims to revelation (*Philosophy of Religion* , 32). While he acknowledged the need for authority, he insisted that it should be a reasonable authority, one that can be trusted (ibid., 67). He believed there is ample evidence to support the truth of Christianity as such an authority. With Joseph Butler , he believed that “probable proofs, by being added, not only *increase* the evidence but *multiply* it” (ibid., 74).

Evidence for God. Trueblood drew his defense for God from the classical sources of evidence:

Cosmological Argument. Speaking of the Second Law of Thermodynamics (*see* THERMODYNAMICS, LAWS OF), Trueblood said, “If the universe is running down like a clock, . . . the clock must have been wound up. . . . The world, if it is to have an end of time, must have had a beginning of time.” He summarized that the evidence suggests that “the world is not self-explanatory. . . . Nature points beyond nature for an explanation of nature” (ibid., 104). See article on BIG BANG THEORY .

Moral Argument. One of the best statements of the moral argument for God’s existence is found in Trueblood. He reasoned that there must be an objective moral law (*see* MORALITY, ABSOLUTE NATURE OF). Otherwise, there would be no such agreement on morality. Without a moral law, every person would be right, whatever he or she did, nor could there be any disagreements over ethical standards. No ethical question could even be discussed, for the concept of ethics would be meaningless. Contradictory views would both be right, since opposites could be equally correct. The moral law that does exist must be beyond individual persons and beyond humanity as a whole, for each person and the whole race are measured for moral progress.

This moral law must come from a moral Legislator, because a law has no meaning unless it comes from a mind to give it meaning. Disloyalty makes no sense unless loyalty is owed to a person, yet people die in loyalty to what is morally right. Truth is meaningless except in the context of a meeting of mind with mind, yet people die for the truth. Hence, discovery of, and duty to, the moral law makes sense only if there is a Mind or Person behind it.

Therefore, a moral, personal Mind that is outside humanity stands behind this moral law. Otherwise, the universe would be irrational. Unless we assume the universe is irrational, there must be an objective moral law and an objective moral Law Giver.

Religious Argument. Trueblood also presents a good summary of the argument from religious experience (*see* APOLOGETICS, EXPERIENTIAL). He notes that not only have the masses claimed to have experienced God, but if even one person is right about a religious experience, there must be a God. In view of this, there are two alternatives: "Either God is, or all of those who have claimed to know Him have been deluded" (ibid., 146). But since, among those who claim to have experienced God are some of the most brilliant and critical minds in the history of humankind, it seems unlikely that they all are wrong. It is more likely that God exists. Of course, it is always possible that everyone is deluded (*see* FREUD, SIGMUND ; FEUERBACH, LUDWIG), but this is not to say there is good reason for believing they are. In fact, there are good reasons for believing that God exists (*see* GOD, EVIDENCE FOR).

E. Trueblood, *Philosophy of Religion*

Truth, Absolute. ***See*** **TRUTH, NATURE OF**

Truth, Nature of. Pilate asked: What is truth? Philosophers from Socrates to the last century answered: Is it *absolute?* Is it *knowable* (*see* AGNOSTICISM)? And does it correspond to a referent or, in the case of metaphysical truth, does it correspond to reality?

The Importance of the Nature of Truth. The nature of truth is crucial to the Christian faith. Not only does Christianity claim there is absolute truth (truth for everyone, everywhere, at all times), but it insists that truth about the world (reality) is that which corresponds to the way things really are. For example, the statement "God exists" means that there really is a God outside the universe, an extracosmic Being (*see* GOD, EVIDENCE OF). Likewise, the claim that "God raised Christ from the dead" means that the dead corpse of Jesus of Nazareth supernaturally vacated its tomb alive a few days after its burial (*see* RESURRECTION, EVIDENCE OF). Christian truth claims really correspond to the state of affairs about which they claim to inform us.

The Nature of Truth. *What Truth Is Not . . .* Truth can be understood both from what it is and from what it is not. There are many inadequate views of the nature of truth. Most of these result from a confusion between the nature (definition) of truth and a test (defense) of truth, or from not distinguishing the result from the rule.

Truth is not "what works." One popular theory is the pragmatic view of William James and his followers that truth is what works. According to James, "Truth is the expedient in the way of knowing. A statement is known to be true if it brings the right results. It is the expedient as confirmed by future experience." That this is inadequate is evident from its confusion of cause and effect. If something is true it will work, at least in the long run. But simply because something works does not make it true. This is not how truth is understood in court. Judges tend to regard the expedient as perjury. Finally, the results do not settle the truth question. Even when results are in, one can still ask whether the initial statement corresponded to the facts. If it did not, it was not true, regardless of the results.

Truth is not "that which coheres." Some thinkers have suggested that truth is what is internally consistent; it is coherent and self-consistent. But this too is an inadequate definition. Empty statements hang together, even though they are devoid of truth content. "All wives are married women" is internally consistent, but it is empty. It tells us nothing about reality. The statement would be so, even if there were no wives. It really means, " *If* there is a wife, then she must be married." But it does not inform us that there is a wife anywhere in the universe. A set of false statements also can be internally consistent. If several witnesses conspire to misrepresent the facts, their story may cohere better than if they were honestly trying to reconstruct the truth. But it still is a lie. At best, coherence is a negative test of truth. Statements are wrong if they are inconsistent, but not necessarily true if they are.

Truth is not "that which was intended." Some find truth in intentions, rather than affirmations. A statement is true if the author intends it to be true and false if he does not intend it to be true. But many statements agree with the intention of the author, even when the author is mistaken. "Slips of the tongue" occur, communicating a falsehood or misleading idea the communicator did not intend. If something is true because someone intended it to be true, then all sincere statements ever uttered are true—even those that are patently absurd. Sincere people are often sincerely wrong.

Truth is not "what is comprehensive." Another idea is that the view that explains the most data is true. And those that are not as comprehensive are not true—or not *as true* . Comprehensiveness is one test for truth, but not the definition of truth. Certainly a good theory will explain all relevant data. And a true worldview will be comprehensive. However, this is only a negative test of whether it is true. The affirmations of that view must still correspond with the real state of affairs. If a view was true simply because it was more encyclopedic, then a comprehensive statement of error would be true and a digested presentation of truth automatically would be in error. Not all long-winded presentations are true and concise ones are not all false. One can have a comprehensive view of what is false or a superficial or incomplete view of what is true.

Truth is not "what is existentially relevant." Following Soren Kierkegaard and other existential philosophers, some have insisted that truth is what is relevant to our existence or life and false if it is not. Truth is subjectivity, Kierkegaard said; truth is livable. As Martin Buber stated, truth is found in persons, not in propositions.

However, even if truth is existential in some sense, not all truth fits into the existential category. There are many kinds of truth, physical, mathematical, historical, and theoretical. But if truth by its very nature is found only subjectively in existential relevance, then none of these could be true. What is true will be relevant, but not everything relevant is true. A pen is relevant to an atheist writer. And a gun is relevant to a murderer. But this does not make the former true nor the latter good. A truth about life will be relevant to life. But not everything relevant to one's life will be true.

Truth is not "what feels good." The popular subjective view is that truth gives a satisfying feeling, and error feels bad. Truth is found in our subjective feelings. Many mystics (*see* MYSTICISM) and new age enthusiasts hold versions of this faulty view, though it also has a strong influence among some experientially oriented Christian groups.

It is evident that bad news can be true. But if what feels good is always true, then we would not have to believe anything unpleasant. Bad report cards do not make a student feel good, but the student refuses to believe them at his or her academic peril. They are true. Feelings are also relative to individual personalities. What feels good to one may feel bad to another. If so, then truth would be highly relative. But, as will be seen in some detail below, truth cannot be relative.

Even if truth makes us feel good—at least in the long run—this does not mean that what feels good is true. The nature of truth does not depend on the result of truth.

What Truth Is. *Correspondence with Reality.* Now that the inadequate views of the nature of truth have been examined, it remains to state an adequate view. Truth is what corresponds to its referent. Truth about reality is what corresponds to the way things really are. Truth is "telling it like it is." This correspondence applies to abstract realities as well as actual ones. There are mathematical truths. There are also truths about ideas. In each case there is a reality, and truth accurately expresses it.

Falsehood, then, is what does not correspond. It tells it like it is not, misrepresenting the way things are. The intent behind the statement is irrelevant. If it lacks proper correspondence, it is false.

Arguments for Correspondence. All noncorrespondence views of truth imply correspondence, even as they attempt to deny it. The claim: "Truth does not correspond with what is" implies that this view corresponds to reality. Then the noncorrespondence view cannot express itself without using a correspondence frame of reference.

If one's factual statements need not correspond to the facts in order to be true, then any factually incorrect statement is acceptable. It becomes impossible to lie. Any statement is compatible with any given state of affairs.

In order to know something is true or false, there must be a real difference between things and statements about the things. But correspondence is the comparison of words to their referents. Hence, a correspondence view is necessary to make sense of factual statements.

Communication depends on informative statements. But correspondence to facts is what makes statements informative. All communication ultimately depends on something being literally or factually true. We cannot even use a metaphor unless we understand that there is a literal meaning over against which the figurative sense is not literal. So, it would follow that all communication depends in the final analysis on a correspondence to truth.

The intentionalist theory claims that something is true only if what is accomplished corresponds fulfils what is intended by the statement. Without correspondence of intentions and accomplished facts there is no truth.

Objections to Correspondence. Objections to the correspondence view of truth come from Christian and non-Christian sources.

When Jesus said "I am the truth" (John 14:6), it is argued that he demonstrated that truth is personal, not propositional. This falsifies the correspondence view of truth, in which truth is a characteristic of propositions (or expressions) which correspond to its referent. But a person, as well as a proposition, can correspond to reality. As the "exact image" of the invisible God (Heb. 1:3), Jesus perfectly corresponds to the Father (John 1:18). He said to Philip, "when you have seen me, you have seen the Father" (John 14:9). So, a person can correspond to another in his character and actions. In this sense, persons can be said to be true, or express the truth.

God is truth, yet there is nothing outside of himself to which he corresponds. Yet according to the correspondence view, truth is that which correctly represents reality. Since God lacks correspondence, this argument goes, the correspondence theory denies that God is true, as the Bible says he is (Rom. 3:4). However, truth as correspondence does relate strongly to God. God's words correspond to his thoughts. So God is true in the sense that his word can be trusted. God's thoughts are identical to themselves, a kind of perfect "correspondence." In this sense, God is true to himself. If truth is understood as what corresponds to another, then in this sense God is not "true." Rather, he is the ultimate reality and so the standard for truth. Other things must correspond to him in a limited way in order to be called true, not he to them.

The basic fallacy in this objection that God is truth yet not correspondent is that it equivocates in its definitions. If correspondence relates only to something *outside* oneself, then God cannot be truth, but the ultimate reality to which truth corresponds. If correspondence can also be *inside oneself*, God corresponds to himself in the most perfect way. He is perfect truth by perfect self-identity. Consider the following fallacious thinking:

1. All who submit to the authority of the Pope are Roman Catholic.

2. But the Pope cannot submit to himself.

3. Therefore, the Pope is not Roman Catholic.

The mistake is in the second premise. Contrary to the claim, the Pope can submit to himself. He simply has to follow the rules he lays down for Roman Catholics. Likewise, God can and does live in accord with his own authority. In this sense he is true to himself.

The Absolute Nature of Truth. The relativity of truth is commonly a premise of current thought. Yet orthodox Christianity is predicated on the position that truth is absolute. Thus, the defense of the possibility of absolute truth is crucial to the defense of the historic Christian faith. According to theories of relative truth, something may be true for one person, but not for all people. Or, it may be true at one time, but not at another. According to the absolutist view, what is true for one person is true for all persons, times, and places.

As argued above, there is only one adequate view of the nature of truth—the correspondence view. Other views, such as coherence and pragmatism, describe tests for truth, not an explanation of the nature of truth itself. *Factual truth is that which corresponds to the facts.* It is that which corresponds to the actual state of affairs being described.

Relative Truth. The relativity of truth is a popular contemporary view. However, truth is not determined by majority vote. Let’s take a look at the reasons people give for belief that truth is relative.

Of all, some things appear only to be true at some times and not at others. For example, many people once believed the world to be flat. Now we know that truth statement was wrong. It would seem that this truth has changed with the times. Or has it? Did the truth change, or did beliefs about what is true change? Well, certainly the world did not change from a box to a sphere. What changed in this regard is our belief, not our earth. It changed from a false belief to a true one.

Within a statement’s universe of discourse, every truth is an absolute truth. Some statements really apply only to some people, but the truth of those statements is just as absolute for all people everywhere at all times as a statement that applies to all people generally. “Daily injections of insulin are essential for continued life” is true of persons with some life-threatening forms of diabetes. This statement has an applied universe of discourse. It isn’t purporting to be a truth that applies to everyone. But if it applies to Fred, then it is true of Fred for everyone. The caveat that this statement is false for people with a normally functioning pancreas does not detract from the statement’s truth within its universe of discourse—diabetics to whom it is properly addressed.

Some statements appear to be true only for some. The statement, “I feel warm” may be true for me but not for another person, who may feel cold. I am the only one within the statement’s universe of discourse. The statement, “I [Norman Geisler] feel warm” (on July 1, 1998, at 3:37 P.M .) is true for everyone everywhere that Norman Geisler did feel warm at that moment in history. It corresponds to facts and so is an absolute truth.

A teacher facing a class says: “The door to this room is on my right.” But it is on the left for the students. Relativists argue that surely this truth is relative to the teacher since it is false for the class. But on the contrary it is equally true for everyone that the door is on the professor’s right. This is an absolute truth. It will never be true for anyone, anywhere at any time that the door was on the professor’s left during this class on this day in this room. The truth is equally absolute that the door was on the student’s left.

It seems obvious that the temperature frequently is relatively high in Arizona and relatively cold at the North Pole. So, apparently some things are true for some places but not for other places. Right?

Not so. Some things are true concerning some places, but not true in other places where the conditions are different. But that isn't the point. Within the Arizona weather report's universe of discourse, the statement corresponds to the facts. So it is true everywhere. The statement: "It is relatively cold for earth at the North Pole" is true for people in Arizona in the summer, or on Pluto where it is colder than on the North Pole. Truth is what corresponds to the facts, and the fact is that it feels cold at the North Pole.

All truth is absolute. There are no relative truths. For if something is really true, then it is really true for everyone everywhere, and for all time. The truth statement 7 + 3 = 10 is not just true for mathematics majors, nor is it true only in a mathematics classroom. It is true for everyone everywhere.

Evaluation. Like an old apple, relativism may look good on the surface but it is rotten at the core. Among its problems:

Absolutely Relative? Most relativists really believe relativism is true for everybody, not just for them. But that is the one thing they cannot hold if they are really relativists. For a relative truth is just true for me but not necessarily for anyone else. So, the relativist who thinks relativism is true for everyone is an absolutist. Such a person believes in at least one absolute truth. The dilemma is this: a consistent relativist cannot say "It is an absolute truth for everyone that truth this is only relatively true." Nor can the person say, "It is only relatively true that relativism is true." If it is only relatively true, then relativism may be false for some or all others. Why then should I accept it as true? Either the claim that truth is relative is an absolute claim, which would falsify the relativist position, or it is an assertion that can never really be made, because every time you make it you have to add another "relatively." This begins an infinite regress that will never pay off in a real statement.

The only way the relativist can avoid the painful dilemma of relativism is to admit that there are at least some absolute truths. As noted, most relativists believe that relativism is absolutely true and that everyone should be a relativist. Therein lies the self-destructive nature of relativism. The relativist stands on the pinnacle of an absolute truth and wants to relativize everything else.

A World of Contradictions. If relativism were true, then the world would be full of contradictory conditions. For if something is true for me but false for you, then opposite conditions exist. For if I say "There is milk in the refrigerator" and you say "there is not any milk in the refrigerator"—and we both are right, then there must both be and not be milk in the refrigerator at the same time and in the same sense. But that is impossible. So, if truth were relative, then an impossible would be actual.

In the religious realm it would mean that Billy Graham is telling the truth when he says, "God exists," and Madalyn Murray O'Hare is also right when she claims, "God does not exist."

But these two statements cannot both be true. If one is true, then the other is false. And since they exhaust the only possibilities, one of them must be true.

No Wrongs and No Rights. If truth is relative, then no one is ever wrong—even when they are. As long as something is true to me, then I'm right even when I'm wrong. The drawback is that I could never learn anything either, because learning is moving from a false belief to a true one—that is, from an absolutely false belief to an absolutely true one. The truth is that absolutes are inescapable.

Answering Objections. Relativists have leveled several objections to the view of truth as absolute. The following are the most important:

No Absolute Knowledge. It is objected that truth cannot be absolute since we do not have an absolute knowledge of truths. Even most absolutists admit that most things are known only in terms of degrees of probability. How, then, can all truth be absolute?

We can be absolutely sure of some things. I am absolutely sure that I exist. In fact, my existence is undeniable. For I would have to exist in order to make the statement, "I do not exist." I am also absolutely sure that I cannot exist and not exist at the same time. And that there are no square circles. And that 3 + 2 = 5.

There are many more things of which I am not absolutely certain. But even here the relativist is misguided in rejecting absolute truth simply because we lack absolute *evidence* that some things are true. The truth can be absolute no matter what our grounds for believing it. For example, if it is true that Sidney, Australia, is on the Pacific Ocean, then it is absolutely true no matter what my evidence or lack of evidence may be. An absolute truth is absolutely true in itself, no matter what evidence there is. Evidence, or the lack thereof, does not change a fact. And truth is what corresponds to the facts. The truth doesn't change just because we learn something more about it.

In-between Truths. Another objection is that many things are comparative—like relative sizes such as shorter and taller. As such they cannot be absolute truths, since they change depending on the object to which they relate. For example, some people are good compared to Hitler but evil as compared to Mother Teresa. Contrary to the claim of relativists, in-between things do not disprove absolutism. For the facts that "John is short in relation to an NBA (National Basketball Association) player," and "John is tall compared to a jockey" are absolutely true for all times and all people. John is in-between in size, and it depends on which one to whom he is compared whether he is shorter or taller. Nonetheless, it is absolutely true that John (being five feet ten inches) is short compared to most basketball players and tall compared to the majority of jockeys. The same thing is true of other in-between things, such as, warmer or colder, and better or worse.

No New Truth (or Progress). If truth never changes, then there can't be any new truth. This would mean that no progress is possible. But we do come to know new truths. That is what scientific discovery is all about. In response to this, "new truth" can be understood in two ways. It might mean "new to us," like a new discovery in science. But that is only a matter of us

discovering an “old” truth. After all, the law of gravity was there long before Isaac Newton. Many truths have always been there, but we are just finding out about them. The other way we might understand “new truth” is that something new has come into existence that makes it possible to make a new statement about it that is only then true for the first time. That’s no problem either. When January 1, 2020, arrives, a new truth will be born. Until that day it will not be true to say, “This is January 1, 2020.” But when that happens it will be true for all people and places forever more. So “old” truths don’t change and neither do “new” truths when they come to pass. Once it is true, it is always true—for everyone.

Truth and Growth in Knowledge. It is also objected that knowledge of truth is not absolute, since we grow in truth. What is true today may be false tomorrow. The progress of science is proof that truth is constantly changing. This objection fails to note that it is not the truth that is changing but our understanding of it. When science truly progresses, it does not move from an old truth to a new truth, but from error to truth. When Copernicus argued that the earth moves around the sun and not the reverse, truth did not change. What changed was the scientific understanding about what moves around what.

Narrow Absolutes. Of course truth is narrow. There is only one answer for what is 4 + 4. It is not 1. It is not 2, 3, 4, 5, 6, 7, 9, 10 or any other number. It is 8 and only 8. That’s narrow, but it is correct.

Non-Christians often claim that Christians are narrow-minded, because they claim that Christianity is true and all non-Christian systems are false. However, the same is true of non-Christians who claim that what they view as truth is true, and all opposing beliefs are false. That is equally narrow. The fact of the matter is that if C (Christianity) is true, then it follows that all non-C is false. Likewise, if H (say, Humanism) is true, then all non-H is false. Both views are equally narrow. That’s the way truth is. Each truth claim excludes contradictory truth claims. Christianity is no more narrow than is any other set of beliefs, whether atheism , agnosticism , skepticism, or pantheism .

Dogmatic Absolutes. The claim that those who believe in absolute truth are dogmatic misses the point. If all truth is absolute—true for all people, times, and places—everyone who claims anything is true is “dogmatic.” Even the relativist who claims relativism is true is dogmatic. For the person who claims that relativism is absolutely true is particularly dogmatic. This person claims to own the only absolute truth that can be uttered, namely, that everything else is relative.

Something important is overlooked in this charge of dogmatism. There is a big difference between the pejorative charge that belief in absolute truth is dogmatic and the manner in which someone may hold to this belief. No doubt the manner with which many absolutists have held to and conveyed their beliefs has been less than humble. However, no agnostic would consider it a telling argument against agnosticism that some agnostics communicate their beliefs in a dogmatic manner.

Nonetheless, there is an important distinction to keep in mind: Truth is absolute, but our grasp of it is not. Just because there is absolute truth does not mean that our *understanding* of it is absolute. This fact in itself should cause the absolutists to temper convictions with humility.

For while truth is absolute, our understanding of absolute truth is not absolute. As finite creatures, we grow in our understanding of truth.

Summary. Truth may be tested in many ways but it should be understood in only one way. There is one reality, to which statements or ideas must conform in order to be regarded as true. There may be many different ways to *defend* different truth claims, but there is really only one proper way to *define* truth, namely, as correspondence. The confusion between the nature of truth and the verification of truth is at the heart of the rejection of a correspondence view of truth.

Likewise, there is a difference between what truth *is* and what truth *does* . Truth is *correspondence* , but truth has certain *consequences* . Truth itself should not be confused with its results or with its application. The failure to make this distinction leads to wrong views of the nature of truth. Truth is that which corresponds to reality or to the state of affairs it purports to describe. And falsehood is what does not correspond.

Universalism. Universalism is the belief that everyone eventually will be saved. It was first proposed by the unorthodox church Father, Origen (ca. 185–ca. 254). Origen and universalism in general were condemned as unorthodox at the Fifth Ecumenical Council of Constantinople (A.D . 553). The theology of universalism should be distinguished from the Universalist Church, an extreme anticreedal movement born in colonial America whose rejection of historic Christianity extended far beyond the doctrine of universalism itself. This group was a force in the liberal theologies of nineteenth-century North America and continues to the present.

One of the most influential twentieth-century theologians to embrace universalism was Karl Barth (1886–1968). Philosopher John Hick is a contemporary proponent of the view (see Hick). A small number of otherwise evangelical theologians, such as Clark Pinnock and John Stott, have embraced forms of universalism and/or annihilationism . Most liberal theologians and cults hold to some form of universalism or its cousin, annihilationism, the view that persons who cannot qualify for heaven simply go out of existence. The common principle throughout universalist and annihilationist theologies is that there is no eternal punishment.

Basis for Universalism. Universalists generally appeal to arguments from God's love in support of their positions. They cite several passages of Scripture to substantiate their views.

God's Omnibenevolence. Universalism is usually based on the notion that a God of love would never allow any of his creatures to perish. But, as C. S. Lewis demonstrated (see, for example, his book, *The Great Divorce*), just the opposite is the case. For while God "so loved the world that he gave his only begotten Son" (John 3:16) and "does not desire that any should perish" (2 Peter 3:9), he does not force his love on anyone. Forced love is a self-contradictory concept (*see* FREE WILL). Jesus said, "O Jerusalem, Jerusalem, you who kill the prophets and stone those sent to you, how often I have longed to gather your children together, as a hen gathers her chicks under her wings, but you were not willing" (Matt. 23:37). Lewis noted that "There are only two kinds of people in the end: those who say to God, 'Thy will be done,' and those to whom God says, in the end. ' *Thy* will be done' " (Lewis, *The Great Divorce* , 69).

Further, the Bible unmistakably teaches that there is an eternal hell and that human beings will go into it (see, for example, Matt. 25:41 ; 2 Thess. 1:7–9 ; Rev. 20:11–15). Jesus had more to say about hell than he did about heaven. He warned, “Do not be afraid of those who kill the body but cannot kill the soul. Rather, be afraid of the One who can destroy both soul and body in hell” (Matt. 10:28). He added of those who reject him, “As the weeds are pulled up and burned in the fire, so it will be at the end of the age” (Matt. 13:40). In what is sometimes called his Mount Olivet Discourse, Jesus declared, “Then he will say to those on his left, ‘Depart from me, you who are cursed, into the eternal fire prepared for the devil and his angels’ ” (Matt. 25:41). Elsewhere he stressed the horror of hell with the statement: “If your hand causes you to sin, cut it off. It is better for you to enter life maimed than with two hands to go into hell, where the fire never goes out” (Mark 9:43). One of his most vivid stories was of the rich man and a beggar named Lazarus. Since this story uses an actual name, most Bible teachers distinguish this from a parable and believe it refers to people who really lived. The description of hell speaks for itself:

> In hell, where he was in torment, he looked up and saw Abraham far away, with Lazarus by his side. So he called to him, “Father Abraham, have pity on me and send Lazarus to dip the tip of his finger in water and cool my tongue, because I am in agony in this fire.” But Abraham replied, “Son, remember that in your lifetime you received your good things, while Lazarus received bad things, but now he is comforted here and you are in agony. And besides all this, between us and you a great chasm has been fixed, so that those who want to go from here to you cannot, nor can anyone cross over from there to us.” He answered, “Then I beg you, father, send Lazarus to my father’s house, for I have five brothers. Let him warn them, so that they will not also come to this place of torment.” Abraham replied, “They have Moses and the Prophets; let them listen to them.” [Luke 16:23–31]

God’s Omnipotence. Others have argued for universalism from God’s omnipotence. Origen, declared: “For nothing is impossible to the Omnipotent, nor is anything incapable of restoration to its Creator” (*On First Principles* , 3.6.5). This, of course, implies that God desires by his goodness to do so, a position easily supported by many Scriptures (1 Tim. 2:4 ; 2 Peter 3:9). But if God wants to save all, and he can save all (i.e., he is all-powerful), then it seemed to follow for Origen that he will save all.

Two points should be made in response. First, God’s attributes do not operate in contradiction to each other. God is internally consistent in his nature. This is why the Bible insists that “It is impossible for God to lie” (Heb. 6:18). This is also the reason that God’s power must be exercised in accordance with his love. That is, God cannot do what is unloving. Second, as already demonstrated (above), it is unloving to force people to love him. Forced love is a contradiction, and God cannot do what is contradictory. Love cannot work coercively but only persuasively. And if some refuse to be persuaded, as the Bible says some will, then God will not coerce them into his kingdom.

Reformatory View of Justice. Origen argued that God’s justice has reformation in view, not punishment (*see* HELL). He claimed, “The fury of God’s vengeance is profitable for the purgation of souls. That the punishment, also, which is said to be applied by fire, is understood to be applied with the object of healing” (2.10.6). He added, “those who have been removed from

their primal state of blessedness have not been removed irrecoverably, but have been placed under the rule of those holy and blessed orders which we have described; and by availing themselves of the aid of these, and being remoulded by salutary principles and discipline, they may recover themselves, and be restored to their condition of happiness" (1.6.2).

One cannot apply God's obvious desire that persons reform their lives to prove that all will be saved in the end. Nor can one assume, contrary to both Scripture and fact, that all persons choose to be reformed (Matt. 23:37 ; Rev. 20:10–15), or that no decision is final. In this life suicide is both one-way and final. Likewise, the Bible declares that each person "is destined to die once, and after that to face judgment" (Heb. 9:27). It is contrary to the proper concept of justice, which is penal, rather than reformatory. God's absolute justice and holiness demand that a penalty be paid for sin (see Levit. 17:11 ; Ezek. 18:20).

The reformatory view of justice also is contrary to the substitutionary death of Christ. "Christ died for sins once for all, the righteous for the unrighteous, to bring you to God" (1 Peter 3:18 ; cf., 1 Cor. 15:3 ; 2 Cor. 5:21). "God made him who had no sin to be sin for us, so that in him we might become the righteousness of God." Why did Christ have to pay the awful price for sin if sin is not an infinite crime and does not have to be punished?

God is indeed interested in reformation. That is what this life is all about. Those who refuse to accept what Christ did in the atonement cannot be reformed in this life. And then they must stand without the righteousness of Christ before an infinitely holy God who cannot abide in the presence of sin's corruption. Separation from God is the necessary punishment for those who cannot exist in God's presence and are rightly the objects of his anger. This is why God is so long-suffering with those who live. He does not wish that any should perish (2 Peter 3:9).

Origen offered an argument for universalism from God's wisdom:

> God, by the ineffable skill of his wisdom, transforming and restoring all things, in whatever manner they are made, to some useful aim, and to the common advantage of all, recalls those very creatures which differed so much from each other in mental conformation to one agreement of labour and purpose; so that, although they are under the influence of different motives, they nevertheless complete the fullness and perfection of one world, and the very variety of minds tends to one end of perfection. For it is . . . is one power which grasps and holds together all the diversity of the world, and leads the different movements towards one work, lest so immense an undertaking as that of the world should be dissolved by the dissensions of souls.

This again misses the point that God's wisdom does not act contrary to his love. And love cannot force anyone to do something.

The fact that God is infinitely wise (omniscient) allows him to know that not everyone will freely choose to serve him. The attempt to save people God knows will never accept him would be contrary to God's wisdom. Still, all are invited, even those God knows will reject him.

Many, with Origen, respond "that God, the Father of all things, in order to *ensure the salvation of all* his creatures through the ineffable plan of his word and wisdom, so arranged each of these, that every spirit, whether soul or rational existence, however called, should *not be compelled by force* , against the liberty of his own will, to any other course than that to which the motives of his own mind led him (lest by so doing the power of exercising free-will should seem to be taken away, which certainly would produce a change in the nature of the being itself)" (Origen, 2.1.2, emphasis added). But God cannot "ensure the salvation of all" without compelling them by force. As long as someone refuses to freely accept God's love, a loving God cannot ensure they will be saved.

Biblical Support for Universalism. A number of biblical texts have been used to support the claim of universalists. It should be noted at the start of this survey that the Bible does not contradict itself (*see* BIBLE, ALLEGED ERRORS IN). Texts that can be interpreted in more than one way must be understood in the light of those that cannot:

Psalm 110:1 . David said and Christ repeated (Ps. 110:1 ; Matt. 22:44): "The LORD says to my Lord: 'Sit at my right hand until I make your enemies a footstool for your feet.' " The enemies, literally of the Christ, are here referred to as subjugated, not saved. They are called the Lord's "footstool"—hardly an appropriate description of saints who are joint heirs with Christ (Rom. 8:17 ; Eph. 1:3). In Psalm 110 , David is speaking of the visitation of God's wrath on his enemies, not of blessings on his people.

Acts 3:21 . Peter speaks of Jesus who "must remain in heaven until the time comes for God to restore everything, as he promised long ago through his holy prophets." This reference to the "restoration of all things" is taken by universalists to mean the restoration of all to God. However, the context does not support such a conclusion. Acts 3:20–21 does not even remotely hint that there will be a total salvation. Other passages totally refute such an idea. Jesus said the gates of hell would not prevail against the church (Matt. 16:18). He also promised his followers, "Surely I am with you always, to the very end of the age" (Matt. 28:20). Jesus could not be with his followers to the end of the age if the entire church had gone into complete apostasy soon after its founding. In Ephesians 3:21 , the apostle Paul says, "To him be the glory in the church and in Christ Jesus to all generations forever and ever." How could God be glorified in the church throughout all ages if there was no church for many centuries? Ephesians 4:11–16 speaks of the church growing to spiritual maturity, not degeneracy.

What then does "the restoration of all things" mean? Peter is speaking to the Jews and refers to the "restoration of all things, which God has spoken by the mouth of all his holy prophets since the world began" (Acts 3:21). Here is the "covenant which God made with our [Jewish] fathers, saying to Abraham, 'And in your seed all the families of the earth shall be blessed' " (vs. 25). This Abrahamic covenant was unconditional and included the promises of possessing the land of Palestine "forever" (Gen. 13:15). Peter refers to the future fulfillment of this Abrahamic covenant, the restoration of all *things* to Israel. Paul affirms the same in Romans 11 (see vss. 23–26).

Romans 5:18–19 . Paul wrote: "Consequently, just as the result of one trespass was condemnation for all men, so also the result of one act of righteousness was justification that

brings life for all men. For just as through the disobedience of the one man the many were made sinners, so also through the obedience of the one man the many will be made righteous" (Rom. 5:18–19). From these verses universalists infer that Christ's death for all guarantees salvation for all. This conclusion, however, is contrary to the context and certainly to the message of Romans as a whole. This is explicitly in the context of being justified *by faith* (5:1), not automatically. In the preceding verse he declares that salvation comes to those "who receive . . . the gift of righteousness" (5:17).

The rest of Romans makes it unmistakably clear that not everyone will be saved. Romans 1–2 speaks of the heathen, who are "without excuse" (Rom. 1:19). Upon them the wrath of God falls (1:18). It declares that "as many as have sinned without the law will also perish without law " (Rom. 2:12). At the heart of his argument, Paul concludes that, apart from justification by faith, the world is "guilty before God" (Rom. 3:19). Speaking of the destiny of both saved and lost, Paul affirms that "the wages of sin is death, but the gift of God is eternal life in Christ Jesus our Lord" (Rom. 6:23). Likewise, Paul recognized that, in spite of his prayers, not all of his kinsmen would be saved (Romans 11) but would be "accursed" (Rom. 9:3). The whole point of Romans is to show that only those who believe will be justified (Rom. 1:17 ; cf. 3:21–26). Romans 9 leaves no doubt that only the elect not everyone will be saved. The rest are "vessels of wrath prepared for destruction" (Rom. 9:22).

Outside of Romans are numerous passages that speak of the eternal destiny of lost people, including the vivid passage at the end of Revelation when John said:

> Then I saw a great white throne and him who was seated on it. Earth and sky fled from his presence, and there was no place for them. And I saw the dead, great and small, standing before the throne, and books were opened. Another book was opened, which is the book of life. The dead were judged according to what they had done as recorded in the books. The sea gave up the dead that were in it, and death and Hades gave up the dead that were in them, and each person was judged according to what he had done. Then death and Hades were thrown into the lake of fire. The lake of fire is the second death. If anyone's name was not found written in the book of life, he was thrown into the lake of fire. [Rev. 20:11–15]

2 Corinthians 5:19 . Universalists also use 2 Corinthians 5:19 , in which Paul told the Corinthians "that God was reconciling the world to himself in Christ, not counting men's sins against them. And he has committed to us the message of reconciliation." It is argued that "the world" was reconciled to God by Christ's work. Thus, all are saved on the basis of Jesus' work on the Cross.

The context clarifies the meaning of "the world." First, reconciliation is regarded as a process according to God's purpose, not an accomplished universal fact. God desires to save all (2 Peter 3:9), but all will not be saved (Matt. 7:13–14 ; Rev. 20:11–15). Second, the context indicates that actual reconciliation is only for those "in Christ," not for all (vs. 17). If all were already saved, then Paul's exhortation to be "ambassadors for Christ" and to "plead" with the world to "be reconciled to God" is senseless. They already are reconciled. All are made savable by Christ's reconciliation, but not all are thereby saved.

Ephesians 1:10 . Also misconstrued by universalists is Paul's statement that in "the fullness of the times he might gather together in one all things in Christ, both which are in heaven and which are under the earth—in Him" (Eph. 1:10 NKJV). A careful examination of this text reveals that Paul is speaking only of believers. First, the context is those "he chose in Him before the foundation of the world" (1:4). Second, the phrase "in Christ" is never used in Scripture of anyone but believers. That unbelievers are excluded is further clarified by the omission of those "under the earth," which Paul elsewhere uses to speak of the lost (Phil 2:10).

Philippians 2:10–11 . Paul predicts that one day "at the name of Jesus every knee should bow, of those in heaven, and of those on earth, and of those under the earth, and the every tongue should confess that Jesus Christ is Lord to the glory of God the Father" (Phil. 2:10–11). Here, the universalists insist, unbelievers are clearly in view in the phrase "under the earth."

No one denies that unbelievers will eventually confess Jesus is Lord, but that does not mean they will be saved. Even demons believe *that* Jesus is Lord, but they refuse to submit to him (cf. James 2:19). Believing *that* Jesus is Lord will not save anyone. Only belief *in* Christ (James 2:21–26) saves. "Those under the earth" (= the lost) in this text, make a confession from their mouth, but this acknowledgment will not be from the heart. For salvation, Paul insisted, one must both confess and "believe in your heart" (Rom. 10:9).

1 Corinthians 15:25–28 . Of the eschaton or culmination of history, Paul affirmed in 1 Corinthians 15:25–28 that "then the end will come, when he hands over the kingdom to God the Father after he has destroyed all dominion, authority and power. He must reign, till he hath put all enemies under his feet. . . . And when all things shall be subdued unto him, then shall the Son also himself be subject unto him that put all things under him, that God may be all in all." On this text Origen wrote, "But if even that unreserved declaration of the apostle do not sufficiently inform us what is meant by 'enemies being placed under his feet,' listen to what he says in the following words, 'For all things must be put under Him.' What, then, is this 'putting under' by which all things must be made subject to Christ?" He added, "I am of opinion that it is this very subjection by which we also wish to be subject to Him, by which the apostles also were subject, and all the saints who have been followers of Christ" (Origen, 1.6.1)

This interpretation ignores both the content and context of this passage. Paul is not speaking of the salvation of the lost but, rather their condemnation. This is evident in such phrases as *destroy* , *put under his feet* , and *put an end to all rule* . This is the language of subjugation (see vss. 24 , 27 , 28). Those in view are spoken of as God's "enemies," not his friends or children. They are subjugated enemies, not saved friends. That God will be "all in all" (vs. 28) does not mean that all will be in God. He will reign supreme in all the universe after ending the rebellion against him. The phrase *all things* must be understood in its context. All things are made subject to Christ (vs. 28). But these "all things" are enemies (vs. 25). The phrase is used in parallel with *enemies* in successive verses (vss. 26–27).

Heaven is not a place where God overpowers the will of his enemies and forces them into the fold. So, there is not a hint in such passages of salvation for all unbelievers.

---

nkjv New King James Version

Conclusion. Not only is there a lack of support for universalism, but there are decisive arguments against it.

Universalism is contrary to the implications of being created in the image of God. God made humankind in his image (Gen. 1:27) which included freedom. For everyone to be saved, those who refuse to love God would be forced to love him against their will. Forced “freedom” is not freedom. A corollary to this is that universalism is contrary to God’s love. Forced love is not love, but a kind of rape. No truly loving being forces himself on another.

Universalism is contrary to God’s perfection and justice. God is absolutely holy. And as such he must separate himself from and punish sin. Hence, as long as there is someone living in sin and rebellion against God, God must punish them. The Bible identifies this place of separation and punishment as hell (see Matthew 5 , 10 , 25).

Universalism is based on Scriptures wrenched out of context, and it ignores other clear passages.

Universalism is based on a kind of Freudian illusion. Sigmund Freud called any belief based on a mere wish to be an illusion. We do not *wish* anyone to suffer in hell forever, and this strong wish seems to be a primary impulse in the universalist thinking. But it is an illusion to believe that all wishes will be fulfilled.

Van Til, Cornelius. Cornelius Van Til (1895–1987) was born in Holland, emigrated to the United States as a child, and grew up on a farm in Indiana. He attended Calvin College and Princeton Seminary. After pastoring a Michigan church, he was professor of apologetics at Westminster Theological Seminary from its founding in 1929 till his retirement in 1972. Francis Schaeffer was among students who adopted a form of presuppositionalism under his influence.

His views on apologetics are expressed in *The Defense of the Faith* (1955; rev. 1963); *The Protestant Doctrine of Scripture* (1967); *A Survey of Christian Epistemology* (1969); *A Christian Theory of Knowledge* (1969); *Introduction to Systematic Theology* (1969); *The Great Debate Today* (1971); *The Defense of Christianity and My Credo* (1971); *Common Grace and the Gospel* (1972); *Introduction to Systematic Theology* (1974); *Christian Apologetics* (1975); *Christian-Theistic Evidences* (1976); and two undated works, *Why I Believe in God,* which is Van Til's summary of his own view. Other significant writings include an introduction to an edition of B. B. Warfield's *The Inspiration and Authority of the Bible* , and an essay, "My Credo" in E. R. Geehan, ed., *Jerusalem and Athens* (1971).

Philosophy of Apologetics. In a succinct statement of his own views, Van Til divided his philosophy of apologetics into three major areas: "My problem with the 'traditional method,' " "my understanding of the relationship between Christian and non-Christian, philosophically speaking," and "my proposal for a consistently Christian methodology of apologetics."

"Traditional" Apologetics. Van Til found seven problems in classical apologetics:

1. It compromises God by maintaining that his existence is only "possible," albeit "highly probable," rather than ontologically and "rationally" necessary.

2. It compromises the counsel of God by not understanding it as the only all-inclusive, ultimate "cause" of whatsoever comes to pass.

3. It compromises the revelation of God in its necessity, its clarity, its sufficiency, and its authority.

4. It compromises human creation as the image-bearer of God by conceptualizing human creation and knowledge as independent of the Being and knowledge of God. Human beings need not "think God's thoughts after him."

5. It compromises humanity's covenantal relationship with God by not understanding Adam's representative action as absolutely determinative of the future.

6. It compromises the sinfulness resulting from the sin of Adam by not understanding ethical depravity as extending to the whole of life, even to thoughts and attitudes.

7. It compromises the grace of God by not understanding it as the necessary prerequisite for "renewal unto knowledge." On the traditional view men and women must renew themselves unto knowledge by the "right use of reason."

Christian and Non-Christian Together. Van Til makes four basic points about the relationship of faith and reason. Each reveals something about the nature of his apologetic approach.

1. Both have presuppositions about the nature of reality: (a) The Christian presupposes a triune God and his redemptive plan for the universe as set forth once for all in Scripture. (b) The non-Christian presupposes a dialectic between "chance" and "regularity," the former accounting for the origin of matter and life, the latter accounting for the current success of the scientific enterprise.

2. Neither Christian nor unbeliever can, as finite beings, use logic to say what reality *must* or *cannot* be. (a) The Christian attempts to understand the world through observation and logically ordering facts. This is done in self-conscious subjection to the plan of the self-attesting Christ of Scripture. (b) The non-Christian, while attempting to understand through observation, at tempts to use logic to destroy the Christian position. Appealing to the *nonrationality* of "matter," the unbeliever says that the chance-character of "facts" witnesses conclusively against the Christian worldview. Then the non-Christian maintains that the Christian story cannot possibly be true. Each human being must be autonomous. "Logic" must legislate what is "possible" and possibility must exclude God.

3. Both claim that their position is "in accordance with the facts": (a) The Christian claims this on the basis of experience in the light of the revelation of the self-attesting Christ in Scripture. Both the uniformity and the diversity of facts have at their foundation the all-embracing plan of God. (b) The non-Christian claims this after interpreting the facts and personal experience in the light of human autonomy. The unbeliever rests upon the ultimate "givenness" of the world and the amenability of matter to mind. No fact can deny human autonomy or attest to a divine origin of the world and humanity.

4. Both claim that their position is "rational." (a) The Christian claims the faith position is self-consistent. The seemingly inexplicable can be explained through rational logic and the information available in Scripture. (b) The non-Christian may or may not claim that facts are totally self-consistent and in accord with the ultimate rationality of the cosmos. One who does

claim total self-consistency will be crippled when it comes to explaining naturalistic "evolution." If rational beings and a rational world sprang from pure chance and ultimate irrationality, such an explanation is in fact no explanation. A basis in irrational chance destroys predication.

A Consistently Apologetic Method. Van Til's own positive view proposes:

1. that we use the same principle in apologetics that we use in theology—the self-attesting, self-explanatory Christ of Scripture.

2. that we no longer appeal to "common notions" on which Christian and non-Christian can agree. Their "common ground" is that each person and each person's world are what Scripture says they are.

3. that we appeal to human beings as God's image-bearer. To do so we set the non-Christian's rational autonomy against Christian dependence. Human knowledge depends on God's knowledge, as revealed in the person and by the Spirit of Christ.

4. that we claim, therefore, that Christianity alone is reasonable. It is wholly irrational to hold any other position than that of Christianity. Christianity alone does not slay reason on the altar of "chance."

5. that we argue, therefore, by "presupposition." The Christian, as did Tertullian, must contest the very principles of an opponent's position. The only "proof" of the Christian position is that, unless its truth is presupposed, there is no possibility of "proving" anything. The state of affairs proclaimed by Christianity is the necessary foundation for "proof" itself.

6. that we preach with the understanding that acceptance of the Christ of Scripture comes about only as the Holy Spirit uses inescapably clear evidence to open a fleeing sinner's eyes to see things as they truly are.

7. that we present the message and evidence for the Christian position as clearly as possible. Because a human being is what the Christian says he or she is, the non-Christian can understand intellectually the issues involved. To an extent, the Christian message tells what the unbeliever already knows but seeks to suppress. This reminder provides a fertile ground for the Holy Spirit. According to God's sovereign grace the Spirit may grant the non-Christian repentance and knowledge of him who is life eternal.

Revelational Presuppositionalism. *Rejection of Classical Apologetics.* Van Til rejects classical apologetics, which he calls the "traditional" method. In its place he substitutes a presuppositional apologetics. He believes the classical apologetics of Thomas Aquinas is based on human autonomy. "There is on this basis no genuine point of contact with the mind of the natural man at all. . . . The revelation of a self-sufficient God can have no meaning for a mind that thinks of itself as ultimately autonomous." The problem is "how it may be known that the God of reason and the God of faith are the same" (*In Defense of the Faith* , 73, 94, 127). He described the Thomistic method as "a position half way between that of Christianity and that of

paganism." Theistic arguments are invalid and, at any rate, they do not lead to the "self-contained ontological trinity of Scripture." Thomistic apologetics reduces the Gospel through rationalism as to make it acceptable to the natural man" (*Great Debate Today* , 91).

He insisted that unless the God of the Bible is the foundation of human experience, experience operates in a void (*Common Grace and the Gospel* , 192). So Van Til begins with the Triune God and his self-revelation in Holy Scripture. Thus, his position has been called *revelational* presuppositionalism.

Van Til's Apologetic Method. The method of implication. Early in his career, Van Til called his apologetic a "method of implication" (*A Survey of Christian Epistemology* , 6–10; 201–2). John Frame said the phrase suggested to Van Til a combination inductive and deductive approach. The general has priority over the particular (*Cornelius Van Til* , 311).

Reasoning by presupposition. In his later writings Van Til typically calls his method "reasoning by presupposition" (ibid., 312). He asserted that "To argue by presupposition is to indicate what are the epistemological and metaphysical principles that underlie and control one's method." The issues cannot be settled by appealing to mutually-agreed-upon "facts" or "laws." The worldviews are too far apart for that. What must be searched out on both sides is a final reference-point that can make the facts and laws intelligible (*In Defense of the Faith* , 99, 100).

Van Til's reference point is so Scripture-dependent that it has been called " *revelational* presuppositionalism." He rejects the *rational* presuppositionalism of Gordon Clark , believing that his stress on the law of noncontradiction is not subservient to God's sovereignty. Likewise, Van Til disagreed with Edward J. Carnell 's presuppositionalism, known as *systematic coherency* . Systematic coherency combines the law of noncontradiction, factual evidence, and existential adequacy as tests for truth.

Indirect method. Van Til described the method as "indirect" to distinguish it from "direct" classical evidential arguments. It was indirect because it showed the truth of Christianity by showing the contradiction in opposing views. An opponent's position is reduced to an absurdity. Frame adds that this suggests "a model like that of the indirect argument in mathematics. In that model, one proves a proposition by assuming the opposite" (*Cornelius Van Til* , 313–14).

External and internal method. Van Til's apologetic method is both external and internal. He argues:

> We should address the unbeliever always from our own presuppositional commitment. From that commitment, however, we may legitimately examine the unbeliever's presuppositions and tell him our evaluation of them, how they look from our point of view. . . . this criticism is "external" in the sense of being based on criteria outside the unbeliever's own system of thought. . . . But it can become "internal" in another sense, when we ask the unbeliever how, even from his own point of view, he is able to account for the intelligibility of the world. . . . Our criticism will never be purely internal, purely from the unbeliever's point of view; it will always be external in the

> sense that it is determined by the Christian point of view. Otherwise, we would be . . . drowning with the one we would rescue." [ibid., 322]

T *ranscendental.* Those familiar with Immanuel Kant understand a transcendental argument. Van Til also affirmed that "the method of implication may also be called a *transcendental method* . . . . A truly transcendental argument takes any fact of experience which it wishes to investigate, and tries to determine what the presuppositions of such a fact must be, in order to make it what it is." The transcendental argument seeks a foundational epistemology for knowledge. Van Til observes that this always presupposes that a foundation does, in fact, exist (*Survey of Christian Epistemology* , 10, 11).

Robert Knudsen, in his essay "Progressive and Regressive Tendencies in Christian Apologetics" (in *Jerusalem and Athens*), noted that the transcendental method gained ascendancy after David Hume undermined the traditional methodology. Greg Bahnsen defended the transcendental method in his essay "the Reformation of Christian Apologetics" (in North, 191–239). However, Van Til never really spelled out how his transcendental argument actually works. Nonetheless, he claimed that "the only argument for an absolute God that holds water is a transcendental argument" (*In Defense of the Faith* , 11; *see* SCHAEFFER, FRANCIS on his use of the transcendental argument).

Van Til said that both inductive and deductive arguments are bound to the universe. "In either case there is no more than an infinite regression." It is always possible to ask, "If God made the universe, who made God?" Yet unless there were an absolute God the very questions and doubts of the skeptic would have no meaning. At some point every epistemological base depends on the existence of God. The transcendental argument seeks to discover that presupposed foundation (*Survey of Christian Epistemology* , 11). Thus, transcendentalism and presuppositionalism are one. For, according to Van Til, it is transcendentally necessary to presuppose that a triune God (*see* TRINITY) revealed in Holy Scripture in order to make any sense of the world. Without this necessary presupposition, no thought or meaning is possible.

The reductio ad absurdum method. Frame recognized three elements in this method: First, it seeks to show that all intelligibility depends on, or presupposes, Christian theism. Second, it is indirect rather than direct, negative rather than positive, essentially a *reductio ad absurdum* . Third, each participant in the discussion must be able to put on the opposing position for the sake of argument to see how it works (*Cornelius Van Til* , 314–15). According to Frame, "The unbeliever supplies the premises of the indirect argument, the premises which the believer then reduces to absurdity" (ibid., 315). Once the unbeliever supplies the premise of the indirect argument, the believer shows that it entails the rational-irrationalist dialectic. The unbeliever's system inevitably applies purely abstract laws to irrational facts. Rational thought is impossible.

Two things happen in the use of the method: The Christian assumes the correctness of the opposing method, then runs it to its final implications to show that its "facts" are not facts and "laws" are not laws. The non-Christian is asked to assume the Christian position for argument's sake and is shown that only these "facts" and "laws" appear intelligible" (*In Defense of the Faith* , 100–101). It is pointed out that "the non-Christian himself refutes his own irrationalism, for despite his philosophy he continues to live as if the world were a rational place. Thus, the

unbeliever’s own mind is part of God’s revelation, witnessing against his irrationalist defense” (*Cornelius Van Til* , 322).

Key Concepts. An understanding of Van Til’s approach depends on the meaning of certain key concepts:

God’s Sovereignty. Van Til is first and foremost a Reformed theologian. Apart from God’s sovereign control of the universe and his revelation to us we would know absolutely nothing. Facts and laws are what they are because of God’s plan. God’s decree “is the final and exclusively determining power of whatsoever comes to pass.” It is the source (*In Defense of the Faith* , 11; *Christian Apologetics* , 11; *Introduction to Systematic Theology* , 247).

Common Ground. Since all truth is God’s and nothing makes sense apart from him, there is no common intellectual epistemological foundation to share with unbelievers. In place of that foundation we set the self-attesting, self-explanatory Christ of Scripture. We no longer appeal to common ground, but to the real common ground that every human being is an image-bearer who is doing business with God at some level.

Brute Facts. A “brute fact” is a fact that is meaningless because it is uninterpreted by God. It represents a universe of pure chance. Brute facts assume human autonomy and take their starting point outside God’s sovereign revelation of himself. Van Til affirms that Christians should appeal to *God-interpreted* facts, but never to brute facts (Van Til, *Christian-Theist Evidences* , 51, 57; Frame, *Cornelius Van Til* , 180).

Because of his presuppositional starting point, it is sometimes wrongly assumed that Van Til does not believe in the validity of traditional historical apologetics (*see* HISTORICAL APOLOGETICS). He says, “I would engage in historical apologetics.” Historical investigation sooner or later will vindicate the truth of the Christian position. “But I would not talk endlessly about the facts and more facts without ever challenging the unbeliever’s philosophy of fact. A really fruitful historical apologetic argues that every fact *is* and *must be* such as proves the truth of the truth of the Christian position” (*Christian Theory of Knowledge* , 293). All facts must be interpreted within the framework of the presupposed Christian worldview revealed in the Bible or they are tainted by their rejection of God’s revelation.

Human Depravity. As a result of Adam’s sin the human race is radically depraved and so sees everything with a twisted perspective, a “jaundiced eye.” Being “dead” in sins, fallen human beings are unable to accurately “know” anything in its context of reality until the Holy Spirit opens their eyes in the process of salvation. With John Calvin , Van Til balances a recognition of God’s common grace to the unbeliever with a view that sin vitiates the unbeliever’s mind. Even the most learned non-Christian scientist cannot truly understand reality (*In Defense of the Faith* , chap. 15). “The natural man cannot will to do God’s will. He cannot even know what is good” (ibid., 54). The noetic effects of sin are total and devastating.

Analogy and Paradox. Even a regenerate mind only knows God’s knowledge by analogy. At no point is our knowledge univocal with God’s. Whenever the creature attempts to understand divine reality it runs into “paradoxes” or apparent contradictions. Van Til argues that “since God

is not fully comprehensible to us we are bound to come into what seems to be contradiction in all our knowledge. Our knowledge is analogical and therefore must be paradoxical" (*In Defense of the Faith* , 61). God is so sovereignly transcendent above human understanding that it would be blasphemous for us to suppose that we can know the way God knows. Even our supernaturally enlightened knowledge is only analogous to God's. This view of the mind constantly keeps two ideas to the front, the distinction between Creator and creature and (2) the sovereignty of Creator over creature (*Cornelius Van Til* , 89). For these reasons our knowledge must be analogical. Our knowledge is derived from the original knowledge in God's thinking. The human must attempt to think God's thoughts after him. "But this means that he must, in seeking to form his own system, constantly be subject to the authority of God's system *to the extent* that this is revealed to him" (*Christian Theory of Knowledge* , 16).

Evaluation. *Positive Contributions.* Few apologists have more forthrightly and courageously stressed the sovereignty of God than has Van Til. Unless God sovereignly wills to reveal himself, we would be in complete ignorance. Revelation, whether general or special, is the source of all truth.

While some apologetic systems give begrudging recognition to man's finitude, few give explicit acknowledgment to human depravity and the inability associated with depravity. Sin does have an effect on the whole person, including the mind. Van Til saw this as clearly as has any apologist.

Van Til defended the formal laws of logic in principle and practice. He believed the laws of logic were the same for both the Creator and creatures. However, formally because of sin they are not understood or applied in the same way. He was not an irrationalist.

Van Til offered a strong argument for Christianity. He regarded it as "proof" and chided other views for weakening their defense to mere "probable" arguments.

It seems proper to acknowledge that there is validity to a transcendental approach. What is often described as a self-defeating argument is strikingly similar to Van Til's approach. There are certain rationally necessary preconditions for meaning, and they do, as Van Til argued, demand that we posit the existence of a theistic God.

Van Til believed in historical evidence, and even devoted a book, *Christian-Theist Evidences* , to it. Unlike fellow Reformed apologist (but personal antagonist), Gordon Clark, Van Til was not an empirical skeptic. He believed in the validity of historic evidence for Christianity. But only as understood from the presupposition of biblical revelation.

Also, unlike Clark, Van Til correctly saw that our knowledge of God is only analogous (*see* ANALOGY, PRINCIPLE OF). To believe otherwise is presumptuous, if not blasphemous. For finite beings can know only in a finite way. To affirm that they know infinitely, as does God, is to deify our knowledge.

Often overlooked by nonpresuppositionalists is the practical value of a presuppositional approach. Non-Christians do implicitly (and even unconsciously) presuppose the basic principles

of a theistic worldview in order to make sense out of the world. Pointing this out debunks their world view and invites them to consider the positive value of the Christian worldview. No doubt Schaeffer's effectiveness in doing this is a result of his study under Van Til.

Negatives in Van Til's Apologetics. Some criticisms of Van Til seem to be based on misunderstanding, but others appear to be valid.

Even staunch defenders such as John Frame, while defending the general validity of Van Til's method, admit that he goes too far in demanding that all apologetic argument fit the one pattern (*Cornelius Van Til* , 315). Frame correctly points out that one may need more traditional arguments to make Van Til's overall argument work. "To show that a non-Christian view of motion and rest is unintelligible, we may find it necessary to use a theistic proof from motion like that of Aquinas. We would argue that if motion is to be intelligibly explained, God must exist" (ibid., 318).

Proving Van Til's conclusion, writes Frame, requires a complex argument to show that intelligible communication presupposes biblical theism. "A Van Tillian apologist would have to go into some detail in showing that intelligibility requires an equal ultimacy of one and many, and that such equal ultimacy in turn presupposes the ontological Trinity. . . . I believe that Van Til's conclusion is better described as a *goal* of apologetics. . . . It is unrealistic to expect that all of Christian theism can be established in a single encounter, let alone in a single argument of syllogism" (ibid.).

Van Til wrongly assumes his view is a purely indirect (negative) approach. There is no clear demarcation between indirect and direct arguments. Most arguments can be put in either form. Frame summarizes Van Til's apologetic:

1. If God does not exist, the world is unintelligible.

2. God does not exist.

3. Therefore, the world is unintelligible (ibid., 318).

Since it is agreed that the world is intelligible, then God must exist. However, Frame points out that the same argument can be stated in a positive form:

1. If the world is intelligible, God exists.

2. The world is intelligible.

3. Therefore, God exists (ibid.).

Van Til's protests to the contrary, he cannot avoid giving a positive apologetic argument. This being the case, much of Van Til's steam against classical apologetics evaporates.

Van Til misunderstands the traditional method of apologetics, so wrongly criticizes it for views very similar to his own. Frame says he questions whether transcendental reasoning is so very different from traditional reasoning, especially since traditional arguments may be needed to flesh out this approach (ibid., 45). Frame is insightful in noting that revelational presuppositionalism is strikingly similar to Thomistic approaches. Aquinas would agree with Van Til:

1. that in the realm of being (metaphysics), logic is dependent on God and not God on logic (*Summa Contra Gentiles* , 1.7; 3.47; 1a. 105, 3).

2. that the existence of God is ontologically necessary (ibid., 1a. 2, 3).

3. that without God nothing could be either known or proven true (ibid., 1a. 16, 1–8; 1a2ae. 109, 1).

4. that the basis for Christian truth is neither reason nor experience but the authority of God expressed in Scripture (*On Truth* , 14.8–9; *Summa Contra Gentiles* , 2a2ae. 2, 10; *On the Trinity* , 2.1, ad).

5. that depraved natural humanity willfully represses the revelation of God in Nature (*Summa Contra Gentiles* , 1a2ae. 77, 4: 83, 3; 84, 2; cf. 1a2ae. 109, 1–10).

Van Til complains that traditional apologetic compromises certainty about God. He seeks absolutely certain proof for Christian theism (*In Defense of the Faith* , 103, 104). Yet "Van Til himself admits that our apologetic *argument* may not be adequate to establish that certain conclusion," writes Frame. "If the argument is never stated adequately enough to justify the certainty of its conclusions, then on what basis may the apologists claim certainty for his argument?" (*Cornelius Van Til* , 277). Van Til overstates the case when he ap pears to insist that every argument should be certain (*see* CERTAINTY/CERTITUDE). The evidence is no less cogent in an argument for high probability (ibid., 279).

Van Til was no Thomist in disguise, but he knew less about Aquinas and was far closer to Thomist thought than he realized. The basic difference between Van Til and Aquinas is that, while they both agree *ontologically* that all truth depends on God, Van Til fails to fully appreciate that finite man must ask *epistemologically* how we knows this. In this he confuses the order of *being* and the order of *knowing* .

Either there is a rational basis for knowing or there is not. But one cannot beg the question and merely presuppose the theistic God. Presuppositions cannot be arbitrary. If we argue, as Van Til implied that we should, that Christian theism is a rationally necessary position, it is difficult to see on what rational grounds one could criticize Aquinas for providing rational support for it. How does Van Til know the Christian position is true? If Van Til answered, as he seems to in his writings, "Because it is the only truly rational view," perhaps Aquinas would reply, "That is what I believe. Welcome, dear brother, to the bi-millennial club of rational theists."

Van Til goes further than most Reformed theologians, who themselves take a stronger stance than other Protestant theologies, regarding the noetic effects of radical depravity. Even some of Van Til's strongest defenders admit an overstatement in his formulation. Speaking of Van Til's assertion that "all unbeliever's interpretive activity results in false conclusions," Frame responds that by implication Van Til denies common grace itself (*Cornelius Van Til* , 194). He adds, "the extreme antithetical formulations [of Van Til] are inadequate without considerable qualification." This understanding asserts that the unbeliever literally never makes a correct statement. Even the answer to a mathematical problem is incorrect in that it represents a false view of how the universe works mathematically. Frame finds it simplistic to hold that the noetic effects of sin amount to a propositional falsification of the unbeliever's every utterance (ibid., 211).

Van Til also suggests that human depravity shows itself as much or more in the discrete statements the unbeliever makes, than in life direction. And there is a failure to convey that the unbeliever's very denial of truth in some respects affirms truth (ibid., 207).

Indeed, Van Til himself offers statements inconsistent with his own antithesis between the knowledge of believers and unbelievers. He urges "that we present the message and evidence for the Christian position as clearly as possible, knowing that because man is what the Christian says he is, the non-Christian will be able to understand in an intellectual sense the issues involved" ("My Credo"). Van Til even says of unbelievers: "He has within himself the knowledge of God by virtue of his creation in the image of God." But Van Til hastens to say in the very next sentence: "But this idea of God is suppressed by his false principle, the principle of autonomy" (*In Defense of the Faith* , 170). This principle is the "jaundiced eye" by which all knowing is distorted and false. But how can he understand the issues even in an intellectual sense if there is no common facts, ground, or knowledge of any kind—if he sees all with a jaundiced eye?

Van Til saw this tension in his own view. He speaks of it as a "difficult point." "We cannot give any wholly satisfactory account of the situation as it actually obtains" (*Introduction to Systematic Theology* , 15). If fallen human beings really see everything with a "jaundiced eye," so that they cannot even understand the truth of general revelation or of the gospel, they are not morally accountable. But Scriptures says they are "without excuse" (Rom. 1:19–20 ; 2:12–15). Indeed, Adam and Eve were "dead in trespasses and sin" (cf. Eph. 2:1) the instant they took of the forbidden fruit (Gen. 3:6 ; Rom. 5:12). Yet they heard and understood God when he spoke (Gen. 3:9–19).

A common mistake of Reformed presuppositionalism is to equate the figure of speech *dead* with the concept *annihilated* , a mistake which, fortunately, they do not make when speaking of the "second death" (Rev. 20:14). Death in Scripture is better understood in terms of separation, not annihilation. The prophet said, "your sins have separated you from your God" (Isa. 59:2 KJV). Indeed, "dead" is not the only figure of speech used in the Bible to describe fallen humankind. Sickness, blindness, pollution, and lameness are also used. But none of these imply a person totally unable to understand God's revelation. Many nonpresuppositional Reformed theologians, among whom are Jonathan Edwards , B. B. Warfield , John Gerstner, and R. C. Sproul, believe

---

kjv King James Version

just as firmly in radical depravity without accepting this skewed view of the noetic effects of sin. Depravity can be understood as an inability to initiate or attain salvation without the grace of God.

In this same connection, Reformed presuppositionalists often misinterpret 1 Corinthians 2:14 to mean that unbelievers cannot even understand God's truth before they are regenerated. Besides the obvious difficulty that they would have to be saved before they believe (just the opposite of what the Bible says in such texts as John 3:16 , 36 ; Acts 16:31 , and Rom. 5:1 , this misreads the passage. Nor does it help to set up an order of events in salvation to claim the person being saved is regenerated before being justified, since one is placed in the kingdom of God by regeneration (John 3:3 ; Titus 5:5). The Greek word for "receive" (*dekomai*) means "to welcome." It does not mean they do not understand. They clearly *perceive* them, but do not willingly *receive* (Rom. 1:19–20). As a consequence, they do not know them by experience. A failure to understand these truths leads to a misunderstanding of the effects of sin on the unregenerate mind.

It is supposed by Van Til that a transcendental argument avoids the effects of depravity to which the traditional apologetic arguments are subject. But why should not sin lead the unbeliever to repress the force of a transcendental argument as much as any evidence (*Cornelius Van Til* , 200)? Here the transcendental approach loses a touted advantage over classical apologetics.

This same point applies to Van Til's rejection of a content-filled general revelation , on which traditional theistic arguments are based. It is often alleged that the effects of sin on general revelation make a supernatural revelation necessary. But sin has equally vitiating effects on supernatural revelation as well, as is evidenced by all the Christian denominations, sects, and cults who claim the same supernatural revelation but interpret it in radically different ways. Thus, presupposing a starting point in Holy Scripture does not in itself offer any advantage over beginning in general revelation, as classical apologetics do. The noetic effects of sin do not vanish simply because one turns his head from nature to the Bible.

Van Til's view of the Trinity involved two apparently opposing propositions: God is one person; God is three persons. He never clearly differentiates between the two senses of the term *person* . Van Til's doctrine of the Trinity "begins with an affirmation or the ancient creeds and the Reformed confessions" (*Cornelius Van Til* , 63). However, it goes on to say that "We therefore claim that we have not asserted unity and trinity of exactly the same thing. Yet this is not the whole truth of the matter. We do assert that God, that is, the whole Godhead is one person" (*Introduction to Systematic Theology* , 229). So, "God is not simply a unity of persons; he is *a* person" (*Cornelius Van Til* , 65).

This is a theological move that no orthodox creed, confession, or major church Father ever took before. Gordon Clark's disciple, John Robbins, went so far as to call it "a radical new heresy" (Robbins, 20). The more common objection, however, is that it violates the law of non-contradiction. Defenders point out that Van Til never calls the doctrine of the Trinity "contradictory," but rather finds it "apparently contradictory" (*Common Grace and the Gospel* , 9). Nor does he deny the traditional view that God is one in essence and three in person; he says

it “is not the whole truth of the matter.” He tries to supplement the traditional doctrine, not replace it (*Cornelius Van Til* , 67). It still seems a bit presumptuous to hold that he discovered what nineteen centuries of theologians, creeds and councils had failed to see. The question is not whether Van Til affirms the orthodox formula that God is one is essence and three in persons (with a distinct difference between *person* and *essence*). The controversy is that he also affirms God to be both three persons and yet also only one person (without offering a difference between *person* and *persons*).

His defenders claim that Clark and Robbins do not answer Van Til’s argument. “He is one ‘being,’ not three; the three partake of one ‘essence.’ Now the question becomes, is this one being personal or impersonal?” Van Til believed the historic formulation made the Father, Son, and Spirit, individuals, but the divine essence, God, could only be regarded as an abstraction. This model could only be inadequate, for God is not an abstraction (ibid., 68).

However, the argument offered is a false dilemma. God is not either personal (in a singular sense) or impersonal. He is tripersonal. Hence, it is not necessary to conclude that the essence of God is impersonal because there are three persons in it. Being tripersonal is being personal. Frame asks the appropriate question: “How, then, do we relate the ‘one person’ to the ‘three persons’? Van Til asserts that ‘this is a mystery that is beyond our comprehension.’ ” Van Til does not say the two assertions are contradictory, but he does not appear to leave any options to contradiction.

The heart of Frame’s defense is that something can be both A and not-A if the two A’s have different senses. “The traditional language, ‘one in essence, three in person’ (which, again, Van Til does not reject) brings out more clearly, of course, that the oneness and the threeness are in different respects. But the formulation ‘one person and three persons’ does not deny that difference of respect” (ibid., 69).

This leads to Frame’s last connected point. Obviously, there is a difference between the sense of *person* as applied to the oneness of God and the sense of *persons* as applied to the three members of the Trinity. For one thing, the Father is the begetter, the Son is begotten, and the Spirit is the one who proceeds from both Father and Son. The Godhead as a unity is not any of those three roles.

> Neither Van Til nor I would claim to be able to state, precisely and exhaustively, the differences between God’s essence and the individual persons of the Godhead. Doubtless the Clarkite critics of Van Til will find this a damaging admission, for they insist that all theological statements be perfectly precise. Never mind that Scripture itself often fails to be precise about the mysteries of the faith. But the creedal tradition, too, fails to give a “precise” account of the relations between God’s “essence”and his “persons.” [ibid., 71]

Frame at this point argues, regarding the confessions, which sort out the biblical conception of the Trinity, that “ *ousia* and *hypostasis* can be interchangeable. They can mean one substance and three substances.”

While Van Til is willing to admit that he cannot really specify any difference in meaning between the two usages of the term "person," yet he criticizes non-Christian views for their contradictions. He says one view "will not lead to greater knowledge, but only to skepticism about the very possibility of truth" (ibid. 77). That very thing could be said of Van Til's view.

Van Til does not overlook the fact that he has not provided a real difference in the definition of the term "person" as used of "one person" and "three persons." He admits that "We may not always be able to show how two concepts can logically coexist" (*Cornelius Van Til* , 71). But unless a difference can be shown, Van Til has not avoided the charge of contradiction. For one cannot have both three and only one of the same subject (person).

Van Til denies "that we can prove to men that we are not asserting anything that they ought to consider irrational, inasmuch as we say that God is one in essence and three in persons." But if we cannot do this, what grounds do we have for objecting when unbelievers cannot do the same for their view? Indeed, the whole transcendental method depends on being able to show that the unbeliever's view is reducible to the logically contradictory.

Van Til claims: "I do not maintain that Christians operate according to new laws of thought any more than that they have new eyes or noses" (*In Defense of the Faith* , 296). This claim notwithstanding, Van Til's "laws of thought" are not really the same for believers. There is only a formal identity. There is no real point of contact that is the same for God and humanity. But this leads to skepticism about God, since there is no point of actual identity between our knowledge and his. It is transcendentally necessary to affirm such a content-filled point of identity.

Granting that a transcendental argument is valid, it does not follow that Van Til's form of it is valid. Certainly, as Van Til argues, it is necessary to posit a God to make sense out of the world. However, he has not shown that it is necessary to postulate a triune God. This is true whether or not one accepts his argument that only the Trinity solves the problem of the one and many. Even granting for the sake of argument that there must be more than one person in the Godhead if the world is to make sense, this does not mandate that there are three persons. This they simply believe from Scripture. The same is true of other aspects of Christianity, such as the plan of salvation. Nowhere does Van Til demonstrate this is a transcendentally necessary precondition for making sense out of our world. Thus, there are fideistic elements in Van Til's form of presuppositionalism. It is interesting to note that even Van Til's defenders admit: "I believe that much of Van Til's presuppositionalism should be understood as an appeal to the heart rather than as a straightforward apologetic method" (Frame, *Cornelius Van Til* , 320).

Verifiability, Principle of. ***See*** **AYER, A. J .**

Verification, Kinds of. *Eschatology* (Gk. *eschatos* , “last things”) deals with what will happen in the end. *Verification* has to do with how to test the meaning or truth of a claim. Out of the school of logical positivism grew the verification principle. Such proponents as A. J. Ayer , following David Hume , originally claimed that for a statement to be meaningful it had to be either true by definition or else empirically verifiable through one or more of the senses. This proved too narrow, since on this ground the principle of empirical verifiability was not itself empirically verifiable. It too was meaningless.

In the wake of the death of strict verifiability grew a broadening of the principle to include other kinds of verification—experiential, historical, and eschatological. Most philosophers agreed that there had to be specific conditions under which one could know if a statement was meaningful or true. Antony Flew , following John Wis dom’s “invisible gardener” parable, argued that, unless there are criteria by which one could know if something is false, one cannot know it is true. Unless one can specify some condition(s) by which a claim could be falsified, there is no way to verify it either. Something has to be able to count against a proposition if evidence is to count for it. This means that, unless a theist can specify conditions under which we could know that God does not exist, there is no ground on which to claim that he does exist.

Types of Verification. Attempts to meet the challenge of verification of a truth claim fall into three categories, past, present, and future. Those that offer criteria for the present can be divided into *theistic proofs* and *experiential tests* .

Historical. Among Christian apologists, John W. Montgomery and Gary Habermas argue that the Christian truth claims can be verified from history by way of the resurrection of Christ (*see* RESURRECTION, EVIDENCE FOR). This view is called historical apologetics or historical verification.

Present Verification. Those who seek some sort of verification in the present fall into the broad categories of rational and experiential. The former offer traditional theistic proofs as verification. Traditional theists note that this is precisely what arguments for and against God’s existence do (*see* GOD, EVIDENCE FOR). If one could offer a disproof of God, then they could falsify the claim of theism (*see* GOD, ALLEGED DISPROOFS OF). Likewise, a proof for God can verify his existence. Anything short of a full proof still tends to verify or falsify.

Experiential tests can be special or general. The special ones are often called mystical and deal with unique religious experiences. The latter deal with experiences available to all. Some

apologists offer nonmystical experiential tests for the truthfulness of religious statements. Ian Ramsey spoke of the empirical fit of statements that evoke an experience of God (see Ramsey). Friedrich Schleiermacher spoke of a feeling of absolute dependence. Paul Tillich's sense of ultimate commitment fits this category. Some have developed an argument from religious experience as a test for their claims about God. Elton Trueblood is an evangelical who has tried this.

Eschatological Tests. Those coming from the empirical traditions tried other kinds of verification-falsification. John Hick offered the principle of eschatological verification (Hick, 252–74). Claims for immortality can be verified if, for example, we consciously observe our own funerals. We can know God exists after death if we have an experience of transcendent rapture and bliss that brings ultimate fulfillment.

Evaluation. Since other forms of verification are discussed as noted above, eschatological verification will be treated here. On the positive side, future verification does seem to meet the minimal criteria for meaning and truth. It does provide specific conditions under which we could know if certain religious claims are true.

On the other hand, the knowledge will be too late to do anything with it. Atheists (*see* ATHEISM) bank on the nonexistence of God and hell. If the atheist wakes up after death to find that he or she was in error on both counts it will be too late. That was the point of Pascal's Wager (*see* PASCAL, BLAISE). Even for the theist it could be too late. We want to know *now* whether it is worth sacrificing all for God, and which God is the true one. Why suffer for Christ, even to the point of death without evidence that Christianity is true (cf. 2 Cor. 11:22–28 ; 2 Tim. 3:12)? It might be deemed better to avoid all the misery and have a fun-filled life now.

Virgin Birth in Isaiah 7:14 . ***See*** **VIRGIN BIRTH OF CHRIST .**

Virgin Birth of Christ. The virgin birth of Christ is the perennial target of naturalistic Bible critics, who tend to regard it as the result of pagan influence on Christian writers of the second century. These Christians developed the myth in an emulation of stories from Greek mythology (*see* MIRACLES, MYTH AND ; MYTHOLOGY AND THE NEW TESTAMENT). One reason for the vehemence of these pronouncements is that, if true, the virgin birth establishes beyond question the life of Jesus as a supernatural intervention of God. If antisupernaturalists concede at this point, they have no case left.

Evidence for the Virgin Birth. *Credibility of Miracle.* At the root of the rejection of the virgin birth of Christ is the rejection of miracles (*see* MIRACLE ; MIRACLES, ARGUMENTS AGAINST ; MIRACLES IN THE BIBLE). A virgin birth is a miracle. If a theistic God exists, and there is evidence that he does (*see* COSMOLOGICAL ARGUMENT ; MIRACLES, APOLOGETIC VALUE OF), then miracles are automatically possible. For if there is a God who can act, then there can be acts of God. Indeed, there is every reason to believe that miracles have occurred from the instant of the founding of the universe (*see* BIG BANG ; EVOLUTION, COSMIC). Hence, the record of Jesus' virgin birth cannot be ruled as mythological in advance of looking at the evidence.

Anticipation of the Virgin Birth. Genesis 3:15 . Long before the New Testament recorded the vir gin birth, the Old Testament anticipated it. In fact, the earliest messianic prediction in the Bible (*see* PROPHECY, AS PROOF OF THE BIBLE) implies the virgin birth. Speaking to the Tempter (Serpent), "God said 'And I will put enmity between you and the woman, and between your offspring and hers; he will crush your head, and you will strike his heel.' " (Gen. 3:15).

That the coming Redeemer was to be the "offspring" or "seed" of the woman is important in a patriarchal culture. Why of a woman? Normally, descendants were traced through their father (cf. Gen. 5 , 11). Even the official genealogy of the Messiah in Matthew 1 is traced through Jesus' legal father Joseph. In the unique term, *seed of the woman* , there is implied that the messiah would come by a woman but not a natural father.

Jeremiah 22 (cf. 2 Samuel 7). Another possible intimation of the virgin birth in the Old Testament is found in the curse placed on Jeconiah which said: "Record this man as if childless, a man who will not prosper in his lifetime, for none of his offspring will prosper, none will sit on the throne of David or rule any more in Judah" (Jer. 22:30). The problem with this prediction is that Jesus was the descendant of the throne of David through Jeconiah (cf. Matt. 1:12).

However, since Joseph was only Jesus' *legal* father (by virtue of being engaged to Mary when she became pregnant), Jesus did not inherit the curse on Jeconiah's *actual* descendants. And since Jesus was the actual son of David through Mary according to Luke's matriarchal genealogy (Luke 3), he fulfilled the conditions of coming "from the loins of David" (2 Sam. 7:12–16) without losing legal rights to the throne of David by falling under the curse on Jeconiah. Thus, the virgin birth is implied in the consistent understanding of these Old Testament passages.

Isaiah 7:14 . Both the New Testament (Matt. 1:23) and many Christian apologists use Isaiah 7:14 as a predictive prophecy to prove the Bible (*see* PROPHECY, AS PROOF OF THE BIBLE) makes specific supernatural predictions centuries in advance. However, critics (*see* BIBLE CRITICISM), following the interpretation of many Bible scholars, say verse 16 refers to the birth of Isaiah's own child shortly before the fall of Samaria in 722 B.C . If so, this is not a prophecy about the virgin birth of Jesus and, it has no apologetic value.

Of the three interpretations of Isaiah 7:14 , only one is incompatible with a supernatural predictive understanding in reference to Christ's birth. That is that this prophecy referred only to Isaiah's day and was fulfilled in the natural birth of Maher-Shalal-Hash-Baz (Isa. 8:3). Of the other two possibilities, the prophecy could have had a double fulfillment—a preliminary one in Isaiah's child and the final one in Christ's birth. Or this prophecy refers only to the supernatural birth of Christ (Matt. 1:23).

Single Reference to a Natural Birth. Liberal scholars and some conservatives view Isaiah 7:14 as having reference only to the natural conception and birth of the son of the prophetess. They argue that the Hebrew *'alma* , sometimes translated "virgin" (KJV , ASV , NIV), refers to a young woman, whether married or unmarried, and should be translated "young maiden" (RSV). If the prophet had intended someone who was a virgin, he would have used *bethulah* (cf. Gen. 24:16 ; Levit. 21:3 ; Judg. 21:12). Further, the context reveals that the prophecy had a near-view fulfillment. Verse 16 declares that "before the boy knows enough to reject the wrong and choose the right, the land of the two kings you dread will be laid waste" (Isa. 7:16). This was literally fulfilled in the invasion of the Assyrian Tiglath Pileser.

Even in the broader context, only the birth of Maher-Shalal-Hash-Baz fit the prophecy. Isaiah 8:3 reads: "Then I went to the prophetess, and she conceived and gave birth to a son. And the LORD said to me, 'Name him Maher-Shalal-Hash-Baz' " (Isa. 8:3). The "sign" was promised to Ahaz (7:10) and would have made no sense if its fulfillment was after his time (7:14).

Therefore, the argument concludes that no prediction of Christ's virgin birth should be found here. The use by Matthew was either faulty or purely typological, with no predictive or apologetic value. Matthew uses the phrase "that it might be fulfilled" typologically in other cases (for example, 2:15 , 23). Matthew *applied* to Christ texts that were not messianic in their contexts.

There is a difficulty with the claim that *'alma* refers to someone who is married. Not once does the Old Testament use *'alma* to refer to a married person. *Bethulah* , on the other hand, is used for a married women (see Joel 1:8). Among texts using *'alma* to refer to a virgin are Genesis. 24:43 , Exodus 2:8 , Psalms 68:25 , Proverbs 30:19 , and Song of Solomon 1:3 ; 6:8 .

Some critics use and 1 Chronicles 15:20 and Psalm 46 as examples of *'alma* (or *alamoth*) referring to a married person. In Psalm 46 it is simply part of the title of the Psalm, "A Song for *Alamoth* ." Nothing in the title or psalm text helps us understand what *Alamoth* means, let alone

---

niv New International Version
rsv Revised Standard Version

whether it refers to a married person. It may be a musical notation, as one for the young women's choir to sing, or it could refer to some kind of musical accompaniment. The reference in 1 Chronicles 15:20 is similar. Music is being sung "with strings according to *Alamoth* ." Whatever this may mean, it does not prove that *'alma* means a married woman.

It can be argued that some features of the passage could not possibly refer only to the immediate circumstances: the supernatural nature of the "sign"; the reference to the one born as *Immanuel* , "God with us," and the reference to the whole "house of David" (vs. 13). The birth of Maher-Sha lal-Hash-Baz in the next chapter cannot fulfill 7:14 , since the one born was to be named "Immanuel."

While the "sign" was for Ahaz, it also was for the whole "house of David" (vs. 13). A distant sign can be for someone who lives long before the event, provided the benefits of the sign extend to the one for whom it is given. Since the "sign" was the birth of Messiah, the hope of salvation for Ahaz and everyone else, the sign was certainly for him.

But what of 7:16 ? The only meaningful way to understand this verse is that it refers to a child born in Isaiah's day. It should be kept in mind that 7:16 's reference to the Assyrian invasion is itself a supernatural predictive prophecy. The issue is not, then, whether 7:14 is predictive and was fulfilled. The question is whether it was fulfilled in three years or 700. There is a possibility that Isaiah 7:16 can be understood in terms of the virgin-birth-only view. Commentator William Hendriksen suggests this possible interpretation: "Behold, the virgin conceives and gives birth to a son. . . . Before this child, *who before my prophetic eye has already arrived* , shall know to refuse the evil and chose the good—i.e., *within a very short time* —the land whose two kings you abhor shall be deserted" (Hendriksen, 139). Or, if one wants to be more literal, the Assyrians did invade *before* the child Jesus grew up—long before.

It is generally acknowledged that not all usages of the phrase "that it might be fulfilled" entail a truly predictive prophecy, Isaiah 7:14 need not be one of them. Matthew cites Micah 5:2 , a clear prediction that the Christ would be born in Bethlehem (Matt. 2:5 ; see also Matt 3:3 ; 21:5 ; 22:43).

Double Reference. Even if the immediate context reveals that the prophecy had a near-view fulfillment in mind, this does not mean that there is not also a fuller fulfillment in a far-view reference to Christ. According to this view, many Old Testament prophecies have both a partial fulfillment in their day and a complete fulfillment in the distant future. Because of their desperate situation, God promised to give to Ahaz a sign that would assure the people that God would ultimately deliver them from bondage. This was a sign of the physical deliverance of Israel from the bondage of their enemies. It ultimately was a sign of the spiritual deliverance of spiritual Israel from bondage to Satan. The first aspect of the sign was fulfilled in the birth of Maher-Shalal-Hash-Baz, the second aspect in the birth of Jesus to the true virgin, Mary. Such double fulfillments are clear in other prophecies. Zechariah 12:10 can be applied both to Christ's first (John 19:37) and second comings (Rev. 1:7). Part of Isaiah 61 was fulfilled in Jesus (Isa. 61:1–2a ; cf. Luke 4:18–19). Part remains for the second coming (Isa. 61:2b–11).

According to the double-reference view, *'alma* refers to a young maiden who has never had sexual intercourse. The wife of Isaiah who bore the son in fulfillment of the first aspect of the prophecy was a virgin until she conceived by Isaiah. However, Mary, the mother of Jesus, was a complete fulfillment—a virgin when she conceived Jesus (Matthew 1:24–25).

Other arguments for this position also fit the supernatural birth-only view. Both of these views reject the idea that the significance of Isaiah 7:14 is exhausted in the natural birth of the prophetess's son.

Single Reference to a Supernatural Birth. Some scholars defend the position that Isa. 7:14 refers only to the supernatural virgin birth of Christ. Contrary to the first option, *'alma* is only translated "virgin" in the Old Testament and has no other options. The prophetess, therefore, does not qualify. The Greek Old Testament (*Septuagint*) translated *'alma* by the unambiguous word *parthenos* which can only mean "virgin." These translators, working before the advent, evidently believed that this was a prediction of the virgin birth of the Messiah. The inspired New Testament sanctioned this work by quoting from the *Septuagint* in Matt. 1:23 . Further, to translate *'alma* as a young girl who is not yet married, but would soon marry Isaiah means that it would be no longer a *virgin* who is conceiving, but a married woman. Isaiah 7:14 regards both the conception and birth as by a virgin.

Proponents of the supernatural-birth-only view point out that the prediction obviously goes beyond Ahaz to the whole "house of David" (Isa. 7:13). That hardly would apply to a natural birth by the prophetess in Isaiah's day. Also, the emphasis is on some wonderful, unheard of "sign" (Isa. 7:11–14). Why should an ordinary birth be understood as an extraordinary sign?

The whole context of Isaiah 7–11 (cf. Micah 5:2f .) forms an unbreakable chain of messianic prophecy:

> "Therefore the Lord himself will give you a sign: The virgin will be with child and will give birth to a son, and will call him Immanuel." [7:14]
>
> "Its outspread wings will cover the breadth of your land, O Immanuel!" [8:8b]
>
> For to us a child is born, to us a son is given, and the government will be on his shoulders. And he will be called Wonderful Counselor, Mighty God, Everlasting Father, Prince of Peace. [9:6]
>
> A shoot will come up from the stump of Jesse; from his roots a Branch will bear fruit. The Spirit of the LORD will rest on him—the Spirit of wisdom and of understanding, the Spirit of counsel and of power, the Spirit of knowledge and of the fear of the LORD —and he will delight in the fear of the LORD . He will not judge by what he sees with his eyes, or decide by what he hears with his ears; but with righteousness he will judge the needy, with justice he will give decisions for the poor of the earth. He will strike the earth with the rod of his mouth; with the breath of his lips he will slay the wicked. Righteousness will be his belt and faithfulness the sash round his waist. [11:1–5]

Matthew 1:22 both interprets Isaiah 7:14 as prophetic with the phrase "that it might be fulfilled" and adds an intensifying phrase, " *now all this was done* that it might be fulfilled . . ." (emphasis added). The manner of the quotation emphasizes the supernatural quality of the birth and the deity of Christ. Most scholars on both sides of the issue acknowledge that the phrase "that it might be fulfilled" does not necessarily refer to a predicative prophecy. However, indications are that Matthew 1:23 is an example of one that is predictive.

Finally, the same verse cannot refer to the birth of Maher-Shalal-Hash-Baz, for the same verse cannot mean two different (opposing things). If both the *Septuagint* and the inspired New Testament affirm that this refers to an actual virgin, it must refer to Christ alone.

Translating the Name Immanuel. A final issue that arises in this debate regards whether the name *Immanuel* mandates that Isaiah was referring to God incarnate. It does not. *Immanuel* can mean "God *is* with us." While the translation "God with us" seems to mean the name-bearer has deity, it is linguistically possible to translate "Immanuel" as "God is with us," which does not denote deity for the name-bearer. The name of a child can refer to a situation meaningful to the giver of the name. Thus Sarah named her son *Isaac* , meaning "laughter."

However, overall evidence indicates that the traditional translation is correct. When a point is made of a biblical name, it most often refers to the one who bears it: *Eve* , mother of the "living" (Gen. 3:20); *Noah* , related to the Hebrew for "comfort" (Gen. 5:29); *Abram* , "father" and *Abraham* , "father of many" (Gen. 17:5); *Sarai* , "princess," and *Sarah* , "princess of God" (Gen. 17:15); *Esau* , "hairy" (Gen. 25:25); *Jacob* , "He grasps the heel" or "deceiver," and *Israel* , "He struggles with God" (Gen. 27:36 ; 32:28); *Naomi* , "pleasant," and *Mara* , "bitter" (Ruth 1:20); *Nabal* , "fool" (1 Sam. 25:3 , 25); *Jesus* , " *Yahweh* saves" (Matt. 1:21); Peter, "rock" (Matt. 16:18); and Barnabas, "son of encouragement" (Acts 4:36).

Both the immediate and broad contexts show that *Immanuel* refers to the character of the one bearing the name. The event is a supernatural sign. The whole "house of David," is in view, especially within the "messianic chain" of Isaiah 7–11 . The New Testament interprets it as referring to Christ. All these factors support the view that it is a reference to Christ.

The Reliability of the New Testament Record. The evidence that Jesus was conceived of a virgin is based in the reliability of the New Testament documents and the New Testament witnesses. Both of these have been established with strong evidence. In fact, as is shown elsewhere, the evidence for the authenticity of the New Testament is greater than for that of any book from the ancient world (*see* ACTS, HISTORICITY OF ; NEW TESTAMENT, DATING OF ; NEW TESTAMENT MANUSCRIPTS ; NEW TESTAMENT, HISTORICITY OF ; NEW TESTAMENT MANUSCRIPTS ; NEW TESTAMENT, NON-CHRISTIAN SOURCES). It remains only to show that these records do testify to the virgin birth of Christ.

There can be no doubt that the New Testament clearly affirms that Christ was born of a virgin.

Matthew 1:18–23 . Matthew wrote:

> This is how the birth of Jesus Christ came about: His mother Mary was pledged to be married to Joseph, but *before they came together* , she was found to be with child through the Holy Spirit. Because Joseph her husband was a righteous man and did not want to expose her to public disgrace, *he had in mind to divorce her quietly* . But after he had considered this, an angel of the Lord appeared to him in a dream and said, “Joseph son of David, do not be afraid to take Mary home as your wife, because *what is conceived in her is from the Holy Spirit* . She will give birth to a son, and you are to give him the name Jesus, because he will save his people from their sins.” *All this took place to fulfil what the Lord had said through the prophet: “The virgin will be with child and will give birth to a son, and they will call him Immanuel”* —which means, “God with us.” [1:18–23]

The emphasized sections point to four factors which demonstrate that Christ was virgin born: First, Mary conceived *“before they came together , ”* thus revealing that it was not a natural conception. Second, Joseph’s initial reaction reveals that he had not had sexual intercourse with Mary, since when he found that she was pregnant *“he had in mind to divorce her quietly . ”* Third, the phrase *“what is conceived in her is from the Holy Spirit”* reveals the supernatural nature of the event. Finally, the citation from the *Septuagint* translation of Isaiah 7:14 about a *parthenos* , “virgin,” giving “birth” to a child indicates that Mary had not had sexual relations with anyone. She was not simply a virgin before the baby was conceived, but after it was conceived and even when it was born.

Luke 1:26–35 . Mark begins immediately with Jesus’ ministry, in accord with his stress on Christ as “Servant” (cf. 10:45). But we would expect a physician, Dr. Luke, to give attention to the circumstances of the birth. He begins with the announcement of Christ birth of a virgin:

> In the sixth month, God sent the angel Gabriel to Nazareth, a town in Galilee, to a *virgin pledged to be married* to a man named Joseph, a descendant of David. The *virgin’s* name was Mary. The angel went to her and said, “Greetings, you who are *highly favored!* The Lord is with you.” Mary was *greatly troubled* at his words and wondered what kind of greeting this might be. But the angel said to her, “Do not be afraid, Mary, you have found favor with God. You will be with child and give birth to a son, and you are to give him the name Jesus.” . . . “How will this be,” Mary asked the angel, “since I am a virgin?” The angel answered, “ *The Holy Spirit will come upon you, and the power of the Most High will overshadow you.* So the holy one to be born will be called the Son of God.” [1:26–35]

The emphasized text again demonstrates that the conception of Christ was supernatural: Mary was a “virgin” (*parthenos*), “pledged to be married.” Mary’s reaction of being “greatly troubled” and being “afraid,” as well as her astonished question, “How will this be?” reveals that she was a virgin. The angel gave some description of how the conception would happen through the Holy Spirit and “the power of the Most High.”

Luke 2:1–19 . When Luke records the birth he again stresses that Mary was only “pledged to be married,” which in that culture meant she had not yet had sexual intercourse with Joseph. The supernatural appearance of the angel and the heavenly choir demonstrate that something

extraordinary had happened. Mary's reaction was to contemplate in awe the mystery of it all. Obviously she knew something supernatural and holy had occurred (vs. 19).

John 2:2–11 . John stresses the overall divinity of Christ (*see* CHRIST, DEITY OF), and doesn't dwell on particulars. Nevertheless, there are a couple of strong intimations in John's Gospel that Jesus was virgin born. When Jesus performed his first miracle at Cana of Galilee his mother was obviously aware of his supernatural origin and confident that he could do the supernatural. John wrote: "On the third day a wedding took place at Cana in Galilee. Jesus' mother was there, and Jesus and his disciples had also been invited to the wedding. When the wine was gone, Jesus' mother said to him, *'They have no more wine . '* 'Dear woman, why do you involve me?' Jesus replied. *'My time has not yet come . '* His mother said to the servants, *'Do whatever he tells you . ' "* Indeed, the emphasized text reveals that Mary seems not only to believe that Jesus could do a miracle but to be requesting one, even though she had never seen him do one since this was Jesus' "first miracle" (vs. 11). Her understanding of his supernatural ability came from her past relationship with Jesus, including his birth.

John 8:41 . Even the insult of Jesus' enemies shows that the circumstances of his birth had stirred general gossip, as might be expected if the story spread. Jesus said to them, " 'You are doing the things your own father [Satan] does.' 'We are not illegitimate children,' they protested. 'The only Father we have is God himself." The Jews may have simply been responding defensively to Jesus' attack on their misplaced confidence in the fatherhood of Abraham. If so, it is an odd rejoinder. But it makes perfect sense if they were turning the argument back on Jesus' own legitimacy. Even Joseph had needed an angelic visitation to be convinced Mary's purity (Matt. 1:20). He and Mary likely faced a continuing shadow on their reputations. But Jesus faced the matter boldly in responding to his sniggering accusers, "Can any of you prove me guilty of sin?" (John 8:46).

Galatians 4:4 . The Epistles are filled with references to Jesus' sinlessness. In the context of teaching about the innate sinfulness that adheres to each descendant of Adam (for example, Romans 5), these teachings themselves indicate that God had done something different in Jesus (2 Cor. 5:21 ; Heb. 4:15 ; 1 John 3:3). Paul's reference to Jesus as "born of a woman" is relatively explicit. He wrote, "But when the time had fully come, God sent his Son, born of a woman, born under law" (Gal. 4:4). This refers to Genesis 3:15 . In a Jewish patriarchal culture one is begotten of a male (the father). To bring attention to being "born of a woman" is to show that something unusual is occurring—in Jesus' case a virgin birth.

The Charge of Mythology. It is difficult to deny that the New Testament teaches the virgin birth of Christ. The easier attack is to say that it is a myth patterned after Greek and Roman gods and was not really a historical event. For a full refutation of the charge that the Gospels evolved over a few generations into a myth-filled legend of Jesus' life, see in particular articles on the New Testament, plus see MITHRAISM , DIVINE BIRTH STORIES , BIBLE CRITICISM , JESUS SEMINAR , and Q DOCUMENT . In brief:

- Evidence is unassailable that the New Testament was written by contemporaries and eyewitnesses (cf. Luke 1:1–4). Second-century dating theories have now been thoroughly discredited by archaeological and manuscript evidence, allowing no time for

legend development (*see* NEW TESTAMENT MANUSCRIPTS ; NEW TESTAMENT WITNESSES, RELIABILITY OF , and NEW TESTAMENT, HISTORICITY OF).

- Virgin birth records do not show any of the standard literary marks of the myth genre (*see* MITHRAISM ; DIVINE BIRTH STORIES ; MYTHOLOGY AND THE NEW TESTAMENT).

- Persons, places, and events of Christ's birth precise and historically substantiated. Luke in particular goes to great pains to note his torical detail (Luke 3:1–2 ; for Luke's credentials as historian see ACTS, HISTORICITY OF).

- No Greek myth even remotely corresponds to the literal incarnation of a monotheistic God in human form (cf. John 1:1–3 , 14) by way of a literal virgin birth (Matt. 1:18–25). The Greeks were polytheists, not monotheists.

- Stories of Greek gods become human via miraculous events like a virgin birth postdated the time of Christ. Hence, if there is any influence it is from Christianity on mythology, not the reverse.

Conclusion. Historical evidence that Jesus was supernaturally conceived of a virgin is more than substantial. Indeed, there are more eyewitness contemporary records of the virgin birth than for most events from the ancient world. The records show no signs of myth development. Indeed, they are surrounded by historical references to real people, places, and times. Thus, there is no reason to believe Jesus was not literally, biologically born of a virgin just as the Bible claims he was. Only an unjustified antisupernatural bias is ground for any conclusion to the contrary.

A particular battleground text is Isaiah 7:14 , which is cited by Matthew. Critics argue that it has no predictive value. At worst the text refers to events in Isaiah's time only, which were applied typologically to Christ but have no predictive value. There is reason to believe the text refers, in part or whole, to a prediction of the virgin birth. In any case, there are other clear predictive texts in the Old Testament (*see* PROPHECY, AS PROOF OF THE BIBLE).

Voltaire, Francois-Marie. Francois-Marie Voltaire (1694–1778) was born in Paris to a well-to-do French family. He received a classical education under the Jesuits at Louis-le-Grand. He abandoned the study of law for literary pursuits. His strongly satirical penchant resulted in banishment to Holland in 1713 and imprisonment in the Bastille (1717–1718). Beginning with his epic poem, *La Henriade* (1723) on Henry IV (1366–1413), the last tolerant English king, Voltaire dominated the French stage for a half century.

Voltaire wrote *Letters Concerning the English Nation* , where there was more religious toleration at the time than in France. In the French edition, he included a critique of Blaise Pascal's (1623–1662) *Pensees* . *Lettres philosphiques* (1734) was an inspiration for liberal thinkers in the eighteenth century. *Essai sur les moeurs* (1756) was published while he lived in Geneva, and *Candide* , a satire on Gottfried Leibniz 's "best of all possible worlds" theodicy, was published in 1756. The themes of his earlier *Lettres* were developed more fully later in *Dictionare philosophique* (1764).

Voltaire's Deistic God. Although he used the term "theist" (*see* THEISM) to describe his philosophy, Voltaire was a deist (*see* DEISM). He believed in a Creator who did not supernaturally intervene in the world. His strong belief in the design of nature kept Voltaire from atheism , a view that was later attacked by Charles Darwin (1809–1882).

Voltaire did not believe that the existence of God is inborn. He observed that some nations have no knowledge of a creating Deity. "Every man comes into the world with a nose and five fingers, but not one possesses at birth any knowledge of God" (*Philosophical Letters* , 39–40). Like consciousness of a moral law, the sense of deity develops gradually, though inevitably as one contemplates the evidence God placed in the natural world.

Evidence for the Existence of God. He accepted many of Thomas Aquinas's arguments for the existence of God. His cosmological argument is tight and persuasive:

1. I exist; so something exists.

2. If something exists, something has existed from all eternity; for what exists either is self-existent or has had its existence communicated to it by another being.

3. If what exists is self-existent, it exists *necessarily* ; it always has existed necessarily: and it is God.

4. If what exists has had existence communicated to it from another being, and that other being has derived *its* existence from a third, who must necessarily be God (*Voltaire and Rousseau against the Atheists* , 42–43).

His teleological argument followed the form of William Paley 's (1743–1805): "I shall always be of the opinion that a clock proves a clock-maker, and that the universe proves a God." He adds, "For my part, in nature as an art, I see nothing but final causes; and I as much believe that apple-trees were made for the purpose of bearing apples, as the watches are made for the purpose of showing the time of day" (ibid., 35). "Can it be that these *copies* imply an intelligent maker, and the *originals* do nothing of the kind? . . . "This of itself appears to me the most convincing demonstration of the existence of a God, and I cannot conceive in what way it can be answered" (ibid., 9).

The Attributes of God. Voltaire believed, with Aquinas, that the essential attributes of God, the First Mover, could be inferred from nature. "This one mover is very *powerful* , otherwise he could not regulate so vast and complicated a machine [as the universe]." Likewise, "He is very *intelligent* , since we, who are intelligent, can produce nothing equal to the least of the springs of this machine." Further, "He is a *necessary* being, inasmuch as the machine could not exist, but for him. . . . He is *eternal* , for he cannot have sprung from nonentity, which being nothing can produce nothing" (ibid., 9–10). Voltaire seemed to accept God's *simplicity* or indivisibility. For he speaks of the "feat to convey a false idea of God, by appearing to consider him as composed of parts—and those, too, unconnected parts—parts hostile to each other" (ibid., 24).

However, Voltaire equivocates on God's *infinity* . He said, "I am forced to admit eternity, but I am not forced to admit that there is any such thing as infinity" (ibid., 12). "I perceive only that there is something which is more powerful than myself, but nothing further" (ibid., 42). "I know no reason why God should be infinite" (ibid., 11). However, while God is not infinite in his being, Voltaire seems to acknowledge God's infinite in duration (eternity) power (omnipotent), "for what restraint is there upon him?" (ibid., 44). Voltaire appears to foreshadow the later finite God views of John Stuart Mill .

What God wills, he wills with necessity. For he is a Necessary Being. This necessity does not nullify free will. "I necessarily will that I may be happy. I do not will this the less because I *necessarily* will it; on the contrary, I will it only the more forcibly from the fact that my will is invincible" (ibid., 16).

God expects his creatures to live by the natural moral law. In a very frank passage, he wrote: "What other restraint could be laid on cupidity and on secret and unpunished transgressions than the idea of an eternal master who sees us, and will judge even our most hidden thoughts?" (ibid., 35). It is not clear how Voltaire reconciled this with his doubts about immortality, unless all the judgment was to come in this life, something not apparent to most people.

Other Beliefs of Voltaire. *Ethics.* Ethics was Voltaire's chief concern. Dogmas divide, but ethics unite. All civil law should be based on the moral law common to all men rooted in a common human nature. Justice was the underlying principle. He hated injustice, cruelty, and oppression. Happiness of the individual and society were the chief goal of ethical behavior.

Voltaire had a naturalistic view of both religion and ethics. People are born with a moral capacity, if not with moral instincts. However derived, they are the foundation of society. Without them, there is no possibility to operate a humane world.

Special Providence and Miracles . God was necessary to get the world going, but he has not manifested any special providential care toward it since then. Indeed, the general theme of Voltaire's *Zadig* seem to have been to question God's justice. Voltaire distinguished between God's general and special providence. He allowed for the former in the deistic sense that God endowed human beings with reason and feelings of benevolence, but he denies the latter. The evil in the world stood between him and an omnibenevolent God (*see* EVIL, PROBLEM OF).

As for miracles, "not a single one of the prophecies that Pascal referred to can be honestly applied to Christ; . . . his discussion of miracles was pure nonsense" (Torrey, *Voltaire and the English Deists* , 264).

Immortality of the Soul. Voltaire's view on the existence of mind and soul gave rise to later materialism, though he remained skeptical. Rooted in English empiricism, Voltaire eventually concluded: "I cannot doubt that God has not granted sensations, memory, and consequently ideas, to organized matter" (ibid., 264). Throughout his life he maintained a skeptical view of the soul, his expression in the last chapter of *Micromegas* (1752) humorously sums up his view: "May God, if there is one, save my soul, if I have one." Others developed Voltaire's skepticism about the soul into a complete atheistic materialism .

Inhumane Christianity. His anonymous poem *Epitre a Uranie* (1722) was a diatribe against Christian belief in a jealous, tyrannical deity of the Old Testament and the inhumane condemnation of all pagans to eternal punishment. Addressing the benevolent, merciful deity he adored, Voltaire prayed: "I am not a Christian that I may love thee more" (ibid., 266). Voltaire denounced all revealed religions (*see* REVELATION, SPECIAL).

Voltaire's attack on Christianity fired on one of its most noted defenders of his time, Pascal . In Voltaire's twenty-fifth philosophical letter, he focused on Pascal's Christian view of the Fall, redemption, divine providence, predestination, and grace. He believed Pascal was neither enlightened nor humanitarian and that he encouraged fanaticism. As for Pascal's "wager," Voltaire was shocked that he would resort to such a means to prove God. Voltaire replied "the heavens declare the glory of God."

Other than this anonymous work, Voltaire reserved his strongest criticism of Christianity until after his retirement in the early 1760s. In his account of the renegade priest, Jean Meslier (1762), he wrote:

> What then are the vain resources of Christians? Their moral principles? These are basi cally the same in all religions. Their distinctives are in cruel dogmas [that] have arisen from them and have preached persecution and dissension. Should we believe their miracles? But what people have not theirs and what philosophic minds do not despise these fables? . . . Their prophecies? Has not their falsity been demonstrated? . . . Their morals? Are they not often infamous? The establishment of their religion? But did it not

> begin with fanaticism, was it not fostered by intrigue, and the edifice visibly maintained by force? Its doctrine? But is not that the height of absurdity? [ibid., 266]

For Voltaire "the establishment of Christianity [was] a grievous aberration of the human mind, a halt in the progress of humanity" (ibid., 267).

Voltaire found arguments against miracles (*see* MIRACLES, ARGUMENTS AGAINST) from David Hume and English deists. In Anthony Collins he discovered arguments against predictive prophecy. And from French rationalists he was convinced of countless contradictions and inconsistencies in the Bible.

As for Christ, he was accepted as his master over other religious leaders, such as Confucius (551–479 B.C .), whom he admired. However, he depicted Christ as a deist or humanist. Voltaire rejected the Christ of the Gospels, though, as Thomas Jefferson (1743–1826), he accepted Christ's essential moral teachings as reported there. The only sense in which Voltaire's views can be called Christian is in the deistic sense. The core Christian theistic and moral teachings of the fatherhood of God and the brotherhood of humankind are common to all religions as revealed in nature (see his *Traite sur la tolerance* [1763]).

Evil. Citing Epicurus (341–270 B.C .), Voltaire agreed that: "Either God can remove evil from the world and will not; or being willing to do so, cannot; or he neither can or will; or he is both able and willing." But "if he is willing and cannot, he is not omnipotent. If he can but will not, he is not benevolent. If he is neither willing nor able, he is neither omnipotent nor benevolent. . . . if he both wants to and can, whence comes evil over the face of the earth?" (cited in *Voltaire and the English Deists* , 265).

Voltaire's writings on evil were directed against the optimism of Leibniz and Alexander Pope (1688–1744). His classic satire *Candide* was directed against this "best of all possible worlds" in the most cutting way. He rejected the optimistic "whatever is, is good" or "partial ill is universal good" for a stoic acceptance of fate and a desire to make life endurable in spite of it (*see* EVIL, PROBLEMS OF).

Religious Attitude. Despite his antipathy to Christianity and supernatural religion, Voltaire had a deep religious experience of his own and strongly defended natural religion. As Norman Torrey put it, "he felt a genuine sense of awe and veneration, expressed far too often to be ignored, that could have come only from the personal mystical experience of cosmic grandeur" (*Voltaire and the English Deists* , 265).

Evaluation. *Positive Aspects.* Voltaire ardently defended many of the same things that theists, moralists, and freedom lovers have cherished. He defended God's existence, exposed superstition, maintained a deeply religious attitude, valued human reason in the pursuit of truth, and had a high sense of morality and justice.

With theists Voltaire spoke against atheism. He wrote: "I have always been convinced that atheism cannot do any good, and may do very great harm. I have pointed to the infinite difference between the sages who have written against superstition and the madmen who have

written against God. There is neither philosophy nor morality in any system of atheism" (*Philosophical Letters* , 33). He adds, "it would not be difficult to prove from history that atheism may sometimes produce as much evil as the most barbarous superstitions" (ibid., 29). Indeed, "it is altogether probable that all the powerful men who have passed their lives in that round of crimes which fools denominate *strokes of policy, revolutionary remedies, art of governing, & c* ., have been atheists" (ibid., 33).

Having long admired the English, Voltaire was influenced by John Locke (1632–1704) and Isaac Newton (1642–1727). Newton's law of gravitation inspired in Voltaire a deep sense of awe for nature and its supremely intelligent Cause. He wrote: "The same gravitation penetrates into all the heavenly bodies, and impels them toward each other . . . and this let me remark in passing, establishes what Plato had divined (I know not how), that the world is the work of the *Everlasting Geometer* " (ibid., 7).

Voltaire correctly perceived that evil is one of the great problems for a theist. He also saw clearly the form of the objection, namely, the seeming impossibility of God being both all-good and all-powerful without defeating evil. What he did not see was that there is a way between the horns of the dilemma (*see* EVIL, PROBLEM OF).

Those who believe in rational religion can be grateful for Voltaire's exposure of superstition and ignorance in religion. This emphasis aids greatly the pursuit of the truth. It is an objective check on what would otherwise be unbridled passion and irrationality.

Voltaire learned well from Locke and English deists the need for religious freedom and tolerance. Locke's influence on Jefferson was a significant influence on the American Revolution. Forced religion, involving as it does a free expression of the soul, is a contradiction in terms. It is the obligation of government to protect freedom of religion, not to enforce a State religion.

Negative Critiques. As a form of deism , Voltaire's theology is vulnerable to the inconsistency inherent in deism. As noted in the article DEISM , it admits the big miracle (creation of the universe) but denies smaller ones. It was common for desists to follow the arguments against miracles laid down by Benedict Spinoza (1632–1677) and Hume . These arguments have been shown to be without foundation, begging the question, and designed to favor naturalism (*see* MIRACLES, ARGUMENTS AGAINST).

From a purely natural point of view, one might sympathize with Voltaire's doubts about immortality. However, in view of the overwhelming evidence for the resurrection of Christ (*see* RESURRECTION, EVIDENCE FOR), there is every reason to believe in life after death. Indeed, Voltaire does not appear to be consistent with his own belief in a God who judges all men, for he knows that not all evils are justly punished in this life. As many other deists, skeptics, and atheists, Voltaire presses the dilemma of evil. But in so doing he undermines his own view. For how can we know there are ultimate injustices unless we posit an ultimate standard of justice? But if God is ultimately just, then the problem of evil is resolved. For the unpunished evils we see are only immediately unjust. If God is perfectly just, he will take care of them at the time he decides (*see* EVIL, PROBLEM OF).

Voltaire's dilemma is a false one. For the fact that evil is *not yet* defeated does not mean it will not be. If God is all-good, he wants to defeat it. If he is all-powerful, he can defeat it. And if he is both of those things and evil is *not yet* defeated, it *will be* .

It was common for "enlightenment" thinkers to take pot-shots at the injustice of hell. But their presupposed standard of ultimate justice demands it. Otherwise, there is no ultimate justice and God is not ultimately just, which he must be since the very concept of an ultimate injustice implies an ultimate Justice.

Also typical of this period was negative Bible criticism. But these criticisms were built on an unjustified antisupernaturalism and they were pre-archaeological. The biblical texts have since been overwhelmingly substantiated (*see* ACTS, HISTORICITY OF ; ARCHAEOLOGY, OLD TESTAMENT ; ARCHAEOLOGY, NEW TESTAMENT ; NEW TESTAMENT, HISTORICITY OF).

Like others who adopted the history-of-religion theory's unjustified evolutionary hypothesis of animism to henotheism to polytheism to monotheism, Voltaire bought into the notion that the Old Testament God was a vengeful tribal deity in contrast to the New Testament's God of love. As a matter of fact, God is described as loving and merciful much more in the Old Testament (see, for example, Gen. 43:14 ; Exod. 20:6 ; Num. 14:19 ; Deut. 7:9 ; Psalm 136 ; Jonah 4:2). The most severe passages on eternal judgment are found in the New Testament (for example, Matt. 25:41 ; Luke 16:19–31 ; Rev. 20:11–15).

Warfield, B. B. Benjamin Breckinridge Warfield (1851–1921) was born near Lexington, Kentucky. He was graduated from the College of New Jersey (later Princeton University) in 1871 and Princeton Theological Seminary in 1876. After studying at the University of Leipzig (1876–1877), he supplied at the First Presbyterian Church in Baltimore, Maryland (1877–1878). He taught at Western Theological Seminary, Allegheny, Pennsylvania (1878–1887), before being called to teach theology at Princeton Theological Seminary, where he taught from 1887 until his death.

In addition to his biblical and theological writings, Warfield wrote apologetically related books and articles, including *An Introduction to the Textual Criticism of the New Testament* (1886), *The Gospel of the Incarnation* (1893), *The Lord of Glory* (1907), *Counterfeit Miracles* (1918), *Revelation and Inspiration* (1927), *Christology and Criticism* (1929), and *Studies in Tertullian and Augustine* (1930). His articles with an apologetic theme included "Revelation" in the *International Standard Bible Encyclopedia* (1915),"On the Antiquity and the Unity of the Human Race," and "The Idea of Systematic Theology."

Warfield's View of Apologetics. John Calvin and the Scottish Presbyterian Westminster Confession tradition were anchoring theological influences on Warfield. He greatly respected his predecessor at Princeton, Charles Hodge. James McCosh implanted the Scottish realism of Thomas Reid (1710–1796) in Warfield's thinking. He also was heavily influenced by Augustine and, to a lesser degree, by Thomas Aquinas.

Warfield was preeminently an apologetical theologian. He stressed the need for apologetics and a rational faith founded on evidence.

Definition of Apologetics. Warfield defined apologetics as "the systematically organized vindication of Christianity in all its elements and details, against all opposition . . ." (*Works* , 9:5). "What apologetics undertakes to establish is just this Christianity itself—including all its 'details' and involving its 'essence'—in its unexplicated and uncompressed entirety, as the absolute religion" (ibid., 9).

Relation of Apologetics and Theology. In his "Idea of Systematic Theology" Warfield spelled out the relation of apologetics to theology: "philosophical apologetics is . . . presupposed in and underlies the structure of scientific theology. . . . Apologetical Theology prepares the way for all

theology by establishing its necessary presuppositions without which no theology is possible—the existence and essential nature of God (*see* GOD, NATURE OF), the religious nature of man which enables him to receive a revelation from God, the possibility of a revelation from God, the possibility of a revelation and its actual realization in the Scriptures" (ibid., 9:55, 64). It is "the function of apologetics to investigate, expiate, and establish the grounds on which a theology—a science, or systematized knowledge of God—is possible" (ibid., 9:4).

The Importance of Apologetics. Few apologists have ever envisioned a greater role for apologetics than did Warfield. The 1887 inaugural address of his professorship at Princeton, "The Idea of Systematic Theology Considered as a Science," emphasized apologetics as "a primary part, . . . a conquering part" in the spread of Christian faith. "It is the distinction of Christianity that it has come into the world clothed with the mission to *reason* its way to dominion. Other religions may appeal to the sword, or seek some other way to propagate themselves. Christianity makes its appeal to right reason, and stands out among all religions, therefore, as distinctively the 'Apologetic religion.' It is solely by reasoning that it has come thus far on its way to kingship" (*Selected Shorter Writings* , 2:99–100).

On the relation of apologetics to the Bible he said, "It is easy, of course, to say that a Christian man must take his standpoint not *above* the Scriptures, but *in* the Scriptures. He very certainly must. But surely he must first *have* Scriptures, authenticated to him as such, before he can take his standpoint in them" (ibid., 2:98).

Faith and Reason. Warfield believed that the *indicia* (demonstrations of the Bible's divine character) work side by side with the Holy Spirit to convince people of the truth of the Bible. Warfield agreed with Calvin that proofs cannot bring people to Christ or even convince them of the divine authority of Scripture. Nonetheless, Warfield believed that the Holy Spirit exercises his convincing power through them.

Contrary to presuppositional apologetics (*see* PRESUPPOSITIONAL APOLOGETICS), there is common ground with unbelievers. "The world of facts is open to all people and all can be convinced of God's existence and the truth of Scripture through them by the power of reasoning of a redeemed thinker." In his 1908 article on "Apologetics"he affirmed that faith is a moral act and a gift of God. However, it is also a matter of conviction become confidence. And all forms of conviction must have a reasonable ground. "It is not faith but reason which investigates the nature and validity of this ground. . . . We believe in Christ because it is rational to believe in him, not even though it be irrational" (*Works* , 9:15).

As a Calvinist, Warfield said that mere reasoning cannot make a Christian because of the inability for sinners to come to God under the curse of the fall. The problem is not that faith does not terminate on evidence, but that a dead soul cannot respond to evidence. However, on the other hand, the Holy Spirit does not bring anyone to salvation apart from evidence. The Spirit works to prepare the soul to receive the evidence. Therefore, men and women do not become Christians by apologetics, but apologetics supplies "the systematically organized basis on which the faith of Christian men must rest" (ibid.).

To be sure, not every Christian can do apologetics, nor are many even aware of the rational justification of their faith. However, the systematic proof that is implicit in every act of Christian faith is a product of apologetics. It is not necessary for salvation to be conscious of these proofs or to explicitly understand them. Nonetheless, such understanding is necessary for the vindication of faith (ibid., 16).

The Various Steps of Apologetics. As a proponent of classical apologetics (*see* CLASSICAL APOLOGETICS), Warfield believed apologetics could be divided into demonstrations of the being and nature of God (*see* GOD, EVIDENCE FOR), the divine origin and authority of Christianity, and the superiority of Christianity over other systems (ibid., 10). He carved up the field by functions and which arguments meet which opponents in battle:

Philosophical apologetics establishes that God exists as a personal Spirit, as Creator, Preserver, and Governor. Philosophical apologetics tackles antitheistic theories.

Psychological apologetics establishes the religious nature of humankind and the validity of human religious sensitivities. It involves the psychology, philosophy, and phenomena of religion. It faces naturalist attacks from "comparative religion" or "history of religions" movements.

An unnamed form might be called *revelational apologetics* , for it reveals the reality of divine governance of history and the actual relationship in which God stands to his world and the ways he makes himself known.

Historical apologetics presents the case for the divine origin of Christianity as God's revealed religion. It discusses all the topics that fall under the popular category heading of the "evidences for Christianity."

Biblical apologetics establishes the trustworthiness of the Bible as a God-revealed document for the redemption of sinners (ibid., 13).

Inspiration of the Bible. Warfield may be best known for his strong defense of the inspiration (*see* BIBLE, EVIDENCE FOR) and inerrancy (*see* BIBLE, ALLEGED ERRORS IN) of the Bible in the originally written texts or "autographs." Warfield produced two major works: *Revelation and Inspiration* and *Limited Inspiration* [*Inerrancy*] and co-authored *Inspiration* with A. A. Hodge.

Legacy. Warfield's views on apologetics have made a lasting impact on the American scene. The works defending an inspired Scripture had a strong influence on the inerrancy movement many years later among evangelicals known as the International Council on Biblical Inerrancy (see Geisler, *Inerrancy*). In general, Warfield is a spiritual ancestor of most classical apologists of the late twentieth century, such leaders as John Gerstner, Kenneth Kantzer, Arthur Lindsley, and R. C. Sproul (see Sproul).

Wellhausen, Julius. Julius Wellhausen (1844–1918) was a German Bible scholar known as the father of modern biblical criticism (*see* BIBLE CRITICISM). He studied at Gottingen and taught at Gottingen, Greifswald, Halle, Marburg and finally returned to Gottingen as historian, philologist, and master of Hebrew, Aramaic, Syriac, and Arabic.

Wellhausen’s most significant work, which presented a mature development of the historical critical method, was *Introduction to the History of Israel* , 1878, 6th ed., 1905. He also wrote “Israel” in the 9th ed. of *Encyclopedia Britannica* , 1878, and *Die Komposition des Hexateuchs* (*The Composition of the Hexateuch*), 1877.

Wellhausen was influenced by W. F. G. Hegel and Wilhelm Vatke, who applied the Hegelian dialectic of historical development to the development of the religion of Israel. From this platform Wellhausen developed the documentary hypothesis.

Documentary Hypothesis. Wellhausen sought to show that the Old Testament as it is possessed by the church is a postexilic product of Judaism with its priestly hierarchy. Religion among the Hebrews has actually developed by a natural evolution, as it had among all other peoples, from fetishism (belief in or worship of objects which are held by superstitious people to possess magical power), to polytheism , to henotheism which is the belief in or worship of one

God without denying the existence of other gods), to ethical monotheism. The last stage was achieved by the writings of the prophets of the eighth century B.C . culminating in the preaching of the Deuteronomists. The final development was the institutionalization of this religion in the legislation of the priestly code and the rewriting of Israel's history in the light of this latest religious perspective (*see* ARCHAEOLOGY, OLD TESTAMENT ; BIBLE, EVIDENCE FOR ; OLD TESTAMENT MANUSCRIPTS ; PENTATEUCH, MOSAIC AUTHORSHIP OF ; REDACTION CRITICISM, OLD TESTAMENT ; SPINOZA, BENEDICT ; STRAUSS, DAVID).

The result is the famous J-E-P-D theory of the authorship of the Pentateuch. According to this theory, Moses did not write the Pentateuch (Genesis–Deuteronomy), as both Jewish and Christian scholars have held through the centuries. Rather, it was written by a number of persons over a long period. These documents are identified as:

1. the *Jehovist* or *Yahwist* (*J*), ninth century B.C .;
2. the *Elohist* (*E*), eighth century B.C .;
3. the *Deuteronomist* (*D*), ca. the time of Josiah, 640–609 B.C ., and
4. the *Priestly* (*P*), ca. fifth century B.C .

The Pentateuch was a mosaic put together from different authors who can be identified partly by their various uses of *Jehovah* (*Yahweh*), or *Elohim* for God or by references to the work of the priests (*P*) or to laws (*D*).

One or more "redactors" or editor/compilers brought together all of this evolutionary development within the religious history of Israel. Wellhausen assumes that there is a "popular religion" of Israel which must be discovered among the many impositions by later redactors, and when this religion is discovered it reveals its form at each stage in the evolutionary development.

Evaluation. Wellhausen's work is critiqued in the article BIBLE CRITICISM , PENTATEUCH, MOSAIC AUTHORSHIP OF , J-E-P-D THEORY , and related entries. In general, Wellhausen's thought has guided the work of "negative" historical-critical efforts to undermine the authority of Scripture. The theory is still widely believed, though archaeological and other research has undermined its assumptions.

The Collapse of the J-E-P-D Theory. Deuteronomy provides one example of arguments refuting the theories first developed by Wellhausen: Textually, Deuteronomy claims that "these are the words of Moses (1:1 ; 4:44 ; 29:1). To deny this is to claim the book of the law is a total fraud. Joshua, Moses' immediate successor, attributed the book of Deuteronomy to Moses (Josh. 1:7), as does the rest of the Old Testament (Judg. 3:4 ; 1 Kings 2:3 ; 2 Kings 14:6 ; Ezra 3:2 ; Neh. 1:7 ; Ps. 103:7 ; Dan. 9:11 ; Mal. 4:4). Deuteronomy is the book of the Law most quoted in the New Testament, with attribution to Moses (Acts 3:22 ; Rom. 10:19 ; 1 Cor. 9:9). Jesus quoted Deuteronomy 6:13 , 16 in resisting the Devil (Matt. 4:7 , 10), and he also directly attributed it to the hand of Moses (Mark 7:10 ; Luke 20:28).

Geographical and historical details of the book display a firsthand acquaintance with sites Moses would have known; its covenantal forms also place it at the period of Moses (Kline, all).

Apparent references within the book to a later period are easily explained. Deuteronomy 34 , with its description of Moses' death, was probably written by his successor Joshua, in accordance with the custom of the day.

Moses and the Entire Pentateuch. The evidence that Moses wrote Deuteronomy destroys the J-E-P-D theory as such. Variations of the theory still deny Moses is the author of all five books.

Four of the five books (excepting Genesis) claim to be written by Moses (see Exod. 24:4 ; Levit. 1:1 ; 4:1 ; 5:14 ; Numbers 1:1 ; 33:2 , and as noted above in Deuteronomy. The lack of a direct claim in Genesis is understandable since the events occurred before Moses' birth. In this book, Moses apparently acted something as an editor and compiler himself, basing his work on records preserved from the patriarchs. This is indicated by the frequent formula "this is the history of" (as in 5:1 ; 10:1 , and 25:19). There is considerable evidence that Moses composed what we know as Genesis:

1. Moses had access to the family histories which traced their ancestry to Abraham and the beginning. As leader Moses was familiar with God's promises to give them Palestine (Gen. 12:1–3 ; 13:15–1 ; 15:18–21 ; 17:8 ; 26:3) after delivering them from Egypt (46:3–4 ; cf. Exod. 2:24).

2. Citations of Genesis identify it as part of the "law of Moses" (Luke 24:44 ; cf. 2 Chron. 25:4). These are found in Moses' own Deuteronomy 1:8 ; 2 Kings 13:23 ; 1 Chronicles 1 , and Matt. 19:8 . It is lumped with the other four as books of Moses in Luke 24:27 , 44 .

3. From earliest times, Jewish teaching has attributed Genesis to Moses. References are found throughout the Jewish Talmud and in other Jewish writers, such as Philo and Josephus.

4. Exodus through Deuteronomy are incomplete without the background of Genesis. Together they form a narrative unit.

With the possible exception of some parenthetical explanatory material and updating of place names that changed, the language and culture of the entire Pentateuch reflects that of Moses' day (*see* ALBRIGHT, WILLIAM F .).

Other evidence against Wellhausen's hypothesis. Virtually the whole corpus of archaeological evidence has tended to prove Wellhausen's evolutionary theory wrong. Most significant is the earliest findings at Ebla, Syria. The Ebla tablets confirm monotheism extremely early, as opposed to Wellhausen's supposition that it was a late evolutionary development from earlier polytheism and henotheism.

Wells, G. A. Modern scholars have denied that Jesus did and said the things attributed to him by the Gospels (*see* BIBLE CRITICISM ; JESUS SEMINAR). Few, however, have joined with G. A. Wells in denying that the man Jesus of Nazareth ever existed. It is, perhaps, the curious nature of his ideas that has earned him some interest in theological circles. Wells believes that, if Jesus did exist, he was an obscure person whose story became patterned after mystery religions (*see* MITHRAISM) and Jewish wisdom literature.

In his books, *Did Jesus Exist?* and *The Historical Evidence for Jesus* , Wells sees four stages in the development of the early ideas about Christ:

- Stage one—Paul's Epistles, written by 60. This "Jesus" was viewed as a supernatural being who spent a brief but obscure time on earth, perhaps centuries earlier (*Did Jesus Exist?* chap. 5).

- Stage two—non-Pauline canonical Epistles, completed in the 70s. Jesus is now said to have lived on earth recently.

- Stage three—the Pastoral Epistles and Ignatius, ca. 80s. Jesus is linked with historical figures such as Pilate and is said to have died at the hands of the romans.

- Stage four—the Gospels (ca. 90, Mark to ca. 120, John). The Gospels are more or less fabricated. They were accepted by the early church uncritically, since they did not conflict with established beliefs (see Habermas, chap. 2).

In view of these stages, Wells believes that historical facts about Jesus came late. He contends that Paul was uninterested in historical details, only a divine Christ. Jesus' concept of wisdom, plus mystery religions, influenced the early picture. Early Christianity began without any contact with a historical Jesus. Thus, nothing can be known about such a man, since there is no firsthand information. The Gospels simply guessed about Jesus' life, accepting what fit with their general views. If Jesus existed, he was probably an obscure peasant.

Difficulties with Wells's Thesis. Problems with this type of argument are covered in articles on the historicity of the New Testament and Jesus. See, in particular, ACTS, HISTORICITY OF ; ARCHAEOLOGY, NEW TESTAMENT ; BIBLE, EVIDENCE FOR ; CHRIST, UNIQUENESS OF ; CHRIST OF FAITH VS. JESUS OF HISTORY ; JESUS, NON-CHRISTIAN SOURCES ; JESUS SEMINAR ; NEW TESTAMENT, DATING THE ; NEW TESTAMENT, HISTORICITY OF , and SON OF MAN, JESUS AS .

The first problem is that Wells, with most other critics, accepts Paul's basic writings as in circulation by 60. But this damages his thesis. Even in these books, written while eyewitnesses were still alive, there is ample evidence of historical interest. Paul speaks of Jesus' virgin birth (Gal. 4:4), sinless life (2 Cor. 5:21), death on the cross (1 Cor. 15:3 ; Gal. 3:13), resurrection (1 Cor. 15:4 , 12–20), and postresurrection appearances (1 Cor. 15:3–8). He appealed to the fact that literally hundreds of eyewitnesses could verify his words. Paul also gives historical details about Jesus' immediate followers, the apostles (1 Cor. 15:5–8 ; Gal. 1:18–19 ; 2).

Another pillar of Wells's argument crumbles in his dating of the Gospels. Even some critical scholars place Mark at 65 and Matthew and Luke prior to 90. As noted in the article NEW TESTAMENT, HISTORICITY OF , that is about as late as is reasonable, given the evidence. Actual dates may be quite a bit earlier. Certainly the dating cannot fit the "stage four" scenario. Paleographers speak for most legitimate recent scholarship when he concludes that "every book of the New Testament was written by a baptized Jew between the forties and the eighties of the first century A.D . (very probably sometime between 50 and 75 A.D ." ("Toward a More Conservative View," 359). Carl Hemer provides powerful evidence that Acts was written between 60–62. Luke was written before Acts (see Acts 1:1), placing it no later than 62 (*see* ACTS, HISTORICITY OF). Rather than being later additions as Wells suggests, the interwoven detail and accuracy of the historical data—especially in Luke and Acts strongly present an early date.

Finally, the John Rylands papyri fragment (*see* NEW TESTAMENT MANUSCRIPTS) is good evidence that John was written before the end of the first century. The possibility of New Testament fragments from the mid-first-century at Qumran, if substantiated, will definitively put to rest any talk of late Gospels.

Christianity and Mystery Religions. Contrary to Wells, accounts of Christ's life was not based on the mystery religions (*see* MITHRAISM). According to a contemporary account by Paul (1 Corinthians 15), the Gospels were based on eyewitness testimony. In view of this, Wolfhart Pannenberg concludes, "Under such circumstances it is an idle venture to make parallels in the history of religions responsible for the *emergence* of the primitive Christian message about Jesus' resurrection" (Pannenberg, 91).

Christianity was monotheistic, and the mystery religions by nature were polytheistic (*see* POLYTHEISM). The gods of the mystery religions were not incarnated as human beings (see John 1:1 , 14). The stories of gods coming back from the dead are not resurrections in the Christian sense, but rather examples of reincarnation (*see* MITHRAISM).

And the final, fatal flaw is that these stories postdate the time of Christ and the Gospels (*see* NEW TESTAMENT, DATING OF).

Historical Methodology. Wells's contention that the Gospels were guesswork or fabrications about Jesus is without foundation. It is based on the disproven assumption that they were late books, and it neglects the overlap in Paul's writings and the presence of eyewitnesses who could set the record straight. Also, the Gospels and Paul present the same basic picture of Jesus.

If the same criteria are applied to the life of Christ as are generally used to evaluate ancient writings, the historicity of Jesus must be accepted. Evaluated by these standards, critical historian Michael Grant noted, "we can no more reject Jesus' existence than we can reject the existence of a mass of pagan personages whose reality as historical figures is never questioned" (Grant, 199–200).

Wells, H. G.

Life and Works. Herbert George Wells (1866–1946) was a scientific humanist who affirmed a new religious faith, a faith in man. He was an admirerer of Auguste Comte and Herbert Spencer. Wells was an English journalist, secondary-level science teacher, and co-author with Julian Huxley of a popularized work, the *Science of Life* .

He "grew up in Victorian England; but he reacted violently, even as a child, against the evangelical faith of his mother" Indeed, "He especially despised the doctrine of the Trinity " (Glover, 121). Nonetheless, Wells' writings reflect many Christian truths, including that of original sin seen in his belief in the "persistent wickedness" of human beings.

H. G. Wells wrote a series of science romances and other works including *The Time Machine* (1895), *The Food of the Gods* (1904), *First and Last Things* (1908), *God The Invisible King* (1917), *The Secret Places of the Heart* (1922), *The Fate of Man* (1939), *You Can't Be Too Careful* (1941), *New World Order* (194?), and *Mind at the End of Its Tether* (194?).

Wells' Views. There are many words that describe the beliefs of Wells: evolutionism, antipessimism, mysticism , dualism , finite godism, agnosticism and even fideism were all embraced by Wells. What is consistent throughout his work is humanistic evolutionism (*see* HUMANISM, SECULAR).

Reacting to his early pessimism, Wells wrote: "I dismiss the idea that life is chaotic because it leaves my life ineffectual, and I cannot contemplate an ineffectual life patiently." Further, "I assert . . . that I am important in a scheme, that we are all important in a scheme. . . . What the scheme as a whole is I do not know; with my limited mind I cannot know. There I become a Mystic." He adds, "And this unfounded and arbitrary declaration of the ultimate righteousness and significance of things I call the Act of Faith. It is my fundamental religious confession. It is a voluntary and deliberate determination to be lieve, it is a choice made" (*First and Last Things,* 66–67).

In 1917, he professed to have found salvation from the purposelessness of life described in a book entitled *God the Invisible King.* William Archer charged that here Wells saw himself as the apostle of a new religious faith (Archer, 32).

God was finite and had come into existence in time but outside space. God was the personal Captain of Mankind who grows as mankind grows. Nonetheless, God was not the collective Mind of mankind but a being with a character of his own.

God's Enemy was Nature or, more specifically, Death. Thus God's aim was to overcome death. God stands over the Veiled Being or Life Force which is "Nature red in tooth and claw."

In the end Wells turned pessimistic (*Mind at the End of Its Tether*). He despairs that man will be able to adapt and fears he will go the way of the dinosaur. Nevertheless, he believes evolution will go on through some other organism.

Evaluation. For an evaluation of Wells' views, see the articles mentioned above under "Wells' Views."

Whateley, Richard. Richard Whateley (1786–1863) was an English logician and theologian and archbishop of Dublin (1831–1863). His book *Logic* (1826) set forth the essence of his understanding of the use of reason. He left behind his own memoir, which was published posthumously by his daughter, *Life and Correspondence* . . . (1866). Whateley also edited William Paley 's *Evidences and Moral Philosophy* . But his most enduring legacy from an apologetics standpoint is *Historic Doubts Relative to Napoleon Bonaparte* (1819). In this short work he satirized skepticism by reducing to the absurd the logic used to deny the authenticity of the Bible.

Using the still-living historical figure Napoleon I (1769–1821) as an example, Whateley applied David Hume 's (1711–1776) principles of skepticism. He said it was no wonder the public was still occupied with recounting the exploits of Napoleon, given their extraordinary character. But no one seemed to be asking the crucial question of whether Napoleon even existed. Whateley noted that the unquestioned is not necessary unquestionable. People admit hastily what they are accustomed to take for granted. Hume had pointed out the readiness with which people believe on slight evidence the stories that please their imagination.

Upon examining the evidence, Whateley concludes that, aside from the rare first-hand witness, the newspaper had become the authority for truth. But using Hume's three principles of credibility (*see* NEW TESTAMENT, HISTORICITY OF), the authority of the newspaper fails on all points. Hume asked of witnesses:

1. whether they have the means of gaining correct information.

2. whether they are interested in concealing truth or propagating falsehood.

3. whether they agree in their testimony.

"It appears then that those on whose testimony the existence and actions of Bonaparte are generally believed, fail in all the most essential points on which the credibility of witnesses depends; first, we have no assurance that they have access to correct information; second, they

have an apparent interest in propagating falsehood; and, thirdly, they palpably contradict each other in the most important points” (266). Whateley challenges the free thinker to weigh all the evidence, “and if he then finds it amounts to anything more than a probability,” Whateley said he would congratulate him for his easy faith (271).

Whateley insists that the story becomes even more doubtful when it partakes of the extraordinary. Tracing the incredible nature of Napoleon’s military exploits, Whateley asked whether anyone would believe this, yet not believe in miracles. For it seemed to him that Napoleon had violated the laws of nature (274). Hence, every skeptic who follows his own principles should reject such stories about Napoleon as highly improbable.

In addressing the question of motive, Whateley pointed out that, while the story about Napoleon *may* be true, a more ingenious one could not have been fabricated for the amusement of the British people. He speculates, as well, on how the name *Napoleon Bonaparte* could have mistakenly arisen, as had others in history. He called free thinkers to listen to no testimony that runs contrary to their experience but to follow their principles consistently. “If, after all that has been said, they cannot bring themselves to doubt the existence of Napoleon Bonaparte, they must at least acknowledge that they do not apply to that question the same plan of reasoning which they have made use of in others” (290).

Whether any skeptics announced their doubt about Napoleon, a few of the more open minded should have been encouraged to check their biases regarding biblical accounts of miracles in general, and the New Testament’s record of Jesus in particular.

Whitehead, Alfred North. Alfred North Whitehead (1861–1947) is the father of the contemporary worldview known as panentheism (not to be confused with pantheism), or Process Theology. He was born on the Isle of Thanet, the son of an Anglican minister. He attended Sherborne public school in Dorset, learning classics, history, and mathematics. He attended Trinity College, Cambridge, on a mathematics scholarship (1880–84) and was awarded a fellowship at Trinity in 1884.

The first period of writing (1898–1910) was focused on the philosophy of mathematics. He produced *A Treatise on Universal Algebra* (1898) and *Principia Mathematica* (with Bertrand Russell, 1910–13).

The second period of writing (1910–24) concentrated on the philosophy of science. While teaching at the University of London (1910–14) he wrote *Introduction to Mathematics* (1911).

Later, at Imperial College of Science and Technology (1914–24) he produced “Space, Time, and Relativity” (1915), *The Organization of Thought* (1917), *An Enquiry Concerning the*

Principles of Natural Knowledge (1919), *The Concept of Nature* (1920), and *The Principle of Relativity* (1922).

A third period of writing (1924–47) stressed the philosophy of history and reality as well as cosmology and metaphysics. The transitional period (1925–27) brought forth *Science and the Modern World* (1925), *Religion in the Making* (1926), and *Symbolism, Its Meaning and Effect* (1927). His mature works in this field came from 1927 to 1947 and produced the epic *Process and Reality* (1929), *Adventures of Ideas* (1933), *Modes of Thought* (1938), and *Essays in Science and Philosophy* (1947).

Religion in the Making. Whitehead's understanding of religion is a landmark in modern thought. His understanding of dogma or propositional religious statements, if valid, would negate the orthodox Christian belief in an inspired and infallible Scripture (*see* BIBLE, EVIDENCE FOR). Whitehead's complex thought is sometimes called *process theology* , since its bottom-line reality is that all things are in process of becoming, including God.

Definition of Religion. Religion is defined as "A system of general truths which have the effect of transforming character when they are sincerely held and vividly apprehended." Religion emerged in *ritual* —habitual performances of acts irrelevant to physical preservation. It then manifested itself in *emotion* —definite types of expressing ones religious feelings, following ritual. Belief (*myth*) followed, giving definite explanations for the ritual. Finally came *rationalization* , the organization and clarification of beliefs and application to conduct. As rituals encouraged emotions (cf. holy-day and holiday), so myths begot thought.

Religion and Dogma. Religious experiences relate to dogma in that dogmas are attempts at precise formulations of religions experience. Rational religions have expressed their experience in three main concepts, first, the value of the individual, second, the value of diverse individuals for each other, and third, the value of the objective world for the existence of a community of individuals. "Religion is world-loyalty," though it begins with consciousness of value within the individual.

According to Whitehead, rational religion is an attempt to find a permanent, intelligible interpretation of experience. Buddhism and Christianity differ in that the latter is metaphysics seeking a religion, whereas the latter is religion seeking a metaphysics. In Buddhism (*see* ZEN BUDDHISM), evil is necessary, but in Christianity it is only contingent. While Buddhists seek relief from the world, Christians seek to change the world. Buddha gave doctrine to enlighten, but Christ gave his life to save. Buddhism begins from general principles, but Christianity begins with facts and generalizes on them.

Metaphysics**.** According to Whitehead, both *process* and *permanence* interplay as aspects of reality. Permanence is a *potential element* of reality. Temporal (time) permanence is found in eternal objects. Nontemporal permanence is found in God (or at least in God's primordial nature, as noted below).

A bit of reality is the *actual element* or entity. Being *is* the potential for becoming. This is the *principle of relativity* . How a thing becomes is what a thing is. This is the *principle of progress* .

Actual entities are real occasions, events, or drops of experience. As in Plato's *Sophist* , they are becoming but never really finish the journey. With each passing moment of process, old dies and new is born. They pass from subjectivity to objectivity (immortality). This they do by final causality—namely, by their subjective aim. Once they are objectified, then they can act by efficient causality on others from past to present.

So how does one move along this pole-to-pole progression, objectifying and becoming? It is a mental process of seizing and incorporating into self an apprehension of the surrounding world. Actually it goes beyond "apprehending" or "comprehending" knowledge to uniting with the world being apprehended, so Whitehead dusts off the seldom-used term *prehension* .

Prehension is a process of feeling, so it goes beyond objective handling of objective realities. It absorbs what is prehended into the unity and satisfaction of the actual entity that is prehending. There are two kinds of prehension, negative or exclusive and positive or inclusive. There are three factors of prehension:

1. the occasion of experience (the subject, actual entity);

2. the data prehended (the object prehended);

3. the subjective form (how the datum is prehended).

All actual entities are bipolar by nature. The *conceptual pole* (potential aspect) is simple and can be negatively prehended in total. What is conceptual or potential is not now. The *physical pole* (actual aspect) is complex and can be prehended partly negatively and partly positively. It is some things; it is not other things. The ontological principle is that the only real causes of anything come from the physical pole. Only actual entities become real causes, final facts.

View of God. *The God Options.* Whitehead's view of God is bipolar. His actual pole is the universe, the cosmos. This pole is in constant change as God prehends more experiences or entities. God's potential pole is beyond the actual world. It is the infinite world of eternal and unchanging potential.

It may be helpful to see how Whitehead contrasted his view of God to other conceptions:

1. The Eastern Asiatic concept of an impersonal order to which the world conforms. This order is the self-ordering of the world; it is not the world obeying an imposed rule.

2. The Semitic concept of a definite personal. individual entity, whose existence is the one ultimate metaphysical fact. God is absolute and underived. This God decreed and ordered the derivative existence we call the actual world.

3. The pantheistic concept has connections to the Semitic concept, except that the actual world is a *phase* within the complete fact of the being of God. The complete fact is the ultimate individual entity of God. The actual world, conceived apart from God, is unreal. Its only reality is God's reality. The actual world is real only to the extent that it is a

> partial description of what God is. But in itself it is merely a certain mutuality of "appearance." This appearance is a phase of the being of God. This is the extreme doctrine of monism as held by Parmenides and Shankara (*see* HINDUISM, VEDANTA) in India (*Religion in the Making* , 66, 67).

Whitehead rejects these views. Christianity is a form of the "Semitic" view, though Christian doctrine has attempted to add some immanence to the utterly transcendent simple Semitic Being. It is the radical transcendence (otherness) of the Semitic God to which Whitehead objects. He also rejects the all-sufficiency of this conception of God,. "There is no entity, not even God, 'which requires nothing but itself in order to exist' " (ibid., 71).

The Existence and Nature of God. Following Immanuel Kant, Whitehead rejects the ontological argument as invalid. The cosmological argument can get us only so far as to postulate a God immanent in the world. Whitehead opts for an "aesthetic argument" from the order of the world. God is posited to account for the creative order in world process.

That is, God is dependent on the world, and the world is dependent on God. Apart from God, there would be no actual world. Apart from the dynamic creativity of the actual world, there would be "no rational explanation of the ideal vision which constitutes God."

In his actual pole, God is finite and limited. "To be an actual thing is to be limited." God cannot be infinite in his actual pole or he would be all things that actually are—evil as well as good (ibid., 144).

Note that this argument is interacting primarily with, and recasting the pantheistic worldview. Pantheism is denied, for its being is too immanent, yet it is the alternative that Whitehead's thought takes most seriously. To reduce God to an impersonal Force, as the Asiatic concept does, is to demean God's religious significance. God is personal, intimately related to the world. But likewise rejected is a transcendent God who is independent and self-existent. God is either finite, or he *is* the universe, including its evil (*see* EVIL, PROBLEM OF). God is not *beyond* the world nor is he *identical* with it. God is *in* the world. "God is that function in the world by reason of which our purposes are directed to ends which in our own consciousness are impartial as to our own interests. Further, God is the actual realization (in the world) of the ideal world. 'The kingdom of heaven is God' " (ibid., 148, 151).

There is a God in the world, because "The order of the world is no accident. There is nothing actual which could be actual without some measure of order. . . . this creativity and these forms are together impotent to achieve actuality apart from the completed ideal harmony, which is God" (ibid., 115). God functions as the ground for creativity necessary for the attainment of value in the world. "God, as conditioning the creativity with his harmony of apprehension, issues into the mental creature as moral judgment according to a perfection of ideals." Thus, "the purpose of God in the attainment of value is in a sense a creative purpose. Apart from God, the remaining formative elements would fail in their functions" (ibid., 110, 114).

According to Whitehead, God has both a *primordial nature* and a *consequent nature* . The latter is the being which is being continually enriched by God prehends. Whitehead also calls it God's *superject nature* .

The primordial nature of God was to be the orderer of eternal objects. Eternal objects are pure potentials which, like Gottfried Leibniz 's monads, cannot relate themselves. The ontological princi ple demands that there be an actual entity behind them, since only actual entities are real causes.

God also is the orderer of actual entities. It is necessary for God to have a consequent nature. All actual entities are bipolar. The physical pole is needed to realize the vision of the conceptual pole. Also, the primordial nature relates only to eternal objects. And the principle of relativity demands that something relate to actual entities. Without God the actual world would fall into chaos.

The superject nature of God is merely the consequent nature as enriched by God's prehensions and as available for prehension by other actual entities—a never-ending process. Evil is incompatibility. What is evil does not fit into a given order of the world process. Creativity is the principle of conjunction and continuity that fills in the gaps between the atoms, that grounds the world process, that makes manyness into oneness. It is the "substance" of which all actual entities (even God) are the "accidents."

View of the World. God and the world are not actually different. God *is* the order (and value) in the actual world. The world is God's consequent nature. It is the sum total of all actual entities (events) as ordered by God. But the world is in process. It is constantly changing. Hence, God in his consequent nature is constantly in flux.

Creation. The universe is eternal. God does not create eternal objects. He is dependent on them as they are on him. Thus, God "is not *before* all creation, but *with* all creation" (ibid., 392, 521). He does not bring the universe into existence; he directs its progress.

As another process theologian put it, creation from nothing is too coercive. The temptation is great to interpret God's role by means of coercive power. "If the entire created order is dependent for its existence upon his will, then it must be subject to his full control. . . . Insofar as God controls the world, he is responsible for evil: directly in terms of the natural order, and indirectly in the case of man" (Ford, 201).

God is more of a cosmic persuader who lures the actual out of potential by final causality the way one is drawn by an object of their love.

In one sense the origin or "creation" of the universe is *ex materia* (out of preexisting matter). But the eternal "stuff" is not material but the realm of eternal forms or potentials which are there available for God to order and to urge into the world process as various aspects of actual entities. But since the realm of eternal objects is God's primordial nature, the movement of creation is also *ex deo* , that is, out of God's potential pole into his actual pole (the world). Reality moves

from the unconscious to the conscious, from potential to actual, from abstract to concrete, from forms to facts.

What prompts this movement? What actualizes it? The answer is *creativity* . " 'Creativity' is the principle of *novelty* ." Creativity introduces novelty into the actual world. "The 'creative advance' is the application of this ultimate principle of creativity to each novel situation which it originates." Even God is grounded in creativity. "Every actual entity, including God, is a creature transcended by the creativity which it qualifies." Hence, "all actual entities share with God this character of self-causation" (*Process and Reality* , 31, 32, 135, 339).

There is a self-caused movement in God from his potential pole to his actual pole. God is a self-caused 'being' who is constantly becoming. Thus the process of creation is an eternal ongoing process of God's self-realization.

The World. The world is pluralistic (*see* PLURALISM). As a whole it is God's "body." It is made up of many "actual entities," what Whitehead calls "final facts," "drops of experience," or "actual occasions" (*Primordial Nature of God* , 95). The world is an atomistic series of events (*see* ATOMISM).

A process metaphysics of the world abandons the concept of actual entities that are the unchanging subjects of change. All things are rather constantly perishing and being reborn as different things. The idea that "no one crosses the same river twice" is extended to the person doing the crossing, as well as the water flowing in the stream. No thinker thinks twice. No subject experiences twice. There are no unchanging beings (ibid., 43, 122). There is no concrete being, all is becoming. "It belongs to the nature of every 'being' that it is a potential for every becoming. There is a becoming of continuity, but no continuity of becoming" (ibid., 53, 71).

Despite the atomic distinctness and continual change in the universe, there is order. This order is given by God. In his primordial nature God gives order to all eternal objects (forms) and the "consequent nature" of "God is the physical prehension by God of the actualities of the evolving universe" (ibid., 134).

Evil. God's self-realization is never perfect, nor is it totally incomplete. The actual world is neither purely orderly, nor purely chaotic. The immanence of an ordering God makes pure chaos impossible (ibid., 169). God is doing all he can to achieve the most possible out of every moment in world history. "The image under which this operative growth of God's nature is best conceived, is that of a tender care that nothing be lost" (ibid., 525). Evil can be defined as whatever is incompatible with these divine efforts at any given moment. Since God does not force the world, but only persuades it, he cannot destroy evil. He must simply work with it and do the best he can to overcome it (*see* FINITE GODISM ; KUSHNER, HAROLD). "[The theory of] divine persuasion responds to the problem of evil radically, simply denying that God exercises full control over the world. Plato sought to express this by saying that God does the best job he can in trying to persuade a recalcitrant matter to receive the impress of the divine forms" (Ford, 202).

What a finite God cannot persuade to fit into the overall unity of the actual world is evil. Evil is incompatibility. It is incongruence. Evil is like the left-over pieces of glass that did not fit into the stain glass window. Only this "picture" or order changes every split second. What does not fit one moment may fit later. Evil, then, must be conceived of as relative.

Human Beings. The human is a personal being with a free will. Each person has "subjective aims," for which ends are purposed and final causality is achieved. God gives overall aim—the initial direction, but where the creature goes from there is his or her own responsibility (Ford, 202–3).

In the mind-body relationship described by Whitehead, the living body is a coordination of actual occasions. Each person (God included) is a society of actual entities that constantly change. There is no changeless, enduring "I." An individual's unity is not found in any unchanging essence or being. It is self-caused becoming. Whitehead wrote:

> I find myself as essentially a unity of emotions, enjoyments, hopes, fears, regrets, valuations of alternatives, decisions—all of them subjective reactions to the environment as active in my nature. My unity—which is Descartes' *"I am"*— is my process of shaping this welter of material into a consistent pattern of feelings. I shape the activities of the environment into a new creation, which is myself at this moment; and yet, as being myself, it is a continuation of the antecedent world. [*Modes of Thought* , 228]

A person's identity is produced moment by moment within the community of actual events. As in the broader world, there is no continuity in becoming; there is only this becoming in continuity (*Religion in the Making* , 112).

Personal immortality was not an essential part of Whitehead's view. He saw no scientific evidence for it, but neither did he oppose it. He simply noted that at present it is generally held that a purely spiritual being is necessarily immortal. His doctrine is entirely neutral on the question of immortality, or on the existence of purely spiritual beings other than God (ibid., 107–8).

Ethics and Values. In this ever-changing kaleidoscope, there is no absolute evil, so there are no absolute values (*see* MORALITY, ABSOLUTE NATURE OF). Value is changing and subjective. "There are many species of subjective forms, such as emotions, valuations, purposes, adversions, aversions, consciousness, etc." (*Process and Reality* , 35). God is the measure of all value, but God is no more stable than is anything else. Nothing is not changing.

On the other hand, value is specific and concrete. God wants to attain value, and the search is creative. "The actual world is the outcome of the aesthetic order [of value], and the aesthetic is derived from the immanence of God" (*Religion in the Making* , 97, 100–1). The problem with the theistic Christian ethic is that it looks to an end of the world—definite goals and an absolute way to go. Christians give free rein "to their absolute ethical intuitions respecting ideal possibilities without a thought of the preservation of society" (*Adventures of Ideas* , 16).

For Whitehead, good and evil "solely concern inter-relations within the real world. The real world is good when it is beautiful" (ibid., 269). Goodness always comes in comparative degrees, just as things are more or less beautiful. But nothing is either most beautiful or most perfect. "Morality consists in the aim at the ideal. . . . Thus stagnation is the deadly foe of morality" (ibid., 269–70). There is at best, for both God and human beings, only a relative achievement of more good.

History and Destiny. There is an ongoing evolutionary (*see* EVOLUTION, COSMIC ; EVOLUTION, BIOLOGICAL) process. God is achieving more and more value. It is being stored in his consequent nature, which, as enriched, is called God's "superject nature." However, "neither God, nor the world, reaches static completion" (ibid., 135, 529). Evil is recalcitrant, and no final victory over it is possible. Hence, Whitehead concludes, "In our cosmological construction we are, therefore left with the final opposites, joy and sorrow, good and evil, disjunction and conjunction—that is to say, the many in one—flux and permanence, greatness and triviality, freedom and necessity, God and the World" (ibid., 518).

Since God is neither omniscient nor omnipotent, even God does not know how the world process will eventuate (*see* GOD, NATURE OF). For "during that process God, as it were, has to wait with bated breath until the decision is made, not simply to find out what the decision was, but perhaps even to have the situation clarified by virtue of the decision of that concrete occasion" (Loomer, 365).

Evaluation. The complexity and vastness of Whitehead's thought makes it difficult to offer a comprehensive evaluation of his ideas in a short space. Much of this is evaluated elsewhere. His underlying epistemology of relative truth and morality is covered in TRUTH, ABSOLUTE NATURE OF ; MORALITY, NATURE OF). On the process view of God and reality, see PANENTHEISM . The process concept of evil is exposed in EVIL, PROBLEM OF .

William of Ockham. Modern skepticism (*see* AGNOSTICISM) did not begin with David Hume . It began in the late Middle Ages with William of Ockham (1285–1349). Ockham was the younger contemporary of Duns Scotus (1266–1308) and Thomas Aquinas (1224–1274). He

stood at the end of the middle ages, and contributed to the rise of the modern age. Whereas skepticism flowered in David Hume (1711–1776), its roots were in William of Ockham.

Ockham's thought had a significant influence on the radical empiricism and skepticism of Hume, the ethical situationalism of Joseph Fletcher (*see* MORALITY, ABSOLUTE NATURE OF), the idealism of George Berkeley (1685–1753), the antitransubstantiation of Martin Luther (1483–1546), as well as ethical voluntarism, nominalism, and the univocity of religious language (*see* ANALOGY, PRINCIPLE OF).

Epistemological Skepticism. His skepticism was manifest on three levels: epistemological, methodological, and apologetic. In his epistemology he was a nominalist and a skeptical empiricist.

Ockham distrusted the senses. He stressed intuition. He held that essences or universals were mental abstractions that were based in real things (*see* REALISM). But Ockham believed that an essence was merely a mental construct with no root in reality. Such things as human nature were not real. Only individual humans exist.

Nominalism has serious implications when applied to the fall of humanity and its redemption. How can a sinful being inherit a single nature if there is no such thing as a nature? How can Christ assume human nature and die for all people, unless there is a human nature? How can one hold an orthodox belief in the Trinity, which affirms that God is three persons in one essence if there are no essences?

Ockham argued that since God was omnipotent that he could do anything. He could create the idea of a tree in our mind, even without the presence of a tree (*see* GOD, NATURE OF). This, of course, undercut trust in the process of "knowing" something. One could "know" something to be true that did not really exist. Could not God create the idea of a world in our minds when there was no world? To apply Ockham to a later skeptic, could not the "demon" conceived by Rene Descartes (1596–1650) deceive us into believing a nonexistent world existed?

Even without malevolent deception, why could not a benevolent God create impressions he desired without there being any external object corresponding to them?

Methodological Skepticism. Ockham also posited the principle of economy of causes, known as *Ockham's razor* . This tool also proved useful to later skeptics, with its principle of simplicity or economy of causes. Although Ockham's statement was "Do not multiply causes without necessity," this has been popularized (corrupted) into the idea, "The simplest cause is the best explanation," or "The fewer the truer." This leads to "The fewest the truest." When this is combined with the principle of omnipotence, the consequences can be devastating. For example, God could create the impression there is a physical world when there is none. This simpler explanation would, then, be the true one. This, indeed, is the conclusion at which Bishop Berkeley later arrived.

Apologetic Skepticism. Ockham was not a skeptic about the existence of God. He was a theist. However, his skepticism undermined the apologetic defense of theism. His objections to

the cosmological argument anticipated Hume and Immanuel Kant. Ockham raised at least three questions about the cosmological argument (Ockham, 129ff; *see* GOD, OBJECTIONS TO ARGUMENTS FOR).

The Possibility of an Infinite Series. Ockham denied that an essentially related infinite regress of causes was impossible (*see* KALAM COSMOLOGICAL ARGUMENTS). Since essentially related causes (for example, father begetting son) need not be simultaneous, they could be originating causes and not conserving causes. The father is not the continued cause of the son's existence. Only if this simultaneity of the here-and-now conserving cause is added to the concept of an essentially related series of causes, argued Ockham, is an infinite regress impossible.

It is contradictory to affirm that there is no First Cause for what is right now being conserved in existence. So the cosmological argument is valid in reference to what now exists, but not for any original creation.

Knowledge of Efficient Causes. Anticipating Hume, Ockham based knowledge of efficient causes on experience (*see* CAUSALITY, PRINCIPLE OF). Causality is defined as "that whose existence or presence is followed by something" (Maurer, 270). The distinction anticipates Hume's criticism that there is no basis in experience for making a necessary connection between cause and effect. But the inescapability of the conclusion of the cosmological argument depends on the necessity of the connection between cause and effect. Ockham thus placed his razor on the central cord binding the cosmological argument.

Inability to Prove One God. Ockham also held that one could not prove in an absolute sense the existence of only one God (*see* THEISM ; GOD, NATURE OF). Only if the unity of God is taken to mean "the most perfect Being that actually exists" can it be said that the unity of God has been proven. If, however, as Christian theists insist, the unity of God refers to the "most perfect" Being possible, then the unity of God cannot be proven. The proposition "God exists." is not a self-evident proposition. Many doubt it, and a self-evident proposition cannot be doubted. Nor is the absolute unity of God known through other propositions, which can also be doubted, nor by experience, for experience can provide one only with the actual, not with the possible.

Therefore, there is no way to demonstrate that God is absolutely one.

Univocal Religious Language. In one area Ockham held the line against skepticism. He spoke strongly against any equivocal or analogical concepts as applied to God. Ockham argues convincingly that no concept can have a totally different or equivocal meaning as applied to God. For if it did, then we would have no idea what it meant. Likewise, an analogous concept must have an element of sameness, otherwise it would be totally different. This element of sameness is really univocal. Hence, without univocal concepts we can know nothing about God.

While the point is well taken when speaking about univocal concepts, Ockham seemed not to understand the need for analogical predication, such as was posited by Aquinas. That is, we must define terms used of God and creatures in the same way, but they are applied in a different way. God is infinitely good, while creatures can strive only for finite goodness. Goodness cannot be

applied univocally or in entirely the same way to the infinite and the finite (*see* ANALOGY, PRINCIPLE OF).

Evaluation. Ockham's epistemological skepticism is discussed in the articles CAUSALITY, PRINCIPLE OF ; FIRST PRINCIPLES ; HUME, DAVID , and REALISM . Apologetic skepticism is treated in COSMOLOGICAL ARGUMENT ; GOD, OBJECTIONS TO PROOFS FOR ; HUME, DAVID , and KANT, IMMANUEL .

As for Ockham's methodological skepticism, even granting his premises, "Ockham's Razor" does not work in discussions of God, since it presupposes the existence of an omnipotent God as a premise. Even granting that God *could* create ideas in us without external objects does not mean God *would* do this. The theistic God of Ockham is not only all-powerful but also all-good. And a omnibenevolent God will not deceive (*see* ESSENTIALISM, DIVINE). Ockham's skepticism does not work without the questionable principle of parsimony. But how can one prove that the positing the fewest causes possible is the way to determine what is true. This is not a first principle. At best, it is only a general guide in scientific matters. It is no universal rule in metaphysical issues.

Why assume an external world is redundant? God may have very good purposes for it. Using Ockham's own Razor, it can be viewed as a simpler explanation that an objectively real world is sending impressions to every one than that God must create impressions in every human being individually. Ockham's explanation that God could be directly creating ideas of an external world in every human being is *Deus ex Machina* (the God-out-of-the-machine). It invokes the supernatural to save its conclusion from collapse. God must pop out of the machine and save it. Again, it is simpler in this case to take the natural explanation than to invoke a supernatural one.

Witnesses, Hume's Criteria for. David Hume (1711–1776), is the skeptic exemplar for modern times (*see* AGNOSTICISM). He outlines the basic criteria that he believed necessary for testing the credibility of witnesses. In his own words: "We entertain suspicion concerning any matter of

fact when the witnesses contradict each other, when they are but few or of a doubtful character, when they have an interest in what they affirm, when they deliver their testimony with hesitation, or with too violent asseverations [declarations]" (Hume, 120).

These concerns can be framed as four questions:

1. Do the witnesses contradict each other?

2. Are there a sufficient number of witnesses?

3. Were the witnesses truthful?

4. Were they nonprejudicial?

Hume's tests can be readily applied to the New Testament witnesses for the resurrection of Christ.

No Contradiction of Witnesses. The evidence is that the testimony of the witnesses does not contradict (*see* NEW TESTAMENT, HISTORICITY OF). Each New Testament writer tells a crucial and overlapping part of the whole story.

- Christ was crucified [around A.D . 30] under Pontius Pilate in Jerusalem.

- He claimed to be the Son of God and offered miracles in support of his claim.

- He was crucified, confirmed to be dead and buried, and yet three days later the tomb was empty (*see* CHRIST, DEITY OF).

- Jesus physically appeared to a number of groups of people over the next weeks, in the same nail-scarred body that had died.

- He proved his physical reality to them so convincingly that these skeptical men boldly preached the Resurrection a little over a month later in the same city, whereupon thousands of Jews were converted to Christianity.

There are minor discrepancies in the Gospel accounts. One account (Matt. 28:5) says there was one angel at the tomb; John says there were two angels (John 20:12). Such conflicts are not contradictions in that they are not irreconcilable. Matthew does not say there was *only* one angel there; that would be a contradiction. We are uncertain of whether the two texts are speaking of the same moments (*see* BIBLE, ALLEGED ERRORS IN). Also, minor differences in testimony are not what Hume had in mind in his first rule. One would not expect authentic, independent witnesses to give identical testimony. If they did we might discount their testimony, assuming they were in collusion.

Number of Witnesses. There are twenty-seven books in the New Testament written by about nine different persons, all eyewitnesses or contemporaries of the events they recorded.

When threatened by the authorities the apostles said, “We cannot but speak of what we have seen and heard” (Acts 4:20). Peter claimed to be a witness of Jesus (1 Peter 5:1). In 2 Peter 1:16 he wrote, “For we have not followed cunningly devised fables, when we made known unto you the power and coming of our Lord Jesus Christ, but were eyewitnesses of his majesty” (KJV). The author of the Fourth Gospel said, “And he that saw [it] bare record, and his record is true: and he knoweth that he saith true, that ye might believe” (John 19:35 KJV). He adds, “This is the disciple which testifieth of these things, and wrote these things: and we know that his testimony is true” (John 21:24 KJV). Indeed, John claimed about Christ: “That which was from the beginning, which we have heard, which we have seen with our eyes, which we have looked upon, and our hands have handled, of the Word of life. . . . That which we have seen and heard declare we unto you . . .” (1 John 1:1 , 3 KJV). And Luke said, “Forasmuch as many have taken in hand to set forth in order a declaration of those things which are most surely believed among us, Even as they delivered them unto us, which from the beginning were eyewitnesses, and ministers of the word”(Luke 1:1–2 KJV).

Six witnesses are crucial to the topic of New Testament miracles (Matthew, Mark, Luke, John, Acts, and 1 Corinthians). These six books by five writers bear witness to the miracle of the resurrection. Even critical scholars now acknowledge that these books were written before A.D . 70, while contemporaries of Christ remained alive. There is little argument that 1 Corinthians was written by the apostle Paul around A.D . 55 or 56, only about two decades after the death of Christ. This is a powerful witness to the reality of the miracle of the resurrection. It is a very early document. It is written by an eyewitness of the resurrected Christ (1 Cor. 15:8 ; cf. Acts 9). Paul refers to more than 500 who had seen and heard the resurrected Christ directly (1 Cor. 15:6). Fourth). At the time, most of these witnesses were alive, available for cross-examination (*see* RESURRECTION, EVIDENCE FOR).

Truthfulness. Few challenge the fact that the New Testament provides a high standard for morality, particularly in Jesus’ emphasis on love (Matt. 5–7 ; 22:36–37). His apostles repeated this teaching in their writings (for example, Romans 13 ; 1 Corinthians 13 ; Galatians 5). They lived, and even died for what they taught about Christ (2 Tim. 4:6–8 ; 2 Peter 1:14), an unmistakable sign of their sincerity.

In addition to teaching that truth is a divine imperative (Rom. 12:9), it is evident that the New Testament writers were scrupulous about truth in their writings. Peter declared, “We did not follow cunningly devised fables” (2 Peter 1:16). The Apostle Paul insisted, “Do not lie one to another” (Col. 3:9). The New Testament writers were honest men, willing to die for the truth of what they had written. Further, where the New Testament writers’ statements overlap with the discovery of historians and archaeologists, they have proven to be accurate (*see* ACTS, HISTORICITY OF ; ARCHAEOLOGY, NEW TESTAMENT). Archaeologist Nelson Glueck concludes, “It may be stated categorically that no archaeological discovery has ever controverted a Biblical reference. Scores of archaeological findings have been made which confirm in clear outline or exact detail historical statements in the Bible” (Glueck, 31). There is no proof that the New Testament writers ever lied in their writings or deliberately falsified the facts. As Harvard legal

kjv King James Version

expert Simon Greenleaf concluded, their testimony shows absolutely no sign of perjury (see Greenleaf).

Finally, the New Testament record has received strong and significant support from historians of this Roman period. Noted Roman historian Sherwin-White chided scholars for not recognizing the historical value of the New Testament documents compared to the sources of Roman history (Sherwin-White, 188–91). Another noted historian of the period, Colin Hemer, presented strong evidence that supports the historical nature of the Book of Acts and its Lucan authorship (by A.D . 62) placing it "unequivocally in the lifetime of many eyewitnesses and surviving contemporaries of Jesus, Peter, and Paul, as prospective readers who could object to the presence of material falsification" (Hemer, 409–10).

Unprejudiced Witnesses. Nor were witnesses of the miracles of Christ, particularly his resurrec tion, predisposed to believe the events to which they gave testimony.

The apostles themselves disbelieved the first reports that Christ had risen from the dead (*see* RESURRECTION, EVIDENCE FOR). The story of the women "seemed to them like idle tales, and they did not believe them" (Luke 24:11). Even when some of the disciples saw Christ themselves they were "slow of heart to believe" (Luke 24:25). When Jesus appeared to ten apostles and showed them his crucifixion scars, "they still did not believe for joy, and marveled" (Luke 24:41). Thomas protested that he would not believe unless he could put his finger in the scars in Jesus' hand (John 20:25).

Jesus also appeared to unbelievers, at least his unbelieving half-brother, James (John 7:5 ; 1 Cor. 15:7), and the greatest unbeliever of the day—Saul of Tarsus (Acts 9).

Witnesses to the resurrection had nothing to gain personally from their testimony. They were persecuted and threatened with death for their stand (cf. Acts 4 , 5 , 8). As a matter of fact, most of the apostles were martyred. Certainly, it would have been much more profitable to deny the resurrection.

To discount their testimonies of those who believed in the resurrected Christ is like discounting an eye-witness of a murder because he actually saw it occur. The prejudice in this case is not with the witnesses but with those who reject their testimony.

Finally, to reject a witness simply because they have some kind of bias is groundless. Everyone has a bias or set of beliefs. No one's testimony could be accepted on anything if every bias were a disqualification. Doctors are biased in favor of a patient's survival. Yet they can still be trusted to give an objective analysis of the patient's condition. Richard Whateley argued satirically that we cannot believe the military exploits about Napoleon, since the British practically demonized him and the French virtually worshiped him. But in fact people do not discard their testimony since they have a bias. Rather, they examine carefully their testimony in order to determine the facts.

Conclusion. Hume was one of the great skeptics of modern times. He devised criteria by which he believed one could eliminate all belief in miracles. However, when his criteria are

applied to witnesses to the resurrection of Christ they pass as credible. This confirms the Christian contention that the New Testament witnesses were reliable and, therefore, that the New Testament accurately reports what Jesus said and did (*see* NEW TESTAMENT, HISTORICITY OF).

Wittgenstein, Ludwig. Ludwig Wittgenstein (1889–1951) was the son of a wealthy Viennese steel magnate. His father was a Jewish Protestant. His mother was Roman Catholic, and Ludwig was baptized a Catholic. He studied engineering in Berlin and Manchester, England. He also studied at Cambridge under Bertrand Russell. Wittgenstein wrote what became an influential work in philosophy, *Tractatus Logico-Philosophicus* (1921, Eng., 1961) while in an internment camp as a captured prisoner of war. Wittgenstein believed he had solved all the problems of philosophy with *Tractatus* , so he retired from the field to teach school. He also gave away his inherited fortune. In the late 1920s, Wittgenstein met frequently with the Vienna circle of logical positivists (*see* LOGICAL POSITIVISM), including A. J. Ayer. He taught at Cambridge until 1947 and then took a job as a hospital porter. In 1948 he went into seclusion and soon learned he had cancer.

In addition to *Tractatus* , Wittgenstein's works included *Notebooks: 1914–1916* (1914–16, Eng. 1961), *Prototractatus* (1914–18, 1971), *Lectures and Conversations on Aesthetics, Psychology, and Religious Belief* (1930–38, 1966); *The Blue and Brown Books* (1933–35, 1958), *Remarks on the Foundations of Mathematics* (1937–44, 1956), *Zettell* (1945–48, 1966), *On Certainty* (1949–. 1969), and *Philosophical Investigations* (part 1, 1945; part 2, 1947–49, Eng. 1953).

Wittgenstein also continued to do research as an engineer and patented several inventions, including a jet reaction propeller for aircraft.

Three influences stand out among several on his philosophical thinking, Immanuel Kant , Arthur Schoppenauer , and Bertrand Russell . Leo Tolstoy and Fyodor Dostoyevsky guided his lifestyle, and Augustine and Soren Kierkegaard were his favorite authors in religion.

Philosophical Thought. Wittgenstein knew two great periods of work. The early period was expressed by *Tractatus Logico-Philosophicus* . Wittgenstein himself said the point of the book was ethical. In the preface he explained that he hoped to set limits on the expression of thoughts. There can be no limits on thought, he declared. "We should have to be able to think what cannot be thought." However, to set limits on language is to differentiate between meaningful ideas and nonsense. "What we cannot speak about we must pass over in silence," he said. That reflected his own work on the book. He said, "My work consists of two parts: The one presented here plus all that I have not written and it is precisely this second part that is the important one."

The project in *Tractatus* is Kantian. The method is that of logical atomism in that Wittgenstein assumes there is a convergence between language and reality. Language mirrors the world. This convergence has serious implications for ethics and philosophy in his thinking. All that can be expressed in language are propositions of natural science (*Tractatus* , 6:42). No transcendental propositions about ethics, aesthetics, or God can be expressed.

The second period of Wittgenstein's work was expressed in *Philosophical Investigations* . Wittgenstein presents and then tries to refute statements of Augustine on the "picture theory of meaning" as the essence of human language. He regards as an oversimplification the ideas that the function of language is to state facts and that all words are names, referring to something. He strikes down as mistaken Augustine's idea that meaning is taught by examples in definition. Example definitions can be variously interpreted (ibid., 1.1:28). The statement of Augustine that the meaning of a name is the object that the name denotes he regarded as absurd.

He also rejected the ideas that meaning is a matter of producing mental images, that one clarifies propositions by analyzing them, and that words have a determinate sense. He rejected both univocal and analogical language (*see* ANALOGY, PRINCIPLE OF). On the positive side, Wittgenstein was a strong proponent of conventionalism .

The central point is that religious language is meaningless. It belongs to the realm of the inexpressible because there is an unbridgeable gulf between fact and value. As discussed in the article on analogy, this view is that all "God-talk" is nonsense. That does not mean that the person cannot feel or know anything about God. It is clear from *Notebooks* that there is a feeling of dependence and a belief in God because "the facts of the world are not the end of the matter." But what Wittgenstein knows he cannot really talk about. Such things are outside the limits of language, and ultimately thought.

Because the higher and transcendent are inexpressible is not to say they are totally incommunicable. They can be shown if not said. An apparent contradiction in *Tractatus* is that although propositions about language are employed they are not propositions of natural science. By Wittgenstein's own reasoning they must be nonsense. He acknowledges this, saying that they can only serve as elucidations—an example of showing and saying (6:45).

In *Investigations* , Wittgenstein does not directly speak about religious discourse, but he seems to assume that prayer and theology are meaningful linguistic activities. Praying in particular is mentioned as a language game. Since stating facts is only one of many linguistic activities, there is no *a priori* bar against the meaningfulness of religious language. Since

language games have intrinsic criteria of meaning, and religious language is a language game, it must be judged by its own standards and not by standards imposed upon it. This is a form of fideism.

In *Lectures and Conversations* , Wittgenstein portrays religious language as possibly being meaningful (as a language game). But it is clear that he remains an acognostic. He rejects any cognitive knowledge in religious language. For example, it is legitimate to utter a belief in a last judgment. But no one could say whether the belief is possibly true or false (58). Such beliefs are purely a matter of blind faith (*see* FIDEISM). There is no evidence for them. He would not, however, ridicule those who claim to base their beliefs on evidence, for example, historical apologetics.

"It has been said that Christianity rests on an historical basis. It has been said a thousand times by intelligent people that indubitability is not enough in this case, even if there is as much evidence as for Napoleon (*see* WHATELY, RICHARD). Because the indubitability wouldn't be enough to make me change my whole life" (57).

Religious beliefs help orient our lives, but they do not inform us about reality. Wittgenstein believes we are locked in a linguistic bubble. Religious language is fine as a language game, but it tells us nothing about God or ultimate reality.

Evaluation. Unlike the logical positivists (*see* AYER, A. J .), Wittgenstein did not utterly deny the meaningfulness of religious language. It remained a legitimate form of language and was based in a meaningful experience. Also, Wittgenstein did not join the Vienna Circle in affirming empirical verifiability. They insisted that only empty tautologies (*see* TAUTOLOGY), which are true by definition or know through the senses, could be meaningful. Wittgenstein rejected this form of positivism, realizing that meaning should be listened to, not legislated.

Therefore, he did not embrace atheism. He was a fideistic theist. He read both the New Testament and Soren Kierkegaard . He acknowledged the validity of prayer and belief in last things. He even recognized that religious language has value. Though it was not descriptive to him, it did aid the religious life in a practical way. It was a meaningful expression of religious experience and helped one live.

Wittgenstein was the archenemy of the Platonic (*see* PLATO) view that there is a one-to-one univocal correspondence between our ideas and those of God. This Augustinian view he rejected outright. There is no correspondence between our thought and God's (*see* TRUTH, NATURE OF).

However, his view is open to serious criticism. All forms of fideism are untenable. If one takes his writings as a rational justification of the nonrational fideistic faith, they are self-defeating. If he offers no rational justification for his beliefs, they are simply unproven propositions that no reasonable person should accept.

He also follows Kant into a false dichotomy between fact and value. They saw the two in totally separate domains. But this is not the case. Human beings combine both. One cannot attack human facticity (the physical presence of the body) without attacking the value of life and

personhood. One cannot separate rape or genocide from the value of the object that is at the center of those actions. In theology, the fact of the death of Christ cannot be separated from its redemptive value.

Wittgenstein believed we are locked inside a language that tells us nothing about the realm of value beyond language itself. This is self-defeating. Any attempt to forbid statements about the mystical realm beyond language transgresses that prohibition. Like Kant's agnosticism , one cannot know that he cannot know, and he cannot say that he cannot say. In claiming that the mystical cannot be spoken, one speaks about it.

Among Wittgenstein's legacies, none is more deadly than the conventionalist view of meaning. All meaning cannot be relative. If it were the statement "All meaning is relative." would be meaningless. Like other attempts to deny objective meaning, Wittgenstein had to assume the objective meaning of his statements (*see* CONVENTIONALISM).

World Religions and Christianity. Orthodox Christianity claims to be the true religion. So does Islam and other religions. Even Hinduism and Buddhism (*see* ZEN BUDDHISM), in spite of their eclectic veneer, claim to be true. Since there are mutually exclusive truth claims among these religions, it is obvious that they cannot all be correct. For example, some religions are monotheistic, such as, traditional Judaism, Christianity, and Islam. Others are pantheistic, such as, Hinduism, Zen Buddhism, and Christian Science. Paganism, Neopaganism, and Mormonism are polytheistic (*see* POLYTHEISM). These have incompatible views of God. In the final analysis, only one can be true, and the others must be false.

Uniqueness of Christianity. The uniqueness of Christianity is found in its singular claims about God, Christ, the Bible, and the way of salvation. While there are other monotheistic religions, Christianity claims to have the true view of God—Trinitarianism (*see* TRINITY).

A Unique View of God. No other religion in human history is explicitly trinitarian. Plato had a triad in ultimate reality of the Good, the Demiurgos, and the World Soul (see Plato). But the

Good was neither personal nor God. The World Soul was not personal. The three did not share one nature. Neoplatonism had a One, a Nous, and a World Soul (see Plotinus). But this series of emanations is not three distinct persons in one essence. Neither the One nor the World Soul is personal. The One has no essence or being. Only in the Christian Trinity is there one God in essence who is expressed eternally in three distinct persons—Father, Son, and Holy Spirit (Matt. 28:18).

Christians claim that this view of God is the true view of God and that there is no other God (1 Cor. 8:4 , 6). Other views are either false views of the true God (as Judaism) or false gods (as in Hinduism). The Islamic view of God is false because it insists that there is only one person in the godhead.

The Jewish (i.e., Old Testament) view of God is of the true God, but it is incomplete. It rightly insisted that there is only one God (Exod. 20:2–3 ; Deut. 6:4). The Old Testament allowed for a plurality within the unity of God (Ps. 110:1) and sometimes spoke of God's Son (Prov. 30:4). Once all three members of the Trinity are mentioned in one passage (Isa. 63:7–10). But the Old Testament never explicitly delineates the members of the Trinity as three persons in One God. The Old Testament Jewish God is the true God revealed explicitly in his unity. It is revelation in progress. The God represented in all other religions is false. These gods are incompatible with the Bible's view of God. It is the exclusivity of Christianity that this view alone is true.

A Unique View of Christ. No other world religion believes that Christ is the unique Son of God, God himself manifested in human flesh (*see* CHRIST, DEITY OF). Orthodox Christianity alone confesses that Jesus is fully God and fully human, two natures in one person. Other religions pay homage to Christ. But none considers him to be God incarnate. To Buddhism and Hinduism he is a Guru showing a path to ultimate reality (Brahman). Islam acknowledges him as one of several prophets (*see* MUHAMMAD, ALLEGED DIVINE CALL OF). To Hinduism the incarnation is really a reincarnation) of Krishna. But there are significant differences between Krishna and Christ. Krishna is only a temporary incarnation. He is not an incarnation of a monotheistic God but of a pantheistic God. There is no real comparison between the Christian concept of Christ and that of any other religion. Some religious movements and cults have adopted a view of Christ's deity. But each has added its own unorthodox beliefs to destroy the truth claims made in Scripture. One form of Buddhism even has Buddha dying for our sins. But this is far from Christianity and is foreign even to the nature of indigenous Buddhism (*see* CHRIST, UNIQUENESS OF).

Speaking of the mystery religions, British scholar Norman Anderson explains,

> The basic difference between Christianity and the mysteries is the historic basis of the one and the mythological character of the others. The deities of the mysteries were no more than "nebulous figures of an imaginary past," while the Christ whom the apostolic *kerygma* proclaimed had lived and died only a few years before the first New Testament documents were written. Even when the apostle Paul wrote his first letter to the Corinthians the majority of some five hundred witnesses to the resurrection were still alive. [Anderson, 52–53]

A Unique View of the Written Word of God. Most religions have holy or wisdom books, including all the major world religions. Judaism has the Torah, Islam the *Qur'an* , and Hinduism the *Bhagavad-gita* . In comparison with these and other writings, the Christian Bible is unique.

- Only the Bible claims to come by the unique process of divine inspiration (*see* BIBLE, INSPIRATION OF). The *Qur'an* claims to have come by verbal dictation from the angel Gabriel to Muhammad.

- Only the Bible has supernatural predictive prophecy (*see* PROPHECY, AS PROOF OF THE BIBLE). Other religions claim predictive prophecy but fail to provide examples of clear predictions hundreds of years in advance that have been literally fulfilled, such as the Bible has. Muslims, for example, claim that Muhammad made predictions in the *Qur'an.* But upon closer examination they fail to measure up to their billing (*see* MUHAMMAD, ALLEGED MIRACLES OF ; QUR'AN, ALLEGED DIVINE ORIGIN OF).

- Only the Bible has been supernaturally confirmed (*see* BIBLE, EVIDENCE FOR ; CHRIST, DEITY OF). For only the Bible was written by men of God who were confirmed by special acts of God (cf. Exod. 4:1f .; Heb. 2:3–4) to be telling the truth about God (*see* MIRACLES, APOLOGETIC VALUE OF ; MIRACLES IN THE BIBLE).

Uniqueness of the Way of Salvation. While some other religions (e.g., "Cat" School of Bhakti Hinduism) employ grace (see Otto), Christianity is unique in its plan of salvation:

- It declares humankind sinful and alienated from a holy God (Gen. 6:5 ; Psalm 14 .; Eccles. 7:28 ; Luke 13:3 ; Rom. 3:23).

- It insists that no amount of good works can get a human being into heaven (Isa. 64:6 ; Rom. 4:5 ; Eph. 2:8–9 ; Titus 3:5–7).

- It declares that there is only one way to God—through the death and resurrection of Jesus Christ for our sins (John 10:1 , 9 ; 14:6 ; 1 Cor. 15:1–6). One must believe from his heart and confess with his mouth to be saved (Rom. 10:9). There is no other way. Jesus said, "I am the way and the truth and the life. No-one comes to the Father except through me" (John 14:6 ; cf. John 10:1 ; Acts 4:12).

Salvation and Other Religions. Christianity, therefore, admits salvation through no other cult or religion. For Christ is not considered to be the Son of God who died for our sins and rose again in any non-Christian religion (*see* RESURRECTION, EVIDENCE FOR).

It is important not to draw false implications from this exclusivity:

It does not follow that God does not love the unbelievers in the world. "For God so loved the world that he gave his one and only Son, that whoever believes in him shall not perish but have eternal life" (John 3:16). Paul said that God wants all to know the truth (1 Tim. 2:4).

It does not follow that God did not provide salvation for all. John informs us that Christ is the atoning sacrifice for both our sins and "the sins of the whole world" (1 John 2:2). Christ died not only for the elect but for all the "ungodly" (Rom. 5:6). He even died for those who "deny" him (2 Peter 2:1).

It does not follow that only a few select nations will be evangelized. John declared: "After this I looked and there before me was a great multitude that no one could count, from every nation, tribe, people and language, standing before the throne and in front of the Lamb. They were wearing white robes and were holding palm branches in their hands" (Rev. 7:9).

It does not follow that no salvation is available to those who have never heard of Christ (Acts 10:35 ; Heb. 11:6 ; *see* "HEATHEN," SALVATION OF). Anyone anywhere who seeks God will find him. Peter insisted that God "accepts men from every nation who fear him and do what is right" (Acts 10:35). The writer of Hebrews says "he rewards those who earnestly seek him" (Heb. 11:6).

All have the light of creation (Rom. 1:19) and conscience (Rom. 2:12–15), which is sufficient for condemnation but not salvation. There are many ways by which God could get the gospel to those who will to be saved. The normal way is through a missionary (Rom. 10:14–15). But God can save through his word (Heb. 4:12) which he can convey through a vision, a dream, a voice from heaven, or an angel (Rev. 14:6). God is not limited in the ways in which he can get the saving message to those who seek him (cf. Heb. 1:1). But if men turn from the light they have, God is not responsible to give more light (John 3:19).

Truth and Other Religions. Many Christians are willing to accept that there is truth or value in other religions (*see* TRUTH, NATURE OF). All humanity receives general revelation (Psalm 19 ; Acts 17 ; Rom. 1:19–29 ; 2:12–15). God has revealed truth to them, so it is no surprise that their beliefs express both good and truth.

There is, however, an important difference between truth as Christians hold it and truth as embraced by non-Christians. The Christian system is a system of truth with some error in it. All non-Christian religions are systems of error with some truths (*see* PLURALISM). The only system of truth is the Christian system. Since Christians are finite, our understanding of this system of truth will have some error in it. This is why we must continue to grow in the truth (2 Peter 3:18), knowing that now we understand imperfectly (1 Cor 13:9 , 12). By contrast, no non-Christian system is true as a system, although there are truths within the system. However, the system itself obscures and taints these truths so that even they are distorted. And no non-Christian system provides the light of salvation.

Some Objections Answered. The unique claims of Christianity are offensive to the unbelieving mind. "The message of the cross is foolishness to those who are perishing, but to us who are being saved it is the power of God" (1 Cor 1:18). Nonetheless, the offended critic deserves an answer (Col. 4:5–6 ; 1 Pet. 3:15).

The Charge of Narrowness and Exclusivity. It is objected that Christianity is narrow and exclusivistic. Nothing sounds worse to the contemporary mind than narrow-mindedness. But this argument is more emotional than rational:

Only one worldview can be true. If the various worldviews have mutually exclusive truth claims, only one can be true (*see* PLURALISM). A true system of thought must be comprehensive of thought and life. It must possess consistency and coherence in its overall claims. But most important, the system must correspond to reality, past, present, and future, natural and supernatural. And all major systems of thought contain key truth claims which are contrary to those of all other systems. Either Christianity teaches true precepts about the Trinity , the deity of Christ (*see* CHRIST, DEITY OF), and the one way of salvation, or else another system is true, and Christianity is false.

Truth by nature is narrow. It is narrow to claim that 3 + 3 = 6 is the only answer, but every other answer is wrong. The unbeliever's viewpoint is just as narrow. The claim "Christianity is true and all non-Christian systems are false" is no more narrow than to claim " Hinduism is true and all non-Hindu systems are false." No truth claim is all-inclusive.

This does not mean that minor truths within opposing systems of thought cannot both be true. Non-Christians hold that murder is wrong and that the earth is spherical. But only Christians (and Judaism from which it emerged) believe that the world was created *ex nihilo* by a triune God. Christians and non-Christians can believe that Jesus was a good man. But only Christians believe that he was the God-man. So while here can be agreement between truths, there is no agreement on the major truths unique to the Christian system.

All religions claim to have the truth. As noted, the claim to unique truth is shared by every religious system that makes truth claims. This is true even of "broad," "eclectic" religions. Hindus claim that it is true that "There are many ways to God." This appears open-minded, but it is just as narrow as the Christian claim. It excludes all opposing views.

The Charge of Injustice. Is it unfair and unjust to claim that there is salvation in no other religion? This objection is without merit for reasons detailed in the article HEATHEN, SALVATION OF . It suffices to mention that God had provided salvation for everyone (John 3:16 ; 1 John 2:2). Everyone who really wants it will get it (Acts 10:35 ; Heb. 11:6).

Conclusion. Any truth claim is exclusive. A system that is all-inclusive makes no truth claim. And every proposition that affirms something denies something else by logical implication. Statements such as, "God is all" are opposed by statements such as, "God is not all." They cannot both be true. All truth claims exclude their contradictory. Indeed, all religions claim to have *the truth* —even if that truth is that they believe other non-contradictory religious systems are true also. But if two or more religions embrace the same truths, then they are really one. And that one basic religious system behind them claims to be the true religion to the exclusion of all opposed religious systems. So, Christianity's claim to be the true religion is no more narrow than the claim of any other religion (*see* PLURALISM, RELIGIOUS).

Worldview. A *worldview* is how one views or interprets reality. The German word is *Weltanschauung* , meaning a "world and life view," or "a paradigm." It is the framework through which or by which one makes sense of the data of life. A worldview makes a world of difference in one's view of God, origins, evil, human nature, values, and destiny.

There are seven major worldviews. Each is unique. With one exception, pantheism / polytheism , no one can consistently believe in more than one worldview, because the central premises are mutually exclusive (*see* TRUTH, NATURE OF ; PLURALISM, RELIGIOUS ; WORLD RELIGIONS, CHRISTIANITY AND). Logically, only one worldview can be true. The seven major worldviews are theism, deism, atheism, pantheism, panentheism, finite godism, and polytheism.

Looking Through the Views. *Theism. An infinite, personal God exists beyond and in the universe.* Theism says that the physical universe is not all there is. There is an infinite, personal God beyond the universe who created it, sustains it, and who acts within it in a supernatural way. He is transcendently "out there" and immanently "in here." This is the view represented by traditional Judaism, Christianity, and Islam.

Deism. God is beyond the universe, but not in it. Deism is theism minus miracles. It says God is transcendent over the universe but not immanent in it, certainly not supernaturally. It holds a naturalistic view of the operation of the world. In common with theism, it believes the originator of the world is a Creator. God made the world but does not work with it. He wound up creation and lets it run on its own. In contrast to pantheism, which negates God's transcendence in favor of his immanence, deism negates God's immanence in favor of his transcendence. Deists have included Francois-Marie Voltaire , Thomas Jefferson , and Thomas Paine .

Atheism. No God exists beyond or in the universe. Atheism claims that the physical universe is all there is. No God exists anywhere, either in the universe or beyond it. The universe or cosmos is all there is and all there will be. All is matter. It is self-sustaining. A few of the more famous atheists were Karl Marx , Friedrich Nietzsche , and Jean-Paul Sartre .

Pantheism. God is the All/Universe . For a pantheist, there is no transcendent Creator beyond the universe. Creator and creation are two ways of denoting one reality. God is the universe or All, and the universe is God. There is ultimately one reality, not many different ones. All is mind. Pantheism is represented by certain forms of Hinduism, Zen Buddhism, and Christian Science.

Panentheism. God is in the universe, as a mind is in a body. The universe is God's "body." It is his actual pole. But there is another "pole" to God other than the physical universe. He has infinite potential to become. This view is represented by Alfred North Whitehead , Charles Hartshorne , and Shubert Ogden.

Finite Godism. A finite God exists beyond and in the universe. Finite godism is like theism, only the god beyond the universe and active in it is limited in nature and power. Like deists, finite godists generally accept creation but deny miraculous intervention. Often God's inability to overcome evil is given as a reason for believing God is limited in power. John Stuart Mill , William James , and Peter Bertocci hold this worldview.

Polytheism . Many gods exist beyond the world and in it. Polytheism is the belief in many finite gods, who influence the world. They deny any infinite God stands beyond the world. They hold that the gods are active, often believing that each has its own domain. When one finite god is considered chief over others, the religion is called henotheism. Chief representatives of polytheism include the ancient Greeks, Mormons, and neopagans (for example, wiccans).

Importance of a Worldview. Worldviews influence personal meaning and values, the way people act and think. The most important question a worldview answers is "Where did we come from?" The answer to this question is crucial to how other questions are answered. Theism declares that God created us. Creation was from nothing, *ex nihilo* . Atheism believes we evolved by chance. Atheism holds to creation out of matter, *ex materia* . Pantheism holds that we emanated from God like rays from the sun or sparks from a fire. Creation is out of God himself, *ex Deo* (*see* CREATION, VIEWS OF). The others play on some form of these understandings, with nuances of difference.

That understanding would influence a person's view of death, for example. A theist believes in personal immortality; an atheist generally does not. For the theist, death is a beginning, for the atheist an ending of existence. For the pantheist, death is the cessation of one life and the beginning of another, leading toward ultimate merging with God.

Theists believe we were created by God with the purpose to eternally fellowship with and worship him. Pantheists believe we will eventually lose all individual identity in God. Atheists generally see immortality only as the ongoing of the species. We live on in memories (for awhile) and in the influence we have on future generations.

Obviously, what one believes about the future will influence how he or she lives now. In classical theism, "We only come this way once" (cf. Heb. 9:27), so life takes on a certain sobriety and urgency it would not have for one who believes in reincarnation . The urgency there is to deal with bad *karma* so the next life will be a step up. But there are always more chances in future lives to try, try again. For the atheist, the old beer commercial said it well: We have to "grab the gusto, because we only go around once."

A virtuous act is given different meanings by various worldviews. A theist views an act of compassion as an absolute obligation imposed by God (*see* MORALITY, ABSOLUTE NATURE OF), which has intrinsic value regardless of the consequences. An atheist views virtue as a self-imposed obligation that the human race has placed upon its members. An act has no intrinsic value apart from that assigned to it by society.

There is also a gulf between worldviews with regard to the nature of values. For a theist, God has endowed certain things, human life for example, with ultimate value. It is sacred because God made it in his image. So there are divine obligations to respect life and absolute prohibitions against murder. For an atheist, life has the value the human race and its various societies have assigned to it. It is relatively valuable, as compared with other things. Usually an atheist believes an act is good if it brings good results and evil if it does not. A Christian believes that certain acts are good, whatever their results.

The differences in worldviews can be summarized in the accompanying chart. In some cases the words represent only the dominant or characteristic form of the view, not that of everyone who accepts the system.

Summary. Reality is either the universe only, God only, or the universe and God(s). If the universe is all that exists then atheism is right. If God is all that exists then pantheism is right. If God and the universe exists then either there is one God or many gods. If there are many gods, polytheism is right. If there is only one God then this God is either finite or infinite. If there is one finite god then finite godism is correct. If this finite god has two poles (one beyond and one in the world), then panentheism is right. If there is one infinite God then either there is intervention of this God in the universe or there is not. If there is intervention, then theism is true. If there is not, then deism is true.

Zen Buddhism. *Forms of Buddhism.* Like Hinduism from which it sprang, Buddhism is not a monolithic religion. It too encompasses many beliefs, and even different worldviews (see). All, of course, claim Gautama Buddha (563–483 B.C .). Buddha, who was raised in India, left his home and family in search for enlightenment, which he is said to have found while meditating under a Bo tree. Buddhists look to him as their source of enlightenment.

The two main branches of Buddhism are called Mahayana ("the greater vehicle") and Hinayana ("the lesser vehicle"). The former claimed enlightenment is available to all and the latter to only a few of the committed. Being aware of the negative connotation of the term, Hinayana Buddhists began to call themselves Theravada ("the teaching of the elders").

Basic Beliefs of Buddhists. Both groups of Buddhist accept the "Four Noble Truths" and the "Eightfold Path" to enlightenment.

The Four Noble Truths. The First Noble Truth is that life consists of suffering *(dukkha)* which entails pain, misery, sorrow, and the lack of fulfillment.

The Second Noble Truth is that nothing is permanent or unchanging in the world (the doctrine of *anicca*). And we suffer because we desire what is not permanent.

The Third Noble Truth is that the way to liberate oneself is by eliminating all desire or craving for what is temporal.

The Fourth Noble Truth is that desire can be eliminated by following the Eightfold Path:

The Eightfold Path is divided as follows:

WISDOM:

1. Right Speech

2. Right Thought

ETHICAL CONDUCT:

3. Right Speech

4. Right Action

5. Right Livelihood

MENTAL DISCIPLINE

6. Right Effort

7. Right Awareness

8. Right Meditation

These are not steps to be taken in sequential order, but attitudes and actions to be developed simultaneously.

In addition to these teachings, Buddhists believe in reincarnation and Nirvana (Buddhist "heaven") which is the final state of "Nothingness" where is no more desire or frustration.

By far and away, however, the most influential form of Buddhism is known as Zen Buddhism. Its origins are found in Tao-sheng (A.D . 360–434), a Mahayana Buddhist and in Bodhi-dharma (d. A.D . 534). He migrated from China to Japan, where his form of Buddhism combined with Taoism emphasis on oneness with Nature. This eclectic blend is known as Zen ("meditation"). Since Zen has made the deepest inroads into Christianity, it is of the greatest interest to the Christian apologists.

One of the most influential advocates of pantheism in the West was Daisetz Teitaro Suzuki. Through his long-term activity as a professor at Columbia University and at various other American universities, as well as his lectures throughout the Western world, Suzuki furthered the cause of Zen in its Western interpretation. D. T. Suzuki has influenced and convinced such Westerners as Christmas Humphreys and Alan Watts.

Nature of Zen. In order to understand Suzuki's form of pantheism, one must seek to grasp the nature of Zen. First, we shall note what Suzuki believes Zen is not, and then what he believes Zen is.

What Zen Is Not. According to Suzuki, Zen is not a system or philosophy "founded upon logic and analysis." Zen is opposed to any form of dualistic thinking—that is, making any kind of subject-object distinction (*Introduction to Zen Buddhism* , 38). Instead Suzuki calls us to "Hush the dualism of subject and object, forget both, transcend the intellect, sever yourself from the understanding, and directly penetrate deep into the identity of the Buddha-mind; outside of this there are no realities."

Neither is Zen a set of teachings. Says Suzuki: "Zen has nothing to teach us in the way of intellectual analysis; nor has it any set doctrines which are imposed on its followers for

acceptance." As such Zen has "no sacred books or dogmatic tenets." Indeed, "Zen teaches nothing." It is we who "teach ourselves; Zen merely points the way" (ibid., 38, 46).

Nor is Zen a religion as "popularly understood." It has no god to worship, no ceremonial rites, no afterlife, and no soul. When Suzuki says that there is no god in Zen, he neither denies nor affirms existence of some deity. "In Zen, God is neither denied nor insisted upon; only there is in Zen no such God as has been conceived by Jewish and Christian minds" (ibid., 39).

Zen claims not to be theistic or pantheistic as such, denying such metaphysical designations. Unlike the God of Christian theism or Vedanta Hinduism, "there is no object in Zen upon which to fix the thought" of the disciple. "Zen just feels fire warm and ice cold, because when it freezes we shiver and welcome fire. The feeling is all in all . . . ; all our theorization fails to touch reality" (ibid., 41).

What Zen Is. So what may we say Zen is? According to Suzuki, "Zen is the ocean, Zen is the air, Zen is the mountain, Zen is thunder and lightening, the spring flower, summer heat, and winter snow; nay, more than that, Zen is the man." Suzuki recounted a story that a Zen master defined Zen as, "Your everyday thought" (ibid., 45). Suzuki puts it another way:

"When a hungry monk at work heard the dinner-gong he immediately dropped his work and showed himself in the dining room. The master, seeing him, laughed heartily, for the monk had been acting Zen to its fullest extent" (ibid., 85). In other words, Zen is life. "I raise my hand; I take a book from the other side of this desk; I hear the boys playing ball outside my window; I see the clouds blown away beyond the neighboring woods:—in all these I am practicing Zen, I am living Zen. No wordy discussion is necessary, nor any explanation" (ibid., 75). Zen is the personal experience of life, unencumbered by any abstractions or conceptualizations (ibid., 45, 132).

God and the World. In Zen Buddhism God is man, and man is God. Citing the Western mystic (*see* MYSTICISM) Meister Eckhart with approval, Suzuki states: " 'Simple people conceive that we are to see God as if he stood on that side and we on this. It is not so; God and I are one in the act of my perceiving Him.' In this absolute oneness of things Zen establishes the foundations of its philosophy" (*Zen Buddhism* , 113). Not only is a human being God, but all is God and God is all. Everything and everyone are really One. "Buddhas [i.e., enlightened Ones] and sentient beings [i.e., those still ignorant] both grow out of One Mind, and there is no other reality than this Mind" (*Manual of Zen Buddhism* , 112).

What this all-embracing Mind is, is no-mindedness which is the human spiritual nature. Says Suzuki: "This Nature [i.e., the human spiritual nature] is the Mind, and the Mind is the Buddha, and the Buddha is the Way, and the Way is Zen" (*Zen Buddhism* , 88). The Mind may be described as having "been in existence since the beginningless past." Mind is not born and does not die; it is beyond the categories of age or being (*Manual of Zen Buddhism* , 112). Mind is all and all is Mind.

Suzuki is quick to point out that this form of monism is not a denial of the world we perceive and feel around us. However the world we do sense which is outside of us is a "relative world,"

which has no final reality.” Individual beings exist, but they are real “only in so far as they are considered a partial realization of Suchness.” Indeed Suchness “exists immanently *in* them. Things are empty and illusory so long as they are particular things and are not thought of in reference to the All that is Suchness and Reality” (*Outlines of Mahayana Buddhism* , 140, 141).

Ordinary experience, then takes the world for something that exists in itself, but it is an illusion. What really exists is Mind (*Manual of Zen Buddhism* , 51).

Buddhists do not like to call Suchness or Mind by the word *God* . The very term is offensive to most Buddhists, “especially when it is intimately associated in vulgar minds with the idea of a Creator who produced the world out of nothing (*see* CREATION, VIEWS OF), caused the downfall of mankind, and, touched by the pang or remorse, sent down his only son to save the depraved.” The variety of ways Buddhists describe this Ultimate reality is partly an effort to avoid speaking of Deity (*Outlines of Mahayana Buddhism* , 219, 220).

Further, Absolute Suchness or Reality cannot be grasped “as it truly is.” It goes beyond categories, even of existence. Suzuki states: “We cannot even say that it is, for everything that is presupposes that which is not: existence and non-existence are relative terms as much as subject and object, mind and matter, this and that, one and other: one cannot be conceived without the other. ‘It is not so (*na iti*),’ therefore may be the only way our imperfect human tongue can express it. So the Mayahanists generally designate absolute Suchness as *Cunyata* or void.”

This indefinable and unthinkable “void” may be more fully interpreted in this way: Suchness is neither existence or non-existence; it is neither unity nor plurality (ibid., 101–2). This is God, and God is All, and All is Mind, and Mind is Buddha, and Buddha is the Way, and the Way is Zen.

View of Human Beings. Individual human beings then are simply a manifestation of this All or Mind or God. Individuals are not isolated entities anyway, as we imagine. By themselves people are no more meaningful than soap bubbles. Particular existence acquires meaning only when thought of in terms of the whole oneness (ibid., 46–47). This is not precisely a denial of materiality. Human beings have both materiality and immateriality, and more (ibid., 149). It is a denial of individuality in any ultimate sense. People only appear to be individual beings, but in reality they are all one in the One. The goal of Zen is to help people go beyond egoism to realize their oneness in God and so become immortal (ibid., 47).

Ethics. Zen is primarily fundamentally a “practical discipline of life” (*An Introduction to Zen Buddhism* , 37). From an ethical perspective, Zen is a discipline aimed “at the reconstruction of character” (*Zen Buddhism* , 16). This rebuilding of character is necessary to do battle with egoism, “the source of all evils and sufferings.” Buddhism “concentrates its entire ethical force upon the destruction of the ego-centric notions and desires” (*Outlines of Mahayana Buddhism* , 124).

Basically, Zen’s answer to egoism is to learn. This ignorance is the clinging “Man needs to detach himself from Ignorance (i.e., dualism), thus transcending all duality. When this is accomplished one “is said to be in harmony and even one with Suchness” (ibid., 122, 124, 146).

This goal can only be met through selfless labor and devotion to others, which requires the prior destruction of all selfish desires. The realization of this goal is called *nirvana* . Destruction of self-orientation brings enlightenment, hence the ability to love others as ourselves (ibid., 52–55).

Involved in this process toward enlightenment and within enlightenment for a Zen monk is "a great deal of manual labour, such as sweeping, cleaning, cooking, fuel-gathering, tilling the farm, or going about begging in the villages far and near." The central principle by which the Zen monk is to live his life "is not to waste but to make the best possible use of things as they are given us" (*Introduction to Zen Buddhism* , 118, 121). The ethical teaching of Zen is succinctly summarized in "The Teaching of the Seven Buddhas":

Not to commit evils

But to do all that is good,

And to keep one's thought pure—

This is the teaching of all the Buddhas. [*Manual of Zen Buddhism* , 15]

Nature of History. Since the world is viewed as illusory (*see* ILLUSIONISM), history is considered illusory as well. Past, present, and future are "unborn." They have no reality beyond being manifestations of Mind (ibid., 53).

Granting this illusory existence of history in no way rules out its role as part of Maya or Ignorance. Suzuki states that history is "a grand drama visualizing the Buddhist doctrine of karmic immortality." Just as in many forms of Hindu pantheism, so Zen Buddhism holds to the belief in *karma* . The Buddhist concept of *karma* is that "any act, good or evil, once committed and conceived, never vanishes like a bubble in water, but lives, potentially or actively as the case may be, in the world of minds and deeds." Suzuki likens the doctrine of *karma* to "the theory of evolution and heredity as working in our moral field" (*Outlines of Mahayana Buddhism* , 183, 200, 207).

As everything else in the world of duality, history must be transcended. This is done in the following way:

> Events past are already past; therefore have no thoughts of them, and your mind is disconnected from the past. Thus past events are done away with. Present events are already here before you; then have no attachment to them. Not to have attachment means no to rouse any feeling of hate or love. Your mind is then disconnected from the present, and the events before your eyes are done away with. When the past, present, and future are thus in no way taken in, they are completely done away with. . . . If you have a thoroughly clear perception as to the mind having no abiding place anywhere, this is known as having a thoroughly clear perception of one's own being. This very Mind . . . is the Buddha-Mind itself; it is called Emancipation-Mind, Enlightenment-Mind, the Unborn Mind, and Emptiness of Materiality and Ideality. [*Zen Buddhism* , 196, 197]

Human Destiny. Human destiny is the achievement of *nirvana* —that is, "the annihilation of the notion of ego-substance and of all the desires that arise from this erroneous conception" and the practical expression of "universal love or sympathy (*karuna*) for all beings" (*Outlines of Mahayana Buddhism* , 50, 51). *Nirvana* is sometimes spoken of as possessing four attributes: Nirvana "is eternal because it is immaterial; it is blissful because it is above all sufferings; it is self-acting because it knows no compulsion; it is pure because it is not defiled by passion and error" (ibid., 348; cf. 399). Nirvana also is God and to achieve it is to realize one's essential oneness with the absolute One.

Nirvana is not achieved easily. However it does not involve asceticism, knowledge of certain books or doctrines, or even meditation divorced from life. Instead the realization of *nirvana* begins and ends in life itself. "Salvation [i.e., the attainment of *nirvana*] must be sought in the finite itself, there is nothing infinite apart from finite things; if you seek something transcendental, that will cut you off from this world of relativity, which is the same as the annihilation of yourself. You do not want salvation at the cost of your own existence."

"Nirvana is to be sought in the midst of Samsara (birth-and-death)." No one can escape Samsara. It is one's subjective perception of life. If a person will but change his inner awareness, he will see that reality is "absolutely one" (*Zen Buddhism* , 14, 15). The awareness of this in the inner life is Nirvana.

The road to Nirvana involves many things. However the most fundamental aspect is the ridding of all dualistic thinking. And the root of all such thinking is logic. Suzuki acknowledges that "we generally think that 'A is A' is absolute, and that the proposition 'A is not-A' or 'A is B' is unthinkable." But such thinking only keeps us in bondage so that we cannot comprehend the truth. We must therefore shed the shackles of logic, and approach life from a new point of view. In this new experience there "is no logic, no philosophizing; here is no twisting of facts to suit our artificial measures; here is no murdering of human nature in order to submit it to intellectual dissections; the one spirit stands face to face with the other spirit like two mirrors facing each other, and there is nothing to intervene between their mutual reflections" (*An Introduction to Zen Buddhism* , 58, 59, 61).

In order to help the Zen disciple beyond the logical interpretation of reality, the Zen masters created a whole approach to reality which included illogical sayings and questions as well as responses to questions—called the *koan* . For example, a very familiar question is "If you have heard the sound of one hand [clapping], can you make me hear it too?" (ibid., 59). A famous saying from Fudaishi graphically illustrates the irrationality of Zen:

Empty-handed I go, and behold the spade is in my hands;

I walk on foot, and yet on the back of an ox I am riding;

When I pass over the bridge, Lo, the water floweth not, but the bridge doth flow. [ibid., 58]

For the attainment of nirvana, one must transcend all the things that keep one from seeing life in its fullness. This step toward nirvana is called *satori* . *Satori* is achieved through the *koan* . It

is this process from the *koan* to *satori* and then to nirvana that is the road to spiritual happiness (ibid., 60).

The essence of Suzuki's absolute pantheism is that the world of particulars is both finite and infinite, relative and absolute, illusory and real. What one needs to do in order to see reality in all its fullness, is to free oneself from logic, words, concepts, abstractions—anything that keeps one from personally experiencing what is neither being nor non-being. When this occurs Nirvana is attained—one becomes one with the One.

Evaluation. For a critique of Zen, see articles on PANTHEISM ; FIRST PRINCIPLES ; EVIL, PROBLEM OF .
